## ACKNOWLEDGMENTS

Without the efforts of many people, this study would not have been completed. The author wishes to express her appreciation to her major adviser, Dr. Judith Powell, for her interest in my professional and personal growth and invaluable assistance throughout the study. Appreciation is also expressed to the other advisory committee members, Dr. Frances Stromberg and Leone List, for their guidance and suggestions during the study.

A note of thanks to Betty Stratton and Maxine Hall and others involved in the Oklahoma Training for Child Care Careers project. Their enthusiasm and cooperation made them a joy to work with. Appreciation is expressed to the 15 persons who participated in the interview portion of the project.

A special note of appreciation is given to Barbara Heister for her friendship, love, and humor during this study.

I am grateful and appreciative to my parents, Jay and Cecilia Oberste, and my brother, Gary, for without their continued love, faith in my abilities, support and encouragement, I could not have completed this educational achievement.

## CHAPTER I

### INTRODUCTION AND STATEMENT OF PROBLEM

The need for child care services outside the family is now in the forefront of consciousness in the United States (Fein and Clarke-Stewart, 1973). The growth of day care has been attributed to three main factors: (1) more women entering the work force; (2) an increasing emphasis on and interest in a child's development during the formative years of his life; and (3) the passage of federal legislation (Head Start, Title I, and Title IV) during the 1960's (Harrold, 1976). In 1938 approximately 300,000 children were in licensed programs while in 1945 there were almost a million. At the present time approximately 640,000 children are using licensed day-care facilities, but estimates of the number currently needing care have ranged from 2 to 4.5 million (Fein and Clarke-Stewart, 1973). According to the Oklahoma Department of Human Services, 50,000 young children are cared for daily in 2,000 licensed day care facilities in Oklahoma (Collins, 1980). An appropriate aim for day care in the past may have been to ensure the survival of children through "custodial care." Today, however, the aim of day care must be much more than that. It must offer opportunities for the development of competence, both for children and their

caregivers (Fein and Clarke-Stewart, 1973).

An important aspect in the development of day care services is providing well-trained child care workers (Berry, 1971). Professional observers feel the most crucial element in quality child care is the person and the skill of the caregivers. Child care in the United States is sorely in need of higher status. Attractive personnel policies and salaries and less tangible factors such as the respect and admiration of the community might encourage experienced and talented people to enter and remain in the child care field (Fein and Clarke-Stewart, 1973). Because the field of child care is relatively new, caregivers have few avenues to gain understandings and resources for their vital role. Available training is often fragmentary or inaccessible to the fully-employed worker (Stratton, 1978). In 1977, the Oklahoma Department of Human Development estimated that 90 percent of the caregivers in Oklahoma had received no child-related training for their work. The seriousness of this lack of training for a job which deeply affects the growth and development of Oklahoma's children was highlighted by the findings of the three-year National Day Care Study which found that higher quality care is associated with two low-cost ingredients--smaller groups of children and caregivers having child-specific education/training (Abt Associates, 1979).

Whatever training is provided for the caregiver, evaluation should be an integral part of that training. Training

evaluations are usually conducted for the purpose of making decisions about two major areas: (1) improvements to be made in the training program itself; or (2) action to be taken regarding the future of the program (Civil Service Commission, n.d.). Data should be gathered to establish goals and objectives, to make decisions about content and procedures, and to assess the degree to which goals and objectives are achieved in the program (Edelfelt, 1977).

An innovative program for child care training in Oklahoma, called "The Oklahoma Plan for Child Care Training," was developed from the concerns expressed by the child care community. The organization is an independent, voluntary group of representatives for child care and child development organizations, educational and government agencies concerned with children. The impetus for the work began in 1973 from the directors of child care facilities in Oklahoma. After three years of discussion and exploration, a long-range plan for developing a model system of statewide ongoing child care training was implemented in 1976.

The Oklahoma Plan for Child Care Training addresses three areas of training need:

1. A basic curriculum of knowledge about child caregiving.
2. Suitable and accessible means of training delivery.
3. Ways to give professional and public recognition to paraprofessionals in child care training.

Implementation of the Oklahoma Plan is projected in three phases:

Phase One. Development of Training and Recognition System

Phase Two. Testing of Systems

Phase Three. Implementation of Systems throughout the State.

In 1978, the permanent name, Oklahoma Training for Child Care Careers (OTCCC) was adopted.

Resources for the work, from 1976 to 1980, have come from a Title XX contract with the Oklahoma Department of Human Services, from the Cooperative Extension Service, Oklahoma State University, and from volunteer, professional time donated by the members of OTCCC. Many additional services have been donated by day care directors and caregivers themselves in helping to plan courses and pilot test materials before final printing and distribution.

During the past four years, OTCCC has developed and designed a four-level paraprofessional Child Care Career Advancement Ladder (Appendix A). The ladder has been developed to show (1) training courses recommended and (2) caregiving skills to be gained which help develop the competencies needed for credentialing by the National Child Development Associate (CDA) Consortium.

While the program has shown tremendous growth from the first conference in 1974 to a fully-developed program

providing training for approximately 1,500 caregivers in Oklahoma in 1980, one aspect of this training program which needs further development is the evaluation component. Although a formalized program of evaluation has not been developed, a wealth of data has been generated and recorded which can: (1) provide information on the effectiveness of the program thus far and (2) be analyzed to make recommendations for a full-scale evaluation program for Oklahoma Training for Child Care Careers.

#### Purposes of the Study

The purposes of this study were to:

1. Identify the types of evaluative information currently available from the Oklahoma Training for Child Care Careers project.
2. Summarize, analyze, and present currently available data in a form which can be coded and eventually transferred to a computerized system.
3. Identify missing information which needs to be collected in future evaluation efforts.
4. Summarize the results of the analysis of the data currently available to evaluate progress toward the major goals of the training and recommend procedures for further evaluative efforts.

Evaluation is meaningful only to the extent that it is linked to goals of the established project. One of the major goals of the OTCCC project is to provide in-service training which is both (a) ACCESSIBLE and (b) SUITABLE for caregivers in Oklahoma. This major goal was used to establish criteria which measured accessibility and suitability, and to analyze the current state of the evaluative data and make recommendations for further directions for the evaluation efforts of OTCCC.

## CHAPTER II

### REVIEW OF LITERATURE

#### The Adult Learner

The distinctive characteristics of the adult learner are several. He is free to avoid, engage in, or withdraw from an educational experience as he pleases. He regards the hours that he gives to learning as valuable and expects them to be used to some constructive purpose. If what he is taught seems neither relevant to his own experience nor of potential benefit, preferable, in the immediate future, he will almost certainly spurn it. The spacing of his learning is dictated by his occupational and family commitments and as a general rule it will be part-time, irregular, and spread over many years (Kidd, 1973).

The theory that adults can't learn as well as children has been disproved by modern research. Adults can learn effectively at all ages (Randall, 1978). E. L. Thorndike showed that the age of a person is not a very significant factor in regard to learning; that all men and women can learn (Kidd, 1973). However, the way in which adults learn differs significantly from the way in which children learn (Randall, 1978).

It is important to keep in mind the following points about the adult learner:

1. Adults must want to learn.

Adults will not learn something just because someone says they should. They must have a desire to learn a new skill or to acquire knowledge.

2. Adults will learn only when they feel a need to

learn. They want to know how the training is going to help them--right now. Adults want to learn something from each training session. It's important that adults leave a learning situation with the feeling that they have gained something useful from it (Randall, 1978). If the adult is not gaining satisfaction on his own terms, he will tend to reject, to forget, to excuse himself. In a class, or learning group, there are three sources of relationships in which satisfaction may or may not show itself. First, there is the relationship between student and teacher; second, the relationship between student and other students; and, third, the relationship between the student and the subject matter of the course (Kidd, 1973).

