INFORMATION TO USERS

This material was produced from a microfilm copy of the original document. While the most advanced technological means to photograph and reproduce this document have been used, the quality is heavily dependent upon the quality of the original submitted.

The following explanation of techniques is provided to help you understand markings or patterns which may appear on this reproduction.

1. The sign or "target" for pages apparently lacking from the document photographed is "Missing Page(s)". If it was possible to obtain the missing page(s) or section, they are spliced into the film along with adjacent pages. This may have necessitated cutting thru an image and duplicating adjacent pages to insure you complete continuity.

2. When an image on the film is obliterated with a large round black mark, it is an indication that the photographer suspected that the copy may have moved during exposure and thus cause a blurred image. You will find a good image of the page in the adjacent frame.

3. When a map, drawing or chart, etc., was part of the material being photographed the photographer followed a definite method in "sectioning" the material. It is customary to begin photoing at the upper left hand corner of a large sheet and to continue photoing from left to right in equal sections with a small overlap. If necessary, sectioning is continued again — beginning below the first row and continuing on until complete.

4. The majority of users indicate that the textual content is of greatest value, however, a somewhat higher quality reproduction could be made from "photographs" if essential to the understanding of the dissertation. Silver prints of "photographs" may be ordered at additional charge by writing the Order Department, giving the catalog number, title, author and specific pages you wish reproduced.

5. PLEASE NOTE: Some pages may have indistinct print. Filmed as received.

DISSERTATION

THE RELATIONSHIPS OF THE INSTITUTIONAL GOALS AND INSTITUTIONAL PRACTICES OF A STATE FOUR YEAR INSTITUTION OF HIGHER LEARNING

The basic problem of this study was to determine if there were relationships among the faculty, students and administrators between the perception of institutional goals and institutional practices in a state four year institution of higher learning.

The faculty, students and administrators of one state four year institution were sampled. The participant samples answered two questionnaires covering twenty goal scales and twenty functioning scales. The three participant samples were then compared on the basis of their perception of the importance attached to institutional goals and the emphasis being given institutional functions as measured by the Institutional Goals Inventory (IGI), and the Institutional Functioning Inventory-University of Oklahoma Modification (IFI-UOM).

The analysis of the data indicated that significant differences exist among the faculty, students and administrators of this one subject institution in the perception of the importance attached to institutional goals and the institutional functions. Faculty and administrators tended to agree on the perceptions in both goals and functions, but the students' responses were divergent.

The relationship between perceptions of goals and functions was also analyzed as an indication of the "appropriateness" of the institutional goal position. Positive correlations larger than the critical value were observed in each of the twenty scale areas.

The study indicated that the institution's functions were consistent with the institution's goals.

ACKNOWLEDGMENTS

The writer wishes to thank the president and vice-presidents of Central State University for their support, as well as the many friends at this institution. Without their efforts and help, this investigation would not have been possible.

THE RELATIONSHIP BETWEEN FACULTY, STUDENT, AND

ADMINISTRATOR PERCEPTIONS OF GOALS

AND PRACTICES OF A STATE

FOUR-YEAR INSTITUTION

CHAPTER I

INTRODUCTION

The literature on higher education expresses interest
in college and university goals and practices. Educators are
interested in discovering and pursuing these everchanging
goals of the institution and the organizations within the
institution. "They are trying to develop what is called the
'perfect university.'"[1] There is not now, never has been,
and possibly never will be, this type of institution; how-
ever, there should always be the search. McGrath (currently
director of higher education at Temple University in Phila-
delphia) stated that education could draw more public
support if its spokesmen were more articulate in defining
the purposes of their institution. He further stated that

---

[1]Kenneth M. Cuthbertson, "Ways in Which American
Higher Education Can Better Inform the Public of Its Goals,
Values, Needs, and Opportunities," Current Issues in Higher
Education (1961), p. 197.

the public is not impressed with vague generalities, but they want a clearer definition of what the institution is doing.[2] In order to inform the public of their goals, educators of higher education obviously must know and define the college and university goals. Cuthbertson, another educator in higher education further supports this idea by saying: "The public needs a statement for now—a statement from each institution and from each segment of higher education as to where it is going in the light of today's world, a world which seems to threaten the goals of our free society."[3]

It is often stated that the American college and university is in a state of crisis. Clark Kerr states:

> A segment of the university is in a crisis, and an important segment, but most of it is not. Most of it is moving along with unparalleled vitality and productivity, and in harmony. This is part of the trouble. It is only half-hearted about doing something about the part in crisis.[4]

The American university of today is primarily derived from three streams of history. The English tradition of training for a select group of undergraduates is the first stream; the second stream is from the German tradition of research for society and specialized training for graduates; the third is the American service to the community surrounding

[3]Cuthbertson, op. cit., p. 198.

[4]Clark Kerr, "Toward the More Perfect University," The Campus in the Modern World (New York: MacMillan Co., 1969), p. 299.

the college or university. From these three streams of history have come functions of our contemporary colleges and universities. The functions of research and graduate training have proved to be in disagreement with service as to how to attain their own specific goals, and their goals are all specifically different.[5]

The conflict that exists between the three areas of purposes is quite clear. Millett says it is customary to describe the purposes or goals of higher education as being three in number: instruction, research, and public service. This description is adequate but at the same time is misleading, since it confuses process and objective. "Instruction is a process; addition to knowledge is an objective. Public service is a process; services actually performed are the objectives."[6] Research, graduate training, and they increasingly relate also to the outside community, to the government, and to the industries in the surrounding area. Undergraduate programs, on the other hand, appear to be more internally oriented--toward the student--and some students are interested more in generalization than in specialization.

Educators feel it is necessary for higher education to find a new unity in the undergraduate curriculum in which

----

[5]Ibid., p. 300

[6]John Millett, Decision Making and Administration in Higher Education (Ohio: Kent State University Press, 1968), p. 48.

4

liberal and vocational interests are both recognized.[7]

Dressel (Assistant Provost and Director of Institutional

Research at Michigan State University) states that

> interest in the quality of undergraduate edu-
> cation must force educators into encouraging
> their best minds to engage in the development
> of new syntheses of subject matter, but within
> and across departmental lines, and to examine
> at the same time what they know about the
> problem of the novice in mastering these bodies
> of subject matter.[8]

If educators were to do this they could improve the quality

of learning and economize on the amount of learning time

required so that the individuals may more quickly and more

easily come abreast of the frontiers of scientific and

humanistic study.[9]

Because of the basic differences between under-

graduate instruction and the other functions of the college

or university, a conflict of goals often is easily recognized.

Each part of the college or university has its own set of

values or goals and they strive to attain them. "The 'word'

goal is a central concept in the study of organizations."[10]

Goal attainment is an aspect of all systems which, in order

[10]Edward Gross and Paul Grambsch, University Goals
and Academic Power (Washington, D.C.: American Council on
Education, 1968), p. 4.

to survive, must attain whatever goals they set for them-
selves.[11] In a special kind of system, the formal organi-
zation, the problem of goal attainment has primacy over all
other problems.[12] Such would be the case for each of the
different undergraduate and graduate departments and other
functions of the college or university. The academic depart-
ments are more than basic operating units of a college or
university. They are the major educational resources of the
institution. Colleges are more than structures of coordina-
tion for the academic departments. They are agencies of
educational planning and development.[13] The faculty or
faculties of a college or university are more than an instru-
ment of personnel management. Clark (chairman of the Soci-
ology Department, Yale University) has stated that there are
two interest groups in the colleges and universities. These
two groups are the faculty and administrators. The adminis-
trators have developed an "administrative class with interests
and ideologies of its own."[14] It appears while the adminis-
trators have seemingly been gaining greater power, some of

lishing Co., 1968), pp. 17-26.

the faculty have been demanding a greater role in planning
and setting of institutional goals and priorities.[15] A
frequent complaint in the college or university is that the
administrator fails to use his power in setting goals,[16] and
by the same token another complaint is that the faculty are
not allowed enough influence in goal determination.[17]

> A growth in the power of administrators represents
> an upset in the presumed balance between academic
> activities and support activities on campus. The
> faculty often grumbles that administrators are over-
> paid, and that too much attention is given to support
> activities (often called simply red tape) rather than
> to the goals of the university. Faculty members
> resent too what they feel to be the illegitimate pre-
> tensions of some administrators to "represent" the
> faculty or the university. The growth in the power
> of administrators is not, in itself, regarded as
> necessary undesirable, even by the academic person
> (who typically holds highly traditional views of what
> the university ought to be doing), provided that
> administrators use their power to help the university
> attain goals that academic people accept. The situa-
> tion becomes a source of genuine concern only when
> administrators are seen both as having more power
> than the faculty and as using that power to pursue
> goals considered undesirable or, at least, tangential
> to desirable goals.[18]

While Gross and Grambsch state that the faculty resent
the administrators having too much power, Harrington, the

vice-president for Academic Affairs at the University of
Wisconsin, states that some faculty do not have time for
problem solving and decision making in dealing with long-
range goals for the college or the university. They are
either too busy working with the student or doing research.
Many faculty, on the other hand, state an interest in estab-
lishing long-range goals, and assume that the administration
should welcome their advice and not feel imposed on.[19]

The faculty, students, and the administrators of the
college and/or university should all be involved in deciding
on the basic goals and procedures. They should work together
to control the curriculum, and make the necessary changes
when the goals tend to change.[20] There is much debate on
this issue today. As recently as 1959, Ruml asserts flatly
that

> governing boards must take control of curriculum
> away from the faculty. Ruml argues that professors
> can be trusted individually but not collectively;
> that trustees and administrators can make colleges
> run more efficiently by regulating size of class,
> type of instruction, and the like. The faculty,
> shorn of its power in this key area of instructional
> improvement and evaluation, will be rewarded by the
> higher salaries which will be made possible by the
> new efficiency of management.[21]

[20]Ibid.

[21]Beardsley Ruml and Donald Morrison, Memo To a
College Trustee (N.Y.: McGraw-Hill Book Co., 1951), pp. 2-5.

There are those who desire the president to be the goal determiner, for they feel that this is the basic and most important function of that office. "An essential part of the president's job is long-range planning."[22] Simon has similar thoughts coordinating with the above statement by adding that the president "should be a leader in setting institutional goals."[23] Osmunson, in a study of presidential inaugural speeches, discovered that approximately 95 percent included references to the presidential role as being a leader and providing institutional direction.[24]

Although the connection with tensions on campus is not always made clear, there are many expressions of concern about disagreements or vagueness in defining institutional goals and standards.

