| Norman N Durha                      |

## ACKNOWLEDGMENTS

The researcher wishes to express her appreciation to her major adviser, Dr. Grovalynn Sisler, for her guidance and assistance throughout this study. Appreciation is also expressed to the other committee members, Dr. Kathryn M. Greenwood and Carolyn Flowers, for their invaluable assistance in the preparation of the final manuscript.

A note of thanks is given to the Tulsa City-County Central Library reference personnel, to the University of Tulsa library and to the Oklahoma University Bass Collection personnel for their aid in making available copies of the Sears Catalog.

#### CHAPTER I

## INTRODUCTION

In the twentieth century, welfare and development of children have become important issues. Much effort has gone into understanding children's behavior and providing an environment that allows maximum growth and development.

When studying children it is important to consider all aspects of their growth and development in order to fully understand and help them in the process of becoming adults (Williams, 1978). Clothing is an important factor influencing the development of children. According to Jaffe (1972, p. 11) "it is widely believed that clothing affects the social behavior of children—the assumption being that the boy who is dressed like a gentleman will behave like one." Many people also believe that wearing similar clothes to that worn by peers gives a sense of security (Jaffe, 1972).

Clothing alone may not affect behavior; however, when seen in relation to social, psychological and physical factors, clothing plays an important role (Williams, 1978). According to Warner (1949, p. vi) "what a woman buys to furnish her house and clothe her family is highly controlled by her social-class values." In America from the 1940s on, the middle class has steadily increased compared to the upper and lower social classes. The middle class has great influence on the American culture and is "largely responsible for the great productivity that

characterizes the nation as a whole" (Horn and Gurel, 1981, p. 274). Clothing can be an important tool in understanding the history of any social class of people, and has been recognized as important evidence of material culture (Frye, 1977).

A historic costume collection containing garments from the latter part of the nineteenth century is housed in the Department of Clothing, Textiles and Merchandising at Oklahoma State University. Several research studies have been conducted in an attempt to establish correcting dating of the garments in the collection, suggest adequate storage and help make the collection as useful as possible for educational purposes. These studies included research on undergarments, shoes, lace and hats (Carr, 1971; Tammen, 1973; Crabtree, 1979; Ridley, 1981). The collection includes children's clothing; however, no attempt has been made to properly catalog, date and store the clothing. The research was undertaken in an attempt to add to the usefulness of the collection.

Very few studies have been conducted dealing specifically with children's clothing. A series of three research studies were done at Cornell University by Carpenter (1948), Clifford (1957), and Stroup (1967) covering the years 1850-1941. Other studies were done by Moase (1972) at Iowa State University who studied children's clothing from 1894 to 1914, and by Helvenston (1975) at Florida State University who covered the period 1841 to 1885. The researcher was unable to find any studies dealing exclusively with children's clothing from 1941 until present day. The literature available on the subject deals primarily with the years prior to 1930 and only briefly mentions the following years.

## Purpose

The purpose of the study was to describe dresses of girls from middle class families during the years 1941 to 1980. The objectives of the study were:

- 1. To identify the variations in the modal design components of dresses available for young girls during 1941-1980.
- 2. To determine the frequency of variations in modal design components, fabric design and fiber content of the dresses shown for each year.
- 3. To make recommendations for using the information in the study to date girls' dresses in the historic costume collection in the Department of Clothing, Textiles and Merchandising at Oklahoma State University.

#### Limitations

The following limitations were identified.

- 1. The modal design components studied were limited to components of dresses available for young girls (size 3-14).
- 2. Due to the lack of availability of actual garments, the study was limited to only photographs or drawings of garments.

## Definition of Terms

Middle Class: Comprised of two distinguishable segments: an upper-middle class of professionals, proprietors, and managers, who generally have at least some college training, and a lower-middle class of small shopkeepers, clerks and salespeople, generally with less education (Kohn, 1969, p. 12).

Modal Design Component: The construction or applied design features that are distinctive as a part of a designated style (Burns, 1982, p. 117). Modal design components in this study include bodice, neckline, collar, waistline, skirt, hemline and sleeves.

Young Girls: Girls who wear size 3-6 (small) and size 7-14 (large).

#### CHAPTER II

## REVIEW OF LITERATURE

Very few research studies were available in the area of children's clothing, and most books on history of costume include the clothing of men and women but not children. The review of literature was divided into two major topics: the history of children's clothing, and research methodology in historic studies on clothing.

## The History of Children's Clothing

The history of children's clothing actually does not begin until the middle of the nineteenth century. Not until then did children wear clothes that were designed especially for their age and with their activities in mind. What children were was very closely related to how adults thought of them. Children were not recognized as unique individuals with their own personalities, and they were either ignored or thought of as miniature adults. According to Laver (1969, p. 128) "One of the objects of children's costume was to maintain, if not to provoke, a certain pride in dress; i.e., to indicate to the world at large the social status of the parents."

Prior to the 1800s children began adult life at an early age and it was not unusual for them to be put to work at the age of six or, if they came from a wealthy family, to be required to study seriously with tutors from the age of three (Wilcox, 1963). The children's "adult" life was reflected in their clothing. The styles and fabric were

identical to those of their parents except when certain details were considered superfluous. The idea that "children should be seen and not heard" prevailed until the middle of the nineteenth century (Macquoid, 1923). Thus, the history of children's costume closely followed the history and the eccentricities of adult clothing until the late 1800s.

There was one exception to the rule that adults and children were dressed alike and that pertained to infant wear. From the beginning of the Christian Era, and probably before then, until well into the eighteenth century, infants were swaddled in tight bands from the moment they were born until they became big enough to learn to walk. It was believed that the tight binding would protect the child from falls and other accidents and would straighten the legs and arms. Thus, children spent their first years in complete denial of physical freedom, which inhibited natural health growth (Ewing, 1977).

For adults and children alike the principal garment prior to the fourteenth century was the tunic. It had developed from the Greek chiton and the Roman toga, both made from a long draped piece of fabric held together by metal pins (Style Cycles--The Children, 1954). The tunic allowed for considerable freedom of movement as the only close fitting part was the girdle or belt at the waist.

As women's dress became shaped to the waist in the fourteenth century, so did girls'. This shaping was the start of the cycle of fashion in the present era. As men's dress from this time also became more elaborate and developed a complex and spectacular history, boys likewise followed their fathers (Ewing, 1977, p. 24).

However, boys were not always dressed like their fathers. Instead, small boys, according to Wilcox (1963), were dressed like their sisters in an ankle length dress until the age of six. The only way to tell them apart was by name. Over the dress both wore a pinafore often made

of sheer linen with embroidery and lace. At six or seven the boy was then "breeched" and became a man; a proud family occasion.

## Changing Ideas on Children and Their Clothing

The crusaders began to travel in the fifteenth century, thus increasing the trade and communication between the East and the West. As they brought back new things and ideas, the interest in clothing grew (Style Cycles—The Children, 1954). The merchants became wealthier as the trade grew and they could now afford to dress their families more elaborately. Most of the information about what clothes they wore came from the paintings of their families as well as the royal families. The paintings do not tell the full story, however, as they only portray children of the upper class dressed in their best (Macquoid, 1923). Most people lived in rural areas and their children were probably dressed in simple, comfortable peasant dress (Ewing, 1977).

The boys continued to wear what their fathers wore. Their garment consisted of doublets, sleeveless jerkins, trunk hose and knee-length balloon-shaped venetians. They were worn with feathered hats and neck ruffs. The girls followed their mothers and wore long stiffened Elizabethan bodices, complete with stomachers and whalebone corsets. They wore high ruffs and decorative headwearings. The garments for both sexes were made of silk, satin, velvet and brocade in primarily dark colors; green and brown (Wilcox, 1963). More than likely, these types of garments were worn on special occasions (such as sitting for a painting). Their daily clothes were the same styles but less elaborate. The girls probably suffered more from wearing this type of clothing than the boys. They were forced to wear the tight corsets all day and often at night too, in order that they grow up with the slender waist that was so

admired (Laver, 1969). The styles of dress changed little during the seventeen and eighteen hundreds, although the trend was toward greater ease and freedom and less rigidity.

