PERCEPTIONS OF RURAL ECONOMIC DEVELOPMENT
OPPORTUNITIES BY AGRICULTURAL EDUCATION
STUDENTS AND THEIR PARENTS IN NORTH
CENTRAL OKLAHOMA

Thesis Approved:

Thesis Advisor

Dean of Graduate College

ACKNOWLEDGEMENTS

I would like to thank my advisor, Dr. James Key, for his expertise in supporting and directing me in this study. A great appreciation would also be given to my committee members, Dr. Eddy Finley and Dr. Bill Weeks, who assisted me in completing this study.

Thanks is given to the Oklahoma Department of Vocational and Technical Education for helping with this study. Greg Dewald's and Todd Zdorkowski's support and assistance was what made this study possible. I would also like to thank my Mother and Cindy Hildebrant for their typing assistance. Appreciation is given to the employees of Kay Electric whose participation made this study possible.

My thesis would not have been possible without the support and assistance of my family. A special thanks to my Mom, Dad, and Brother (Justin) for their encouragement in completing this study.

CHAPTER I

INTRODUCTION

Many of the most successful businesses in America are run from relatively small towns. For example: Wal-Mart Stores, Incorporated, located in Bentonville, Arkansas, is the nation's largest retailer; J. M. Smucker Company, located in Orrville, Ohio, commands 38 per cent of the market share of the jams and jelly business; and Caterpillar, Incorporated, located in Peoria, Illinois, dominates the world market in earth-moving equipment. These are just three good examples of the many businesses and large corporations run from relatively small towns in America (Heenan, 1991).

The Kay Electric Cooperative, headquartered near Blackwell, is planning a rural development initiative for their service area in North Central Oklahoma and has asked for assistance from Greg Dewald, the Oklahoma Department of Vo-Tech Rural Development Specialist. The cooperative wants to invest in training, business start-ups and expansions, and joint ventures to help rural families and others in rural areas build new sources of income for themselves. The Cooperative's return on this investment is, of course, increased patronage by the rural population.

Problem

The rural communities in the Kay Electric Cooperative have seen a decrease in their population for the past several decades, and many people have ideas about how to reverse that population trend. Information was needed to identify the opportunities as perceived by Agricultural Education students and their parents to help rural families and towns build new sources of income.

Purpose

The purpose of this study was to identify a number of rural economic development opportunities, skills rural families possess, and what types of assistance would be needed to develop these opportunities as perceived by high school Agricultural Education students and their parents in the Kay Electric Cooperative service area.

Objectives

In order to accomplish the purpose of the study these objectives were developed.

1. To identify the projects or business ventures rural families think will work.
2. To identify the skills rural families perceive themselves to possess.

3. To identify the skills or "assistance" rural families desire.
4. To identify methods of developing the skills rural families desire and possess.

Terms and Definitions

The Following are Definitions of Terms as used in this Study:

FFA Members - These are youth who range in age from 14 to 18 years of age, and are enrolled in Agricultural Education class. Membership is open regardless of race, sex, creed, national origin, or handicap.

Parents - These are the parents of the local FFA members.

Kay Electric Cooperative - This is the rural electric cooperative which serves the people of the following towns: Blackwell, Perry, Newkirk, Tonkowa, Braman, Deer Creek Lamont, Medford, Garber, Covington, and Frontier.

North Central Oklahoma - The area where the consumers will use the electricity from the Kay Electric Cooperative.

Agriculture Education Instructor - A teacher who teaches agriculture education at the secondary school level. They were formerly known as

Vocational Agriculture teachers or Vo-Ag instructors (Garr, 1990).

Scope of the Study

The scope of the study included fifty two adults and one hundred sixty three FFA members. The towns that participated in this survey included: Blackwell, Braman, Deer Creek-Lamont, Frontier, Medford, and Perry (Figure 1).

Limitations of the Study

The following limitations of the study were recognized by the researcher:

1. The only people to be surveyed were in the towns that were served by the Kay Electric Cooperative.
2. This study was given to Agricultural Education Teachers and it was administered to Agricultural Education students by these instructors, whose opening remarks may have influenced the students.
3. The survey was to be taken home by the students to the parents, completed and taken back to the Agricultural Education Instructor; however, it is possible all surveys distributed by the teacher were neither completed nor returned.

