#### ACKNOWLEDGMENTS

I would like to express my sincere appreciation for the help, guidance, and encouragement of Mrs. Kathryn M. Greenwood who served as my thesis adviser. I also wish to thank Dr. Donice Kelly and Dr. Robert Breitenbach for serving as members of my advisory committee.

The recognition for a large amount of assistance, inspiration, and reassurance goes to one person - my husband, Bob. His help with the data processing was particularly beneficial to this study.

Thanks are in order to Velda Davis for the final typing of this thesis.

#### CHAPTER I

#### INTRODUCTION

Women's role in the economy and the business world has undergone a profound change. Business has become a woman's sphere, as well as a man's world.

In the late 1800's men did most of the buying for the household, but at the turn of the century they began to delegate an increasing number of buying duties to their wives. This, coupled with the fact that about nine million women had entered industry and business during World War I, was the beginning of women's influence on the world of business. The majority of these nine million women remained in business after World War I, thus leading to the speculation that "Women were in business to stay."

A statement in the early 1900's by Edith Abbot voiced the importance of women in industry.

In a study of our economic development it becomes clear that women have been from the beginning of our history an important factor in American industry. In the early days of the factory system they were an indispensable factor. The theory, therefore, that women are a new element in our industrial life, or that they are doing

Doree Smedley and Lura Robinson, <u>Careers in Business For Women</u> (New York, 1945), p. 17.

<sup>&</sup>lt;sup>2</sup>Ibid., p. 17.

<sup>&</sup>lt;sup>3</sup>Ibid., p. 18.

'men's work,' or that they have 'driven out the men,' is a theory unsupported by facts.  $^{\rlap{\sl /}4}$ 

In 1929 Fleishman wrote that it had not been so long since the feminist movement had broken down the barriers between women and occupational fields which had been regarded as exclusively men's areas.<sup>5</sup>

An article in Time in early 1954 stated that

Outwardly, but only outwardly, American business has become strongly feminized. ... of the total United States labor force of 63 million nearly 1/3 are women, twice as big a proportion as 60 years ago. Nevertheless, there are not enough top women executives in the United States to form a medium sized chorus line. 6

The number of women in business and industry can be misleading when dealing with professional home economists, since only a small number of the total working force of women are in executive positions. There were four million women in professional and technical occupations in 1969, which was one out of seven employed women.<sup>7</sup>

A current article concerning women executives stated, "American industry produces almost as few top women executives as it did four years ago - or 10 years ago."

Edith Abbot, Women In Industry (New York and London, 1909), p. 317.

Labor, "For Women, A Difficult Climb to the Top," <u>Business Week</u> (August 2, 1969), p. 42.

#### The Problem

Factors which influence the career choices of women are complex and are difficult to study. Prestige is one of the variables within this array of occupational choices. "In every complex society there is a division of labor and a hierarchy of prestige."

The purposes of this study were to investigate the relative prestige of the professional occupations of female home economists in business as expressed by selected prospective home economists, and to study the relationships of those prestige ratings to the choice of the major area of study.

These purposes took shape in the following emergent hypotheses:

- There will be no significant difference between the freshmen and senior women in their prestige ratings of selected occupational titles.
- 2. There will be no identifiable relationship between the higher prestige ratings of selected occupational titles of the freshmen and the choices of major areas of study.
- 3. There will be no identifiable relationship between the higher prestige ratings of selected occupational titles of the seniors and the declared area of study.

This was an exploratory study of the prestige ratings of certain home economist occupations as perceived by selected groups of home economics students. It was anticipated that this study might provide some insights of value in further investigations of a prestige nature.

Harold M. Hodges, Jr., <u>Social Stratification</u> (Cambridge, 1964), p. 1.

Studies of this type could contribute to the sources of data used in career guidance.

High school and junior colleges, business colleges, employment agencies, and even four-year colleges and universities sometimes fail to recognize how important it is to provide young women with adequate information and sympathetic advice about employment possibilities. 10

An exploration of student's feelings and attitudes relative to occupational choices may be of help in career guidance. Prestige studies of this nature are based on the concept that prestige is the power to establish a position in one's mind. Prestige has been further characterized as a differentiated position in a hierarchy. 11

A survey, in the form of a questionnaire, was conducted to investigate the relative prestige ratings of selected occupational titles of home economists by students in the College of Home Economics at Oklahoma State University. The first hypothesis used a quantitative approach to explore the difference between the prestige ratings of the 74 freshmen and the 57 seniors. The 118 occupational titles selected were taken from the American Home Economics Association's current series of career leaflets shown in Appendix A.

The second hypothesis required a qualitative approach to the problem of identifying relationships between the freshmen's higher rated occupations and the major areas of study. A similar approach was used to test the third hypothesis in order to identify the relationships between the higher rated occupations of the seniors and the declared major area of study.

Frank T. Stockton, "Higher Priority for Women," <u>National Business Woman</u>, Vol. 38 (Nov., 1959), p. 26.

Muzafer Sherif and Carolyn W. Sherif, An Outline of Social Psychology (United States, 1948), p. 222.

#### Limitations

Prestige - This concept was confined to the occupational titles for female home economists in the area of business.

Sample - The respondants were female freshmen and senior students enrolled in the College of Home Economics at Oklahoma State University.

Occupational Titles - Teaching as an occupation was omitted for the purpose of this study. Two departments in the College of Home Economics prepare the students for a teaching certificate: the Home Economics Education Department, and the Family Relations and Child Development Department.

Respondant Error - The possibility of error existed as a result of student's responses to the repetitive questionnaire form.

#### Definition of Terms

Prestige Rating - A score designating the prestige level by numerically calculating weighted adjectives which appeared on the questionnaire.

Prestige Rank - A number representing the position of a prestige rating score in an ordinal scale.

