The Nespillem tribe are a branch of the San Puell tribe, and live in the Nespillem Valley. They are self-supporting and will not receive anything from the Government. They have good places and are excellent workers and usually raise considerable grain. While it is a fact they do not receive anything from the Government, if they can find some Indian who has had a plow or anything else issued to him that they might have use for they will not hesitate a moment to trade him out of it. They were opposed to the treaty which was recently made with the Indians residing on the Colville Reservation, and declare they will not receive any part of the purchase money in case the treaty is ratified. I have endeavored on many occasions to get them to put their children in school, but they say they will leave the reservation before they will consent to have their children go to school.

The San Puell tribe are the least progressive of any Indians residing on the Colville Reservation. It seems on comparing the Nespilems and San Puells that the more progressive Indians had left the San Puell tribe and joined the Nespilems. They absolutely refuse to accept anything from the Government. They will not even accept rations for the old and decrepit when it is known to be a fact that they are on the eve of starvation. When they are sick it is impossible to get them to have anything to do with the Government physician, as they claim they must pay for the medicine. I have explained to them the many advantages which they would derive by accepting issues which the Government furnishes to be issued to the deserving Indians, but they say they want to pay for everything they get; that if they accept anything from the Government without paying for the same they will go to hell when they die. They do not farm only on a small scale, and raise a few garden vegetables. They devote the greater portion of their time to hunting and fishing. While they are on friendly terms, I have been unable to get them to give me the census of their tribe. They are ignorant and very superstitious. They did every-

thing in their power to defeat the work of the late commission. They make many inquiries about their chief, Sko-las-kin, who was sent out of the country about two years ago, and wonder if he is ever going to return to them. It is to be hoped he will remain where he is for some time yet, as his advice to these Indians has been pernicious and dangerous, and their condition to-day is largely due to the example he set for them to follow.

The upper band of Spokanes, whose hands have never been dyed with the blood of the whites, find themselves wanderers in the land of their birth. They have no reservation, and are forced to a life of beggary and vagabondage. "Why is this?" they ask with bitter discontent. "We have always been at peace with the white people, but where is our reward? When Joseph went to war we refused to join him. Now Joseph and his children are given food and clothing, houses, and farming tools, and we get nothing. This is not right." Of course it is not, neither is it politic in the long run. The Government has fallen into the error of doing too much for some of the Indians and not enough for others. About ten families of the upper Spokanes, becoming weary after having waited for over four years for the ratification of the treaty made with them, quietly moved on the Cœur d'Aléne Reservation a few weeks ago and have taken up land and are trying to make a start in life. Many of the Indians belonging to this tribe say they will not move on any reservation until they find out what is going to be done with the treaty which was made with them, and they say if something is not done for them soon they will be lost.

The Calispel tribe are scattered over land lying in the Calispel Valley and along the Pend Oreille River. They are also in the same condition as the Upper Spokanes in regard to a reservation upon which to live. They can not remain long upon the land they now occupy, as the whites are fast settling up that part of the country, and the game, which was once so plentiful, is growing more scarce each year. These Indians number about 200, so I am informed by the Catholic priest, who visits them occasionally.

These Indians, and other nonreservation Indians, are still having trouble over land claims with the whites, which they have occupied for many years, long before the whites moved to the Pacific coast. A vigorous protest should be inaugurated against the whites and in favor of the Indians, who have lived on certain tracts of land and cultivated the same for a long period. There are many whites, who, if they can make filings on lands which are occupied and improved by Indians, will do so without hesitation. They appear to think the poor Indian has no rights that they are bound to respect. The Indian office should have some representatives visit these Indians and devote their entire time and energy to their interest, and when an Indian makes complaint that some white man is trying to dispossess him of his land, to take the case in hand for the Indian, and if upon an investigation it is found that the Indian has a valid claim, to prosecute it and carry it to a final settlement, and not put the poor ignorant Indian off from time to time, thereby lessening the Indian's chances to his land when it is called for a hearing before the proper local land office officials. It would only take a short time to settle these land cases if taken hold of with that earnestness which is required.

**Colville Commission.**—On May 1, 1891, the commissioners, consisting of Hon. Mark A. Fullerton, Hon. J. F. Payne, and Hon. W. H. H. Dufur, appointed to treat with the Indians residing on the Colville Reservation, visited the Colville Agency, and a few days later met a number of the Indians in council at Neepilem, and presented to them some proposals for purchasing a portion of their reservation. There was much opposition at first among the Indians to selling a part of the reservation. The commissioners had to talk to the Indians two or three days before any agreement could be reached. The Okonagan tribe was the first to sign. Then came Moses and his band of Columbias, and next Joseph's band of Nez Percés. The San Puell tribe and the Neepilem tribe were bitterly opposed to the treaty, and not one of them signed. They said they had never asked any favors of the Government, had accepted none, and simply desired to be let alone. The commissioners closed their labors on May 23, 1891, opposite Marcus, on the reservation where the Colville and Lake tribes signed the treaty.

By the terms of the treaty the Indians agree to sell 1,500,000 acres, or about half of the Colville Reservation, and the Government agrees to pay the sum of \$1,500,000 for that portion of the reservation ceded, in five annual installments of \$300,000 each. The treaty is in my opinion a very fair one, both for the Indians and the Government. Those Indians living on the ceded portion can keep their homes if they so desire, or they can go on the diminished reservation, which is of ample extent and resource to maintain them in comfort.

**The whisky traffic.**—Through the kindness of Hon. Thomas R. Brown, United States marshal for this State, and on my recommendation in the premises, he has appointed a number of deputy United States marshals in the small towns surrounding the reservation, and that alone has had a wonderful effect in cutting off much of the

whisky traffic, which has been carried on so openly in the past by a class of white scoundrels living near the borders of the reservation, who are utterly devoid of principle or character, and who have robbed and debased the Indians by selling them whisky, thereby rendering their condition more hopeless. I have lost no opportunity in prosecuting parties against whom I could bring evidence, who are following this disreputable business of furnishing whisky to Indians for a livelihood. During the last term of the United States district court, held at Spokane, Wash., a number of whisky sellers were tried, convicted, and some were sentenced to State prison, and others were fined. The whisky traffic has caused me more trouble, and does more towards retarding civilization than all other evils combined. It was whisky sold or given to the Indians by some white man that was the cause of the murder of the white man who was crossing the reservation last fall.

**Crime.**—There have been three murders committed by Indians residing on the Colville Reservation during the past year while under the influence of whisky. A white freighter by the name of Cole was murdered by two Indians while they were under the influence of whisky. One of the murderers was killed by a deputy sheriff while resisting arrest, and the other Indian, a mere boy of about 15 years, was taken from the county jail of Okonagan County during the still hours of night and lynched by a mob of cowardly whites. Much excitement prevailed for a time after the lynching of the young Indian, presumably by the parties implicated in the lynching, as their conscience probably troubled them and they fancied there was going to be an Indian outbreak. The other murders were Indians who killed one another during a drunken row. It was revenge that lynched the Indian boy, and the party or parties who furnished the whisky to these Indians were responsible for the loss of three lives.

**Traders.**—There are two traders on the Colville Reservation, one white trader and one full-blood Indian trader. There is one full-blood Indian operating a trading store on the Cœur d'Aléne Reservation.