One of the first to be against children's tight clothing was John Locke. He especially protested the practice of swaddling infants (Gay, 1964). He was one of many educationalists who were concerned about the health of children, but it was not until Rousseau published his book, Emile, that parents accepted the idea that perhaps children were different from adults and should therefore not be made to behave and wear the same clothes as adults (Ewing, 1977 and Laver, 1969). During the decades around 1700, several changes came about in children's costumes, the most significant being that children no longer wore the cumbersome dress of adults. Little boys were now "breeched" earlier and began to wear the more comfortable trousers instead of the tight fitted breeches. Trousers had been considered only fitting for the sailors and people of the lower classes, but by wearing trousers, boys introduced a fashion that their fathers would later adopt (Laver, 1969). Girls were also "freed" by the liberation and were relieved of their restricting stay. They now wore a loose dress of muslin with round neck and loose sleeves with only a soft sash at the waist to fit the dress (Wilcox, 1963). They also began to wear pantalets. These looked much like the trousers the boys wore and shockingly revealed that girls had legs, too.

Possibly for the first time in history, fashion in children's wear proceeded fashion for adults. Forty years after boys started to wear trousers, their fathers followed suit. After pantalets gained acceptance for girls, women gradually followed and made them an adult fashion, too. As mentioned by Martin (1978), this pattern was to continue.

The straw boater or sailor hat worn by children as early as 1780 became fashionable for adults in 1890. The soft turned—down collar worn by boys in the 1870s became fashion for men in the 1920s. . . . Little girls wore a pigeon-breasted look with gathers and fullness from the chest to a very low waist in 1888. In 1903 the pigeon-breast appeared in women's bodices. In 1885 little girl's fashion placed the waist at the hip level. Thirty-five years later in the early 1920s the adult woman's waistline was at the hip (pp. 7-8).

## Industrialism and the Years Leading Up to It

In the late eighteenth century the so-called fashion plate was introduced. From then on, year for year accounts are available of what children and adults wore. The children's clothes continued to be sensible into the nineteenth century. Soft fabrics and light colors were used for both sexes, but this was not to last long (Laver, 1969).

Girls suffered the most. The skirts became fuller, and the waist tighter and tighter. To make the skirt full, several petticoats were worn. Tight lacing became common from early childhood, and the bodice was fitted with rows of tucks. Leg o'mutton sleeves added fullness to the bodice and pantaloons added interest to the legs. The hats were equally elaborate, decorated with as many bows as they could hold. The cottons and muslins gave way to organdy, gingham and taffeta often decorated heavily with ruffles, ribbon, embroidery and trimming (Wilcox, 1963). Even the footwear became tighter and heavier. "Instead of the comfortable pump-style shoes of earlier days they wore tight buttoned or laced boots" (Ewing, 1977, p. 70). The clothes were no longer light and loose, but heavy and restrictive of movement.

Then in 1840, the crinoline was invented. It was light weight and gave some relief from the oppressive petticoats, but it did not last long. In the 1860s, it became fashionable to draw fullness to the back thus creating the bustle. Whereas the crinoline had given little

girls freedom to run about, the bustle inhibited any movement of the legs (Laver, 1969).

Ewing (1977) suggested that perhaps the everyday dress was less elaborate and cumbersome, like the dress worn by "Alice in Wonderland," than that shown on fashion plates of girls dressed in their best for the occasion.

She wears a simple dress with a plain bodice and a straight full skirt with some rows of tucks at the hem, to allow for her growth. The dress has short puff sleeves and a tiny turn-down collar. Over it goes a pinafore, also with small sleeves, plus two pockets. Her hair is simply brushed back, uncurled . . . (Ewing, 1977, p. 97)

For home, school and play the apron or pinafore was an important part of the costume. For special occasions, the apron was made of sheer fabric decorated with lace and embroidery (Wilcox, 1963).

In the 1820s, it had again become popular to dress little boys in dresses. At first, they were simple dresses worn with pantaloons showing, but little by little, they became increasingly elaborate. Long hair for girls was fashionable again often topped with hats decorated with flowers and feathers. While the elaborate fashions would follow a girl all her life, the boys escaped their girlish dresses as they grew up and instead wore a loose and comfortable tunic over their trousers. The tunic became everyday wear for wealthy as well as peasant boys in the 1840s and 1850s (Ewing, 1977).

The industrialism had its effect on clothing, too. Ready-made clothing was first produced for men. The infrequent fashion change in men's fashion made that possible, but the manufacturers soon realized that they had a new market in boy's ready-made clothes. By 1820, several New York firms sold a variety of fashions for boys. One example is Oak Hall Department Store opened by George Simmons in 1841. He

devoted an "entire spacious rotunda to boy's clothing only" (Kidwell and Christman, 1974, p. 54). The favorite style of little boys was a dark suit with a straight short jacket. Often collarless, the jackets were buttoned at the neck and sometimes edged with braid (Ewing, 1977).

Americans had always followed the fashions of Europe and even imported many of their clothes. But in 1860, the picture changed. American boys were wearing knickerbockers (trousers cut off and gathered at the knee), and the idea spread to Europe. The knickerbockers were worn with various jackets, but most commonly with the Norfolk jacket which had box pleats down the sides, an encased waist belt and a white Eton collar (Ewing, 1977).

Other fashions for boys included dressing them in "historic costumes" as Julius Caesar or international costumes as Turks. For a while, the Scottish cap and tartan kilt were popular. The fashion that was to last the longest (until the First World War) was that of dressing little boys in sailor costumes (Laver, 1969). This influenced the girls' dress and the sailor costume became popular among them, too, except the long pants for boys were exchanged for a kilted skirt for girls (Wilcox, 1963). The sailor suit was a welcome relief from the otherwise tight clothes worn by both boys and girls.

## New Attitudes Toward Education

In the beginning of the twentieth century, it was predicted that this would be "the century of the child." Man began to think of his origins focusing on the development of the child. Many questions were asked about what made each individual unique and the discussion of "nature versus nurture" was launched. Attention was especially focused on education. The Standford-Binet IQ-test was developed and highly

welcomed. Now a tool was available by which children could be classified and teachers would be given clues about how to most effectively teach the children. But instead of individualizing the education, school became more rigid. Children all entered school at the same age and moved regularly from grade to grade. Then came John Dewey, introducing "a theory of progressive education in which school was a satisfying experience in itself as well as a processing plant for future citizens" (Greenleaf, 1978, p. 129). His child centered approach stressed the importance of allowing the child to "express himself." Discipline was minimized and an effort was made to make the environment more inviting to children. The classroom was decorated with the children's own art work and special emphasis was put on entertaining the children while they were learning in the form of music and art classes and trips to museums. In 1960, the theory of the open classroom, developed primarily by Jean Piaget, was introduced in the United States. He said that children learn differently from adults and should not be taught the same way. Instead, they should be allowed to discover knowledge. The classroom became an "activity center" (Greenleaf, 1978).

Childrearing practices in the twentieth century have to a large degree followed the development that took place in education. For centuries, it was the children's duty to serve their parents who had the right to control the children. When behaviorist psychology was introduced, childrearing focused on the children's wants rather than the parent's wants. Permissiveness followed strict upbringing and was based on Freud's theory "that the less society blocked a child's desire, the better his chances were for becoming a happy, well adjusted adult" (Greenleaf, 1978, p. 142).

The new attitudes affected children's clothing. According to Ewing (1977, p. 135) "Kid's clothing from about the second decade of this century, meant something new; a carefree, gay comfortable way of dressing that was to affect all fashion."

Children's dress was now designed with children in mind, and was simple and childlike. Girls wore dresses that covered the knees and had a low waistline. Three styles of dresses were especially popular: the sailor outfit, the Russian tunic with a pleated skirt, the jumper dress worn over a thin blouse. And instead of drawers and petticoats, after 1908, the bloomers were worn (Wilcox, 1963). Little boys, too, continued to wear the sailor suit and the new Buster Brown suit. Buster Brown was a cartoon figure popular first in 1908. The suit consisted of "bloomer-style, wide, knee-length pants, a double-breasted hiplength belted jacket with a round neck, worn with a wide starched collar and a flappy bow. . . " (Ewing, 1977, p. 140).

## The War and After-war Years

Then came World War I in 1914. At the beginning of the war, children were dressed stiffly, but when it ended, they were dressed in loose and easy clothes. Because of the difficulty of getting starch, the collars were soft and not stiff as they had been earlier (Laver, 1969). Knitting was popular during the war and continued to be afterwards. Especially popular were the soft knitted sweaters and caps for both boys and girls.