Linowitz stated that trustees appear to be aware of their obligation to help relate institutional objectives to the needs and aspirations of the supporting society. They reject the idea that the college or university is an organization intended solely to meet the needs of individual

students as defined by the students themselves.[25] Trustees resist the syndicalist view of some professors that the academic profession should control virtually all of the educational aspects of institutions of higher learning. There is a need to clarify the objectives of American higher education as a whole and the role of each institution within the system. Many realize that traditional programs do not always fit current needs, and that better institutional guidelines should stem from long-range planning and the establishment of campus priorities. "Trustees perceive that the heightened importance of higher education and the prospect of its becoming universal will thrust most colleges and universities into a closer relationship with the surrounding society."[26]

Kerr stated that the colleges and universities of today need to develop mechanisms of "self-renewal," the need to keep themselves in position to make appropriate contributions to society. In their educational function, he saw colleges and universities needing renewal to enhance their ability to prepare young people to cope with the kind of world that they will actually encounter.[27]

[26]Ibid.

[27]Clark Kerr, "Institutional Goals," Campus Tensions: Analysis and Recommendations (Washington, D.C.: American Council on Higher Education, 1970), p. 49.

There is no more important task involved in education than the functions and goals of the public institution of higher learning. What part, then, do the goals play in the development of the institution? Concern with goals has taken on an important place in educational literature and should to some degree focus on their functions and their influences on goal attainment. What are the functions of a public four-year institution of higher learning, and therefore the goals? While this study does not provide the answer to these questions, it does suggest that the question itself is valid and relevant.

Statement of the Problem

The problem of this study was to determine the relationship between the perceived institutional goals of a state four-year institution and the perceived functions or practices of that institution. The secondary research problem was to describe the differences between the perception of institutional goals as reported by students, faculty, and administration of the public four-year institution. More specifically, this study sought to answer the following questions:

1. Is the degree of agreement between faculty members, students, and administrators on the importance of perceived institutional goals significant?

2. Is the degree of agreement between faculty members, students, and administrators on the importance of perceived institutional functions significant?

3. Is there a relationship between the perceived
   institutional goals of a state four-year institu-
   tional and the perceived functions or practices of
   that institution?

Need for the Study

In order to inform the public of their goals, values,

needs, and opportunities, institutions of higher education

must be able to describe them with clarity. But are colleges

and universities able to do this? Probably each college

embraced a resounding statement of purpose at the time of its

founding, and such statements undoubtedly produced initial

public support and applause. One contemporary observer claims

that, "What the public needs now is a statement from the

institutions stating what they are doing and where they are

going today in our free society."[28]

Etzioni and others indicate that the real goals of the

organization can only be determined from investigation of

organizational process.

> Sometimes organizations go so far as to abandon
> their initial goals and pursue new ones more suited
> to the organization's needs. This is what we meant
> when we say that the organizational goal becomes
> the servant of the organization rather than its
> master.[29]

Consequently, if perceived goals and perceived practices are

not related, then it may be concluded that the organization

---

[28]Cuthbertson, op. cit., p. 197.

[29]Amitai Etzioni, Modern Organizations (New Jersey:
Prentice-Hall, Inc., 1964), p. 5.

has abandoned the stated goals and is pursuing other goals.

It is important that the college or university that
is being identified, know its goals for the purpose of plan-
ning.[30] This study will provide information on the perceived
goals of the student, faculty member, and the administrator
of a large multipurpose state institution. A review of the
literature indicates that there have been similar studies
undertaken in North Carolina and in California, but that no
study has yet been undertaken in the central part of the
continental United States. The present study further pro-
vides information on the perceived practices of the student,
faculty members, and the administrators of an Oklahoma four-
year institution and a comparative analysis of the perceived
goals and the practices of that institution. Furthermore,
this study investigated attitudes toward the institutional
practices and institutional goals and attempted to determine
if relationships existed among the students, faculty, and the
administrators.

<center>Definitions of Terms</center>

For the purpose of this study, the following terms
which lack consensual definition are presented:

Administrators - Are those administrative officers who hold
   positions of director or departmental head and above in
   the administrative hierarchy within the institution.

---

[30]Ibid.

Congruence - The degree to which perceived goal importance

and the perceived practice emphasis are correlated.

Consensus - The degree of agreement among administrators,

faculty, and students on the importance of perceived

institutional goals as measured.

Dissatisfaction - A Significant difference between the

importance attached to a perceived institutional goal

and a preferred institutional goal as measured.

Faculty - Any full-time staff holding academic rank who is

not an administrator.

Institutional Functions - The actions and practices of the

organization which tend to operationalize the perceived

goals.[31]

Institutional Goals - Are those perceived future states which

administrators, faculty, and students tend to agree are

presently important and which they are moving toward.[32]

<div align="center">The Hypotheses</div>

Three null hypotheses were investigated in this study.

1. There is no significant difference on agreement
   on the perceived importance of goals among admin-
   istrators, faculty, and students as measured by
   the Institutional Goal Inventory (IGI).

2. There is no significant difference on agreement
   on the perceived emphasis given institutional
   practices among administrators, faculty, and
   students as measured by the Institutional

(New York: John Wiley and Sons, Inc., 1958), p. 156.

[32]Etzioni, op. cit., p. 7.

Functioning Inventory-University of Oklahoma
Modification (IFI-UOM).

3. There is no significant relationship between the
   perceived importance of the institutional goals
   and the perceived degree of emphasis given the
   institutional practices.

Limitations of the Study

The investigator recognized and acknowledged the

following general limitations of the study.

1. The study was limited to a sample of the full-time

   faculty, administrators and full-time students of a

   large multipurpose state institution of higher learning.

2. The results of the study were limited to the general time

   period in which the study was conducted.

3. This study was limited to one institution of a particular

   type. Thus, results were not to be generalized to higher

   educational institutions for the most part.

CHAPTER II

THEORETICAL FRAMEWORK AND RESEARCH

Theoretical Framework

A review of selected research indicated that authori-
ties are attempting to learn all the facts relating to goals
and functions on organizations and institutions of higher
learning. According to March and Simon's, formal organiza-
tions distinguish between two types of goals, operational
and nonoperational. Operational goals allow for means-ends
analysis, and nonoperational goals require sub-goals to be
operational.[1] Nonoperational (intangible) goals are unstan-
dardized mental "products" that lend themselves to evaluation
much less readily than tangible (operational goals) standard-
ized physical products. In the former case, evaluation
criteria (standards) are difficult to define, performance is
difficult to measure, and a comparison of performance is dif-
ficult to make.[2] Etzioni provides ample evidence that there

---

[1]James G. March and Herbert A. Simon, Organizations
(New York: John Wiley and Sons, Inc., 1958), p. 42.

[2]Nicholas Demerath, Richard Stephens, and Robb
Taylor, Power, Presidents, and Professors (New York: Basic
Books, Inc., 1967), p. 204.

is a feeling by the public that the goals of higher education are confusing.

> In many cases the legitimate goal is neglected
> and emphasis is put on means. . . . A secondary
> goal threatens to become the major goal. Al-
> though there is some controversy over what con-
> stitutes the primary and the secondary goals of
> outstanding universities, it seems fair to con-
> clude that a majority of the members of their
> professional staff would see research as primary
> and teaching as secondary. This is well reflected
> in the prestige and promotion system.[3]

Administrators of institutions of higher learning have a special responsibility to see that the goals are attained effectively. Therefore, it is essential that present goals be clarified and distinction made between the real goals and the intended goals of the institution so that progress toward achieving them can be measured. Likewise, it is important that goals themselves be continually re-evaluated. This is very difficult to do in organizations where the product or output is intangible.[4]

Were the goals of departments of universities and colleges more clearly specified, evaluation would be less burdensome. In other words, if the products of academic departments were something other than they are, departmental performances would be less noticeable. However, until

---

[3]Amitai Etzioni, _Modern Organizations_ (New Jersey: Prentice-Hall, Inc., 1964), p. 5.

[4]James D. Thompson and Wm. J. McEwen, "Organizational Goals and Environment: Goal Setting As an Interaction Process," _American Sociological Review_, XXIII (Feb., 1958), 23-31.

colleges and universities are transformed into industrial-
type organizations whose outputs are technicians, technical
services, patients or hardware products--like certain develop-
ment laboratories and trade schools--the products of academic
departments will continue to be chiefly mental products en-
capsulated and carried in human beings and literatures.[5]

Perrow has stated that a major hindrance to the com-
prehension of organizational behavior has been the lack of
adequate distinction between goals. He further states that
"operative goals" and not "official goals" are the most
relevant goals in the understanding of behavior. "Official
goals" are the general purpose goals that are put forth in
charters and public statements. They are generally (with
purpose) vague and broad. "Operative goals" show ends
sought through operating policies, and they are the means
to the official goals. "Operative goals" are the goals
that reflect choices among competing values. These goals
are shaped by the dominant groups, reflecting the impera-
tives of a particular task area that is most critical.[6]

The head of an organization or heads of departments
think that they are directing toward certain goals, while
in reality the organization is actually pursuing others.

---

[5]Demerath, Stephens, and Taylor, op. cit., p. 204.

[6]Charles Perrow, "The Analysis of Goals in Complex
Organizations," American Sociological Review, XXVI (Dec.,
1961), 854-866.

> In some instances the head may be unaware of the
> discrepancy; the true situation is hidden from him.
> The heads of some university departments, for
> instance, have only very inaccurate information on
> what happens to most of their product, the gradu-
> ates.[7]

Therefore, the heads of departments see the "official goals"
as the goals that are general and vague. If the administra-
tors of the institutions take the responsibility to see that
the goals are attained effectively, the official goals will
be clarified and distinctions made between operative, real
goals, and the official (intended) goals.[8]

Related Research

Theorists such as Gross and Grambsch[9] have regarded
the thought of goals as being related to the study of organi-
zational behavior; there has been little investigation of
organizational goals in higher education until the late
1960s.

Sanford stressed that "it is one of our tasks to
study goals, discovering what we can about their origins
. . . means through which they can be reached."[10] With
interest growing in goals within the last ten years a number

---

[7]Etzioni, op cit., pp. 6-7.

[8]Thompson and McEwen, op. cit., pp. 23-31.

[9]Edward Gross and Paul V. Grambsch, University Goals
and Academic Power (Washington, D.C.: American Council on
Education, 1968), p. v.

[10]Nevitt Sanford, The American College (New York:
John Wiley and Sons, Inc., 1962), p. 102.

of people have begun delving into the studies of institution-
al goals and practices in higher education.

