Abstract:	<p>A new research area linked to ethics, virtues, and morality is servant leadership. Scholars are currently seeking publication outlets as critics debate whether this new leadership theory is significantly distinct, viable, and valuable for organizational success. The aim of this study was to identify empirical studies that explored servant leadership theory by engaging a sample population in order to assess and synthesize the mechanisms, outcomes, and impacts of servant leadership. Thus, we sought to provide an evidence-informed answer to how does servant leadership work, and how can we apply it? We conducted a systematic literature review, a methodology adopted from the medical sciences to synthesize research in a systematic, transparent, and reproducible manner. A disciplined screening process resulted in a final sample population of 39 appropriate studies. The synthesis of these empirical studies revealed: a) there is no consensus on the definition of servant leadership; b) servant leadership theory is being investigated across a variety of contexts, cultures, and themes; c) researchers are using multiple measures to explore servant leadership; and d) servant leadership is a viable leadership theory that helps organizations and improves the well-being of followers. This study contributes to the development of servant leadership theory and practice. In addition, this study contributes to the methodology for conducting systematic literature reviews in the field of management, highlighting an effective method for mapping out thematically, and viewing holistically, new research topics. We conclude by offering suggestions for future research.</p>

A Systematic Literature Review of Servant Leadership Theory in Organizational Contexts

ABSTRACT A new research area linked to ethics, virtues, and morality is servant leadership. Scholars are currently seeking publication outlets as critics debate whether this new leadership theory is significantly distinct, viable, and valuable for organizational success. The aim of this study was to identify empirical studies that explored servant leadership theory by engaging a sample population in order to assess and synthesize the mechanisms, outcomes, and impacts of servant leadership. Thus, we sought to provide an evidence-informed answer to how does servant leadership work, and how can we apply it? We conducted a systematic literature review, a methodology adopted from the medical sciences to synthesize research in a systematic, transparent, and reproducible manner. A disciplined screening process resulted in a final sample population of 39 appropriate studies. The synthesis of these empirical studies revealed: a) there is no consensus on the definition of servant leadership; b) servant leadership theory is being investigated across a variety of contexts, cultures, and themes; c) researchers are using multiple measures to explore servant leadership; and d) servant leadership is a viable leadership theory that helps organizations and improves the well-being of followers. This study contributes to the development of servant leadership theory and practice. In addition, this study contributes to the methodology for conducting systematic literature reviews in the field of management, highlighting an effective method for mapping out thematically, and viewing holistically, new research topics. We conclude by offering suggestions for future research.

Keywords: leadership, leadership theory, servant leadership, systematic literature review

INTRODUCTION

Leadership is one of the most comprehensively researched social influence processes in the behavioral sciences. This is because the success of all economic, political, and organizational systems depends on the effective and efficient guidance of the leaders of these systems (Barrow, 1977). A critical factor to understanding the success of an organization, then, is to study its leaders. Leadership is a skill used to influence followers in an organization to work enthusiastically towards goals specifically identified for the common good (Barrow, 1977; Cyert, 2006; Plsek and Wilson, 2001). Great leaders create a vision for an organization, articulate the vision to the followers, build a shared vision, craft a path to achieve the vision, and guide their organizations into new directions (Banutu-Gomez and Banutu-Gomez, 2007; Kotter, 2001).

According to Schneider (1987), the most important part in building an organization with a legacy of success is the people in it, which includes the followers (i.e., employees and volunteers) as well as the leaders. Leadership theories attempt to explain and organize the complexity of the nature of leadership and its consequences (Bacharach, 1989; Bass and Bass, 2008). Over the years, some leadership scholars have called attention to the implicit connection between ethics and leadership. A burgeoning new research area and leadership theory that has been linked to ethics, virtues, and morality is servant leadership (Graham, 1991; Lanctot and Irving, 2010; Parolini et al., 2009; Russell, 2001; Whetstone, 2002).

Servant leadership theory's emphasis on service to others and recognition that the role of organizations is to create people who can build a better tomorrow resonates with scholars and practitioners who are responding to the growing perceptions that corporate leaders have become selfish and who are seeking a viable leadership theory to help resolve the challenges of the 21st century. Despite servant leadership being coined by Robert K. Greenleaf over three decades ago

1
2
3
4 in 1970, it remains understudied yet still prominently practiced in boardrooms and organizations
5
6 (Bass and Bass, 2008; Spears, 2005). It has received significant attention in the popular press –
7
8 (e.g., *Fortune* magazine and Dateline) (Spears Center, 2011) and leading organizational
9
10 management authors have discussed the positive effects of servant leadership on organizational
11
12 profits and employee satisfaction; see Max DePree (*Leadership is an Art*, 1989), Stephen Covey
13
14 (*Principle Centered Leadership*, 1990), Peter Senge (*The Fifth Discipline: The Art and Styles of*
15
16 *the Learning Organization*, 1990), Peter Block (*Stewardship: Choosing Service over Self*
17
18 *Interest*, 1993), and Margaret Wheatley (*Finding Our Way: Leadership in an Uncertain Time*,
19
20 2005). However, Greenleaf's (1970, 1977) conceptualization of servant leadership as a way of
21
22 life rather than as a management technique perhaps has slowed the acceptance of this leadership
23
24 theory in academia as scholars ask the question: If it is a way life – a philosophy, how can it be
25
26 empirically tested? Even Greenleaf admitted servant leadership is unorthodox and would be
27
28 difficult to operationalize and apply, as “it is meant to be neither a scholarly treatise nor a how-
29
30 to-do-it manual” (Greenleaf, 1977, p. 49). The majority of research to date on servant leadership
31
32 consists of developing theoretical frameworks and establishing measurement tools with the
33
34 intention that future scholars can apply these tools to explore servant leadership in practice and
35
36 as a tenable theory. Only a limited amount of research has empirically examined this construct.
37
38
39
40
41
42
43
44

45
46 As an aid in advancing servant leadership theory, we sought to identify these empirical
47
48 studies that investigated servant leadership by engaging a sample population in order to assess
49
50 and synthesize its mechanisms, outcomes, and impacts. Currently, there does not exist a
51
52 comprehensive summary of empirical studies exploring servant leadership theory in
53
54 organizational settings (e.g., a systematic literature review), which is a gap in the extant
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 literature. Through exploring empirical studies investigating servant leadership theory in
5
6 organizational contexts, we provide evidence that servant leadership is a tenable theory.
7
8

9 As a promising new field of research, servant leadership faces the challenges once
10 addressed by the early services marketing and sport management scholars whose new ideas and
11 concepts were accepted slowly within the conservative culture of academia (Shannon, 1999).
12
13 Similarly, servant leadership scholars have sought a variety of publication outlets for their work
14 while they confront a debate on the distinctiveness and significance of this leadership theory for
15 organizations as well as employees. In addition, the acceleration of knowledge production in the
16 management field has resulted in a body of knowledge that is increasingly transdisciplinary,
17 fragmented, and interdependent from advancement in social sciences. In management research
18 the literature review is a key tool used to manage the diversity of knowledge for an academic
19 inquiry; however, a critique of these reviews is that they are typically descriptive accounts of
20 contributions of selected writers often arbitrarily chosen for inclusion by the researcher, and that
21 these reviews may lack a critical assessment of included studies (Tranfield et al., 2003). In
22 contrast, a systematic literature review (SLR) is different from traditional narrative reviews in
23 that it adopts a replicable, scientific and transparent process that aims to mitigate bias through
24 exhaustive literature searches and by providing an audit trail of the conclusions. A current gap in
25 management research is a discussion of how to conduct a SLR, how to critically assess studies,
26 and how to integrate the conclusions. In this SLR, we not only ascertain the current state of the
27 field in servant leadership research and synthesize divergent studies, but also advance a rigorous
28 methodology for conducting a SRL in management research.
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48
49
50
51
52
53
54