Occupational Title - A caption representing a position or occupation in the area of business.

Relationship - An association established between an occupation and a major area of study.

Major Area of Study - The department at Oklahoma State University in which the concentration of course work is channeled for students enrolled in the College of Home Economics.

Higher Rated Occupations - The occupational titles with a mean prestige rating score of 80.00 or above. This is the equivalent of ratings which were above average--ratings of "good" or "excellent."

College of Home Economics - The following six departments at Oklahoma State University: Clothing, Textiles and Merchandising, CTM; Family Relations and Child Development, FRCD; Food, Nutrition and Institution Administration, FNIA; Home Economics Education, HEED; Home Management, Equipment and Family Economics, HMEFE; Housing and Interior Design, HID. (Abbreviations indicated are used for the purpose of brevity in the tables.)

#### CHAPTER II

#### REVIEW OF LITERATURE

The prestige hierarchy of occupations is a much studied aspect of stratification of modern societies. 1 "Despite rather extensive searches conducted by a variety of techniques, it appears that occupational prestige hierarchies are similar from country to country and from subgroup to subgroup." 2

A study of occupational prestige polls in Japan, Soviet Russia, Great Britain, Germany, New Zealand, and the United States, revealed that occupations tended to have an almost identical relative status in these nations. "There exists among the six nations a marked degree of agreement on the relative prestige of matched occupations."

Industrialization has proceeded to different points in the several countries whose prestige hierarchies have been studied without seriously affecting the relative positions of occupation in the countries involved. Within one country we can only expect to observe changes over time as large as the differences we have previously observed between two nations at different stages of economic development.

Robert W. Hodge, Paul M. Siegel, and Peter H. Rossi, "Occupational Prestige in the United States: 1925-1963," in Reinhard Bendex and Seymour Martin Lipset, Class, Status and Power, 2nd Ed. (New York, 1966), pp. 322-334.

<sup>&</sup>lt;sup>2</sup>Ibid., p. 322.

<sup>&</sup>lt;sup>3</sup>Alex Inkeles and Peter H. Rossi, "National Comparisons of Occupational Prestige," <u>American Journal of Sociology</u>, Vol. 61 (Jan., 1956), pp. 329-339.

 $<sup>^{4}</sup>$ Hodge, Siegel, and Rossi, p. 322.

A study by Hodge, Siegel, and Rossi found that prestige rankings remain fairly constant over time.<sup>5</sup> The hierarchy of occupational prestige also remains stable under a variety of conditions.<sup>6</sup>

On the other hand, there are cogent reasons for expecting that changes in occupational structure will be reflected, at least ultimately, in corresponding changes in the prestige positions of occupations. The prestige of an occupation is apparently a characteristic of that occupation, generated by the way in which it is articulated into the division of labor, by the amount of power and influence implied in the activities of the occupation, by the characteristics of incumbents, and by the amount of resources society places at the disposal of incumbents. (Other factors are undoubtedly at work but these are the most obvious and the most massively observable.) Hence, as occupations shift in these respects over time, corresponding adjustive shifts in prestige positions can be anticipated.

Prestige or "power of position" also involves the concept of status, which is "...position in a social system." Status positioning brings about a stratified society of social classes. This is displayed in a basic definition of social classes:

Relatively permanent and homogeneous divisions in society into which individuals or families can be categorized when being compared with other individuals or families in the society. 9

Another general definition for social classes could be: "...strata of society composed of individuals who accept each other as status equals, and are hence qualified for intimate association." 10

<sup>&</sup>lt;sup>10</sup>Harold M. Hodges, Jr., p. 275.

Davis stated that status has the quality of differential value. In this way statuses confer a prestige value on their occupant. 11

In societies, people are classified into categories, and in most of these societies many of these categories are ranked, or stratified, from lower to higher. Social stratification is a form of social differentiation, like age or sex division. Inherent in this process of stratification is a graded hierarchy. Each of these divisional units constitutes a social class—an aggregate of people who share equal or roughly equal rank and prestige. 12

The prestige of occupations is interwoven with the social class structure, since occupation is the single most influential variable in determining social class. <sup>13</sup> Emile Durkheim stated that in a general way classes probably arise from the multitude of occupational organizations. <sup>14</sup>

Occupation is a popular index of social classes probably due to the fact that it acts as a blanket term which identifies many other potent status symbols. To place people into a social class is a complex conception. Many variables are involved, but one in particular is the most significant. Occupation as a measure of social class standing has a social reality. It, above all, is most valid. 16

<sup>&</sup>lt;sup>16</sup>Joseph A. Kahl and James A. Davis, "A Comparison of Indexes of Social Economic Status," <u>American Sociological Review</u>, Vol. 20 (June, 1955), pp. 317-325.

A hierarchy of prestige and a division of labor exists in every complex society. The leadership and social responsibility positions are usually ranked at the top. Positions which require long training and superior intelligence are usually ranked just below. A small minority constitutes the number of leaders and highly educated individuals. The large majority is made up of people in the lower strata who perform routine jobs with scant rewards and very little prestige. <sup>17</sup>

These references sight the significance of the occupational position in the prestige hierarchy. Occupational prestige limited to female home economists in business has a somewhat different connotation in the limits of this thesis.

Women have been gainfully employed for centuries. In the early colonial period of our nation women were employed in such areas as running taverns and shops, selling garden seeds, nursing, midwifery, and some were servants. When factories came into being and the need for labor grew, woman power was called upon to fill this need. They were willing to work at a wage employers were willing to pay. The man-power shortage caused by the two world wars also gave women unparalleled opportunities to join the labor force.

John Henry Culter, What About Women (New York, 1961), p. 212.