**Sanitary.**—The general health of the Indians of this agency is now good, but considerable sickness prevailed during the winter and early spring. A number of the Cœur d'Aléne Indians and members of Moses' and Joseph's band died last winter with la grippe. The Indians, or many of them, when being treated by the reservation physician, if they do not commence to improve at once, decide that the white man's medicine is no good, and they will, if an opportunity offers, take all the medicine at one dose which is probably intended for a great many doses. They go on the theory if a little is good a larger quantity is better. The Indian medicine man has but little to do now. The Lower Spokanes, however, had a medicine man attending on some of their sick for a short time last winter, owing to the fact that they could not get the Government physician from Nespilem, which is about 100 miles distant.

A physician is badly needed at this agency. He would have over one thousand Indians to attend to in case of sickness, and from the agency to where he would be called, in the extreme northern portion of the Colville Reservation, it is 116 miles, making a total of 232 miles in making the round trip; while if the physician located at Nespilem is called on to make the trip, as it is his duty to do so, there would be the distance from Nespilem to the agency and return, which is 150 miles, and that added to the 232 would make 382 miles in making the round trip. If a severe type of epidemic should break out among the Indians living in the extreme northern portion of the reservation, what show would they have if they had to depend on the physician located at Nespilem, 191 miles distant? It is not to be wondered at that the Indians are decreasing at such an alarming rate. The Indian medicine man is forbidden to practice, and the white physician is located at so great a distance as to be of little or no benefit to these Indians. Congress should increase the appropriation for the Colville Agency to a figure which would allow sufficient help for the proper management of the Indians under this agency.

Among the deaths during the past year was that of Chief Tonasket. His death occurred on April 2, 1891. He was an Indian of more than ordinary intelligence, and his death will be a great loss to his people as also to the whites, to whom he was a good friend. His influence was always on the side of law and order.

**Education.**—There are five boarding schools connected with this agency, only one of which is maintained by the Government. The others are contract schools, under contract with the honorable Commissioner of Indian Affairs and the superintendent of the boarding schools, instead of the Bureau of Catholic Indian Missions, as has been the custom in the past. Two of these schools are located at De Smet Mission, on the Cœur d'Aléne Reservation, Idaho, and two at the Colville Mission, near the town of Colville, Wash., and within 7 miles of the Colville Reservation. These schools are industrial boarding schools, and have been very well patronized during the past year. There is but one school building and one school on the Colville Reservation, the Tonasket boarding school. The day-school building, located at Nespilem, was unfortunately destroyed by fire on December 25, 1890.

The Tonasket school has an unfortunate location. It is located about 140 miles from the agency, on Bonaparte Creek, and near the Okonagan River. Bonaparte Creek is supplied with water from a lake which is strongly impregnated with alkali, thereby causing the water to be almost totally unfit for man or beast at certain seasons of the year. The land in the vicinity of the school building is of a very poor quality, not being capable of producing any kind of vegetation without an abundance of water. The mosquitoes are so numerous that they are almost unbearable during the spring and summer months. Wood has to be hauled a distance of about 12 miles. It would appear that the party who selected the present site for the school had no conception whatever as to the needs of a school. In a country where an abundance of good wood and the very best of water could be had within easy access, and then to erect the school building many miles from wood, and near water which is certainly not intended for civilized people to use, would certainly lead one to conclude that the party who made the selection was laboring under a fit of insanity. It is to be hoped that the Department will order the removal of the school building to a more suitable location, which can be had within a distance of about 15 miles from the present site.

This school has been maintained since the latter part of January, 1891. It was impossible to open the school sooner on account of the failure to receive the supplies. The school has been very successfully conducted under the management of Superintendent E. K Dawes, who has had many years' experience in conducting Indian schools. It has done most excellent work, with an enrollment of over 90 pupils. If arrangements are not made for the enlargement of the school building or other buildings erected, I am satisfied many pupils will have to be turned away. There are eight employes at this school.

**Police.**—The police force of this agency consists of 2 officers and 14 privates. They are vigilant and very prompt as a rule in the discharge of their duties, and obey the instructions given them cheerfully. It would be a very difficult task indeed to run the agency without them, as I consider their services indispensable.

**Court of Indian offenses.**—This court is presided over by three full-blood Indians, viz., Lot Whish-le-pee-sum, Cornelius Skosh-jock-in, and Thomas S. Garry. Court is held once a month and oftener when there are any cases to be disposed of. The court is an important factor in the administration of affairs at this agency. There has been no appeal from the decision of the court, and the offenders accept the decisions of the judges as conclusive. The following is the result of the workings of the court during the past year:

Causes.	Number of cases.	Number days in jail and performance of labor.
Drunkenness .....	5	30 days each.
Adultery .....	3	One 60 days, two 90 days each.
Gambling .....	7	30 days each.
Larceny .....	1	90 days.
Plurality of wives .....	1	60 days.

**Missionary.**—The Spokane tribe of Indians are members of the Presbyterian Church. The Presbyterian Board of Home Missions have heretofore furnished them the services of two ministers, but during the past six months they have not had any one to hold religious services for them except two visits from Rev. A. B. Cort, a white minister, whom the Indians had to pay. They have two very good church buildings on their reservation. These Indians are very desirous of having a white minister hold religious services for their benefit, as they claim their children would be much benefited by having the English language spoken instead of the Indian language. They are not able to pay for the services of a minister, and I feel where Indians take so much interest in religion as these Indians do it would be giving them much encouragement if the Government would furnish the services of a minister for their benefit.

The Catholic priest makes occasional visits to the Colville, Lake, and Okonagan tribes, many of those Indians being Catholics. But a small number of Moses and Joseph's people are Catholics. They have been laboring under the disadvantage of having no minister to preach to them. Moses is bitterly opposed to the Catholic religion. The San Puell and Nespilem Indians have a kind of religion of their own. The San Puells have a small church on that part of the reservation which they occupy.

**Freighting.**—The Indians of this reservation hauled about all the Government freight for this agency without the loss or damage of a single package. The freight was slow in arriving last year, and it is to be hoped it will be received during the

summer and fall, and then there will be no trouble in regard to getting Indians to haul the same.

**Allotments.**—No lands have as yet been allotted to the Indians in severalty on this reservation. There are many Indians, however, who I am satisfied are ready to have their lands allotted to them. The Lake and Okonagan Indians are prepared to take their allotments now, and I trust they will have their lands allotted to them before that part of the reservation is thrown open to white settlement, for, if they are not looked after properly, many of them will become discouraged when the rush by the whites is made and abandon their claims. A very large majority of the Indians on this reservation are living on separate tracts and cultivating the same without regard to legal subdivisions.

**Trespasses.**—A number of white people have already been traveling over that portion of the reservation which was recently negotiated for, prospecting and getting ready to make locations. I am fearful, if this is not stopped, that trouble between the Indians and the whites will be the result. Stockmen living along the borders of the reservation are in the habit of grazing their stock on the reservation when they find no one guarding the same.

**Inspection.**—This agency was visited and inspected by United States Indian Inspector Robert S. Gardner, in August, 1890. Dr. Daniel Dorchester, superintendent of Indian schools, visited this agency during last December in the interest of the school service.