There have been three main studies concerning goals
of colleges and universities, within the past five years.
One such study was conducted by Gross and Grambsch and
reported in 1968. Their study described university goals in
1964 as they were perceived by the administrators, faculty,
and students of 68 universities in the United States. The
Gross and Grambsch inventory consisted of 47 goal statements,
each rated in terms of present and preferred importance.
Generally speaking, the faculty, and administrators were in
agreement that things are the way they ought to be, or the
gap between present and preferred goals was quite small,
especially among the highest and lowest ranked goals.[11] In
1969, the Gross and Grambsch inventory was revised and ap-
plied to 14 liberal arts colleges. One of the findings of
this study was that faculty at small liberal arts colleges
felt that the major decisions on goals were made by the
administrators, but in general the administrators and facul-
ty perceived the relative importance of goals the same way.
In the same study strong emphasis was being placed on teach-
ing, and little emphasis placed on research.[12]

Another investigation of institutional goals was
conducted by the National Laboratory for Higher Education in

---

[11]Gross and Grambsch, op. cit., pp. 530-533.

[12]Ibid.

the Carolinas and Virginia under the direction of Uhls. An instrument called the Institutional Goal Inventory (IGI) was administered to five dissimilar institutions of higher education on three different occasions. The Delphi technique was then used in an effort to bring about agreement on goals on the part of the administrators, faculty, students and community members.[13]

In 1972 Peterson used the Institutional Goals Inventory in his study of institutional goals in cooperation with the Joint Committee on the Master Plan in California. This study was to identify the goals of the higher education of 116 California institutions. At this time, only a preliminary and incomplete draft of the survey is available, but the report indicated the value of the IGI as an instrument to identify and clarify the goal priorities.[14]

In 1968 the Council for Advancement of Small Colleges conducted an analysis of college and institutional goals as an aspect of their "Project Student Development." The administrators and faculty members of 13 different small colleges were asked to participate in a ranking of graduates in terms of their perceived importance to characteristics.

[13]Norman Uhl, Identifying College Goals and Delphi Way, Topical Papers and Reprints No. 2 (Durham, N.C.: National Laboratory of Higher Education, 1971), p. 19.

[14]Richard E. Peterson, "Goals for California Higher Education: A Survey of 116 Academic Communities." A preliminary and incomplete draft (Berkeley: Educational Testing Service, 1972), p. 3.

After receiving the results the 13 colleges were then grouped
into four categories: Christ-centered, Intellectual-Social-
centered, Personal-Social-centered, and Professional-Voca-
tional-centered.[15]

In 1968 there was a series of groups studying goals
in institutions of higher education. One of these groups
was the Bureau of Applied Social Research at Columbia Uni-
versity. This goal study group sent a survey form consist-
ing of 64 goal items or statements to every college academic
dean in the United States. The deans were asked to indicate
to what extent their college placed importance on each of the
different goals. The study found that different colleges in
different areas of the United States placed different empha-
sis on different goals.[16]

The Danforth Foundation, in 1969, financed the admin-
istration of the Gross and Grambsch instrument to select ad-
ministrators and faculty members of fourteen private colleges.
The results of this study showed that the faculty, students
and administrators generally perceived the same importance on
most matters relating to college goals and governances. The
areas with strongest agreement were in the areas of support-
ing the general welfare of the community, and supporting
adult educational programs.

Francisco: Jossey-Boss, Inc., 1968, p. 156.

[16]Patricia Nash, "The Goals of Higher Education--An
Empirical Assessment," New York: Columbia University, Bureau
of Applied Social Research, 1968 (Mimeographed).

A preliminary Institutional Goals Inventory Instrument was developed by Uhl in 1969. This instrument was to provide goal statements which could be used to test the value of the Delphi method. With the repeated administering of the Instrument, it was noticed that beliefs about goals tended to merge or tend to one point, thus proving the validity of the Delphi method.[17]

Summary

This chapter reports of the research in the area of goals, both long- and short-range. In the present study the definition of goals from many sources has been discussed. There seems to be an element of agreement that all colleges and universities have long-range "official" goals and short-range "operative" goals. In some instances colleges and universities short-range goals are not always directed toward the long-range ones. There is also some difference as to the importance of goals within the institution. The greater population of the faculty, administrators, and students are aware that the goals are there, but many cannot see them.

It is evident that there is a need for the administrators, teachers, and students to become more aware of the value of providing and encouraging opportunities for the development of and attaining of goals in the college or institution of higher learning.

---

[17]Uhl, op. cit.

To help the educators identify their goals Uhl
(sponsored in 1969 by the National Laboratory for Higher
Education) developed a preliminary Institutional Goals In-
ventory. This instrument has been refined by Richard
Peterson and is now being developed by the Educational Test-
ing Service for commercial use to assist the institutions in
identifying their constituents' perceptions of the institu-
tions of higher education goals.

The relationship between institutional goals percep-
tions and institutional functioning perceptions has been
examined in this study. It is expected that this present
study will further identify institutional behavior and
create additional interest in this subject both generally
and in the institution being investigated.

CHAPTER III

RESEARCH DESIGN

Restatement of the Problem and Hypotheses

The state four-year institution of higher learning

chosen for this study is located in Oklahoma and is growing

from a teachers' college to a multipurpose institution. The

president of this institution endorsed the research. The

study is part of a series of six studies being done in the

region. The other studies include a private institution,

public and private Junior Colleges and studies within a

multipurpose university.

The major problem investigated in this study was the

perception of goals in a public four-year institution as

reported by its faculty, students, and administrators. More

specifically, this study was designed to seek answers to the

following questions:

1. Is the degree of agreement among administrators,
   faculty, and students on the importance of per-
   ceived institutional goals significant?

2. Is the degree of agreement among administrators,
   faculty, and students on the importance of
   institutional functions significant as measured?

The proposition that there is a relationship between faculty, students, and administrators perceptions of institutional goals and functions was tested through the following null hypotheses:

Hypothesis 1:   There are no significant differences in agreement on the perceived importance of goals among administrators, faculty, and students as measured by the IGI.

Hypothesis 2:   There are no significant differences in agreement on the perceived emphasis given institutional practices among administrators, faculty, and students as measured by the IFI-UOM.

Hypothesis 3:   There are no significant relationships between the perceived importance of the institutional goals and the perceived degree of emphasis given the institutional practices.

This chapter includes a description of the design of the research. The population and sample are first described, followed by a review of the instruments, data collection procedures and statistical treatment.

Description of the Sample:
History of the Institution

The institution that was the subject of this research was established 1890 in the central part of the state. In 1919 the function of the institution was changed to that of a four-year teachers college. The class of 1921, consisting of nine members, was the first to receive baccalaureate degrees. The state legislature designated the institution a state college in 1939 and authorized the granting of degrees without teaching certificates. In 1954, the State Regents

for Higher Education authorized programs leading to the Master of Teaching degree. The M.T. became the Master of Education in 1969, and in 1971 programs leading to the Master of Arts in English and Master of Business Administration degrees were initiated.

From an institution of twenty-three students in 1891, the subject institution has grown to an enrollment of more than 10,500 students. It has been in nearly a constant state of change since its inception, and in 1971 it was officially redesignated as a state university.[1]

Further evidence of change is seen in the enrollment at this institution. From 1960-1961 to 1973-1974 they increased from 3,968 to 10,481 full-time students. The graduates doubled in this same period of time, from 732 in 1960-1961 to 1,408 in 1973-1974. The majority of the students are off-campus commuters and travel daily to and from classes. (See Table 1 for trends in total head count by terms from 1960-1961 to 1973-1974. See Tables 2, 3, 4, and 5 for the trends in head count for the different classes of students: freshmen, sophomores, juniors, seniors, graduates from 1960-1961 to 1973-1974.)

The faculty of the institution, totaling 352 full- and part-time instructors, are organized into five schools (see Table 1). These faculty hold a rank from that of

---

[1]General Catalog, LIX (Edmond: Central State University, October, 1972), 3-4.

lecturer (part-time) to full-time instructors up to full professors (see Table 2). (The qualifications of the faculty full-time and part-time are listed showing how many hold Bachelors degrees, Juris Doctorates, Masters degrees and Doctorates. Table 3 presents this demographic data.)

The power of statistical decisions is, among other factors, related to the size of the sample. The participant samples for this study include 125 members each from faculty, students, and administration of the subject institution. It was decided that at least 100 subjects within each group would probably complete the research which would provide ample power for this study. The faculty sample was selected at random utilizing a table of random numbers. No attempt was made to make the sample proportional to discipline areas or faculty academic ranks, but representatives of every discipline and rank were included among the respondents.

A total of 119 faculty correctly completed and returned the questionnaires. This response represented a 95 percent participation on the part of the faculty. The second group sampled was the administrative officers. As defined by the institution in the faculty register, administrative officers were those in assignments of department chairman level and above. Of the 125 administrators receiving the questionnaire, 107 completed and returned them. This response represents better than 85 percent participation of sampled administrators. The third sample consisted of 103

Description of the Instrument: Institutional Goals Inventory

The Institutional Goal Inventory was chosen for this
study because the instrument measures goals covering a broad
area. The study used by Gross and Grambsch was limited to
universities only, and the Danforth study was limited to
private institutions. With the development of the state
four-year college toward university status, an instrument
was needed to cover the goal areas in a broad sense.

The Institutional Goals Inventory (IGI) was developed
for Educational Testing Service by Uhl and Peterson in 1970.
The instrument consists of twenty scales, each measuring a
certain goal area. Each scale has four questions, and each
question allows for five responses from "extremely high
importance" to "no importance." Each question allows for
two responses to be answered. The "is" referring to present
conditions and the "should be" referring to more desirable
conditions. With these two responses, each goal area could
measure the perceived importance of a goal and the preferred
importance of a goal. In this study, only the "is" response
was deemed to be appropriate.

The twenty scales which comprise the IGI are des-
cribed as follows by the Educational Testing Service:

1. Academic Development. The first kind of institutional goal covered by the IGI has to do with the acquisition of general specialized knowledge, preparation of students for advanced scholarly study, and maintenance of high intellectual standards on the campus.

2. Intellectual Orientation. While the first goal area had to do with acquisition of knowledge, this second general goal of instruction relates to an attitude about learning and intellectual work. Likewise, some conception of the scholarly, rational, analytical, inquiring mind has perhaps always been associated with the academy or university. In the IGI, Intellectual Orientation means familiar with research and problem solving methods, the ability to synthesize knowledge from many sources, the capacity for self-directed learning, and a commitment to life-long learning.

3. Individual Personal Development. In contrast to most of the goals covered by the IGI, this one was set forth and has found acceptance only in roughly the past decade. It was conceived by psychologists and has found its main support among professional psychologists, student personnel people, and other adherents of "humanistic psychology" and the "human potential movement." As defined in the IGI, Individual Personal Development means identification by students of personal goals and of sense of self-worth and self-confidence, self-understanding, and a capacity for open and trusting interpersonal relations.

