

## INFORMATION TO USERS

This material was produced from a microfilm copy of the original document. While the most advanced technological means to photograph and reproduce this document have been used, the quality is heavily dependent upon the quality of the original submitted.

The following explanation of techniques is provided to help you understand markings or patterns which may appear on this reproduction.

1. The sign or "target" for pages apparently lacking from the document photographed is "Missing Page(s)". If it was possible to obtain the missing page(s) or section, they are spliced into the film along with adjacent pages. This may have necessitated cutting thru an image and duplicating adjacent pages to insure you complete continuity.
2. When an image on the film is obliterated with a large round black mark, it is an indication that the photographer suspected that the copy may have moved during exposure and thus cause a blurred image. You will find a good image of the page in the adjacent frame.
3. When a map, drawing or chart, etc., was part of the material being photographed the photographer followed a definite method in "sectioning" the material. It is customary to begin photoing at the upper left hand corner of a large sheet and to continue photoing from left to right in equal sections with a small overlap. If necessary, sectioning is continued again — beginning below the first row and continuing on until complete.
4. The majority of users indicate that the textual content is of greatest value, however, a somewhat higher quality reproduction could be made from "photographs" if essential to the understanding of the dissertation. Silver prints of "photographs" may be ordered at additional charge by writing the Order Department, giving the catalog number, title, author and specific pages you wish reproduced.
5. PLEASE NOTE: Some pages may have indistinct print. Filmed as received.

## ACKNOWLEDGMENTS

I express my appreciation to Paul F. Sharp, President of the University of Oklahoma and to William H. Maehl, Jr., Chairman of the Faculty Senate for their endorsement of and interest in this study. Expressions of gratitude also go to fellow participants in the Center for Studies in Higher Education Goals Study Group, Maryjo Lockwood, Robert Lynn, Kenneth Peterson, Jim Colclazer, and Leon Kroeker, with whom many fruitful hours of study were spent.

Deepest appreciation is extended to Robert E. Ohm, Dean of the College of Education for his guidance, counsel, and support. Appreciation is also expressed to Herbert R. Hengst, Jack Parker, and John Pulliam for their assistance, interest, and encouragement. William Graves is due sincere thanks for so willingly sharing his statistical and computer knowledge with this student.

Through the love, understanding, and support of my wife, not to mention her typing skill, the completion of the research reported in this study was possible. To my four children, Lynne, William, Michelle, Kenneth, and wife, Patricia, these pages are dedicated.

CHAPTER I  
INTRODUCTION

Background of the Problem

The contemporary literature on higher education expresses considerable interest in institutional goals, practices, and the recent emergence of collective bargaining in higher education.

The current focus on institutional goals in higher education has as its genesis what David Riesman calls the "collision course" in higher education between the increased expectations of the public and the limited resources available.<sup>1</sup> When Harvard was founded in 1636, higher education was to be for a miniscule elite. Institutions of higher education, as the nineteenth century progressed, expanded the services they provided. The award of the first Ph. D. at Yale in 1861 and the passage of the Morrill Act in 1862 were watersheds in higher education history, they marked the beginning of the research and service function of American higher education. World Wars I and II, and the reaction to

---

<sup>1</sup>David Riesman, "The Collision Course of Higher Education", The Journal of College Student Personnel, 10 (Nov., 1969), pp. 363-369.

Sputnik in 1957 serve as indicators of the increased demands on higher education to provide research and service. "The University has become a prime instrument of national purpose."<sup>2</sup>

Institutions of higher education have become what Jacques Barzun compares to a "firehouse on the corner", responding to all calls for assistance.<sup>3</sup> Robert Hutchins has compared the university to a medieval guild which "undertook to be everything for the town".<sup>4</sup> Institutions have simply added functions to existing ones to meet the needs of their constituents. President Johnson's statement that "we expect institutions of higher learning to right many of society's wrongs such as poverty and social injustice; we expect them to make the lame walk and to devise ways to feed the world's hungry; and we expect them to offer blueprints for the curbing of inflation" provides a verbalization of the expectations for higher education to solve the nation's ills.<sup>5</sup>

The increased demands of society have come into

collision with The New Depression in Higher Education.<sup>6</sup>

Americans still expect great things from their systems of higher education, but they have come to balk at the price. When one considers that tuition fees have risen three to four times as fast as the national price index for other goods and services, with only medical and hospital costs having risen faster, the reaction of the public is understandable.<sup>7</sup> With the cost of a single conventional course with twenty students being no less than \$20,000,<sup>8</sup> and the estimated real cost of a student's higher education being \$9,070 per year,<sup>9</sup> it is readily apparent that educational costs have risen. While educational costs have risen to new heights, financial resources seem to have reached limits of availability, and competition for limited resources with other institutions that service society has increased. "The crunch of new demands against limited resources"<sup>10</sup> has served

to focus attention toward the goals of institutionalized higher education.

Institutions of higher learning are increasingly being called upon to articulate their goals in ways meaningful to their constituencies. The Carnegie Commission on Higher Education's 1972 publication, The More Effective Use of Resources: An Imperative for Higher Education, notes that one solution to the financial crisis is for "institutions to carefully analyze the relations between the use of resources and the accomplishment of goals . . .".<sup>11</sup> In 1947 the Truman Commission of Higher Education stated that the major need of American colleges and universities was "to see clearly what it is they are trying to accomplish", we are little closer today than we were in 1947.<sup>12</sup> Today the need for clear-cut goals has reached a crisis stage, "a crisis of purpose".<sup>13</sup> The need for clear, explicit goal statements to provide focus and direction are heard from numerous

<sup>13</sup>Peterson, The Crisis of Purpose. p. 1.

sources.<sup>14</sup> Currently the Western Interstate Commission on Higher Education is devoting considerable attention to the development of models which facilitate goal setting.<sup>15</sup>

As growth has begotten more growth, and specialization more specialization, institutions have become, to use Clark Kerr's term, "multi-versities". Now in the period of financial restraint, the task that James Perkins pointed out in 1966, "to draw the lines between their legitimate and illegitimate functions, and to see clearly where their mission begins and ends",<sup>16</sup> is of particular importance to institutions of higher education. Decisions of choices of missions will not be easy ones, because universities are "multi-versities, not one community, but several."<sup>17</sup> As

<sup>17</sup>Kerr, p. 19.

institutions are increasingly forced to choose among alternatives and priorities, those diverse elements of the university will compete to determine whose goals become the institutional goals.<sup>18</sup>

"The new university is a conflict-prone organization. Its many purposes push and pull in different directions."<sup>19</sup> On many campuses there are widely divergent views and often conflicting ones, as to the proper role of the institution.<sup>20</sup> A recent study by Lipset and Ladd notes that the "professoriate has become deeply divided because it has become extraordinarily disparate in its range of fields, substantive interests, and outside associations . . .".<sup>21</sup> The lack of unity in the modern university can be noted in Hutchins' description of the modern university as a "series of separate schools and departments held together by a central heating system",<sup>22</sup> and Clark Kerr's notation of it as "a series of

<sup>22</sup>Hutchins, quoted in Kerr, p. 20.

individual faculty entrepreneurs held together by a common grievance over parking".<sup>23</sup> While all the constituencies of the university desire to see it fulfill its true purpose, there are "several visions of true purpose, each relating to a different layer of history, a different web of forces."<sup>24</sup> "The university is so many things to so many different people that it must, of necessity, be partially at war with itself."<sup>25</sup> There are then, competing conceptions of what the university should be. It has been noted that the growth of the sixties was not the result of planning, but the result of accommodation between "competing power blocks".<sup>26</sup> Competition can be expected to increase as universities go through the process of getting more effective uses out of resources.<sup>27</sup> Much of the concern over academic governance and resource allocation has at its base the realization that competing definitions of institutional purposes are determined by those who control those processes.

One of the most frequent complaints in academe is

---

<sup>23</sup>Kerr, p. 20

<sup>24</sup>Kerr, pp. 8-9.

<sup>25</sup>Ibid.

<sup>26</sup>Richard E. Peterson, "Reform in Higher Education: Remarks of the Left and Right", Liberal Education, 55(March, 1969), p. 60.

<sup>27</sup>Carnegie Commission, The More Effective Use of Resources, p. 21.

that administration is failing to set goals,<sup>28</sup> by the same token another most common complaint is that the faculty are not allowed enough influence in goal determination.<sup>29</sup>

Burton Clark and others have noted that in the multiversity there are two primary interest groups, the faculty and the administration. There has developed an "administrative class with interests and ideologies of its own".<sup>30</sup> It is anticipated that administrative power will grow in the future. The financial crises will cause a greater degree of centralization and "administration, because it deals with money, and money is now particularly important, will gain authority".<sup>31</sup> The Carnegie Commission notes that while administration may be viewed as a means to an end, under circumstances as they are now, "it may come to seem, and even sometimes be, that the means determine the ends".<sup>32</sup> While the administrators have seemingly been gaining greater power, some faculty have been asking for a greater role in planning, budgeting, and finance allocation, and the setting

<sup>30</sup>Clark, p. 19.

<sup>31</sup>Carnegie Commission, The More Effective Use of Resources, p. 21.

<sup>32</sup>Ibid.

of institutional goals and priorities.<sup>33</sup>

A growth in the power of administrators represents an upset in the presumed balance between academic activities and support activities on campus. The faculty often grumbles that administrators are overpaid, and that too much attention is given to support activities (often called simply red tape) rather than to the goals of the university. Faculty members resent too what they feel to be the illegitimate pretensions of some administrators to "represent" the faculty or the university. The growth in the power of administrators is not, in itself, regarded as necessarily undesirable, even by the academic person (who typically holds highly traditional views of what the university ought to be doing), provided that administrators use their power to help the university attain goals that academic people accept. The situation becomes a source of genuine concern only when administrators are seen both as having more power than the faculty and as using that power to pursue goals considered undesirable or, at least, tangential to desirable goals.<sup>34</sup>

Tension has been fostered in higher education because the administrators have usually ended up taking the initiative in planning, while the faculty have played a reactive role.<sup>35</sup>

The proper role of administration and faculty in goal setting is still being debated. There are those who

desire the president to be the goal determiner. A review of the literature on the job of the president leaves one with the impression that it is the president's most important function. Henry Wriston writes: "An essential part of the presidents job is long-range planning."<sup>36</sup> Harold Stoke writes: "It is his unique job to clarify the purposes of the institution and how best to achieve them."<sup>37</sup> Herbert Simon writes that the president "should be a leader in setting institutional goals."<sup>38</sup> Douglas Brown writes: "The president of a college should essentially be its leader in general educational policy."<sup>39</sup> Robert Osmunson, in a study of presidential inaugural speeches, found that approximately 95% of the presidents made reference to the presidents role of providing educational leadership by providing institutional direction.<sup>40</sup> Others claim that the proper role of administration is to maximize faculty determination of institutional goals. While there is disagreement on the role faculty and

<sup>40</sup>Robert Lee Osmunson, "Higher Education as Viewed by College and University Presidents," School and Society, XCVIII(Oct., 1970), p. 369.

administration should play in goal determination, there is a realization among some that goal consensus is necessary for institution effectiveness.<sup>41</sup> How to gain a consensus on university goals is one of the major questions facing higher education. Two major options are now competing for support. One is shared governance, and the other is formal bargaining. Algo Henderson notes that there are two primary faculty participation models, shared governance and collective negotiations.<sup>42</sup> The concept of shared governance is that traditional to higher education. It finds its classic statement in the 1966 "Statement on Government of Colleges and Universities", issued jointly by the American Association of University Professors, the American Council on Education, and the Association of Governing Boards of Universities and Colleges.<sup>43</sup> Basic to this shared governance concept is that consensus can be reached by participative decision making. Supporters of this option urge administration to "collegialize their relationship".<sup>44</sup>

<sup>44</sup>Demerath, Stephens, and Taylor, p. 216.

Increasingly, faculty are electing the second model of bargaining as a "decision-making process" in higher education.<sup>45</sup> While it is argued that bargaining will "carry with it the automatic end of governance as we know it today,"<sup>46</sup> others point out that conflict and negotiations are basic to governance as we know it today.<sup>47</sup>

The resolution of conflict in modern organizations is made difficult by the fact that conflict is not formally recognized, hence legitimated. To legitimate conflict would be inconsistent with the monocratic nature of hierarchy. It would require formal bargaining procedures. Modern organizations, through the formal hierarchy of authority, seek an "administered consensus". Conflict resolution, therefore, must occur informally in surreptitious and somewhat illegal means. Or else it must be repressed, creating a phony atmosphere of good feeling and superficial harmony.<sup>48</sup>

The bargaining model requires that "groups would negotiate issues relating to goals and methods . . ." <sup>49</sup>

As of January, 1972, approximately fifty-five

<sup>49</sup>Henderson, "Control in Higher Education: Trends and Issues," p. 7.

thousand academic personnel had elected bargaining agents on one-hundred-sixty-three campuses in seventeen states.<sup>50</sup>

Many, as Malcolm Scully, former editor of the Chronicle of Higher Education, wrote, "believe academic professionals should organize because, unlike other professions, they are employed by institutions. Their goals and those of the institution may sometimes differ."<sup>51</sup>

Unions on campus have not denied that there are legitimate institutional goals. They have not denied that there is a community of interest shared by the institution and the faculty. But they have emphasized that the goals of a system and of the faculty may differ widely and that conflict will inevitably arise as the generalized goals of the institution are translated into decisions on operation and policy. Hence, the role of the union is to make sure that actions taken reflect the interests of the faculty.<sup>52</sup>

The contracts negotiated to date are primarily concerned with economic matters.<sup>53</sup> This concern for financial rewards has tended to push goal formulation into the background, but as Allen Smith, Vice-President for Academic Affairs at the University of Michigan, has noted, "One can not bargain exclusively on economic relationships forever. Surely the other side of the table will want something in

---

<sup>50</sup>Tice, p. 291.

<sup>52</sup>Charles M. Rehmus, "Alternatives to Bargaining and Traditional Governance," in Tice, p. 92.

<sup>53</sup>Carol H. Schulman, Collective Bargaining on Campus (Washington, D.C.: American Association for Higher Education, 1972), p. 4.

return for the money."<sup>54</sup> The Carnegie Commission has recommended that institutions with faculty that employ collective bargaining employ negotiations experts and "consider agreements that will induce increases in productivity of faculty members . . . "<sup>55</sup>

While bargaining may focus on resources rather than explicitly on goals, the fact remains that it is improbable that a goal can be effective unless it is at least partially implemented. To the extent that bargaining sets limits on the amount of resources available or the ways they may be employed, it effectively sets limits on choice of goals.<sup>56</sup>

The prospect of goal determination via collective bargaining requires that the relationship between institutional goal perception and collective bargaining be investigated.

#### Statement of the Problem

The problem of this research is to investigate the extent to which faculty and administrator perceptions of institutional goals and functions are related to faculty attitudes toward collective bargaining.

More specifically, this study seeks answers to the following questions:

1. What attitudes do university faculty members hold toward collective negotiations?

---

<sup>54</sup>Allen F. Smith, "Should Faculties Organize?" in Tice, pp. 119-120.

<sup>55</sup>Carnegie Commission, The More Effective Use of Resources, p. 89.

<sup>56</sup>Thompson and McEwen, p. 27.

2. Is the degree of agreement between faculty members and administrators on the importance of perceived institutional goals significantly related to attitudes toward collective negotiations?
3. Is the degree of agreement between faculty members and administrators on the importance of perceived institutional preferred goals significantly related to attitudes toward collective negotiations?
4. Is the degree of agreement between faculty members and administrators of the emphasis given to a perceived function related to attitudes toward collective negotiations?
5. Are certain biographic-career characteristics related to favorable attitudes toward collective negotiations?

#### Need for the Study

Today over 55,000 academic personnel have elected collective bargaining agents.<sup>57</sup> Increasingly, bills are being introduced into state legislatures to enable collective negotiations in higher education. For example, the 34th Oklahoma Legislature has seen the introduction of House Bill No. 1348, "Establishing the Right of Collective Bargaining by the Professional Staff of Colleges; Providing for Recognition of Bargaining Agents for Professional Staff."<sup>58</sup> The statutory right to bargain collectively is thought to

---

<sup>57</sup>Tice, p. 291.