3. Adults learn by doing.

If one of the objectives of the course has to do with a skill like reading or discussing, or using a tool, the experience must provide both the

necessary content and the opportunity to practice that skill (Kidd, 1973). Research has shown that if adults immediately practice what they have learned and continue to use it, learning and retention are much higher. Adults must have the opportunity to use what they learn before they forget it or dismiss it from their memory.

4. Experience affects adult learning.

Adults relate their learning to what they already know. If the new knowledge doesn't fit in with previous knowledge, they will probably reject or dismiss it. Thus, any new information or skill must be related to what the individuals already know (Randall, 1973). According to Kidd (1973), one of the reasons that adults continue to learn well, is that they concentrate their learning in the areas of experience in which their interests also lie. Thus their motivation is substantial and, as everyone knows, wanting to learn is the greatest aid to learning. In maturity, active learning is usually practiced in areas defined in terms of interest.

5. Adults learn best in an informal environment.

If the environment is too much like a classroom, adults will not learn as well. Many adults have unpleasant memories of their schools days; others

feel they have finished school (Randall, 1978). Since there is often considerable stress put upon informality in the learning of adults, and the term "informal education" is sometimes used as a synonym for adult education, it has been assumed by some that the learning transaction is possible only where there is mastery of all the principles that must be brought into some harmonious arrangement. It requires planning and practice, even if it might appear artless (Kidd, 1973).

6. Adults respond to a variety of teaching methods. Adults, like children, learn better if an idea is presented in many ways; or in other words, when the information reaches them through more than one sensory channel.
7. Adults want guidance, not grades. Adults do want to know how they are doing; what progress they are making (Randall, 1978).

#### In-Service Education

One aspect of adult learning is in-service education. According to Edelfelt and Johnson (1975), in-service education can be defined within the following narrow but entirely workable construct:

In-service education is that portion of professional development that should be publicly supported and includes a program of systematically

designed activities planned to increase the competencies-knowledge, skills, and attitudes-needed by personnel in the performance of their assigned responsibilities (p. 47).

Edefelt and Johnson (1975) also note that in-service education must have at least three purposes: (a) to implement education-improvement activities directed toward specified student needs; (b) to improve the educator's own or expected goals of professional development, which may or may not lead to higher levels of certification; and (c) to meet goals of personal growth. In-service education for education improvement and professional development should increasingly be one and the same. Too often, in-service education has been an end in itself rather than the means through which well-defined education improvement activities are initiated in the schools.

All those who participate in in-service education are engaged in both learning and teaching. In-service education is not merely a matter of one group dispensing information to another; each participant has some special area of insight, talent, expertise, and perception (Edelfelt, 1977).

In-service education in day care is needed, but often inaccessible to the staff. Problems with in-service education were discussed at a conference entitled "Training for Child Care Vocations in Oklahoma," held on March 23, 1974, in Stillwater, Oklahoma. At the conference, the following

points were brought out about in-service training:

In our center we have found in-service training very effective. I have been able to get people to come in and sit with the children at nap time and this is the time we have our in-service. The more who know about your program and are interested in it, the better chance you have for help. We find it helpful to involve all our community residents, and all of Tulsa, if necessary, to get these things done ("Where Are We Now?", 1974, p.2).

Another participant at the conference stated:

Private proprietors cannot do this. Non-profit day care centers can use volunteers and Head Start can use parents. Our parents are working, often for minimum wage, and cannot ask for time off, and no one's going to come in and volunteer for you to make a profit ("Where Are We Now?", 1974, p.2).

A staff member from a proprietary center stated an alternative solution:

We don't use volunteers. We have a skeleton staff watching the children who are asleep and we go into another room where we are available if a child awakes and needs help. There's something about going right from the session when you are enthused and saying, 'I'm going to try this today!' I happen to feel this is the ideal solution ("Where Are We Now?", 1974, p.3).

In-service training/education has been shown to have a positive effect on the child as well as the caregiver. Caregivers with education/training relevant to young children deliver better care with somewhat superior developmental effects for children (Abt Associates, 1979). Results also indicate:

. . . in classes supervised by lead teachers with child-related education/training, lead teachers spend more time in social interaction with children; and children show more cooperation, and attend longer to tasks and activities, while at the same time there is a lower frequency of noninvolvement in tasks or activities (Abt Associates, 1979, p.4).

Qualitatively, these findings imply that smaller groups, especially those supervised by lead caregivers with preparation relevant to young children, are marked by activity and harmony. Larger groups, especially those supervised by caregivers without education or training specifically oriented toward young children, present a contrasting picture. Caregivers fall into a passive posture, monitoring active intervention (Abt Associates, 1979).

#### Evaluation

Evaluation is a planned process which provides specific reliable information about a selected topic, problem or question for purposes of determining value and/or making decisions (Civil Service Commission, n.d.). Evaluation is crucial to the design and implementation of any in-service program (Edelfelt and Johnson, 1975). Evaluation of the training program is beneficial to the trainee, the trainer, as well to the program's directors or staff. Competent evaluation is the cornerstone of meeting both organizational and individual educational needs, and of improving the cost effectiveness of the training function. Evaluation can be directed at two general components of training effectiveness.

First, to what degree does in-class learning occur as a result of training? And second, to what degree does the learning translate into on-the-job behavior change (Bunker and Cohen, 1978)?

The purpose of evaluation should determine the design of the strategy (Thompson, 1978). An evaluation strategy provides an orderly approach to compare "what is" with "what is wanted" (Thompson, 1978). Bunker and Cohen (1978) state that questions frequently answered through evaluation include:

-Which training method is most appropriate for the material and the target population?

-Was the course material learned? Did the training result in the desired immediate demonstration of behavior change?

-What changes could be made to improve the training program?

-Are there particular types of trainees for whom the training is more or less effective? (pp. 4-7).

Evaluation should be continuous throughout the training program in order to judge the trainees' progress and the teacher's effectiveness. The key for the trainer is knowing why he or she wants to evaluate and then to evaluate in such a manner so as to meet stated objectives (Thompson, 1978). Several means of evaluating include tests, anecdotal records, self-evaluation, employer evaluation, and parent evaluation (parents of the children with whom trainees worked) (Berry, 1971). Another factor which needs continuous

evaluation is the learner's concept of his own competency and progress. As he is aware of progress in specific skills identified through continuous evaluation with the teacher, he can gain a feeling of increasing adequacy which in turn will promote greater growth (Wilhelms, 1967).

Thompson (1978) states that the trainee's needs are among the most basic in training programs. Commitment by trainees to evaluation is an important initial concern plus an important maintenance concern for the trainer. This problem is best dealt with through modification of evaluation procedures if the initial procedures prove to have a negative influence (Thompson, 1978).

The trainer in a training program also has an important role in the program. Trainers must continually ask themselves whether the objectives being pursued are the correct ones from the trainee's point of view and from the decision-makers' viewpoint (Thompson, 1978). Evaluation results are important to the trainer also. As a user of evaluation results, Thompson (1978) states:

. . . the trainer has three specific needs: (1) a need to know how he or she is doing; (2) a need to use the results of his or her efforts for decisions about the next phase in the training program; and (3) a need to know if the training program can be generalized with other subsystems inside and outside the organization (p. 90).

## Types of Evaluation

Evaluation of a training program should be of several kinds. Most evaluations of training programs fall into two broad types: "impact" analysis, used to assess the program's overall impact or participant outcomes; and "process" analysis, focusing on the internal elements of the program. Impact evaluation asks whether the program is a "success" or "failure" overall, and is typically quantitative in approach. Process analysis, in contrast, asks how the program works with emphasis on identifying ways of improving program operations and design, and is typically qualitative in approach (Hollister, Kemper, and Wollldridge, 1979).