**The census.**—The increase in the number of Indians over that of last year is due largely to many Indians and half-breeds moving on the reservation from the Colville Valley and different parts of the country to take up land and also to share in the purchase money from the sale of a part of the reservation. During the late session of the legislature of this State a bill was introduced and passed appropriating the sum of \$1,500 for pay of 2 enumerators to take a census of the Indians residing on the Colville Reservation. It was monumental cheek on the part of the State legislature to enact such a law, and a reflection on the honesty of the census taken by myself and employes. I dare say a more correct census was never taken of these Indians than that taken last year. The enumerators appointed to take the census by the State promised me they would not go on the reservation until permission had been granted them by the Indian Office; but I presume they finally concluded it did not make any material difference whether they received the consent of the Indian Office or not as long as the State of Washington had ordered a census taken, so on the reservation they went, and as soon as I received word that they were trying to enumerate the Indians I immediately ordered them off. It was then submitted to the Indian Office for a decision, and the honorable Commissioner of Indian Affairs very wisely decided that there was no necessity for the taking of a census by the State. It is my opinion if the enumerators had been permitted to proceed with the enumeration that serious trouble and probably bloodshed would have been the result, as the Indians were very much agitated over the matter, and it would not have taken much to have caused serious trouble. The Indians said if I wanted to take the census it would be all right, but they protested against the idea of having the census taken by outside parties.

**Improvements.**—During the past year I have had the agency buildings painted, also erected a blacksmith shop and slaughterhouse at Nespilem.

**Mills.**—Mr. Bouska, the sawyer and miller at Nespilem, has sawed about 30,000 feet of lumber, and the gristmill has ground and made into flour 2,174 bushels of wheat and 77 bushels of corn for the Indians during the past year. Mr. Wilmot, the sawyer and miller for the Tonasket mills, has sawed about 75,000 feet of lumber, of which the Indians have received nearly all of that amount. No grain has ever been ground at the gristmill, as these Indians have raised chiefly oats, and they have found ready sale for them at good prices in the Okonagan mines, which are only a few miles distant from the reservation.

**Employes.**—The employes, with but two exceptions, have been industrious and obedient, and have at all times manifested an interest in the work of assisting the Indians in advancing in civilized pursuits.

**Conclusions.**—I have endeavored to report the condition of these Indians and the affairs at this agency as they exist. Thanking you very kindly for the many courtesies extended, and the prompt manner in which my numerous requests have been passed upon during the past year,

Very respectfully, your obedient servant,

HAL. J. COLE,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERINTENDENT OF TONASKET SCHOOL.

TONASKET SCHOOL,  
Loomis, Okanagan County, Wash., September 1, 1891.

SIR: I have the honor to hand you my first annual report of the Tonasket boarding school.

The employes for this school were ordered to report for duty October 1, 1890, but on our arrival we found it impossible to open school, for there was not an article of furniture, bedding, or subsistence on the place. Some of the goods were received in December, 1890, but the kitchen range and bedding did not arrive till the end of January, 1891. On receipt of these we opened school.

The books, slates, pencils, and other school supplies were not received until June, consequently all the teaching had to be oral.

We had five months of school with a total enrollment of 92 children. The average attendance was 48. Average attendance for the last quarter was 66.

Our building is poorly constructed and badly arranged. We need additional buildings as follows: Boys' quarters, schoolroom, commissary, laundry, workshop, and stable.

Our school is not located in a desirable spot. I hope the effort to change the situation will meet with success.

Space for our garden was very limited, but we succeeded in raising some very fair vegetables.

The health of all has been excellent.

Our school was looked upon with a good deal of suspicion by some of the older Indians, but I think they are inclined now to view us in a more friendly manner. I do not apprehend any trouble after vacation, as I believe the children will be ready to come in of their own accord.

We look forward to next year with pleasant anticipations.

Very respectfully,

E. K. DAWES,  
Superintendent.

HAL J. COLE,  
United States Indian Agent.

## REPORT OF NEAH BAY AGENCY.

NEAH BAY AGENCY, August 17, 1891.

SIR: I have the honor to submit herewith my second annual report of affairs at this agency for the fiscal year ending June 30, 1891.

Since my last annual report reasonable progress has been made in civilization among the Indians under my charge, though not so marked as friends deeply interested in the solution of the Indian problem might wish.

I am pleased to state, however, that there has been no retrograde movement. Every step has been a step forward. This has been particularly true of the younger and more progressive of the Indians.

Of the Makahs there are 130 of both sexes who are fifty years of age and upwards who cling tenaciously to their old barbarous habits and superstitions. All efforts thus far to induce them to adopt and practice civilized habits have met with but partial success.

As those Indians receive no attention whatever (and from what I can learn have not for years) from ministers of any denomination, is it any wonder that their moral standing is of a very low order? I have, by laying down the law at the beginning of my term and enforcing it by imprisonment with labor, created a wholesome respect for the sanctity of the marriage tie, so that lately such offenses are becoming more rare.

As I stated in my former report, the Makah Indians are not dependent on agriculture for subsistence. Their wealth is in the rich products of the waters of the Pacific Ocean and the straits of Juan de Fuca, on which shores they live. In 1880, Judge James G. Swan, custom-house inspector at Neah Bay, was employed by the United States Census Bureau for the Tenth Census to make a report on the food fishes of Cape Flattery, which report was made through Prof. Spencer F. Baird, then U. S. Fish Commissioner. Mr. Swan ascertained that the Makah Indians during the year had taken 1,586,200 pounds of fresh halibut, which, canned and dried for winter use, weighed 395,555 pounds. The Makah Indians at that time numbered 700 persons. In 1890, for the Eleventh Census, Charles W. Smiley, U. S. Fish Commission, engaged Charles Adie, post trader and Signal Service officer at Neah Bay, to report in a like manner of the food fishes of Cape Flattery. Mr. Adie placed the number of pounds at 280,000 of fresh halibut taken that year by the Makah Indians, who numbered 454 persons. This may be considered as a fair annual product of the fisheries of the Makah tribe for halibut per annum.

I would respectfully call your attention to one very great demand brought on by white competition: that is, a knowledge of the latest improved methods and appliances for curing and packing fish for shipment as a source of revenue. Their present method of sun-drying, with thousands of flies covering the exposed fish, is rather primitive, and would hardly recommend itself to the taste of an epicure, neither is it a desirable article of commerce.

During the present season there has been a mosquito fleet of about twenty fishing boats, and four or five schooners manned by white men, engaged in halibut

fishing. Those boats with their improved appliances have caught enormous quantities of fish. One of the schooners left the bay with 35,000 pounds of fresh halibut packed in ice, for up-sound ports, the fish to be shipped east by rail. Two other schooners caught recently 25,000 pounds each, the fish to be stored in a cold storage house in Seattle, and from thence to be shipped to eastern markets.

The Indians view with jealousy the encroachments of the white men on what they have always regarded as their exclusive possessions, and find for the first time in their history that white competition has overstocked, and will I am afraid eventually take from them a market of which heretofore they have had almost a monopoly.

Seal fishing has been successfully prosecuted by the Indians of this agency. Skins command a high price, starting in the early season at \$10 per skin, and finally reaching \$19.50. Very few of the Indians sold for less than \$15.