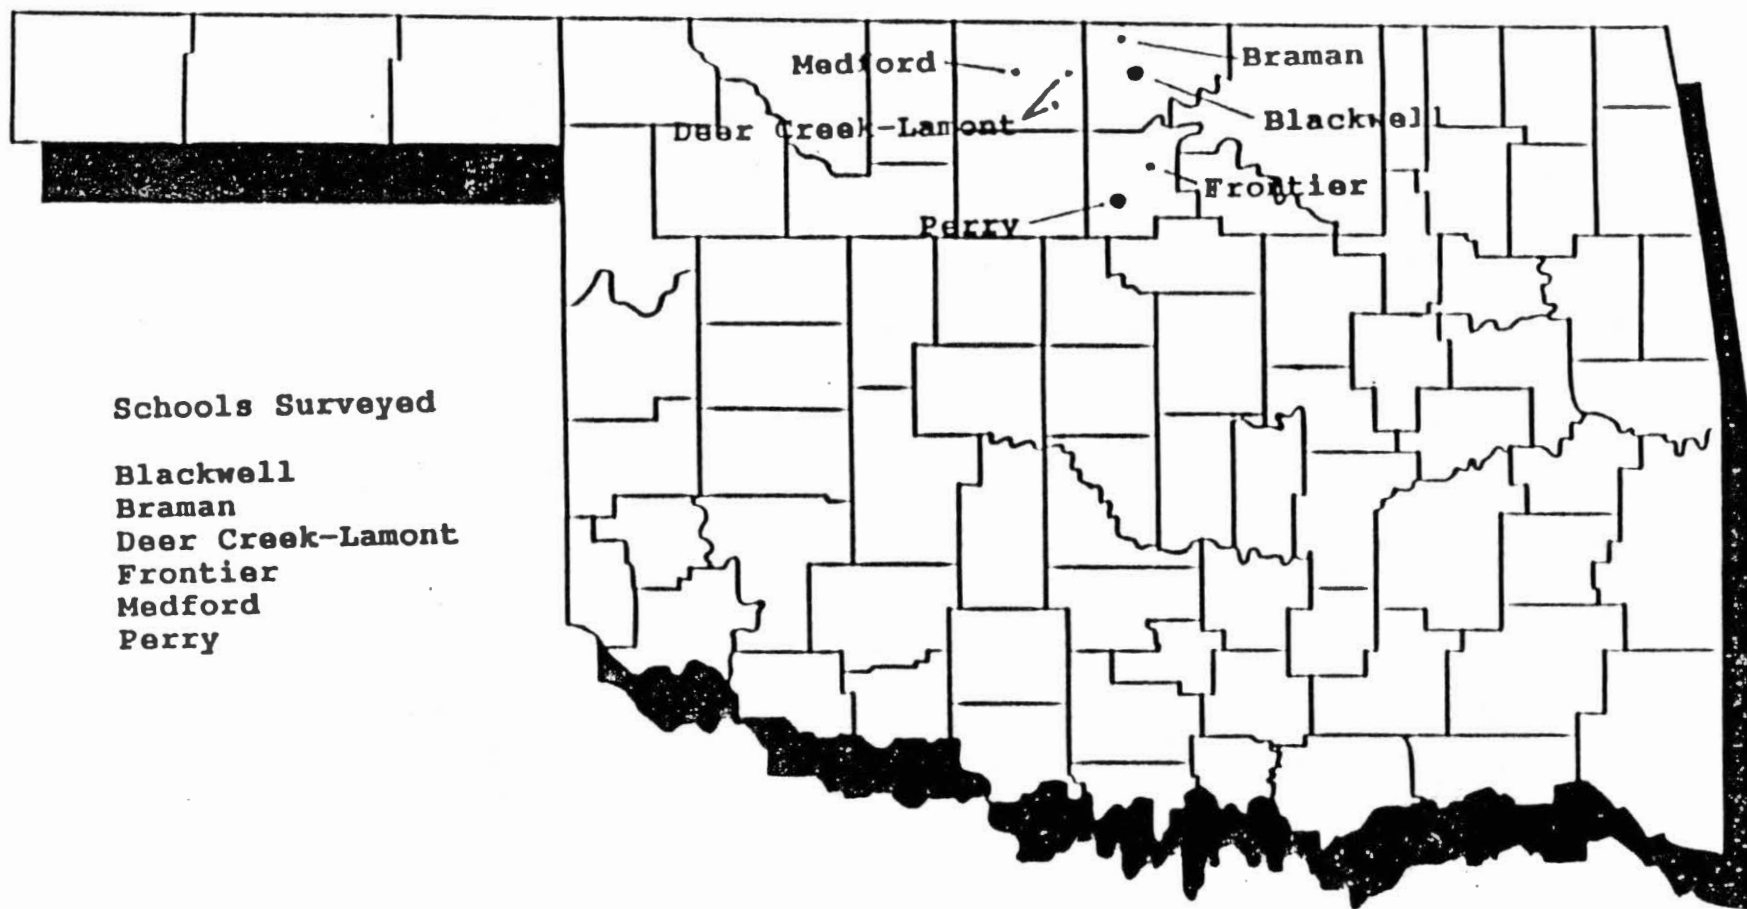

FIGURE 1
LOCATION OF SCHOOLS WITHIN THE STATE

Assumptions of the Study

The researcher assumed that several conditions applied to this study:

1. The volunteers who participated in the study possessed a wide variety of knowledge and experience which will lead to many ideas of successful businesses.
2. The responses made by the volunteers could be useful in determining what types of educational assistance that they would like to receive business and industry might succeed in North Central Oklahoma.
3. The developed instrument provided a wide range of information and did not limit any participant to a certain range of ideas.
4. Anyone that fit into the categories of FFA member or Parent could be surveyed. The survey did not discriminate against sex, race, socio-economic level, handicap, or religion.

CHAPTER II

REVIEW OF LITERATURE

The review of literature includes topics on small towns, leadership, government programs for rural development, trends of Oklahomans, and education.