Qualitative and quantitative methods are more than just differences between research strategies and data collection procedures. These approaches represent fundamentally different epistemological frameworks for conceptualizing the nature of knowing, social reality, and procedures for comprehending these phenomena. Program evaluation can be strengthened when both approaches are integrated into an evaluation design (Filstead, 1979).

Patton (1980) offers a checklist of situations in evaluation research when qualitative methods may be called for. Among the situations are included the following:

A need for information about what program staff do, what services are provided to clients, and what clients experience,

An interest in the internal dynamics of programs in program processes,

An interest in the variations among clients and program,

A need for information about types of client cases, including successes and failures, and

An interest in the collection of detailed, descriptive information about the program for the purpose of improving the program (p. 88).

Patton suggests that whenever one or more of these conditions hold (as in the OTCCC evaluation), some qualitative data collection is probably appropriate.

The ethnographic approach to data collection and interpretation is well-suited to certain aspects of the objectives of this study. Ethnographic descriptions of natural environments and ground-level reporting of what people say and do, rather than what they say they do have added a new empiricism to evaluation research (Ianni and Orr, 1979). Ethnographic research calls for the collection of a great deal of information about a few people. In addition to observing members of a cultural system, ethnographic researchers ordinarily subject selected members to intensive interviews. To a large extent, the interview protocol should reflect the viewpoint of the respondent rather than the researcher.

## CHAPTER III

### METHODS AND PROCEDURES

Since the nature of this project involves the organization and analysis of a great deal of existing data in various forms, the first step was to determine the extent to which information was available to evaluate the major goals of the OTCCC project, i.e., to provide training which is both accessible and suitable for caregivers. The sheer quantity of data generated by this project makes the establishment of a computerized evaluation system imperative, but the data are not yet in a form which can be transferred to coding sheets for a computer. Therefore, the first step was to determine, with the help of the OTCCC staff, which criteria they considered to be indicative of whether the training was (1) accessible to caregivers and (2) suitable for the client.

#### Defining Status of Current Data

Several conferences were held with the OTCCC staff in which they determined criteria which they considered to be indicative of whether they had achieved their major goals. For example, the staff indicated that one criterion related to accessibility of the training was the various formats

which have been used to deliver training. After identifying such criteria to the extent possible, the next step was to determine the current status of the data in regard to these criteria. For example, the criteria related to "Program Delivery: Format of Delivery," required information regarding the number of sessions for each course and the number of hours for each session, but the current data available was listed only as "Date: \_\_\_\_\_" and "Hours: \_\_\_\_\_." In some cases, data were available in several ways or from several sources and could be reorganized in a suitable form for presentation and evaluation. In still other cases, data were available in subjective, qualitative form which could be content analyzed to yield categories for analysis in order to quantify the data.

#### Identifying and Developing a Plan for Collection of Additional Data

During the aforementioned conferences with the staff, necessary data which were not available in any form became apparent. A plan for collecting these data was devised. It became apparent to the OTCCC staff and researcher that caregivers receiving training, and employers of both trained and untrained caregivers would have perspectives related to the project which are not known by the OTCCC staff. OTCCC training may be affecting the lives of those involved, and subsequently, the lives of children in ways which would not be apparent from ordinary evaluation efforts. For

example, although not major goals of the project, training may be enhancing self-esteem, social development or career acquisition of the trainees. It was determined that a number of interviews with trainers, trainees, and day care licensing service workers should be conducted in order to identify any relevant information which should be included in a comprehensive evaluation of the project.

It was not a goal of this project to conduct sophisticated statistical analysis of data, rather to determine what information was available, what data needed to become available in order to adequately evaluate the efforts of training, and to present these data in a form which could be utilized to design a system for data collection, presentation, and analysis.

A subsequent project will be needed in order to transfer the data to the computer, train the OTCCC staff in data collection and preparation techniques for computerized analysis, and design a standard computer program for statistical analysis of the OTCCC data. In summary, the following steps were taken by the researcher in order to accomplish the two phases of the project:

1. The OTCCC staff was interviewed in order to determine the criteria which measured whether training was both (a) accessible and (b) suitable for caregivers in Oklahoma.
2. The investigator reviewed the current data/record

keeping system and determined where information related to the criteria was available. The information may have been demographic or process data about the project and it may have been qualitative or quantitative (e.g. test scores, attitude change scores).

3. The investigator determined which aspects of the data were in a form that could be coded for the computer and which aspects of the data were in open-ended form and had to be content analyzed in order to develop response categories for future data collection and coding for the computer.
4. A content analysis of all the subjective open-ended data was conducted and the investigator developed appropriate categories for analysis.
5. The OTCCC staff and investigator developed a set of open-ended questions related to the impact of OTCCC training on such aspects as trainees attitude toward their job, physical changes within the center, and changes in the personal lives of the trainees. The investigator conducted telephone interviews with a representative sample of people involved in OTCCC training, e.g. caregivers, directors, day care licensing service workers.

Data gathered through the aforementioned process is summarized in Chapter IV. In addition to providing an

evaluation and assessment of past achievements and current status of the OTCCC training, recommendations are made for the development of further evaluation efforts.

## CHAPTER IV

### RESULTS

Results of the evaluation study are reported according to the major goals of the OTCCC project. Those goals are to provide in-service training which is both (a) ACCESSIBLE and (b) SUITABLE for caregivers in Oklahoma.

#### Accessibility of Training

Interviews with the OTCCC staff have indicated that the criteria which they consider to be related to their goal of providing ACCESSIBLE training can be organized into three main categories: (a) Program Delivery; (b) Profiles of Trainers; and (c) Profiles of Trainees. The data related to each of these categories is located on the current forms used by the OTCCC staff and is described below, along with a description and an example of the form in which it is currently available. Under each category the criteria which the OTCCC staff considers indicative of whether the training is accessible to caregivers will be listed. The criteria will be discussed one at a time including the current form in which data is found (all current forms are located in Appendix B) and suggested code categories based on the

content analysis of the available data generated from February, 1977 to December, 1980.

### Program Delivery

Criterion 1. Hours and Days of Training. (Located on Course Resume Sheet [Form F-1] under "Course Organization: Dates: \_\_\_\_\_ Hours: \_\_\_\_\_") Examination of data sheets indicated that categories can be developed to indicate which hours of the day have been used for training and which days of the week training has been offered. Furthermore, inconsistencies were found in the reporting of this criterion, resulting in either missing or incomplete data.

Hours of Training. Table I presents the analysis of available information regarding the times of day which have been used for OTCCC training and the number and percentage of courses offered during each time frame. The most frequent times of day for training have been 12:30 - 2:30 in the afternoon and 7:00 - 9:00 in the evening. Other time slots used five times or more were: 9:00 a.m. - 11:00 a.m.; 12:00 p.m. - 2:00 p.m.; 1:00 p.m. - 3:00 p.m.; and "night". These categories overlap with those most frequently used. The most useful time slots for training have been from the noon hour through the afternoon nap period or in the evenings. If this data were recoded in the following recommended categories, the data could be standardized with no real

loss of information to the OTCCC staff. Table II presents the analysis of the recommended categories for recording times of day training has been offered and summary of the current data. Accordingly, Table III presents a comparison of the current form of the data and the suggested code categories based on the content analysis.

Days of Training. Analysis of available information indicated that training has been held on one or more of the following days of the week as shown in Table IV. The most frequent day of the week for training has been Tuesday, with 32.7% of the courses on that day. Days of the week training was offered 100 times or more were Wednesday with 115 courses and Thursday, with 107 courses. Table V presents a comparison of the current form of the data and suggested code categories based on the content analysis.