<sup>58</sup>House Bill No. 1348 introduced by Lindstrum, 34th Legislature, 1st session, Oklahoma, 1973.

have acted as an impetus to collective bargaining.<sup>59</sup> The competition between the American Federation of Teachers, the National Education Association, and the American Association of University Professors to represent faculty as bargaining agents will increase the utilization of collective negotiations by faculty members.<sup>60</sup>

Recently the importance of identifying institutional goals for the purpose of planning has become well known.<sup>61</sup> Such financial planning systems as Program Planning Budgeting, (P.P.B.S.), requires identification of goals as a starting point,<sup>62</sup> as does a Management Information System.<sup>63</sup> The implementation of the concept of accountability also requires goal identification.<sup>64</sup> This study will provide

information on the perceived goals of the faculty and administration of a large multi-purpose state university.

An extensive review of the literature relating to goals and collective bargaining indicates that no study has yet been undertaken examining the relationship between faculty attitudes toward collective bargaining and their perception of institutional goals. While no studies have been undertaken, literature in the field indicates that there is reason to investigate whether attitudes toward collective bargaining are related to perceptions of institutional goals. Dissatisfaction with the role of faculty in governance, which is often cited as a cause for faculty unionization, seems to have at its base the feeling that faculty should determine institutional directions, and that there is dissatisfaction with administration in this regard.<sup>65</sup> Some authors point out that conflict between administration and faculty reflects differences of opinion over future directions of growth.<sup>66</sup>

Algo Henderson and others have pointed out that collective bargaining is one model available to reach agreements on institutional direction and priorities.<sup>67</sup> This study will investigate attitudes toward collective bargaining and faculty goal perception to determine if a relationship does exist between the two.

### Definition of Terms

1. Administrators: Those administrative officers who hold positions of Director and above in the administrative hierarchy within the institution.
2. Attitude: "An attitude is a personal disposition common to individuals, but possessed to different degrees, which impels them to react to objects, situations, or propositions in a way that can be called favorable or unfavorable."<sup>68</sup>
3. Collective Negotiations: "A process in which conditions of employment are determined by agreement between representatives of an organized group of employees on the one hand, and one or more employers on the other."<sup>69</sup>
4. Consensus: The degree of agreement between administrators and faculty members on the importance of perceived institutional goals.
5. Faculty: Full-time staff holding academic rank who are not administrators.
6. Favoring collective negotiations: Scoring above +1

standard deviation above the mean on the Collective Negotiations Scale.

7. Institutional functions: The perceived actions and practices of the institution. These can be considered operational sub-goals.<sup>70</sup>
8. Institutional goals: Goals, as used in this study, refer to non-operational goals, those future states which the faculty and administrators perceive they are moving toward.<sup>71</sup>
9. Not favoring collective negotiations: Scoring below -1 standard deviation below the mean on the Collective Negotiations Scale.
10. Perception: A judgement concerning the importance of an institutional goal or the emphasis given an institutional practice on the part of a faculty member or administrator.

#### Null Research Hypotheses

- Ho<sub>1</sub> There is no significant difference of agreement on the perceived importance of institutional goals among administrators, faculty with favorable attitudes toward collective negotiations (score high on C. N. S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C. N. S.) as measured by the Institutional Goals Inventory and the Collective Negotiations Scale.
- Ho<sub>2</sub> There is no significant difference of agreement on the perceived importance of preferred institutional goals among administrators, faculty with favorable attitudes toward collective negotiations (score high on C. N. S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C. N. S.) as measured by the Institutional Goals Inventory and the Collective Negotiations Scale.

<sup>71</sup>Amita Etzioni, Modern Organizations (Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1964), p. 7.

- Ho<sub>3</sub> There is no significant difference of agreement on the perceived emphases given an institutional practice among administrators, faculty with favorable attitudes toward collective negotiations (score high on C.N.S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C.N.S.) as measured by the Institutional Functioning Inventory-University of Oklahoma Modification, and the Collective Negotiations Scale.
- Ho<sub>4</sub> There is no significant relationship between the selected biographic-career characteristics of tenure, age, sex, rank, terminal degree status, university-wide committee membership, faculty senate membership, and faculty attitudes toward collective negotiations as measured by the Collective Negotiations Scale.

#### Limitations of the Study

1. The study was limited to a sample of the full-time faculty and administrators of a large multipurpose state university.
2. The results of the study are limited to the general time period in which the study was conducted.

## CHAPTER II

### THEORETICAL FRAMEWORK AND RESEARCH

#### Theoretical Framework

The works of March and Simon, and Charles Perrow provide the basic theoretical framework for the study. Other organizational theorists as Thompson, McEwen, and Simon also provide support for the idea that bargaining results when goals are not shared.

March and Simon's theory of formal organizations distinguishes between two types of goals, operational and non-operational. Operational goals allow for means ends analysis, and non-operational goals require sub-goals to be operational. They also see organizational behavior as intendedly rational. March and Simon then postulate two types of decision-making processes associated with the two types of goals.

When a number of persons are participating in a decision-making process, and these individuals have the same operational goals, differences in opinion about the course of action will be resolved by predominately analytic processes, i.e. by the analysis of the expected consequences of courses of action for realization of the shared goals. When either of the postulated conditions is absent from the situation (when goals are not shared, or when

the shared goals are not operational and the operational subgoals are not shared), the decision will be reached by predominately bargaining processes.<sup>72</sup>

Charles Perrow points out that a major impediment to the understanding of organizational behavior has been the lack of adequate distinction between goals. He points out that the most relevant goals in understanding behavior are not "official goals" but "operative" goals. Official goals are general purposes put forth in charters and public statements, official goals are purposely vague and general. Operative goals designate ends sought through operating policies, they are means to official goals. "Operative" goals reflect choices among competing values. The operative goals are tied directly to group interests and may or may not support official goals. "The operative goals will be shaped by the dominant groups, reflecting the imperatives of a particular task area that is most critical."<sup>73</sup>

Thompson and McEwen note that goals of an organization should not be viewed as constants, and that reappraisal of goals is a recurrent problem in an organization. They also note reappraisal of goals is more difficult as the product is less tangible. The setting of goals is seen essentially

---

<sup>72</sup>March and Simon, Organizations, p. 156.

<sup>73</sup>Charles Perrow, "The Analysis of Goals in Complex Organizations", American Sociological Review, 26(1961), pp. 854-866.

as a problem of defining desired relationships between an organization and its environment. The organization can survive only if it adjusts to its environment. Bargaining is noted to provide environmental control over organizational goals and reduces the probability of arbitrary unilateral goal setting. One of the most important parts of the environment is seen to be the organization members, collective bargaining reviews the basis for continued support of the organization by organization members. "Bargaining appears, therefore, to involve the actual decision process. To the extent that the second parties support is necessary, he is in a position to exercise a veto over final choice of alternative goals and hence takes part in the decision."<sup>74</sup>

Simon presents the notion of goals as constraint sets. According to Simon, organizational goals can be viewed as widely shared constraint sets. One way to develop widely shared constraint sets is through bargaining.<sup>75</sup>

Victor Thompson theorizes that most of the conflict in organizations is due to differing perceptions of reality between specialists and those in hierarchical positions, and that such conflict can be resolved by formal bargaining if

conflict was recognized as legitimate.<sup>76</sup> A number of behavioralist goal theorists view goal determination as a result of continuing conflict and processes of bargaining.<sup>77</sup>

### Related Research

While theorists such as Parsons<sup>78</sup> and Simon<sup>79</sup> have noted that the concept of goals is central to the study of organizational behavior, there has been relatively little study of organizational goals or goal formulation in higher education.

In 1961 Charles Perrow stated that social scientists have given little attention to the study of goals of large-scale organizations.<sup>80</sup> One year later, in his seminal volume, The American College, Nevitt Sanford emphasized that "it is one of our tasks to study goals, discovering what we can about their origins . . . means through which they can be reached and their consequences . . ." <sup>81</sup> While response to Sanford's challenge has been slow, a number of empirical

studies have been undertaken concerning institutional goals in higher education.

In 1964 Gross and Grambsch surveyed 68 American universities in an attempt to determine what the goals of universities were, as perceived by administrators and faculty members, and the differences between these perceptions. This study utilized an inventory of 47 goal statements to which faculty and administrators were to attach a relative emphasis of importance. Gross and Grambsch found, in part, that faculty and administrators agreed in their views of the relative emphasis placed on 34 of the 47 goals, with administrators giving higher ratings to 13 perceived goals. This study was published in 1968 under the auspices of the American Council on Education.<sup>82</sup>

Two other groups were active in 1968 studying goals in institutions of higher education. The Bureau of Applied Social Research at Columbia University sent to every college academic dean a survey form containing 64 goal statements asking the deans to indicate to what extent their college "emphasized" each goal. The major finding of this study was that different goals are more emphasized at different types of institutions.<sup>83</sup> The Council for Advancement of

<sup>82</sup>Gross and Grambsch, University Goals and Academic Power.

<sup>83</sup>Patricia Nash, "The Goals of Higher Education--An Empirical Assessment," (New York: Columbia University, Bureau of Applied Social Research, 1968). (Mimeographed.)

Small Colleges conducted an analysis of college goals as an aspect of their "Project Student Development". The faculty and administrators of the 13 colleges which participated were asked to rank characteristics of graduates in terms of their perceived importance to the graduates of the respective institutions. Based on the results, these colleges were grouped into four categories: Christ-centered, Intellectual-Social-centered, personal-social-centered, and professional-vocational-centered.<sup>84</sup>

In 1969 the Danforth Foundation, noting that small private colleges had been excluded from the Gross and Grambsch study, financed the administration of the Gross and Grambsch instrument to selected administrators and faculty of fourteen participating colleges. One of the findings of this study was that faculty at small liberal arts colleges felt that the major decision about goals were made by administrators, but generally administrators and faculty perceived the relative importance of goals the same way.<sup>85</sup> The latter part of 1969 saw the development of the preliminary Institutional Goals Inventory by Norm Uhl. Sponsored by the National Laboratory for Higher Education, a preliminary Institutional

Goals Inventory Instrument was developed. This instrument was developed to provide goal statements which could be utilized to test the value of the Delphi method. With repeated administrations of the inventory, it was found that beliefs about goals did generally converge.<sup>86</sup>

In 1971 Philip Swarr utilized the Gross and Grambsch instrument in the study of four undergraduate institutions in New York. While the Danforth and Gross and Grambsch study utilized ranked scores for analysis, this study utilized mean scores. One of the major findings of this study was that administrators who are perceived to have more power than the faculty were more satisfied than are faculty with the degree of importance they perceive being given goals at their institution.<sup>87</sup>

In 1972 the largest use of the Institutional Goals Inventory yet attempted was undertaken by a Joint Committee on the Master Plan for Higher Education in California. This project was conducted by the Educational Testing Service under the direction of Richard E. Peterson. This study of 116 California institutions will serve as a norming study

for the I.G.I. At this point in time, only a preliminary and incomplete draft of the survey is available, but the report indicated the value of the I.G.I. as an instrument to identify and clarify goal priorities.<sup>88</sup>

Collective bargaining in higher education has also suffered from relatively little investigation. Part of the reason for the lack of study is that collective bargaining did not become a part of higher education until the mid 1960's. Much of the present information on collective bargaining is polemical or descriptive with very little empirical evidence available. Most research conducted to date has investigated the relationship between demographic variables and attitudes toward collective bargaining. The composite that emerges from these studies is that the professor having favorable attitudes toward collective bargaining is a young male, non-protestant of middle-class

---

<sup>88</sup>Richard E. Peterson, Goals for California Higher Education: A Survey of 116 Academic Communities (Berkeley, Calif.: Educational Testing Service, 1972). (A Preliminary and incomplete draft.)

origin with liberal and democratic political preferences.<sup>89</sup>

The literature on collective bargaining abounds with statements that autonomy from external control, institutional research support, teaching load required, amount of financial support, and amount of faculty participation in governance are related to faculty attitudes toward unionization.<sup>90</sup> No research has, however, been completed yet that confirms these statements. Very little has been done in the identification of institutional variables which influence faculty attitudes toward collective bargaining. Institutional

size, based on F. T. E., was found related to the percentage of union members on a campus in a study conducted in the California State College System. Those institutions with over nine-thousand students were found to have a greater percentage of union members than those with less. This same study indicated that rate of institutional growth did not seem related to the prevalence of faculty unionization. It was also found that those institutions having a more bureaucratic structure had a greater prevalence of faculty union membership.<sup>91</sup>

In the studies related to faculty attitudes toward collective negotiations, the research indicated that those with lower salaries, lower rank, and without tenure who have low opinions of administrative personnel and little sense of power have more favorable attitudes toward collective negotiations. The greater dissatisfaction of the faculty with their institutional environment, the greater is the probability of favorable attitudes toward collective negotiations.<sup>92</sup>

Moore, The Attitudes of Pennsylvania Community College Faculty Toward Collective Negotiations in Relation to Their Sense of Power and Sense of Mobility.

### Summary

This chapter gives the theoretical framework upon which the research hypotheses of the study are founded and a summation of related research in the area of collective bargaining and institutional goals.

The concept of institutional goals has been central to the work of such organizational theorists as March, Simon, Perrow, Thompson, and McEwen. March and Simon state that bargaining results when goals are not shared by members of an organization. Perrow notes that goals are shaped by dominant groups in an organization through competition. Thompson and McEwen view goals as constraint sets and bargaining as a decision process in goal selection. Simon notes that widely shared constraint sets can be developed through bargaining.

The study of institutional goals and collective bargaining in higher education is in its infancy. The last decade has seen increased interest in the study of institutional goals. In 1962 Nevitt Sanford noted the need for increased study of institutional goals in higher education. Gross and Grambsch, in 1968, surveyed the faculty of 68 American universities upon their respective institutions goals and determined that there was a great deal of consensus between administrators and faculties on the importance attached to a goal. The Bureau of Applied Research at Columbia University and the Council for the Advancement of Small Colleges,

and the Danforth Foundation have also surveyed higher education institutions as to their goals. In 1969 Norman Uhl, sponsored by the National Laboratory for Higher Education, developed a preliminary Institutional Goals Inventory. This instrument has been refined by Richard Peterson and is being developed by the Educational Testing Service for commercial use to assist institutions of higher education in identifying their constituents perceptions of the institutions goals.

Collective bargaining in higher education is of recent vintage. The study of this phenomenon has, to date, been very limited. The studies completed have principally investigated demographic variables and attitudes toward collective bargaining. Most of the literature in the field is polemical. Many of the claimed reasons for collective bargaining have not been investigated empirically. In particular, institutional variables that could influence faculty attitudes toward bargaining have been largely ignored.

The relationship between the perception of institutional goals and attitudes toward collective bargaining is being first examined in this study. It is hoped that further endeavors to identify institutional variables affecting faculty attitudes toward collective bargaining will result from this initial endeavor.

CHAPTER III  
RESEARCH DESIGN

Restatement of the Problem and Hypotheses

The problem of this research is: what are the relationships between faculty members and administrators perceptions of institutional goals and functions and faculty attitudes toward collective bargaining?

More specifically, this study seeks answers to the following questions:

1. What attitudes do university faculty members hold toward collective negotiations?
2. Is the degree of agreement between faculty members and administrators on the importance of perceived institutional goals significantly related to attitudes toward collective negotiations?
3. Is the degree of agreement between faculty members and administrators on the importance of perceived institutional preferred goals significantly related to attitudes toward collective negotiations?
4. Is the degree of agreement between faculty members and administrators on the emphasis given to a perceived function related to attitudes toward collective negotiations?
5. Are certain biographic-career characteristics related to favorable attitudes toward collective negotiations?