The Makahs own three schooners, the *Perkins*, *James G. Swan*, and *Lottie*. The *Perkins* remained at the bay, and with a crew composed entirely of Indians, realized \$3,000 on the season's catch. The *Swan* and *Lottie* each employed a white man as navigator, and sailed for Bering Sea; but alas, at Sand Point the *Swan* was overhauled by a revenue cutter and was obliged to return to Neah Bay. The *Swan's* catch for the season was 155, and for 125 skins the owners received \$19.50 per skin, and for 30 skins \$18; in all \$2,977.50; so that their adventurous voyage was not altogether disastrous. The last heard from the *Lottie* was that she had reached Bering Sea. A great deal of the hunting around Cape Flattery was done by Indians in canoes, who would leave their village in the middle of the night, paddle or sail out 20 or 30 miles from shore, and return in the evening with their catch.

The schooner *Teaser*, owned by white men but manned by Indian hunters, caught something over two hundred seals. Summing up the sealing season, taking into consideration the price paid over other years, I have no hesitancy in saying that it has been on the whole a very profitable one for these Indians.

The Makah Indians are expert whalers. This season they have captured twelve of those monsters of the deep. The method of whale catching has been so often and so minutely described that it is familiar to most everyone. I will therefore not undertake it. It strikes me very forcibly that a tribe of Indians hardy and brave enough to venture 20 and often 30 miles offshore in their frail cedar canoes to engage in such perilous business that requires undaunted courage, self-possession, and presence of mind, have all the elements of a great people. When the dead whale is safely beached there is great rejoicing in the village; the blubber is divided among the villagers, and they regard it as an article of food as highly as the whites do that of pork. The oil is their butter, and while eating they dip almost everything they use for food in this whale oil. The oil sells readily at \$1 per gallon among the different tribes of coast Indians. The greatest portion of the whale meat is cut into thin slices, and dried for winter use.

**Lands in severalty.**—The Indians of the Makah reservation without exception desire their reservation surveyed and allotted to them in severalty. The rush of white settlers to this section of country has created some uneasiness among them, and has made them doubly anxious for a survey. The sooner this is accomplished the better, as it is unreasonable to expect Indians (or anyone for that matter) to work with that degree of courage without some prospect of receiving a lawful and permanent title to their respective claims.

Indians, as a rule, do not like to live back in the woods; therefore, in my opinion it would be advisable to subdivide the land so that each family would have a frontage either on the ocean, the straits, or on some of the creeks or rivers.

A great many have staked out claims and have made some improvements on them. There has been three times the acreage planted in potatoes and other vegetables than there was last year.

This interest in receiving their land in severalty is somewhat remarkable when we take into account that when I made my former report hardly an Indian on the reservation took any interest in the matter, or cared whether the reservation was surveyed or not.

The Quillayute Indians have a small reservation containing 845 acres, which is located 35 miles south of Cape Flattery. Previous to the reservation being set apart by President Cleveland, February 19, 1889, four claims had been taken within the limits, leaving very little for the Indians, except what was back in the woods and lowlands, subject to overflow by the Quillayute River.

The preëmption and timber entries under contest, and now pending in the General Land Office, embrace the most valuable part of the reservation, the Indian village being located thereon. The claimant, Daniel Pullen, in 1880, under the guise of doing business by permission of the old Chief Howeatle, established a trading post in the heart of the village with the solemn assurance on the part of Pullen that he would lay no claim to the land; but all promises and pledges to the old chief were forgotten, for in 1883 he (Pullen) preëmpted the land, claiming settlement March 1, 1880. Complaint being made by Oliver Wood, then United States Indian

Agent at Neah Bay, on October 12, 1887, the cash entries made by Mr. Pullen for both preemption, and timber entries were held for cancellation by the General Land Office, the usual sixty days being allowed Mr. Pullen to show cause why the same should not be cancelled. The case rested until November, 1890, when Special Land Agent W. T. Sharp conducted a hearing on the part of the Government, which lasted three weeks, and in which I rendered all the assistance in my power in furnishing Mr. Sharp with all the testimony which I was able to acquire, tending to show the rights of the Indians to the land involved, and to show and prove Mr. Pullen's noncompliance with the United States land laws relating to preemption and timber-land entries. The case, after being passed on by the registrar and receiver in the district land office at Seattle, has been forwarded to the General Land Office in Washington for a decision. Whatever rights Mr. Pullen may have under the law, the Quillayute Indians have an equitable and just claim to the land, and I contend that the Government should maintain them in it.

The Industrial boarding school situated at this agency, and the day school at Quillayute have been fairly prosperous and successful. Three changes of superintendents in the past year was not in my opinion for the best interests of the schools. Frequent changes are a great hindrance to any school. What the school needs is teachers of superior tact and skill, who will remain long enough in the service to be of some benefit to the children after they have studied their peculiarities and the best methods of dealing with them.

As I stated in my former report, I am better pleased with the results obtained in the industrial education of the girls than that of the boys. The girls, on leaving school to assume new duties and responsibilities as wives and mothers, as a rule are quite proficient in cooking, sewing, laundry work, and general housekeeping. As to the boys, it is folly to expect to turn out first-class mechanics when the only representative of the different mechanical trades on the pay roll is an Indian carpenter. The industrial teacher and carpenter are supposed to fill all that is lacking in the make-up of the force.

Nevertheless with the assistance of the employes there has been a great deal done in the repairing of school buildings, the laying of sidewalks and the replacing of the old and rotten water system with new pipes, extending the fresh water supply, not only to all the school buildings, but to the houses of the employes as well.

By the labor of the school boys, directed by the superintendent, we have, I think, the best garden in the county, insuring an ample supply of potatoes, cabbage, and all other vegetables to subsist the school during the entire year, providing we can keep them from rotting in this humid climate. They have also assisted in curing and moving away 75 tons of hay, have helped inclose 106 acres of splendid pasture land in the Wa-ach Creek bottoms, requiring 300 rods of fencing, and have kept everything in a neat and orderly manner around the agency and school buildings.

The Quillayute day school, under the efficient management of A. W. Smith, principal teacher, and Miss Bright as assistant, has made very fair progress. The teachers have done everything in their power to instruct and elevate to a higher plane the children intrusted to their care. The new schoolhouse, erected last fall about a quarter of a mile from the village, is a great improvement on the old shack formerly occupied as a schoolhouse, situated as it was right in the heart of the village.

The average attendance at this school for the past year has been 50; at the industrial boarding school, 58. I think I have brought into the school every child that is old enough, on the Makah Reservation, except those reported ill by the agency physician.

**Police.**—The police force are prompt and obedient to execute an order, and are important factors in the civilization of these Indians. I have them distributed among the different villages as follows: Three at Neah Bay, 2 miles; one at Wa-ach village, 5 miles; one at Suez village, 6 miles; one at Osette, 18 miles, and two at Quillayute, 35 miles from the agency.

**Inspection.**—United States Inspector Robert S. Gardner was here for two days last September, and made a very careful and thorough inspection of the books, buildings, stock, and everything connected with the agency. The superintendent of Indian schools, Dr. Dorchester, paid us a visit later in September, but unfortunately the school children were up Sound in the hop fields enjoying their annual vacation.