Small Towns

North Central Oklahoma could be best described as a town where the tallest building is the grain elevator. The homes of the middle class would cost approximately twenty thousand dollars, and those of the poor are very neat. It is an area where crime almost never happens. Crack and heroin only come to these towns on the nightly news. These towns provide a place where you don't have to lock your door and you can let your children come into the downtown alone (Hornik, 1989). These small towns provide a rich heritage for people in Oklahoma and also a place they call home. These towns are a place where the people are kind and you see many smiling faces.

Leadership

For rural development programs to function effectively there must be a strong leadership base in the community. Many communities have leaders but few are developing their leadership qualities to the fullest potential for their community. Many leaders in the smaller rural towns seek greater economic opportunity and leave their hometown. This provides a great opportunity for others to step forward and develop groups for the purpose of developing leadership (Oklahoma Rural Development Summit, 1991).

Oklahoma's economy has been dependent upon oil and agricultural activities. Rural communities provide the greatest amount of these activities statewide. The survival of these rural communities will be dependent upon income and employment opportunities provided in these areas. Oklahoma will need to continue to diversify to keep agriculture strong in the rural communities. Rural communities need to provide employment opportunities so that they can keep the people in the community who once relied on the family farm (Oklahoma Association of Electric Cooperatives, 1988).

Government Programs for Rural Development

The Farmers Home Administration has rural development programs available through their offices. There are programs classified under community and business, single family housing, multiple family housing, and farm. Each of

these categories has possible loans guaranteed through the Farmers Home Administration. There are industrial development grants that are made to public bodies so that business enterprises will come to rural areas. There are loans for nonfarm enterprises to supplement farm income. These were developed to pay costs of organizing a business (Oklahoma Rural Enterprise Team, 1990).

The Oklahoma Conservation Commission and Conservation Districts are constantly working at meeting the needs of the public. The opportunities are with the renewable natural resources to provide economic opportunities. Through cooperation with the United States Department of Agriculture and the Soil Conservation Service there have been economic development opportunities for catfish farming and soil farming. The conservation plan protects the resource and protects the investment dollars from unnecessary expenses (Oklahoma Rural Enterprise Team, 1990).

Trends of Oklahomans

Most interesting about the population growth data from 1950 through 1990 is the trend of individuals living in unincorporated areas. The data show that in 1950 36.1 percent of the state's population resided outside of municipal boundaries. This share fell to 26.0 percent during the 1960 census and 20.7 percent in 1970. During the next two decades, however, this ratio began to rise, first to 22.7 percent in 1980 and 23.3 percent in the most recent 1990 census. The trend of disappearing unincorporated population which existed through 1970 can not be expected to

continue. These areas are no longer declining at the rate they once were, and with reduced isolation as a result of the gains in communications they may be very viable in the future (DATASCAN BULLETS, 1991, 2).

These small towns in North Central Oklahoma are experiencing a shift in population from rural to urban. Now the towns are struggling to bring jobs back into the rural areas, as a way of stemming the population drop. However, there are many problems, such as infrastructure, that cannot be overcome without a very large tax increase which the older citizens in the community will be against. The aging population in these communities has most of the money and they may not be around to see the change in the economic development. "The Department of Economic and Community Affairs study indicated that more than 26 percent of the public water systems and 50 percent of the sanitary sewer systems in Oklahoma will probably have to increase capacity to accommodate new industrial demands (Summit Team Meeting, 1991, 19)."

"In a recent USA Today poll, 39% of the people surveyed said they would prefer to live in a small town." [According to U.S. Census figures, less than 24% of the population dwells in rural areas, compared with 44% in 1950 (Hornik, 1989)].

The Persian Gulf War brought fear to Americans, but even before the war began the economy was declining. In February, after the war, the economy saw a sharp increase

with its biggest monthly gain in three years. People had a more positive outlook after winning the war in just one hundred hours and there was also hope that the long recession was over (Oklahoma Department of Commerce, 1991).

Education

In order to improve education for rural development programs there needs to be an improvement in communication to make people aware of the available assistance programs. Community leaders need to encourage newspapers to report issues.

Harold S. Geneen was president and chief executive officer of the ITT corporation from 1959 to 1977 and developed many ideas on how to run a business. Perhaps here would be how he says it best.

A half-century has gone by since I began making business decisions, and if I were forced to try to sum it all up, I would have to say that the best way to run a business with the best hope of eventual success is to do it as you would cook on a wood-burning stove.

How do you cook on a such primitive stove? Because you know that you cannot control all the elements of fire, wood, air flow, et cetera, you keep your eye on everything at all times. You follow the recipe to an extent, but you also add something extra of your own. You do not measure out every spice and condiment. You sprinkle here, pour there. And then you watch it cook. You keep your eye on the pot. You look at it and check it from time to time. You sniff it. You dip your finger in and taste it. Perhaps you add a little something extra to suit your own taste. You let it brew awhile and then you

taste it again. And again. If something went wrong, you correct it. But, whatever you do, the most important thing is to keep your eye on it. You don't want it to be ruined when you are off doing something else. When it is done to your satisfaction, you're right there to take it off the stove. In the end, you will have a pot roast or a lamb stew that is the very best you could possibly make, a joy to your plate and to your ability as a cook. It will taste far better than any slab of meat you cook automatically by pushing buttons on a microwave oven. That is how you would cook on a wood-burning stove when nothing is preset. And that is the frame of mind to take into the art of conducting and building a successful business (Geenen, 1984).