4. Humanism Altruism. More or less explicit discernment of this concept may also be of fairly recent vintage, although variously construed it has long had its place in the catalogues of liberal arts and church-related colleges. It reflects the belief (in many quarters) that a college education should not mean just acquisition of knowledge and skills, but that it should also somehow make students better people--more decent, tolerant, responsible, humane. Labeled Humanism/Altruism, this fundamental ethical stance has been conceived in the IGI as respect for diverse cultures, commitment to working for world peace, consciousness of the important moral issues of the time, and concern about the welfare of man generally.

5. Cultural/Aesthetic Awareness. Some conception of cultural sophistication and/or artistic appreciation has traditionally been in the panoply of goals of many private liberal arts colleges in America, perhaps especially liberal arts colleges for women. In the IGI, the conception entails heightened appreciation of variety

of art forms, required study in the humanities of arts, exposure to forms of non-western art, and encouragement of active student participation in artistic activities.

6. Traditional Religiousness. This goal is included in the IGI in recognition of the fact that a great many colleges and universities in America are explicitly religious in their control, functioning, and goals, while many more retain ties of varying strength with the Roman Catholic Church or, more often, a Protestant denomination. Traditional Religiousness, as conceived in the IGI, is meant to mean a religiousness that is orthodox, doctrinal, usually sectarian, and often fundamental, in short, traditional (rather than "secular" or "modern"). As defined in the IGI, this goal means educating students in a particular religious heritage, helping them to see the potentialities of full-time religious work, developing students' ability to defend a theological position, and fostering their dedication to serving God in everyday life.

7. Vocational Preparation. While universities have perhaps always existed in part to train individuals for occupations, this role was made explicit for American public higher education by the Land Grant Act of 1862, and then extended to a broader populace by the public two-year college movement of the 1950s and 1960s. As operationalized in the IGI, this goal means offering: specific occupational curricula (as in accounting or nursing), programs geared to emerging career fields, opportunities for retraining or upgrading skills, and assistance to students in career planning. It is important to distinguish between this goal and the next one to be discussed, Advanced Training, which involves graduate-level training for various professional careers.

8. Advanced Training. This goal, as defined in the IGI, can be most readily understood simply as the availability of post-graduate education. The items comprising the goal area have to do with developing/maintaining a strong and comprehensive graduate school, providing programs in the "traditional professions" (law, medicine, etc.), and conducting advanced study in specialized problem areas—as through a multi-disciplinary institute or center.

9. Research. According to most historians of the matter, the research function in the American university was a late nineteenth century import of the German concept of the university as a center for specialized scientific research and scholarship. Attempting to embrace both "applied" or "problem-centered" research as well as

"basic" or "pure" research, the Research goal in the IGI involves doing contract studies for external agencies, conducting basic research in the natural and social sciences, and seeking generally to extend the frontiers of knowledge through scientific research.

10. Meeting Local Needs. While in times past some institutions of higher learning must certainly have functioned in some way to meet a range of educational needs of local individuals and corporate bodies, the notion of Meeting Local Needs (in the IGI) is drawn primarily from the philosophy of the post-war (American) community college movement. Which is not to say, as will be seen, that this is a goal that four-year institutions cannot share. In the IGI Meeting Local Needs is defined as for continuing education for adults, serving as a cultural center for the community, providing trained manpower for local employers, and facilitating student involvement in community-service activities.

11. Public Service. While the previous goal focused on the local community, this one is conceived more broadly--as bringing to bear of the expertise of the university on a range of public problems of regional, state, or national scope. As it is defined in the IGI, Public Service means working with governmental agencies in social and environmental policy formation, committing institutional resources to the solution if major social and environmental problems, training people from disadvantaged communities, and generally being responsive to regional and national priorities in planning educational programs.

12. Social Egalitarianism has to do with open admissions and meaningful education for all admitted, providing educational experiences relevant to the evolving interests of (1) minority groups and (2) women, and offering remedial work in basic skills.

13. Social Criticism/Activism. This is a higher educational goal conception that has been put forth only in the past five years or so. Owing its origin almost entirely to the student protest movement of the 1960s, the central idea of the goal is that the university should be an advocate or instrument for social change. Specifically in the IGI, Social Criticism/Activism means providing criticism of prevailing American values, offering ideas for changing social institutions judged to be defective, helping students to learn how to bring about change in American Society, and being engaged, as an institution, in working for basic changes in American Society.

14. **Freedom.** Some of the standard dictionary definitions include: civil liberty, as opposed to subjection to an arbitrary or despotic government; exemption from external control, interference, regulation, etc.; personal liberty, as opposed to bondage or slavery; autonomy; relative self-determination. Freedom, as an institutional goal bearing upon the climate for and process of learning, is seen as relating to all the above definitions. It is seen as embracing both "academic freedom" and "personal freedom," although these distinctions are not always easy to draw. Specifically in the IGI, Freedom is defined as protecting the right of faculty to present controversial ideas in the classroom, not preventing placing no restrictions on off-campus political activities by faculty or students, and ensuring faculty and students the freedom to choose their own life cycles.

15. **Democratic Governance.** The central notion of this goal, as here conceived, is the opportunity for participation—participation in the decisions that affect one's working and learning life. Colleges and universities in America have probably varied a good deal in the degree to which their governance is participatory, depending on factors such as nature of external control (e.g., sectarian), curricular emphases, and personalities of presidents and other campus leaders. Most all institutions, one surmises, as they expanded during the 1950s and 1960s, experienced a diminution in participatory governance. A reaction set in in the late 1960s spurred chiefly by student (power) activities. As defined in the IGI, Democratic Governance means decentralized decision-making; arrangements by which students, faculty, administrators, and governing board members can (all) be significantly involved in campus governance, opportunity for individuals to participate in all decisions affecting them, and governance that is genuinely responsive to the concerns of everyone at the institution.

16. **Community.** While community in some sense has perhaps always characterized most academic organizations, especially small ones, the more modern concept of community has risen in only the past decade in reaction to the realities of mass higher education, the "multiversity," and the factionalism and individual self-interest within the university. In the IGI, Community is defined as maintaining a climate in which there is faculty commitment to the general welfare of the institution, open and candid communication, open and amicable airing of differences, and mutual trust and respect among students, faculty, and administrators.

17. Intellectual/Aesthetic Environment means a rich program
    of cultural events, a campus climate that facilitates
    student free-time involvement in intellectual and cul-
    tural activities, an environment in which students and
    faculty can easily interact informally, and a reputa-
    tion as an intellectually exciting campus.

18. Innovation, as here defined as an institutional goal,
    means more than simply having recently made some
    changes at the college; instead the idea is that inno-
    vation has become institutionalized, that throughout
    the campus there is continuous concern to experiment
    with new ideas for educational practice. In the IGI,
    Innovation means a climate in which continuous innova-
    tion is an accepted way of life, it means established
    procedures for readily initiating curricular or
    instructional innovations, and, more specifically, it
    means experimentation with new approaches to (1) indi-
    vidualized instruction and (2) evaluating and grading
    student performance.

19. Off-Campus Learning. The elements of the IGI defini-
    tion of Off-Campus Learning, as a process goal an
    institution may pursue, form a kind of scale. They
    include: (short term) time away from the campus in
    travel, work-study, VISTA work, etc.; arranging for
    students to study on several campuses during their
    undergraduate years; awarding degrees for supervised
    study off the campus; awarding degrees entirely on the
    basis of performance on an examination.

20. Accountability/Efficiency is defined to include use of
    cost criteria in deciding among program alternatives,
    concern for program efficiency (not further defined),
    accountability to funding sources for program effective-
    ness (not defined), and regular submission of evidence
    that the institution is achieving stated goals.[2]

Uhl utilized the introductory IGI in his study,

Identifying Institutional Goals. He reported the reliability

found for fourteen of the twenty scales now in the revised

---

in higher education who had not participated in the study but were familiar with the institutions sampled predict the institutions which would give the most and the least importance to each of the goal areas. This method yielded results consistent with test results, for example: the church-related

institutions placed a greater importance to the goal area

"Religious Orientation" than did the public institutions.

When there was no agreement among raters, the scales could

not be validated.[5]

Institutional Functioning Inventory-University of Oklahoma Modification

The IFI had its beginnings in 1967 when a group at

Educational Testing Service began discussions with McGrath

(Teachers College, Columbia University) about developing a

measure of "institutional vitality." By that summer McGrath

and his associates had a format for the instrument encompas-

sing twelve dimensions of institutional functions. Early in

1968 seventy-two colleges were invited to administer the

experimental IFI, of the seventy-two institutions originally

invited, fifty agreed to participate. In addition, nine

colleges associated with the Central States College Associa-

tion and eight colleges linked to the Regional Educational

Laboratory of the Carolinas and Virginia heard of the pro-

ject, volunteered to participate, and were included, bringing

the total number of participants to sixty-seven.[6]

The IFI-UOM was developed by revising the Educational

Testing Service to conform to the twenty scales of the

---

[5]Ibid., p. 28.

[6]Institutional Functioning Inventory Preliminary
Technical Manual (Educational Testing Service, Princeton,
New Jersey, 1970), p. 3.

Institutional Goals Inventory (IGI). Where appropriate to
the new scales, existing items were used in the IFI-UOM.
There were forty-five new items written for the IFI-UOM.
Each of the twenty inventory scales of the modified instru-
ment contain six items, totaling 120 items.

Hengst (director of higher education at the Univer-
sity of Oklahoma), and Lynn (vice-president of Oklahoma
Baptist University), wrote the first draft of the IFI-UOM.
This draft was examined by eight practitioners in higher
education to evaluate the appropriateness of each of the
items to its scale. The first draft was modified according
to the responses of the practitioners. This instrument was
designed to show perceptions of what institutional functions
are.

The twenty scales within the IFI-UOM were constructed
to correspond to the twenty goal area scales of the IGI.

The reliability of IFI-UOM was examined with data
from three different institutions. A sampling of students,
faculty, and administrators underwent the test-retest.
Table 3 summarizes these data evidencing typical reliabil-
ity coefficients for scales for this type of instrument.
The only coefficients of marginal value were r=.37 for the
advanced training scale for sample A and r=.34 and .20 for
the Academic Development and Intellectual Orientation scales
for sample C.

A = University
B = Community College
C = State four-year institution.

In sample C of the Table 6, the following test-re-
test procedures were conducted. Twenty-five of each group

(faculty, students, and administrators) were selected to serve for a reliability check, taking a retest of the IFI-UOM and sending the completed questionnaires to the office of the institutional research. Five days after the participants had answered the first IFI-UOM questionnaire, they were given the second questionnaire with the same instructions for answering and returning. Each group reported on its own institution. The reliability coefficients are given in Table 3. The institution in the reliability study was C on this table.