**Court of Indian offenses.**—Up to June 30, 1891, no court of Indian offenses had been established at this agency. This matter has been corrected by the appointment of three judges for the fiscal year ending June 30, 1892.

The census for the year ending June 30, 1891, shows the number at the agency to be 694; Mahahs, 449, divided as follows: Males above 18 years of age, 148; females above 14 years of age, 173; school children between the ages of 6 and 16, 60.

Quillayutes are divided as follows: Males above 18 years of age, 69; females above 14 years of age, 81; school children between 6 and 16, 44.

In conclusion I would say that the past year has been a very prosperous year for

the Indians of this agency. With the exception of the very old and decrepit, they are self-supporting. I have no trouble whatever in governing them, and flatter myself that I have (considering the short time I have been among them) gained in a great measure their confidence and respect.

Thanking the Indian Office for the kind and courteous treatment extended to me in the past year,

I have the honor to be your most obedient servant.

JOHN P. MCGLENN,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF PHYSICIAN, NEAH BAY AGENCY.

NEAH BAY AGENCY,  
July 1, 1891.

SIR: In accordance with the rules of the Department, I have the honor to present to you my second annual report from July 1, 1890, to June 30, 1891.

During this period we have been unfortunately visited by two epidemics, one being that of "measles," and the other "chicken pox." The "chicken pox" made its appearance in August, but only 17 of the children were affected by it, and they made good recoveries.

In June of this year the measles arrived. On the 17th of this month I visited Mr. Hannah, the assistant teacher, who for some days had been feeling unwell, and I found he was suffering from measles. I at once informed Mr. McGleNN, the agent, and advised that the school be closed, and the children sent to their respective homes, for heretofore this disease has produced great ravages amongst this tribe, and they naturally have a great dread of it. With the means at hand I isolated Mr. Hannah, and took every precaution to prevent the spread of the disease, but all to no good, for but a few days elapsed when I was sent for to visit a boy living at the Neah Bay village. He was suffering from measles, and on making a tour of inspection I found 4 more sick from the same cause, 1 at Neah Bay and 3 at Waatch. The former custom of the Indian medicine man in these cases was to make the patient sweat profusely, and whilst the patient was still hot to take him to the beach and plunge him into the sea. The results may easily be imagined. This I strictly forbade, explaining to them the dangers of doing so, and I am glad to state that they have adhered to my advice, and so far all the cases have progressed most satisfactorily, and I am hoping it will take a speedy departure without any victims.

In the spring of this year I accompanied Mr. McGleNN to the Quillayute and Osette villages on the Pacific Ocean. I noticed a great change at Quillayute since my previous visit. The space that had been occupied by the "rancheria" which had been burnt down, was laid out in a street, with frame houses on either side, all varying in their architecture, from the ugly box house to the more picturesque gothic and Swiss chalet. So far so good. The internal conditions were far less satisfactory. It was their sealing season, and seal flesh to them is a toothsome dish, and the remains of previous meals with bits of blubber, fresh seal skins and fish scattered promiscuously around produced a stench, that words fail to express. All these same things are found in the rancherias, but the profuse ventilation and sandy floors prevents such stinks arising. In this direction, I fear, that civilization is productive of harm so long as they catch whales, seals, and fish.

I would again respectfully call your attention to the necessity of providing new buildings for the school children at Neah Bay. They are unsanitary, and totally unfit for the purpose they are used for. Since my last report, new water pipes have been laid which is a great improvement, but I am still of the opinion that the reservoir should be cemented and covered in, for the reasons mentioned in my previous annual report.

It will be noticed, amongst the diseases on the inclosed list, that there occur cases of "spina bifida" and "paralysis of the extensor muscles of the wrist." The "spina bifida" occurred in the child of the "chief." Upon inquiry I found this disease, or malformation rather, is very rare amongst the Indians. A child belonging to the Clallam Indians was born with it, and a former child of the same chief, but by another wife, was deformed in a like manner. I adopted the usual treatment, but the child only lived a few months.

The case of "paralysis" or "painter's drop wrist" occurred in the Indian carpenter. In the absence of other causes, and with a history of syphilis, I attributed it to the latter disease, and as it gradually disappeared (the man now being quite well) under the influence of iodide of potassium, I think its origin must have been specific.

The case of "senile cataract" mentioned in my last report I operated on, with partial success. At any rate, from being totally blind, he can now see well enough to move about, and he is satisfied. About 3 weeks after the operation he unfortunately had an attack of apoplexy. Considering this was the first time such an operation had been performed on any of them, I think the fates might have been a little more considerate; and the medicine men made the most of it; but the fact of his sight being restored was a factor in my favor. By and by I hope to report more like cases, for it is only by work of this kind that modern medical and surgical science can overcome their superstitions.

The case of *ectropion* was as bad a case as ever I saw, the lids not only being considerably everted, but extremely oedematous, and the man had not been able to see for months. Under treatment, which I had great difficulty to get him to submit to, he made a good recovery, and now you could not tell he had suffered from it. He has a great opinion of the "white doctor's" skill, he himself being a medicine man.

On the whole I am satisfied with the confidence they have in me, and the longer I live among them I hope that the opportunities may be many to enable me to lift the veil of superstition that enshrouds them at present.

During the year there has been births, 11; and deaths, 16. Of the latter 5 died from phthisis, 4 old age, 4 infantile debility, 1 spina bifida, 1 hemorrhage after labor, 1 pneumonia.

I am your obedient servant,

H. B. RUNNALLS, M. R. C. S., L. L. D.,  
*Physician in charge.*

JOHN P. MCGLENN,  
*U. S. Indian Agent.*

## REPORT OF PUYALLUP AGENCY.

PUYALLUP (CONSOLIDATED) AGENCY,  
*Tacoma, Wash., August 25, 1891.*

SIR: I have the honor to submit herewith my twenty-first annual report, giving a brief outline of the condition of affairs at this agency, with a statement of the progress made during the year.

This is a consolidated agency, embracing within its limits seven different reservations. These are scattered at different places within a radius of 150 miles, and it requires a large amount of traveling and correspondence to keep them all properly regulated. There are boarding schools on four of these reservations, each of which is under the supervision of a superintendent, who also acts in the capacity of local agent and has a full corps of school employes who conduct the school under his direction. Three of the reservations are unoccupied by white employes, and the Indians living on them send their children to the schools above mentioned. There are courts of Indian offenses established on each of the reservations, which regulate their infernal intercourse under the general supervision of the agent. In addition to this, there are two day schools sustained among nonreservation Indians which require some care and attention. The labor required to perform all these duties keeps an agent pretty actively employed.

The Indians living on five out of these seven reservations have had their land allotted to them in severalty, have received patents for the same, and are citizens of the United States; and, further, this now being a State, they are citizens of the State. Under a recent decision of the United States district court, citizens of a State can not be placed under the jurisdiction of an Indian agent. The Department therefore has no further authority over this class of Indians. The agent can act as an adviser and attorney, but no longer as the ruler or governor. It is a very unfortunate situation; is unpleasant for the agent, and detrimental to the best interests of the Indians. Released as they are from the restraints of the Indian Department, they are free to indulge to an unlimited extent in the use of intoxicating liquors, of which they are almost universally very fond, to practice all of their old heathenish rites and customs of incantations and "tamanamous" over the sick, and to take their children out of the schools on any pretext or excuse and thus deprive them of the education the Government wishes them to have, and tend to break up the schools. The State has no laws that cover these classes of cases.