According to Wes Watkins (Former Oklahoma Congressman and Rural Development Specialist) Oklahoma needs to find increasing ways to market products around the world. He believes that in order to create jobs first we must have:

1. Finances
2. Technology
3. Markets for the Products

Former Congressman Watkins has found that approximately one billion dollars worth of exports creates about twenty thousand new jobs. In Oklahoma less than ten percent of the businesses export products. Approximately thirty seven percent would like to export products but do not know how to accomplish the task. This will be where the public education of rural development strategies will need to take place. A good rural development policy needs to create off-farm jobs.

According to Greg Dewald (Oklahoma Department of Vocational and Technical Education, Rural Economic Development and In-Service Specialist) there are many people in these communities who do not understand the basis for rural development. Manufacturing will bring jobs to the communities and the retail and service businesses will follow. However, there is some resistance to change in these communities because they do not want a large corporation to locate in their hometown. The resistance by the community leaders would be to a raise in taxes to improve water, sewer, garbage, etc. There are many improvements that would have to be made in order to attract a large corporation and when several businesses had been developed the small town environment would be lost.

Summary

In order for the small towns in Oklahoma to succeed in preparing a rural development program to increase business, people must see the need for education (Oklahoma Economic Outlook, 1990). In order for these towns to survive they need to change their attitudes, not their populations (Heenan, 1991). People in these towns need to take their proposals to large corporations and explain why they could benefit from the small town environment. These communities need to explain the changes they would make to accommodate the needs of the corporation or manufacturing industry.

CHAPTER III

DESIGN AND METHODOLOGY

The study was conducted to determine ideas for rural business development in the Kay Electric Cooperative service area. It was qualitative in nature which left the participants open to many ideas. The study had listings on what kind of assistance that might needed in order to encourage rural business development.

Institutional Review Board (IRB)

Government regulations and Oklahoma State University Policy require all research dealing with human subjects conducted by faculty and/or postdoctoral, graduate, and undergraduate students must be approved by the Oklahoma State University Institutional Review Board (IRB). The purpose of IRB will be to insure the rights and welfare of the human subjects in the study. In compliance with the IRB this study was granted proper permission to continue; see Appendix C for approval statement.

Population

The data was gathered from a sample from a population which included FFA members and their Parents in the Kay Electric Cooperative Service Area. Contact was made with the local Agricultural Education Instructors and the questionnaire was given to the students in the classrooms. Each student took a copy of the questionnaire home to their parents so they could participate. The questionnaires were brought back to the instructors, who sent them to the Oklahoma Department of Vocational and Technical Education.

The population was dispersed over the North Central Oklahoma area that was surveyed. There were approximately fifty students from each town that was surveyed and approximately twelve adults from each town. The survey did ask each to identify themselves as an FFA member or Parent.

Development of the Instrument

The instrument was developed by the Oklahoma Department of Vocational and Technical Education rural development specialists Greg Dewald and Todd Zdorkowski. The instrument was developed so that it would be open ended in nature and there wouldn't be any limitations on ideas for businesses. The students and adults were asked to identify the projects or business ventures that they thought might work in their rural community. They were asked to identify skills that their family could contribute to the economic development of

their community. Participants were asked to identify what type of assistance will be needed for business ventures.

Data Gathering

The study was conducted by sending out questionnaires to the schools in the Kay Electric Cooperative service area. The population consisted of the FFA members in the local schools and their parents. The data was put together according to school and divided up between adults and youth.

The data was gathered in a survey delivered to the Agricultural Education Instructors by Greg Dewald (Rural Development Specialist) with the Oklahoma Department of Vocational and Technical Education. Each instructor surveyed his/her classes to get the information on the questionnaire. Each student was given a questionnaire to take home to his/her parents so that the adults could be surveyed. The surveys were to be answered and delivered to the Agricultural Education instructor. The instructors gathered the surveys and sent them to the Oklahoma Department of Vo-Tech.

Analysis of Data

A qualitative statistical approach was used in gathering and analyzing the information. The information was gathered and split into the youth and adult categories. Each question had a listing of the responses from each town.

Then the results were placed into one large spreadsheet for further analysis. The listings were alphabetized and ranked in descending order for the ease of marking the results. Each town had a list of responses that they saw as important in improving the economic development of that particular community. The total number of responses was put into a column and ranked according to the totals. Then the data was ranked from the most responses to the least responses.

The data was put into the spreadsheet and ranked according to each question. Each question had many responses and several different answers and each person that listed the same answer was added in the columns by the towns. Each and every response was important to this study for analysis.

CHAPTER IV

PRESENTATION AND ANALYSIS OF DATA

The purpose of this study was to identify rural economic development opportunities, skills rural families possess, and types of assistance which would be needed to develop these opportunities as perceived by Agricultural Education students and their parents in North Central Oklahoma.

Objectives

In order to accomplish the purpose of the study, these objectives were developed.