The Home Economists in Business Section of the American Home Economics Association stated as a group objective,

Focus public interest in, and awareness of, Home Economics as a prestige profession through a planned Home Economists in Business public relations program and the maintenance of high professional standards.  $^{21}$ 

Actually, home economists hold many kinds of jobs in business organizations. Even within one company you will find home economists with different skills and talents working in different departments—research, advertising, public relations, product planning—as well as in home economics department itself.<sup>22</sup>

Occasionally the home economist (in business) is supplemented or even replaced by other employees with less technical training. Apparently many managers are willing to replace their current home economist whenever necessary with non-professionals or workers lacking college degrees in home economics. This indicates that business management as a whole is not sold yet on the necessity of college preparation for the fulfillment of required duties. <sup>23</sup>

There are many barriers confronting women in the business world. Women executives admit that male resentment exists, <sup>24</sup> but coupled with this is the idea that "... business leaders have long known that women, as well as men, usually prefer male supervisors." These concepts merge and give the impression that

... they are still, by and large, denied a professional or working status equal to that of men. In every occupational category they are still downgraded and forced to accept subsidiary jobs at lower salaries. The proportion of

<sup>&</sup>lt;sup>25</sup>John Henry Culter, p. 204.

women in the upper levels of any occupation or profession is to this day small, even in traditionally feminine positions.  $^{26}$ 

The manifestations of these sex discrimination complaints are usually alleged unequal benefits--primarily health and life insurance, and pensions. The second greatest source of complaints is alleged discrimination in layoff, recall, and seniority. The government requires in Title VII of the Civil Rights Act that all employees be treated without regard to sex in every phase of employment.

Charles H. LeClaire, who was vice-president for employee and public relations of a Milwaukee corporation said,

I do not think there is really any real prejudice concerning women in business, but we do have, as men, a way of traditionally thinking about a man's or a woman's job. Sometimes this goes on almost unconsciously.<sup>28</sup>

Regardless of the problems involved, more and more women are working and there is some increase in the number pursuing executive level careers in the business world. Women were reported in all of the 479 individual occupations listed in 1960 decennial census. 29

Occupations in the labor force are divided into eleven broad categories, according to the monthly reports prepared by the Bureau of the Census and published by the Bureau of Labor Statistics. Within these categories more women were employed in clerical work than any

<sup>&</sup>lt;sup>26</sup>Ibid., p. 203.

<sup>&</sup>lt;sup>29</sup>U. S. Department of Labor, Women's Bureau, <u>1969 Handbook on</u> Women Workers, Bul. 294 (Washington, D. C., 1970), p. 95.

other major division in April, 1969. Professional workers were the fourth largest group, showing four million women or one out of seven employed women in professional and technical occupations. Around 1.5 million more women were engaged in professional or technical work in 1969 than in 1950, and almost 1.8 million more than in 1940.

Even though the number of women in professional and technical jobs increased from 1.9 to 4.1 million between 1950 and 1969 the proportion of these jobs declined slightly, from 40 to 38 percent. The actual number of men increased even more rapidly than that of women. 31

The foremost reason for women entering the labor force is an economic one.

Career women have not been masculinized; they have been moneyized. The old adage has it that money makes the mare go; also the sire, gelding, stallion, colt, and filly in our nations' hypercommodity exchange.<sup>32</sup>

Arthur Goldberg stated, when he was Secretary of Labor, "... First of all, our statistics show that a great majority of the women in the working force are in the working force because they have to be."<sup>33</sup>

Another resource on working women says, "It is true that most American women work out of economic necessity, and that they do not get the same pay for the same work."<sup>34</sup>

<sup>30</sup> Ibid., p. 97.

<sup>31</sup>U. S. Dept. of Labor, Bureau of Labor Statistics, Employment and Earnings and Monthly Report on the Labor Force (May, 1969).

<sup>33</sup> Nancy Reeves, "Curiour Quest For Woman Power," The Nation, Vol. 197 (August 24, 1963), p. 89.

<sup>34</sup> John Henry Culter, p. 203.

A recent study of employed women stated that some women earn high incomes, but these constitute a small proportion of all women. The article went on to say, "The larger proportion of women workers in occupations requiring limited skill and education is reflected in the median earnings of all women workers."

It appears that women will continue to be an important element in the economy of the country and to the world of business. Kievit said, "The likelihood is that the trend toward an increasing proportion of women being gainfully employed will continue." 37

The 1965 Handbook on Women Workers states that the number of women workers will probably rise 41 percent between 1964 and 1980. The same period should have a 27 percent increase for men. 38

The need for home economists in the future is exemplified by the following comments.

As both technician and manager, the home economist is needed today more than ever. While the United States was formerly an agricultural and farming society, and more recently an industrial and mass production society, it is now emerging as a technological society in which technicians function in more important roles. Both technical and managerial talents of home economists are needed, however, to implement the vast changes resulting from that technological society. The home economist in business has the major role of mastering her technology, interpreting that new technology for managements decisions, and keeping pace through research of new and useful developments.<sup>39</sup>

#### CHAPTER III

#### METHODS AND PROCEDURES

#### Design of the Study

This exploratory study was designed to investigate the prestige hierarchy of occupational titles for home economists in business as perceived by prospective home economists. The investigation attempted to gather information in a virtually unstudied area. To accomplish the objectives of the study a questionnaire was developed to identify the relative prestige hierarchy of selected occupational titles. Statistical and descriptive techniques of analysis were used to test the hypotheses.

## The Sample

The sampling universe considered was the freshmen and senior women enrollment at Oklahoma State University in the College of Home Economics during the fall semester of 1969 and the spring semester of 1970. The sample was drawn from the freshmen enrolled in Home Economics 1113, "Home Economics for Contemporary Living;" and the seniors enrolled in Home Economics 4112, "The Home Economist in the Contemporary World." Both courses are required for graduation from the College of Home Economics. These classes represented 80.1 percent of the freshmen and 64.3 percent of the seniors in the College of Home Economics.

