## **DISCLAIMERS**

Oklahoma State University, U. S. Department of Agriculture, State and Local governments cooperating. Oklahoma State University in compliance with Title VI and VII of the Civil Rights Act of 1964, Executive Order 11246 as amended, Title IX of the Education Amendments of 1972, Americans with Disabilities Act of 1990, and other federal and state laws and regulations, does not discriminate on the basis of race, color, national origin, gender, age, religion, disability or status as a veteran in any of its policies, practices or procedures. This includes but is not limited to admissions, employment, financial aid, and educational services.

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, Director of Oklahoma Cooperative Extension Service, Oklahoma State University, Stillwater, Oklahoma. This publication is printed and issued by Oklahoma State University as authorized by the Dean of the Division of Agricultural Sciences and Natural Resources. 03/2014.

The contents of this report reflect the views of the author(s) who is responsible for the facts and the accuracy of the data presented herein. The contents do not necessarily reflect the views of the Oklahoma Department of Transportation or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation. While trade names may be used in this report, it is not intended as an endorsement of any machine, contractor, process, or product.

---	---

## **1.0 INTRODUCTION**

Only the products listed on the *Approved Herbicide and Adjuvant List* (AHAL) are approved for the ODOT Statewide Herbicide Contract. Herbicide/adjuvant items on the AHAL meet the minimum criteria set by ODOT. Any product not on the AHAL is not eligible for inclusion as an herbicide contract bid item in any upcoming bidding process. Herbicide/adjuvant products must meet minimum criteria before they will be placed on the current AHAL. Failure to meet one or more of the criteria will result in non-approval. The AHAL is updated annually and any listed products that fail to maintain minimum approval criteria will be removed along with any other products ODOT decides to remove. Manufacturers and distributors are encouraged to resubmit non-approved products at a later date once minimum approval criteria is met. ODOT reserves the right of final herbicide inclusion or exclusion to provide for specific herbicide product exemptions in the case of but not limited to: herbicide manufacturer supply issues, herbicide manufacturer delivery issues, EPA label issues, ODAFF label issues, and Oklahoma legislative issues.

Section 2 of this report very briefly summarizes the actions taken in 2013 to update the 2012 AHAL to create the 2013 AHAL that is shown in Table 1. Section 3.0 provides the criteria used to evaluate the suitability of herbicide products for entry onto the AHAL. Section 4.0 overviews the criteria used to evaluate the suitability of spray adjuvants for entry onto the AHAL. In Section 5.0 the information submission requirements for AHAL candidate herbicides and adjuvants are covered. The requirements of the research data package for candidate herbicides are covered in Section 6.0 while the details of herbicide-adjuvant compatibility data package are covered in Section 7.0. The specific protocol to be used in screening for herbicide-adjuvant tank mix compatibility (jar test) is discussed in Section 8.0.

## **2.0 DEVELOPMENT OF THE 2013 AHAL**

A meeting was held April 4 at the ODOT/Div. 9 Headquarters to discuss the 2012 AHAL and items of concern with respect to the SW-699 & 699a herbicide contracts. Participating in the meeting were ODOT representatives Ms. Jennifer Mason, Mr. Luis Malave, and Mr. Bryan Hurst as well as Oklahoma State University representatives Mr. Doug Montgomery and Mr. Clayton Hurst. Following this meeting action was taken in an attempt to streamline the upcoming SW699 & 699a contract efforts. The 2012 AHAL was revised to incorporate statewide contract ID numbers as well as clean up unneeded information and remove unnecessary items from the 2012 AHAL to create the 2013 AHAL (Table 1). Details of the AHAL include the specific item (product) number, the product type, item description, herbicide contract number reference and its associated contract line item number, the product's manufacturer or distributor, the product's EPA registration number and state of Oklahoma registration number, supplemental label number and finally the date and year in which the product was originally approved for addition to the AHAL. The 2013 AHAL was emailed by Doug Montgomery to Luis Malave on April 26, 2013. The 2013 AHAL will hopefully synchronize the ODOT-AHAL

with the Department of Central Services' statewide contract effort and produce a more effective and efficient purchasing system for ODOT field division personnel. We appreciate the assistance and efforts of Mr. Luis Malave, Ms. Jennifer Mason and Mr. Brian Hurst in this effort.