55 Thus, the purpose of this study was to systematically examine and organize the current
56 body of research literature that either quantitatively or qualitatively explored servant leadership
57
58
59
60
61
62
63
64
65

1
2
3
4 theory in a given organizational setting. In this SRL we only included empirical studies that
5
6 investigated servant leadership in an organizational context and excluded studies with a primary
7
8 focus on model development or testing measurement instruments. Earlier reviews on the concept
9
10 of servant leadership focused on: identifying key characteristics (Russell and Stone, 2002),
11
12 measurement development (Barbuto and Wheeler, 2006), and proposing a theoretical framework
13
14 (Van Dierendonck, 2011). Although these reviews help provide insight into how researchers
15
16 have attempted to operationalize servant leadership, none of them was done in a systematic
17
18 manner (i.e., no methodology to select articles or limit bias), and none of them specifically
19
20 explored empirical research.
21
22
23
24

25
26 The following research questions guided this SLR: a) how was servant leadership
27
28 defined?; b) in what contexts was servant leadership theory empirically investigated?; c) how
29
30 was servant leadership examined (i.e., the methodology)?; and, d) what were the results of the
31
32 examination? We begin this paper by summarizing the origin of servant leadership and follow
33
34 with a short discussion of the development of servant leadership as a theory and a new research
35
36 area. Next, a summary of the method used for selecting and reviewing the literature is explained,
37
38 with details on search strategy, analysis, and assessment of the quality of the reviewed studies.
39
40 Then, we present our findings of the SLR on empirical studies that have explored servant
41
42 leadership theory. In addition, we discuss the methodological contribution of conducting SLRs in
43
44 the field of management as an effective method for mapping out thematically, and viewing
45
46 holistically, new research topics. We conclude by offering suggestions for future research and
47
48 practice.

ORIGIN OF SERVANT LEADERSHIP BY ROBERT K. GREENLEAF

Servant leadership was introduced into an organizational context through Greenleaf's three foundational essays – *The Servant as Leader* (1970), *The Institution as Servant* (1972), and *Trustees as Servants* (1972) – all of which he published after retiring from 40 years of management work at AT&T. Greenleaf (1977) defined servant leadership as not just a management technique but a way of life which begins with “the natural feeling that one wants to serve, to serve *first*” (p. 7). Greenleaf (1977) conceptualized the servant as leader from his impressions of *Journey to the East* by Hesse (1956) and used the character Leo to describe a true servant: “Leadership was bestowed upon a man who was by nature a servant. . . . His servant nature was the real man, not bestowed, not assumed, and not to be taken away” (p. 21). Servant leaders are distinguished by both their primary motivation to serve (what they do) and their self-construction (who they are), and from this conscious choice of ‘doing’ and ‘being’ they aspire to lead (Sendjaya and Sarros, 2002). Greenleaf (1977) believed servant leadership was an inward lifelong journey.

Upon retirement in 1964, Greenleaf launched a second career, which spanned 25 years, in which he articulated his new leadership paradigm – servant leadership. He promoted servant leadership in many publications and presentations, including lectures at Massachusetts Institute of Technology's (M.I.T.) Sloan School of Management, Harvard Business School, Dartmouth College, and the University of Virginia; and served as leadership consultant to institutions such as Ford Foundation, Lilly Endowment, M.I.T., R.K. Mellon Foundation, and the American Foundation for Management. In 1964 he founded the Center for Applied Ethics, renamed the Robert K. Greenleaf Center for Servant Leadership in 1985, which helps people understand the principles and practices of servant leadership (Greenleaf Center, 2011). Over 20% of *Fortune*

1
2
3
4 magazine top 100 companies have sought guidance from the Greenleaf Center for Servant
5
6 Leadership, such as Starbucks, Vanguard Investment Group, Southwest Airlines, and ID
7
8 Industries (Greenleaf Center).
9

10
11 Although the contemporary study of servant leadership evolved largely from Greenleaf
12 (1970, 1977), the practice of servant leadership is not a new concept, with roots dating back to
13
14 ancient teachings of the world's great religions, as well as to statements of numerous great
15
16 leaders and thinkers (Sendjaya and Sarros, 2002). The concept of servant leadership echoes the
17
18 messages of Mother Theresa, Moses, Harriet Tubman, Lao-tzu, Mohandas Gandhi, Martin
19
20 Luther King, Jr., Confucius, and many other religious, historic, and current leaders (Keith, 2008).
21
22 Many scholars model Jesus Christ's teachings to his disciples as the ultimate example of servant
23
24 leadership (Ebener and O'Connell; Lanctot and Irving, 2010; Winsten, 2004). Whereas other
25
26 leadership theories are traditionally defined only by what the leader does, servant leaders are
27
28 defined by their character and by demonstrating their complete commitment to serve others. This
29
30 creates one of the core challenges for theorists; how to construct models that encompass
31
32 Greenleaf's theoretical message of "*servanthood-through-leadership-through-practice*" (Prosser,
33
34 2010, p. 28) that operates not only on a surface-level but deep within a person's being. Although
35
36 scholars have agreed theories, frameworks, and models will increase our understanding of the
37
38 meaning, implications, and applications of servant leadership, it is important to remain aware of
39
40 the more abstract, underlying principles and concepts of a servant as a leader (Spears, 1998;
41
42 Keith, 2008; Prosser, 2010).
43

46
47
48
49
50
51

52 53 **SERVANT LEADERSHIP AS A THEORY**

54
55 Although servant leadership is a growing trend being practiced by private and non-profit
56
57 organizations alike, there is still a lack of research in this area (Farling et al., 1999). The majority
58
59
60
61
62
63
64
65

1
2
3
4 of research in servant leadership has streamed from Greenleaf's (1977) foundational texts and
5
6 the Greenleaf Center (see Akuchie, 1993; Bordas, 1995; Brody, 1995; Buchen, 1998;
7
8 Chamberlain, 1995; Frick, 1995; Gaston, 1987; Kelley, 1995; Kiechel, 1995; Kuhnert and Lewis,
9
10 1987; Lee and Zembke, 1995; Llyod, 1996; Lopez, 1995; McCollum, 1995; McGee-Cooper and
11
12 Trammell, 1995; Rasmussen, 1995; Rieser, 1995; Senge, 1995; Smith, 1995; Snodgrass, 1993;
13
14 Spears, 1995, 1996; Tatum, 1995; Vanourek, 1995). Many of these writers present narrative
15
16 examples of how servant leadership is being used in organizational settings; however, this is also
17
18 the primary limitation of much of the servant leadership literature, which is anecdotal in nature
19
20 instead of empirical (Bowman, 1997; Northouse, 1997; Sendjaya and Sarros, 2002). Bass (2000)
21
22 acknowledged that servant leadership requires extensive research, emphasizing that "the strength
23
24 of the servant leadership movement and its many links to encouraging follower learning, growth,
25
26 and autonomy, suggests that the untested theory will play a role in the future leadership of the
27
28 learning organization" (p. 33). The promise of servant leadership has since motivated scholars
29
30 and practitioners to explore the possibilities of the servant-first paradigm.
31
32
33
34
35
36
37