Criterion 2. Format of Delivery. (Located on Course Resume Sheet [Form F-1] under "Course Organization: Dates: \_\_\_\_\_ Hours: \_\_\_\_\_" and also on Class Participation Record [Form F-13] under "Attendance:" /1/2/3/4/5) Examination of data sheets indicated that categories can be developed to indicate the number of sessions for each course and the number of hours of each session. Inconsistencies were found in the reporting of this criterion, resulting in either missing or incomplete data. For example, analysis of the Class Participation Record (Form F-13) under "Attendance" indicated that five sessions were held for an Orientation to Child

Care course but on the Course Resume Sheet (Form F-1) under "Course Organization: Dates: \_\_\_\_\_," only two dates were indicated for the course. Analysis of available information indicated that the following number of sessions have been held for OTCCC training shown in Table VI. The following number of hours per session are indicated in Table VII.

The most frequent number of sessions for each course have been five and the most frequent number of hours per session has been two. The staff of OTCCC has requested that training for each course be 10 hours or more. Analysis indicates that the majority of the training for OTCCC occurs in two hour session (70.7%) for five sessions (69.2%). Table VIII and Table IX present a comparison of the current form of data and the suggested code categories based on the content analysis of this criterion.

Criterion 3. Location of Training Site. (Located on Course Resume Sheet [Form F-1] under "Training Site: \_\_\_\_\_") Examination of data sheets indicated that categories can be developed to indicate the city and county where OTCCC training has taken place. Inconsistencies were found in the reporting of this criterion, resulting in either missing or incomplete data. For example, analysis of the Course Resume Sheet (Form F-1) under "Training Site" indicated "no response," and the Class Participation Record (Form F-13) under "Address" gave the location of the training site. Table X presents the analysis of available information regarding the

towns/cities which have held OTCCC training. The most frequent cities to hold OTCCC training has been Oklahoma City (41) and Tulsa (27). Other cities which have held training five or more times were: Norman (7); Madill (6); Durant (6); and Enid (5). Table XI presents the analysis of available data sheets regarding the counties where training has taken place. The most frequent counties to hold OTCCC training has been Oklahoma (47) and Tulsa (29). Other counties which have had five or more training courses has been Cleveland (9), Marshall (6), Bryan (6), Washington (5), McCurtain (5), Caddo (5), and Garfield (5).

Information regarding OTCCC courses trained in the four Oklahoma Cooperative Extension Service Districts (Appendix C) was also analyzed. The analysis of available information indicated training had taken place in the following Oklahoma Cooperative Extension Service Districts as shown in Table XII. The Southwest and Northeast districts have had the most frequent number of courses trained. These two districts also contain the two largest counties (Oklahoma City and Tulsa, respectively) that have had training.

Recommendations for compiling this data are that a system be developed to code the counties and districts where training is offered. The data can be recorded by local program, but coding counties and districts would provide rapid access to summary data about which areas of the state are receiving training. Accordingly, Table XIII presents

- District Offices
- 1 - Northwest
- 2 - Northeast

a comparison of the current form of the data and the suggested code categories based on the content analysis.

Criterion 4. Sponsors of Training Sessions. (Located on Course Resume Sheet [Form F-1] under "Course Organization: Dates: \_\_\_\_\_ Hours: \_\_\_\_\_") Examination of data sheets indicated that categories can be developed to indicate the category of sponsor or sponsors of each training course for OTCCC. Content analysis of the data available indicated that courses may have had more than one sponsoring organization, and that the following organizations have been used as sponsors as indicated in Table XIV. The most frequent sponsoring organization for OTCCC training has been the Department of Human Services which have sponsored 57 courses. Other organizations which have sponsored a course 10 or more times has been the OU-Center for Child and Family Development (16); Church Sponsored Child Care Centers (15); Oklahoma County Health Department (14); Privately owned centers (14); Cooperative Extension (11); and Vocational-Technical Schools (10). While there has been an impressive variety in individual OTCCC sponsors, the sponsors can be grouped into categories for recording and summarizing training data. If this data were recoded in the following recommended categories, the data could be standardized with no real loss of information to the OTCCC staff. Table XV presents an analysis of the sponsoring organizations in the recoded form. Table XVI presents a

comparison of the current form of the data regarding this criterion and the suggested code categories based on the content analysis.

Criterion 5. Centers Represented at Training Sessions. (Located by finding the names of participants of each course on the Class Participation Record [Form F-13] and checking each participants' personnel file located in the OTCCC office for their employment/center located on the Caregiver's Advancement Record [Form F-6] under "Employment") The OTCCC staff indicated that another criterion for "Program Delivery" was to determine from what centers trainees were coming to receive training. To obtain this information, the researchers had to locate the names of each participant in the "Caregiver's File" located in the OTCCC office. After locating the participant's advancement record, the place of employment was recorded. The actual training site was also obtained by looking at the Class Participation Record (Form F-13) under "Site."

At this point, the process is too laborious to retrieve all of the information regarding this criteria. Sixty courses were analyzed; however, and 305 centers were represented, with a mean of 5.1 centers per course. In the future, the OTCCC staff could develop a means of obtaining this information. Data related to number of centers served and approximate distance traveled could provide further evidence of accessibility of training.

Table XVII presents a comparison of the current form of the data regarding this criterion and suggested code categories based on the content analysis.

### Profiles of Trainers

Criterion 1. Occupation of Trainers. (Located on Trainer Application form [F-4] under "Occupation" and on Trainer Information Card [Form F-14] under "Occupation") Examination of the data sheets indicated that categories can be developed to indicate the occupations of OTCCC trainers. While data indicate that training has been offered by 48 trainers, a pool of 87 designated trainers has been developed. Table XVIII presents the analysis of current available information regarding the occupation of designated trainers and the number and percentage of trainers for each occupation. The most frequent occupations of OTCCC designated trainers has been day care licensing service workers (N=25) and directors of day care centers or preschools (N=23). If this data were recoded in the following recommended categories, the data could be standardized with no real loss of information to the OTCCC staff. Table XIX presents the analysis of the recommended categories for recording trainers' occupations and summary of current data. A comparison of the current form of the data regarding this criterion and suggested code categories based on the content analysis is presented in Table XX.

Criterion 2. Educational Level of Trainers. (Located on Trainer Application Form [Form F-4] under "Education" and on the Trainer Information card [Form F-14] under "Education") Examination of the data sheets indicated that categories can be developed to indicate the educational levels of OTCCC trainers. Table XXI presents an analysis of current available information regarding trainers education level. Four or more years of college training was indicated by 79.5% of the trainers. All trainers have had four years of high school or above. Table XXII presents a comparison of the current OTCCC form and the suggested code categories for the educational level of OTCCC trainers.

Criterion 3. Trainers' Related Types of Experience. (Located on Trainer Application form [Form F-5] under "Experience in Child Care" or on Trainer Information Card [Form F-14] under "Experience") Examination of data sheets indicated that field experience of the trainers' is currently recorded as response to an open-ended question. Enough data is available to create response categories for future data collection and retrieval. This is important in order to determine if certain kinds of past experiences are related to successful training. The current form of this data makes such analysis impossible (Table XXIII). The most frequent types of experiences indicated by the trainers has been staff training (18.4%) and workshop leader (15.4%). There have also been a wide variety of experiences- teachers,

directors, aides, Lamaze-LaLeche instructors, as well as swimming and tennis instructors. If this data were recoded in the following recommended categories the data could be standardized. Table XXIV presents an analysis of recommended categories for recording OTCCC Trainers' related experience, and summary of current data according to these categories. A comparison of the current OTCCC form and the suggested code categories for the trainers' previous experience is presented in Table XXV.

Criterion 4. Number of Courses Each Trainer Has Trained.