The proposition that there is a relationship between faculty and administrators perceptions of institutional goals and functions and faculty attitudes toward collective negotiations is tested through the following null hypotheses:

Ho<sub>1</sub> There is no significant difference of agreement on the perceived importance of institutional goals among administrators, faculty with favorable attitudes toward collective negotiations (score high on C.N.S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C.N.S.) as measured by the Institutional Goals Inventory and the Collective Negotiations Scale.

Ho<sub>2</sub> There is no significant difference of agreement on the importance of preferred institutional goals among administrators, faculty with favorable attitudes toward collective negotiations (score high on C.N.S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C.N.S.) as measured by the Institutional Goals Inventory and the Collective Negotiations Scale.

Ho<sub>3</sub> There is no significant difference of agreement on the perceived emphases given an institutional practice among administrators, faculty with favorable attitudes toward collective negotiations (score high on C.N.S.) and faculty who do not have favorable attitudes toward collective negotiations (score low on C.N.S.) as measured by the Institutional Functioning Inventory-University of Oklahoma Modification and the Collective Negotiations Scale.

Ho<sub>4</sub> There is no significant relationship between selected biographic-career characteristics of tenure, age, sex, rank, terminal degree status, university-wide committee membership, faculty senate membership, and faculty attitudes toward collective negotiations as measured by the Collective Negotiations Scale.

### Description of the Sample

The population defined for this investigation is the administrators and full-time faculty of a large multi-purpose state university. A sample size of three-hundred full-time faculty was selected. This represents fifty percent of the full-time faculty of the institution sampled during the 1972-1973 academic year. The faculty for the sample were selected on a random basis utilizing a list of random numbers for the selection process. No attempt was made to make the sample proportional to discipline areas or faculty academic ranks, but representatives of every discipline and rank were included among the sample respondents. (See Appendix A) A total of two-hundred-ten faculty members voluntarily responded to the questionnaire. This response represents a 70 percent participation on the part of the randomly selected faculty. The second group sampled was the administrative officers as defined by the University in the faculty register who were at the Directors level and above. Fifty administrators were sampled. A total of 35 administrators responded voluntarily to the questionnaire. This represents a 70 percent participation on the part of

the administrators. The non-respondents were found to be similar to the respondents demographically. (See Appendix A)

### Description of the Instruments

#### Institutional Goals Inventory

The Institutional Goals Inventory was developed for the Educational Testing Service by Richard E. Peterson and Norman Uhl in 1970. The instrument contains twenty scales, each measuring a particular goal area. Each scale has four questions and allows for five responses from "of extremely high importance" to "of no importance". Each question allows for a response in an "is" and "should be" column, thus measures of the perceived importance of a goal area and the preferred importance of a goal area are obtainable.

The twenty scales within the Institutional Goals Inventory are described as follows by the E.T.S.:

(1) Academic Development. The first kind of institutional goal covered by the I.G.I. has to do with the acquisition of general and specialized knowledge, preparation of students for advanced scholarly study, and maintenance of high intellectual standards on the campus.

(2) Intellectual Orientation. While the first goal area had to do with acquisition of knowledge, this second general goal of instruction relates to an attitude about learning and intellectual work. Likewise, some conception of the scholarly, rational, analytical, inquiring mind has perhaps always been associated with the academy or university. In the I.G.I., Intellectual Orientation means familiarity

with research and problem solving methods, the ability to synthesize knowledge from many sources, the capacity for self-directed learning, and a commitment to life-long learning.

(3) Individual Personal Development. In contrast to most of the goals covered by the I. G. I., this one was set forth and has found acceptance only in roughly the past decade. It was conceived by psychologists and has found its main support among professional psychologists, student personnel people, and other adherents of "humanistic psychology" and the "human potential movement". As defined in the I. G. I., Individual Personal Development means identification by students of personal goals and development of means for achieving them, enhancement of sense of self-worth and self-confidence, self-understanding, and a capacity for open and trusting interpersonal relations.

(4) Humanism/Altruism. More or less explicit discernment of this concept may also be of fairly recent vintage, although variously construed it has long had its place in the catalogues of liberal arts and church-related colleges. It reflects the belief (in many quarters) that a college education should not mean just acquisition of knowledge and skills, but that it should also somehow make students better people--more decent, tolerant; responsible, humane. Labeled Humanism/Altruism, this fundamental ethical stance has been conceived in the I. G. I. as respect for diverse cultures, commitment to working for world peace, consciousness of the important moral issues of the time, and concern about the welfare of man generally.

(5) Cultural/Aesthetic Awareness. Some conception of cultural sophistication and/or artistic appreciation has traditionally been in the panoply of goals of many private liberal arts colleges in America, perhaps especially liberal arts colleges for women. In the I. G. I., the conception entails heightened appreciation of a variety of art forms, required study in the humanities or arts, exposure to forms of non-Western art, and encouragement of active student participation in artistic activities.

(6) Traditional Religiousness. This goal is included

in the I. G. I. in recognition of the fact that a great many colleges and universities in America are explicitly religious in their control, functioning, and goals, while many more retain ties of varying strength with the Roman Catholic Church or, more often, a Protestant denomination. Traditional Religiousness, as conceived in the I. G. I., is meant to mean a religiousness that is orthodox, doctrinal, usually sectarian, and often fundamental-- in short, traditional (rather than "secular" or "modern"). As defined in the I. G. I., this goal means educating students in a particular religious heritage, helping them to see the potentialities of full-time religious work, developing students' ability to defend a theological position, and fostering their dedication to serving God in everyday life.

(7) Vocational Preparation. While universities have perhaps always existed in part to train individuals for occupations, this role was made explicit for American public higher education by the Land Grant Act of 1862, and then extended to a broader populace by the public two-year college movement of the 1950's and 1960's. As operationalized in the I. G. I., this goal means offering: specific occupational curricula (as in accounting or nursing), programs geared to emerging career fields, opportunities for retraining or upgrading skills, and assistance to students in career planning. It is important to distinguish between this goal and the next one to be discussed, Advanced Training, which involves graduate-level training for various professional careers.

(8) Advanced Training. This goal, as defined in the I. G. I., can be most readily understood simply as the availability of post-graduate education. The items comprising the goal area have to do with developing/maintaining a strong and comprehensive graduate school, providing programs in the "traditional professions" (law, medicine, etc.), and conducting advanced study in specialized problem areas--as through a multi-disciplinary institute or center.

(9) Research. According to most historians of the matter, the research function in the American univer-

sity was a late 19th century import of the German concept of the university as a center for specialized scientific research and scholarship. Attempting to embrace both "applied" or "problem-centered" research as well as "basic" or "pure" research, the Research goal in the I. G. I. involves doing contract studies for external agencies, conducting basic research in the natural and social sciences, and seeking generally to extend the frontiers of knowledge through scientific research.

(10) Meeting Local Needs. While in times past some institutions of higher learning must certainly have functioned in some way to meet a range of educational needs of local individuals and corporate bodies, the notion of Meeting Local Needs (in the I. G. I.) is drawn primarily from the philosophy of the post-war (American) community college movement. Which is not to say, as will be seen, that this is a goal that four-year institutions cannot share. In the I. G. I. Meeting Local Needs is defined as providing for continuing education for adults, serving as a cultural center for the community, providing trained manpower for local employers, and facilitating student involvement in community-service activities.

(11) Public Service. While the previous goal focused on the local community, this one is conceived more broadly--as bringing to bear of the expertise of the university on a range of public problems of regional, state, or national scope. As it is defined in the I. G. I., Public Service means working with governmental agencies in social and environmental policy formation, committing institutional resources to the solution of major social and environmental problems, training people from disadvantaged communities, and generally being responsive to regional and national priorities in planning educational programs.

(12) Social Egalitarianism has to do with open admissions and meaningful education for all admitted, providing educational experiences relevant to the evolving interests of (1) minority groups and (2) women, and offering remedial work in basic skills.

(13) Social Criticism/Activism. This is a higher

educational goal conception that has been put forth only in the past five years or so. Owing its origin almost entirely to the student protest movement of the 1960's, the central idea of the goal is that the university should be an advocate or instrument for social change. Specifically in the I. G. I., Social Criticism/Activism means providing criticism of prevailing American values, offering ideas for changing social institutions judged to be defective, helping students to learn how to bring about change in American society, and being engaged, as an institution, in working for basic changes in American society.

(14) Freedom. Some of the standard dictionary definitions include: civil liberty, as opposed to subjection to an arbitrary or despotic government; exemption from external control, interference, regulation, etc.; personal liberty, as opposed to bondage or slavery; autonomy; relative self-determination. Freedom, as an institutional goal bearing upon the climate for and process of learning, is seen as relating to all the above definitions. It is seen as embracing both "academic freedom" and "personal freedom," although these distinctions are not always easy to draw. Specifically in the I. G. I., Freedom is defined as protecting the right of faculty to present controversial ideas in the classroom, not preventing students from hearing controversial points of view, placing no restrictions on off-campus political activities by faculty or students, and ensuring faculty and students the freedom to choose their own life cycles.

(15) Democratic Governance. The central notion of this goal, as here conceived, is the opportunity for participation--participation in the decisions that affect one's working and learning life. Colleges and universities in America have probably varied a good deal in the degree to which their governance is participatory, depending on factors such as nature of external control (e.g., sectarian), curricular emphases, and personalities of presidents and or other campus leaders. Most all institutions, one surmises, as they expanded during the 1950's and 1960's, experienced a diminution in participatory governance. A reaction set in in the late 1960's,

spurred chiefly by student (power) activists. As defined in the I. G. I., Democratic Governance means decentralized decision-making; arrangements by which students, faculty, administrators, and governing board members can (all) be significantly involved in campus governance, opportunity for individuals to participate in all decisions affecting them, and governance that is genuinely responsive to the concerns of everyone at the institution.

(16) Community. While community in some sense has perhaps always characterized most academic organizations, especially small ones, the more modern concept of community has risen in only the past decade in reaction to the realities of mass higher education, the "multiversity," and the factionalism and individual self-interest within the university. In the I. G. I., Community is defined as maintaining a climate in which there is faculty commitment to the general welfare of the institution, open and candid communication, open and amicable airing of differences, and mutual trust and respect among students, faculty, and administrators.

(17) Intellectual/Aesthetic Environment means a rich program of cultural events, a campus climate that facilitates student free-time involvement in intellectual and cultural activities, an environment in which students and faculty can easily interact informally, and a reputation as an intellectually exciting campus.

(18) Innovation, as here defined as an institutional goal, means more than simply having recently made some changes at the college; instead the idea is that innovation has become institutionalized, that throughout the campus there is continuous concern to experiment with new ideas for educational practice. In the I. G. I., Innovation means a climate in which continuous innovation is an accepted way of life, it means established procedures for readily initiating curricular or instructional innovations, and, more specifically, it means experimentation with new approaches to (1) individualized instruction and (2) evaluating and grading student performance.

(19) Off-Campus Learning. The elements of the I. G. I. definition of Off-Campus Learning, as a

process goal an institution may pursue, form a kind of scale. They include: (short term) time away from the campus in travel, work-study, VISTA work, etc.; arranging for students to study on several campuses during their undergraduate years; awarding degrees for supervised study off the campus; awarding degrees entirely on the basis of performance on an examination.

(20) Accountability/Efficiency is defined to include use of cost criteria in deciding among program alternatives, concern for program efficiency (not further defined), accountability to funding sources for program effectiveness (not defined), and regular submission of evidence that the institution is achieving stated goals.<sup>93</sup>

The preliminary Institutional Goals Inventory was utilized by Norman Uhl in his study, Identifying Institutional Goals. Utilizing coefficient alpha, a generalization of the Kuder-Richardson Formula 20, to measure internal consistency Uhl reported the reliability found for fourteen of the twenty scales now in the revised Institutional Goals Inventory.<sup>94</sup> These are reported in Table 1. The Goals for California Higher Education study, utilized by the Educational Testing Service for norming of the Institutional Goals Inventory, reported the reliability of the goal area

test results, e.g., church-affiliated institutions placed a greater importance on Religious Orientation than did public institutions.<sup>96</sup> (See Appendix B for specimen instrument)

<sup>96</sup>Norman Uhl, Identifying Institutional Goals, pp. 27-30.

Institutional Functioning Inventory University of  
Oklahoma Modification

The developmental work on the Institutional Functioning Inventory (I. F. I.) began early in 1967 when a group at Educational Testing Service began discussions with Earl McGrath and his associates at Teachers College, Columbia University, on developing an instrument to measure institutional vitality. By the summer of 1967 a format for the instrument had been established and twelve dimensions of institutional functions identified. In February of 1968 seventy-two college faculty were administered the experimental I. F. I.<sup>97</sup>

The University of Oklahoma Modification of the Institutional Functioning Inventory was developed by revising the Educational Testing Service Institutional Functioning Inventory to conform to the twenty goal areas of the Institutional Goals Inventory, where appropriate to the new scale existing Institutional Functioning Inventory items were used in the Institutional Functioning Inventory University of Oklahoma Modification, (I. F. I.-M). Forty-five new items were written for the I. F. I.-M. Each of the twenty inventory areas of the instrument contain six items

---

<sup>97</sup>Richard E. Peterson, John A. Centra, Rodney T. Hardnett, and Robert Linn, Institutional Functioning Inventory Preliminary Manual (Princeton, N. J.: Educational Testing Service, 1970), pp. 3-9.

for a total of one-hundred-twenty items.

The first draft of the Institutional Functioning Inventory-University of Oklahoma Modification which was developed by Herbert R. Hengst and Robert L. Lynn, was examined by eight practitioners in higher education to evaluate the appropriateness of each item to its scale. As a result, the first draft was modified. This instrument is designed to elicit perceptions of what institutional functions are.

The twenty scales within the Institutional Functioning Inventory-University of Oklahoma Modification were constructed to correspond to the twenty goal areas of the Institutional Goals Inventory. The I.F.I.-M. function areas are as follows:

1. Academic Development
2. Intellectual Orientation
3. Individual Personal Development
4. Humanism/Altruism
5. Cultural/Aesthetic Awareness
6. Traditional Religiousness
7. Vocational Preparation
8. Advanced Training
9. Research
10. Meeting Local Needs
11. Public Service
12. Social Egalitarianism
13. Social Criticism/Activism
14. Freedom
15. Democratic Governance
16. Community
17. Intellectual/Aesthetic Environment
18. Innovation
19. Off-Campus Learning
20. Accountability/Efficiency

A reliability test was conducted on the I.F.I.-M. during the Spring of 1973. A sample of thirty-eight persons, including students, faculty and administrators, was utilized. The test-retest reliability coefficients are reported in Table 3. (See Appendix C for specimen instrument.)

### Collective Negotiations Scale

The Collective Negotiations Scale, referred to as the C. N. Scale, was used to measure attitudes toward the use of collective negotiations in higher education. The C. N. Scale is a modification of a scale developed by Patrick Carlton for measuring the attitudes of North Carolina teachers toward collective negotiations.<sup>98</sup>

Carlton's scale was a thirty item, Likert-type scale designed to elicit attitudes toward collective negotiations on the part of teachers. The scale was based on three assumptions: (1) that attitudes are quantitatively identifiable and can therefore be assigned score values; (2) that attitudes lie along a continuum from strongly disfavor to equally strong favor; (3) that collective negotiations is made up of at least two complimentary facets, the negotiations process, and sufficient coercive force to assure near equality of the parties involved. These were assumed to be non-separable characteristics.<sup>99</sup>

Carlton reported that 104 items were initially written, expressing various opinions about collective negotiations. These items were then submitted to a panel

---

<sup>98</sup>Patrick Carlton, Attitudes of Certificated Instructional Personnel in North Carolina Toward Questions Concerning Collective Negotiations and Sanctions, Unpublished Doctoral dissertation, University of North Carolina, 1966.

<sup>99</sup>Ibid., p. 68

of one-hundred educators who wrote a critical analysis of them. An item analysis of the results was performed and the thirty items with the most discriminatory power were selected for the final scale. The split-half reliability of Carlton's scale was reported to be .84.