But where there are laws they do not get their full rights, nor are they properly restrained. They are usually too poor to bear the expense of litigation in the State courts, and are easily imposed upon and fleeced by unprincipled lawyers, and so prefer to let their affairs go rather than to regulate them by suit in the State courts. In criminal matters the expense to the State is often very considerable, and for the reason that they are very light taxpayers, their lands being exempt from taxation, the authorities are inclined to neglect them, unless whites are involved, and to allow them to go unpunished for crimes against each other. Particularly is this the case with regard to the marriage relation. So that our experience goes to prove that citizenship has been forced upon them before they were ready for it. They are left unprotected and unguarded and are likely to suffer severely for the want of it. Socially the tendency of society is for them to associate with the lower classes of the whites, the influence of which is to drag them downwards. The picture is a painful one, but it is nevertheless a true one. It is like a father who has brought up a family of boys under good family discipline till they have reached the age of twelve or fourteen years, when the law should withdraw his authority over them and they be allowed to roam over the streets at their own sweet will and go to destruction.

The Puyallup Commission, which was appointed by Congress to investigate the present condition of the Indians on the Puyallup Reservation, and make recommendations concerning the sale of their lands, met during the past winter, visited the Indians on the reservation a number of times, and remained near here for a number of weeks. Their report will probably be submitted to Congress during the coming season. It is evident to all that the best interests of both Indians and whites in this vicinity would be best subserved should a portion of the reservation be sold, as it is, or soon will be, needed for city purposes, and can not be used by the Indians. The best manner of doing this so that the rights and interests of all are concerned shall be properly protected is the question to be considered.

The unscrupulous and inveterate efforts of speculators to get possession of their lands requires constant vigilance and effective work to check them. It has been found necessary to keep a detachment of soldiers on the reservation for several months to protect the Indians from being robbed by this class of men. The tables have been turned, and the Army has been needed to protect the Indians instead of to fight them. Possibly if this had been done in other instances, Indians would not have been driven to desperation, and obliged to fight for their rights themselves.

The Quinaielt Reservation is very large and but sparsely settled. Until of late years it has been supposed that it was very nearly valueless for agricultural purposes, but it is now pretty certain that there is a large quantity of very valuable land on it. The best part of it is as yet quite difficult of access, but with the incursion of white settlements around it will fast be made available. During the past year or two hundreds of settlers have taken claims along its borders, and it is becoming more and more important that it be surveyed and allotted. Steps are now being taken to survey the boundary lines of a part or all of it, which it is hoped will be done during the present season. There are prospects that within a few years a railroad will be built to a point near the lake. Should this be done and the good land subdivided and allotted, it would be an attractive place for intelligent Indians to move to, where they could get good claims, perhaps the last chance for them in this State. The coast Indians would, I think, congregate there. In such a place, removed so far away from the center of the heavy settlements, they would be safer from temptation than elsewhere for some generations yet to come. I am told that there are many advantages for a good school to be established there when this should be done.

The Schools connected with this agency have been unusually prosperous during the year. The total enrollment has been 349 and the average attendance 255, which is much more than any year previous. Improvements and additions have been made to some of the school buildings, noticeably at the S'Kokomish and Quinaielt. The Puyallup is the school that now needs additions, as the attendance has been in excess of the accommodations afforded. The crops on the school farms are generally abundant this year, as the season has been favorable, and the industrial department of the schools has been well conducted. As stated above, the exercise of the full rights of citizenship enjoyed by the Indians has been taken advantage of by some in taking their children out of the schools. This has been offset on the other hand by the hard times, which have influenced others to put their children where they could be provided for without expense to them. The health of the scholars has been rather better during the past year than usual, and there has been less sickness. The reports of the superintendents of the several schools, submitted herewith, give full accounts of their condition in detail. The employes have most of them worked hard, and the progress of the scholars shows the result of their patient and laborious efforts. By far the largest part of the time of the agent has been taken up in caring for the schools. The cooperation and assistance of the Indian Bureau in the management of the schools has been fully appreciated, and is very apparent in their growth, prosperity, and progress.

On the 1st day of last June I completed twenty years of continuous service as Indian agent and residence on Indian reservations, so that I am now in my twenty-first year of this kind of official life. In looking back over this period I note many changes, both in the Indians themselves and in the conditions by which they are surrounded. There certainly has been great advance in many particulars. With many of them it seems as though everything had been done for them by the Government that could be done. They have had good homes and valuable land secured to them, their children have had good opportunities for education, and now they have been endowed with the full rights of citizenship. What use they will make of all this time alone can tell. Probably some will abuse their privileges and others will be benefited by them. These Indians at least can not complain that they have not been fairly and generously treated by the Government.

The condition of their health is the most serious drawback to their advancement. Scarcely any are free from some kind of disease, and while they are not diminishing as rapidly as is often supposed, they are certainly not increasing in numbers.

The kind and courteous treatment received by me from the officers of the Indian Bureau is a source of much gratification and pleasure to me.

Very respectfully submitted.

EDWIN EELLS,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF PUYALLUP SCHOOL.

PUYALLUP CONSOLIDATED AGENCY,  
*Tacoma, Wash., August 24, 1891.*

SIR: I have the honor to submit the following report of Puyallup School for the fiscal year ending June 30, 1891.

A brief history of the school from the time it was established up to 1890 was given in last year's report, to which I would respectfully refer you.

Very satisfactory progress has been made during the year, and much interest manifested by the pupils in their work. The enrollment was: Male, 87; female, 79; total, 166; and the average 107.40.

against 85.17 for the previous year. School was in session ten months, the remaining two months being divided into four vacations, one at the close of each term of school. Most of the pupils spend vacations with their parents.

The school was graded during 1889, and when the authorized course of study was received, in 1890, we very readily adjusted our classes to its requirements, and at the close of the school year made promotions in the customary manner. Six pupils were graduated and received diplomas.

The various grades contained the following number of pupils at the close of the year:

Sex.	I.	II.	III.	IV.	V.	VI.	VII.	VIII.
Male.....	26	5	4	5	11	6	6	4
Female.....	28	7	7	5	8	6	1	2
Total.....	54	12	11	10	19	12	7	6

Four young men, two of whom were pupils and two former pupils, were sent to Harrison Institute, at Chemawa, Oregon.

Health has been better than usual. We have had but few serious cases of sickness, and the comparative marking would be about as follows: Good, 120; fair, 33; bad, 14. No deaths occurred at school, but three pupils died at their homes after being withdrawn.

The school has 160 acres under fence, 35 acres of which is in meadow, 21 acres in garden and other crops, and the remainder in pasture, upon which is kept the Government stock, consisting of 7 head of horses, 23 head of cows, 10 head of other cattle, and 10 hogs.

The carpenter has been crowded with work in fitting up the older buildings, which were moved and attached to the main building. He has been assisted by from 4 to 6 boys, working on half time.