There were 493 respondents in the six classes of Home Economics 4112 and the five classes of Home Economics 1113. Of these respondents 268 were freshmen and 182 were seniors. There were 100 questionnaires which did not provide the appropriate data.

The final sample consisted of one-third of each of the two groups, and included 222 freshmen and 171 seniors. This sample was taken in a random manner from the freshmen as a group since a major area of study had not been declared. The random sample for the seniors was taken after the questionnaire had been divided into departments in order to obtain a representative sample from the declared major areas of study. This represented 27.2 percent of the freshmen and 21.4 percent of the senior Home Economics majors for 1969-1970.

#### The Questionnaire

Occupational titles were chosen from the current career leaflets published by American Home Economics Association. These are listed in Appendix A. One hundred and eighteen occupational titles in the area of business were selected for the purpose of this study and are listed on the questionnaire in Appendix B. Occupations requiring teaching certificates were excluded for the purpose of this study.

The career leaflets listed occupational titles under eight divisions. Clarification was needed on some titles which appeared in more than one area. For example, "utility home economist" was a title used in four different divisions. An additional statement was used to clarify that certain occupational titles appeared in more than one area and to designate which particular area. The statement used was as

follows: "in the area of ... ." The blank was filled by the particular area(s) under which the title appeared.

The instrument developed for data collection emphasized the prestige nature of the study. One section of the questionnaire was designed to identify the factor which the respondent felt was the most influential on the prestige rating of an occupation.

The questionnaire presented the 118 occupations which were to be rated according to one of six adjectives. These adjectives were used in the National Opinion Research Center's study in 1947<sup>1</sup> and in a follow-up study by Hodge, Siegel, and Rossi in 1963.<sup>2</sup> Each adjective was assigned a numerical value: an "excellent" rating had a value of 100, a "good" rating the value of 80, an "average" rating the value of 60, a "somewhat below average" rating the value of 40, a "poor" rating the value of 20, and a "do not know" rating the value of 0. Calculating the numerical average of these arbitrarily assigned values yielded the prestige rating score for each occupational title.

A personal data sheet accompanied the questionnaire, but the respondent's name was not required. Students were requested to complete the questionnaire prior to filling in the data sheet. General information was requested concerning college classification, major area of study, marital status, estimated grade point, estimated size of high school attended, and the estimated size of the home town, as shown in

<sup>&</sup>lt;sup>1</sup>C. C. North and Paul K. Hatt, "Jobs and Occupations: A Popular Evaluation," Logan Wilson and William L. Kolb, <u>Sociological Analysis</u> (New York, 1949).

<sup>&</sup>lt;sup>2</sup>Robert W. Hodge, Paul M. Siegel, and Peter H. Rossi, "Occupational Prestige in the United States: 1925-1963," in Reinhard Bendex and Seymour Martin Lipset, <u>Class</u>, <u>Status</u>, <u>and Power</u>, 2nd edition (New York, 1966), pp. 322-334.

Appendix B. The data sheet also asked each respondent to indicate by first and second choice the most preferred occupations after graduation. These choices were rated in the manner in which the original 118 occupational titles were rated on the questionnaire. The data sheet specified that the respondent's preferred occupations did not have to be selected from the list of occupational titles which appeared on the questionnaire.

In administering the questionnaire, verbal instructions introduced the investigator as a graduate student in Home Economics. The following brief suggestions were given to help the respondents complete the questionnaire and data sheet, as shown in Appendix B.

- 1. Work as rapidly as possible.
- 2. Put down your first reactions.
- 3. Complete the pages in the order in which they are arranged.

#### Statistical Analysis

To determine the correlation between the freshmen and the senior prestige rating scores, the average scores of each occupational title for both groups were calculated by a specially designed computer program as presented in Appendix C. The statistical technique used was the Spearman rank correlation. It was used to measure the variables in an ordinal scale. Subroutine SRANK from IBM's SSP (Scientific Subroutine Package) was used to compute the Spearman correlation coefficient. The .05 level was established as the level

<sup>&</sup>lt;sup>3</sup>Sidney Siegel, <u>Nonparametric</u> <u>Statistics</u> (United States, 1956), pp. 202-213.

of significance. The t test of significance was used to determine whether the correlation occurred by chance.

The Spearman correlation coefficient was determined by the following equation:

$$6 \sum_{i=1}^{n} d_{i}^{2}$$

$$r_{s} = 1 - \frac{i=1}{n^{3} - n}$$

where

n = 118

The statistic used to measure the significance of  $r_s$  was:

$$t = r_{s_{\parallel}} \sqrt{\frac{n-2}{1-r_{s}^{2}}}$$

where the degrees of freedom were:

$$d \cdot f \cdot = n - 2$$

The relationship between the major area of study and the higher rated occupations was determined in a qualitative manner. The areas of study were designated as the departments in the College of Home Economies listed in Oklahoma State University's 1970-72 catalog. The higher rated occupations were designated as those rated 80.00 or above in each area of study and represented occupations with an "excellent" or "good" rating score.

The prestige rating score for each occupational title was calculated separately for the freshmen by first and second preference of

major, and for the seniors by declared major area of study. This was done by means of a specifically designed computer program as presented in Appendix C.

A relationship between an occupation title and a major area of study was said to exist when one or more of the following criteria were met:

- 1. The occupational title was listed under a corresponding area in AHEA'S career leaflets, as shown in Appendix A.
- 2. The occupational title was within the limits of the particular department areas as verified by each department head in the College of Home Economics at Oklahoma State University.

  Each department head indicated the relationship of the occupational titles to the department as "yes" or "somewhat," as shown in Appendix A.
- 3. The occupational title was related to course work in a department area as stated in course titles or descriptions in the Oklahoma State University's 1970-1972 catalog, as shown in Appendix A.