1. To identify the projects or business ventures rural families think will work.
2. To identify the skills rural families possess.
3. To identify the skills or "assistance" rural families desire.
4. To identify methods of developing the skills rural families desire and possess.

Description of Data

There were 215 youth and adults that responded to the survey from the following towns: Blackwell, Braman, Deer-Creek Lamont, Frontier, Medford, and Perry. The following towns did not respond when given this questionnaire: Covington, Garber, Newkirk, Ponca City, and Tonkawa. This survey had a number of different responses. Each person was able to respond more than once to each question or choose not to respond at all to the question. The data was collected through the State Department of Vocational and Technical Education with the help of Greg Dewald (Rural Development Specialist).

The study was qualitative in nature which allowed for a number of different responses to each question. Please refer to Appendix A for a quick reference to the questions on the survey and areas surveyed. There were 163 youth and 52 adults that participated in the survey. Table I and Table II describe where the responses came from by community and the number of males and females that responded from each community. Tables III and IV describe the population surveyed as living in town or living in the country, as well as the number of nonrespondents.

The youth responded 534 times with 96 different answers to question number one which means that each youth responded between three and four (3.28) times to the question. The adults responded 155 times with 71 different answers to

TABLE I

TOTALS	28	54	19	37	5

N = 52

question number one so each adult responded almost three (2.98) times to each question.

The characteristics of the groups were totaled by youth (Table V) and adults (Table VII) by the responses given to the question of "What kinds of businesses do you think are needed in your local area that do not exist there now?" The categories in the table are by percentage and number of responses to that particular answer. Then responses are by towns: Blackwell, Braman, Deer Creek-Lamont, Frontier, Medford, and Perry including a total column at the end of the table.

Question one had 96 different responses by the youth (Table V) as to what types of businesses they thought were needed that did not already exist. There were 50 of the youth respondents who would like to see a Restaurant (a new restaurant), 42 that chose a Clothing Store, 29 chose an Auto Parts Store, 25 chose a Mini Mall, and 24 chose a Grocery Store as types of new businesses in their respective towns.

Table VI breaks down the youth answers by Retail, Service, and Manufacturing. In the Retail part of the question 50 youth chose Restaurant as the most common response, 42 chose a Clothing Store, and 29 chose an Auto Parts Store. The most common response in the Service part of the question was a Recreation Hall with 21 responses. Then 19 chose Fast Food, 12 chose Sale Barn, and 12 chose Service Station. The most common response in the

*No Response		3.1%													

Manufacturing part of the question was Industry with seven responses; three chose Bakery, and two chose a Power Plant.

Adults responding to Question one (Table VII) had 71 different responses to what types of businesses they thought were needed that did not already exist. There were 18 respondents that chose a Restaurant, 11 chose a Clothing Store, 11 chose a Hardware Store, five chose a Car Wash, five chose an Equipment Dealer, five chose a Fabric Store, and five chose a Manufacturing Company as types of new businesses.

In Table VIII the Adults were broken down by Retail, Service, and Manufacturing. The most common response in the Retail area was Restaurant with 18 responses, 11 chose Clothing Store, and 11 chose Hardware Store. In the Service area five adults chose a Car Wash; and there were three adults who chose the following answers: Appliance Repair, Laundry Mat, Sale Barn, and Service Station. In the Manufacturing part there were five adults who chose a Manufacturing Company, four chose Industry, two chose Machine Shop, and two chose a Recycling Center.

The youth responded 267 times to Question 1A (Table IX) with 106 different answers. Each youth that was surveyed responded between one and two times (1.64) to the question. Question 1A is stated as to "What kinds of businesses have you imagined that you could start or run?" There were 23 respondents that chose a Restaurant, 19 chose a Clothing

Store, 18 did not respond, ten chose Sporting Goods, and ten chose a Welding Shop.

In Table X Question 1A was broken down into the categories of Retail, Service, and Manufacturing. The most common response in the Retail section was a Restaurant with 23 responses, then Clothing store with 19 responses, and Sporting Goods with ten responses. In the Service section there were ten youth who chose Welding Shop, nine chose Lawn Mowing, seven chose Farm/Ranch, and seven chose Service Station. In the Manufacturing part of the question there were two youth who chose Factories, two chose Machine Shop, and one chose Aluminum Business.

The adults responded 95 times to Question 1A (Table XI) with 59 different answers. Each adult that was surveyed responded almost two times (1.83) to the question "What kinds of businesses have you imagined that you could start or run?" There were nine adults of the 52 who did not respond to this question. Some of the top responses included five who chose a Restaurant, four chose Car Wash, and four chose a Craft Shop.

In Table XII, responding to adult Question 1A, answers were categorized according to Retail, Service, and Manufacturing. In the Retail category the most common response was Restaurant with five responses, four chose Craft Shop, and three chose the following Clothing Store, Convenience Store, and Grocery Store. In the Service category there four who chose Car Wash, three chose Service

*No Response		17.3%												

Station, and three chose Welding Shop. In the Manufacturing category the following were chosen once each:

Fabric/Clothing Manufacturing, Fence Post Factory, Gas Company, Housing/Apartment Project, Industry, and Recycling Center.