Children's clothes for the 1920s remained unchanged, except for the fact that both skirts and shorts grew shorter and shorter. Boys were wearing flannel, tweed and serge suits, while girls wore flowered, striped and dotted dresses. Both boys and girls wore short hair and white ankle-length socks. There was one new trend, however. The American clothes manufacturers, now more than ever before, seized the opportunity to mass produce children's clothing. This led to simple and moderately priced fashions.

The wardrobe of the well-dressed child in the 1930s consisted of tailored garments (the Channel suit for girls and the Eton suit for boys), play and sports clothes. Also, corduroy was used but mainly in shorts and trousers for school. Shirley Temple influenced girl's looks more than anything else at the end of the 1930s and beginning of the 1940s. The world wide famous child-star dominated the entertainment world, and her clothes were copied everywhere. Her curly hair and red and white polka-dot dress, called the Shirley Temple dress, became mass fashion. This fashion was the first to be created by a child for children (Ewing, 1977).

The clothing styles of the 1940s had changed little, except that when the United States entered World War II, rationing was introduced. This made life harder for the parents, but encouraged straight-forward design. Eliminating fussy trimming may have benefitted children, who were then dressed in much simpler clothes (Ewing, 1977). Thomson and Rea (1949, p. 3) emphasized that simpler clothes may be best for children and recommended "simple designs, easy of cut /and/ ample in fullness for stooping, reaching and growth." In 1947, the scarcity of material ended, which provided for the "New Look" in women's dresses. It undoubtedly had an effect on children's clothes, too, in terms of variety.

What changed fashion even more for adults as well as children, was the introduction of new synthetic fibers. Nylon and rayon had already been developed, but in the 1950s, acrylic, polyester and textured

nylon fibers revolutionized sports and everyday wear (Black and Garland, 1980). The importance of this development was discussed by Truman (1966, p. 130): "Their advent, added to the proliferation of chain stores selling the latest fashions in good quality at low prices, meant that almost anyone who wished could always be in height of fashion."

## The Trend Toward Casualness

While the "New Look" brought full, crisp petticoats, full gathered skirts and pleats, these years also brought an intensified casualness to children's clothes. "Shorts, slacks, bright sport shirts, blue jeans and Western fashions—transmitted through TV—all became top of the mode" (Style Cycles—The Children, 1962, p. 41). Probably the biggest fashion for boys was the Davy Crockett Western outfit and hat inspired by the Walt Disney film of 1955 which was shown on television all over the world. To provide skins for the hat, many a domestic cat gave his life. The outfit was significant in that it was the first time that children had asserted their right to choose what they wanted to wear, and in addition, it was classless and purely American (Ewing, 1977).

By this time, young people had become big business for the clothing manufacturers and other manufacturers dealing in objects of interest to the young. The manufacturers used children for commercial purposes and the children learned to take advantage of it. Bender (1967) said:

It all adds up to money and the kids get the idea. The people whom grown-ups look up to these days are not only rich but lux-uriously packaged. Youngster's idols, from Bobby Kennedy to the Beatles and their proliferating imitators, are well endowed with coin of the realm and call attention to themselves with distinctive clothes and hairstyles. Money is power, children learn by observing adults and putting what they learn to practice (p. 248).

In the 1960s, the trend was toward higher fashion and style in

children's clothing. They knew what they wanted, they wanted new styles, and their parents had the money to pay for it (Anspach, 1967).

In the 1960s, Caroline and John F. Kennedy, Jr. were the big idols. The way John, Jr. was dressed especially had a great influence on boy's fashions. His costume consisted of a tweed coat, a shetland sweater and flannel shorts. Toward the end of the 1960s, through the 1970s and into the 1980s, the most visible fashion item was the blue jeans for both sexes, all ages and all income levels. Everybody wanted jeans and even little boys were concerned about the cut of the legs and the type of pocket on the jeans (Ewing, 1977).

In the 1970s, the fashion went more toward the unisex look, for adults as well as children. Vivid colors were used more in boy's clothing than they had been before, including big floral prints and rich colored geometric patterns. Separates for girls and women were seen more and more; instead of a dress, a skirt, a shirt and a cardigan or jacket were worn (Black and Garland, 1980). Fashion changed quickly. Earlier, only one line a year had been presented by the manufacturers, but now they showed several each year; a line for each season and one for the Christmas Holidays (Ewing, 1977).

Today, clothes are classless more than ever before, and the trend has been toward simpler and more casual clothing. Bib overalls and jeans are everyday wear as are T-shirts and athletic shoes. Martin (1978) described the situation:

Children at a concert or in the library seem to be outfitted more to climb a mountain or tend a flock of goats. These clothes express their value of the solid and earthy and their lack of concern for a sharp press and any clothing that hampers a spontaneous walk in the mud. It is also a nostalgic return to simpler times (p. 10).

This nostalgic return to simpler times has taken a different form in

1982. The most popular fashions are western wear for boys and girls and a return to the laces, ruffles and high collars of the 1900s for girls.

## Research Methodology in Historic Studies on Clothing

A search of the literature revealed that Young (1937) and Krober and Richardson (1940) were some of the first to develop and use the quantitative analysis of dress. They used the quantitative analysis to demonstrate that shifts in the comparative proportion of women's dress design over time have tended to come in cycles and recur consistently and regularly.

Young (1937) followed several steps. First, the source was selected from which the data was to be collected. Secondly, a method was developed for identifying the typical fashions of each year and a tally sheet was prepared. The sheet was divided into squares, each row of squares across the sheet representing one year. Above the top row of squares, little drawings were made; one drawing for each new skirt style encountered in the magazine. The skirts for each year were then tallied as they appeared until a total of 50 was reached. The same procedure was followed for other parts of the dress such as the bodice and sleeves. Thirdly, when the fashion for each year had been tallied, the dominant type of any part of the garment for each year was selected. By assembling the parts, the researcher was able to find the typical dress of that year. Next, by looking through the magazines. a dress was found which combined, or most nearly combined in itself, all the parts which were characteristic of that year. That dress was considered the typical dress for its year. The dresses selected to

represent all years were then placed in chronological order, and the evolution of fashion could be studied in detail.

Kroeber and Richardson (1940) followed a procedure similar to that developed by Young (1937). They studied six features of dress; three vertical and three horizontal measures of the skirt, the waist and the decolletage. All measures were made on fashion plates from various sources. Only front view or nearly front view figures were used whenever possible. The data obtained from the measurements were first converted into percentages of the total figure and then reduced to one mean for each dimension in each year studied. These means were combined into averages for ten-year periods to give a better overview of the data. A moving average showing the trend was determined combining the average values for 1848, 1849, 1850, 1851 and 1852 into one value for 1850. A moving average was calculated for each year. "In this way, the 'exceptionalness' of any single year is minimized by its being merged with the years on either side and a smoother curve results" (Kroeber and Richardson, 1940, p. 120). The data were interpreted descriptively and periodically to determine the duration of each fashion dimension.

Greenwood and Murphy (1978, p. 258) combined the methods used by Young (1937) and Kroeber and Richardson (1940) into three major steps in "The Process of Quantitative Analysis of Women's Dress Styles":

- 1. Securing the resource materials.
- 2. Deriving the annual representative women's dress styles.
- 3. Analysing selected dimensions of the modal components of the annual representative women's dress styles.

The process of quantitative analysis was used by Ridley (1981) and Burns (1982). The purpose of Ridley's study was to identify distinguishable characteristics of American women's hats, 1900 to 1950, and to

develop a procedural model to be used in classifying and cataloging historic hat collections. Burns used the quantitative analysis to "in-vestigate the dimensions in the fashion diffusion process for women's daytime dress during the period 1930-1979 in the United States" and to "examine the relationships between the progressive stages in the fashion diffusion process" (Burns, 1982, p. 3).

Stroup (1967) investigated the clothing available for children in America from 1930 to 1941. Outerwear for girls and boys age one to ten was studied using illustrations from <u>Sears</u> and <u>Best Catalogs</u> of spring and back-to-school fashions. Tabulation sheets were designed in order to determine the frequency of the garment silhouette, decorative detail, fabric and color.

Moase (1972) examined boys' and girls' (age two to eight) clothing during 1894 to 1914 as illustrated in the <u>Delineator</u>. The objectives of the study were to compare the silhouette, style, fabric, color, trim and length of costume. Ten illustrations for girls' costume and ten for boys' from the <u>Delineator</u> were studied for every even numbered year. A data sheet was developed including year and month of illustration, gender of child, checklist of costume items, proportion of child's figure, and information on occasion, season, fabric and trim. Observations from each year were discussed for boys and girls separately, and composite drawings were prepared for each year studied.