38 Since Farling et al.'s (1999) call for empirical studies, there have emerged three streams
39
40 of research (Van Dierendonck and Patterson, 2011): a) a conceptual stream (Spears, 1998; Laub,
41
42 1999; Patterson, 2003); b) a measurement stream (Page and Wong, 2000; Wong and Page, 2003;
43
44 Ehrhart, 2004; Barbuto and Wheeler, 2006; Dennis and Bocarnea, 2005; Liden et al., 2008;
45
46 Sendjaya et al., 2008; Van Dierendonck and Nuijite, 2011); and c) model development (Russell
47
48 and Stone, 2002; Van Dierendonck, 2011). Notably absent from the above streams are empirical
49
50 studies that explore servant leadership theory in a given organizational setting. In addition, in
51
52 spite of the growing amount of research on servant leadership, the theory is still under-defined,
53
54 with various authors grappling with definitions (Anderson, 2009). This is as Greenleaf (1977)
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 predicted, when he warned that servant leadership would be difficult to apply and operationalize.
5
6 He did not provide a management how-to-do-it-manual; instead, he challenged readers to reflect,
7
8 ponder, and grow (Frick, 2004; Spears, 1995).
9

10
11 To date, three reviews of servant leadership have been conducted, which help provide
12
13 insight into how researchers have organized the complexity of Greenleaf's concepts on servant
14
15 leadership into a theoretical framework. Russell and Stone's (2002) review revealed the
16
17 following nine functional attributes, or operative qualities and distinctive characteristics of
18
19 servant leaders; vision, honesty, integrity, trust, service, modeling, pioneering, appreciation of
20
21 others, and empowerment. In addition, Russell and Stone determined 11 accompanying
22
23 attributes, which are interrelated and supportive of the nine core attributes listed above:
24
25 communication, credibility, competence, stewardship, visibility, influence, persuasion, listening,
26
27 encouragement, teaching and delegation. From this assimilation of attributes Russell and Stone
28
29 developed a model of servant leadership to spark future application and research. While their
30
31 review provides a conceptual overview of servant leadership, it lacks a methodology. Barbuto
32
33 and Wheeler (2006) developed an integrated model of servant leadership after conducting a
34
35 literature review, which synthesized the attributes of servant leadership into five factors;
36
37 altruistic calling, emotional healing, persuasive mapping, wisdom, and organizational
38
39 stewardship. The third review by Van Dierendonck (2011) also concludes with another
40
41 conceptual model, which identifies six key characteristics of servant leadership: empowering and
42
43 developing people, humility, authenticity, interpersonal acceptance, providing direction, and
44
45 stewardship. All of these reviews exemplify different interpretations of Greenleaf's writings
46
47 employing different terminologies; however, all include the fundamental dimension of
48
49 servanthood or the willingness to serve others. These reviews highlight the plurality of servant
50
51
52
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 leadership theory, leaving the researcher, student, or practitioner to ponder exactly what servant
5
6 leadership theory *is*. As DiMaggio (1995) pointed out “there is more than one kind of good
7
8 theory” (p.391).
9

10
11 Given that previous reviews have examined the development of conceptual frameworks
12
13 and measurement tools for servant leadership, the present review focuses only on empirical
14
15 studies that have explored servant leadership theory in an organizational context. As such, the
16
17 current study is the first review to provide a synthesis, based upon evidence in published peer
18
19 reviewed journals, of empirical studies conducted on servant leadership theory in organizational
20
21 settings.
22
23
24

25 26 **METHODOLOGY**

27
28 The SLR is often contrasted with traditional literature reviews because systematic
29
30 reviews are objective, replicable, systematic, comprehensive, and the process is reported in the
31
32 same manner as for reporting empirical research (Weed, 2005). The origin of SLRs is in the
33
34 medical, health care, and policy fields, where they have been used to assemble the best evidence
35
36 to make clinical and policy decisions (Cook et al., 1997; Tranfield et al., 2003). SLRs in
37
38 management are used to provide transparency, clarity, accessibility, and impartial inclusive
39
40 coverage on a particular area (Thorpe et al., 2006). Klassen et al (1998) define SLR as “a review
41
42 in which there is a comprehensive search for relevant studies on a specific topic, and those
43
44 identified are then appraised and synthesized according to a pre-determined explicit method” (p.
45
46 700). This SRL specifically explored research studies that have examined servant leadership
47
48 theory in a given organizational setting. Since our focus was gaining insight on the empirical
49
50 investigation of servant leadership theory, we excluded studies with a primary focus on model
51
52 development or testing measurement instruments. The approach of this review entailed extensive
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 searches of relevant databases with the intention of ensuring, as far as possible, that all literature
5
6 on servant leadership was identified while maintaining the focus on literature of greatest
7
8 pertinence to the research questions – (i.e., empirical studies that have investigated servant
9
10 leadership theory in organizational settings). Next, we discuss our search methods, inclusion and
11
12 exclusion criteria, sample, and data analysis.
13
14

15 16 **Search Methods**

17
18
19 Published studies were identified through searches of electronic databases accessible
20
21 through the authors' university library system. Databases included in this review were: PsycInfo,
22
23 Eric, Sociological Abstracts, PAIS International, Social Services, Communication Abstracts,
24
25 International Bibliography of the Social Sciences (IBSS), Physical Education Index, World Wide
26
27 Political Abstracts from the vendor CSA, Academic Search Complete, Business Source
28
29 Complete, Communication and Mass Media Complete, Education and Administration Abstracts,
30
31 Gender Studies, CINAHL, Health Source: Nursing/Academic Edition, Human Resources
32
33 Abstracts, and Medline through the vendor EBSCO. All results were limited to English-only peer
34
35 reviewed journal articles. The searches for published studies were conducted in a systematic
36
37 manner, following the order of the databases listed above.
38
39
40
41
42

43 **Inclusion and Exclusion Criteria**

44
45 The initial search required that articles included in the review were studies that must: a)
46
47 be published in a peer-reviewed journal; b) be in the English language; and (c) use the keyword
48
49 “servant leadership.” No restriction was placed on year of publication. The number of articles
50
51 containing the keyword “servant leadership” retrieved from each database was recorded. Next,
52
53 we examined if there were any external duplicates from the current database being searched and
54
55 the previous databases that had already been searched. We recorded the number of external
56
57
58
59
60
61
62
63
64
65

1
2
3
4 duplicates, and then deleted the duplicated journal articles from the last database searched while
5
6 keeping a running total of new articles found.
7
8

9 Once all possible studies had been identified, we conducted a second screening to assess
10 eligibility against inclusion criteria and then full text articles were retrieved for those that met the
11 inclusion criteria. The inclusion criteria for the second screening required that the published
12 inclusion criteria. The inclusion criteria for the second screening required that the published
13
14 peer-reviewed article meet all of the following four specifications: a) be in the English language;
15
16 b) be an empirical study (i.e., not an essay, book review, letter, literature review, editorial,
17
18 opinion, journalistic or antidotal article); c) discuss servant leadership as the main topical theme;
19
20 and d) examine servant leadership theory either quantitatively or qualitatively. Articles were
21
22 excluded if any of these four components was not addressed in the abstract, results, or discussion
23
24 sections of the respective study. Finally, additional articles meeting the inclusion criteria were
25
26 found by examining the bibliographies of resources identified through the secondary screening.
27
28
29
30
31

32 **Sample**

33
34
35 Peer reviewed publications were identified using the key terms outlined in the inclusion
36 and exclusion criteria section above. In all, a total of 381 articles were retrieved; however, after
37
38 duplicates were deleted there remained 255 articles meeting the initial inclusion criteria. After
39
40 the secondary search process was conducted, a final sample of 44 appropriate studies was
41
42 obtained. Upon retrieving full text articles, an additional five articles were excluded after further
43
44 examination because they did not satisfy the screening criteria. The final sample of articles
45
46 constituted 39 empirical studies. Peer-reviewed articles meeting the outlined criteria were
47
48 published between 2004 and 2011. The 39 published articles were drawn from a variety of peer-
49
50 reviewed journals (n=27). Table 1 depicts the list of journals included in the study, the number of
51
52 articles included from each journal, and the database they were accessed through.