In 1970 John W. Moore modified the Carlton scale for use with higher education faculty.<sup>100</sup> The modification was accomplished primarily through word substitution, such as using the word "faculty" to replace the word "teacher", "college" to replace "school", etc. Coefficient alpha, a measure of internal consistency for the C. N. Scale as modified, was computed by Moore as an index of reliability of the scale. The process is equivalent to the Kuder-Richardson Formula 20 method for computing the reliability of a scale. The reliability coefficient was reported to be .92 for the pilot sample with a standard error of 4.39. Moore also performed an item analysis and factor analysis. These analyses lead to the elimination of five items from the original scale. Five new items were constructed and added to the remaining twenty-five items. A panel of higher education students attested to the face validity of the new

---

<sup>100</sup>John W. Moore, The Attitudes of Pennsylvania Community College Faculty Toward Collective Negotiations in Relation to Their Sense of Power and Sense of Mobility.

scale. The reliability index, coefficient alpha, was again computed on the new C.N. Scale and found to be .96 and the standard error of measurement was 4.50. The C.N. Scale, as modified by Moore, was utilized in this study to measure attitudes toward collective negotiations. (See Appendix D for specimen instrument.)

#### Procedure for Collection of Data.

Permission to conduct the study was requested from the President and the Chairman of the Faculty Senate of the institution sampled. After a review of the prospectus of this study, approval and endorsement was granted by the President and the Chairman of the Faculty Senate.

The first phase in data collection was to obtain a current listing of faculty and administrative officers and staff of the University. From this list, three-hundred faculty were identified utilizing a table of random numbers. Proceeding from the first faculty member selected at random through the list of randomly selected faculty members, each individual was contacted via phone to confirm their current status and availability as a sample subject.

The second phase in the data collection process involved sending a letter explaining the purpose of the study and the three questionnaires to the randomly selected sample of faculty and the identified administrative officers

and staff in April of 1973. One follow-up letter was sent during May of 1973 to faculty members and administrators who had not responded to the earlier request. (See Appendix E for specimen letters.)

### Statistical Methodology

The principle interest of the study is the relationship between attitudes toward collective negotiations and perception of institutional goals, preferred institutional goals and institutional functions. A four stage analysis of the data was necessitated.

The first stage of analysis dealt with the data obtained from the Collective Negotiations Scale, and had for its purpose the determination of group one and group three to be compared in the study. Group one were faculty having favorable attitudes toward collective negotiations, scoring one standard deviation above the mean on the Collective Negotiations Scale. Group three were those faculty having unfavorable attitudes toward collective negotiations, scoring one standard deviation below the mean on the Collective Negotiations Scale. Group two was designated to be the administrator respondents. One standard deviation above and below the mean on the Collective Negotiations Scale was selected to determine group one and three membership so as to maximize group

differences based on the Collective Negotiations Scale scores. To compute the total score for each respondent, the mean score of the respondents, and the standard deviation of the respondents on the Collective Negotiations Scale, the University of California Biomedical Program, BMD 01D, was utilized.<sup>101</sup> This program computes simple averages and measures of dispersion. The following measures were computed by this program on the Collective Negotiations Scale: mean, variance, standard deviation, standard error of mean, and range. This program, and all other computer programs used in this study, are on file at the Merrick Computer Center of the University of Oklahoma.

The second stage of analysis dealt with data obtained by the Institutional Goals Inventory. A multiple analysis of variance was computed for the three groups across all goal areas of the instrument. This procedure was used to determine if there was a systematic difference in variance among the three groups of the sample over the twenty goal areas in both the "is" and "should be" components of the instrument. If systematic variance is found, a one-way analysis of variance will be computed on each goal scale to determine on what goal scales the variance

---

<sup>101</sup>W. J. Dixon, (ed.), Biomedical Computer Program (Berkeley, Calif.: University of California Press, 1970), pp. 42-49.

occurred. Individual comparisons will then be computed, using the Scheffé method, on those goal scales where significant differences were found, in order to determine which group was varying. This procedure provides information as to whether or not there was significant group differences in the perception of the importance attached to perceived institutional goals, "is" component of the instrument, and preferred institutional goals, "should be" component of the instrument.

The University of Oklahoma Multiple Analysis of Variance Program was utilized for some of the above computations.<sup>102</sup> This program performs univariate and multivariate analysis of variance, analysis of covariance, and of regression. It provides an exact solution in the orthogonal or non-orthogonal case. Options in the program include single or multiple degree of freedom contrasts in the main effects or interactions, transformations of variables, and orthogonal polynomial contrasts with equal or unequally spaced points. The program also provides for reanalysis with different criteria, covariates, contrasts, and models. The following measures were computed by this program for the Institutional Goals Inventory responses for

---

<sup>102</sup> Elliot Cramer and L. L. Thurston, O. U. Manova Program (Chapel Hill, N.C.: Psychometric Laboratory, University of North Carolina, n.d.).

both the "is" and "should be" components of the instrument: means and standard deviations for each group on each scale, multiple anova, a test of significance using approximate F test for multivariate analysis of variance, Univariate F tests over all goal scales, the sum of the squares, degrees of freedom, mean squares within, and significance level. The Scheffé method for unequal cells was hand computed for those goal scales where significant group variance was found.

The third stage of analysis was to determine if there were significant group differences on the perceived emphasis placed on institutional functions. The same procedures, computer programs, and computations were used in this stage as in the previous stage of analysis on the data obtained from the Institutional Functioning Inventory-University of Oklahoma Modification.

The fourth stage of analysis dealt with data obtained from the administration of the Collective Negotiations Scale and the career-demographic information on sample members. This stage determined if there was any significant relationship between attitudes toward collective negotiations and the selected demographic variables of tenure, age, sex, rank, university-wide committee membership, faculty senate membership and terminal degree status.

The relationship between the demographic variables and the Collective Negotiations Scale was computed by utilizing the Pierson Product Moment correlation. The University of California Biomedical Program, BMD 03D, was utilized for correlation coefficient computation.<sup>103</sup>

A simple percentage analysis of the response patterns to the Collective Negotiations Scale was completed.

### Summary

The purpose of this chapter has been to present a description of the manner in which the problem and hypotheses were investigated. The problem elements were identified as faculty attitudes toward collective negotiations and their perceptions of institutional goals, preferred institutional goals, and institutional functions.

Three instruments were utilized to collect data on the variables, the Institutional Goals Inventory, the Institutional Functioning Inventory-University of Oklahoma Modification, and the Collective Negotiations Scale. The instruments were distributed to a randomly selected sample of three-hundred faculty and fifty administrators. Seventy percent of the sample responded.

---

<sup>103</sup>Dixon, Biomedical Computer Program, pp. 60-66.

The faculty respondents were dichotomized based on their Collective Negotiations Scale scores. The two faculty groups were characterized as those faculty having favorable attitudes toward collective negotiations, and those faculty having unfavorable attitudes toward collective negotiations. The two faculty groups and the administrator group were then compared on the basis of their scores on the Institutional Goals Inventory and the Institutional Functioning Inventory-University of Oklahoma Modification.

A multiple analysis of variance was computed for the three groups across all goal and function scales of the instruments to determine if there was systematic difference in variance among the three groups. If systematic variance is found, a one-way analysis of variance will be computed on each goal and function scale to determine on what scales significant variance occurred. The Scheffé method will be utilized for those scale areas where significant variance was found, to determine how the groups were varying. A Pierson Product Moment correlation was computed to determine the relationship between the selected demographic variables of the respondent faculty and their attitudes toward collective negotiations, based on Collective Negotiations Scale scores. A simple analysis of

response patterns to the Collective Negotiations Scale was completed. The above analytical procedures provided the data for testing the hypotheses of the study.

## CHAPTER IV

### PRESENTATION AND ANALYSIS OF THE DATA

The findings and statistical analyses given in this chapter is based upon data obtained from the administration of: (1) the Collective Negotiations Scale; (2) the Institutional Goals Inventory; and (3) the Institutional Functioning Inventory-University of Oklahoma Modification.

Collective Negotiations Scale scores were utilized to divide and dichotomize the faculty respondents into two groups. Those faculty scoring one standard deviation above the mean on the C.N.S. were designated as having favorable attitudes toward collective negotiations. Those faculty scoring one standard deviation below the mean on the C.N.S. were designated as having unfavorable attitudes toward collective negotiations. (See Table 4)

The three groups, (1) those faculty having favorable attitudes toward collective negotiations, (2) administrators, (3) those faculty having unfavorable attitudes toward collective negotiations, constituted the three test groups. The groups were compared on the data obtained from the administration of the Institutional Goals Inventory for both the perceived goal and preferred goal components, and

the Institutional Functioning Inventory. The data obtained was arranged so that the statistical analyses described in Chapter III could be performed. All hypotheses were tested by using the Approximate F Test for multiple variate analysis of variance, or the Pierson Product Moment Correlation coefficient. The Approximate F Test for multiple variate analysis of variance was used to test  $H_{01}$ ,  $H_{02}$ , and  $H_{03}$ . The Pierson Product Moment Correlation coefficient was used to test  $H_{04}$ . A confidence level of 0.05 was used throughout to test the significance of difference. The actual levels of significance achieved are reported in the appropriate tables.

Table 4

ADMINISTRATOR AND FACULTY GROUPS AS DEFINED  
BY THE COLLECTIVE NEGOTIATIONS SCALE

GROUP	$\bar{x}$	SD	+1 SD	-1 SD
Group Two-Administrators	73.76	16.26	90.02	57.50
All Respondent Faculty	79.20	17.40	96.60	61.80
Group One- Faculty Scoring +1 SD	106.41	5.33	111.74	101.08
Group Three- Faculty Scoring -1 SD	58.50	12.11	70.61	46.39

The first null hypothesis was: There is no significant difference of agreement on the perceived importance of institutional goals among administrators, faculty with favorable attitudes toward collective negotiations, and

faculty who do not have favorable attitudes toward collective negotiations as measured by the Collective Negotiations Scale. The testing of this hypothesis was accomplished through comparing the test groups on the basis of their scores on the perceived goals component of the Institutional Goals Inventory; Utilizing the Approximate F Test to test significance, the hypothesis was significant at the .001 level, and thus rejected. (See Table 5) The three groups differed significantly in their perceptions of the importance

2.136	40	146	.001

of institutional goals. Table 6 provides a comparison of the grand mean and group means for each goal area of the instrument.

Because a significant difference was found among the groups on their perceptions of the importance attached to institutional goals, Univariate F Tests were computed to determine over which of the twenty goal area scales significant differences occurred. It was found that there were significant differences among the groups at the .05 level

\*Significant at .05 level

On those goal area scales where the Univariate F test indicated a significant difference among the groups,

a Scheffé Post Hoc comparison test was conducted to determine which of the three groups was differing significantly from each other. Table 8 summarizes the Scheffé test findings indicating in which group comparisons, the critical value was exceeded. Group One, those faculty having favorable attitudes toward collective negotiations, were found to score lower than group two, the administrators, on the Institutional Goals Inventory perceived goals component over seven goal area scales: Academic Development, Humanism/Altruism, Advanced Training, Research, Freedom, Democratic Governance, and Community. Group One scored lower than Group Three, those faculty with unfavorable attitudes toward collective negotiations, on only one goal area scale, that of freedom.

Table 8

FINDINGS OF SCHEFFÉ TEST  
PERCEIVED GOAL AREA COMPARISONS BETWEEN GROUPS

Goal Area	1<2	1<3	2<1	2<3	3<1	3<2
Academic Development	x					
Humanism/Altruism	x					
Advanced Training	x					x
Research	x					
Social Egalitarianism				x		
Freedom	x	x				
Democratic Governance	x					
Community	x					
Group One: Those faculty with favorable attitudes toward collective negotiations						
Group Two: Administrators						
Group Three: Those faculty with unfavorable attitudes toward collective negotiations						

The administrator group scored lower than Group Three on the Social Egalitarianism scale, but higher than Group One on the Advanced Training Scale.

Faculty with favorable attitudes toward collective negotiations were found to vary significantly from administrators, while those faculty who have unfavorable attitudes toward collective negotiations did not vary significantly in their perception of the importance attached to an institutional goal area. In every instance, Group One scored lower than Group Two on the scales tested. Faculty who favor collective negotiations do not perceive the university to be placing as great an emphasis on six of the goal areas tested as do the administrator group.

The second null hypothesis was: There is no significant difference of agreement on the importance of preferred institutional goals among administrators, faculty with favorable attitudes toward collective negotiations, and faculty who do not have favorable attitudes toward collective negotiations as measured by the Institutional Goals Inventory and the Collective Negotiations Scale. The testing of this hypothesis was accomplished through comparing the test groups on the basis of their scores on the preferred goals component, (should be component), of the Institutional Goals Inventory. The Approximate F Test for significance

was used, the hypothesis was significant at the .002 level, and thus was rejected. (See Table 9) The three groups differed significantly in their perception of the importance that should be attached to institutional goals. Table 10 provides a comparison of the grand mean and group means for each goal area of the preferred goal component of the instrument.

Table 9

APPROXIMATE F TEST RESULTS FOR THE  
INSTITUTIONAL GOALS INVENTORY: PREFERRED GOALS

F	D.F.Hyp.	D.F.Err.	P Less Than
1.937	40.	146	.002

Because a significant difference was found among the groups on their perception of the importance that should be attached to an institutional goal, Univariate F Tests were computed to determine over which of the twenty goal area scales significant differences occurred. It was found that there were significant differences among the groups at the .05 level of confidence over eight goal areas: Traditional Religiousness, Vocational Preparation, Social Criticism/Activism, Freedom, Democratic Governance, Innovation, Off-Campus Learning, and Accountability/Efficiency. The Univariate F Test findings are reported in Table 11.

On those goal area scales where the Univariate F

Group One: Faculty with favorable attitudes toward collective negotiations

Group Two: Administrators

Group Three: Faculty with unfavorable attitudes toward collective negotiations

toward collective negotiations were found to score higher than Group Three, those faculty with unfavorable attitudes toward collective negotiations, on four goal area scales: Social Criticism/Activism, Freedom, Democratic Governance, and Off-Campus Learning. Those with favorable attitudes toward collective negotiations felt the institution should be placing greater emphasis on the goal areas of Social Criticism/Activism, Freedom, Democratic Governance, and Off-Campus Learning compared to the group with unfavorable attitudes toward collective negotiations. Group One scored

lower than Group Three on two goal scale areas: Traditional Religiousness and Accountability/Efficiency. Those who do not have favorable attitudes toward collective negotiations desired a greater emphasis on the institutional goal areas of Traditional Religiousness and Accountability/Efficiency than did those faculty favoring collective negotiations. Group Two, administrators, also desired that the goal area of Accountability/Efficiency be given greater emphasis than did Group One. On the one goal area scale of Accountability/Efficiency both the administrator group and unfavorable attitudes toward collective negotiations group felt the goal should receive greater emphasis than did those faculty with favorable attitudes toward collective negotiations. It is also interesting to note that on the goal scale area of Freedom those faculty favoring collective negotiations felt that it should be accorded greater emphasis than did either the administrator group or faculty group with unfavorable attitudes toward collective negotiations.

While significant difference on what importance should be attached to institutional goals occurred nine times between Groups One and Two and Groups One and Three, differences between Groups Two and Three occurred only twice. The faculty with unfavorable attitudes toward collective negotiations scored lower than the administrator

group on the goal scale areas of Innovation and Off-Campus Learning. They did not feel that these areas should be given as great an emphasis as did the administrator group.

The third null hypothesis was: There is no significant difference of agreement on the perceived emphasis given an institutional practice among administrators, faculty with favorable attitudes toward collective negotiations and faculty who do not have favorable attitudes toward collective negotiations as measured by the Institutional Functioning Inventory-University of Oklahoma Modification and the Collective Negotiations Scale. The testing of this hypothesis was accomplished through comparison of the test groups on the basis of their scores on the University of Oklahoma Modification of the Institutional Functioning Inventory. The Approximate F Test for significance was used, the hypothesis was significant at the .001 level and thus rejected. (See Table 13) The three groups differed significantly in their perception of the degree to which the

Table 13

APPROXIMATE F TEST RESULTS FOR THE  
INSTITUTIONAL FUNCTIONING INVENTORY

institution was performing in the function areas tested. Table 14 provides a comparison of the grand mean and group means for each function area of the University of Oklahoma Modification of the Institutional Functioning Inventory.

