Extension Circular No. 255 is to take the place of Experiment Station Circular No. 71.

## EGGSPLANATION

The receipes and information in this circular have been assembled under one cover for the eggspress purpose of aiding in the understanding of how and why eggs should be of greater use in the human diet. The sources and original authors of most of the recipes have been lost by their popularity in having appeared in many publications of different sorts and at different times. Credit cannot be given with any degree of accuracy for many of these recipes are very old and are thoroughly tried and proven. Some are new versions of old recipes and still others will continue to lend opportunity for future variations.

Eggs should be included in the diet frequently the whole year through because they are highly nutritious, cheap, and available at all times. They are a valuable meat substitute. They are easily and quickly prepared and can be prepared in a wide variety of ways for any meal.

Eggs are an ideal family food. They are not just a breakfast food, but may be used as the main dish for either lunch, supper, or dinner. Because of the vitamin and mineral content, they make a valuable food for a child. Their vitamin and fat content make them desirable foods for the convalescent.

Few foods are as nutritious weight for weight as are eggs. They contain desirable proteins and fats as well as vitamins A, B, and D which are those substances in food so necessary for health. Eggs are rich in mineral salts, especially phosphorus, calcium, and iron. Eggs are valued especially for their iron and for their vitamins.

Eggs are easily and quickly digested if cooked so that the protein is not toughened or coated with grease. Eggs are classed as a protein food so they should be cooked at low temperatures. To properly soft cook eggs, place them in a vessel containing enough boiling water to cover them. Place the vessel where the water will not boil, but will hold its temperature. For soft eggs the time should be three to five minutes. For medium eggs from eight to ten minutes, and for hard eggs fifteen to thirty minutes. Cooking at a low temperature is the success of all delicious egg dishes, from fried eggs to angel cake, or up or down the scale whichever way the taste may go.

Of the edible protein of an egg, about 13% is protein, and about 10% is fat. The remaining portions are water and mineral matter. Of the minerals needed for one day, one egg will supply 10% of the iron, 6% of the phosphorus and 5% of the calcium. An egg is rich in sulphur. One egg will supply 10% of the protein a person needs for one day. Because of this protein, eggs may take the place of meat, cheese, beans, nuts, and milk in the diet. Eggs contain no starch, so it is desirable to combine them with bulky food. Contrary to an existing belief there is no difference in the composition of eggs with white and brown shells.

Many varied uses are made of eggs because the white has the power of holding air. Whenever a food containing beaten egg white is heated, the air expands and the egg white stretches, then coagulates, which in turn makes the food light and porous. Sometimes the products fail due to the temperature being too high which hardens the outside protein before the center is set.

In addition to being used as the main dish for any meal, eggs have four important places or uses in cooking.

1. Thickening as in custards, batters, sauces. Egg slightly beaten so that yolk and white are well mixed. Two yolks thicken a mixture slightly more than one whole egg.

2. To add lightness as in omelet, soufflé, sponge cakes, etc., yolk and white beaten separately, folded into the mixture.

3. To add richness and color as in ice cream, sauces, rolls, etc.

4. For coating to prevent absorption of grease as in croquettes and other articles fried in fats. Eggs are slightly beaten and mixed with equal parts of water and milk.

It is important to keep eggs in a clean odorless place to hold their good fresh quality. Eggs should be kept in the refrigerator but not in the same dish or container with onions or other articles of strong flavor or odor. There is no known way to improve the quality of an egg after the hen lays it, so from that time till it is used it is the duty of everyone handling it to preserve that quality.

**Floating Island**

3 egg whites	3 egg yolks	1½ c. scalded milk
4 T. sugar	¼ c. sugar	½ t. vanilla
	⅛ t. salt	

Beat the whites until stiff. Add 4 tablespoons sugar. Drop by tablespoonfuls into a shallow pan of hot water. Bake in a moderate oven until delicately brown. Remove cooked whites into a serving dish.

Prepare the custard sauce. Mix the yolks, sugar and salt in a bowl, add scalded milk slowly. Return to the double boiler and cook until a coating is formed on metal spoon. Remove immediately and add flavoring. Pour around cooked whites in a large shallow bowl. Chill before serving.

**Baked Custard**

Proceed as for custard. Pour the mixture into buttered custard cups or a baking dish. Set in a pan of warm water and bake in a slow oven. Test with a knife blade, when blade comes out clean, remove from oven. (For custard baked in large mold, use 6 eggs).

**Variations:**

1. One cup of steamed dates cut in pieces may be added.
2. Custard may be sprinkled with nuts, nutmeg, cocoanut, or grape nuts before baking.

**Custard**

4 c. milk	½ c. sugar	½ t. vanilla or nutmeg
4 eggs	¼ t. salt	

Scald the milk (use double boiler if possible). Beat the eggs slightly, add sugar and salt. Gradually add hot milk to egg mixture, stirring constantly. Return to double boiler and cook at low heat stirring constantly until mixture coats the spoon.

**Bread Custard**

3 slices of buttered bread	4 eggs	1 qt. milk
	¼ c. sugar	

Beat the eggs without separating; add the sugar then the milk. When the sugar is dissolved pour the mixture into a baking dish, and cover the top with the bread, butter side up. Bake in a moderate oven until set or solid. Serve cold. This is an exceedingly nice custard for children's supper.

**Angel Pudding**

1 lb. English walnuts	5 egg whites	9 oz. dates
3 teaspoons baking powder	1¼ cups powdered sugar	

Break walnuts finely, and chop dates, mix with sugar and baking powder, add whites of eggs last. Bake in moderate oven twenty to thirty minutes. Serve with whipped cream.

**Blanc Mange With Variations**

The foundation recipe for blanc mange can be varied in many ways with a number of flavors. Make chocolate pudding by adding eggs, cocoa, or melted chocolate, and vanilla. Make caramel with caramelized sugar with or without the addition of chopped nuts. Make butterscotch pudding with one quart of milk, four rounded tablespoons cornstarch, three eggs, one cup brown sugar, one dessert spoonful molasses, one tablespoon butter, pinch salt, vanilla.

For fluff pudding, the yolks of the eggs are cooked with the other ingredients and stiffly beaten whites are folded in when the double boiler is removed from the stove. Almond flavoring is particularly nice with this pudding. Fruit juice sauces thickened with cornstarch or cream, plain or whipped, are delicious with any blanc mange.

Other variations may be provided by the addition to the foundation recipe of cocoanut and eggs; dates, after having first been washed, stoned, and chopped, and eggs; and canned fruit.

Most of these pudding variations become excellent cream pies if served in pie shells and topped with merangue or whipped cream.