 Insert Table 1 about here

We grouped the journals by their area of focus, which showed a concentration of research taking place in leadership (n=9), education (n=7), business (n=6), and psychology (n=6), with the fields of nursing (n=3), management (n=2), personal selling and sales management (n=2), ethics (n=1), parks and recreation administration (n=1), services marketing (n=1), and sports (n=1) representing a smaller number of empirical studies.

Data Analysis

The Matrix Method (Garrard, 1999) was utilized as the strategy for organizing and abstracting pertinent information from these publications. For this study, the following information was abstracted from each article: a) how was servant leadership defined? b) in what contexts was servant leadership theory empirically investigated? c) how was servant leadership examined? and d) what were the results of the examination? Last, for each publication, the methodology used to examine servant leadership was evaluated. For qualitative studies, we used a critical appraisal tool designed by Letts et al. (2007), and for quantitative studies we used a critical appraisal tool designed by the Institute for Public Health Sciences (2002). In addition to these two appraisal assessments we used Stoltz, Udén, and William’s (2004) critical appraisal tool, which assessed both quantitative and qualitative studies. We adopted these three critical appraisal tools to create a three-point scale to reflect the quality of studies: high (I); medium (II) – used if studies did not meet criteria for high (I) or low quality; and low (III). Table 2 describes our classification for high to low quality studies, which was based on the three critical appraisal tools mentioned above.

 Insert Table 2 about here

The findings from these studies were summarized and placed into matrixes (i.e., tables). Our SLR findings consist of a synthesis of the results from all 39 empirical studies along with the assessment of quality for each study. Further, we assess the level of supporting evidence for thematic conclusions drawn from combining the results of multiple studies.

FINDINGS

Overall, this review highlights that servant leadership theory is being researched and tested across a variety of contexts, cultures, disciplines, and themes. Our sample included 11 qualitative studies, 27 quantitative studies, and one mixed method study, all empirically assessing servant leadership theory. Thus, this review illustrates that servant leadership is being explored both quantitatively and qualitatively, and the topic has an international appeal with studies being conducted in 11 countries. In the quality assessment, 22 studies were classified as high, 12 as medium, and five as low quality. Conclusive statements were made based upon the synthesis of findings from each article. The conclusions (see Table 3) were classified as A (strong evidence) or B (moderate evidence) based on scientific strength.

 Insert Table 3 about here

If two or more studies of high quality supported a conclusion or one study of high quality in addition to two or more studies of medium quality supported the conclusion, we assigned it an (A) rating. On the other hand, conclusions with one study of high quality and one study of

1
2
3
4 medium quality or two studies of medium quality were assigned a (B) rating. If a conclusion(s)
5
6 did not fall under (A) strong evidence in favor of conclusion or (B) moderate evidence in favor
7
8 of conclusion, we classified it as insufficiently supported and labeled insufficient evidence. The
9
10 following discussion of our findings is organized around the four central research questions.
11
12

13 **How was Servant Leadership Defined?**

14
15
16 Servant leadership theory was introduced to readers by authors of empirical studies by
17
18 citing one or all three of the following: Greenleaf (1977), Spears (1995, 1998, 2004), and Laub
19
20 (1999). Generally, authors described servant leadership by quoting one of these three authors in
21
22 addition to citing multiple other authors, including, but not limited to: Barbuto and Wheeler
23
24 (2006), Graham (1991), Ehrhart (2004), Liden et al., (2008), Page and Wong (2000), and
25
26 Patterson (2003). Here, we discuss the three most cited authors on servant leadership that have
27
28 provided definitions.
29
30
31

32
33
34 Greenleaf (1970, 1972, 1977), the grandfather of servant leadership, was cited by 37 of
35
36 the 39 empirical studies. The majority of authors used part or all of Greenleaf's description from
37
38 his original essay, *The Servant as Leader* (1970):
39

40
41 It begins with the natural feeling one wants to serve, to serve *first*. Then conscious choice
42
43 brings one to aspire to lead. That person is sharply different from one who is leader first.
44
45 . . . The difference manifests itself in the care taken by the servant-first to make sure that
46
47 other people's highest priority needs are being served. The best test, and difficult to
48
49 administer, is this: Do those served grow as persons? Do they, *while being served*,
50
51 become healthier, wiser, freer, more autonomous, more likely themselves to become
52
53 servants? *And*, what is the effect on the least privileged in society? Will they benefit or at
54
55 least not be further deprived? (Greenleaf, 1970 as cited in Greenleaf 1977, p. 27).
56
57
58
59
60
61
62
63
64
65

The majority of authors in our sample, like Greenleaf himself, defined servant leadership theory in a descriptive manner. These descriptions usually cited multiple scholarly works in the conceptual and measurement research streams, in addition to citing leading organizational management authors.

The second most referenced author defining servant leadership theory was Larry Spears. Like Greenleaf, Spears gained his knowledge from practice with most of his works being non-empirical. He served for 17 years as the head of the Greenleaf Center, has authored more than 10 books on servant leadership, and in 2008 established the Larry C. Spears Center for Servant Leadership, Inc. (Spears Center, 2011). Spears (1995, 1998, 2004) identified 10 characteristics of servant leaders from Greenleaf’s writings: listening, empathy, healing, awareness, persuasion, philosophy, conceptualization, foresight, stewardship, commitment to the growth of people, and building community. These attributes are described in Table 4.

 Insert Table 4 about here

Four of the qualitative studies in our sample used Spear’s 10 characteristics to inform their analysis (Crippen, 2004; Crippen and Wallin, 2008a, 2008b; Strum, 2009).

The third most cited author in defining servant leadership theory is Laub (1999). His Organizational Leadership Assessment (OLA) was an outcome of his dissertation. The OLA assesses an organization’s health based upon the six key areas of an effective servant-minded organization by exploring the perceptions of top leaders, managers and supervisors, and the workforce; however, it does not assess the servant leadership of individual leaders (OLA Group, 2011). Authors in our sample used Laub’s definition, which terms the practice of servant

1
2
3
4 leadership as placing “the good of those led over the self-interest of the leader” (1999, p. 81). In
5
6 addition, authors would list and describe Laub’s six key variables of an effective servant-led
7
8 organization: a) values people – believing, serving, and non-judgmentally listening to others; b)
9
10 develops people – providing learning, growth, encouragement and affirmation; c) builds
11
12 community – developing strong collaborative and personal relationships; d) displays authenticity
13
14 – being open, accountable, and willing to learn from others; e) provides leadership – foreseeing
15
16 the future, taking initiative, and establishing goals; and f) shares leadership – facilitating and
17
18 sharing power. The OLA has been widely used in health organizations (OLA Group), and was
19
20 used in six quantitative studies in our sample (Herman, 2010; Black, 2010; Cerit, 2010; Cerit,
21
22 2009; Irving and Longbotham, 2007; Joseph and Winston, 2005).