Question 2 (Table XIII) asks "What kinds of marketable skills do you think the individuals and families in your local area could use to generate extra income but do not or, for some reason, cannot use?" The youth responded 314 times to Question 2 with 80 different answers, so each youth responded almost two times (1.93) to the question. The most common answer was Welding with 46 different people choosing it. Thirty-five people chose not to respond to the question with 19 of those being from Perry. Twenty-seven chose Cooking for a source of income not being used, 15 chose Crafts, 14 chose Mechanical Repair, and 13 chose Sewing.

The adults in Question 2 (Table XIV) had 101 responses with 43 different answers, so each person responded almost two times (1.94) to the question. Nineteen of the 52 adults did not respond to this question with eight of the 19 being from Blackwell. Eight chose Welding, seven chose Sewing, five chose Computer Training, four chose Bookkeeping, four chose Cooking, and four chose Crafts as sources of income not being used.

Question 2A was stated as "What kinds of marketable skills do you have that could generate extra income that you do not or, for some reason, cannot use?" A second part to

this question stated "Why do you think this is true?" just below the first part of the question. Question 2A (Table XV) had 252 responses by the youth with 66 different answers, so each person responded between one and two times (1.55) to the question. Forty-two people did not respond with 23 of those being from Perry. The most common answer was Welding with 36 responses; 26 chose Cooking, 12 chose Mechanic, and 11 chose farming as types of opportunities to generate extra income. On Question 2A (Table XVI) "Why do you think this is true?" had 170 responses with 21 different answers. There were 77 of the youth who did not respond to this part of the question. The question about marketable skills that people possess to generate extra income and why they think it is true, received the following responses: 33 chose Experience, ten chose Not Enough Demand, eight chose No Time, and eight chose Not Out Of High School.

Adults on Question 2A (Table XVII) had 96 responses with 50 different answers, so each person responded almost two times (1.85) to the question. There were 15 adults who chose not to respond to the question. There were seven who chose Sewing, six chose Bookkeeping, four chose Cooking, four chose None, and four chose Welding as types of marketable skills to generate extra income. On Question 2A (Table XVIII) "Why do you think this is true?" there were 52 responses with 15 different answers. There were 27 people who chose not to respond to the question. On Question 2A on

why they think they have a marketable skill the answers were four who chose Finances, four chose Lack of Time, and four chose Not Enough Demand.

Question 3 (Table XIX) was stated as "What kinds of training or assistance do you think that the families or individuals in your local area need in order to start a business or generate some extra income?" The youth responded 231 times with 46 different answers, so each youth responded between one and two (1.42) times to the question. On the types of assistance needed, the youth chose Education 33 times, Finances 30 times, No Response 28 times, Business Management 22 times, and Bookkeeping 13 times.

The adults in Question 3 (Table XX) responded 91 times with 31 different answers, so each person responded almost two times (1.75) to the question. On the types of assistance the adults chose Financing 21 times, Education 12 times, No Response nine times, and Business Management six times.

Question 3A (Table XXI) is stated as "What kinds of training or assistance would you want before starting a business or generating some extra income?" This question had 227 responses by the youth with 41 different answers, so each youth responded between one and two (1.39) times to the question. The most common response as types of training or assistance needed was Education with 57 responses, No Response occurred 29 times, 26 chose Finances, 16 chose

Business Management, ten chose College Education, and ten chose Experience.

The adults on Question 3A (Table XXII) had 76 responses with 22 different answers, so each adult responded between one and two times (1.46) to the question. There were 11 who chose Finances, ten No Responses, nine chose Education, seven chose Bookkeeping, and six chose Business Management as types of training or assistance needed.

Question 4 was stated as "How should any of these training or assistance services be delivered, if they are to be of any use to the people in your local area or to yourself? Examples: one-on-one, in small groups, in large groups, locally, via television or interactive video, by outside experts, by local instructors or facilitators?" The youth (Table XXIII) responded to this question 230 times with 21 different answers, so each youth responded between one and two times (1.41) to the question. The most common types of assistance or services to be delivered were Small Groups with 48 responses, 41 chose Local Instructors, 34 chose No Response, 29 chose One on One, 20 chose Outside Experts, and 19 chose Large Groups.

The adults on Question 4 (Table XIV) had 92 responses with 16 different answers, so each adult responded almost two times (1.77) to this question. The most common types of assistance or services to be delivered were Small Groups with 20 responses, 11 chose Outside Experts, ten chose No Response, and ten chose One on One.

CHAPTER V

SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

Summary

The purpose of this study was to identify rural economic development opportunities, skills rural families possess, and types of assistance which would be needed to develop these opportunities as perceived by Agricultural Education students and their parents in North Central Oklahoma.

Objectives

In order to accomplish the purpose of the study these objectives were developed.

1. To identify the projects or business ventures rural families think will work.
2. To identify the skills rural families possess.
3. To identify the skills or assistance rural families desire.
4. To identify methods of developing the skills rural families desire and possess.