The IFI-UOM was divided into two parts: the faculty and administrators were the only participants on the first testing, they were joined by the students on the second testing. The first questionnaire consisted of 120 items measuring the twenty functioning areas. The second questionnaire, including the students measured only twelve functioning areas, the reason being stated by the Educational Testing Service (ETS) that the students of the institution did not know enough about the actual running or the functions of the institution over the remaining eight functioning areas.

Procedure for Collection of Data

Permission to conduct the study was requested from the president and vice-president of Academic Affairs of the institution. After a personal interview was conducted with both officials and an endorsement was written by the administrators, research was continued to the next phase of the data collection.

The second step in data collection involved obtaining a current list of full-time faculty and administrators employed at the institution. From this list, 125 faculty and as many administrators were selected at random by utilizing a list of random numbers. All full-time faculty were chosen from the five schools within the institution. After the list of participants had been obtained the president of the institution then wrote a letter to each one asking his cooperation by filling out the questionnaires and returning them to the office of institutional research at his earliest convenience.

The participating students were all full-time seniors, juniors, sophomores and second semester freshmen. The students were selected by going into an unidentified general education class (classes required by all students at the institution) and requesting their participation. The students were asked to return their questionnaires to the office of institutional research at their earliest convenience. The general education classes were chosen at random times with the first class starting at 7:30 in the morning and the last class being taught at 7 o'clock in the evening. There were a total of five classes where students participated and where the instructor gave permission for the questionnaires to be given to the students. Each class consisted of freshmen, sophomores, juniors and seniors. See Appendix D for time and class schedule.

Statistical Methodology

The University of Oklahoma Multiple Analysis of Variance Program was utilized for some of the above computations.[7] This program performs univariate and multivariate analysis of variance, analysis of covariance, and of regression. It provides an exact solution of orthogonal or non-orthogonal case. Options in the program include single or multiple degree of freedom contrasts in the main effects or interactions, transformations of variables, and orthogonal polynomial contrasts with equal or unequally spared points. The program also provides for reanalysis with different criteria, contrasts, models, and covariates. The following measures were computed by this program for the IGI responses for the "is" component of the instrument: means and standard deviations for each group on each scale, multiple anova, a test of significance using approximate F test for multivariate analysis of variance, Univariate F tests over all goal scales, the sum of the squares, degrees of freedom, mean squares within, and significance level. The Scheffe method for unequal cells was hand computed for those goal scales where significant group variances were found.

The principal interest of the study was the relationship between institutional goals and functions. A three stage analysis of the data was undertaken.

---

[7]Elliot Cramer and L. L. Thurston, O.U. Manova Program (Chapel Hill, N.J.: Psychometric Laboratory, University of North Carolina, n.d.).

The first stage of the analysis dealt with the data obtained from the IGI. A multivariate analysis of variance (MANOVA) was completed on the scores over the twenty scales of the instrument for the three groups: faculty, students, and administrators. This procedure was to determine if there were systematic differences in group means among the three groups over the twenty goal scales. When systematic differences were detected in the univariate analysis of variance, post-hoc analyses using the Scheffé procedure were performed to determine within which groups the variation occurred. This procedure provided information as to whether there are group differences in the perceptions of the importance attached to each institutional goal. The second stage of the analysis was to determine whether there were group differences on the emphasis placed on practices or functions. The same procedures used in the first stage were completed on the data obtained from the IFI-UOM on twenty goal scales.

The third stage of the analysis determined the relationships between the perceived importance of the institutional goals (IS Responses) and the perceived emphasis of institutional functions or practices. This was accomplished by obtaining correlation coefficients for each pair of scales across all the "IS" responses. These were used to determine the relationship between each goal area and its corresponding function area. The intercorrelation matrix also told how each scale correlated with each of the other

scales. It was assumed that because of the type of institution being used there would be a stronger relationship between some goals/functions pairs than others. It was also considered that this investigation might uncover conflicting situations where a particular goal area might have been perceived as very important and its corresponding functioning area quite low resulting in a negative relationship.

Summary

The purpose of this chapter was to present a description of the manner in which the problem was investigated. The problem was identified as the relation among the perceptions of institutional goals and institutional functions of three groups of people, the faculty, students, and administrators of selected institutions.

Two instruments were selected to collect the data necessary to an analysis of the problem, the Institutional Goals Inventory and the Institutional Functioning Inventory-University of Oklahoma Modification. The instruments were distributed to a randomly selected sample of 125 participants within each group of full-time faculty, students, and administrators. More than 80 percent of the sample responded to the instruments.

The three groups (faculty, students, and administrators) were compared on the basis of their scores on the IGI and the IFI-UOM. A multivariate analysis of variance was

computed for the three groups over the goal scales and another over the function scales of the instruments to determine if there were systematic mean differences among the three groups. If significant differences were found, one-way analyses of variance were computed on each goal and function scale to determine within which scales significant differences occurred. The Scheffé testing method was utilized for those scale areas where significant differences were found, to determine how the groups were varying.

A correlation was computed to determine the relationship between the selected variables of the respondents and their answers toward the IGI and the IFI-UOM based on the IGI and IFI-UOM scale scores. An analysis of response patterns to the IGI and IFI-UOM scales was completed. This procedure provided the data for testing the hypotheses of the study.

CHAPTER IV

PRESENTATION AND ANALYSIS OF DATA

Questionnaire responses of administrators, faculty, and students in a public four-year institution of higher learning were analyzed. The two questionnaires were the IGI and the IFI-UOM.

Randomly selected respondents from the faculty, administrators, and student body constituted the three test groups. Data obtained from the IGI for perceived goals components and the IFI on these three groups were compared. The data were organized so that statistical analyses described in chapter iii could be performed. A significance level of .05 was used throughout for hypothesis testing.

Hypothesis One

The first null hypothesis was: There is no significant difference on agreement on the perceived importance of goals among administrators, faculty, and students as measured by the IGI.

This hypothesis was tested by comparing the groups on the basis of the mean scores on the perceived goals component of the IGI. Using the approximate F test to test

significance, the null hypothesis was rejected at the .001 level (Table 7). The three groups had significant differences in their perceptions of the importance of the

TABLE 7

ANALYSIS OF VARIANCE

F	D.F. Hyp.	D.F. Error	Probability Less Than
3.101	40	59	.001

institutional goals at their institution. The overall mean and group means for each goal area of the IGI is presented in Table 8.

Since there was a significant difference found among the groups on their perceptions on the importance attached to institutional goals, univariate F tests were computed to determine within which of the twenty goal area scales the differences occurred. Significant differences were found among the three groups within four goal areas: Personal Development, Vocational Preparation, Off-campus Learning and Accountability/Efficiency. There were sixteen goal areas where significant differences were not found (see Table 9).

A Scheffé post hoc comparison was conducted on the goal area scales to show how the groups differed from one

another where the univariate F tests indicated significant
difference among the three groups. The faculty (group one)
scored differences from students (group two) on four of the
twenty goal areas: Individual Personal Development, Off-
campus Learning, Vocational Preparation, and Accountability/
Efficiency. Faculty scored significantly higher than the
students in the goal areas of Individual Personal Development,
Vocational Preparation, and Accountability/Efficiency. The
students scored significantly more than the Faculty in the
goal area of Off-campus Learning. Students and administrators
differed over four of the twenty goal areas: Individual
Personal Development, Vocational Preparation, Off-campus
Learning and Accountability/Efficiency. The students scored
significantly higher than administrators in the goal area
Off-campus Learning, while the administrators scored signifi-
cantly higher than the students in Individual Personal Devel-
opment, Vocational Preparation, and Accountability/Efficiency.
Table 10 summarizes the Scheffé test findings in the twenty
goal areas.

Table 11 also shows the findings of the Scheffé tests
and explains the agreement in each goal area. Table 10 shows
there is significant difference only. Scheffé tests showed
generally no disagreement between faculty and administrators,
in both groups scoring higher on three goal areas than stu-
dents. The three goal areas were Individual Personal Develop-
ment, Vocational Preparation, and Accountability/Efficiency.

*These three groups showed agreement on three goal areas in the IGI: Traditional Religiousness, Research, and Off-campus Learning.

The only goal area in which the students scored higher was

Off-campus Learning.

Hypothesis Two

The second null hypothesis was: There is no siginificant difference on agreement on the perceived emphasis given institutional practices among the administrators, faculty, and students, as measured by the IFI-UOM. This was tested by a Multivariate Analysis of Variance across groups using their scores on the IFI-UOM and dependent variable. This test was divided into two parts: the faculty and administration (test group A), and the faculty, students, and administration (test group B).

The approximate F Test for significance was used. The frequency was significant at the .058 level on the first part of the IFI-UOM (test group A) and the null hypothesis was not rejected (see Table 12). The two groups tested individual significant differences in their perceptions of

TABLE 12

APPROXIMATE F TEST FOR MULTIVARIATE
ANALYSIS OF VARIANCE (IFI-UOM)
TEST GROUP A

F	D.F. Hyp.	D.F. Error	Probability Less Than
1.585	20	210	.058

the importance of the institutional functions at their
institution. The overall and group means for each function-
ing area of the instrument is presented in Table 13.

Since there was a significant difference found
between the groups on their perceptions on the importance
attached to institutional functions, univariate F tests were
computed to determine within which of the twenty functioning
area scales the differences occurred. Significant differ-
ences were found between the two groups within two goal
areas: Advanced Training, and Democratic Governance. There
were no significant differences found on the other eighteen
functioning areas (see Table 14).

The second part of the second hypothesis was tested
by comparing the test groups on the basis of their scores on
the perceived functioning components of the IFI-UOM. The
approximate F test was again used on the second part of the
IFI-UOM (test group B), differences were significant at the
.001 level, and the null hypothesis was rejected (see Table
15). The three groups differed significantly in their per-
ception of the degree to which the institution was perform-
ing in the function areas tested (see Table 16 for the
overall mean and group means for each functioning area).

Because a significant difference was found among the
groups on their perceptions of the appropriate functioning
area scales, an analysis of variance on each of the twelve
functioning scales groups differed significantly. It was

9. Social Criticism/Activism				
10. Freedom				
11. Democratic Governance	X		X	
12. Intellectual/Aesthetic Environment				

Note: The faculty and administrators agreed on all the items
while the students disagreed with both faculty and
administrators on two of the twelve items.

The faculty and administrators were in agreement in all twelve of the functioning areas. The faculty and administrators perceive that more emphasis is given the functioning area Individual Personal Development while the students saw low functioning in this scale area. Students perceived more emphasis given Democratic Governance than the faculty, while administrators perceived more emphasis in this functioning area than both the faculty group and student group.