23
24
25
26
27
28 In summary, our results confirm Anderson’s (2009) and Van Dierendonck’s (2011)
29
30 assessments that servant leadership theory remains under-defined with no consensus on its
31
32 definition or theoretical framework. Scholars are still seeking to articulate Greenleaf’s
33
34 conceptualization of servant leadership by using a variety of definitions sourced from multiple
35
36 works.
37
38

39 40 41 **In what Contexts was Servant Leadership Theory Empirically Investigated?**

42
43 Our sample illustrates servant leadership theory is being studied across cultures, contexts,
44
45 and across a diversity of research foci. Overall, the sample consisted of studies in 11 countries,
46
47 which included four cross-cultures studies. These findings demonstrate that servant leadership is
48
49 being practiced in various cultures, specifically: U.S. (n=23), Canada (n=4), China (n=2),
50
51 Turkey (n=2), Indonesia (n=1), New Zealand (n =1), Kenya (n=1), and the Republic of Trinidad
52
53 (n=1), with five cross-culture studies comparing U.S. and Ghana, U.S. and UK, U.S. and China
54
55 (n=2), and Indonesia and Australia.
56
57
58
59
60
61
62
63
64
65

1
2
3
4 A contextual analysis of the sample revealed that servant leadership theory is being
5
6 applied in the following organizational settings: education (n=17), which consisted of religious
7
8 schools (n=6) and secular schools (n=11); secular for profit organizations (n=17), which notably
9
10 included financial services (n=4) and nursing (n=3); public organizations (n=2); religious
11
12 organizations (n=1); non-profit organizations (n=1); and in a historical context (n=1). It is
13
14 important to note that servant leadership was examined in a religious context in seven of the 39
15
16 studies, and that the education field represents 44% of the contextual environment for the entire
17
18 sample.
19
20
21
22

23 This synthesis also revealed seven key research themes, with some studies containing
24
25 more than one area of focus. The themes and their associated studies are presented in Table 3.
26
27 An overall count and description of each theme is as follows: a) cross-cultural applicability –
28
29 acceptance, practices, and different weights of servant leadership in a variety of cultures (n=7);
30
31 b) servant leadership attributes – conceptual models characteristics were studied (n=7); c) team
32
33 level effectiveness – effects of servant leadership explored at the unit level (n=20); d) followers’
34
35 well-being – effects on employees in a servant-led environment (n=20); e) spirituality –
36
37 connection between spiritual workplace and servant-led workplace was investigated (n=1); f)
38
39 demographics (n=3); and g) implementation of servant leadership (n=3). We discuss a synthesis
40
41 of these themes below in the last section of our findings, where we provide an overview of the
42
43 results of studies included in the sample.

65

How was Servant Leadership Examined (i.e., the Methodology)?

All of the 27 quantitative studies used surveys as the data collection method. The two most popular measures of servant leadership theory used by these empirical studies were Laub's (1999) OLA instrument – used by six studies (Herman, 2010; Black, 2010; Cerit, 2010; Cerit, 2009; Irving and Longbotham, 2007; Joseph and Winston, 2005) and the Servant Leadership Scale developed by Ehrhart (2004) – used by six studies (Ehrhart, 2004; Jaramillo et al., 2009a, 2009b; Mayer et al., 2008; Neubert et al., 2008; Walumbwa et al., 2010). Instruments that were utilized by two studies included: Barbuto and Wheeler's (2006) instrument (Jenkins and Steward, 2010; Garber et al., 2009); Liden et al.'s. (2008) instrument (Hu and Liden, 2011; Schaubroeck et al., 2011); and Sendjaya et al.'s. (2008) survey (Pekerti and Sendjaya, 2010; Sendjaya and Perketi, 2010). Taylor et al. (2007) used Page and Wong's (1998) self-assessment measure. Washington et al. (2006) used Dennis and Winston's (2003) instrument, which was an adopted version of Page and Wong's (2000) instrument. Rieke, Hammermeister, and Chase (2008) used Hammermeister, Burton, Pickering, Westro, Baldwin, and Chase's (2008) instrument, which was also an adopted version of Page and Wong's instrument. Babakus, Yavas, and Ashill (2011) and Hale and Fields (2007) used lesser known scales, those of Lytle, Hom, and Mokwa (1998) and Dennis (2004) respectively. One study tapped a survey designed by the U.S. Office of Personal Management (OPM). Four studies used surveys developed specifically for the research: Fridell, Belcher, and Messner (2009), Reinke (2004), and McCuddy and Cavin (2008, 2009). In summary, out of 27 survey studies, there were 14 different measures used. It is important to note that the majority of authors combined multiple measurement scales to construct their surveys. In addition, the majority of these measures explored servant leadership theory at

1
2
3
4 the unit level of analysis (i.e., group or team performance) while only a few examined it at the
5
6 individual level of analysis (i.e., individual performance).
7
8

9 Similarly, the 11 qualitative studies used a variety of servant leadership frameworks to
10
11 inform their analyses, while three studies did not provide any information on frameworks. Four
12
13 of the qualitative studies used Spear's (1998) 10 characteristics to inform their analyses
14
15 (Crippen, 2004; Crippen and Wallin, 2008a, 2008b; Strum, 2009). Two studies used Patterson
16
17 (2003) and Winsten's (2003) models – Dingman and Stone (2007) and Winston (2004). Han et
18
19 al. (2010) used multiple dimensions and definitions of servant leadership in Western literature
20
21 including but not limited to: Barbuto and Wheeler (2006); Liden et al. (2008); Ehrhart (2004);
22
23 and Sendjaya et al. (2008). The multiple quantitative and qualitative measures used by the
24
25 studies in our sample reinforce our findings for research question one, where it was found that
26
27 authors have defined servant leadership in various ways. Similarly, as this review demonstrates,
28
29 there is still not an agreed upon measurement strategy for servant leadership theory.
30
31
32
33
34
35

36 **What were the Results of the Examination?** 37

38 Our sample of empirical studies illustrates that servant leadership is a tenable theory. It is
39
40 viable and valuable on an individual and an organization level, which can lead to increased
41
42 overall effectiveness of individuals and teams. In Table 3, a synthesis of the conclusions from
43
44 our sample of articles is divided by theme, with a rating of the evidence to support each
45
46 individual conclusion. We discuss the results of these empirical studies by theme below.
47
48
49

50 **Cross-cultural applicability.** The cross-cultural studies (Hamilton and Bean, 2005 –
51
52 U.S. and UK; Hale and Fields, 2007 – U.S. and Ghana; Han et al., 2010 – U.S. and China;
53
54 Pekerti and Sendjaya, 2010 – Indonesia and Australia; Schaubroeck, et al. (2011) – U.S. and
55
56 China) all indicate servant leadership's acceptability across a variety of cultures. However, these
57
58
59
60
61
62
63
64
65

1
2
3
4 studies also show that the different attributes perceived to make up servant leadership are not
5
6 weighted equally across cultures. For example: Hale and Fields (2007) found that vision had a
7
8 significantly stronger relationship with leader effectiveness for Ghanaians in comparison to
9
10 North Americans; Han, Kakabadse, and Kakabadse (2009) found “being dutiful” to be an
11
12 extended form of servant leadership in China; Hamilton and Bean (2010) discovered that
13
14 introducing servant leadership within a Christian context was perceived as obtrusive in the
15
16 United Kingdom; and Perkerti and Sedjaya (2010) found that Australian leaders exhibited more
17
18 behaviors with authentic self (leadership flows out of who we are as opposed to what we do),
19
20 while Indonesian leaders exhibited more behaviors with responsible morality (reflective moral
21
22 reasoning employed to assess whether or not the process and outcomes of one’s leadership are
23
24 ethical) and transforming influence (articulation and implementation of a shared vision which
25
26 provides inspiration, meaning to one’s work, and creates a positive work environment). In
27
28 contrast to these findings, Schaubroeck, et al. (2011) found no significant differences in
29
30 perceptions of servant leadership between Hong Kong and the U.S. These cross-cultural studies,
31
32 along with studies conducted in different countries, imply that servant leadership might be
33
34 practiced across a variety of cultures, but culture-specific perceptions of servant leadership exist
35
36 based on socialization and national context.
37
38
39
40
41
42
43
44