The domestic work has been improved in our new quarters, but the increase of numbers has taken up all available space. Owing to the late arrival of the dry goods, the sewing-room work has been more arduous than usual. All of the cloth was made up, and the clothing became so old and worn that the mending was largely increased. The larger girls furnished considerable material for their own dresses. Cooking and kitchen work has had the attention which its importance demands. Besides the regular detail to assist the cook, one of the pupils was made assistant cook on regular salary and another was employed at good wages by the employes to cook for them.

In December a lodge of Good Templars was organized in the school. It has 50 members. Our pupil members are sent as delegates to the district lodges, and one was sent to the grand lodge at Spokane. They take a lively interest and active part in the work, and so far have done credit to themselves and the school.

With the assistance of friends we established a small library and a good reading room early in the year. The Tacoma dailies and some of the best magazines and weekly papers come to its tables regularly, and it is a useful addition to the school.

The buildings are now filled with pupils, and some portions, especially the boys' dormitory, are crowded. If we have an increase of numbers next year, as in the past year, it will make more room necessary.

In conclusion, we have been repaid for any extra effort made by the increased prosperity of the school.

Very respectfully submitted.

EDWIN L. CHALCRAFT,  
Superintendent.

E. EELS,  
United States Indian Agent.

## REPORT OF SUPERINTENDENT OF QUINAIELT SCHOOL.

PUYALLUP CONSOLIDATED AGENCY, WASH., July 29, 1891.

SIR: In compliance with the requirements of circular letter of April 3, 1891, I have the honor to submit my second annual report of the Quinaielt Indian boarding school, located on the Quinaielt Indian Reservation, for the fiscal year ending June 30, 1891.

The average attendance during the year has been 27. During that time 2 female pupils have been permitted to withdraw, one having attained maturity and the other, being an invalid, returned home, where she is well cared for; and 3 new pupils have been added, leaving a present total of 28. All the children of school age on the reservation that are able to attend are in school. There are a number of Indians living off from the reservation who have children that should be in school, but little can be done toward getting those children in except by persuasion, which I have tried in vain, as they live about 30 miles from the school north on the beach, where as yet it is almost impossible to reach them save by way of the beach on foot at low tide, when only a person accustomed to the route can go, there being many high points extending into the ocean to climb, one tunnel about 4 rods long that always has from 3 to 10 feet of water in it at extreme low tide to ford or swim, besides many rivers. We hope to have better success this coming year in persuading or influencing those Indians in some way to bring their children to school.

The pupils have made excellent progress in the branches of learning taught. The school has been fully organized in conformity with the new course of study, all the grades having pupils but the third, sixth, and eighth. The grading of the school has created quite an enthusiasm on the part of the pupils to learn. They now look forward with pleasure to completing the course, and especially the pupils of the seventh grade. All pupils complete easily the work of each grade in the time allowed, and many of them have completed the fourth year's work at the close of this their third year in school. One boy who has been in school three years has just finished the work of the fifth grade. This is conclusive, and goes to prove that the Indian children, with the same advantages that children of the white public schools have, can accomplish as much school work in the same time as is done by white children.

From 8 to 12 o'clock a. m. every day except Saturday, Sundays, and legal holidays (which are appropriately observed), school is in session. Saturday forenoon the boys, under the industrial teacher, clean the schoolroom, boys' dormitory, stoves, etc., as well as the school grounds, so as to have everything appear neat and clean. The girls during this time, under the direction of the matron and cook, attend

to the cleaning of the kitchen, dining room, girls' dormitory, etc., besides performing many other duties usually found to be done on Saturdays.

The afternoons of each Saturday the children are allowed time for recreation, and they are often taught the sports and games enjoyed by the white youth, such as base and foot-ball, croquet, etc. In addition to above, special time is allowed each school day, when the boys and girls together, under the direction of an employé, enjoy suitable outdoor sports and games.

The Sabbath day is properly observed by all attending the Sabbath school in the morning and Bible study or singing in the evening. The employés aid in making the school a success, and many of the older Indians come in and take part in the exercises. Much good has been done, not only among the children, but also among the parents. A missionary is needed very much here, as it is impossible for the superintendent or any employé to devote the necessary time to the good work. A session of school is held each evening for free and easy study, singing, etc., after which the pupils retire to their dormitories. The older girls are given instrumental lessons on the organ by the matron, and are having excellent success. These children excel in music and sing well.

The afternoons of school days the girls from 1 to 5 o'clock are taught cutting, fitting, and making garments for themselves, as well as keeping their clothing, besides the clothing of the boys, in repair, caring for milk, cooking, etc., besides being taught the many other duties known to good housekeepers. I would say that the larger girls are pronounced by the matron and cook to be good plain cooks, and that they take particular pride in learning this much-desired art, which will be of so much benefit to them in future. Sewing of all kinds they learn very fast, and many of them now can cut, fit, and make all the necessary garments they require without any instructions, while all can do plain sewing, a little simple fancy work, and crocheting. They perform the duties required of them cheerfully and willingly.

During the same time that the girls are taught industrial work the boys, under the direction of the industrial teacher and with his help, care for the garden and farm, build and make all necessary repairs on fences, buildings, etc., as well as caring for the stock. At this employment they are cheerful, obedient, and industrious, and take a great pride in performing their work well, and especially the work of the garden, which contains about 3 acres under fence.

Though the spring was late and during the early part of the season the garden did not look very promising, yet the summer showers, which are unusual here, have helped the late crops, and I estimate the school will realize some 200 bushels potatoes, 200 bushels turnips, 50 bushels carrots, besides beets, peas, cabbage, etc., enough for school requirements. The bottom land here is very hard to clear, but we are devoting all the time that can be spared to clearing and enlarging the garden and farm.

The schoolhouse being located near the beach, where it was in danger of being washed away by high-winter tides, was moved to a point near the boarding house, about 40 rods from the beach and on a high bank of the river, where it is now out of danger of high tides and much more convenient. The new grounds contain about 1 acre of land, which, with the beach at low tide, make ample playgrounds for the boys. The boarding house is located in the girls' playgrounds, which joins the boys' grounds, with a fence between. The grounds are high and dry, overlooking the river and ocean, making a very beautiful place for the school. The school and boarding houses have been repaired and are now comfortable and convenient. Barns and stables and all outside buildings have been repaired and part of them enlarged, so as to make plenty of comfortable room for stock.

The employés here are interested in their work, and the majority of them having been in the service here from two to four years, the school has profited by their experience. The same employés desiring to remain in the service another year, we may reasonably expect even better results from their labors and experience.

The school being situated in the center of the Indian village, one who is acquainted with Indian characteristics can readily see some of the difficulties we have to contend with. The older Indians do not, nor can not, appreciate the work of the school, and consequently, instead of trying to work with us for the good of the children, they are continually trying to keep alive in the minds of the young their old customs, superstitions, etc. Again, it is very hard for the children to become good English speakers when they have so many opportunities of using their own language with their parents, who can not converse in any but their own language. Only when talking with Indians who do not speak English do we allow the children to speak in their native tongue, yet I find that they do not advance in English speaking as they should, or as they could if the school was situated away from the village. These drawbacks and many others exist owing to so much intermingling of the children with the old Indians.