### **3.0 MINIMUM CRITERIA FOR HERBICIDES**

1. All herbicides must maintain current registrations with the U.S. Environmental Protection Agency (EPA) and Oklahoma Department of Agriculture, Food & Forestry (ODAFF). Current registration numbers must be included on the submission form. Different or changed herbicide formulations of the same active ingredient will require separate approval or re-approval. Efficacy and compatibility testing involving herbicide active ingredients that are on the current ODOT AHAL will not be initiated until both EPA and ODAFF registration numbers are provided on the submission form.
2. The final submission packet for all herbicides must include a hard-copy of the most current EPA and/or supplemental EPA labels and/or ODAFF supplemental labels (24-C or 2ee if applicable). All labels and/or supplemental labels must clearly state the identification of active ingredients, the concentration of both active and inert ingredients and recommended product use rates. Special attention will be paid to surfactant loading in applicable herbicide products. Herbicides that are formulated with surfactants where the surfactant percentage load is not stated on their labels must have this information submitted on the herbicides AHAL submission form.
3. The final submission packet for an herbicide active ingredient not on the current ODOT AHAL will require a sample product submission to the Oklahoma State University Roadside Vegetation Management (OSU RVM) Research Program to in order that weed control efficacy and tank mix compatibility testing can be conducted by the OSU RVM program. All testing and data analysis will occur prior to inclusion on the current ODOT AHAL. A minimum of 1 pint (liquid herbicide) or 1 pound (dry herbicide) must be submitted for testing purposes. Unused untested product will be disposed of as per label directions.
4. All herbicides require a minimum of efficacy and compatibility testing prior to inclusion in the ODOT AHAL. Efficacy testing involving an herbicide active ingredient or ingredients that are not on the current ODOT AHAL will involve a minimum of 2 growing seasons (2 years) of efficacy data on roadside weed control and bermudagrass herbicide tolerance. Efficacy testing involving herbicide active ingredients that are on the current ODOT AHAL will involve a minimum of 1 growing season (1 year) of efficacy data on roadside weed control and bermudagrass injury. Efficacy data must include a minimum of 15, 30, and 60 days-after-application evaluations on roadside weed control and bermudagrass injury as compared to current ODOT standard treatment(s). If all

other pre-approval criteria are met, a product would likely be available for inclusion in the ODOT Statewide Herbicide Contract the year following the final year of efficacy and/or compatibility testing. Efficacy research involving herbicide active ingredient(s) that are not on the current ODOT AHAL must be provided by the OSU RVM Research Program. Contact OSU RVM Research Program personnel for current scheduling and supplemental pricing of research. Efficacy data involving herbicide active ingredients that are on the current ODOT AHAL can be provided by the OSU RVM Research Program or similar data will be accepted from another Land Grant University Research Program. Efficacy data from a Land Grant University, other than Oklahoma State University, must be accompanied with contact information (name, address, and phone number) of the researcher(s) (See Section 5 and Figure 1). All efficacy testing performed by the OSU RVM Research Program will also include tank mix compatibility testing via an industry standard jar test method. Efficacy data submitted from another Land Grant University Research Program that does not include compatibility data will require compatibility testing before inclusion on the ODOT AHAL. Efficacy and compatibility test data from manufacturers/distributors internal research will not be accepted.