Helvenston (1975) recorded American children's costume in the period 1841-1885 and studied various aspects of the child's role in society at that time. She described the total costume of boys and girls ages one to twelve as depicted in <u>Godey's Lady's Book</u> and <u>Peterson's Magazine</u> noting garment types, style, color and fabric. Only fashion plates showing the costume clearly and in front view were used

whenever possible. Seasonal variation, garment characteristics and costumes particular to certain age groups were determined. The information was reported in narrative form.

#### CHAPTER III

## METHODS AND PROCEDURE

The purpose of the study was to describe dresses of girls from middle class families during the years 1941 to 1980. The objectives of the study were:

- 1. To identify the variations in the modal design components of dresses available for young girls during 1941-1980.
- 2. To determine the frequency of modal design variations, fabric design and fiber content of the dresses shown for each year.
- 3. To make recommendations for using the information in the study to date girls' dresses in the historic costume collection in the Department of Clothing, Textiles and Merchandising at Oklahoma State University.

The materials studied consisted of pictures of clothing for young girls. Clothing for children under three is considered infant wear and is generally not included under children's wear in the <u>Sears Catalog</u>. The most commonly used size ranges for children in the catalog were size 3 to 6 and size 7 to 14. Although children over twelve years of age tend to wear clothing very similar to that of adults, most styles came in size 7 through size 14. The study thus covered both size ranges.

## Selection of Source

The Sears Catalog was chosen as a representative source of

children's clothing from 1941-1980 for the following reasons.

- 1. It is geared to middle income families (<u>The Story of Sears</u>, Roebuck and Co., 1961, p. 1).
  - 2. It had continuous circulation during the period 1941-1980.
- 3. It was available throughout the country and was nationally representative.
- 4. It included drawings or photographs of children's clothing together with descriptions of the garments. Photographs showing girls' garments were used only if they were full length and were front standing views showing the garment clearly with lines easily distinguishable.

The issues of the <u>Sears Catalog</u> studied were the Spring/Summer issues for the odd numbered years (i.e., 1941, 1943, 1945, etc.) and the Fall/Winter issues for the even numbered years (i.e., 1942, 1944, 1946, etc.). After a preliminary study, it was determined that style changes would occur gradually during a two year span. It should therefore be sufficient to study the Spring/Summer and Fall/Winter clothing every other year.

#### Tabulation of Data

A work sheet was adapted from several used previously in other studies (Stroup, 1967; Moase, 1972; Helvenston, 1975; Ridley, 1981; Burns, 1982). The apparel characteristics under investigation were divided into seven modal design components (bodice, neckline, collar, waistline, skirt, sleeves and hemline), fabric design and fiber content. A tally sheet was developed for each year listing the variations for each modal design component. Tabulation of the yearly frequency of each variation of the seven modal design components, fabric design and fiber content during the forty year period indicated the life span and

recurrence of the variations.

In order to clearly identify different variations of a modal design component, a glossary of terms was developed. Variations encountered in the catalog but not included in the glossary were sketched on the tally sheet to clearly identify the variation. A new sketch was made each time a new variation was recognized in sampling the data. The variation was then added to the glossary (Appendix A). The variations in the fabric design and fiber content categories were determined by those fabric design and fiber names used in the Sears Catalog or identified through careful examination of the photographs in the catalog. The tally sheets thus portrayed the trend of the stylistic changes in the modal parts of girls' dresses year by year.

In addition, a tally sheet for the number of dresses, pants, skirt and jumper outfits shown each year was developed. This provided means of determining the proportion of dresses shown in relation to pants, skirt and jumper outfits in the catalog. The two size ranges (size 3-6 and size 7-14) were treated separately in order that they could be compared for similarities and differences. There were thus forty tally sheets (one for each year) plus one for the number of dresses, pants, skirts and jumper outfits shown each year for each size range.

## Analysis of Data

The years 1941-1980 were divided into four ten-year periods (1941-1950, 1951-1960, 1961-1970, 1971-1980). For each period, tabulations were made on the frequency and percentage of variations in the modal design components, fabric design and fiber content, and on the frequency and percentage of dresses in relation to pants, skirt and jumper outfits.

In order to make the study usable in the historic costume

collection in the Clothing, Textiles and Merchandising Department, composite line drawings of the styles shown most frequently for each ten-year period were included in the study. This should aid in dating girls' dresses in the historic costume collection.

#### CHAPTER IV

## FINDINGS AND RESULTS

The purpose of the study was to describe dresses of girls from middle class families during the years 1941 to 1980. The discussion of the findings and results were divided according to year and size range. The years 1941-1980 were divided into four ten-year periods (1941-1950, 1951-1960, 1961-1970, 1971-1980) and discussed separately for each of the two size ranges. For each period, the number and percentage of dresses and other garments in the <a href="Sears Catalog">Sears Catalog</a> and the number and percentage of variations of modal design components, fabric design and fiber content were presented and discussed. Composite line drawings for each ten-year period were presented.

## The Years 1941-1950

The following is a discussion of the dresses shown in the <u>Sears</u>

<u>Catalog</u> from 1941 to 1950. The two size ranges are discussed separately and then compared for similarities and differences.

## Size 3-6

During the years 1941-1950, almost as many dresses as other garments were shown for girls' size 3-6. Table I shows the number and percentage of dresses and of pants, skirt and jumper outfits shown in the catalog. A total of 149 (48%) dresses were shown as compared to 164 (52%) other garments.

<sup>&</sup>lt;sup>a</sup>Illustrations of dresses used in the study.

<sup>&</sup>lt;sup>b</sup>Discards include dresses that did not meet the criteria stated in Chapter III.

The bodice styles most frequently shown included straight bodice (70%), shown each year of the decade, and fitting by darts (13%) (Table II). The round neckline (92%) appeared every year during 1941-1950 and was the only type shown in 1941, 1942, 1946, 1948 and 1950. The only other type of neckline shown was the square neckline (8%). Several different collars were shown. The greatest number of dresses appeared with Peter Pan collars (58%), which were shown every year in the decade. Fifteen percent of the dresses had no collar and 12 percent had shirt collars. Most of the dresses shown had a natural waistline (89%), while only 10 percent had no seam and one percent had a raised waistline. More gathered skirts (72%) were shown than any other skirt variation, and they appeared every year. Twenty-one percent of the dresses had flared skirts, which were shown every year except 1943 and 1945-47. The short puff sleeve was the most frequently shown sleeve variation and was the only one shown in 1941, 1942, 1943 and 1944. From 1941 to 1949, the dresses were shown with hemlines at midthigh, but in 1950, the hemline was at the knee.

All five variations of fabric design were shown. The solid (40%) and print (32%) designs were shown every year throughout the decade, and stripe (12%) was shown every year except 1941. One hundred percent cotton fabric was used in 92 percent of the dresses, 100 percent rayon was used in eight percent of the dresses and cotton/rayon blend was used in one percent.

The most frequently shown variations of the seven modal design components were straight bodice, round neckline, Peter Pan collar, natural waistline, gathered skirt, short puff sleeves and midthigh hemlines.

The fabric used most frequently in the dresses was a solid colored 100 percent cotton fabric. A composite line drawing of the seven modal

<sup>&</sup>lt;sup>b</sup>Other than cotton/polyester and cotton/rayon.

design component variations shown most frequently for the 1941-1950 period was depicted in Figure 1.

Various kinds of trim shown during 1941-1950 were embroidered and appliqued flowers and animals, bows and belts tied in a bow in the back. Many of the dresses looked like skirt and blouse outfits although they were one pice dresses.

### Size 7-14

A smaller percentage of dresses was shown in the <u>Sears Catalog</u> during 1941-1950 than other garments for girls, size 7-14. Only 34 percent of the total garments shown were dresses whereas 66 percent were other garments. The number and percent of dresses and of pants, skirt and jumper outfits shown in the Sears Catalog for 1941-1950 were shown in Table III.

The most frequently shown bodice variations for the decade were fitting by darts (46%), straight bodice (33%) and princess seams (10%) each shown nine out of the ten years (Table IV). Most of the dresses shown had round necklines (68%), which were shown each year; however, 20 percent of the dresses had square necklines, which were shown every year except 1948 and 1950, and 12 percent had V-necklines. A wide variety of collars were shown, although 27 percent of the dresses had no collar. Peter Pan (19%) and shirt (19%) collars were both shown in eight of the ten years. Other collars shown included Bertha (8%), notched (7%), lace (6%), ruffle (5%), tie (4%) and sailor (3%). The natural waistline (80%) was the most commonly used and was the only one shown in 1944, 1945, 1949 and 1950. Twelve percent of the dresses had a low waistline and seven percent had no seam at the waist. More gathered skirts (64%) were shown than any other skirt variation, and they

<sup>&</sup>lt;sup>a</sup>Percentages do not always total 100% due to rounding.

