ACKNOWLEDGMENT

The writer wishes to express his appreciation to all who have had a part in this study, and he is particularly grateful to the following: To Mr. Fred C. Ogle, Superintendent of the Checotah High School; to the faculty of the Checotah High School for their cooperation in gathering data; and to Raedean Lefors for her able assistance. Sincere gratitude is also extended to Professor Robert Price, and C. L. Angerer for their encouragement, valuable suggestions, and careful criticisms.

A STUDY OF 322 FORMER VOCATIONAL AGRICULTURE PUPILS
RELATIVE TO MARKS RECEIVED, SUPERVISED FARM
TRAINING AND LEADERSHIP; PRESENT
OCCUPATION AND INCOME RECEIVED

CHAPTER I
INTRODUCTION

While keeping tab of all pupils who were enrolled in vocational agriculture since the author has been in Checotah 1935, to 1950, it was evident that some correlation existed between the marks the pupils made in vocational agriculture and their income level which they received in occupations in life after leaving school.

It was with the thought in mind that there was a correlation existing between marks made while in school and income received later in life by the pupil that this study was begun.

As teachers, we need to become more familiar with the results attained in the lives of former pupils after leaving school. This is very important if we are to direct and guide present pupils in an adequate preparation for future living.

Purpose of Study

This study is concerned specifically with ascertaining any correlation which may exist between the marks pupils make in vocational agriculture and the income which they receive in occupations after leaving school.

In addition, the investigation proposes to accomplish the following secondary purposes:

1. To discover how the marks received in vocational agriculture and the number of years completed in vocational agriculture compare.
2. To determine whether the marks received in vocational agriculture and the number of years of college attendance compare.
3. To compare the marks received in vocational agriculture and the average number of points received in F. F. A. leadership activities.
4. To find the distribution of farm and town pupils who have had vocational agriculture.
5. To discover the number of pupils who have had vocational agriculture and who graduated from high school.
6. To determine the present occupational distribution of all former pupils of vocational agriculture in Checotah High School.
7. To determine the present occupational distribution by marks received while in vocational agriculture.

This study seeks to provide information and data which will aid teachers and parents in stimulating and promoting the making of better marks by vocational agriculture pupils.

The Need

There are several thousand vocational agriculture pupils over the state who have little, if any realization of

the correlation between marks received and chances of such items as: income later received; completing high school; chances of attending college; and the opportunities of engaging in various occupations. An effort will be made to determine this correlation in order to aid future vocational agriculture pupils by stimulating them to make better marks in order to achieve a brighter future.

Method of Procedure

To determine the correlation a survey and a study was made of all students out of school that had completed one or more years of vocational agriculture during the period 1935 through 1950 inclusive. In making the study all school records in the superintendent's office and in the vocational agriculture department were checked for each individual boy. Appropriate entries were made in the first seven columns on the individual survey sheet. Also, entries were made in the eighth and ninth columns regarding occupation and income. This information was secured by personal contact and a survey blank which was mailed to each individual who was not personally contacted.

The F. F. A. leadership score the pupil received was determined from certain selected activities which he participated in during the time he was in vocational agriculture.

The rating given each activity is indicated as follows:

1. Leadership and F.F.A. activities	10 points each
2. Productive enterprise projects	10 points each
3. Improvement projects	3 points each
4. Supplementary farm practices	1 point each
5. Each \$10.00 productively invested	2 points each
6. Make the school honor roll	5 points each
7. Each cooperative activity	2 points each
8. Miscellaneous activities	1 point each

It is realized that the results will be affected by the fact that some pupils have been out of school a much greater number of years than others who have only been out a short time.

Scope of the Study

A survey was made of 322 vocational agriculture pupils who were out of school.

Source of the Data

All vocational agriculture pupils out of school who had completed one or more years of vocational agriculture in the Checotah High School during the period 1935 through 1950 inclusive, were included in this study.

Definition of Terms

In this study the term "mark" carries the same meaning as the grade received.

The term "F. F. A." has reference to the Future Farmers of America Association which is an organization composed of members of the vocational agriculture class.

Chapter II

PRESENTATION OF DATA

The study will attempt to show the number of years in vocational agriculture; years in college; F. F. A. leadership score made in vocational agriculture activities; number of farm pupils; number graduating from high school; and present occupation and present income.