The coded questionnaire and the resulting computer listing of the coded raw data obtained from the sample are presented in Appendix D. This listing contains all the data analyzed in this study.

#### CHAPTER IV

#### FINDINGS AND ANALYSIS

The statistical and descriptive findings of this study are presented and analyzed in this chapter. Data reported were based on responses from a 1969-1970 prestige study involving students majoring in the College of Home Economics at Oklahoma State University.

#### The Sample

The random sample consisted of two groups of respondents, freshmen and seniors. The distribution by major department areas of each group is shown in Table I. The freshmen group had not formally declared a major and the respondents were asked to indicate a first and second choice of major area of study. Thus, two subdivisions were used relative to the major areas of study for the freshmen.

The seniors were divided into groups as to declared major areas of study before the one-third random sample was drawn. Thereby, the six different departments, or areas of study, were proportionately represented as is shown in Table I.

#### Major Area of Study

The seniors were asked to indicate if a double major had been declared. Four seniors, of the 57 sampled, reported a double major. The second major area for three of these four respondents was an

<sup>&</sup>lt;sup>a</sup>Major outside the College of Home Economics.

 $<sup>^{\</sup>mathrm{b}}\mathrm{Did}$  not select a second choice.

education area and the fourth respondent declared library science as the double major.

The senior group was also asked to indicate whether a change of major area of study had occurred since the freshmen year. Almost one-half, 49.2 percent, of the seniors had changed their major. Appendix E, Table XXXI shows the percentage of seniors who had changed majors, and indicates the previous major areas of study. The seniors in the Housing and Interior Design Department and the Home Management, Equipment and Family Economics Department had no previous major areas of study, but these majors represented only 12.3 percent of the senior respondents. The largest percent of seniors with previous majors, 82.4 percent, was in the Family Relations and Child Development Department. The Food, Nutrition and Institution Administration Department showed 75.0 percent of the seniors in that department had previously changed their majors.

The respondents tended to be homogeneous in terms of the size of high school, the size of home town, and the grade point average, but the respondents varied greatly in terms of marital status. Appendix E, Tables XXIII, XXV, XXVII, and XXIX present these findings.

#### Size of High School

When the major area of study was considered, the Clothing, Textiles and Merchandising seniors tended to come from small high schools. More than half of these seniors graduated from high schools with an enrollment of 499 or less. The freshmen group was evenly divided between the larger and smaller high schools. However, 24.0 percent of

the freshmen came from high schools of 2000 or more students and none of the seniors were in this category.

The respondents in the Food, Nutrition and Institution Administration department tended to come from small high schools. The freshmen group contained 75.0 percent from the category of 499 or less, and the senior group held 40.0 percent in this category. The larger high school category, 1000 or more in size, contained 29.0 percent of the freshmen group but none of the senior group.

The freshmen group in the Housing and Interior Design Department came from large high schools, 80.0 percent of the freshmen were in the category of 1000 or more. Only 10.0 percent of the freshmen came from high schools in smaller categories of 499 or less. The senior group was evenly dispersed in these categories, as shown in Appendix E, Table XXIV.

### Size of Home Town

The size of the home town, a generally homogeneous characteristic, tended to show some differences when considered by department areas.

The freshmen in the Clothing, Textiles and Merchandising tended to be from larger towns and the seniors tended to be from smaller towns.

The freshmen in the Housing and Interior Design Department were from larger towns. The seniors were evenly divided between the smaller and the larger home towns as seen in Appendix E, Table XXVI.

#### Grade Point Average

The grade point average of respondents in the Clothing, Textiles and Merchandising Department revealed that the freshmen group had a

larger percentage in the category of 2.50 - 2.99 than did the senior group. The other five department areas had a larger percentage of the seniors in this category, as seen in Appendix E, Table XXVIII.

## Marital Status

Marital status was not evenly dispersed. None of the freshmen were married, but 45.6 percent of the senior students were married as shown in Appendix E, Table XXIX. The distribution shown in Appendix E, Table XXX indicates that 46.2 percent of these married students had been married one year or less.

#### Prestige Data

#### Influencial Factor

Selected factors which were influential in assigning prestige value to occupational titles were presented in the questionnaire. Each respondent was asked to designate the one factor considered to be the most influential in the prestige rating of an occupation. These factors are presented in Table II.

Almost half of the freshmen, and a third of the seniors indicated that the "salary possibilities" factor had the most influence on the prestige of an occupation. More seniors than freshmen felt that "education necessary" was the most influential factor in assigning prestige to an occupational title. Within the freshmen group, 2.7 percent of the respondents elected to write in a factor felt to be the most influential on prestige ranking of an occupation. Only 1.8 percent of the senior group elected to write in the most influential

factor. These factors were "possibility for advancement," "personal interest," and "if happy doing the job."

TABLE II

FACTORS INFLUENCING PRESTIGE RATINGS
OF OCCUPATIONAL TITLES

	Freshmen N = 74	Seniors N = 57
	Percent	Percent

Responsibility Required	20.3	21.0
Education Necessary	16.2	29.8
Service to Humanity	14.9	14.0
Other	2.7	1.8
TOTAL	100.0	100.0

## Prestige Ratings of Total Sample

The prestige ratings of the 118 occupational titles in an ordinal scale for the entire sample are presented in Appendix F. Both the freshmen and the senior groups are combined in these rating and rank scores. There were nineteen occupational titles rated 80.00 or above, which was a rating of "good" or "excellent" by the respondents. Eleven, or 52.3 percent, of these occupational titles were rated in

this higher category of 80.00 or above by both the freshmen and the senior groups. An asterisk is used to note these higher rated occupational titles in Table III below.