 $<sup>^{\</sup>mathrm{b}}\mathrm{Other}$  than cotton/polyester and cotton/rayon.

were shown every year. Twenty-eight percent of the skirts were flared, shown every year except from 1944 to 1947. The short puff sleeves, which appeared every year, were shown on 81 percent of the dresses and was the only variation shown in 1941 and 1945. All the dresses shown had hemlines at the knee.

The fabric designs most frequently shown were solid color (40%), shown every year, and print (22%) shown every year except 1950. Other fabric designs shown included stripe (15%), plaid (12%) and check (10%). Cotton fabric (67%) was used every year and rayon (21%) was used every year except 1945, 1949 and 1950.

The most frequently shown variations of the seven modal design components during the decade were bodice fitted by darts, round neckline, no collar, natural waistline, gathered skirt, short puff sleeves and hemline at the knee. The fabric used most frequently in the dresses was a solid colored 100 percent cotton fabric. A composite line drawing of the seven modal design component variations shown most frequently for the 1941-1950 period was depicted in Figure 2.

Various kinds of trim shown during 1941-1950 included rick-rack, band and lace trim, ruffles, bows and embroidered flowers. Many of the dresses had belts either buckled or tied in the back.

When the dresses, size 3-6, were compared with dresses, size 7-14 prom the Sears Catalog, they appeared to have similar characteristics except in the bodice, collar and hemline area. Although the most frequently shown bodice variation was the straight bodice for both size ranges, many of the size 7-14 dresses had bodice fitted by darts. The smaller dresses more often had Peter Pan collars while most of the size 7-14 dresses had no collar. The hemline was at the knee for the larger dresses and midthigh for the smaller except for 1950 when it was

at the knee.

#### The Years 1951-1960

The following is a discussion of the dresses shown in the <u>Sears</u>

<u>Catalog</u> from 1951-1960. The two size ranges are discussed separately and then compared for similarities and differences.

## <u>Size 3-6</u>

More dresses were shown in the <u>Sears Catalog</u> during 1951-1960 than other garments. Table V shows the number and percentage of dresses and of pants, skirt and jumper outfits shown in the <u>Sears Catalog</u> for 1951-1960. A total of 234 (57%) dresses were shown compared to 176 (43%) other garments.

The two most frequently shown bodice styles were straight bodice (85%) and bodice fitted by darts (10%) (Table VI). The straight bodice was shown every year in the decade, and the bodice fitted by darts was shown every year except 1952 and 1958. Ninety-four percent of the dresses shown had round necklines, which appeared every year. The most frequently shown collars were Peter Pan collars (40%), shirt collars (30%), both shown every year in the decade, and Bertha collars (16%) shown every year except 1959. Ninety-nine percent of the dresses had natural waistlines and only one percent had low waistlines. More gathered skirts (77%) were shown than any other skirt variation, although 19 percent were flared skirts. The short puff sleeve (68%) was the most frequently shown sleeve variation and was the only one shown in 1951. Short straight sleeves (19%) were shown every year except 1951, 1952 and 1955. From 1951 to 1955, the hemline was at the knee continuing the fashion from 1950, but from 1956 to 1960, the hemlines

 $<sup>^{\</sup>mathrm{b}}\mathrm{Other}$  than cotton/polyester and cotton/rayon.

again ended at midthigh.

The most frequently shown fabric designs were solid color (44%) and print (26%) both shown every year in the decade. Other fabric designs included plaid (16%), check (8%) and stripe (6%). Eighty-six percent of the dresses were made of 100 percent cotton fabric, five percent were made of 100 percent nylon and four percent were made of 100 percent rayon.

The most frequently shown variations of the seven modal design components during the decade were straight bodice, round neckline, Peter Pan collar, natural waistline, gathered skirt, short puff sleeves and midthigh and knee hemlines. The fabric most frequently used was a solid colored 100 percent cotton fabric. A composite line drawing of the seven modal design component variations shown most frequently for the 1951-1960 period was depicted in Figure 3. Various kinds of trim shown during 1951-1960 were bows, lace, decorative bands and embroidered flowers.

## Size 7-14

During the years 1951-1960, fewer dresses were shown than other garments; however, more dresses were shown than other garments during the years when the Spring/Summer catalog was sampled. Table VII shows the number and percentage of dresses and of pants, skirt and jumper outfits shown in the catalog. A total of 241 (44%) dresses were shown compared to 303 (56%) other garments.

The bodice styles most frequently shown included straight bodice (48%) and fitting by darts (44%), both shown each year in the decade and the only ones shown in 1959 (Table VIII). The round neckline (85%) appeared most frequently and was shown every year. The V-neckline (9%)

 $<sup>^{\</sup>mathrm{b}}\mathrm{Other}$  than cotton/polyester and cotton/rayon.

was shown every year except for 1951, 1952 and 1957. All the collar variations except for the cowl were shown during 1951-1960. The shirt collar (33%) was the most frequently shown followed by the Peter Pan collar (28%), no collar (15%) and the Bertha collar (13%). Ninety-six percent of the dresses had natural waistlines and only a few had either no seam or a low waistline. The greatest number of dresses had gathered skirts (79%), shown every year, and flared skirts (17%), shown every year except 1955, 1957 and 1959. The most frequently shown sleeve variations were short puff sleeves (58%) shown every year, and short straight sleeves shown every year except 1951 even though they accounted for only 23 percent. All the dresses ended at the knee as they had in the previous decades studied. All five variations of fabric design were shown every year except 1951 and 1952.

Most of the dresses were solid colored (39%) followed by printed (24%), plaid (16%), striped (11%) and checked (10%) fabric designs.

Cotton fabric was used in 86 percent of the dresses, and for the first time in the decades studied, polyester was used in 1951; however, in none of the subsequent years of this decade was polyester used again.

Other fabrics used included nylon (5%) and rayon (4%).

The most frequently shown variations of the seven modal design components during the decade were straight bodice, round neckline, shirt collar, natural waistline, gathered skirt, short puff sleeves and hemline at the knee. The fabric used most frequently in the dresses was a solid colored 100 percent cotton fabric. A composite line drawing of the seven modal design component variations shown most frequently for the decade was depicted in Figure 4. Various kinds of trim shown during 1951-1960 were lace, bows, pockets used decoratively as well as functionally, and narrow belts.

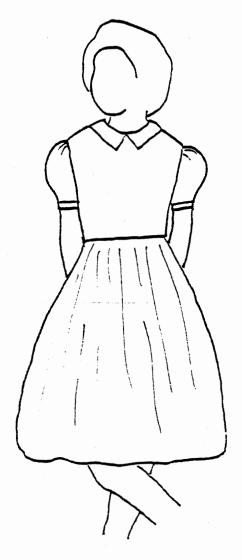

Figure 4. Composite Line Drawing of The Seven Modal Design
Component Variations Shown Most Frequently In
The Sears Catalog During The Period 1951-1960,
For Girls Size 7-14

When the dresses, size 3-6, were compared with the dresses, size 7-14, from the <u>Sears Catalog</u>, they appeared to have similar characteristics except in the bodice and hemline. Although the most frequently shown bodice variation was the straight bodice for both size ranges, many of the size 7-14 dresses had bodices fitted by darts. The hemline was at the knee for the larger dresses as well as for the smaller dresses from 1950 to 1955, but from 1956 to 1960, the hemline was at midthigh on the smaller dresses as it had been before 1950.

#### The Years 1961-1970

The following is a discussion of the dresses shown in the <u>Sears</u>

<u>Catalog</u> from 1961-1970. The two size ranges are discussed separately and then compared for similarities and differences.

# <u>Size</u> 3-6

A smaller percentage of dresses was shown in the <u>Sears Catalog</u> during 1961-1970 than during the other decades studied. More space was devoted to showing pants, skirt and jumper outfits than to dresses. Table IX shows the number and percentage of dresses compared to the number and percentage of pants, skirt and jumper outfits shown in the catalog. A total of 297 (46%) dresses and 351 (54%) other garments were shown.