TABLE I

A COMPARISON OF MARKS RECEIVED IN VOCATIONAL
AGRICULTURE BY 322 PUPILS AND THE NUMBER OF YEARS COMPLETED
IN VOCATIONAL AGRICULTURE

Average Mark received	Number of pupils receiving	Average years of Vocational Agri. completed
A	23	3.8
B	98	2.8
C	142	2.2
D	54	1.7
F	5	1.

Table I shows that the twenty-three pupils who received a mark of A, averaged completing a total of three and eight-tenths years of vocational agriculture, while ninety-eight pupils who received a mark of B, averaged completing only two and eight-tenths years. It is further evident that one hundred and forty-two pupils who received an average mark of C, averaged a completion of two and two-tenths years of vocational agriculture. Fifty-four pupils receiving D marks

averaged completing one and seven-tenths years and five F pupils completed only one year of vocational agriculture.

It is evident that pupils making the better marks have more interest in farm problems and remain in vocational agriculture longer. It is probable that most of them while in school expect to remain in some field of agriculture in the future and have a much better attitude and a desire to learn more about the problems connected with the business of farming.

TABLE II

A COMPARISON OF MARKS RECEIVED IN VOCATIONAL AGRICULTURE
BY 322 PUPILS AND THE NUMBER OF YEARS COMPLETED IN COLLEGE

Average Mark received	Number of pupils receiving	Number attending college	Average years completed in college
A	23	18	2.8
B	98	28	0.8
C	142	21	0.35
D	54	5	0.16
F	5	0	0.0

Table II shows that twenty-three pupils receiving a mark of A, averaged completing a total of two and eight-tenths years in college, while ninety-eight pupils receiving a mark of B, averaged completing only eight-tenths of one year of college. One hundred forty-two pupils who received an average mark of C averaged a completion of thirty-five hundredths of one year of college. Fifty-four D pupils averaged completing sixteen-hundredths of one year of college and none of the five F pupils attended college.

We find eighteen of the twenty-three pupils receiving A attended college. Of the eighteen attending college, fifteen went to Oklahoma A & M with thirteen of them having degrees from A & M. One attended O. U. and two attended smaller colleges. Fourteen of the twenty-three are shown to have

completed four years of college work.

In the group of pupils receiving the mark of B, twenty-eight of the ninety-eight pupils attended college one or more years. Twelve have completed four years.

Twenty-one of the group of one-hundred forty-two pupils receiving the mark of C attended college with two having completed four years. Only five out of a total of fifty-four pupils receiving a mark of D attended college with two having completed four years. No F pupils attended college.

TABLE III

A COMPARISON OF THE MARKS RECEIVED IN VOCATIONAL AGRICULTURE
AND THE AVERAGE NUMBER OF POINTS RECEIVED
IN F. F. A. LEADERSHIP ACTIVITIES

Average Mark received	Number of pupils receiving	Average number of points received in Leadership activities*
A	23	548
B	98	225
C	142	121
D	54	53
F	5	13

* For explanation of leadership activities see page 3.

Table III shows that twenty-three pupils receiving a mark of A averaged earning 548 points in F. F. A. leadership activities, while ninety-eight pupils receiving a mark of B averaged earning 225 points in F. F. A. leadership activities. The 142 pupils receiving a mark of C averaged 121 points in leadership activities, while fifty-four D pupils averaged only fifty-three points in F. F. A. leadership activities. The five F pupils averaged earning only 13 points per pupil in the leadership activities of the F. F. A.

It is evident that pupils making the better marks have more interest in the F. F. A. activities, thereby receiving more points in the leadership phase of the F. F. A.

TABLE IV

THE DISTRIBUTION OF FARM AND TOWN PUPILS AMONG THE
THREE HUNDRED AND TWENTY-TWO PUPILS
INCLUDED IN THE STUDY

Farm pupils	Town pupils
240	82

Table IV brings out the comparison of farm and town pupils with the farm pupils having approximately a three to one ratio.