45 **Servant leader attributes.** Seven studies explored the conceptual definitions of servant
46
47 leadership, and found Spear’s (1998), Patterson’s (2003), and Winston’s (2003) attributes to be
48
49 representative of servant leadership in different contexts. Five studies (Boroski and Greif, 2009;
50
51 Crippen, 2004; Crippen and Wallin, 2008a, 2008b; Sturm, 2009) within three different contexts
52
53 (schools, community, and nursing) supported Spear’s 10 characteristics (see Table 3). Two
54
55 studies (Winston, 2004; Dingman and Stone, 2007) provided support for Patterson’s (2003)
56
57
58
59
60
61
62
63
64
65

1
2
3
4 leader-to-follower and Winston's (2003) follower-to-leader models of servant leadership.
5
6 Patterson's model of leader-follower interaction starts with the leaders' *agapaó* (love for others)
7
8 which she conceptualizes as a collection of the following seven values: being teachable; showing
9
10 concern for others; demonstrating discipline; seeking the greatest good for the organization;
11
12 showing mercy in actions and beliefs with all people; meeting the needs of followers and the
13
14 organization; and creating a place where peace grows within the organization. These seven
15
16 values are based upon the biblical concept of the seven beatitudes from Matthew 5 (Patterson,
17
18 2003; Winston, 2003, 2004). Instead of focusing on leader-follower interaction as Patterson's
19
20 model does, Winston's model focuses on the follower-to-leader interactions. Winston's follower-
21
22 to-leader model starts with the followers' *agapaó* and then shows how the followers are servant
23
24 leaders themselves by utilizing the same variables as Patterson's model. As stated above, studies
25
26 confirm the applicability of the variables in both of these models: trust, empowerment, vision,
27
28 altruism, intrinsic motivation, commitment, and service (Winston, 2004; Dingman and Stone,
29
30 2007). Thus, the attributes identified by Spears, Patterson, and Winston were represented within
31
32 the measurement instruments discussed above.
33
34
35
36
37
38
39
40

41 **Team level effectiveness.** Sixteen empirical studies explored servant leadership theory at
42
43 a unit level. Overall, these studies found that a servant-led organization enhances leader trust and
44
45 organizational trust, organizational citizenship behavior, procedural justice, team and leader
46
47 effectiveness, and the collaboration between team members. Several studies found that a servant-
48
49 led environment provided affirmation of justice and fair treatment, which is positively associated
50
51 with procedural justice, or the perception of how a work group as a whole is treated (Ehrhart,
52
53 2004; Walumbwa et al., 2010; Chung et al., 2010). Procedural justice fosters trust in the servant
54
55 leader and in the servant-led organization (Joseph and Winston, 2005; Reinke, 2004; Senjaya and
56
57
58
59
60
61
62
63
64
65

1
2
3
4 Pekerti, 2010; Washington et al., 2006). This creates an open and trusting environment, which
5
6 can enhance collaboration among team members (Garber et al., 2009; Sturm, 2009; Irving and
7
8 Longbotham, 2007). Collaboration in a servant-led organization creates a helping culture (i.e., a
9
10 spirit of willingness), which increases team members' organizational citizenship behavior,
11
12 defined as pro-social and altruistic behaviors that have been shown to improve organizational
13
14 performance (Ebener and O'Connell, 2010; Hu and Liden, 2011; Ehrhart; Walumbwa et al.,
15
16 2010). Servant leadership also improves overall team effectiveness (Taylor et al., 2007; Mayer et
17
18 al., 2008; McCuddy and Cavin, 2008) and can enhance leaders' effectiveness (Irving &
19
20 Longbotham, 2007; Schaubroeck et al., 2011; Hu and Liden, 2011). In summary, servant
21
22 leadership creates a trusting, fair, collaborative, and helping culture that can result in greater
23
24 individual and organizational effectiveness.
25
26
27
28
29

30
31 **Followers' well-being.** Findings from 15 empirical studies illustrate that servant
32
33 leadership enhances followers' well-being. These studies showed conceptually and empirically
34
35 how servant leadership influences followers' well-being by creating a positive work climate
36
37 (Neubert et al., 2008; Black, 2010; Jaramillo et al., 2009a), which is related to greater
38
39 organizational commitment (Cerit, 2010; Hamilton and Bean, 2005; Hale and Fields, 2007; Han
40
41 et al., 2010; Pekerti and Sendjaya, 2010). Greater commitment to the organization increases
42
43 employee job satisfaction (Cerit, 2009; Jenkins and Stewart, 2010; Mayer et al., 2008; Chung, et
44
45 al., 2010) and consequently decreases employee turnover (Jaramillo et al., 2009b; Babakus et al.,
46
47 2011). Servant leaders create these positive outcomes by developing trust while nurturing
48
49 followers, which encourages the creativity, helping behaviors, and well-being of followers
50
51 (Jaramillo et al., 2009a; Babakus et al., 2011; Rieke et al., 2008). Overall, these studies support
52
53 the notion that servant leadership can improve followers' well-being.
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 **Spirituality.** One study (Herman, 2010) found a positive connection between workplace
5 spirituality and servant leadership, while six studies explored servant leadership within religious
6 intuitions. In addition, many scholars described servant leadership using the teachings of Jesus
7 Christ as a reference (Ebener and O’Connell; Hamilton and Bean, 2005; Winsten, 2004).
8
9 Although there appears to be a relationship between spirituality and servant leadership, there was
10 insufficient evidence to draw conclusions for this review.
11
12
13
14
15
16
17

18
19 **Demographics.** Three studies (Fridell et al., 2009; McCuddy and Cavin, 2009; Taylor et
20 al., 2007) attempted to identify demographic characteristics conducive to practicing servant
21 leadership. However, these studies lacked methodological quality sufficient to support any
22 conclusions. In addition, many of the findings of these studies contradicted each other as well as
23 other studies within our sample. For example, one study found significant differences between
24 men and women’s servant leadership style usage – female leaders were more likely to practice
25 daily reflection and consensus building, foster self worth, and engage in healing relationships
26 (Fridell et al., 2009), while another study found no difference (McCuddy and Cavin, 2009). Also,
27 one study found that socio-economic factors were positively related to servant behaviors
28 (McCuddy and Cavin, 2009), while another study found that no demographic variables were
29 significantly related to servant leadership (Taylor et al., 2007) Therefore, it remains to be
30 discovered if there are in fact demographic characteristics that are related to servant leadership.

48 **Implementation of servant leadership.** Three studies examined servant leadership in
49 various organizational processes (Hamilton and Bean, 2005 – leadership development; Savage-
50 Austin & Honeycutt, 2011 – organizational change; Dingman and Stone, 2007 – succession
51 planning). Nevertheless, these studies were not supported by other empirical studies nor was
52 their methodological quality sufficient to provide any conclusions.

LIMITATIONS

Although this SLR was conducted in a disciplined manner, potential limitations must be acknowledged. We limited the search process to indexed journals available through the authors' university library system that were peer reviewed published articles written in the English language. Thus, this review did not include non-indexed journals or dissertations because they are not peer-reviewed, or peer-reviewed servant leadership articles published in a language other than English. Given the apparent universal interest in servant leadership, as identified in our review, perhaps there are more empirical studies being published in other languages that would complement or contradict some of the conclusions drawn from this review. The methodology and findings of the studies included in the review were assessed by two independent reviewers aided by a critical assessment tool, which was utilized to make the evaluation phase more accurate. However, our attempt to integrate results conducted with qualitative as well as quantitative data analysis may have limited the ability to sufficiently explore all methodological considerations when fusing the findings of both types of empirical studies into a coherent text. In order to guide future scholars in conducting SLRs, more work is needed on how to assess the quality of qualitative and quantitative research in the field of management. Given SLRs origins are in the medical field, which conduct controlled trial studies, there are few critical appraisal tools that are applicable to the research methods used in other disciplines, such as qualitative inquiry and cross-sectional studies.