(Located on Trainer Information Card [Form F-14] side two-"Instruction Record") Examination of data sheets indicated that categories can be developed to indicate the number of courses each trainer has trained. Analysis of available information indicated that trainers have offered the number of courses presented in Table XXVI. Fifty percent of the trainers have trained only one course and 10 trainers have offered two courses. Few trainers have offered more than two courses. One very experienced trainer has offered 13 courses. In the future, as trainers have more experience, OTCCC staff may want to develop codes for recording the number of OTCCC courses offered.

Criterion 5. Status of References of Trainers. The OTCCC staff indicated that they would like a way of recording information about the trainers during the approval process in regard to the status of their references,

recommendation by the Executive Committee for approval to train, and courses trained. A check sheet was developed for the OTCCC staff's use as shown in Table XXVII. Eventually, the OTCCC staff could develop codes for retrieval of information stored in a computer system.

### Profiles of Trainees

Criterion 1. Occupation of Trainees. (Located on Caregiver's Advancement Record [Form F-6] under "EMPLOYMENT") Examination of data sheets indicated that categories can be developed to indicated the occupations of OTCCC trainees. Table XXVIII presents the analysis of current available information regarding the occupation of trainees and the number and percentage of trainees for each occupation. The most frequent occupation listed by the trainees was "teacher" with 137 or 14.0% of the total respondents stating this as their occupation. One hundred and six trainees reported their occupation as "director." There also has been a variety of occupations such as cook, bus/van driver, speech therapist, secretary, substitute teacher, houseparent, field representative, and bookkeeper. The occupations can be grouped into categories for recording and summarizing trainees' data. If this data were recoded in the following recommended categories, the data could be standardized with no real loss of information to the OTCCC staff. Table XXIX presents an analysis of the trainees' occupations and summary of current data in recoded categories. Table XXX

presents a comparison of the current form of the data regarding this criterion and the suggested code categories based on content analysis.

Criterion 2. Education of the Trainees. (Located on the Caregiver's Advancement Record [Form F-6] under "EDUCATION" or Participant's Enrollment Form [Form F-2] under "EDUCATION") Examination of data sheets indicated categories can be developed to indicate the educational level of OTCCC trainees. Table XXXI presents the analysis of current available information regarding the educational level of trainees and the number and percentage of trainees at each level. The most frequent educational level completed by OTCCC trainees has been four years of high school, with 553 or 43.7% of the trainees. Six hundred and nineteen trainees did not respond to this question on the Participant's Enrollment Form (Form F-2). The OTCCC staff indicated that this question was not asked of trainees before 1978, which contributed to the rate of non-response. It is believed, however, that some trainees may not have attended high school. Nine trainees stated they had completed sixth and eighth grade. Table XXXII presents an analysis of the suggested recoded categories for the educational level of OTCCC trainees and summary of current data by these categories. Categories could be developed and information recoded to include education below high school and more specific college education levels. Table XXXIII presents a comparison of the

current data on the educational level of OTCCC trainees and the suggested code categories based on content analysis.

Criterion 3. Field Experience in Child Care Facilities.

(Located on Caregiver's Advancement Record [Form F-6] under "Experience related to child care" or on Participant's Enrollment Form [Form F-2] under "Other experiences related to child care") Examination of data sheets indicated that categories can be developed to indicate the care related field experience of OTCCC trainees. Table XXXIV presents the analysis of available information regarding the field experience of OTCCC trainees. The most frequent field experiences of trainees has been "child care/day care/ nursery worker," with 285 or 23.1% of the trainees. Other experiences reported 100 times or more has been "babysitting" (N=148) and "parent/mother/raised own children" (N=140). While there has been a wide and impressive variety of trainees' field experiences, the experiences can be grouped into categories for recording and summarizing training data. If this current data were recoded in the following recommended categories, the data could be standardized and retrieved more readily by the OTCCC staff. Table XXXV presents an analysis of the recoded categories of OTCCC trainees' field experiences and summary of current data. Table XXXVI presents a comparison of the current OTCCC form and suggested code categories for trainees' field experiences in child care.

Criterion 4. Number of Trainees Who Have Completed One or More Courses. (Located on Caregiver's Advancement Record [Form F-6] side two under "Training Record Form") To obtain this information, the investigator examined the "Caregiver's File" located in the OTCCC office. Each card was examined and the name of the course each trainee had registered for, date (month and year) course was completed, and date Level I (3 courses) on the Child Care and Development Career Ladder was completed. Table XXXVII indicates how many courses have been completed by individual trainees. As can be logically expected from the short history of the availability of training (3 years), the largest number of trainees have completed one course. This data clearly indicates that increasing numbers of trainees are committed to participating in OTCCC training. Already, 68 persons have completed four or more of the seven courses which have been available since 1977. Additionally, 139 persons have completed the three specific courses required to achieve Level I of the OTCCC Child Care and Development Career Ladder. These successive enrollments by individuals indicate an impressive commitment to OTCCC training.

TABLE XXXVII

### Suitability of Training

Interviews with the OTCCC staff indicated that criteria which they consider to be related to their goal of SUITABILITY for the caregivers can be organized into three main areas:

- (1) Does the training have an effect on personal and professional needs of the persons receiving training?
- (2) Based on the director's assessment, what are the effects of the training received by the caregivers?
- (3) Based on day care licensing service workers' assessments, what are the effects of the training received by the center's personnel?

The OTCCC staff and investigator developed open-ended questions based on these criteria to assess the suitability of the training being offered. A stratified sample was selected to include persons representing all categories of individuals involved in OTCCC training. The sample included 3 caregivers who have completed 1 course; 3 caregivers who have completed Level I of the OTCCC Child Care and Development Ladder (APPENDIX A); 2 caregivers who have completed all six OTCCC courses offered thus far in the training program; 2 directors who are also OTCCC trainers; 2 directors who have OTCCC training in their centers; 1 day care licensing service worker who is a trainer; and 2 day care licensing service workers who do not train. A letter was sent

to each person explaining the project and asking for their participation (APPENDIX C). The letter indicated they would be telephoned by the investigator within two weeks for the purpose of conducting the open-ended interview. The fifteen interviews were conducted by the investigator approximately one to two weeks later. The specific open-ended questions asked to each group (caregivers, directors, licensing service workers) and their specific responses to the questions are listed in APPENDIX D. Responses of each group are summarized below.

#### Caregivers

When asked about what they had learned in addition to what can be covered by tests, caregivers generally indicated that they had developed skills in guidance, i.e., "how to be more patient," increased knowledge and understanding of child development, and developed classroom management skills, i.e., labeling shelves, setting up a room, and removing "running areas." The caregivers also indicated an increased knowledge in health, safety, and nutrition, i.e., which foods "contain alot of sugar," "learned about diseases- those that are contagious."

The caregivers indicated that training was helpful to them in their job in that it helped them develop a positive attitude toward children, i.e., "have positive attitude about the child," "how to talk to children," and "you (child)

are someone special." Training has also increased their confidence as a caregiver, i.e., "gave me self-assurance; know where I'm going," understand children and how to cope with their problems, i.e., "as a person I feel I can teach a child now." Training has also been helpful to the caregivers in their personal life by helping them deal with their own children and grandchildren, i.e., "positive guidance with my teenager;" "more open to communication;" and "used to spank own children but not now, give choices."

The caregivers were positive about the courses and training, i.e., "Orientation to Child Care film was good;" "training was good and helpful;" "like them all; get better as we go." Suggestions they had for improving the courses included more class involvement (discussions, bring things you have made, and make things). The caregivers indicated they would like more information on dealing with parent involvement, small infants, older children (6-12), and "more specific (information) on outdoor arrangement and things to do outdoors." One caregiver expressed concern about the criteria for completion of a course. She felt that the program needs a "way to deal with people who have completed only half the course or miss more than two hours--sometimes they get discouraged and won't try again."