TABLE V

THE HIGH SCHOOL ATTAINMENT OF THE THREE HUNDRED
TWENTY-TWO PUPILS INCLUDED IN THE STUDY

Number graduated	Number dropping out end of each year				Number not graduating
	1st.	2nd.	3rd.	4th.	
203	34	49	31	5	119

Table V brings out the fact that sixty-three per cent of 322 pupils in vocational agriculture classes in Checotah High School system during the period of the study, graduated from high school with thirty-seven per cent not completing high school. This emphasizes the thought that the subjects which pupils use the most in life should come early in high school since a large number of pupils never complete high school.

TABLE VI

A COMPARISON OF THE MARKS RECEIVED IN VOCATIONAL AGRICULTURE
BY THREE HUNDRED AND TWENTY-TWO PUPILS
AND THEIR PRESENT INCOME

Average Mark received	Number of pupils receiving	Average income received
A	23	\$3978.88
B	98	2835.27
C	142	2120.04
D	54	1724.97
F	5	1175.00

An examination of the income received shows that the high incomes are received by those in occupations related to agriculture, such as Soil Conservation service personnel; vocational agriculture teachers and dairy plant managers and field men. While a portion of the former pupils now in work other than farming are enjoying a higher income, the difference in these two may probably be due to the reduced income in farming in this area the past year when the boll weevil reduced the cotton crop considerably. ¹

However in comparing boys receiving D and F marks now in other work with those now farming we find the boys in other work make the higher income.

This study revealed the fact that no pupil with a D or F average is in work related to agriculture. They either farm or work in some other occupation; better than seventy-five per cent of them are in the latter.

The twenty-three pupils with a mark of A in Table VI had an average income of \$3978.88. The ninety-eight pupils having a mark of B averaged \$2835.27 income. The 142 C marks averaged \$2120.04. The average of the fifty-four D marks was \$1724.97 and the five F marks averaged an income of \$1175.00.

1 See Table XIX

CHAPTER III

OCCUPATIONAL DISTRIBUTION

In this chapter an effort will be made to show the present occupation of all pupils in the study as well as the occupational distribution of the pupils making the various marks of A, B, C, D, and F while in vocational agriculture.

TABLE VII

PRESENT OCCUPATIONAL DISTRIBUTION OF THE THREE HUNDRED
AND TWENTY-TWO FORMER PUPILS INCLUDED IN THIS STUDY

Number of pupils	Occupation	Per Cent
69	Farming	21
20	Work related to agriculture	6
154	Other Work	47
37	In College	11
16	Deceased	5
26	Unknown	8

Sixty-nine of the 322 pupils are farming today with another twenty in work related to agriculture, as vocational agriculture teachers, county agents, soil conservation service, dairy company, and field men. One hundred fifty-four are in other work such as bankers, mechanics, salesmen, merchants, etc. Thirty-seven former pupils are still in college with thirty of them majoring in some field of agriculture.

Sixteen are deceased and the whereabouts of twenty-six other pupils are unknown.

When we take the deceased and unknown pupils off the 322 former pupils, we have 280 pupils accounted for in this study. One hundred and nineteen or 42.5 per cent of the 280 are in some form of agriculture work as (1) farming (2) in work related to agriculture (3) students in college majoring in some field of agriculture. One hundred and sixty-one former pupils or 57.5 per cent of the known pupils are in work not closely connected with agriculture as mechanics, salesman, clerks, bankers, merchants, etc. A high per cent of their customers are in some kind of agriculture work.

TABLE VIII

PRESENT OCCUPATIONAL DISTRIBUTION OF THE TWENTY-THREE PUPILS HAVING A MARK OF A IN VOCATIONAL AGRICULTURE

Number of pupils	Occupation	Per Cent*
4	Farming	17
10	Work related to agriculture	43
4	Other work	17
3	Student in college	13
1	Deceased	5
1	Unknown	5

* Per cent is to the closest whole number

Table VIII shows that sixty per cent of the pupils receiving marks of A are in some kind of agriculture work, either farming or in work related to agriculture. Forty-three per cent of the A pupils are in work related to agriculture while only seventeen per cent of the pupils receiving a mark of A are in work not related to agriculture. Thirteen per cent are in college and five per cent are deceased. A like number is unknown.

It would appear that pupils receiving marks of A in their vocational agriculture work stand a fair chance of being in some work related to agriculture in the future.