There were 215 youth and adults that responded to the survey from the following towns: Blackwell, Braman, Deer-Creek Lamont, Frontier, Medford, and Perry. The following towns did not respond when given this questionnaire: Covington, Garber, Newkirk, Ponca City, and Tonkawa. This survey had a number of different responses. Each person was able to respond more than once to each question or choose not to respond at all to the question.

The responses were totaled for each question and ranked in descending order with a secondary key being in alphabetical order. The total number of responses was added and then divided by the population surveyed. There were 163 youth participants and 52 adult participants. The total number of answers were added to find the different opportunities that the youth and adults discovered.

Summary of Findings

Through analysis of the data collected and presented in this study, there are some findings that can be suggested about the possibilities of rural development. The tables were broken down by youth and adults and the findings are the most popular responses according to each table. In Tables V and VII (Distribution of Youth/Adult Respondents by Community on Types of Businesses Needed but Which do not Exist at the Present Time), the most common response given was Restaurant. A Clothing Store and Auto Parts Store respectively were the next most common responses for the

Youth. The next most common response for the adults was a Hardware Store and then a Clothing Store.

Tables VI and VIII (Distribution of Youth/Adult Respondents by Community on Types of Businesses Needed but Which do not Exist at the Present Time by Retail, Service, and Manufacturing), the most common response for the youth and adults in the Retail category was a Restaurant, next being a clothing store. In the Service category the youth would like to see a Recreation Hall, the next most common responses were Fast Food and a Sale Barn. The adults in the Service category chose Car Wash as the most common response; next was Appliance Repair followed by Laundry Mat. In the Manufacturing category the youth chose Industry as the most common response, the next being Bakery and then Power Plant. The adults in the Manufacturing category chose a Manufacturing Company as the most common response, followed by Industry, Machine Shop, and Recycling Center.

Tables IX and XI (Distribution of Youth/Adult Respondents by Community on Kinds of Businesses They Have Considered Starting or Running), the most common response given was a Restaurant for both the youth and adults. Clothing Store was the next most common response for the youth, while the adults chose a Car Wash and Craft Shop. The third most common response for the youth was a tie between Welding Shop and Sporting Goods.

Tables X and XII (Distribution of Youth/Adult Respondents by Community on Kinds of Businesses They Have

Considered Starting or Running by Retail, Service, and Manufacturing), the responses between the youth and adults were similiar in the Retail and Service category but the adults had more ideas in the Manufacturing category. In the Retail category the most common response for the youth and adults was a Restaurant. The second most common response for the youth was a Clothing Store, and Sporting Goods. The second most common response in the Retail category for the adults was Craft Shop and Clothing Store. In the Service category the most common response for the youth was Welding Shop, followed by Lawn Mowing, Farm/Ranch, and Service Station. The most common response for the adults in the Service category was Car Wash, followed by Service Station and Welding Shop. In the Manufacturing category the youth and adults both picked some major manufacturing company as the most common response.

In Tables XIII and XIV (Distribution of Youth/Adult Respondents by Community on Kinds of Marketable Skills Individuals and Families Possess but do not Use), the responses between the youth and adults were similar with welding being the most common response as a marketable skill that people in the area possess. Cooking was the second most common choice for the youth but for the adults the choice was sewing. Computer Training was the third most common choice for the adults, while crafts was for the youth.

Tables XV and XVII (Distribution of Youth/Adult Respondents by Community on Kinds of Marketable Skills That They have to Generate Extra Income but do not Use), illustrate the responses between the youth and adults were different in that youth chose Welding as the most common response while the adults chose Sewing. The second most common response for the youth was Cooking while the adults chose Bookkeeping. The third most common response for the youth was Mechanic while the adults chose Cooking, None, and Welding.

On Question 2A "Why do you think this is true?" for Tables XVI and XVIII the responses were similar between the youth and adults. These ideas correlate with Question 2 and the responses are related to those answers in the previous question. The youth chose Experience as a marketable skill to generate extra income and the adults chose Finances, Not Enough Demand, and Lack of Time. The second most common response was Not Enough Demand by the youth and Experience by the adults.

In Question 3 for Tables XIX and XX (Distribution of Youth/Adult Respondents by Community on Training or Assistance that Others Need Before Starting a Business), the most common responses for the adults and youth were very similar for the types of assistance others need before starting a business. The most common response by the adults was Financing and the youth was Education. The second most common response for the youth was Financing and for the

adults was Education. The third most common response for the adults and youth was Business Management.

Tables XXI and XXII (Distribution of Youth/Adult Respondents by Community on Training or Assistance That They Need Before Starting a Business) relate to Question 3A. The most common response for the youth was Education, similar to the question in Table XI where the most common response was Education. The most common response for the adults was Finances with second being Education and third being Bookkeeping. The second most common response for the youth was Finances, with third being Business Management and others following such as Bookkeeping, College Education, and Experience.

Question 4, Tables XXIII and XXIV (Distribution of Youth/Adult Respondents by Community on How the Training or Assistance Should be Delivered), dealt with the needs of people in the local area. The youth and adults had similar answers with the most common response for both being Small Groups. The second most common response for the youth was Local Instructors, while the adults chose Outside Experts. The third most common response for the youth and adults was One on One.