Training has had a positive effect on the caregivers attitude toward their job and day care work as well as themselves, i.e., "feel more important;" "more self-assurance--

I love working." Caregivers stated that they have more harmonious relationships with other staff members, discuss problems and have become closer as a staff. They also feel they are more conscientious, more aware of what they say, and that they feel more important.

### Directors

The directors felt that OTCCC training has been helpful to their caregivers by giving practical knowledge that can be put to practical and immediate use. The interaction within the group was noted as being invaluable.

When asked if the caregivers are doing anything differently than they did before, the directors indicated the caregivers have changed in their classroom management skills, i.e., "have expanded the planning;" "have done quite a bit of reconstructing of the rooms." The directors also said that the caregivers seem to understand the needs of the child and "talk more about the children." The directors indicated that they are expanding the planning since their caregivers have had training and are more aware of the things they have been doing.

Suggestions for improving the training were made from directors who are also trainers. A director/trainer suggested that the trainer manual be in text form so the instructor could structure each session. It was also suggested that packets for a particular course be printed together-- "some have different page numbers-some of the packets are

ones printed earlier."

The directors indicated that they encourage their entire staff to participate in training and "expect a good share of them to go all the way through." Training did not seem to have an effect on the staff turnover in the centers of the four directors interviewed. However, three directors indicated that they do not have a great deal of turnover or have not seen an effect. One director indicated that she had seen an effect on turnover stating that "once they (caregivers) do receive the training, they go on to bigger and better things, which I think is great."

#### Licensing Service Workers

When asked if they had seen any physical changes within the centers since training began, the licensing service workers stated that they have seen changes in the room arrangement of the centers, more interest centers, and centers were making more homemade games. It was also stated that the caregivers are using more positive guidance and giving more individual attention.

When asked if they had seen any personal changes in the directors of the centers since training began, the licensing service workers stated that the directors were more concerned with the qualifications of those they hire and are "better about daily lesson plans." The directors' enthusiasm was noted as being better since training.

Licensing service workers have observed that caregivers have developed a more positive attitude toward their job, i.e., "generally feel more confident, professional;" "positive attitude about caregiving;" "have more pride about their job." A licensing service worker stated that caregivers "correct people when they say they are babysitting--explain that children learn through play."

The licensing service workers are working more directly with the entire staff (directors and caregivers) since the staff have received OTCCC training, i.e., "before, I only worked with directors, since caregivers had training they are no longer afraid of licensing service workers--will ask for help in working up units;" "feel much closer to the staff. We talk about children's behaviors, etc.;" "staff wants to add input." A licensing service worker stated that the staff of the center's attitude has improved toward new licensing standards since OTCCC training.

The licensing service workers were positive about the training program. They did, however, state that some of the packets had to be rewritten for the particular group of caregivers--"have to gear it up or down." She felt that the packets should contain different options. It was also stated that some packet materials are not appropriate for caregivers (man at a desk thinking about a boat). "Some (material) should be redone and made more appropriate."

A licensing service worker who is also a trainer in western Oklahoma stated that "I'm the only one who trains-- I need more help." She went on to say that she was very happy to train and hands out more material than just the packets, due to the lack of available materials in her area.

## CHAPTER V

## SUMMARY AND CONCLUSIONS

## Summary

Purpose of Study

The major purpose of this study was to evaluate and assess the past achievements and current status of the Oklahoma Training for Child Care Careers (OTCCC) project. The major goals of (a) accessibility to the caregivers and (b) suitability for the clients were used to determine criteria in which to evaluate the project.

Specific purposes of the study were to: (1) identify the types of evaluative information currently available from the OTCCC project; (2) summarize, analyze, and present currently available data in a form which can be coded and eventually transferred to a computerized system; (3) identify missing information which needs to be collected in future evaluation efforts; (4) summarize the results of the analysis of the data currently available to evaluate progress toward the major goals of the training.

### Methods of the Study

The OTCCC staff was interviewed in order to determine the criteria which measured whether training was both (a) accessible and (b) suitable for caregivers in Oklahoma. The current data/record keeping system was reviewed and it was determined where information related to the criteria was available. Information was analyzed to determine if it was in a form that could be coded for the computer or in an open-ended form that had to be content analyzed in order to develop appropriate categories for analysis. An open-ended interview was conducted with 15 persons involved in OTCCC training (caregivers, directors, day care licensing workers) regarding the impact of the training on such aspects as the trainees attitude toward their job, physical changes within the center, and changes in the personal lives of the trainees.

### Summary of Major Findings

Analysis of current data available to assess the extent to which the OTCCC training has been accessible to caregivers in Oklahoma is presented in detail in Chapter IV. While comprehensive records have been kept, the investigator found that the data, in almost all instances, could be collapsed into fewer categories for the purpose of evaluation and information retrieval. The suggested codes are presented in Chapter IV. The available data were summarized

both in the present form and in the suggested form to facilitate decision-making of the OTCCC staff in their future evaluative efforts.

With regard to an overall assessment of the accessibility of OTCCC training, the data available presents a very positive view. Since 1977, training has been delivered to over 1,500 persons in 156 locations throughout Oklahoma. Twenty-four different organizations sponsored 180 separate courses. Training has been offered by 48 different trainers representing a variety of experiential, occupational, and educational backgrounds. A pool of 87 designated trainers is currently available to the OTCCC staff. Data further indicate an impressive commitment of both trainees and trainers to the OTCCC project, with 50% of the trainers having completed two courses or more. In the three years training has been offered, 139 persons have completed the specific course requirements to achieve Level I of the OTCCC Child Care Career Advancement Ladder. Data available regarding demographic characteristics of trainees indicate that OTCCC training has been accessible to trainees representing a wide variety of previous experience and education. Approximately 62% of the trainees have had high school education or below. In summary, it appears that the OTCCC project has been very successful in its goal of providing accessible training for careers in child care.

Evidence of suitability of OTCCC training is available from the 15 interviews conducted with a sample of persons representing all areas of involvement in OTCCC training. Caregivers indicated that OTCCC training has helped them develop skills in guidance and classroom management. Training has also been helpful in developing a positive attitude toward children and toward their job. It has also given them self-confidence as a caregiver. The caregivers also stated that training has helped them in dealing with their own children and grandchildren. All caregivers interviewed were positive about the training program and indicated an interest in more information regarding parent involvement, young infants, older children, outdoor space arrangement, and outdoor activities.

Directors interviewed stated that OTCCC training has been helpful in providing practical knowledge for the staff that can be put to immediate use. The directors stated that they have noticed a change in the caregivers' classroom management skills such as rearrangement of the room and expanded planning. The directors encourage all of their staff to participate in the training program.

Licensing service workers also noticed a change in the room arrangement of the centers and more homemade games and interest centers since training began. Caregivers are using more positive guidance and giving more individual attention. The licensing service workers indicated that they have seen

a change in attitude of the caregivers and directors. The caregivers have a positive attitude toward their job and feel more confident. They also discuss and talk with the licensing service worker about the center and particular children. The licensing service workers stated that directors are more aware of caregivers' qualifications and more concerned with the qualifications of an applicant. Training was noted as helping several directors and centers accept the new day care licensing standards. In summary, OTCCC training appears to have a positive effect on the personal and professional lives of caregivers involved in the program.

### Conclusions

Past emphasis in the OTCCC project has been on the development of the curriculum materials, organizational strategies, and delivery of training. Inadequate resources have been available to develop an adequate system of evaluation. The size and scope of the project has reached a stage where the development of a comprehensive evaluation which can be computerized is essential. The investigator spent approximately 300 hours gathering and tabulating data from the current forms to retrieve specific information. The investigator hopes that her efforts to categorize and summarize the existing data will be of help to the OTCCC staff in their further development of the evaluation system for OTCCC training.