Every year during 1961-1970, the straight bodice was shown; it appeared on 72 percent of the dresses (Table X). Fourteen percent of the dresses had a yoke top, which was shown mainly from 1966 to 1970. Almost all of the dresses had round necklines, the only type shown in 1961, 1962 and 1968. The only other type shown during the 10 year period was the square neckline (4%). Many different collars were shown. The greatest number of dresses appeared with Peter Pan collars (27%);

<sup>&</sup>lt;sup>a</sup>Percentages do not always total 100% due to rounding.

<sup>&</sup>lt;sup>b</sup>Other than cotton/polyester and cotton/rayon.

however, 21 percent of the dresses had no collar, 13 percent had Bertha collars, 11 percent had shirt collars and 10 percent had lace collars. The notched collar was not shown at all. All four variations of the waistline were shown in 1965, 1967, 1968, 1969 and 1970; however, the natural waistline was the only type shown in 1961, 1962 and 1963. All variations of the skirt, except the gored skirt, were shown. The most frequently shown variations were the gathered skirt (54%) and the straight skirt (34%). Three sleeve variations were shown almost equally: short straight (25%), 3/4 length (21%) and no sleeves (20%). Short puff sleeves appeared every year except 1966, but only accounted for 17 percent of the sleeves. All the dresses had midthigh hemlines continuing the fashion from 1956.

All five variations of the fabric design were shown. Solid (43%) and print (18%) designs were shown every year. Although 25 percent of the dresses were plaid, the variation only appeared in six out of the ten years. Cotton fabric was used in 57 percent of the dresses and cotton/polyester blend fabric was used in 27 percent of the dresses.

The most frequently shown variations of the seven modal design components during the decade were straight bodice, round neckline, Peter Pan collar, natural waistline, gathered skirt, short straight sleeves and midthigh hemline. The fabric used most frequently in the dresses was a solid color 100 percent cotton fabric. A composite line drawing of the seven modal design component variations shown most frequently for the decade was depicted in Figure 5. Various kinds of trim shown were rick-rack, decorative bands, embroidered flowers, lace, applique, decorative buttons and bows.

Component Variations Shown Most Frequently In
The Sears Catalog During The Period 1961-1970,
For Girls Size 3-6

# Size 7-14

Fewer dresses were shown during 1961-1970 than pants, skirt and jumper outfits. Table XI shows the number and percentage of dresses and of pants, skirt and jumper outfits shown in the <u>Sears Catalog</u> for 1961-1970. A total of 242 (43%) dresses were shown as compared to 322 (57%) other garments.

The most frequently shown bodice styles were straight bodice (70%), which was shown every year, and fitting by darts (13%), which was shown mainly from 1961 to 1965 (Table XII). Almost all the dresses had round necklines which were the only ones shown in 1963, 1964, 1968 and 1970. Three collar variations were shown almost equally: no collar (23%), Peter Pan (21%), and shirt (21%), each shown every year of the decade. Eleven percent of the dresses had band collars, which appeared every year except 1963 and 1966. As with the dresses, size 3-6, for the dresses, size 7-14, the most frequently shown waistline was the natural, which was the only one shown in 1961, 1962 and 1963. The straight (35%) and gathered (34%) skirts appeared almost equally; however, neither style was shown every year. Twenty-six percent of the dresses had pleated skirts, the highest percent for pleated skirts during the 1941-1980 period studied. Both the short straight (33%) and the 3/4 length (26%) sleeves appeared every year. Eighteen percent of the dresses had no sleeves, shown only for the years when the Spring/Summer catalog had been sampled, and 10 percent had long straight sleeves. From 1961 to 1965, the dresses had hemlines at the knee, but from 1966 to 1970, the hemlines were at midthigh.

The most frequently shown fabric design variations were solid color (47%), plaid (21%) and print (17%). Cotton fabric, the most

<sup>&</sup>lt;sup>b</sup>Other than cotton/polyester and cotton/rayon.

frequently used, appeared every year except 1970 when cotton/polyester fabric was the most frequently used.

The most frequently shown variations of the seven modal design components during the decade were straight bodice, round neckline, no collar, natural waistline, straight skirt, short straight sleeves and midthigh or knee hemlines. The fabric used most frequently was a solid colored 100 percent cotton fabric. A composite line drawing of the seven modal design component variations shown most frequently for the decade was depicted in Figure 6. Various kinds of trim shown during 1961-1970 were lace rick-rack, bows and decorative buttons. Many of the dresses were shown with wide belts and for the first time, ties similar to men's ties, were shown with the dresses.

When the dresses, size 3-6, were compared with the dresses, size 7-14, from the <u>Sears Catalog</u>, they appeared to have similar characteristics except in the collars and hemline. Both size ranges showed dressed with a great variety of collars, the most frequently being Peter Pan collars and no collar; however, more of the dresses, size 7-14, had shirt collars. The dresses, size 3-6, had hemlines at midthigh, and the dresses, size 7-14, had hemlines at the knee until 1966 when the fashion changed and the hemlines were at midthigh.

## The Years 1971-1980

The following is a discussion of the dresses shown in the <u>Sears</u>

<u>Catalog</u> from 1971-1980. The two size ranges are discussed separately and then compared for similarities and differences.

### Size 3-6

During the years 1971-1980, slightly fewer dresses were shown than

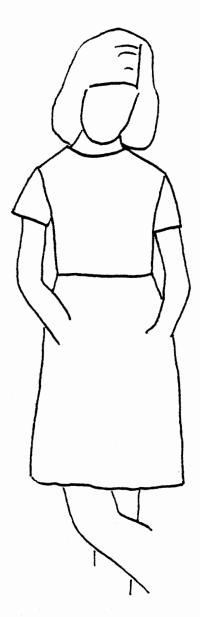

Figure 6. Composite Line Drawing Of The Seven Modal Design Component Variations Shown Most Frequently In The Sears Catalog During The Period 1961-1970, For Girls Size 7-14

other garments. Table XIII shows the number and percentage of dresses compared to the number and percentage of pants, skirt and jumper outfits. shown in the catalog. Every other year during the decade more dresses were shown than other garments, which may be due to the fact that for those years (1971, 1973, 1975, 1979) the Spring/Summer catalog was sampled. A total of 228 (48%) dresses were shown compared to 246 (52%) other garments.

The bodice styles most frequently shown included straight bodice (66%) and yoke top (22%), both shown each year in the decade, and smocking (7%) shown every year except 1973, 1974 and 1980 (Table XIV). The round neckline appeared every year during 1971-1980, and was the only type shown in 1973, 1974 and 1980. The square neckline was shown every year except 1973, 1974 and 1980, and the V-neckline appeared only in 1979. Many different collars were shown. The greatest number of dresses appeared with no collar (26%); however, 17 percent of the dresses shown had lace collars. 12 percent had band collars and 12 percent had Peter Pan collars. The notched collar was not shown at all. The collars tended to be larger than the collars shown in previous years. All four variations of the waistline were shown, with the natural (44%) and raised (35%) waistlines appearing each year. More gathered (55%) and straight (32%) skirts were shown than any other skirt variation, and they appeared every year. Three sleeve variations were shown almost equally: long straight (27%), short puff (26%) and no sleeves (23%). Long straight sleeves were shown most often for the even numbered years when the Fall/Winter catalog had been sampled and no sleeves only when the Spring/Summer catalog was sampled. Bishop and kimono sleeves were not shown during 1971-1980. All of the dresses had hemlines at midthigh except 5 percent which were floor length. This was the only decade in

<sup>&</sup>lt;sup>a</sup>Percentages do not always total 100% due to rounding.

 $<sup>^{\</sup>mathrm{b}}\mathrm{Other}$  than cotton/polyester and cotton/rayon.

which floor length dresses were shown.

All five variations of fabric design were shown. Solid (31%) and print (45%) designs appeared every year throughout the decade and plaid every year except 1977 and 1979. Cotton/polyester blend fabric was used in 70 percent of the dresses and 100 percent polyester in 17 percent of the dresses in the catalog. Other fabrics used included cotton/rayon (5%), acrylic (4%) and cotton (1%).

The most frequently shown variations of the seven modal design components during the decade were straight bodice, round neckline, no collar, natural waistline, gathered skirt, long straight sleeves and midthigh hemline. The fabric used most frequently in the dresses was a printed cotton/polyester blend fabric. A composite line drawing of the seven modal design component variations shown most frequently for each year was depicted in Figure 7. Various kinds of trims shown during 1971-1980 were buttons, used decoratively rather than functionally, bows, lace, applique and embroidery. Many of the dresses were shown with belts tied in a bow in the front.