Hypothesis Three

The third null hypothesis was: There is no signicant relationship between perceived importance of the institutional goals and the perceived degree of emphasis given the institutional practices. This hypothesis was tested by correlating corresponding areas from the IGI and IFI-UOM across all respondents. The product-moment correlation procedure was applied and twenty coefficients were computed. The .01 significance level was adopted. Inspection of Table 19 verifies that all twenty correlations exceeded the critical value of .148 required to reject the hypothesis of no correlation between corresponding areas in the IGI and IFI-UOM. The twenty areas have been ordered in Table 19 on the basis of the magnitude of the correlation between the two instruments.

It was observed that the faculty, students, and administrators felt that the state institution was internally consistent on its emphasis and its functioning in the area of

TABLE 19

CORRELATION BETWEEN THE IGI AND IFI-UOM

18. Innovation	2	.53*
19. Off-campus Learning	17	.22*
20. Accountability/Efficiency	11	.30*

*Students did not answer IFI-UOM items pertaining to these functioning area scales.

Community. The moderately high correlation of .56 between
the perceived practices of Community on the IGI would suggest
that there is rather strong tendency for agreement at this
state institution regarding present practices and importance
of the goal of Community. The Cultural/Aesthetic Awareness
and Traditional Religiousness had a very low correlation.
Although the correlations are positive and statistically
significant from zero, they represent weak tendencies toward
agreement. Respondents do not see the operation of the
institution being performed consistently with the importance
of the areas. Respondents are in agreement on the function-
ing and goal areas of: Community, Innovation, and Meeting
Local Needs. The correlation was high showing that the three
groups agree the institution is implementing the goal areas
of Community, Innovation, and Meeting Local Needs. The
respondents, on the other hand, saw low implementation of the
scales, Cultural/Aesthetic Awareness, Freedom, and Traditional
Religiousness. The low correlation does not tell whether the
institution is functioning toward these goal scales, but it
does reveal that there is disagreement between the respondents
as to the implementation of the goals. The respondents see
the practices as being different from the goal areas. When
the correlation is significantly high the students, faculty,
and administrators perceive the institution as implementing
the goal areas with their practices. As the correlation

becomes smaller, it can be inferred that the respondents

report that the practices do not aid in goal attainment.

CHAPTER V

SUMMARY, CONCLUSIONS, AND IMPLICATIONS

FOR FURTHER RESEARCH

Summary

The multivariate analysis of variance (MANOVA) was
performed on the questionnaire responses submitted by
119 faculty, 103 students, and 107 administrators from one
state institution of higher learning in one southwestern
state. Two questionnaires were utilized testing twenty
broad ranged goal and functioning scales. The Institutional
Goals Inventory was concerned with the goals of the institu-
tion, and the Institutional Functioning Inventory-University
of Oklahoma Modification, was concerned with the functions of
the institution.

The first hypothesis, that of no difference among
the groups on goal scales, was rejected because significant
disagreement was observed between the students, faculty, and
administrators on the importance given institutional goals.
The second hypothesis of the study was concerned with the
functions of the institution as seen by the faculty, students,
and administrators. The students again disagreed with the

69

faculty and administrators. Therefore, there were significant differences among the three groups in the perceptions of the emphasis given institutional functions. Tests of the third hypothesis, which dealt with the relationships between the goals and functions scales, found significant correlation coefficients between each institutional goal and its corresponding institutional function at the .01 level. Thus all three hypothesis were rejected.

Conclusions

The faculty and administration agreed on all the goals of the institution and on the importance being placed on all the institutional functions, according to the scales of the IGI. The students disagreed with the administrators on four of the twenty goal areas, and they disagreed with the faculty on two goal areas. Factors related to the students' divergence were not clearly reconciled. Reasonable inference suggests, however, that students may not have understood the items on the instrument, or were unfamiliar with the goals of the institution. In addition, the four levels of students involved in the sample, would also contribute to wide ranges of student understanding.

Another interesting observation was the response of all three groups to the two scales: Community and Meeting Local Needs. All groups ranked both areas high as goals, and the correlations between goal scales and function scales

were strong and positive. Community is a goal of the four-year college or university, and Meeting Local Needs is a goal area shared by both the community or junior college and the four-year college or university.

The faculty and administration agreed on the emphasis being given the institutional functions. These two samples placed the function areas: Vocational Preparation and Meeting Local Needs as the leading "Functioning" areas among the twenty scales. It should be noted that the students did not respond to these two scales. It is apparent that the faculty and administrators see these Functioning areas as important. In addition, high correlations were observed between the "goals" and "functions" scales in these two areas. It is, therefore, inferred that both faculty and administrators are congruent on their emphasis on goals and their implementation of practices to accomplish these goals.

Two of the lowest ranked functioning areas were Research and Off-campus Learning. Research was ranked as a low functioning area. A high correlation with the goals scales suggested the institution placed low value on research as a goal and behaved that way. By placing low values on this function and goal scale, it is possible to infer that the institution is not presently engaged in research, nor does it highly regard research efforts. Off-campus Learning, another low function area has low correlation with the corresponding goal scale. This indicates that the members of

the institution are in disagreement over the desirability of
the goal. The institution is attempting to fulfill the
function of Off-campus Learning at a relatively low level.
The administrators perceived that relatively high emphasis
was given the functioning areas of Academic Development,
Individual Personal Development, and Democratic Governance.
The students' responses disagreed with the administrators in
each of these functioning areas. Four functioning areas were
given high emphasis by all three groups: Vocational Prepara-
tion, Meeting Local Needs, Cultural/Aesthetic Awareness, and
Social Egalitarianism. These four functioning areas appear
to be more traditional and suggest that the institution tends
still to function more like a four-year college than an
institution developing into a multipurpose university.

The data provided by the participants indicated the
existence of relationships between the perceived importance
of the goals of the institution and the perceived degree of
emphasis given the institutional practices. There were four
variations of the goal/function correlations. For example,
a goal such as Academic Development was a high valued goal
and had a correlation coefficient of .28. The second varia-
tion was represented by a goal of low value with a high
coefficient of correlation. An example of this configuration
is the goal scale Social Criticism/Activism. Such data sug-
gests that the institution neither values this goal area nor
indulges in practices that promote its implementation. The

third variation on the correlation of goals and functions made apparent in the study was the goal area that was highly valued and also highly correlated with functioning scales. A good example is the goal Community, which was among the most valued goal areas and the most highly correlated with the functioning scale. In this case, it can be reported that the institution is practicing this valued goal in ways that promote its implementation. The last goal of the correlations of goals and functions is represented by the low ranking goal that was also correlated at low levels. An example of this pattern is represented by the Traditional Religiousness. It was valued at low levels and correlated with functions at .15. There is a low implementation of this goal, which is consistent with its value level. Table 20 is the list of the twenty goal scales with their correlations.

The institution should investigate the low value goals with low correlations and consider possibly discontinuing their function. The institution should concentrate on the goals with high values and low correlations, and investigate procedures on implementing these goals. This would strengthen these goals that are high and their implementation would be fulfilled. The high goals with low correlations should be researched to see why the low correlation and proceed to alter the implementations so these high valued goals could be fulfilled. The high valued goals with high

TABLE 20

THE TWENTY GOAL AREAS AND
THEIR CORRELATIONS

I. High Value Goal Scale (Scale Name)	- With - Rank on IGI	Low Correlation between Goals and Functions "r" Rank
1. Academic Development	1	14
2. Accountability/ Efficiency	2	11
7. Vocational Preparation	3	10
8. Advanced Training	4	12
3. Individual Personal Development	5	16
5. Cultural/Aesthetic Awareness	6	19

(This institution places high values on these
goals but there is low implementation of them.)

II. Low Value Goal Scale (Scale Name)	- With - Rank on IGI	Low Correlation between Goals and Functions "r" Rank
12. Social Egalitarianism	7	15
14. Freedom	8	18
4. Humanism/Altruism	9	13
19. Off-campus Learning	10	17
20. Traditional Religiousness	11	20

(The institution is placing little importance on
these goals and they are receiving low implemen-
tation.)

TABLE 20--Continued

III.	High Value Goal Scale (Scale Name)	- With - Rank on IGI	High Correlation between Goals and Functions "r" Rank
2.	Intellectual Orientation	12	7
16.	Community	13	1
10.	Meeting Local Needs	14	3
15.	Democratic Governance	15	4

(The institution places high values on these goals and there is high implementation of these goals.)

IV.	Low Value Goal Scale (Scale Name)	- With - Rank on IGI	High Correlation between Goals and Functions "r" Rank
17.	Intellectual/Aesthetic Environment	16	5
18.	Innovation	17	2
11.	Public Service	18	8
19.	Research	19	9
13.	Social Criticism/ Activism	20	6

(The institution places low values on these goals and they implement them highly.)

correlation should be researched to see if these should be the goals for a four-year institution of higher learning or if they are the old goals of a "bygone" institution. The low value goals with high correlations need to be investigated to see why their high implementation. They possibly are goals that the members of the institution see value in and stress the implementation of these goals. This would be

a situation of goal change if this were to happen.

Implications for Further Study

Recommendations, based on procedures, survey of authoritative literature, and analysis of data for further research are presented as follows:

1. Analysis of the causes of high and low goal values need to be investigated at this institution of higher learning.

2. Comparative studies need to be made of other institutions of higher learning, such as other four-year state institutions in this geographic location, in order to determine if similar findings result.

3. Comparative studies to determine the correlation between the tests used in this study and other tests that have been produced to measure goals and practices.

4. This study should be utilized in comparing other similar institutions in other geographical locations, in order to determine if similar findings result.

The results of this study have strengthened the findings of previous research and laid the groundwork for more complicated and detailed investigations. These suggestions should be ample incentive for well-trained investigators who intend to conduct further studies in institutional goals and institutional practices.

The results of this study and the findings of previous research efforts in the same area indicate that perception of institutional goals and institutional functions or practices

are related, and meaningful investigations could be con-
ducted in other institutions of higher learning in this area.

There are certain disadvantages to the questionnaire
that was used by the participating groups. There should be
some revision made in the direction of having the students,
as well as the faculty and administration, answering all
twenty of the Functioning scale areas. There possibly should
be some attempt made to equalize the two scales for all par-
ticipants. It appears to be unbalanced when one is using the
IGI and utilizing the twenty goal scales; using three par-
ticipant sample groups, and using the IFI-UOM; and dividing
this second scale into two parts. The imbalance occurs when
one uses two participant groups in the first part and then
all three participant groups in the second part, but letting
one group take only twelve of the twenty functioning scales.