Because a significant difference was found among the groups on their perception of the emphasis being given the institutional functions tested, Univariate F Tests were computed to determine over which of the twenty functions area scales significant differences occurred. It was found that there were significant differences among the groups at the .05 level of confidence over fourteen function areas: Academic Development, Intellectual Orientation, Humanism/Altruism, Traditional Religiousness, Advanced Training, Public Service, Social Egalitarianism, Social Criticism/Activism, Freedom, Democratic Governance, Community, Intellectual/Aesthetic Environment, Innovation, and Accountability/Efficiency. The Univariate F Test findings are reported in Table 15.

On those function area scales where the Univariate F Test indicated a significant difference among the groups, a Scheffé Post Hoc Comparison Test was conducted to determine which of the three groups were differing significantly from each other. Table 16 summarizes the Scheffé test findings, indicating on what group comparisons the critical value was exceeded.

Group One: Faculty with favorable attitudes toward collective negotiations

Group Two: Administrators

Group Three: Faculty with unfavorable attitudes toward collective negotiations

faculty with unfavorable attitudes toward collective negotiations differ significantly, on the Social Egalitarianism scale the administrators scored lower.

While the administrator group and faculty group with unfavorable attitudes toward collective negotiations did not differ significantly in their perception of the emphasis being given twelve of the thirteen institutional

function areas tested, the faculty group with favorable attitudes toward collective negotiations did differ significantly. In every case the faculty group with favorable attitudes toward collective negotiations scored lower than the other two groups. The faculty with favorable attitudes toward collective negotiations did not feel that the institutional function areas of Academic Development, Intellectual Orientation, Humanism/Altruism, Traditional Religiousness, Advanced Training, Public Service, Social Egalitarianism, Social Criticism/Activism, Freedom, Democratic Governance, Community, Intellectual/Aesthetic Environment, Innovation, and Accountability/Efficiency were being given as great an emphasis as perceived by the administrator and faculty group with unfavorable attitudes toward collective negotiations.

The fourth null hypothesis was: There is no significant relationship between the selected biographic-career characteristics of tenure, age, sex, rank, university-wide committee membership, faculty senate membership, terminal degree status and attitudes toward collective negotiations as measured by the Collective Negotiations Scale. The testing of this hypothesis was accomplished through comparison of test scores of all faculty respondents on the

Collective Negotiations Scale on the basis of the selected biographic-career variables. The Pierson Product Moment Correlation Coefficient was used to test the significance at the .05 level of confidence, the hypothesis was not rejected. (See Table 17)

TABLE 17

## PIERSON PRODUCT MOMENT CORRELATION RESULTS

Variable	r Correlation	r required at .05 level
1 Age	-.068	.19
2 Rank	-.055	.19
3 Tenure	-.0733	.19
4 Terminal Degree Status	-.066	.19
5 Sex	+.075	.19
6 Faculty Senate Membership	+.084	.19
7 University-wide Committee Membership	+.046	.19

While age, rank, tenure, and terminal degree status was inversely related to collective negotiations scores, the correlation level did not reach significance. Male faculty tended to score lower than female faculty on the collective negotiations scale, but a significant correlation was not attained. The faculty who are not members of any university-wide committees and those faculty who are not members of the faculty senate tended to score higher than other faculty who were members on the Collective Negotiations Scale, but a

significant correlation level was not reached. None of the biographic-career variables tested was found significantly related to attitudes toward collective negotiations as measured by the Collective Negotiations Scale.

One of the purposes of this study was to assess the general attitude orientation of university faculty toward collective negotiations. In order to determine the receptiveness of university faculty to the use of collective negotiations in higher education, an analysis of the respondents to selected items on the Collective Negotiations Scale was undertaken.

The items were organized into three categories for the purpose of analysis: (1) items pertaining to attitudes toward collective action; (2) items pertaining to attitudes toward the use of sanctions; and (3) items pertaining to attitudes toward faculty withholding their services. The categorizations above were made on the basis of the assumption that they represent increasing levels of militancy. For purposes of clearer discussion of the faculty response patterns to the Collective Negotiations Scale, the two agreement responses of the instrument have been collapsed into one category, "agreement", and the two disagreement responses of the instrument into one category, "disagreement".

The faculty percentages of responses to each response

choice for the 15 items in the collective action category are reported in Table 18. An analysis of the faculty responses to the items indicate that university faculty are favorable disposed toward collective negotiations. Approximately 80 percent agreed that faculty should be able to organize and bargain collectively. (Item 5) Over 70 percent agreed that collective negotiations is an effective way for faculty to participate in determining the conditions of their employment. (Item 1) Fifty percent of the faculty sampled agreed that collective negotiations is a good way to unite the teaching profession into a powerful political body, (Item 16) and 61 percent felt that collective negotiations could bring greater order to education. (Item 30)

Approximately 69 percent of the faculty sampled agreed that collective negotiations is an effective way to limit the unilateral authority of the governing board, (Item 2) while only approximately 15 percent agreed that collective negotiations is an infringement of the authority of the governing board. (Item 15) Only about 37 percent thought that collectively negotiated agreements placed undesirable restrictions on the administration. (Item 17)

Approximately 47 percent agreed that collective negotiations is primarily a coercive technique that will have detrimental effects on higher education. (Item 7) A

11. I feel that the good faculty members can always get the salary they need without resorting to collective negotiations.	4.9	29.3	40.5	25.3
12. I believe that collective bargaining alias collective negotiations, is beneath the the dignity of college faculty members.	5.4	16.6	53.7	24.3

TABLE 18 (continued)

15.	I feel that collective negotiations is an infringement on the authority of the governing board and should be resisted.	2.5	12.7	63.7	21.1
16.	I think collective negotiations is a good way to unite the teaching profession into a powerful political body.	6.9	43.6	38.2	11.3
17.	I think that collectively negotiated written labor agreements place undesirable restrictions on the administration.	1.3	30.9	52.0	10.7
18.	I think collective negotiations can provide a vehicle whereby faculty members gain greater on-the-job dignity and independence in performing their functions.	10.2	44.9	30.7	14.2
19.	I believe the many leaders in the drive for collective negotiations are power seekers who do not have the best interests of education at heart.	8.4	36.5	43.8	11.3
20.	The local faculty organization should seek to regulate standards for hiring of new faculty members.	10.2	47.8	32.2	9.8
28.	I feel that it is unwise to establish educational policies and practices through collective negotiations.	12.7	28.3	50.7	8.3
30.	I think collective negotiations can bring greater order and system to education.	8.8	52.2	28.3	10.7

smaller number, 41 percent, agreed that it was unwise to establish educational policies and practices through collective negotiations. (Item 28)

Fifty-five percent agreed that collective negotiations can provide a vehicle where faculty can gain greater on-the-job dignity and independence. (Item 18) Only 22 percent agreed that collective negotiations is below the dignity of faculty members. (Item 12) A larger number, 34 percent, agreed that good faculty members can always get the salary they need without resorting to collective negotiations. (Item 11)

Faculty responses to items pertaining to the utilization of sanctions are reported in Table 19. Faculty responses to the items in the use of sanctions category seem to indicate that university faculty have favorable attitudes toward the use of a number of forms of sanctions. Over 73 percent agreed that faculty have a right to impose sanctions on governing boards under certain circumstances. (Item 21) Approximately 86 percent agreed that when a governing board denies the requests of the faculty, faculty have a right to present those facts to the public and their professional associates. (Item 29) Over 78 percent agreed that faculty organizations at local, state, and national levels should publicize unfair practices by a governing board through various mass media. (Item 6)

TABLE 19

OF THE COLLECTIVE NEGOTIATIONS SCALE  
CATEGORIZED AS MEASURES OF  
ATTITUDES TOWARD SANCTIONS

Item Number	Percentages			
	AS	A	D	DS
6. Faculty organizations at local, state, and national levels should publicize unfair practices by a governing board through the media such as TV, radio, newspapers, and magazines.	27.5	41.2	24.0	7.3
21. I think faculty members have a right to impose sanctions on governing boards under certain circumstances.	13.9	64.2	17.9	4.0
22. I think that sanctions are a step forward in acceptance of faculty responsibility for self-discipline and for insistence upon conditions conducive to an effective program of education.	11.3	44.8	34.5	9.4
23. I believe sanctions are a means of improving educational opportunities and eliminating conditions detrimental to professional service.	10.3	48.3	32.5	8.9
24. I believe that censure by means of articles in professional association journals, special study reports, newspapers, or other mass media is a legitimate technique for faculty use.	17.6	54.6	22.9	4.9

TABLE 19 (continued)

27.	I believe that any faculty sanction or other coercive measure is completely unprofessional.	10.2	19.5	49.8	20.5
29.	I believe that when the governing board denies the requests of the faculty, the faculty has a right to present the facts to the public and to their professional associates employed in other colleges.	27.0	59.2	12.3	1.5

---

Nearly 59 percent agreed that sanctions are a means of improving educational opportunities and eliminating conditions detrimental to professional service (Item 23).

Approximately 56 percent agreed that sanctions are a step forward in the acceptance of faculty responsibility for self-discipline and for the insistence upon conditions conducive to effective educational programs. (Item 22)

Seventy-two percent agreed that certain forms of censure were legitimate techniques for use by faculty (Item 24). Only 29 percent believed that faculty sanctions or other coercive measures were completely unprofessional (Item 27).

An analysis of the items pertaining to the withholding of faculty services indicated that such militant and severe action is viewed unfavorably by the majority of

university faculty. The percentages of responses to each item in this category appear in Table 20.

Fifty-three percent agreed that faculty members should be able to withhold services when a satisfactory agreement between their organization and the governing board cannot be reached. (Item 3) Approximately 54 percent agreed that faculty services were not so necessary to the public welfare as to necessitate the forfeiture of the right of faculty to strike. (Item 26) Over the question on the position that faculty as public employees should not strike, the faculty was evenly divided. (Item 25)

The majority of the faculty sampled felt that collective negotiations should omit the threat of withholding services. (Item 4) Approximately 62 percent agreed that faculty members should not strike in order to enforce their demands. (Item 10)

Fifty-two percent agreed that strikes, sanctions, boycotts, mandated arbitration or mediation are improper procedures to be used by public university faculty members. (Item 13) Fifty-one percent felt that a faculty member cannot withhold his services without violating professional ethics and trust. (Item 14) Approximately 80 percent felt that strikes on the part of faculty members are an undesirable aspect of collective negotiations. (Item 8)

### Summary

This chapter presents the statistical analysis and findings of the data collected through the administration of the instruments described in Chapter III. The chapter deals in turn with each of the four hypotheses and a simple analysis of response patterns to the Collective Negotiations Scale. The multiple variate analysis of variance was used to test the first three hypotheses and the Univariate F Test and Scheffé Post Hoc Comparison test for explanatory purposes. The fourth hypothesis was tested through the Pierson Product Moment Correlation. Simple percentages were used for the analysis of responses to the Collective Negotiations Scale.

Three of the four null hypotheses were rejected. Hypothesis 1 was found significant at the .001 level of confidence, there was a relationship between attitudes toward

collective negotiations and perceived importance of institutional goals. Hypothesis 2 was found significant at the .002 level of confidence, there was a relationship between attitudes toward collective negotiations and the preferred importance of institutional goals. Hypothesis 3 was found significant at the .001 level of confidence, there was a relationship between attitudes toward collective negotiations and perception of the emphasis being given institutional functions. Hypothesis 4 was not rejected. No correlation between age, sex, rank, tenure, terminal degree status, university-wide committee membership, or faculty senate membership and attitudes toward collective negotiations was found. Faculty scores on the Collective Negotiations Scale indicated generally favorable attitudes toward the concept of collective negotiations, but less favorable attitudes toward the use of sanctions.

## CHAPTER V

### SUMMARY, CONCLUSIONS, IMPLICATIONS AND RECOMMENDATIONS

#### Summary

The concept of institutional goals has become central to the study of organizations. Such organizational theorists as March, Simon, Perrow, Thompson, and McEwen view goals as significant variables in the administrative process. However, in the study of administration of higher education, the investigation of institutional goals has been confined primarily to goal identification. Such studies have not considered goals as organizational variables nor the relation of goals to other variables such as the phenomenon of collective bargaining treated in this study.

Collective bargaining in higher education is of recent vintage. Those studies completed to date have principally investigated demographic variables and attitudes toward collective negotiations. Institutional variables that could influence faculty attitudes toward collective negotiations have largely been ignored. Since institutional goals have become central to the study of organizations, the relation of goals and bargaining should be investigated.

The work of a number of organization theorists support the idea that institutional goals and bargaining are related. March and Simon postulate that when goals are not shared, or when shared goals are not operational, bargaining will result. Perrow notes that goals are shaped by competition within the organization. Thompson and McEwen view goals as constraint sets, and bargaining as a decision process in goal selection. In this study, it is hypothesized that there is a relation between institutional goal perception and attitudes toward collective negotiations.

Three instruments were utilized to collect data on the variables treated in the study, the Institutional Goals Inventory, the Institutional Functioning Inventory-University of Oklahoma Modification, and the Collective Negotiations Scale. The instruments were distributed to a randomly selected sample of three-hundred faculty and fifty administrators. Seventy percent of the sample responded.

The multiple variate analysis of variance was used to test the first three hypotheses, and the Univariate F Test and Scheffé Post Hoc Comparison Test was utilized for explanatory purposes. The fourth hypothesis was tested through the Pierson Product Moment Correlation. Simple percentages were used for the analysis of responses to the Collective Negotiations Scale.

The basic problem of this research has been to determine if there is a relationship between the perception of institutional goals and functions in higher education and attitudes toward collective negotiations. Through the testing of the research hypotheses, it was determined that a relationship does exist between attitudes toward collective negotiations and the perception of importance attached to institutional goals and functions.

Research hypothesis One: There is no significant difference of agreement on the perceived importance of institutional goals among administrators, faculty with favorable attitudes toward collective negotiations and faculty who do not have favorable attitudes toward collective negotiations. This hypothesis was found significant at the .001 level of confidence and thus rejected. A significant difference occurred among the groups on their perceptions of the importance attached to institutional goals. Significant differences in the perception of the importance attached to institutional goals was noted over eight goal areas. In seven of the goal areas where significant differences were found, it was the faculty with favorable attitudes toward collective negotiations that differed from the administrator group.

Faculty with favorable attitudes toward collective

negotiations perceived the institution as giving less importance to the following seven goal areas than did the administrator group.

(1) Academic Development. The acquisition of general and specialized knowledge, preparation of students for advanced scholarly study, and maintenance of high intellectual standards on the campus.

(4) Humanism/Altruism. Respect for diverse cultures, commitment to working for world peace, consciousness of the important moral issues of the time, and concern about the welfare of man generally.

(8) Advanced Training. The items comprising the goal area have to do with developing/maintaining a strong and comprehensive graduate school, providing programs in the "traditional professions" (law, medicine, etc.), and conducting advanced study in specialized problem areas--as through a multi-disciplinary institute or center.

(9) Research. The Research goal of the I.G.I. involves doing contract studies for external agencies, conducting basic research in the natural and social sciences, and seeking generally to extend the frontiers of knowledge through scientific research.

(14) Freedom. In the I.G.I., Freedom is defined as protecting the right of faculty to present controversial ideas in the classroom, not preventing students from hearing controversial points of view, placing no restrictions on off-campus political activities by faculty or students, and ensuring faculty and students the freedom to choose their own life cycles.

(15) Democratic Governance. The central notion of this goal, as here conceived, is the opportunity for participation--participation in the decisions that affect one's working and learning life. As defined in the I.G.I., Democratic Governance means decentralized decision-making; arrangements by

which students, faculty, administrators, and governing board members can (all) be significantly involved in campus governance, opportunity for individuals to participate in all decisions affecting them, and governance that is genuinely responsive to the concerns of everyone at the institution.