## TRAINER'S EVALUATION

Name \_\_\_\_\_

Course \_\_\_\_\_

Date \_\_\_\_\_

Thank you for taking a few minutes to jot down your reactions to your training experience. Your comments will help OTCCC improve the training materials and report the effectiveness of training.

YOUR PERCEPTION OF STUDENT REACTIONS: Circle the most appropriate answer.

1. How useful was the content of this course to your caregiver-students?

1	2	3	4	5
Useless	Not very Useful	Somewhat Useful	Useful	Very Useful

2. How well did the content match your students current learning level?  
(Note that this answer peaks at 3)

1	2	3	2	1
Too Easy	Easy	Well-Adjusted to learning level	Difficult	Too Difficult

3. In general, how did the students receive the class presentations?

1	2	3	4	5
Bored	Fairly Uninterested	Moderately Interested	Interested	Excited and Eager

4. How involved did the students become in the class sessions?

1	2	3	4	5
Refused to Participate	Generally Unresponsive	Participated When Urged	Participated When Asked	Participated Spontaneously

5. How interested did the caregivers seem in using what they learned?

1	2	3	4	5
Not willing to Try	May try Later	Were Willing to Try	Tried	Tried and Were Pleased With Results

## Form F-9

## YOUR REACTIONS TO THE COURSE:

1. How difficult was this course to prepare and teach?  
(Note that this answer peaks at 3)

1	2	3	4	5
Very Easy	Easy	Handled It OK	Difficult	Too Difficult

Comment \_\_\_\_\_

Please comment on the following:

2. In what ways might the Trainer's Guide be improved? Were any of the parts confusing? Could any parts be omitted?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

3. Did your training package contain all of the required materials?

List any missing items: \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

4. Which suggested class activities were most successful?

\_\_\_\_\_

\_\_\_\_\_

5. Were any class activities not effective? Which? Why?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

6. List three materials in the package which you felt were particularly useful and effective.

a. \_\_\_\_\_ b. \_\_\_\_\_

c. \_\_\_\_\_

7. Were there materials which you think should be upgraded or eliminated? Which? \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

8. Please use the back of this sheet to share any other comments or reactions to this course.

## OKLAHOMA TRAINING FOR CHILD CARE CAREERS

## EVALUATION FORM

Dear Caregiver: Please take just a minute to tell us what you thought of this course. Your ideas will help us write better materials. Thank you.

- I. Evaluate the presentation of the materials. Which kind of presentation did you like best -- lectures, filmstrips, discussion, group work?
  
- II. How might the course be improved?
  
- III. Were you comfortable with the class assignments? The Learning Activities?
  
- IV. In what ways has this course helped you become a better caregiver?
  
- V. Are you interested in more training?

(Please tear off this sheet and hand in to the trainer separately.)

Tulsa, OK 74177

Dear Ms. Sherman:

The purpose of this letter is to solicit your help in evaluating Oklahoma Training for Child Care Careers (OTCCC). By doing this, you will be assisting Betty Stratton and Maxine Hall in summarizing information about the training provided through OTCCC. A great deal of information is available in the training office, however, additional data is needed from you concerning your involvement and its effect on you personally and professionally. Judy Oberste will be contacting you by phone in the next two weeks and we would appreciate you taking time to visit with her concerning your involvement in this project.

During your conversation with Judy, we would like you to share with her your feelings, insights, and opinion about OTCCC training. Your suggestions for improving the training system and any additional information you would like to share will be appreciated.

If you are willing to participate in this interview your comments will be tape-recorded, but you will not be identified on the tape nor in the final report. Your participation will help us to have a better and more "human" evaluation of OTCCC.

Thank you in advance for helping us with this important Oklahoma Training for Child Care Careers project.

Sincerely,

*Judy Oberste*

Judy Oberste, Graduate Assistant  
Family Relations and Child Development

*Judith A. Powell*

Judith A. Powell, Ed.D.  
Advisor, Associate Professor  
Family Relations and Child Development

*Betty Stratton*

Betty Stratton  
Executive Director,  
Oklahoma Training for  
Child Care Careers

APPENDIX D  
SPECIFIC RESPONSES TO INTERVIEW  
QUESTIONS

## CAREGIVERS

1. During OTCCC training, you are given pretests and post-tests about information you learned. We know that everything a person learns can't be measured with tests. What other things have you learned?
  - how to be more patient
  - labeling shelves
  - rearranged rooms-remove running area
  - about child care facilities-how to handle children
  - aware of children's needs; encourage them in their development; know and understand about the stages in development
  - deal with children; their personality
  - Health and Safety-learned about diseases--those that are contagious
  - setting up room
  - Nutrition-know which foods are good and which ones contain a lot of sugar
  - mainly a refresher
  - aware of what's going on in the nursery
  - learned the do's and don'ts of discipline
  - how children react to things
  
2. In what ways was the training helpful to you in your job?
  - aware of children's needs
  - understand children; cope with their problems
  - gave me ideas and things you can do with children
  - not to say negative things with children; be positive
  - have positive attitude about the child; you (child) are someone special

- weak on tornado and fire drills--helped in this way
- had less background in health and safety--helped to evaluate what we had and what we needed
- how to help children when they are crying
- made me think about my job
- gave me self-assurance; know where I'm going
- had only in-home training before--now I feel I know how to go about dealing with children and their problems
- learned art activities, stories and fingerplays; sounds of animals, musical games
- as a person I feel I can teach a child now

3. In what ways was the training helpful to you in your personal life?

- help with own children--test out ideas with them and then modify it for work
- help deal with grandchildren
- can't think of any ways
- made me aware that I am capable of learning my own way
- I don't think it has
- watch ways to help in development and love and warmth outside home

4. Can you give examples of ways you have used what you have learned in the training sessions?

- never use to have themes
- cover more pre-writing, manipulatives, and numbers now
- more aware; not anything specific; more patience and understanding

- labeling of shelves
- rearrange rooms
- go down to their level
- being positive
- use a soft voice
- different ideas for topics, themes
- different things to use, make, cook

5. Is there anything you are doing differently than you did before in your job?

- not really
- getting down to child's eye level; using a soft voice; have smaller sentences
- being positive
- talk to them (children) at their level
- deal and work with other people, see problems they have and have become closer
- more aware, not anything specific
- more conscientious--I think before I say something

6. Is there anything you are doing differently than you did before in your personal life?

- dealing and talking with own children
- no
- short-tempered--learned to cope
- use to spank own children but not now, give choices
- nutrition--eating better
- positive guidance with teenager
- disease--know about burns, poisons

- have teenage son--more aware and understanding toward him--didn't have or give time--with training it would have helped with own family--more open to communication

7. What suggestions would you make for improving the course?

What other topics would you like covered in the course?

- pretest used term that it's meaning was just the way you interpret it (did not remember the exact word or test)
- important to keep in contact with parents; need more in regard to dealing with parents
- Orientation to Child Care film was good
- more speakers (last time only one)
- with the guest speakers we didn't have enough time to talk and discuss
- overall, training was good and helpful
- like a class with personal involvement, like a class with class participation
- more creative--making things
- more about small infants and older children (6-12)
- more group discussions
- bring related article to sessions and share with other class members and discuss it
- helps me to learn more with class discussions
- be more specific on outdoor arrangement and things to do outdoors
- way to deal with people who have completed only half the course or miss more than two hours--sometimes they get discouraged and won't try again
- like them all; get better as we go
- more class participation
- bring things that you make

8. What changes do you see in your attitude toward your job?

How do you feel about day care work? Is it different since you have had training?