INSTITUTIONAL   FUNCTIONING   INVENTORY

(University of Oklahoma Modification)

INSTITUTIONAL FUNCTIONING INVENTORY
(University of Oklahoma Modification)

To the Respondent:

      This is a questionnaire for institutional self-study. In it you are asked for your perceptions about what your institution is like—administrative policies, teaching practices, types of programs, characteristic attitudes of groups of people, etc. This inventory is not a test; the only "right" answers are those which reflect your own perceptions, judgments, and opinions.

      No names are to be written on the inventory. Comments and criticisms are invited regarding any aspect of the inventory. Please use the back of the test booklet for any such comments.

DIRECTIONS:

1. Pencils. Any type of marking instrument may be used. Please mark out the appropriate response by using an (X).

2. Information Items. Check only one answer box for each question that applies to you. All respondents should answer Item A and each of the items, B-J, that apply.

3. Marking your Responses. Sections 1 and 3 consist of statements about policies and programs that may or may not exist at your institution. Indicate whether you know a given situation exists or does not exist by marking either YES (Y); NO (N); or DON'T KNOW (?).

4. Respond to every question. Please mark an answer for every statement in the inventory.

5. Mark only ONE answer for EACH statement, but please respond to each and every statement.

The IFI-(OUM) was developed by the
Center for Studies in Higher Education
University of Oklahoma

INFORMATION ITEMS

Please select one answer for each question below that applies to you.

A. Select the one response that best describes your role.

( ) 0. Faculty member
( ) 1. Student
( ) 2. Administrator
( ) 3. Governing board member
( ) 4. Alumna/Alumnus
( ) 5. Member of off-campus community group
( ) 6. Staff
( ) 7. Other

B. Faculty and students: select one field of teaching and/or research interest or, for students, major field of study.

( ) 0. Biological sciences
( ) 1. Physical sciences
( ) 2. Mathematics
( ) 3. Social sciences
( ) 4. Humanities
( ) 5. Fine arts, performing arts
( ) 6. Education
( ) 7. Business
( ) 8. Engineering
( ) 9. Other

C. Faculty: indicate academic rank.

( ) 0. Instructor
( ) 1. Assistant professor
( ) 2. Associate professor
( ) 3. Professor
( ) 4. Other

D. Faculty: indicate current teaching arrangement.

( ) 0. Full-time
( ) 1. Part-time
( ) 2. Evening only
( ) 3. Off-campus only- extension, etc.
( ) 4. Research only
( ) 5. Other

E. All respondents: indicate age at last birthday.

( ) 0. 17 to 18
( ) 1. 19 to 20
( ) 2. 21 to 23
( ) 3. 24 to 26
( ) 4. 27 to 29
( ) 5. 30 to 39
( ) 6. 40 to 49
( ) 7. 50 to 59
( ) 8. 60 or over

F. Students: indicate class in college.

( ) 0. Freshman
( ) 1. Sophomore
( ) 2. Junior
( ) 3. Senior
( ) 4. Graduate
( ) 5. Other

G. Students: indicate current
enrollment status.

( ) 0. Full-time, day
( ) 1. Part-time, day
( ) 2. Evening only
( ) 3. Off-campus only-extension,
e.g., correspondence,
TV, etc.
( ) 4. Other

H. Optional information ques-
tion (special supplemental
sheet will be provided if
this item is used.

I. Optional informa-
tion question
(special supple-
mental sheet will
be provided if this
item is used.

J. Optional informa-
tion question
(special supple-
mental sheet will
be provided if this
item is used.

SECTION 1

Respond to statements in this section by selecting either:

YES (Y)   NO (N)   DON'T KNOW (?)

If the statement   If the statement   If you do not
applies or is true   does not apply or   know whether the
at your institution.   is not true at   statement applies
                        your institution.   or is true.

(Y) (N) (?) 1. There is a campus art gallery in which
traveling exhibits or collections on loan
are regularly displayed.

(Y) (N) (?) 2. There are programs and/or organizations
at this institution which are directly
concerned with solving pressing social
problems, e.g., race relations, urban
blight, rural poverty, etc.

(Y) (N) (?) 3. Regulations of student behavior are
detailed and precise at this institution.

(Y) (N) (?) 4. Foreign films are shown regularly on or
near campus.

(Y) (N) (?) 5. Religious services are conducted regu-
larly on campus involving a majority of
the students.

(Y) (N) (?) 6. A number of professors have been involved in the past few years with economic planning at either the national, regional, or state level.

(Y) (N) (?) 7. There are provisions by which some number of educationally disadvantaged students may be admitted to the institution without meeting the normal entrance requirements.

(Y) (N) (?) 8. A number of nationally known scientists and/or scholars are invited to the campus each year to address student and faculty groups.

(Y) (N) (?) 9. Advisement (counseling) is offered students concerning personal, as well as academic goals.

(Y) (N) (?) 10. Successful efforts to raise funds or to perform voluntary service to relieve human need and suffering occur at least annually on this campus.

(Y) (N) (?) 11. This institution attempts each year to sponsor a rich program of cultural events--lectures, concerts, plays, art exhibits, and the like.

(Y) (N) (?) 12. At least one modern dance program has been presented in the past year.

(Y) (N) (?) 13. Ministers are invited to the campus to speak and to counsel students about religious vocations.

(Y) (N) (?) 14. Professors from this institution have been actively involved in framing state of federal legislation in the areas of health, education, or welfare.

(Y) (N) (?) 15. A concerted effort is made to attract students of diverse ethnic and social backgrounds.

(Y) (N) (?) 16. Quite a number of students are associated with organizations that actively seek to reform society in one way or another.

(Y) (N) (?) 17. There are no written regulations regarding student dress.

(Y) (N) (?) 18. Students publish a literary magazine.

(Y) (N) (?) 19. A testing-counseling program is available to students to help them to achieve self-understanding.

(Y) (N) (?) 20. An organization exists on campus which has as its primary objective to work for world peace.

(Y) (N) (?) 21. At least one chamber music concert has been given within the past year.

(Y) (N) (?) 22. The institution sponsors groups and programs which provide students opportunities to witness to others concerning their faith.

(Y) (N) (?) 23. A number of faculty members of administrators from this institution have gone to Washington to participate in planning and operating various federal programs.

(Y) (N) (?) 24. One of the methods used to influence the flavor of the college is to try to select students with fairly similar personality traits.

(Y) (N) (?) 25. This institution, through the efforts of individuals and/or specially created institutes or centers, is actively engaged in projects aimed at improving the quality of urban life.

(Y) (N) (?) 26. The institution imposes certain restrictions on off-campus political activities by faculty members.

(Y) (N) (?) 27. There are a number of student groups that meet regularly to discuss intellectual and/or philosophic topics.

(Y) (N) (?) 28. At least one poetry reading, open to the campus community, has been given within the past year.

(Y) (N) (?) 29. The curriculum is deliberately designed
to accommodate a great diversity in
student ability levels and educational-
vocational aspirations.

SECTION 2

Respond to statements in this section by selecting either:

STRONGLY AGREE (SA)

If you strongly agree with
the statement as applied to
your institution.

AGREE (A)

If you mildly agree with the
statement as applied to your
institution.

DISAGREE (D)

If you mildly disagree with
the statement as applied to
your institution.

STRONGLY DISAGREE (SD)

If you strongly disagree with
the statement as applied to
your institution.

(SA) (A) (D) (SD) 30. How best to communicate knowledge
to undergraduates is not a ques-
tion that seriously concerns a
very large portion of the faculty.

(SA) (A) (D) (SD) 31. Students who display traditional
"scholar" behavior are held in
low esteem in the campus commu-
nity.

(SA) (A) (D) (SD) 32. In dealing with institutional
problems, attempts are generally
made to involve interested people
without regard to their formal
position or hierarchical status.

(SA) (A) (D) (SD) 33. Capable undergraduates are
encouraged to collaborate with
faculty on research projects or
to carry out studies of their
own.

(SA) (A) (D) (SD) 34. Undergraduate programs of instruction are designed to include demonstration of the methods of problem analysis.

(SA) (A) (D) (SD) 35. Power here tends to be widely dispersed rather than tightly held.

(SA) (A) (D) (SD) 36. Almost every degree program is constructed to enable the student to acquire a depth of knowledge in at least one academic discipline.

(SA) (A) (D) (SD) 37. A major expectation of faculty members is that they will help students to synthesize knowledge from many sources.

(SA) (A) (D) (SD) 38. The important moral issues of the time are discussed seriously in classes and programs.

(SA) (A) (D) (SD) 39. Many faculty members would welcome the opportunity to participate in laying plans for broad social and economic reforms in American society.

(SA) (A) (D) (SD) 40. Serious consideration is given to student opinion when policy decisions affecting students are made.

(SA) (A) (D) (SD) 41. Certain radical student organizations, such as Students for a Democratic Society, are not, or probably would not be, allowed to organize chapters on this campus.

(SA) (A) (D) (SD) 42. This institution takes pride in the percentage of graduates who go on to advanced study.

(SA) (A) (D) (SD) 43. Student publications of high intellectual reputation exist on this campus.

(SA) (A) (D) (SD) 44. Professors get to know most students in their undergraduate classes quite well.

(SA) (A) (D) (SD) 45. Foreign students are genuinely respected and are made to feel welcome on this campus.

(SA) (A) (D) (SD) 46. Religious diversity is encouraged at this institution.

(SA) (A) (D) (SD) 47. Application of knowledge and talent to the solution of social problems is a mission of this institution that is widely supported by faculty and administrators.

(SA) (A) (D) (SD) 48. Governance of this institution is clearly in the hands of the administration.

(SA) (A) (D) (SD) 49. Certain highly controversial figures in public life are not allowed or probably would not be allowed to address students.

(SA) (A) (D) (SD) 50. Little money is generally available for inviting outstanding people to give public lectures.

(SA) (A) (D) (SD) 51. A 4.0 grade average brings to a student the highest recognition on this campus.

(SA) (A) (D) (SD) 52. Academic advisers generally favor that a meaningful portion of each degree program be allocated to individual study.

(SA) (A) (D) (SD) 53. Most faculty members do not wish to spend much time in talking with students about students' personal interests and concerns.

(SA) (A) (D) (SD) 54. When a student has a special problem, some of his peers usually are aware of and respond to his need.

(SA)   (A)   (D)   (SD)   55.   Religious ideals of the institution's founding fathers are considered by most faculty members to be obsolete.

(SA)   (A)   (D)   (SD)   56.   Senior administrators generally support (or would support) faculty members who spend time away from the campus consulting with governmental agencies about social, economic, and related matters.

(SA)   (A)   (D)   (SD)   57.   Compared with most other colleges, fewer minority groups are represented on this campus.