CONCLUSION

This SLR demonstrates servant leadership theory is applicable in a variety of cultures, contexts, and organizational settings. Even though Greenleaf first coined the philosophy in the 1970s, it has taken until 2004 for servant leadership to be explored in an empirical manner. This

1
2
3
4 SLR did not place any limitation on the publication year of peer-reviewed journal articles;
5
6 however, no empirical studies were found across all the databases searched before 2004. To date,
7
8 the majority of research in servant leadership is either attempting to conceptually define and
9
10 model the theory or develop measurement tools to empirical test it. Thus, the greater part of
11
12 research on servant leadership is addressing one of the major criticisms of the theoretical
13
14 construct, which is the difficulty of operationalizing its concepts and principles (Brumback,
15
16 1999; Wong and Davey, 2007). Quay is not alone in his sentiments on Greenleaf's works: "For
17
18 all his good advice and many practical ideas, he is a Don Quixote trying to convince managers to
19
20 pursue good and eschew evil" (1997: 83). By Greenleaf's own admission, his ideas are
21
22 unorthodox, yet the value of this review illustrates that servant leadership works and is a tenable
23
24 theory.
25
26
27
28
29

30
31 The first question of this review sought to discover how servant leadership is being
32
33 defined. Although our findings indicated the majority of authors use Greenleaf (1970, 1972,
34
35 1977), Spears (1998), and Laub (1999) to help define servant leadership, there still does not exist
36
37 an accepted consensus over its definition. This lack of consensus creates confusion (Van
38
39 Dierendonck, 2011) amongst researchers, as they create their own variations of definitions and
40
41 theoretical models. Perhaps one day there will be a generally accepted theory of servant
42
43 leadership, but the empirical cross-cultural studies in this review highlight that while servant
44
45 leadership has been researched in a variety of cultures, it has different meanings based on
46
47 socialization and national context. In addition, Greenleaf (1977) argued that servant leadership is
48
49 an inward life-long journey, implying that the meaning of servant leadership could change
50
51 throughout one's life time. Therefore, this review does not conclude with a model or another
52
53 definition of servant leadership; however, it does provide an overview of multiple definitions of
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 servant leadership currently being used in empirical studies in order to further our conceptual
5
6 understanding.
7

8
9 Second, this review explored the contexts in which servant leadership is being
10 empirically investigated. Our review illustrates the diversity of cultures, organizational settings,
11 and research foci in which servant leadership is being explored. There seems to be pronounced
12 interest in investigating servant leadership in the U.S. and throughout the Asia Pacific region;
13
14 however, there is a paucity of studies being conducted in other parts of the world. Currently, the
15 majority of studies are exploring servant leadership in an educational setting (44% of our
16 sample). Organizational settings that have received less attention from researchers include
17 medical institutions, public organizations, non-profit organizations, and community-level
18 organizations. Research on servant leadership is concentrated in the fields of leadership,
19 education, business and psychology; whereas, there is only a small number of studies in the
20 fields of nursing, management, personal selling and sales, ethics, parks and recreation
21 administration, services marketing, and sports. The research themes being explored the least are:
22 spirituality, demographics, and implementation of servant leadership. Thus, this review helps
23 researchers identify areas and contexts which are relatively unexplored in relation to servant
24 leadership and thus ripe for further investigation.
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44

45 Third, this review examined the tools that can be used to measure the existence and
46 outcomes of servant leadership. The multiple quantitative and qualitative measures used by the
47 studies point to the fact that there is currently not an agreed upon measurement instrument of the
48 theoretical construct. This review can point researchers towards the current measurement tools
49 available, how they are being used, and in what contexts they are being applied. Last, this review
50 synthesized the findings of these empirical studies (see Table 3). Seven research themes
51
52
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 emerged: cross-cultural applicability, servant leadership attributes, team level effectiveness,
5
6
7 followers' well-being, spirituality, demographics, and implementation of servant leadership. This
8
9 synthesis can help researchers identify the current findings in the extant literature and to discover
10
11 research foci that remain relatively underexplored.
12

13
14 Several intriguing directions for future research emerged from our SLR. First, this SLR
15
16 only identified 39 empirical studies that explored servant leadership theory in organizational
17
18 settings, highlighting the need for researchers to empirically investigate the construct of servant
19
20 leadership in a variety of organizational contexts. In the burgeoning field of entrepreneurship,
21
22 researchers could explore how to build a servant-led organization, or in the field of
23
24 organizational change, studies could explore how to implement servant leadership in an
25
26 established organization or during a merger or acquisition. Second, there is a need to investigate
27
28 the antecedents of servant leadership development, such as personal attributes of the leader,
29
30 background of the leader, and organizational history and trajectory. Third, researchers can
31
32 examine other outcomes of servant leadership, such as voluntarily organizational turnover,
33
34 succession planning, affective organizational commitment, and employee well-being through
35
36 generative growth. Last, there is a need to develop critical appraisal tools for quantitative and
37
38 quantitative research used in the field of management to conduct SLRs. Perhaps our integration
39
40 of several appraisal tools can serve as a template, as we assessed the level of supporting evidence
41
42 for thematic conclusions drawn from combining the results of multiple studies.
43
44
45
46
47
48
49

50
51 This SLR is the first synthesis of empirical studies exploring servant leadership theory in
52
53 organizational contexts that utilizes a rigorous methodology to mitigate bias through exhaustive
54
55 literature searches and by providing an audit trail of the conclusions. This review enhances our
56
57 understanding of the definition(s) of servant leadership, illustrates the diversity of cultures,
58
59
60
61
62
63
64
65

1
2
3
4 organizational settings, and research foci in which it is being examined, identifies tools that can
5
6 be used to measure its existence and outcomes, and shows that servant leadership is a viable
7
8 leadership theory that helps organizations and the well-being of followers. Our findings
9
10 synthesize empirical research on servant leadership theory across the multidisciplinary fields of
11
12 business, medicine, psychology, religion, leisure, education, and economics and law. Scholars
13
14 exploring servant leadership are using theories from other disciplines to build upon existing
15
16 theory and to develop theory that is uniquely applicable to their field (e.g., organizational
17
18 behavior, sport, gender). Thus, this SLR validated servant leadership as a viable and valuable
19
20 theory, and therefore, illustrates how servant leadership theory can be used to inform future
21
22 empirical studies. In addition, and importantly, this SLR contributes to advancing the
23
24 methodology of conducting a SLR in the management context. Here, we showcase how a SRL
25
26 can provide an effective method for mapping out thematically the current body of research
27
28 literature that empirically explores servant leadership theory in organizational contexts.
29
30
31 However, this type of systematic review with rigorous methodology can be applied to other
32
33 research streams within management as an aid in holistically synthesizing the state of the field in
34
35 various topical areas.
36
37
38
39
40
41
42

43 As a viable leadership theory, servant leadership can perhaps provide the ethical
44
45 grounding and leadership framework needed to help address the challenges of the 21st century:
46
47 technological advancements, economic globalization, increased communications, the Internet,
48
49 rising terrorism, environmental degradation, war and violence, disease and starvation, threat of
50
51 global warming, intensifying gap between the poor and rich worldwide, as well as many other
52
53 unsolved issues. Servant leadership contrasts, traditional leader-first paradigms, which applaud a
54
55 Darwinism, individualistic, and capitalist approach to life, implicating that only the strong will
56
57
58
59
60
61
62
63
64
65

1
2
3
4 survive. Sadly, this belief system is operating at the heart of most organizations and is the
5
6 consequence of most of our modern tragedies: Arthur Andersen and Enron, Dennis Kozlowski
7
8 and Tyco, and Bernard Ebbers and WorldCom (Forbes, 2002). Servant leaders believe “the
9
10 world does not have to be like this” (Keith, 2008, p. ix) and actively work at changing society for
11
12 the better. In short, this review shows servant leadership can help address these ethical dilemmas.