- I think my job is more important. I had an elementary degree and I thought day care was just more or less babysitting. It's not just watching the children. More important, you make more of an impact on the children.
- more understanding about my job
- feel more important; have certification so it seems important
- not so much a job anymore, more involved with the children
- love working; not as frustrated--can handle the problems at work and not as tired when I get home
- thought I just babysat--with course, it helped me grow and handle problems
- more self-assurance
- deal and work with other people--have harmony
- see problems the other staff have with group and discuss it--have become closer

9. Do you feel you have changed as a person after having taken training?

- more conscientious
- feel more important
- count to ten; think before I act
- have changed slightly--more aware of what I say
- yes--a better person
- no--not really

10. Is there anything else you would like us to know?

- overall training was good and helpful
- Orientation to Child Care film was good
- more in regard to dealing with parents
- something about older children; school age
- more on small infants
- great way for women who need some "on-the-job" training

## DIRECTORS

1. How long have you been the director in this particular center
  - 1 year
  - 12 years
  - 8 years
  - since February, 1981
  
2. How long have caregivers been training in your center?
  - 3 years
  - since January, 1980
  - from the beginning
  - since February, 1981
  
3. Have you had OTCCC training? Do you train with your staff?
  - train with staff
  - no
  - an OTCCC trainer
  - an OTCCC trainer
  
4. In what ways has training been helpful to your caregivers?
  - best way to train--it gives you practical knowledge. Even if you are a college graduate you need practical training.
  - helps you to evaluate what you are doing
  - helps to increase your knowledge
  - all the material has been very well received and put to practical use. The big advantage to the program

is that for us is it has been an inhouse staff training thing. It's gotten the people together. Each training session has become an inhouse problem solving kinda thing. The interaction within the group has been invaluable.

- thought our day care was different. Have learned that everyone has the same problems and to take it a little easy. Don't get upset at the children when they do something--it's normal
- (children) don't have to eat all their food--they can at least taste it.

5. Since they began training, is there anything the caregivers are doing differently than they did before?

- quite a bit of reconstructing of the rooms. The teachers with their aides have done quite a bit of rearranging of the rooms. Since the Behavior and Guidance class this spring, there is a big section in there about rearranging and how it affects children's behavior and everyone enjoyed that very much. I think probably everyone has benefited also from that this is a recognized thing and we have gotten feedback from the mothers who have come into the center and find us in a classroom situation and are pleased that we are doing this. I think it's given them an attitude of importance of their job and this shows.
- have expanded the planning to a variety of planning
- seem to understand needs of child
- explain more and talk more about the children. They are all different

6. Since the caregivers have had training, is there anything you are doing differently than you did before as a director?

- I don't believe so
- have expanded the planning
- have participatory managing; have changed roles--facilitator of information

- we are doing the same thing but probably more aware of what we are doing

7. What suggestions would you make for improving the training?

- make sure packets are identical with each other. Some have different page numbers--some of the packets are ones printed earlier. It's confusing when you say turn to page so-n-so and they can't find it.
- some times it's confusing to me as a trainer to have the trainers manual spelled out minute by minute, step by step. I think that I would rather have the material in text form and be able to structure each session myself-which we can do pretty much anyway. That's given to us as a guide with the assurance that if we deviate from it as long as we cover the material that's fine but somehow I always feel obligated to go back through that minute by minute progression to make sure I haven't left something out and it's confusing. Perhaps someone who hasn't done training wouldn't have that problem. I think, for me, I can take off with it better if I structure the session thing myself.
- not really-they seem to have everything
- have an information phone tree to let others know about the training--when and where it is
- should have started (training) earlier

8. Would you suggest further training for your caregivers?

For your entire staff (cook, bus driver, etc.)?

- definitely--I don't know if there is enough training.
- I encourage the other staff to participate
- I'm expecting a good share of them to go all the way through
- I plan to take the second and third courses
- entire staff participates in the training

9. Have you seen any affect on your staff turnover ratio since your caregivers have been training?

- no--can't say I have
- no--don't have very much turnover here anyway so I really haven't seen an affect
- unfortunatly yes. When person becomes quality caregivers they advance. Problem with Oklahoma child care is very low pay and low recognition. Once they get to a point where they are really a quality caregiver they start looking around at other possibilities, for them whether it is continuing college, facilitating a day care home, some other options for them. Once they do receive the training they go on to bigger and better things which I think is great.
- no--I haven't seen any

10. Is there anything else you would like us to know?

- most innovative way to reach paraprofessionals and I'm really excited about it
- should have started training earlier
- everything they teach us is good
- learn that the child is the most important person. Talk to the parents and maybe something is wrong at home.

## LICENSING SERVICE WORKERS

1. How long have you been a licensing service worker?
  - 3 years
  - 8½ years
  - 7½ years
  
2. Approximately how many centers do you serve in your area?
  - 60 - 70
  - 25
  - 55
  
3. Approximately how many of these centers have OTCCC training?
  - 30
  - 9
  - 5
  
4. Have you seen any physical changes within the centers since training began?
  - no
  - indescrible--planning activities
  - more positive guidance
  - individual attention
  - making more interest centers and homemade games
  - arrangement of centers
  - staff interested--let you know what is going on--didn't do this before

5. Have you seen any personal changes in the directors of the centers since training began?
  - no--directors are degreed and doing training
  - more concerned with whom they are going to hire-- their qualifications
  - better about daily lesson plans
  - enthusiam is better
  
6. Have you seen any changes in the caregivers since they began training?
  - have more pride about their job
  - enthused about planning
  - generally feel more confident, professional
  - great deal--positive attitude about caregiving
  - correct people when they say they are babysitting-- explain children learn through play
  - make positive statements about child
  
7. Is there anything you are doing differently in the centers than you did before the staff received OTCCC training?
  - makes life easier--staff wants to add input
  - center's attitude is improved toward new licensing standards.
  - no
  - bringing more books and records to the center
  - before, I only worked with the directors, since caregivers had training they are no longer afraid of the licensing worker--will ask for help in working up units

- feel much closer to the staff--we talk about children's behavior, etc.

8. What suggestions would you make for improving the training?

- only one who trains--need to get more help
- have to rewrite packet for particular group--have to gear it up or down which takes alot of time--should contain different options
- some packet materials are not appropriate for caregivers (man at a desk thinking about a boat) some should be redone and made more appropriate
- one trainer gets too casual in presenting the material--needs to be more professional

9. Is there anything else you would like for us to know?

- I hand out more material than just packets due to the lack of available materials in my area (western Oklahoma)

## VITA

Judy Anne Oberste

Candidate for the Degree of

Master of Science

Thesis: AN EVALUATION OF THE OKLAHOMA TRAINING FOR CHILD  
CARE CAREERS PROJECT

Major Field: Family Relations and Child Development

Biographical:

Personal Data: Born in Tulsa, Oklahoma, July 26, 1954,  
the daughter of J. R. and Cecilia Oberste.

Education: Graduated from Bishop Kelley High School,  
Tulsa, Oklahoma, in May, 1972. Attended North-  
eastern Oklahoma A & M College, Miami, Oklahoma,  
1972-1973; attended Tulsa Junior College, Tulsa,  
Oklahoma, 1973-1977; received a Bachelor of  
Science in Home Economics degree from Oklahoma  
State University, Stillwater, Oklahoma, with a  
major in Family Relations and Child Development  
in December, 1979; completed requirements for  
the Master of Science degree at Oklahoma State  
University in December, 1981.

Professional Experience: Graduate Teaching Assistant,  
Oklahoma State University Child Development Lab-  
oratories, Stillwater, Oklahoma, 1980-1981.

Professional Organizations: Omicron Nu, Southern Asso-  
ciation on Children Under Six, Oklahoma Associa-  
tion on Children Under Six, Association for Child-  
hood Education International, Friends of Day Care.