(SA)   (A)   (D)   (SD)   58.   The notion of colleges and universities assuming leadership in bringing about social change is not an idea that is or would be particularly popular on this campus.

(SA)   (A)   (D)   (SD)   59.   In arriving at institutional policies, attempts are generally made to involve all the individuals who will be directly affected.

(SA)   (A)   (D)   (SD)   60.   Faculty members feel free to express radical political beliefs in their classrooms.

(SA)   (A)   (D)   (SD)   61.   The student newspaper comments regularly on important issues and ideas (in addition to carrying out the customary tasks of student newspapers).

(SA)   (A)   (D)   (SD)   62.   It is almost impossible for a student to graduate from this institution without a basic knowledge in the social sciences, and humanities.

(SA)   (A)   (D)   (SD)   63.   Programs for the adult (out-of-school) age student are primarily designed to treat their vocational needs.

(SA) (A) (D) (SD) 64. Formal organizations designed to provide special assistance to students are accorded favorable recognition by individual members of the faculty.

(SA) (A) (D) (SD) 65. Faculty members are more concerned with helping students to acquire knowledge and professional skills than they are in helping students to be better persons.

(SA) (A) (D) (SD) 66. By example, the administration and faculty encourage students to dedicate their lives to God.

(SA) (A) (D) (SD) 67. Administrators and faculty have in the past three years been responsive to regional and national priorities in planning educational programs.

(SA) (A) (D) (SD) 68. There are no courses or programs for students with educational deficiencies, i.e., remedial work.

(SA) (A) (D) (SD) 69. The governing board does not consider active engagement in resolving major social ills to be an appropriate institutional function.

(SA) (A) (D) (SD) 70. Students, faculty, and administrators all have opportunities for meaningful involvement in campus governance.

(SA) (A) (D) (SD) 71. The governing body (e.g., Board of Trustees) strongly supports the principle of academic freedom for faculty and students to discuss any topic they may choose.

(SA) (A) (D) (SD) 72. Many opportunities exist outside the classroom for intellectual and aesthetic self-expression on the part of students.

SECTION 3

Respond to statements in this section by selecting either:

YES (Y)	NO (N)	DON'T KNOW (?)
If the statement applies or is true at your institution.	If the statement does not apply or is not true at your institution.	If you do not know whether the statement applies or is true.

(Y) (N) (?) 73. This institution operates an adult education program, e.g., evening courses open to local area residents.

(Y) (N) (?) 74. Counseling services are available to adults in the local area seeking information about educational and occupational matters.

(Y) (N) (?) 75. Quite a number of faculty members have had books published in the past two or three years.

(Y) (N) (?) 76. Courses are offered through which local area residents may be retrained or upgraded in their job skills.

(Y) (N) (?) 77. There is a job placement service through which local employers may hire students and graduates for full- or part-time work.

(Y) (N) (?) 78. There are a number of research professors on campus, i.e., faculty members whose appointments primarily entail research rather than teaching.

(Y) (N) (?) 79. Facilities are made available to local groups and organizations for meetings, short courses, clinics, forums, and the like.

(Y) (N) (?) 80. Credit for numerous courses can be earned now solely on the basis of performance on an examination.

(Y) (N) (?) 81. Some of the strongest and best-funded undergraduate academic departments are professional departments which prepare students for specific occupations, such as nursing, accounting, etc.

(Y) (N) (?) 82. A number of departments frequently hold seminars or colloquia in which a visiting scholar discusses his ideas or research findings.

(Y) (N) (?) 83. The average teaching load in most departments is eight credit hours or fewer.

(Y) (N) (?) 84. There are a number of courses or programs that are designed to provide manpower for local area business, industry, or public service.

(Y) (N) (?) 85. A plan exists at this institution whereby a student may be awarded a degree based primarily on supervised study off-campus.

(Y) (N) (?) 86. One or more individuals are presently engaged in long-range financial planning for the total institution.

(Y) (N) (?) 87. Courses or seminars are conducted in order that former students and others may be retrained or upgraded in their skills.

(Y) (N) (?) 88. New advanced degrees have been authorized and awarded within the last three years.

(Y) (N) (?) 89. Faculty promotions generally are based primarily on scholarly publication.

(Y) (N) (?) 90. Courses dealing with artistic expression or appreciation are available to all adults in the local area.

(Y) (N) (?) 91. Several arrangements exist by which students may enroll for credit in short terms away from the campus in travel; work-study, VISTA-type work, etc.

(Y) (N) (?) 92. Analyses of the philosophy, purposes, and objectives of the institution are frequently conducted.

(Y) (N) (?) 93. Counseling services are available to students to assist them in choosing a career.

(Y) (N) (?) 94. One or more non-traditional graduate departments (or centers) has been established within the last five years.

(Y) (N) (?) 95. In general, the governing board is committed to the view that advancement of knowledge through research and scholarship is a major institutional purpose.

(Y) (N) (?) 96. Attention is given to maintaining fairly close relationships with businesses and industries in the local area.

(Y) (N) (?) 97. Every student is encouraged to include some study abroad in his educational program.

(Y) (N) (?) 98. Planning at this institution is continuous rather than one-shot or completely nonexistent.

SECTION 4

Respond to statements in this section by selecting either:

STRONGLY AGREE (SA)

If you strongly agree with the statement as applied to your institution.

AGREE (A)

If you mildly agree with the statement as applied to your institution.

DISAGREE (D)

If you mildly disagree with the statement as applied to your institution.

STRONGLY DISAGREE (SD)

If you strongly disagree with the statement as applied to your institution.

(SA) (A) (D) (SD) 99. Most faculty members consider the senior administrators on campus to be able and well-qualified for their positions.

(SA) (A) (D) (SD) 100. It is almost impossible to obtain the necessary financial support to try out a new idea for educational practice.

(SA) (A) (D) (SD) 101. Generally speaking, top-level administrators are providing effective educational leadership.

(SA) (A) (D) (SD) 102. There is a general willingness here to experiment with innovations that have shown promise at other institutions.

(SA) (A) (D) (SD) 103. Generally speaking, communication between the faculty and the administration is poor.

(SA) (A) (D) (SD) 104. High ranking administrators or department chairmen generally encourage professors to experiment with new courses and teaching methods.

(SA) (A) (D) (SD) 105. More recognition is regularly accorded faculty members for research grants received than for service grants.

(SA) (A) (D) (SD) 106. Staff infighting, backbiting, and the like seem to be more the rule than the exception.

(SA) (A) (D) (SD) 107. This institution would be willing to be among the first to experiment with a novel educational program or method if it appeared promising.

(SA) (A) (D) (SD) 108. Laying plans for the future of the institution is a high priority activity for many senior administrators.

(SA) (A) (D) (SD) 109. The graduates of such profes-
sional colleges as the Colleges
of Law and Medicine at this
institution are recognized by the
public as strong practitioners.

(SA) (A) (D) (SD) 110. Although they may criticize
certain practices, most faculty
seem to be very loyal to the
institution.

(SA) (A) (D) (SD) 111. In my experience it has not been
easy for new ideas about educa-
tional practice to receive a
hearing.

(SA) (A) (D) (SD) 112. A graduate is usually considered
by faculty to be better educated
if all of his credit hours were
earned at this institution, than
if he had studied on several cam-
puses in qualifying for his
degree.

(SA) (A) (D) (SD) 113. Seldom do faculty members prepare
formal evaluations of institu-
tional goal achievement.

(SA) (A) (D) (SD) 114. The faculty is receptive to add-
ing new courses geared to
emerging career fields.

(SA) (A) (D) (SD) 115. Undergraduates interested in
study beyond the B.A. level
receive little or no formal
encouragement from the faculty
or staff.

(SA) (A) (D) (SD) 116. Few, if any, of the faculty could
be regarded as having national or
international reputations for
their scientific or scholarly con-
tributions.

(SA) (A) (D) (SD) 117. There is a strong sense of commu-
nity, a feeling of shared inter-
ests and purposes, on this campus.

(SA)   (A)   (D)   (SD)   118.   This institution has experimented with new approaches to either individualized instruction or evaluation of student performance.

(SA)   (A)   (D)   (SD)   119.   Off-campus learning experiences of various types are considered as valuable, or more valuable, to the student's education, as regular courses.

(SA)   (A)   (D)   (SD)   120.   The approval of proposals for new instructional programs is regularly dependent on an estimate of potential efficiency.

SPECIMEN LETTERS

Central State University

100 North University Drive – Edmond, Oklahoma 73034

Office of the President

May 1, 1973

Ms. Kathryn Alcorn
Chairman, Dept. of Art
Campus

Dear Ms. Alcorn:

Mr. L. D. Kroeker of the Art Department is completing requirements
for his doctorate degree in higher education at the University of Okla-
homa. Since the topic of his dissertation is in direct relationship to
Central State University and the data can be used to our advantage in
planning and evaluation, I have asked Dr. Barbara Ryan to work with
him in data collection. The personnel of the Office of Institutional
Research can then analyze and organize the data for our internal needs.

Therefore, I request your cooperation in filling out the enclosed question-
naires. Return them directly to the Office of Institutional Research no
later than May 11, 1973.

Respectfully,

Garland Godfrey
President

GG/jm

Enclosures: 2

December 15, 1972

Mr. Robert L. Lynn
Assistant to the President
Oklahoma Baptist University
Shawnee, Oklahoma   36104

Dear Mr. Lynn:

Dr. Joseph Sutton, of The University of Alabama, has forwarded your letter regarding institutional goals to me. I shall be happy to supply you with a brief report of my effort in this area.

I chose the Educational Testing Service's Institutional Goals Inventory (IGI) as my data gathering device. This instrument asks respondents to rate a series of goals on a five point scale in terms of what they perceive the goals of the institution to be and what they feel the goals ought to be.

I administered the IGI to random samples of teaching faculty, students, academic administrators, local active alumni and local Chamber of Commerce, asking that they respond in terms of the University as a whole. Simultaneously, I administered the IGI to random samples of teaching faculty and students in each of seven Schools within the University, asking that they respond in terms of their particular school. The principles of the Delphi technique were applied to both administrations.

The results indicated significant convergence of opinion through the three iterations. The greatest institution-wide emphasis centered on goal areas traditional to the University environment and a rejection of faddish, unproven programs and activities. Minor exceptions to this result occurred in some Schools within the University. For example, the institution-wide sample emphisized Basic Area Learning Competence, Research and the upgrading of internal operations, while rejecting External Degrees, Social Activism and expansion of student services and activities. Exceptions were the Schools of Law and Social Work.

Mr. Robert L. Lynn   ￢2￢   December 15, 1972

        If you need further information, please do not hesitate to call or write.

                                        Sincerely,

                                        Edward Udut

                                        Edward Udut
                                        Assistant to the President