TABLE 2
CLASSIFICATION AND QUALITY ASSESSMENT OF STUDIES

	I = High	II = Medium	III = Low
QNT	Study using quantitative analysis of data. Clearly focused study, sufficient background provided, well planned, method appropriate, measures validated, applicable and adequate number of participants, data analysis sufficiently rigorous with adequate statistical methods, findings clearly stated.	–	Not focused study, insufficient background provided, poorly planned, inappropriate method, invalidated measures, inapplicable and inadequate number of participants, data analysis insufficiently rigorous, with inadequate statistical methods, unclear findings.
QAL	Study using qualitative analysis of data. Purpose stated clearly, relevant background literature reviewed, design appropriate, identified researcher’s theoretical or philosophical perspective, relevant and well described selection of participants and context, procedural rigor in data collection strategies and analysis, evidence of the four components of trustworthiness (credibility, transferability, dependability, and confirmability) results are comprehensive and well described.	–	Vaguely formulated purpose, insufficient background, few or unsatisfactory descriptions of participants and context, trustworthiness inadequately addressed, lacks in description of data collection, data analysis, and results.

QNT, quantitative study; QAL, qualitative study; I, high quality; II, medium quality; III, low quality.

TABLE 3: OVERVIEW OF CONCLUSIONS

Result Themes	Conclusion	Evidence	References
Cross-cultural applicability	SL is accepted and practiced in various cultures; however, components of SL have different weights	Strong evidence in favor of statement (A)	Cerit, (2009, 2010) (QNT I, QNT I); Hamilton & Bean (2005) (QAL III); Hale & Fields, (2007) (QNT I); Han et al., (2010) (QAL II); Pekerti & Sendjaya, (2010) (QNT I)
SL attributes	Spears' (1998) 10 characteristics are representative of a servant leader applied in different context	Strong evidence in favor of statement (A)	Boroski & Greif, (2009) (QAL III); Crippen, (2004) (QAL II); Crippen & Wallin, (2008a) (QAL II), (2008b) (QAL II); Sturm, (2009) (QAL I)
	Patterson (2003) and Winston (2003) models of SL are supported	Strong evidence in favor of statement (A)	Winston, (2004) (QAL I); Dingman & Stone (2007) (QAL II)
Team level effectiveness	SL leads to increased leader trust and organizational trust	Strong evidence in favor of statement (A)	Joseph & Winston, (2005) (QNT I); Reinke, (2004) (QNT II); Senjaya & Pekerti, (2010) (QNT I); Washington et al, (2006) (QNT I)
	SL fosters organizational citizenship behavior	Strong evidence in favor of statement (A)	Ebener & O'Connell, (2010) (QAL I); Hu & Liden, (2011) (QNT I); Ehrhart, (2004) (QNT I); Walumbwa et al, (2010) (QNT I)
	Procedural justice is positively associated with SL	Strong evidence in favor of statement (A)	Ehrhart, (2004) (QNT I); Walumbwa et al, (2010) (QNT I); Chung, et al., (2010) (QNT II)
	SL increases team effectiveness	Strong evidence in favor of statement (A)	Irving & Longbotham, (2007) (QNT I); Schaubroeck et al (2011) (QNT I); Hu & Liden, (2011) (QNT I)
	SL is associated with greater leadership effectiveness	Strong evidence in favor of statement (A)	Taylor et al, (2007) (QNT II); Mayer et al., (2008) (QNT I); McCuddy & Cavin, (2008) (QNT III)
	SL enhances collaboration	Moderate evidence in favor of statement (B)	Garber et al., (2009) (QNT II); Sturm, (2009) (QAL I); Irving & Longbotham, (2007) (QNT I)
Followers' well-being	SL increases employee job satisfaction	Strong evidence in favor of statement (A)	Cerit, (2009) (QNT I); Jenkins & Stewart, (2010) (QNT I); Mayer et al., (2008) (QNT I); Chung, et al., (2010) (QNT II)
	SL creates a positive work climate	Strong evidence in favor of statement (A)	Neubert et al., (2008) (QNT I); Black, (2010) (Mixed Method: QNT II & QAL III); Jaramillo et al., (2009a) (QNT I)
	SL supports employee creativity and helping behaviors	Strong evidence in favor of statement (A)	Jaramillo et al., (2009b) (QNT I); Neubert et al., (2008) (QNT I)
	SL improves followers well-being	Strong evidence in favor of statement (A)	Jaramillo et al., (2009b) (QNT I); Rieke et al., (2008) (QNT I)
	SL lowers employee turnover	Strong evidence in favor of statement (A)	Jaramillo et al., (2009a) (QNT I); Babakusa et al., (2011) (QNT I)
	SL increases commitment	Strong evidence in favor of statement (A)	Cerit, (2010) (QNT I); Hamilton & Bean (2005) (QAL III); Hale & Fields, (2007) (QNT I); Han et al., (2010) (QAL II); Pekerti & Sendjaya, (2010) (QNT I) Jaramillo et al., (2009a) (QNT I); Jaramillo et al., (2009b) (QNT I)
Spirituality	SL is associated with workplace spirituality	Insufficient evidence	Herman, (2010) (QNT II)
Demographics	Propensity toward engaging in SL is associated with demographic variables	Insufficient evidence	Fridell et al., (2009) (QNT II); McCuddy & Cavin, (2009) (QNT III); Taylor et al, (2007) (QNT II)
Implementation of SL	Knowledge and framing of SL can affect adoption	Insufficient evidence	Hamilton & Bean (2005) (QAL III); Savage-Austin & Honeycutt, (2011) (QAL III)
	Positive relationship between succession planning and SL	Insufficient evidence	Dingman & Stone (2007) (QAL II)

SL, servant leadership; QNT, quantitative study; QAL, qualitative study; I, high quality; II, medium quality; III, low quality.

TABLE 4

SPEARS' (1998) 10 CHARACTERISTICS OF A SERVANT LEADER

Characteristic	Description
Listening	Automatically responding to any problem by receptively listening to what is said, which allows them to identify the will of the group and help clarify that will.
Empathy	Striving to accept and understand others, never rejecting them, but sometimes refusing to recognize their performance as good enough.
Healing	Recognizing as human beings they have the opportunity to make themselves and others 'whole'.
Awareness	Strengthened by general awareness and above all self-awareness, which enables them to view situations holistically.
Persuasion	Relying primarily on convincement rather than coercion.
Conceptualization	Seeking to arouse and nurture theirs' and others' abilities to 'dream great dreams'.
Foresight	Intuitively understanding the lessons from the past, the present realities, and the likely outcome of a decision for the future.
Stewardship	Committing first and foremost to serving others needs.
Commitment to the growth of people	Nurtures the personal, professional, and spiritual growth of each individual.
Building community	Identifies means of building communities among individuals working within their institutions, which can give the healing love essential for health.