TABLE III
HIGHER RATED OCCUPATIONAL TITLES
BY FRESHMEN AND SENIORS

Occupation Title	Rate
* Fashion Designer	90.84
* Interior Designer	89.77
* Clothing Designer	89,16
* Interior Decorator	87.63
* Space Food Technologist	86.72
* Fashion Editor	85.95
* Food Chemist	83.21
Fashion Illustrator	82.75
* Furniture Designer	82.60
* Textile Designer	82.60
* Costume Designer	82.44
Department Store Buyer in Area of Textiles and Clothing	82.14
Fashion Coordinator	81.68
* Food Research Specialist	81.22
Research Specialist in Area of Family Relations and Child Development	81.07
Nutrition Research Specialist	80.92
Child Guidance Counselor	80.61
Department Store Buyer in Area of Housing, Furnishings and Equipment	80.15
Research Specialist in Area of Textiles and Clothing	80.15

## Preferred Occupations

Each of the respondents was asked to list and rate a first and second choice in terms of the most preferred occupations after graduation. The titles for these occupations did not have to be selected from those listed in the prestige questionnaire.

The average prestige rating of the most preferred occupations by department areas showed the freshmen in five out of six of the departments rated the first choice higher than the second choice. The exception was the Home Management, Equipment and Family Economics

Department, in which the freshmen rated the two choices equally. See Appendix G. The mean scores of the prestige ratings of the most preferred occupations for the freshmen were: 87.90 for the first choice and 79.30 for the second choice.

The mean prestige ratings of the most preferred occupations after graduation for all the seniors were: 78.50 for the first choice and 74.50 for the second choice. The senior's first choices of preferred occupations were rated higher than the second choices, as shown in Appendix G.

## Analysis

## Hypothesis I

The first hypothesis stated that there would be no significant difference between the freshmen and the senior prestige ratings of the occupational titles. The findings related to Hypothesis I were analyzed statistically using the Spearman correlation coefficient and the t test of significance. Table IV shows the comparison of the

PRESTIGE RATINGS OF SELECTED BUSINESS OCCUPATIONAL TITLES

ratings and rank ordering of the occupations for the freshmen and senior groups. The resulting correlation coefficient was .90.

A correlation coefficient of .90 and 116 degrees of freedom yields a t test of significance of 22.80. Based upon these figures, the level of significance was notably beyond the .01 level.

The null hypothesis was supported by the findings of this study. The degree of prestige assigned to the occupational titles of home economists in business did not vary significantly as perceived by the freshmen and senior groups.

#### Hypothesis II

The second hypothesis stated that there would be no relationship between the freshmen's higher prestige ratings of business occupational titles and the choices of major area of study. A relationship between the freshmen's higher prestige rating scores and the choices of major area of study was identified in each of the six department areas in the College of Home Economics at Oklahoma State University.

A discussion of the major area of study of the freshmen by first and second choices and the related occupations within each of these six areas of study follows:

1. The Clothing, Textiles and Merchandising Department was indicated as the first choice of major area of study by 33.8 percent of the freshmen. Table V shows 21 occupational titles which these respondents rated as 80.00 or above. There were 66.7 percent of these occupational titles related to this department as determined by the designated criteria. There were 34 occupations of the 118 titles listed on the

questionnaire which were related to the department area, as seen in Appendix H. There were 41.2 percent of these 34 occupational titles rated in these higher occupations by the freshmen chosing Clothing, Textiles and Merchandising as a first choice of major area of study. The mean score for these respondents was 71.39. The mean score for the freshmen as a group was 72.92.

The Clothing, Textiles and Merchandising Department was selected as a second choice of major area of study by 18.9 percent of the freshmen. There were 37 occupational titles with the established rate of 80.00 or above, as shown in Table VI. There were 51.3 percent of these 37 occupational titles related to the Clothing, Textiles and Merchandising Department. Thirty-four of the 118 occupational titles listed on the questionnaire were related to this department, as shown in Appendix H. There were 55.8 percent of the possible related occupational titles rated 80.00 or above. The mean score of all 118 occupational titles by this group of freshmen was 75.35, and the mean for all occupational titles for the total freshmen group was 72.92.

2. The Family Relations and Child Development Department was selected as the first choice of major area of study by 24.3 percent of the freshmen group. There were 45 occupational titles rated 80.00 or above by the respondents in this department, as shown in Table VII. There were 22.2 percent of the 45 occupational titles related to the Family Relations and Child Development Department.

<sup>\*</sup> CCUPATIONAL TITLE, RELATED TO THIS AREA OF STUDY.

Fifteen of the 118 occupational titles were related to this department, and 66.7 percent of these were rated 80.00 or above. See Appendix H for the complete list of related occupational titles. The mean score was 77.37 for all the occupational titles rated by the freshmen in this department as their first choice. The mean for all freshmen was 72.92.

There were 23.0 percent of the freshmen that identified the Family Relations and Child Development Department as a second choice of major area of study. Eight occupational titles had an average score of 80.00 or above. There were 12.5 percent of these occupational titles which were related to this area of study, as shown in Table VIII. The average score of all occupations in this subgroup was 66.52 which was somewhat lower than the average of 72.92 for all the freshmen for all occupational titles.

3. The Food, Nutrition and Institution Administration Department was designated as a first choice of major area of study by 6.8 percent of the freshmen. Thirteen occupational titles were rated 80.00 or above, as shown in Table IX. All thirteen occupational titles were related to the Food, Nutrition and Institution Administration Department.

There were 34.2 percent of the 38 occupational titles which were related to this department. See Appendix H for the list of related occupational titles. The mean score for the group of freshmen that chose this department as a first choice of major area of study was 63.66, and the mean for all freshmen was 72.92.