TABLE IX

PRESENT OCCUPATIONAL DISTRIBUTION OF THE NINETY-EIGHT PUPILS HAVING A MARK OF "B" IN VOCATIONAL AGRICULTURE

Number of pupils	Occupation	Per Cent*
22	Farming	23
7	Work related to agriculture	7
43	Other work	44
16	In college	16
5	Deceased	5
5	Unknown	5

* Per cent is to the closest whole number

Table IX shows twenty-three per cent of the pupils with marks of B are farming, while only seven per cent are in work

related to agriculture. Forty-four per cent are in college, while five per cent are deceased and five per cent unknown.

TABLE X

PRESENT OCCUPATIONAL DISTRIBUTION OF THE ONE HUNDRED
AND FORTY-TWO PUPILS HAVING A MARK OF
"C" IN VOCATIONAL AGRICULTURE

Number of pupils	Occupation	Per Cent*
31	Farming	22
3	Work related to agriculture	2
70	Other work	50
15	Student in college	10
8	Deceased	6
15	Unknown	10

* Per cent to closest whole number

Table X shows the per cent of pupils farming is twenty-two, with two per cent in work related to agriculture which is a big drop from the A and B marks. Fifty per cent are in other work which is an increase over the A and B marks. Ten per cent of the C marks are in college, six per cent deceased and ten per cent unknown, the latter three remaining steady.

TABLE XI

PRESENT OCCUPATIONAL DISTRIBUTION OF THE FIFTY-FOUR
PUPILS HAVING A MARK OF "D" IN VOCATIONAL AGRICULTURE

Number of pupils	Occupation	Per Cent*
10	Farming	18
0	Work related to agriculture	0
34	Other work	63
3	Student in college	5
2	Deceased	4
5	Unknown	9

* Per cent to the closest whole number

Table XI shows the per cent of those farming remains fairly constant with the pupils farming accounting for eighteen per cent of the total number. However, the number in work related to agriculture dropped to zero, with the number in other work again increasing up to sixty-three per cent. The per cent of pupils in college decreased to four and those pupils unknown were nine per cent.

TABLE XII

PRESENT OCCUPATIONAL DISTRIBUTION OF THE FIVE PUPILS
HAVING A MARK OF "F" IN VOCATIONAL AGRICULTURE

Number of pupils	Occupation	Per Cent
2	Farming	40
0	Work related to agriculture	0
3	Other work	60
0	In college	0
0	Deceased	0
0	Unknown	0

Table twelve with five pupils shows that two former pupils are farming, three are in other work, none are in work related to agriculture, and none are in college, deceased, or unknown.

TABLE XIII

SUMMARY OF PRESENT OCCUPATIONAL DISTRIBUTION BY PERCENTAGE
UNDER EACH MARK EARNED BY THE THREE HUNDRED AND
TWENTY-TWO PUPILS INCLUDED IN THIS STUDY

Occupation	* Per cent by marks				
	A	B	C	D	F
Farming	17	23	22	18	40
Work related to agriculture	43	7	2	0	0
Other work	17	44	50	63	60
In college	13	16	10	5	0
Deceased	5	5	6	4	0
Unknown	5	5	10	9	0

* Per cent is to the closest whole number

Table XIII shows that the per cent of pupils farming remained fairly constant under each mark. However the per cent of pupils in work related to agriculture decreases very rapidly as the value of the marks go down. For those engaged in other work, the percentage is reversed for as the mark received goes down the percentage in other work as a rule goes up.

The percentage in college as a whole decreases in proportion as the value of marks earned goes down. The percentage of deceased and unknown remains fairly steady for all marks.

CHAPTER IV

F. F. A. LEADERSHIP SCORE

Chapter III was devoted to an analysis of the three hundred and twenty-two former vocational agriculture pupils according to their present occupation and the mark earned while in vocational agriculture. The analysis was then carried one step further, to include the F. F. A. leadership score in order to correlate the present occupational distribution with their F. F. A. leadership score while in class.