## **4.0 MINIMUM CRITERIA FOR ADJUVANTS**

1. All adjuvants (mainly drift control products), liquid or dry forms, require a minimum of compatibility testing with current standard ODOT broadcast herbicide treatments. A minimum of 1 pint (liquid adjuvant) or 1 pound (dry adjuvant) must be submitted for testing purposes. Unused untested product will be disposed of as per label directions. Different or changed adjuvant formulations of a specific name brand adjuvant will require separate approval or reapproval. Compared to herbicide formulations, it is much more difficult to monitor formulation changes in adjuvants. Therefore, manufacturers/distributors are encouraged to submit new or changed formulations for compatibility testing. Compatibility testing should be conducted using a standard jar test method (Section 7). Compatibility testing should include, but is not limited to, all herbicide treatments currently used by ODOT in major broadcast spray programs that require the use of drift control products (ODOT Policy Number D 504-1). Adjuvants should be tested using current standard ODOT herbicide rates and carrier rates. Drift control product rates evaluated should be those recommended on the products label for application conditions as closely related to ODOT roadside programs as possible. Compatibility research can be supplied by the OSU RVM Research Program or similar data will be accepted from another Land Grant University Research Program. Contact OSU RVM Research Program personnel for current scheduling and pricing of research. Compatibility data from a Land Grant University other than Oklahoma State University must be accompanied with contact information (name, address, and phone number) of the researcher(s) (See Section 6 and Figure 1). Compatibility data from manufacturers/distributors internal research will not be accepted.

2. Certain types of adjuvants are exempt from the pre-approval process as far as compatibility testing. The following types of adjuvants are currently exempt: non-ionic surfactants, non-ionic surfactants (aquatic approved), sprayable grade ammonium sulfate, water soluble dyes, oil soluble dyes, and activated charcoal clean-up products. These types of adjuvants need only meet ODOT herbicide contract bid specifications to be considered for possible awards.

## 5.0 AHAL PRODUCT SUBMISSION REQUIREMENTS

A product's final submission packet must include the following:

- completed submission form
- current and legible EPA/Supplemental label(s), ODAFF supplemental label (24-C or 2ee if applicable), or hard-copy product label
- complete efficacy research data packet (required for all herbicide products, See Section 5 and Figure 1)
- complete compatibility research data packet (required for all drift control products and herbicides, See Section 6 and Figure 1)

Recommendations concerning approval or non-approval decisions will be made within 30 days of the date that a complete final submission packet is received by Oklahoma State University (OSU) Roadside Vegetation Management (RVM) Research personnel. The final decision on approval will be mailed by ODOT to the manufacturer and/or distributor contact person within 30 days of receipt of the OSU RVM Research Program recommendation of approval or non-approval.

**Figure 1. Submission Form for Consideration of Products for the Approved Herbicide and Adjuvant List (AHAL).**

## **6.0 REQUIREMENTS FOR HERBICIDE RESEARCH DATA PACKET**

1. Efficacy data is required for all herbicides being submitted for inclusion in the AHAL.
2. Efficacy data must be generated using labeled product information.
3. Efficacy data must be generated using common standard weed control research equipment, techniques, methods, experimental design and statistical analysis.
4. Efficacy data for an herbicide active ingredient not on the current ODOT AHAL will require a minimum of data from two growing seasons with three treatment replications per season.
5. Efficacy data for an herbicide active ingredient that is represented on the current ODOT AHAL (i.e. generic herbicides) will require a minimum of data from one growing season with three treatment replications.
6. Efficacy data on specific weed problems found along Oklahoma roadsides is preferred. This would include but is not limited to the following weed species:
  - A. Winter Annual/Biennial/Perennial Weeds
    - downy brome, cheat, annual ryegrass, hairy vetch, musk thistle, scotch thistle, sweet clover, wheat and/or other cereal grains.
  - B. Summer Annual/Biennial/Perennial Weeds
    - johnsongrass, Illinois bundleflower, field bindweed, kochia, crabgrass spp., foxtail spp., pigweed spp., silver bluestem, common bermudagrass (total vegetation control).
7. Efficacy data on common bermudagrass phytotoxicity must also be submitted.
8. Efficacy data generated must be accompanied by clear, concise descriptions of how data was collected (i.e. visual, plant counts, etc.) and the scale used to collect data.
9. Efficacy data must include 15, 30, and 60 days-after-application evaluations.
10. Efficacy data should be subjected to analysis of variance and means should be separated using an appropriate separation test at the 90% confidence or certainty level, also known as  $p=0.10$ , also known as probability ( $p$ ) of a greater  $F$  value = 0.10, also known as  $p > F = 0.10$ .
11. Efficacy data should be accompanied in a summary report describing materials and methods, data analysis, and discussion of results.
12. All efficacy testing should include comparison treatments using current ODOT standard treatments (see most current OSU publication E-958: Suggested herbicides for roadside weed control). OSU RVM program personnel may be contacted for recommendations on standard treatments.
13. Research should be conducted on roadside areas or areas which are being managed with no supplemental fertilization or irrigation.