# <u>Size 7-14</u>

For size 7-14 garments, a smaller percentage of dresses was shown than for any of the other ten-year periods. Each year more pants, skirt and jumper outfits were shown than dresses. Table XV shows the number and percentage of dresses and of pants, skirt and jumper outfits shown in the <u>Sears Catalog</u> for 1971-1980. A total of 161 (26%) dresses were shown as compared to 466 (74%) other garments.

The most frequently shown bodice variations for the decade were straight bodice (60%), yoke top (16%), gathers (13%) and smocking (10%) (Table XVI). In 1975, only gathered and straight bodices appeared, and

<sup>&</sup>lt;sup>a</sup>Percentages do not always total 100% due to rounding.

 $<sup>^{\</sup>mathrm{b}}\mathrm{Other}$  than cotton/polyester and cotton/rayon.

in 1980, only straight bodices appeared. Almost all of the dresses shown had round necklines (85%) except for 10 percent that had square and five percent that had V-necklines. In 1972 and 1976, only round necklines were shown. A wide variety of collars were shown during 1971-1980. Although no collar (29%) and shirt collars (25%) were shown most frequently, nine percent of the dresses had Peter Pan collars, nine percent had ruffle collars, eight percent had band collars and tie, Bertha, cowl and sailor together represented 12 percent. In 1975, only the shirt collar and no collar were shown, but for the other years, at least five different collar variations were shown. The natural waistline (60%) was the most commonly used, and was the only one shown in 1975. Twenty percent of the dresses had a raised waistline, 11 percent had no seam at the waistline and 10 percent had a low waistline. In 1971, 1972 and 1974, all four variations of the waistline were shown. As many gathered as straight skirts were shown (43% each) but only nine percent of the dresses had pleated skirts (mainly from 1971 to 1974) and five percent had flared skirts. Although the short straight sleeve (23%) was shown most frequently, almost as many long sleeves (21%), no sleeves (19%) and short puff sleeves (19%) were shown. The fashion which began in 1966 of hemlines at midthigh continued until 1979 when the dresses became longer and again ended at the knee as they had before 1966. For the first time during 1941-1980, ankle-length dresses appeared in 1972 and 1973, and floor length dresses in 1973, 1974, 1977 and 1979. These long dresses were all labeled evening dresses or gowns.

The fabric designs most frequently shown were solid colored and print. They were shown every year except 1980 when only solid colored fabrics were shown. Checked fabric (9%) was shown primarily in the years 1971-1975. Cotton/polyester fabric (69%) was used every year

and although 100 percent polyester was used 9 out of 10 years, it only represented 14 percent. Other fabrics used included synthetic blend (7%), cotton/rayon (4%), acrylic (4%), which was mainly used in knitted dresses, cotton (3%) and rayon (1%).

The most frequently shown variations of the seven modal design components were the straight bodice, round neckline, no collar, natural waistline, gathered and straight skirts, short straight sleeves and midthigh hemline. The fabric used most frequently in the dresses was a solid colored cotton/polyester blend fabric. A composite line drawing of the seven modal design component variations shown most frequently for each year was depicted in Figure 8. Various kinds of trim included bows at the collar, waist and yoke, decorative buttons and applique.

Many of the dresses were shown with belts buckled as well as tied. The belts were wide and made of shiny material in the beginning of the decade, but toward the end, they became narrower and were made of the same fabric as the dress. From 1978 to 1980, the peasant look with many ruffles and lace trim was shown frequently.

When the dresses, size 3-6, were compared with the dresses, size 7-14, from the <u>Sears Catalog</u>, they appeared to have similar characteristics except in the collars and sleeves. The smaller dresses more often had Peter Pan collars and long straight sleeves, whereas the size 7-14 dresses showed shirt collars and short straight sleeves. The hemline was at midthigh for both size ranges except for the years 1978 to 1980 when dresses, size 7-14, ended at the knee.

### Discussion of Findings

The characteristics of girls' dresses changed little over the

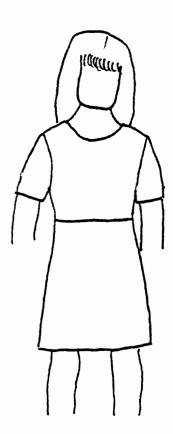

Figure 8. Composite Line Drawing Of The Seven Modal Design
Component Variations Shown Most Frequently In
The Sears Catalog During The Period 1971-1980,
For Girls Size 7-14

40-year period, more so for the dresses size 3-6 than for the dresses size 7-14. The larger dresses tended to change more than the smaller dresses, which may be due to the fact that girls wearing dresses size 7-14 are much closer in age to adults and may tend to wear clothing similar to that of adults, for whom fashions change more rapidly. The relatively few changes, especially in the smaller dresses, may make accurate dating of the dresses in the historic collection difficult. The number and percent of dresses and of pants, skirt and jumper outfits for the 40-year period were shown in Table XVIII, Appendix B, and the number and percent of variations of modal design components, fabric design and fiber content for 1941-1980 were included in Table XIX, Appendix C. Composite line drawings of the seven modal design component variations shown most frequently in the Sears Catalog during the period 1941-1980 were included in Appendix D.

In the study, no attempt was made to distinguish between variations of the dresses shown in the Spring/Summer and Fall/Winter catalogs; however, some differences were noticed mostly in the types of collars and sleeves shown on the dresses. A detailed study comparing spring and fall dresses may reveal additional differences that did not show up in this study. For the years when the Fall/Winter issues of the <a href="Sears">Sears</a> <a href="Catalog">Catalog</a> were studied, more pants, skirts and jumpers were shown than when the Spring/Summer issues were studied.

### Recommendations For Dating Girls' Dresses

The following steps were suggested for dating girls' dresses:

- 1. Decide on the approximate size of the dress to be dated and choose one of the two size ranges given in the study.
  - 2. Identify the variations of the seven modal design components,

fabric design and fiber content using the glossary in Appendix A.

- 3. Compare the modal design variations of the dress with the composite drawings to establish a possible decade for the dress.
- 4. If the fiber content can be determined, check it against the tables. (For example, polyester was not used until 1951 and was used more frequently after 1960. This would thus limit the period of the dress.)
- 5. Check the tables to determine when the modal design variations identified in the dress were most frequently shown.
- 6. Establish an approximate 5-year period from which the findings indicate the dress to be.
- 7. Other sources on girls' dresses may then be consulted to confirm the established 5-year period.

#### CHAPTER V

#### SUMMARY AND RECOMMENDATIONS

The purpose of the study was to describe dresses of girls from middle class families during the years 1941 to 1980. The objectives of the study were:

- 1. To identify the variations in the modal design components of dresses available for young girls during 1941-1980.
- 2. To determine the frequency of variations in modal design components, fabric design and fiber content of the dresses shown for each year.
- 3. To make recommendations for using the information in this study to date girls' dresses in the historic costume collection in the Department of Clothing, Textiles and Merchandising at Oklahoma State University.

# Summary of Procedure

A glossary of variations of the modal design components (bodice, neckline, collar, waistline, skirt and sleeves) was developed. The glossary was used to identify the variations in girls' dresses shown in the <u>Sears Catalog</u> from 1941-1980. The issues of the <u>Sears Catalog</u> studied were alternated between Spring/Summer and Fall/Winter issues. After tabulating the number and percentage of each variation of the modal design components, fabric design and fiber content, and the number and percentage of dresses and of pants, skirt and jumper outfits for each

year, the findings were discussed for each ten-year period (1941-1950, 1951-1960, 1961-1970, 1971-1980). The two size ranges studied (size 3-6 and size 7-14) were treated separately in order that they could be compared for similarities and differences. Composite line drawings of the dress styles shown most frequently for each ten-year period were made.

## Summary of Findings

Fewer dresses were shown in the <u>Sears Catalog</u> than pants, skirt and jumper outfits for both size ranges. For size 3-6, a total of 908 (49%) dresses were shown compared to 937 (51%) other graments. For size 7-14, a total of 859 (40%) were shown compared to 1311 (60%) other garments.

The most frequently shown variations of the seven modal design components for 1941-1980, size 3-6, were straight bodice, round neck-line, Peter Pan collar, natural waistline, gathered skirt, short puff sleeves and midthigh hemline. The fabric used most frequently was a solid colored 100 percent cotton fabric.