TABLE XIV

PRESENT OCCUPATIONAL DISTRIBUTION OF ALL PUPILS HAVING A SCORE OF 300 OR ABOVE IN F. F. A. LEADERSHIP ACTIVITIES ^b

Number of pupils	Occupation	Per Cent*
21	Farming	30
15	Work related to agriculture	22
20	Other work	29
10	In college	14
2	Deceased	3
1	Unknown	1

* Per cent to the closest whole number

^b An explanation of the F. F. A. leadership score can be found on page 3 of this study.

This study shows that 52 per cent of the pupils in table XIV are farming or are in work related to agriculture with 30 per cent farming and 22 per cent in the work related to agriculture. Thirty per cent are in other, with 14 per cent in college.

TABLE XV

PRESENT OCCUPATIONAL DISTRIBUTION OF ALL PUPILS
HAVING A SCORE OF 150 to 300 IN F. F. A.
LEADERSHIP ACTIVITIES

Number of pupils	Occupation	Per Cent*
17	Farming	28
2	Work related to agriculture	3
27	Other work	45
9	In college	15
4	Deceased	6
2	Unknown	3

* Per cent is to the closest whole number

Table XV shows twenty-eight per cent of the pupils having an F. F. A. leadership score between 150 and 300 were farming. Only three per cent were in work related to agriculture, while forty-five per cent were in other work, fifteen per cent were in college, six per cent deceased and three per cent unknown.

TABLE XVI

PRESENT OCCUPATIONAL DISTRIBUTION OF ALL PUPILS
HAVING A SCORE OF 75 to 150 IN F. F. A.
LEADERSHIP ACTIVITIES

Number of pupils	Occupation	Per cent*
14	Farming	22
1	Work related to agriculture	2
37	Other work	58
6	In college	10
2	Deceased	3
3	Unknown	4

* To the closest whole number

Twenty-two per cent of the pupils in the above group were farming. Those in work related to agriculture dropped to a low of two per cent. Pupils in other work increased to fifty-eight per cent, ten per cent being in college, three per cent deceased and four per cent unknown.

TABLE XVII

PRESENT OCCUPATIONAL DISTRIBUTION OF ALL PUPILS
HAVING A SCORE BELOW 75 IN F. F. A.
LEADERSHIP ACTIVITIES

Number of pupils	Occupation	Per cent*
10	Farming	8
2	Work related to agriculture	2
77	Other work	60
12	In college	8
8	Deceased	6
20	Unknown	15

* Per cent shown to the closest whole number.

Table XVII shows eight per cent of the pupils who have an F. F. A. leadership score below seventy-five are farming. Two per cent are in work related to agriculture. Sixty per cent are in other work; eight per cent are students in college; six per cent deceased and the whereabouts of fifteen per cent of the pupils is unknown.

CHAPTER VCOMPARATIVE INFORMATION CONCERNING PUPILS WHO MADE
VARIOUS MARKS IN VOCATIONAL AGRICULTURE

TABLE XVIII

THE COMPARATIVE AVERAGE SUMMARY OF THE
322 PUPILS IN THIS STUDY

Marks received	Number of pupils receiving	Average salary of income received for the year 1949 or 1950	Average years com- pleted in vocational agriculture	Average years com- pleted in college	Average score earned in F.F.A. leadership activities
A	23	\$3978.88	3.8	2.8	548
B	98	2835.27	2.8	.8	225
C	142	2120.04	2.2	.35	121
D	54	1724.97	1.7	.16	53
F	.5	1175.00	1.0	.0	13

Table XVIII shows that each activity including salaries received decreases in about the same order as the value of the marks earned.

TABLE XIX

THE COMPARATIVE AVERAGE OF THE 322 PUPILS IN
THIS STUDY ACCORDING TO OCCUPATION

Occupation and marks received	Number of pupils receiving	Average income received for the year 1949 or 1950	Average years completed in vocational agriculture	Average years completed in college	Average score earned in F.F.A. leadership activities
Farming					
A	4	\$3000.00	4.	1.0	540
B	22	2515.27	2.7	.09	240

Explanation of Each Column on
Individual Survey Findings Sheets

Column 1. "Number Assigned"

Refers to the individual pupils using number instead of the name in order that the identity of the pupil is not revealed in this study.

In the preliminary survey the author listed all pupils alphabetically, then numbered the students as they appear in the report.

Column 2. "Farm boy"

Farm boys are marked with an X, other boys are marked with a T in column two.