(16) Community. In the I.G.I., Community is defined as maintaining a climate in which there is faculty commitment to the general welfare of the institution, open and candid communication, open and amicable airing of differences, and mutual trust and respect among students, faculty, and administrators.

Faculty with favorable attitudes toward collective negotiations tend to see the institution as placing less emphasis on the maintenance of high scholarship, development of strong professional programs, conducting basic research, and working for a commitment to the welfare of man than did the administrator group. Interestingly, those faculty with favorable attitudes toward collective negotiations perceive the goals of academic freedom, the participation of faculty in decision-making, and the development of trust and open communications on the campus to be receiving less emphasis at the institution than the administrator group.

Research hypothesis Two: There is no significant difference of agreement on the importance of preferred institutional goals among administrators, faculty with favorable attitudes toward collective negotiations, and faculty who do not have favorable attitudes toward collec-

tive negotiations. This hypothesis was significant at the .002 level of confidence and thus rejected. A significant difference among the groups on their perception of the importance of preferred institutional goals was noted over eight goal areas.

In four of the goal areas where significant differences were found, those faculty with favorable attitudes toward collective negotiations scored higher than those faculty who do not have favorable attitudes toward collective negotiations. Faculty with favorable attitudes toward collective negotiations felt that the following goal areas should be given greater emphasis than did the faculty who do not have favorable attitudes toward collective negotiations:

(13) Social Criticism/Activism. Providing criticism of prevailing American values, offering ideas for changing social institutions judged to be defective, helping students to learn how to bring about change in American society, and being engaged, as an institution, in working for basic changes in American society.

(14) Freedom. In the I.G.I., Freedom is defined as protecting the right of faculty to present controversial ideas in the classroom, not preventing students from hearing controversial points of view, placing no restrictions on off-campus political activities by faculty or students, and ensuring faculty and students the freedom to choose their own life cycles.

(15) Democratic Governance. The central notion of this goal, as here conceived, is the opportunity for participation--participation in the decisions that affect one's working and learning life. As

defined in the I.G.I., Democratic Governance means decentralized decision-making; arrangements by which students, faculty, administrators, and governing board members can (all) be significantly involved in campus governance, opportunity for individuals to participate in all decisions affecting them, and governance that is genuinely responsive to the concerns of everyone at the institution.

(19) Off-Campus Learning. The elements of the I.G.I. definition of Off-Campus Learning, as a process goal an institution may pursue, form a kind of scale. They include: (short term) time away from the campus in travel, work-study, VISTA work, etc.; arranging for students to study on several campuses during their undergraduate years; awarding degrees for supervised study off the campus; awarding degrees entirely on the basis of performance on an examination.

Faculty with favorable attitudes toward collective negotiations felt that the institution should be giving greater priority to the criticism of American society for improvement, providing greater opportunity for faculty and student input into decision-making, ensuring freedom of life styles, and promoting off-campus learning opportunities.

Interestingly, those faculty favoring collective negotiations scored significantly lower than the other two test groups on the goal area of Accountability/Efficiency. Those faculty with favorable attitudes toward collective negotiations did not feel that cost criteria should be used in deciding any program or that accountability for program effectiveness should be as important as did the administrator group or those faculty with unfavorable attitudes toward

collective negotiations. Those faculty with favorable attitudes toward collective negotiations also felt that vocational preparation or the education of students in a particular religious heritage should be of low institutional importance compared to the administrator group in the case of vocational preparation and the faculty group not favoring collective negotiations in the case of religious training.

Those faculty with unfavorable attitudes toward collective negotiations did not feel that Innovation or Off-Campus Learning should be of as great an importance to the institution as did the administrator group.

Research hypothesis Three: There is no significant difference of agreement in the perceived emphasis given an institutional practice among administrators, faculty with favorable attitudes toward collective negotiations, and faculty who do not have favorable attitudes toward collective negotiations. This hypothesis was found significant at the .001 level of confidence and thus rejected. A significant difference among the groups on their perception of the emphasis being given institutional practices was noted over fifteen function areas. In all fifteen function areas where differences in the groups perceptions of the emphasis given institutional practices was noted, it was those faculty favoring collective negotiations who scored

lower than the comparison groups of administrators and/or faculty with unfavorable attitudes toward collective negotiations.

In the eight function areas that follow, those faculty favoring collective negotiations scored significantly lower than both the other test groups:

(2) Intellectual Orientation. Developing student familiarity with research and problem solving methods, the ability to synthesize knowledge from many sources, the capacity for self-directed learning, and a commitment to life-long learning.

(4) Humanism/Altruism. Developing student respect for diverse cultures, commitment to working for world peace, consciousness of the important moral issues of the time, and concern about the welfare of man generally.

(6) Traditional Religiousness. Educating students in a particular religious heritage, helping them to see the potentialities of full-time religious work, developing students' ability to defend a theological position, and fostering their dedication to serving God in everyday life.

(11) Public Service. Working with governmental agencies in social and environmental policy formation, committing institutional resources to the solution of major social and environmental problems, training people from disadvantaged communities, and generally being responsive to regional and national priorities in planning educational programs.

(15) Democratic Governance. Providing for decentralized decision-making; arrangements by which students, faculty, administrators, and governing board members can (all) be significantly involved in campus governance, opportunity for individuals to participate in all decisions affecting them, and governance that is genuinely responsive to the concerns of everyone at the institution.

(16) Community. Community is defined as encouraging a climate in which there is faculty commitment to the general welfare of the institution, open and candid communication, open and amicable airing of differences, and mutual trust and respect among students, faculty, and administrators.

(17) Intellectual/Aesthetic Environment. Providing a rich program of cultural events, a campus climate that facilitates student free-time involvement in intellectual and cultural activities, an environment in which students and faculty can easily interact informally, and a reputation as an intellectually exciting campus.

(18) Innovation. Encouraging a climate in which continuous innovation is an accepted way of life, it means established procedures for readily initiating curricular or instructional innovations, and, more specifically, it means experimentation with new approaches to (1) individualized instruction and (2) evaluating and grading student performance.

Those faculty with favorable attitudes toward collective negotiations felt the institution was performing to a lesser degree in those function areas given above than did the other two test groups.

In the six function areas following, those faculty with favorable attitudes toward collective negotiations scored lower than those faculty with unfavorable attitudes toward collective negotiations, but not significantly lower than the administrator group:

(1) Academic Development. Has to do with providing students with the opportunity for acquisition of general and specialized knowledge, preparation of students for advanced scholarly study, and maintenance of high intellectual standards on the campus.

(8) Advanced Training. Providing for developing/maintaining a strong and comprehensive graduate school, providing programs in the "traditional professions" (law, medicine, etc.), and conducting advanced study in specialized problem areas--as through a multi-disciplinary institute or center.

(12) Social Egalitarianism. Providing open admissions and meaningful education for all admitted, providing educational experiences relevant to the evolving interests of (1) minority groups, and (2) women, and offering remedial work in basic skills.

(13) Social Criticism/Activism. Means providing criticism of prevailing American values, offering ideas for changing social institutions judged to be defective, helping students to learn how to bring about change in American society, and being engaged, as an institution, in working for basic changes in American society.

(14) Freedom. Freedom is defined as protecting the right of faculty to present controversial ideas in the classroom, not preventing students from hearing controversial points of view, placing no restrictions on off-campus political activities by faculty or students, and ensuring faculty and students the freedom to choose their own life cycles.

(20) Accountability/Efficiency. Utilization of cost criteria in deciding among program alternatives, expressing concern for program efficiency, fostering accountability to funding sources for program effectiveness, and regular submitting of evidence that the institution is achieving stated goals.

The composite that emerges is that faculty with favorable attitudes toward collective negotiations view the institution as not performing as effectively as the administrators or faculty with unfavorable attitudes toward collective bargaining in the function areas tested.

Research hypothesis Four: There is no significant relationship between selected biographic-career characteristics of tenure, age, sex, rank, terminal degree status, university-wide committee membership, faculty senate membership and faculty attitudes toward collective negotiations. No significant correlation between the biographic-career characteristics and scores on the Collective Negotiations Scale was found, thus the hypothesis was not rejected. Previous studies cited in Chapter II had found age, tenure, and rank related to attitudes toward collective negotiations. Those studies, however, had been conducted in highly industrialized and unionized geographic areas. This study tends to indicate that for the population sampled, the biographic-career variables could not be used as predictors of attitudes toward collective negotiations.

One of the purposes of this study was to assess the general attitude orientation of university faculty toward collective negotiations. An analysis of the data collected from the administration of the Collective Negotiations Scale indicates that the majority of university faculty sampled have favorable attitudes toward the use of collective negotiations in higher education, but there was less consensus over whether collective negotiations could bring improvement to higher education. There is considerable

consensus that faculty have the right to utilize sanctions, however, there is little favor expressed toward the various forms of sanctions, particularly withholding of services.

### Conclusions

In relation to current theory, the findings contribute to the premise that institutional goals can be treated as organizational variables, and, that such characteristics of goals as shared or not shared, subject to competition, and open to bargaining, are related to attitudes toward bargaining. More specifically, the study has added to organizational theory in higher education by demonstrating that institutional goals can be treated as variables with results useful to administration and faculty. As administrators become increasingly involved in dealing with the forms of collective bargaining spreading into higher education, data on institutional goals and functions may contribute to institutional strategies for working through the problem.

The findings of this study support the conclusion that there is a relationship between faculty perception of institutional goals and functions, and their attitudes toward collective negotiations. Faculty with favorable attitudes toward collective negotiations differ markedly in their perception of the importance accorded institutional

goals and the emphasis being given institutional functions from those faculty with unfavorable attitudes toward collective negotiations. However, faculty having unfavorable attitudes toward collective negotiations do not tend to disagree with administrators as to the importance accorded institutional goals or the emphasis given institutional functions.

The findings resulting from the testing of the first three hypotheses of this study tend to affirm March and Simon's theory of formal organizations related to the decision-making process. March and Simon postulated that when goals are not shared, or when shared goals are not operational, the decision process will be reached by predominantly bargaining processes. This study has shown that those faculty having favorable attitudes toward collective negotiations, bargaining, differ in their perceptions of the importance attached to perceived and preferred institutional goals more frequently than administrators or faculty with unfavorable attitudes toward collective negotiations.

Faculty having favorable attitudes toward collective negotiations have a markedly different perception of the role reality of the institution than the administrators and faculty with unfavorable attitudes toward collective nego-

tiations. They see goals as being accorded less importance and functions given less emphasis than the other groups. Faculty supportive of collective negotiations do not rate the institution as high in according importance to goals or achieving functions as do the administrators and faculty with unfavorable attitudes toward collective negotiations. This tends to support Victor Thompson's theory that conflict in organizations is due to differing perceptions of reality between those in hierarchical positions and specialists.

The perceived importance accorded institutional goals having to do with the faculty role in the institution are significantly related to attitudes toward collective negotiations. Those faculty favoring collective negotiations perceived the institution as according less importance to the goal areas of freedom, democratic governance, and community than did the administrators and faculty with unfavorable attitudes toward collective negotiations. Faculty favoring collective negotiations felt that less academic freedom and less freedom to choose their own life style were being accorded by the institution than did the other groups. They also perceived significantly less institutional commitment to greater faculty participation in governance and in decisions affecting them than the other groups. Faculty with unfavorable attitudes toward collec-

tive negotiations and administrators agreed that the institution had a greater commitment to encouraging open and candid communications and mutual trust between faculty and administrators than did those faculty favoring collective negotiations.

Not only did faculty favoring collective negotiations see those goal areas having to do with the faculty role in the institution accorded less importance than did the faculty with unfavorable attitudes toward collective negotiations, but they preferred a greater importance be accorded those goal areas than did the other groups. Faculty favoring collective negotiations thus appear dissatisfied with the priority being given those goals which would allow for greater faculty participation in institutional decision-making, while those faculty with unfavorable attitudes toward collective negotiations do not appear dissatisfied or differ from the administrators in the preferred emphasis that should be given the goal areas of freedom, democratic governance, and community. Faculty who have favorable attitudes toward collective negotiations feel that faculty should play a greater role in institutional decision-making.

While those favoring bargaining desire a greater role for faculty in governance, they would prefer that the

goal of accountability not be accorded as high an importance in the institution as the administrators and faculty with unfavorable attitudes toward bargaining. Faculty with favorable attitudes toward bargaining perceived the institution as according accountability a greater importance than the other groups, and preferred that accountability be accorded less importance than the administrators and faculty with unfavorable attitudes toward collective negotiations.

This study indicates that lack of consensus between administrators and faculty on institutional goals may be of greater importance than biographic-career variables in a faculty's decision to elect collective bargaining as a decision-making process in higher education. While a number of other studies have indicated a significant correlation between age, rank, tenure, and attitudes toward collective negotiations, this study does not find a significant correlation. While no correlation between demographic variables and attitudes toward collective bargaining was found, a relationship was confirmed to exist between goal perception and attitudes toward collective negotiations.

University faculty, based on those sampled in this study, view collective faculty pressure as legitimate. While faculty feel that they should have the option of

utilizing bargaining, there is hesitance in endorsing the type of aggressive actions against the administration and governing board that are often required in the bargaining process.

#### Implications and Suggestions for Further Research

This study implies that by determining the degree of goal consensus among faculty and between faculty and administrators, an index of a faculty's propensity to utilize collective bargaining can be determined. Additional research is needed to confirm or refute that differences between administrators and faculty in institutional goal perception is related to attitudes toward bargaining. It is recommended that similar studies be conducted utilizing samples from geographically diverse universities as well as other types of higher education institutions.

This study implies that it is important to gain information on those institutional variables related to faculty attitudes toward collective negotiations. Because human behavior is a result of interaction of a person and his environment, it is important that those variables in the institutional environment related to faculty attitudes toward collective bargaining be identified. It is recommended that studies be conducted to identify institutional variables related to attitudes toward collective negotia-

tions.

This study implies that an administration should encourage goal consensus in order to decrease the propensity of a faculty to utilize collective negotiations. Convergence of goal perception has been demonstrated by using the Delphi method. It is recommended that studies be conducted to determine if convergence of goal perception reduces favorable attitudes toward collective negotiations. Research should be conducted into methods of bringing about increased goal consensus.

This study implies that the more democratic governance is at an institution, the less propensity a faculty will have to utilize collective negotiations. Studies should be conducted to compare the faculty role in goal setting and attitudes toward collective negotiations based on a variety of institutional governing patterns. Research should also be done to determine if administrative leadership patterns are related to attitudes toward collective negotiations.

This study implies that faculty feel that the utilization of collective negotiations will increase the faculty's participation in institutional goal formulation. Research should be conducted to determine if a faculty does increase its role in goal formulation and institutional

decision-making by utilizing collective negotiations.

This study implies that an administration desiring to reduce a faculty's propensity to bargaining should seek to collegialize its relationship with the faculty. It is recommended that studies be conducted to determine if the degree of collegiality between faculty and administrators is related to the propensity to favor bargaining.

This study implies that while faculty desires a greater role in governance and goal formulation, they do not desire to be held accountable for their decisions. Research is recommended to identify ways of increasing accountability that are acceptable to faculty.

The increased utilization of collective negotiations as a decision-making process in higher education requires that further studies investigate and evaluate the implications of collective negotiations as a decision-making process. How will bargaining effect all the constituencies of higher education and will it alter institutional life, and if so, how?

APPENDIX B

INSTITUTIONAL GOALS INVENTORY

# INSTITUTIONAL GOALS INVENTORY

(Form 1)

To the respondent:

Numerous educational, social, and economic circumstances have arisen that have made it necessary for many colleges and universities in America to reach clear, and often new, understandings about their goals. During the late 1960s there were new demands, especially from students, for colleges to assume new roles and serve new interests. Now, in the early 1970s, a widespread financial crisis is making it imperative for colleges to specify the objectives to which limited resources may be directed.