<sup>\*</sup> OCCUPATIONAL TITLES RELATED TO THIS AREA OF STUDY.

The Food, Nutrition and Institution Administration

Department was designated as a second choice of major area

of study by 9.5 percent of the freshmen. Sixty occupational

titles were rated as 80.00 or above by these respondents.

There were 36.6 percent of these 60 occupations that were

found to be related to this department as seen in Table X.

There were 38 occupational titles, of the 118 listed on the questionnaire, which were related to this major area of study. See Appendix H for the complete list of related occupational titles. There were 57.8 percent of these occupational titles rated 80.00 or above. The mean score for this group of freshmen was 77.67, and the mean of the freshmen group for all 118 occupational titles was 72.92.

4. The Home Economics Education Department was designated as a first choice major area of study by 20.3 percent of the freshmen. There were 28 occupational titles which were rated 80.00 or above, as seen in Table XI. There were 10.7 percent of these occupational titles which were related to this department.

There were 20 occupations related to the Home Economics Education Department from the list of 118 titles of the questionnaire. There were 15.0 percent of the related occupational titles in this area of study rated 80.00 or above. The mean score for this subgroup was 73.32 compared to 72.92 for all freshmen.

The Home Economics Education Department was designated as a second choice of major area of study by 13.5 percent of

<sup>\*</sup> OCCUPATIONAL TIPLES RELATED TO THIS AREA OF STUDY.

There were 34 occupations, of the 118 occupation titles in the questionnaire, related to this department. See Appendix H. There were 44.1 percent of these 34 related occupational titles rated 80.00 and above. The mean score for all the occupational titles rated by this subgroup of freshmen was 79.32, and the mean score for the freshmen as a group was 72.92.

6. The Housing and Interior Design Department was designated as a first choice of major area of study by 13.5 percent of the freshmen. There were 29 occupational titles rated 80.00 or above, as seen in Table XV. There were 37.9 percent of these occupational titles related to this department. There were 22 occupations, of the 118 occupational titles, which had a relationship with the Housing and Interior Design Department See Appendix H... There were 50.0 percent of these 22 occupational titles rated 80.00 or above. The mean score for this subgroup was 72.69 and the mean score for all freshmen was 72.92.

The Housing and Interior Design Department was designated as a second choice of major area of study by 13.5 percent of the freshmen. Forty-three occupational titles were rated 80.00 or above. There were 27.9 percent of these 43 occupational titles related to the Housing and Interior Design Department, as shown in Table XVI.

There were 22 occupations, of the 118 titles listed on the questionnaire, related to this department, as shown in Appendix H. There were 54.5 percent of these 22 occupational

titles rated 80.00 or above. The mean score of the 118 occupational titles rated by this subgroup of freshmen was 75.71. The mean score for the freshmen group as a whole was 72.92.

#### Hypothesis III

The third hypothesis stated there would be no relationship between the higher prestige ratings of business occupational titles and the senior's declared major areas of study. A relationship between the senior's higher prestige rating scores and the declared area of study was indicated in five of the six department areas.

The following discussion of the senior group is divided into the six areas of study, or departments, as established at Oklahoma State University.

1. The Clothing, Textiles and Merchandising Department was designated as a major area of study by 12.3 percent of the seniors. Twenty-two occupational titles were rated 80.00 or above by these seniors. There were 50.0 percent of these occupational titles related to this department, as shown in Table XVII.

There were 34 occupations, of the 118 titles on the questionnaire, related to the Clothing, Textiles and Merchandising Department, as seen in Appendix H. There were 32.4 percent of these 34 occupational titles rated 80.00 or above. The mean score of all the occupations rated by this subgroup was 70.41, and the mean score of all the occupational titles by the senior group was 72.11.

<sup>\*</sup> OCCUPATIONAL TITLES RELATED TO THIS AREA OF STUDY.

2. The Family Relations and Child Development Department was designated by 29.8 percent of the seniors as a major area of study. Nineteen occupational titles were rated as 80.00 or above, and 31.6 percent of these were related to this department area, as shown in Table XVIII.

There were 15 occupational titles which were related to this department out of the 118 occupational titles listed in the questionnaire, as seen in Appendix H. Forty percent of these occupational titles were rated 80.00 or above.

The mean score of all 118 occupational titles as determined by the seniors in this subgroup was 70.63. The mean score of the seniors totally was 72.11.

3. The Food, Nutrition and Institution Administration Department was designated by 7.0 percent of the seniors as a major area of study. There were 92 occupational titles with a rating of 80.00 or above. There were 37.0 percent of these 92 occupational titles related to this department area, as seen in Table XIX.

There were 38 occupations related to this department area, as seen in Appendix H. There were 89.5 percent of these occupational titles rated 80.00 or above. The mean score for this subgroup of seniors for all 118 occupations was 82.46. The average for all seniors for all occupational titles was 72.11.

4. The Home Economics Education Department was designated as the major area of study by 38.6 percent of the seniors. Ten occupational titles were rated as 80.00 or above, and are

presented in Table XX. None of these occupational titles were related to this area of study. This department had a smaller number of related occupational titles on the question-naire since the occupational area of teaching was excluded for the purpose of this study. The mean score for this subgroup was 71.48, and the mean score for all seniors for all 118 occupational titles was 72.11.

- The Home Management, Equipment and Family Economics Department was designated as a major area of study by 1.8 percent of the seniors. Ninety-four occupational titles were rated as 80.00 or above and 34.0 percent were related to this department, as shown in Table XXI. Thirty-four occupational titles were related to this area of study, as shown in Appendix H. There were 94.2 percent of these 34 occupational titles rated 80.00 or above. The mean score was 82.80, compared to 72.11 for all seniors.
- 6. The Housing and Interior Design Department was designated as a major area of study by 10.5 percent of the seniors. Twenty-seven occupational titles were rated 80.00 or above, and 37.0 percent of these occupational titles were related to this department area. Table XXII presents these higher rated occupational titles. Twenty-two occupations, of the 118 titles on the questionnaire, related to this department area. There were 45.5 percent of these 22 occupational titles rated 80.00 or above. The mean score for all 118 occupational titles by this subgroup was 72.06, and the mean score for all 118 occupational titles for all the seniors was 72.11.