Column 3. "Graduated"

An X refers to the fact that the pupil graduated from high school, an O shows that he did not graduate.

Column 4. "Years in Class"

Indicate the total number of years the student completed in Vocational Agriculture.

Column 5. "Average Marks"

Is the students average mark for all years which the individual completed in Vocational Agriculture.

Column 6. "Years in College"

Gives the number of years the pupil attended college.

Column 7. "F.F.A. score"

Shows the student's F.F.A. Leadership score for the time he was in Vocational Agriculture.

Explanation of Each Column on
Individual Survey Findings Sheets
(continued)

Column 8. "Occupation"

Gives the occupation each pupil was in during
the years 1949 and 1950.

Column 9. "Income"

The income for each boy for the year 1949 or
1950. Students showing no income were either in
college, deceased, or unknown due to inability to
find any record.

CHAPTER VII

CONCLUSIONS AND RECOMMENDATIONS

This study has been an attempt to analyze the former vocational agriculture pupils of the Checotah High School, and to find the relationship between marks received, supervised farm training and leadership, and income which they are now receiving.

A definite correlation seems to exist between the F. F. A. leadership score made by a pupil and the occupation in which he is engaged after leaving school. The per cent of pupils farming and working in work related to agriculture tends to drop in the same ratio as the F. F. A. leadership score decreases.

In considering these items in relation to those now engaged in other work the opposite appears to be true in that the F. F. A. score achieved decreases as the percentage of those engaged in other work tends to increase.

A definite correlation seems to exist between the mark received by the pupil and the income earned after leaving school. The income earned tends to drop in the same ratio as the mark received decreases.

The twenty-three pupils with a mark of A in Table VI had an average income of \$3978.88. The ninety-eight pupils having marks of B averaged \$2835.27 income. The 142 C marks averaged \$2120.04. The average of the fifty-four D marks was \$1724.97 and the five F marks averaged an income of \$1175.00.

An examination of the income received shows that the high incomes are received by those in occupations related to agriculture, such as soil conservation service personnel, vocational agriculture teachers, dairy plant managers, and field men. While a portion of the former pupils now in work other than farming are enjoying a higher income, the difference in these two may probably be due to the reduced income in farming in this area the past year when the boll weevil reduced the cotton crop considerably.

However, in comparing boys receiving D and F marks now in other work with those now farming we find the boys in other work make the higher income. Therefore, the author believes we should be careful in recommending that our low grade pupils be farmers, as they are doing better in other work according to this study. This may be due to the fact that a farmer must do his own planning, managing, and thinking, while in other work quite often someone else does the planning, managing, and thinking with the worker only doing what he is told to do. The successful farmer of today must plan, organize, and look ahead in order to keep pace with trends and changing conditions in agriculture.

This study revealed the fact that no pupil with a D or F average is in work related to agriculture. He either farms or works in some other occupation; better than seventy-five per cent of them are in other occupations.

Pupils with a mark of A evidently have an excellent chance of succeeding in work related to agriculture.

APPENDIX
PUPILS QUESTIONNAIRE

Checotah, Oklahoma
September 1, 1950

Number _____

Dear Former Student:

We are making a study of all boys that have completed one or more years of Vocational Agriculture in the Checotah School. Part of the information will come from the school records. The other information will need to come from you. The information you give will be confidential and for my use only, in the report that will be made numbers will be used in place of names so as to not expose any ones name or income. If you do not know your exact income for one of the two years, give it as close as possible as you will know better than anyone else as to about what it was.

We have seventy-two boys in agriculture this year. Last year the boys won 18 moneys in the swine show at Wilburton including the Grand Champion. At the Muskogee Jr. Livestock show they won 30 moneys in swine all in the 1st six placings. We also had the Grand Champion jersey cow and bull at the Muskogee State Fair last fall, and the Reserve Grand Champion steer at the Jr. Livestock show.

I wish you all the success and hope you and your family are well and doing fine.

Yours very truly,

Neill Lefors

Return the following to me in the enclosed envelope.

Did you graduate from High School? _____
If yes, the name of the High School _____
Number of years in college _____
Your major in college _____
Your occupation in 1949 or 1950 _____
About what was your average salary or income for one of
the above years \$ _____ Year _____.

Number _____