## **7.0 REQUIREMENTS FOR COMPATIBILITY RESEARCH DATA PACKET**

1. Compatibility data is required for all herbicides and adjuvants (drift control products) being submitted for inclusion in the AHAL.
2. Compatibility data must be generated using labeled adjuvant information.
3. Compatibility data must be generated using common standard compatibility jar test method.
4. All adjuvants should be tested for compatibility with current ODOT broadcast herbicide treatments and rates.
5. Compatibility testing should include but is not limited to the following treatments (rates):
  - A. Landmaster BW + Ammonium Sulfate (2 pts./A + 17 lbs./100 gal. of water).
  - B. MSMA (2 qts/A).
  - C. Roundup Pro Concentrate (1 qt./A).
  - D. Ranger Pro (1 qt./A).
  - E. Roundup Pro Concentrate + Oust XP (1 pt. + 1.0 oz./A).
  - F. Roundup Pro Concentrate + Outrider (1 pt. + 1.0 oz./A).
  - G. Vanquish + NIS (1 qt./A).
  - H. Overdrive + NIS (4 oz./A).
  - I. Transline + NIS (8 oz./A).
6. Compatibility data generated must be accompanied by clear, concise descriptions of how data was collected (i.e. visual) and clear a description of all observations.
7. Compatibility data must include observations taken immediately after mixtures are made and shaken, 30 minutes after initial shaking (before re-shaking), and immediately after re-shaking.
8. Compatibility data should be accompanied in a summary report describing materials and methods and discussion of results.

## **8.0 PROCEDURES FOR COMPATIBILITY JAR TEST**

1. Mix all herbicides together first before attempting to add any adjuvant.

Mixing order for herbicides (unless otherwise stated on label):

- a. AMS
- b. dry herbicides
- c. liquid solubles
- d. liquid emulsifiables

Mixing should occur by slowly inverting bottle 3 or 4 times after each product is added. This should be adequate to mix all liquids but dry herbicides will require repeating the inversion process several more times over a 1-3 minute period or until all dry herbicide prills are visibly dispersed. Inverting bottles should be done to prevent excessive foaming if at all possible. All herbicides & AMS should be thoroughly mixed before attempting the addition of any adjuvants being tested.

2. Add the appropriate adjuvants to the herbicide mixture one at a time followed by slowly inverting the mixture 10 times. Evaluate the mixture immediately and move on to the next adjuvant repeating the process. Once the first mixture is evaluated make a note of the time on the score sheet. Once all evaluations are made with a particular herbicide treatment, allow the bottles to set undisturbed for 30 minutes (or as close as possible).
3. After 30 minutes evaluate each of the bottles for the 2<sup>nd</sup> time. It is acceptable to pick up the bottles but this should be done carefully so as not to disturb the mixture. After evaluation place each bottle down undisturbed. It might be helpful to hold the mixture with a bright light (light bulb, window) behind the bottle to backlight the mixture making possible incompatibilities more visible. When the last mixture is evaluated proceed immediately to the 3<sup>rd</sup> evaluation.
4. The 3<sup>rd</sup> and final evaluation occurs by slowly inverting the first bottle 10 times followed by evaluation. Repeat for the rest of the mixtures.
5. Each testing procedure will have 3 evaluations. Incompatibilities could be in the form of excessive foaming, sludges, gels, particulates, globules, and formation of layers just to mention a few. Incompatibilities occur when these forms are created instantly or over time and will not easily disperse with final agitation.