Conclusions

In the analysis of the data collected and presented in this study, there are some conclusions that can be suggested. The people in the Kay Electric Cooperative

service area have a wide range of ideas to generate extra income or start a business.

The youth and adults had many ideas about businesses to generate extra income but many of them were retail and service businesses. In order to have successful retail and service businesses there must be a proper population base. There are many ideas on how to create jobs for the population base but manufacturing will bring people to the communities, and then the service and retail businesses will follow.

Perhaps some of the welding opportunities can be explored for a manufacturing company because it seems that many of the people know how to weld. If a Machine Shop were put in, products could be made to export out of Oklahoma. The Fence Post factory was another idea for a way to use the natural resources in the community.

Some of the participants chose not to participate in the survey by not responding to the questions. The areas in which the response rate per question was down were in the Perry youth and the Blackwell adults.

We might conclude that the reason many of the youth had a high response in welding is that they are in the shop during Agricultural Education class. This could also be an opportunity for a manufacturing company that needs employees who can weld.

Whenever the Kay Electric Cooperative has a service program on rural development strategies the presentation

should be done by Outside Experts for the adults, although the youth prefer Local Instructors 2:1 over Outside Experts and this may be out of respect for their teachers.

Recommendations

The author feels that the Kay Electric Cooperative should develop some instructional programs and present some seminars on rural development strategies. The people in these towns want information on how to keep the money they spend in their home communities. Based on the results of this study the following recommendations are presented:

1. Conduct a program on how to increase existing rural business developments.
2. Develop programs to better use available Financial Management sources, Business Management, and Marketing for Rural Development.
3. Look at possible opportunities to incorporate the participants' experiences into the development programs.
4. Conduct a program on Home Economics to develop Cooking and Sewing skill and a Marketing program in order to better utilize these skills.
5. Develop different kinds of programs for adults and youth using different instructors.

APPENDIXES

APPENDIX A

LIST OF QUESTIONS AND AREAS

FFA/YF RURAL ECONOMIC DEVELOPMENT SURVEY

Schools in rural Oklahoma surveyed by area:

- (A-1) Blackwell
- (A-2) Braman
- (A-3) Deer Creek-Lamont
- (A-4) Frontier
- (A-5) Medford
- (A-6) Perry

This was a consolidated list of survey questions as ask to respective towns listed above:

1. What kinds of businesses do you think are needed in your local area that do not exist there now?
 - 1a. What kinds of businesses have you imagined that you could start or run?
2. What kinds of "marketable" skills do you think the individuals and families in your local area could use-- to generate extra income but do not or, for some reason, cannot use?
 - 2a. What kinds of "marketable" skills do you have that could generate extra income that you do not or, for some reason, cannot use?

Why do you think this is true?
3. What kinds of training or "assistance" do you think that the families or individuals in your local area need in order to start a business or generate some extra income?
 - 3a. What kinds of training or "assistance" would you want before starting a business or generating some extra income?
4. How should any of these training or "assistance" services be delivered, if they are to be of any use to the people in your local area or to yourself?
Examples: one on one, in small groups, in large groups, locally, via television or interactive video, by outside experts, by local instructors or facilitator?

APPENDIX B

SURVEY AND INSTRUCTIONS

FFA/YF RURAL ECONOMIC DEVELOPMENT SURVEY

Survey Instructions

1. This survey is intended for FFA and YF members, as well as their families and acquaintances.
2. Please scan the examples below.
3. The survey begins on page 2. Note the "open" spaces provided for your comments. Provide more than one comment or answer to each survey question.
4. The responses to this survey will remain confidential, and you will not be asked to identify yourself in any way.
5. After completing the survey, return it to your FFA or YF advisor.

Example Survey Items

Example Survey Question 1.	What kinds of businesses are needed in your area that do not exist there now?
Example Response:	Parts store, implement repair, commodity/futures trading, bookkeeping service, self-insurance service, marketing services, children's clothing, fabric store, etc.
Example Survey Question 2.	What kinds of "marketable" skills do you have that you do not (or cannot for some reason) use to earn extra income?
Example Response:	Welding, mechanical repair, canning, cooking, trucking, commercial construction, computer bookkeeping, etc.

1. What kinds of businesses do you think are needed in your local area that do not exist there now?

Response:

- 1a. What kinds of businesses have you imagined that you could start or run?

Response:

2. What kinds of "marketable" skills do you think the individuals and families in your local area could use to generate extra income but do not or, for some reason, cannot use?

Response:

- 2a. What kinds of "marketable" skills do you have that could generate extra income that you do not or, for some reason, cannot use?

Response:

Why do you think this is true?

3. What kinds of training or "assistance" do you think that the families or individuals in your local area need in order to start a business or generate some extra income?

Response:

- 3a. What kinds of training or "assistance" would you want before starting a business or generating some extra income?

Response:

4. How should any of these training or "assistance" services be delivered, if they are to be of any use to the people in your local area or to yourself? Examples: one on one, in small groups, in large groups, locally, via television or interactive video, by outside experts, by local instructors or facilitators?

Response:

5. Please check the appropriate descriptions:

_____ FFA member

_____ Male

_____ YF member

_____ Female

_____ Parent or spouse

_____ Other

_____ Live in town

_____ Live in the country