The Institutional Goals Inventory (IGI) was developed as a tool to help college communities delineate goals and establish priorities among them. The instrument does not tell colleges what to do in order to reach the goals. Instead, it provides a means by which many individuals and constituent groups can contribute their thinking about desired institutional goals. Summaries of the results of this thinking then provide a basis for reasoned deliberations toward final definition of college goals.

The *Inventory* was designed to embrace possible goals of all types of American higher education institutions—universities, church-related colleges, junior colleges, and so forth. Most of the goal statements in the *Inventory* refer to what may be thought of as "output" or "outcome" goals—substantive objectives colleges may seek to achieve (e.g., qualities of graduating students, research emphases, kinds of public service). Statements toward the end of the instrument relate to "process" goals—goals having to do with campus climate and the educational process.

The IGI is intended to be completely confidential. Results will be summarized only for groups—faculty, students, trustees, and so forth. In no instance will responses of individuals be reported. The *Inventory* should ordinarily not take longer than 45 minutes to complete.

DIRECTIONS

The *Inventory* consists of 90 statements of possible institutional goals. Using the answer key shown in the example below, you are asked to respond to each statement in two different ways:

First — How important *is* the goal at this institution at the present time?

Then — In your judgment, how important *should* the goal *be* at this institution?

EXAMPLE

		of no importance or not applicable	of low importance	of medium importance	of high importance	of extremely high importance
to prepare students for graduate school...	is	1	2	3	4	5
	should be	1	2	3	4	5

In the example, the respondent has indicated that he believes the goal "to prepare students for graduate school" is presently of low importance at his institution, but that it should be of high importance.

- Unless you have been given other instructions, consider the institution as a whole in making your judgments.
- In giving *should be* responses, do not be restrained by your beliefs about whether the goal, realistically, can ever be attained on the campus.
- Please try to respond to every goal statement in the *Inventory*, by

blackening one oval after *is* and one oval after *should be*.

- Use any soft lead pencil. Do not use colored pencils or a pen—ink, ball point, or felt tip.
- Mark each answer so that it completely fills (blackens) the intended oval. Please do not make checks (✓) or X's.

- Additional Goal Statements (Local Option) (91–110): A section is included for additional goal statements of specific local interest or concern. These statements may be supplied locally. If none are supplied, leave them blank and go on to the Information Questions.
- Information Questions (111–117): These questions are included to enable each institution to analyze the results of the *Inventory* in ways that will be most meaningful and useful to them. Respond to each question that applies.
- Subgroups and Optional Information Questions (118–124): Instructions may be given for marking these items. If not, please leave them blank.

Please respond to these goal statements by blackening one oval after is and one after should be.

82. to carry on a broad and vigorous program of extracurricular activities and events for students...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
83. to be concerned about the <u>efficiency</u> with which college operations are conducted...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
84. to be organized for continuous short-, medium-, and long-range planning for the total institution...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
85. to include local citizens in planning college programs that will affect the local community...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
86. to excel in intercollegiate athletic competition...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
87. to be <u>accountable</u> to funding sources for the effectiveness of college programs...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
88. to create a climate in which systematic evaluation of college programs is accepted as an institutional way of life...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
89. to systematically interpret the nature, purpose, and work of the institution to citizens off the campus...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
90. to achieve consensus among people on the campus about the goals of the institution...	is	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	should be	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

• If additional locally written goal statements have been provided, use page ten for responding and then go on to page eleven.  
 • If no additional goal statements were given, leave page ten blank and answer the information questions on page eleven.

ADDITIONAL GOAL STATEMENTS  
(Local Option)

If you have been provided with supplementary goal statements, use this section for responding. Use the same answer key as you use for the first 90 items, and respond to both *is* and *should be*.

Please mark one answer for each of the information questions below that apply to you.

111. Mark the one that best describes your role.

- 1 Faculty member
- 2 Student
- 3 Administrator
- 4 Governing Board Member
- 5 Alumna/Alumnus
- 6 Member of off-campus community group
- 7 Other \_\_\_\_\_

112. Faculty and students: mark one field of teaching and/or research interest, or for students, major field of study.

- 1 Biological sciences
- 2 Physical sciences
- 3 Mathematics
- 4 Social sciences
- 5 Humanities
- 6 Fine arts, performing arts
- 7 Education
- 8 Business
- 9 Engineering
- 10 Other \_\_\_\_\_

113. Faculty: indicate academic rank.

- 1 Instructor
- 2 Assistant professor
- 3 Associate professor
- 4 Professor
- 5 Other \_\_\_\_\_

114. Faculty: indicate current teaching arrangement.

- 1 Full-time
- 2 Part-time
- 3 Evening only
- 4 Off-campus — extension only, etc.
- 5 Other \_\_\_\_\_

115. All respondents: indicate age at last birthday.

- 1 Under 20
- 2 20 to 29
- 3 30 to 39
- 4 40 to 49
- 5 50 to 59
- 6 60 or over

116. Students: indicate class in college.

- 1 Freshman
- 2 Sophomore
- 3 Junior
- 4 Senior
- 5 Graduate
- 6 Other \_\_\_\_\_

117. Students: indicate current enrollment status.

- 1 Full-time, day
- 2 Part-time, day
- 3 Evening only
- 4 Off-campus only — e.g., extension, correspondence, TV, etc.
- 5 Other \_\_\_\_\_

118. Subgroups — one response only.

Instructions may be given for gridding this subgroup item. If not, please leave blank.

- 1 One
- 2 Two
- 3 Three
- 4 Four
- 5 Five

APPENDIX C

INSTITUTIONAL FUNCTIONING INVENTORY  
(University of Oklahoma Modification)

\* \* \* \* \*  
\*  
\* INSTITUTIONAL FUNCTIONING INVENTORY \*  
\* (University of Oklahoma Modification) \*  
\*  
\* \* \* \* \*

TO THE RESPONDENT:

This is a questionnaire for institutional self-study. In it you are asked for your perceptions about what your institution is like--administrative policies, teaching practices, types of programs, characteristic attitudes of groups of people, etc. This inventory is not a test; the only "right" answers are those which reflect your own perceptions, judgments, and opinions.

No names are to be written on the inventory. Comments and criticisms are invited regarding any aspect of the inventory. Please use the back of the test booklet for any such comments.

DIRECTIONS:

1. PENCILS. Any type of marking instrument may be used. Please mark out the appropriate response by using an (X).
2. INFORMATION ITEMS. Check only one answer box for each question that applies to you. All respondents should answer Item A and each of the Items, B-J that apply.
3. MARKING YOUR RESPONSES. Sections 1 and 3 consist of statements about policies and programs that may or may not exist at your institution. Indicate whether you know a given situation exists or does not exist by marking either YES (Y); NO (N); or DON'T KNOW (?).
4. RESPOND TO EVERY QUESTION. Please mark an answer for every statement in the inventory.
5. MARK ONLY ONE ANSWER FOR EACH STATEMENT, but please respond to each and every statement.

The IFI-(OUM) was developed by the Center for Studies  
in Higher Education, University of Oklahoma.

## INFORMATION ITEMS

Please select one answer for each question below that applies to you.

A. Select the one response that best describes your role.

- 0. Faculty member
- 1. Student
- 2. Administrator
- 3. Governing board member
- 4. Alumna/Alumnus
- 5. Member of off-campus community group
- 6. Staff
- 7. Other

B. Faculty and students: select one field of teaching and/or research interest or, for students, major field of study.

- 0. Biological sciences
- 1. Physical sciences
- 2. Mathematics
- 3. Social sciences
- 4. Humanities
- 5. Fine arts, performing arts
- 6. Education
- 7. Business
- 8. Engineering
- 9. Other

C. Faculty: indicate academic rank.

- 0. Instructor
- 1. Assistant professor
- 2. Associate Professor
- 3. Professor
- 4. Other

D. Faculty: indicate current teaching arrangement.

- 0. Full-time
- 1. Part-time
- 2. Evening only
- 3. Off-campus only - extension, etc.
- 4. Research only
- 5. Other

E. All respondents: indicate age at last birthday.

- 0. 17 to 18
- 1. 19 to 20
- 2. 21 to 23
- 3. 24 to 26
- 4. 27 to 29
- 5. 30 to 39
- 6. 40 to 49
- 7. 50 to 59
- 8. 60 or over

F. Students: indicate class in college.

- 0. Freshman
- 1. Sophomore
- 2. Junior
- 3. Senior
- 4. Graduate
- 5. Other

G. Students: indicate current enrollment status.

- 0. Full-time, day
- 1. Part-time, day
- 2. Evening only
- 3. Off-campus only-e.g. extension, correspondence, TV, etc.
- 4. Other

H. Optional information question (special supplemental sheet will be provided if this item is used).

I. Optional information question (special supplemental sheet will be provided if this item is used).

J. Optional information question (special supplemental sheet will be provided if this item is used).

## SECTION 1

Respond to statements in this section by selecting either:

YES (Y)

NO (N)

DON'T KNOW (?)

If the statement applies or is true at your institution.

If the statement does not apply or is not true at your institution.

If you do not know whether the statement applies or is true.

- | (Y) | (N) | (?) |  |
|-----|-----|-----|--|
| (Y) | (N) | (?) | 1. There is a campus art gallery in which traveling exhibits or collections on loan are regularly displayed.   |
| (Y) | (N) | (?) | 2. There are programs and/or organizations at this institution which are directly concerned with solving pressing social problems, e.g., race relations, urban blight, rural poverty, etc. |
| (Y) | (N) | (?) | 3. Regulations of student behavior are detailed and precise at this institution.   |
| (Y) | (N) | (?) | 4. Foreign films are shown regularly on or near campus.  |
| (Y) | (N) | (?) | 5. Religious services are conducted regularly on campus involving a majority of the students.  |
| (Y) | (N) | (?) | 6. A number of professors have been involved in the past few years with economic planning at either the national, regional, or state level.  |
| (Y) | (N) | (?) | 7. There are provisions by which some number of educationally disadvantaged students may be admitted to the institution without meeting the normal entrance requirements.                  |
| (Y) | (N) | (?) | 8. A number of nationally known scientists and/or scholars are invited to the campus each year to address student and faculty groups.  |
| (Y) | (N) | (?) | 9. Advisement (counseling) is offered students concerning personal as well as academic goals.  |
| (Y) | (N) | (?) | 10. Successful efforts to raise funds or to perform voluntary service to relieve human need and suffering occur at least annually on this campus.  |
| (Y) | (N) | (?) | 11. This institution attempts each year to sponsor a rich program of cultural events--lectures, concerts, plays, art exhibits, and the like.   |
| (Y) | (N) | (?) | 12. At least one modern dance program has been presented in the past year.   |
| (Y) | (N) | (?) | 13. Ministers are invited to the campus to speak and to counsel students about religious vocations.  |
| (Y) | (N) | (?) | 14. Professors from this institution have been actively involved in framing state or federal legislation in the areas of health, education, or welfare.                                    |
| (Y) | (N) | (?) | 15. A concerted effort is made to attract students of diverse ethnic and social backgrounds.   |
| (Y) | (N) | (?) | 16. Quite a number of students are associated with organizations that actively seek or reform society in one way or another.   |
| (Y) | (N) | (?) | 17. There are no written regulations regarding student dress.  |
| (Y) | (N) | (?) | 18. Students publish a literary magazine.  |
| (Y) | (N) | (?) | 19. A testing-counseling program is available to students to help them to achieve self-understanding.  |
| (Y) | (N) | (?) | 20. An organization exists on campus which has as its primary objective to work for world peace.   |
| (Y) | (N) | (?) | 21. At least one chamber music concert has been given within the past year.  |
| (Y) | (N) | (?) | 22. The institution sponsors groups and programs which provide students opportunities to witness to others concerning their faith.   |
| (Y) | (N) | (?) | 23. A number of faculty members or administrators from this institution have gone to Washington to participate in planning and operating various federal programs.                         |
| (Y) | (N) | (?) | 24. One of the methods used to influence the flavor of the college is to try to select students with fairly similar personality traits.  |

- (Y) (N) (?) 25. This institution, through the efforts of individuals and/or specially created institutes or centers, is actively engaged in projects aimed at improving the quality of urban life.
- (Y) (N) (?) 26. The institution imposes certain restrictions on off-campus political activities by faculty members.
- (Y) (N) (?) 27. There are a number of student groups that meet regularly to discuss intellectual and/or philosophic topics.
- (Y) (N) (?) 28. At least one poetry reading, open to the campus community, has been given within the past year.
- (Y) (N) (?) 29. The curriculum is deliberately designed to accommodate a great diversity in student ability levels and educational-vocational aspirations.

## SECTION 2

Respond to statements in this section by selecting either:

STRONGLY AGREE (SA)

AGREE (A)

DISAGREE (D)

STRONGLY DISAGREE (SD)

If you strongly agree with the statement as applied to your institution.

If you mildly agree with the statement as applied to your institution.

If you mildly disagree with the statement as applied to your institution.

If you strongly disagree with the statement as applied to your institution.

- (SA) (A) (D) (SD) 30. How best to communicate knowledge to undergraduates is not a question that seriously concerns a very large proportion of the faculty.
- (SA) (A) (D) (SD) 31. Students who display traditional "scholar" behavior are held in low esteem in the campus community.
- (SA) (A) (D) (SD) 32. In dealing with institutional problems, attempts are generally made to involve interested people without regard to their formal position or hierarchical status.
- (SA) (A) (D) (SD) 33. Capable undergraduates are encouraged to collaborate with faculty on research projects or to carry out studies of their own.
- (SA) (A) (D) (SD) 34. Undergraduate programs of instruction are designed to include demonstration of the methods of problem analysis.
- (SA) (A) (D) (SD) 35. Power here tends to be widely dispersed rather than tightly held.
- (SA) (A) (D) (SD) 36. Almost every degree program is constructed to enable the student to acquire a depth of knowledge in at least one academic discipline.
- (SA) (A) (D) (SD) 37. A major expectation of faculty members is that they will help students to synthesize knowledge from many sources.
- (SA) (A) (D) (SD) 38. The important moral issues of the time are discussed seriously in classes and programs.
- (SA) (A) (D) (SD) 39. Many faculty members would welcome the opportunity to participate in laying plans for broad social and economic reforms in American society.
- (SA) (A) (D) (SD) 40. Serious consideration is given to student opinion when policy decisions affecting students are made.
- (SA) (A) (D) (SD) 41. Certain radical student organizations, such as Students for a Democratic Society, are not, or probably would not be, allowed to organize chapters on this campus.
- (SA) (A) (D) (SD) 42. This institution takes pride in the percentage of graduates who go on to advanced study.
- (SA) (A) (D) (SD) 43. Student publications of high intellectual reputation exist on this campus.
- (SA) (A) (D) (SD) 44. Professors get to know most students in their undergraduate classes quite well.
- (SA) (A) (D) (SD) 45. Foreign students are genuinely respected and are made to feel welcome on this campus.
- (SA) (A) (D) (SD) 46. Religious diversity is encouraged at this institution.
- (SA) (A) (D) (SD) 47. Application of knowledge and talent to the solution of social problems is a mission of this institution that is widely supported by faculty and administrators.
- (SA) (A) (D) (SD) 48. Governance of this institution is clearly in the hands of the administration.