#### CHAPTER V

#### SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

The purposes of this exploratory study were to investigate the relative prestige of professional occupational titles of female home economists in business; and to study the relationship of certain prestige factors related to the major areas of study selected by prospective home economists.

It was hypothesized that:

- There will be no significant difference between the freshmen and the senior women in the prestige ratings of selected occupational titles.
- 2. There will be no identifiable relationship between the higher prestige ratings of selected occupational titles of the freshmen and the choices of major area of study.
- 3. There will be no identifiable relationship between the higher prestige ratings of selected occupational titles of the seniors and the declared major areas of study.

The data was obtained by means of a questionnaire administered to a selected group of freshmen and senior students enrolled in Home Economics at Oklahoma State University during the fall of 1969 and the spring of 1970.

The questionnaire listed 118 occupational titles which the respondents were asked to rate according to the prestige value as represented by one of six adjectives. These adjectives were weighted and the mathematical calculations resulted in a prestige rated score for each occupational title. The average score for each occupational title was obtained by calculating all the respondents ratings.

Statistical and qualitative analyses were based on a random sample of 74 freshmen and 57 seniors. The Spearman rank correlation, the t test of significance, means, and percentages were used to analyze the data. The .05 level was established as the level of significance.

The prospective home economists in this study tended to perceive the prestige of occupational titles of home economists in business in a similar manner. The correlation between the freshmen and senior prestige ratings scores was significant beyond the .01 level. This was based on a t value of 22.80 for a correlation coefficient of .90 and 116 degrees of freedom.

The freshmen group tended to rate the occupational titles higher than the senior group. The mean score of the 118 occupational titles for the freshmen group was 72.92, and the mean score of the senior group was 72.11.

A relationship between the higher rated occupational titles and the choice of major area of study existed according to the limits of this study. The following percentages indicate the number of occupational titles rated 80.00 or above which were related to the particular area of study according to the first choice of the freshmen students: Clothing, Textiles and Merchandising Department, 66.7 percent; Family Relations and Child Development Department, 22.2 percent; Food, Nutrition and Institution Administration Department, 100.0 percent; Home Economics Education Department, 10.7 percent;

Home Management, Equipment and Family Economics Department, 27.5 percent; and the Housing and Interior Design Department, 37.9 percent.

The following percentages indicate the number of occupational titles rated 80.00 or above which were related to the particular area of study according to the second choice of the freshmen students:

Clothing, Textiles and Merchandising Department, 51.3 percent; Family Relations and Child Development, 12.5 percent; Food, Nutrition and Institution Administration, 36.6 percent; Home Economics Education Department, 7.3 percent; Home Management, Equipment and Family Economics, 21.7 percent; and Housing and Interior Design Department, 27.9 percent.

The following percentages indicate the number of occupational titles rated 80.00 or above which were related to the particular area of study according to the senior students: Clothing, Textiles and Merchandising, 50.0 percent; Family Relations and Child Development, 31.6 percent; Food, Nutrition and Institution Administration, 37.0 percent; Home Economics Education Department, 0.0 percent; Home Management, Equipment and Family Economics, 34.0 percent; and Housing and Interior Design Department, 37.0 percent.

In both the freshmen and the senior groups a relationship tended to exist between the higher prestige ratings of the business occupational titles and the choice of major areas of study. The strongest relationships were found in those departments which prepare students for careers as home economists in business.

The correlation between the prestige ratings of the freshmen and senior groups tended to support the findings of previous prestige studies—that these ratings do not change significantly over time.

Further studies of a longevity nature using homogeneous samples would be necessary to validate such generalizations in the area of home economists is business.

This study indicated that there was a relationship between the prestige ratings of occupational titles of home economists in business and the choice of major area of study. Further studies of this nature might contribute to the body of information used by home economists in career guidance. Such studies might investigate and identify occupations of home economists not included in this study.

Another type of study might be designed to investigate the influence of certain words used in occupational titles. Words, such as "designer," may have a bearing on the prestige rating regardless of the subject matter represented.

Further prestige studies might compare women's ratings of occupational titles of home economists in business with other occupational
titles for women. Such prestige ratings might also be compared to the
prestige values assigned to the occupational titles for men.

### VERBAL INSTRUCTIONS

#### FOR QUESTIONNAIRE

My name is Brenda Woods and I am a graduate student in Home

Economics. This questionnaire I am handing you to fill out provides

data for the research related to my thesis study.

There are three suggestions to help you complete it:

- 1. Work as rapidly as possible.
- 2. Put down your first reactions.
- Complete the pages in the order in which they are arranged.

The last page is for personal data; however, no name is requested.

No effort will be made to identify the answer sheets with individual students.

On this data sheet is space to check your major. The departments are represented by their initials: HM,E,FE is Home Management department. If you are a Home Economics Education major, do not fill in any of the spaces.

Raise your hand if you have any questions and I will come to you.

### THIS IS A PRESTIGE STUDY

Which factor listed below do you feel has the most influence on the prestige ranking of an occupation? (Check one only)

☐ Salary Possibilities

□ Responsibility Required

☐ Education Necessary

☐ Service to Humanity

DOther (Please indicate)

The following occupations have been selected from those listed in the current career leaflets published by the American Home Economics Association.

For the jobs listed below, please check the column that best gives your own personal opinion of the professional or prestige standing for each occupation.