The most frequently shown variations of the seven modal design components for 1941-1980, size 7-14, were straight bodice, round neckline, shirt collar, natural waistline, gathered skirt, short puff sleeves and knee hemline. The fabric used most frequently was a solid colored 100 percent cotton fabric.

When the two size ranges were compared for the 40-year period, they differed only in the collars and hemlines. The dresses, size 3-6, were shown with more Peter Pan collars and midthigh hemlines, and for the dresses, size 7-14, more shirt collars and knee hemlines were shown. Although the most frequently shown bodice variation was the straight

year, the findings were discussed for each ten-year period (1941-1950, 1951-1960, 1961-1970, 1971-1980). The two size ranges studied (size 3-6 and size 7-14) were treated separately in order that they could be compared for similarities and differences. Composite line drawings of the dress styles shown most frequently for each ten-year period were made.

## Summary of Findings

Fewer dresses were shown in the <u>Sears Catalog</u> than pants, skirt and jumper outfits for both size ranges. For size 3-6, a total of 908 (49%) dresses were shown compared to 937 (51%) other graments. For size 7-14, a total of 859 (40%) were shown compared to 1311 (60%) other garments.

The most frequently shown variations of the seven modal design components for 1941-1980, size 3-6, were straight bodice, round neck-line, Peter Pan collar, natural waistline, gathered skirt, short puff sleeves and midthigh hemline. The fabric used most frequently was a solid colored 100 percent cotton fabric.

The most frequently shown variations of the seven modal design components for 1941-1980, size 7-14, were straight bodice, round neck-line, shirt collar, natural waistline, gathered skirt, short puff sleeves and knee hemline. The fabric used most frequently was a solid colored 100 percent cotton fabric.

When the two size ranges were compared for the 40-year period, they differed only in the collars and hemlines. The dresses, size 3-6, were shown with more Peter Pan collars and midthigh hemlines, and for the dresses, size 7-14, more shirt collars and knee hemlines were shown. Although the most frequently shown bodice variation was the straight

bodice for both size ranges, many of the dresses, size 7-14, were shown with bodices fitted by darts.

#### Conclusions

The following conclusions were drawn on the basis of the study:

- 1. Fewer dresses were shown than the total of other garments, but when the number of dresses were compared to the number of pants, skirts and jumpers individually, more dresses were shown than any one of the other types of clothing.
- 2. The dresses, size 3-6 and 7-14, had similar characteristics except in collars and hemlines.
- 3. The characteristics of girls' dresses changed little during the 40-year period which may make accurate dating of dresses in the historic collection difficult.

#### Recommendations

The researcher made the following recommendations for further study:

- 1. Test the validity of the findings using a source other than the <u>Sears Catalog</u>.
- 2. Investigate the most frequently shown modal design components comparing those in dresses shown for Spring/Summer with those in dresses shown for Fall/Winter.
- 3. Investigate the modal design components of girls' clothing other than dresses.
- 4. Conduct a similar study on boys' clothing during the same period.

bodice for both size ranges, many of the dresses, size 7-14, were shown with bodices fitted by darts.

#### Conclusions

## APPENDIX A

GLOSSARY OF MODAL DESIGN COMPONENTS AND VARIATIONS OF GIRLS' DRESSES, 1941-1980

# GLOSSARY OF GIRLS' DRESS CLASSIFICATIONS AND DESIGN VARIATIONS,

1941-1980

Bodice: The part of a garment which covers the upper part of the body from the waistline hem or seam to the neckline (Burns, 1982, p. 119).

<u>Dart:</u> Shaped tuck taken to fit garment to the figure (Picken, 1957, p. 94).

Gathers: One or two rows of gathering in fabric to draw in fullness (Picken, 1957, p. 147).

<u>Pleats</u>: Fold of fabric laid back flat, usually lengthwise of fabric. Made singly or in groups for decoration or to hold in width of garment (Picken, 1957, p. 256).

Tucks: Fold of fabric stitched in place (Picken, 1957, p. 357).

Princess seam: Outline of a close-fitting garment in which waist and skirt are made in continuous sections from shoulder to hem (Picken, 1957, p. 301).

Smocking: Decorative stitching holding fullness in regular patterns (Picken, 1957, p. 315).

Straight: A bodice closely following the contours of the body without fitting by design features (darts, tucks).

Yoke top: Fitted portion of a garment over the shoulders to which the rest of the garment is sewn (Picken, 1957, p. 384).

Neckline: The part of a garment which outlines the bodice around the neck (Picken, 1957, p. 230).

Round: A neckline that is cut to form a circle around the base of the neck.

Square: A neckline that is cut to form a square (Picken, 1957, p. 231).

<u>V-shape</u>: A neckline that is designed to form a V shape outline (Burns, 1982, p. 124).

Boat: A neckline that follows the contour of the collar bone, high in front and back, wide at the sides and ending in the shoulder seams (Picken, 1957, p. 230).

Collar: Article of dress attached to garment worn around the neck (Picken, 1957, p. 71).

Band: A collar that stands against the neck without a fold or roll (Burns, 1982, p. 124).

Peter Pan: Turned down collar two to three inches in width having rounded end in front (Picken, 1957, p. 74).

Shirt: A collar designed in varying widths and shapes that stands high against the neck (Burns, 1982, p. 124).

Lace: Collar made of any type lace; various shapes.

<u>Tie:</u> A collar with extended ends that can be formed into a tie or tied into a bow (Burns, 1982, p. 125).

Bertha: Deep collar falling softly from bodice neckline over shoulders (Picken, 1957, p. 72).

Sailor: A collar shaped square in back, narrowing to point of V-neckline in front (Ficken, 1957, p. 75).

<u>Ruffle</u>: A collar that is designed on the bias grain or straight grain of the fabric that is gathered or pleated into the neckline to give a full, ripple effect (Burns, 1982, p. 125).

Notched: Flat narrow collar joined to narrow lapels so as to produce notch (Picken, 1957, p. 74).

<u>Cowl</u>: A collar that stands and falls or rolls around the neckline (Burns, 1982, p. 125).

<u>Waistline</u>: The part of the garment that covers the midsection of the body from below the bust to the curved area of the hip, which

may be designed with or without a horizontal seam connecting the bodice and skirt (Burns, 1982, p. 125).

<u>Natural</u>: A waistline seam at the natural position connecting bodice and skirt (Burns, 1982, p. 126).

<u>Lowered</u>: A waistline seam below the natural position connecting bodice and skirt (Burns, 1982, p. 126).

Raised: A waistline seam above the natural waist
position connecting bodice and skirt (Burns, 1982, p.
126).

No seam: A waistline area designed without a horizontal seam (Burns, 1982, p. 126).

Skirt: The part of the garment which covers the lower part of the body, hanging from the waistline seam (Burns, 1982, p. 121).

Straight: Cut from a rectangular shape designed to hang straight from the waistline (Burns, 1982, p. 121).

Flared: Cut from a triangular shape designed to hang with the wide base at the hemline (Burns, 1982, p. 122).

<u>Pleated</u>: Skirt having knife, box or inverted pleats (Picken, 1957, p. 307).

Gathered: A skirt with design fullness in the hip area created by moderate to maximum gathering (Burns, 1982, p. 122).

Gored: Skirt having from two to six or more shaped sections sewn together (Chambers, 1945, p. 558).

Sleeves: The part of a garment which covers the arms and is attached to the bodice or is cut as part of the bodice in the shoulder area (Burns, 1982, p. 121).

Sleeveless: A garment designed without sleeves that ends on the shoulder (Burns, 1982, p. 121).

Short Straight: A bowlike, one-piece, straight-hanging, slightly roomy sleeve ending above the elbow (Chambers, 1945, p. 95).

Short Puff: A short gathered sleeve with a tight band at the bottom (Chambers, 1945, p. 95).

Three-Quarter Length: Sleeve ending halfway down the forearm, covering three-quarters of entire arm (Picken, 1957, p. 312).

Long Straight: A bowlike, one-piece, straight hanging, slightly roomy sleeve ending at wrist (Chambers, 1945, p. 95).

Bishop: Sleeve that is full in the lower part and either loose or held by band at wrist (Picken, 1957, p. 310).

<u>Kimono</u>: Short sleeve cut in one with the body of the garment (Picken, 1957, p. 311).

<u>Cap</u>: Short sleeve just covering the shoulder and not continued under arm (Picken, 1957, p. 310).