- (SA) (A) (D) (SD) 49. Certain highly controversial figures in public life are not allowed or probably would not be allowed to address students.
- (SA) (A) (D) (SD) 50. Little money is generally available for inviting outstanding people to give public lectures.
- (SA) (A) (D) (SD) 51. A 4.0 grade average brings to a student the highest recognition on this campus.
- (SA) (A) (D) (SD) 52. Academic advisers generally favor that a meaningful portion of each degree program be allocated to individual study.
- (SA) (A) (D) (SD) 53. Most faculty members do not wish to spend much time in talking with students about students' personal interests and concerns.
- (SA) (A) (D) (SD) 54. When a student has a special problem, some of his peers usually are aware of and respond to his need.
- (SA) (A) (D) (SD) 55. Religious ideals of the institution's founding fathers are considered by most faculty members to be obsolete.
- (SA) (A) (D) (SD) 56. Senior administrators generally support (or would support) faculty members who spend time away from the campus consulting with governmental agencies about social, economic, and related matters.
- (SA) (A) (D) (SD) 57. Compared with most other colleges, fewer minority groups are represented on this campus.
- (SA) (A) (D) (SD) 58. The notion of colleges and universities assuming leadership in bringing about social change is not an idea that is or would be particularly popular on this campus.
- (SA) (A) (D) (SD) 59. In arriving at institutional policies, attempts are generally made to involve all the individuals who will be directly affected.
- (SA) (A) (D) (SD) 60. Faculty members feel free to express radical political beliefs in their classrooms.
- (SA) (A) (D) (SD) 61. The student newspaper comments regularly on important issues and ideas (in addition to carrying out the customary tasks of student newspapers).
- (SA) (A) (D) (SD) 62. It is almost impossible for a student to graduate from this institution without a basic knowledge in the social sciences, natural sciences and humanities.
- (SA) (A) (D) (SD) 63. Programs for the adult (out-of-school) age student are primarily designed to treat their vocational needs.
- (SA) (A) (D) (SD) 64. Formal organizations designed to provide special assistance to students are accorded favorable recognition by individual members of the faculty.
- (SA) (A) (D) (SD) 65. Faculty members are more concerned with helping students to acquire knowledge and professional skills than they are in helping students to be better persons.
- (SA) (A) (D) (SD) 66. By example, the administration and faculty encourage students to dedicate their lives to God.
- (SA) (A) (D) (SD) 67. Administrators and faculty have in the past three years been responsive to regional and national priorities in planning educational programs.
- (SA) (A) (D) (SD) 68. There are no courses or programs for students with educational deficiencies, i.e., remedial work.
- (SA) (A) (D) (SD) 69. The governing board does not consider active engagement in resolving major social ills to be an appropriate institutional function.
- (SA) (A) (D) (SD) 70. Students, faculty and administrators all have opportunities for meaningful involvement in campus governance.
- (SA) (A) (D) (SD) 71. The governing body (e.g., Board of Trustees) strongly supports the principle of academic freedom for faculty and students to discuss any topic they may choose.
- (SA) (A) (D) (SD) 72. Many opportunities exist outside the classroom for intellectual and aesthetic self-expression on the part of students.

## SECTION 3

Respond to statements in this section by selecting either:

- | YES (Y)  |     |     | NO (N)  | DON'T KNOW (?)   |
|--|-----|-----|---|--|
| If the statement applies or is true at your institution. |     |     | If the statement does not apply or is not true at your institution. | If you do not know whether the statement applies or is true.   |
| (Y)  | (N) | (?) | 73.   | This institution operates an adult education program, e.g., evening courses open to local area residents.  |
| (Y)  | (N) | (?) | 74.   | Counseling services are available to adults in the local area seeking information about educational and occupational matters.  |
| (Y)  | (N) | (?) | 75.   | Quite a number of faculty members have had books published in the past two or three years.   |
| (Y)  | (N) | (?) | 76.   | Courses are offered through which local area residents may be retrained or upgraded in their job skills.   |
| (Y)  | (N) | (?) | 77.   | There is a job placement service through which local employers may hire students and graduates for full or part-time work.   |
| (Y)  | (N) | (?) | 78.   | There are a number of research professors on campus, i.e., faculty members whose appointments primarily entail research rather than teaching.  |
| (Y)  | (N) | (?) | 79.   | Facilities are made available to local groups and organizations for meetings, short courses, clinics, forums, and the like.  |
| (Y)  | (N) | (?) | 80.   | Credit for numerous courses can be earned now solely on the basis of performance on an examination.  |
| (Y)  | (N) | (?) | 81.   | Some of the strongest and best-funded undergraduate academic departments are professional departments which prepare students for specific occupations, such as nursing, accounting, etc. |
| (Y)  | (N) | (?) | 82.   | A number of departments frequently hold seminars or colloquia in which a visiting scholar discusses his ideas or research findings.  |
| (Y)  | (N) | (?) | 83.   | The average teaching load in most departments is eight credit hours or fewer.  |
| (Y)  | (N) | (?) | 84.   | There are a number of courses or programs that are designed to provide manpower for local area business, industry, or public services.   |
| (Y)  | (N) | (?) | 85.   | A plan exists at this institution whereby a student may be awarded a degree based primarily on supervised study off-campus.  |
| (Y)  | (N) | (?) | 86.   | One or more individuals are presently engaged in long-range financial planning for the total institution.  |
| (Y)  | (N) | (?) | 87.   | Courses or seminars are conducted in order that former students and others may be retrained or upgraded in their skills.   |
| (Y)  | (N) | (?) | 88.   | New advanced degrees have been authorized and awarded within the last three years.   |
| (Y)  | (N) | (?) | 89.   | Faculty promotions generally are based primarily on scholarly publication.   |
| (Y)  | (N) | (?) | 90.   | Courses dealing with artistic expression or appreciation are available to all adults in the local area.  |
| (Y)  | (N) | (?) | 91.   | Several arrangements exist by which students may enroll for credit in short terms away from the campus in travel; work-study, VISTA-type work, etc.                                      |
| (Y)  | (N) | (?) | 92.   | Analyses of the philosophy, purposes, and objectives of the institution are frequently conducted.  |
| (Y)  | (N) | (?) | 93.   | Counseling services are available to students to assist them in choosing a career.   |
| (Y)  | (N) | (?) | 94.   | One or more non-traditional graduate departments (or centers) has been established within the last five years.   |
| (Y)  | (N) | (?) | 95.   | In general, the governing board is committed to the view that advancement of knowledge through research and scholarship is a major institutional purpose.                                |
| (Y)  | (N) | (?) | 96.   | Attention is given to maintaining fairly close relationships with businesses and industries in the local area.   |
| (Y)  | (N) | (?) | 97.   | Every student is encouraged to include some study abroad in his educational program.   |
| (Y)  | (N) | (?) | 98.   | Planning at this institution is continuous rather than one-shot or completely non-existent.  |

## SECTION 4

Respond to statements in this section by selecting either:

	STRONGLY AGREE (SA)	AGREE (A)	DISAGREE (D)	STRONGLY DISAGREE (SD)	
					If you strongly agree with the statement as applied to your institution.
					If you mildly agree with the statement as applied to your institution.
					If you mildly disagree with the statement as applied to your institution.
					If you strongly disagree with the statement as applied to your institution.
(SA)	(A)	(D)	(SD)	99.	Most faculty members consider the senior administrators on campus to be able and well-qualified for their positions.
(SA)	(A)	(D)	(SD)	100.	It is almost impossible to obtain the necessary financial support to try out a new idea for educational practice.
(SA)	(A)	(D)	(SD)	101.	Generally speaking, top-level administrators are providing effective educational leadership.
(SA)	(A)	(D)	(SD)	102.	There is a general willingness here to experiment with innovations that have shown promise at other institutions.
(SA)	(A)	(D)	(SD)	103.	Generally speaking, communication between the faculty and the administration is poor.
(SA)	(A)	(D)	(SD)	104.	High ranking administrators or department chairmen generally encourage professors to experiment with new courses and teaching methods.
(SA)	(A)	(D)	(SD)	105.	More recognition is regularly accorded faculty members for research grants received than for service grants.
(SA)	(A)	(D)	(SD)	106.	Staff infighting, backbiting, and the like seem to be more the rule than the exception.
(SA)	(A)	(D)	(SD)	107.	This institution would be willing to be among the first to experiment with a novel educational program or method if it appeared promising.
(SA)	(A)	(D)	(SD)	108.	Laying plans for the future of the institution is a high priority activity for many senior administrators.
(SA)	(A)	(D)	(SD)	109.	The graduates of such professional colleges as the Colleges of Law and Medicine at this institution are recognized by the public as strong practitioners.
(SA)	(A)	(D)	(SD)	110.	Although they may criticize certain practices, most faculty seem to be very loyal to the institution.
(SA)	(A)	(D)	(SD)	111.	In my experience it has not been easy for new ideas about educational practice to receive a hearing.
(SA)	(A)	(D)	(SD)	112.	A graduate is usually considered by faculty to be better educated if all of his credit hours were earned at this institution, than if he had studied on several campuses in qualifying for his degree.
(SA)	(A)	(D)	(SD)	113.	Seldom do faculty members prepare formal evaluations of institutional goal achievement.
(SA)	(A)	(D)	(SD)	114.	The faculty is receptive to adding new courses geared to emerging career fields.
(SA)	(A)	(D)	(SD)	115.	Undergraduates interested in study beyond the B.A. level receive little or no formal encouragement from the faculty or staff.
(SA)	(A)	(D)	(SD)	116.	Few, if any, of the faculty could be regarded as having national or international reputations for their scientific or scholarly contributions.
(SA)	(A)	(D)	(SD)	117.	There is a strong sense of community, a feeling of shared interests and purposes, on this campus.
(SA)	(A)	(D)	(SD)	118.	This institution has experimented with new approaches to either individualized instruction or evaluation of student performance.
(SA)	(A)	(D)	(SD)	119.	Off-campus learning experiences of various types are considered as valuable, or more valuable, to the student's education, as regular courses.
(SA)	(A)	(D)	(SD)	120.	The approval of proposals for new instructional programs is regularly dependent on an estimate of potential efficiency.

APPENDIX D  
COLLECTIVE NEGOTIATIONS SCALE

### Collective Negotiations Scale

The statements listed below are intended to elicit your opinions on matters concerning faculty-governing board relationships in state universities.

The following definitions are presented to assist you in responding to the statements below.

**Collective Negotiations:** a generic term for the process in which faculty salaries and other conditions of employment are determined by agreement between representatives of a faculty organization and representatives of the governing board.

**Sanctions:** a term applied to coercive acts of various kinds, varying in intensity from verbal warning to withholding services. Sanctions of all types are used to gain concessions from the employer.

**Faculty Organization:** an organization representing the faculty in collective negotiations with the governing board in matters pertaining to salaries and other conditions of employment.

**Strike:** a severe form of sanction involving concerted work stoppage by employees.

Please circle the response to the right of the statement which best describes your reaction to the statements.

Agree Strongly	Agree	Disagree	Disagree Strongly
AS	A	D	DS

- |    |   |    |   |   |    |
|----|---|----|---|---|----|
| 1. | I think collective negotiations is an effective way for faculty to participate in determining the conditions of their employment. | AS | A | D | DS |
| 2. | I think collective negotiations is an effective way for faculty to limit the unilateral authority of the governing board.         | AS | A | D | DS |

- |     |  |    |   |   |    |
|-----|--|----|---|---|----|
| 3.  | Faculty members should be able to withhold their services when satisfactory agreement between their organization and the governing board cannot be reached.                            | AS | A | D | DS |
| 4.  | Collective negotiations should if possible omit the threat of withholding services.  | AS | A | D | DS |
| 5.  | Faculty members should be able to organize freely and to bargain collectively on their working conditions.   | AS | A | D | DS |
| 6.  | Faculty organizations at local, state, and national levels should publicize unfair practices by a governing board through the media such as TV, radio, newspapers, and magazines.      | AS | A | D | DS |
| 7.  | I feel that collective negotiations is primarily a coercive technique that will have detrimental effects on higher education.  | AS | A | D | DS |
| 8.  | I feel that strikes on the part of faculty members are an undesirable aspect of collective negotiations.   | AS | A | D | DS |
| 9.  | I believe that militant faculty organizations are made up of a large number of malcontents and misfits.  | AS | A | D | DS |
| 10. | Faculty members should not strike in order to enforce their demands.   | AS | A | D | DS |
| 11. | I feel that the good faculty members can always get the salary they need without resorting to collective negotiations.   | AS | A | D | DS |
| 12. | I believe that collective bargaining alias collective negotiations, is beneath the dignity of college faculty members.   | AS | A | D | DS |
| 13. | I believe that strikes, sanctions, boycotts, mandated arbitration or mediation are improper procedures to be used by faculty who are dissatisfied with their conditions of employment. | AS | A | D | DS |

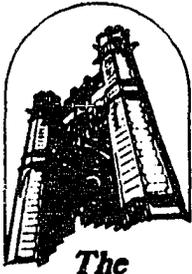

- |     |  |    |   |   |    |
|-----|--|----|---|---|----|
| 14. | I feel that a faculty member cannot withhold his services without violating professional ethics and trust.   | AS | A | D | DS |
| 15. | I feel that collective negotiations is an infringement on the authority of the governing board and should be resisted.   | AS | A | D | DS |
| 16. | I think collective negotiations is a good way to unite the teaching profession into a powerful political body.   | AS | A | D | DS |
| 17. | I think that collectively negotiated written labor agreements place undesirable restrictions on the administration.  | AS | A | D | DS |
| 18. | I think collective negotiations can provide a vehicle whereby faculty members gain greater on-the-job dignity and independence in performing their function.                             | AS | A | D | DS |
| 19. | I believe that many leaders in the drive for collective negotiations are power seekers who do not have the best interests of education at heart.   | AS | A | D | DS |
| 20. | The local faculty organization should seek to regulate standards for hiring of new faculty members.  | AS | A | D | DS |
| 21. | I think faculty members have a right to impose sanctions on governing boards under certain circumstances.  | AS | A | D | DS |
| 22. | I think that sanctions are a step forward in acceptance of faculty responsibility for self-discipline and for insistence upon conditions conducive to an effective program of education. | AS | A | D | DS |
| 24. | I believe that censure by means of articles in professional association journals, special study reports, newspapers, or other mass media is a legitimate technique for faculty use.      | AS | A | D | DS |
| 25. | I feel that the traditional position that faculty members, as public employees, may not strike is in the best interest of public higher education.                                       | AS | A | D | DS |

- |     |  |    |   |   |    |
|-----|--|----|---|---|----|
| 26. | I don't feel that the services of the faculty are so necessary to the public welfare as to necessitate the forfeiture of the right of faculty to strike.   | AS | A | D | DS |
| 27. | I believe that any faculty sanction or other coercive measure is completely unprofessional.  | AS | A | D | DS |
| 28. | I feel that it is unwise to establish educational policies and practices through collective negotiations.  | AS | A | D | DS |
| 29. | I believe that when the governing board denies the requests of the faculty, the faculty, has a right to present the facts to the public and to their professional associates employed in other colleges. | AS | A | D | DS |
| 30. | I think collective negotiations can bring greater order and system to education.   | AS | A | D | DS |

Center for  
Studies in Higher Education  
College of Education

Dear

The contemporary literature on higher education reflects considerable interest in institutional goals, functions, and the recent emergence of collective negotiations in higher education. A review of the literature indicates that little study of these topics has been undertaken.

We are conducting studies of the perceptions of institutional goals and practices of faculty and administrators at the \_\_\_\_\_ and their attitudes toward collective negotiations. These studies are being undertaken both as dissertations and as part of the continuing activities of the Center for Studies in Higher Education. \_\_\_\_\_ President, and

\_\_\_\_\_, Chairman of the Faculty Senate, have given their endorsement to these studies.

Your cooperation and your opinions are essential and vital to the success of these studies. The questionnaire instruments take approximately one hour to complete. The anonymity of your response is guaranteed.

Realizing the many demands on your time, let us express in advance our appreciation for the cooperation which we shall receive.

Sincerely yours,

*Maryjo Lockwood*  
Maryjo Lockwood

*L. W. Lindeman*

Center for  
Studies in Higher Education  
College of Education

Dear Dr.

A few weeks ago you received a phone call requesting your assistance with a study of perceptions of institutional goals and practices of faculty and administrators at the \_\_\_\_\_ and their attitudes toward collective negotiations. If you have already shared in these studies by returning the questionnaires mailed to you, please accept again our grateful thanks.

Realizing that the demands on your time are great you may not have yet found time to complete the questionnaires mailed to you. Because your cooperation and your opinions are essential and vital to the success of these studies, we are encouraging you to share in these studies by returning the completed questionnaire prior to May 16, 1973.

Sincerely yours,

Maryjo Lockwood