The Indians here are not citizens, their lands never having been allotted. For the good of the school as well as for the welfare of the Indians, I have persuaded about 40 young men and heads of families to leave the village and settle on the bottom lands of the Quinaialet and Queets rivers, on the reservation. The majority of them have this year good gardens, and they realize that they have profited by the change. We hope to succeed in getting others to do likewise, for there is yet plenty of good land along the mentioned rivers which I have carefully explored.

I would earnestly request that the outside lines of this reservation, as well as the mentioned bottom lands, be surveyed as soon as possible. The Indians are very desirous that this much should be done at least, if not the whole reserve.

Fish and game of all kinds are getting very scarce, and the Indians are obliged to find other employment. Fortunately there is plenty of work for them freighting with teams and canoes for the white settlers near the reserve. During the hop-picking season (September) they make good wages, and before the rainy season begins they provide the necessary supplies for winter. Most of our Indians here live well—much better than other tribes north on the beach, unless, perhaps, the Makaha, who make their money by getting the fur seal, which is a very profitable business for them. The reservation being 30 miles from the nearest towns, the Indians do not get as much whisky as many other tribes.

Court of Indian Offenses do their work very satisfactorily, and the police are as attentive to duty as perhaps the average Indian police.

I have to acknowledge with pleasure the encouragement and help given by my superiors in the service, and hoping that even better success in future than we have had in the past may crown our efforts.

I am, very respectfully, your obedient servant,

E. W. AGAR,  
*Superintendent and Teacher.*

EDWIN BELLS,  
*United States Indian Agent.*

## REPORT OF SUPERINTENDENT OF CHEHALIS SCHOOL.

CHEHALIS BOARDING SCHOOL, June 30, 1891.

SIR: In accordance with your circular letter of April 3, 1891, I beg leave to make the following report: I received for the property here October 1, 1890, and took charge the same day. This school had been in good hands for years, and, of course, I found everything in a shape to do honor to my predecessors. The school was well graded, disciplined, and advanced. Everything had been reduced to a system, and I have been happy in trying to keep on in the same line, with every appearance of success. The buildings, fences, etc., were in as good a condition as their age would admit. In spite of the best of care, they all evince general symptoms of "a mild decay."

I found the whole corps of employés faithful and efficient, and our year's work has been in perfect harmony.

There is no history of the school within my reach, except what may be gleaned from the school registers, which are complete since 1882.

The reported capacity of the school is 50 boarding and 10 day pupils. This is a fair report for all the rooms except the dormitories. These, as will be seen by the following figures, are much overcrowded, the more so as the only means of ventilation are the windows and four small openings into a closed attic, which last, in my estimation, does not amount to anything: Boys' dormitory is 50 by 20 by 8½ feet—8,500 cubic feet. This room accommodated during the third quarter an average of 30 boys—283 cubic feet of air to a boy. The air space is farther reduced by a wardrobe, and nearly the whole wall-space is occupied with the extra suits, thus farther reducing the air space. The girls' dormitory is a trifle larger than that of the boys, but from this space is taken a lavatory. The girls have a wardrobe room aside from the dormitory. This dormitory accommodated 24 girls during the winter.

The average attendance during the year, by the quarter, is as follows: First quarter, 40; second quarter, 41; third quarter, 53; fourth quarter, 46; average for the year, 45.

The girls are taught all kinds of plain sewing, cooking, mending, darning, knitting, and laundry work, except washing, which last is done by the assistant cook and assistant seamstress.

Special attention is given to teaching the larger girls how to cook for and care for a small family. To this end one of the girls is detailed for as many days as there are tables in the dining room—in our case nine days. A separate issue of provisions for six pupils is made, which the employés supplement by some delicacy, as canned corn, tomatoes, etc. The girl so detailed is given the use of a stove and utensils, and instructed by some competent employé to prepare toothsome meals for six pupils. Each day she becomes mistress and hostess of one table, until all the tables are served by her. At the same time one of the boys at the respective tables becomes the host, and is taught to serve at table. The change of girls is made once in not more than nine days, hence the work does not become burdensome. This has proved eminently popular, and I think quite profitable, for I am sure that any of our larger girls can now be recommended as quite competent domestics in any house of limited means.

The boys are taught all branches of farming and stock-raising, as well as can be done by one man who is farmer, carpenter, blacksmith, and industrial teacher, all in one. The man who does all this is thoroughly competent for the work, and does all that any man can; but too much is asked of him. His whole energies must be exerted to get the work done, and industrial teaching is, perforce, a secondary item. For instance, our industrial teacher can "fit up" a saw equal to the best of our mechanics. Because the work drives so, he must do this himself and not take the time to teach a boy to do it, for he can file a dozen saws while he is teaching the boy to file one. The crying need here is a good assistant farmer, such a one as can be procured at \$300 and board per year. With our present industrial teacher, such a helper could be made to produce at least twice his cost to the Government in extra production of the farm and stock, while the teacher could do his legitimate work of instruction without injury to the crops. I am fully aware that industrial information must be acquired by the doing. I do not ask for an easier time for the employés, neither do I want the boys to work less; but I do want to be so equipped as to be enabled to so instruct the boys that they may be taught to thank about their work and may learn to do such mechanical work as is done so well by the proverbial Yankee farmer.

The water for the use of the school is pumped by hand from a 30-foot well into a small tank placed as high as the second floors of the buildings, from which it is carried by pipes to the lavatory, the kitchen, and the employés' houses. This work of "plumbing" was done by a former superintendent and the boys, at almost no expense to the Government. There is need of a larger well, a windmill and fixtures, together with a large tank, to be used for general purposes and in case of fire.

Respectfully submitted.

ANDREW H. VIETS,  
Superintendent Chehalis School.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERINTENDENT OF S'KOKOMISH SCHOOL.

SIR: I have the honor to herewith present to you this my first annual report of the S'Kokomish boarding school. According to request a short history is given of the school, being indebted for the facts given mainly to Rev. M. Eells, who has been a missionary here the past sixteen years.

The school was established about 1865. That the school was then in a crude state may be gathered from the fact that the teacher, meeting an inspector at Olympia at that time, and on being asked what branches were taught at S'Kokomish, made the reply that fishing and hunting covered every branch either of school studies or industrial work.

Between 1865 and 1871 Rev. W. C. Chattin and D. B. Ward were employed as teachers. When Mr. Ward arrived here 5 little boys met him on the river bank and claimed to be the school. Slowly, however, the school grew in numbers until, in 1877, there were about 25 scholars, which was more than the capacity of the boarding department.

The present schoolhouse was erected in 1874, though an addition has since been built for a primary department. Additions have been made to the boarding department, so that now it has a capacity of 60 boarding pupils; besides, there could be accommodated 20 day scholars.

In 1885 the attendance reached the maximum, 55 pupils. Owing to the curtailment of the authority of the agent over children off the reservation the attendance has decreased since that time. In 1884 11 pupils were sent to the training school at Chemawa, and a few at different times since then.

The pupils have been mainly from the Twana, Clallam, and Squakson tribes, or subtribes of Puget Sound.

The general health has been excellent. During the fourteen years from 1874 to 1888 the average annual death rate in the school was about 1 in 25. The character of the school has been wholly a boarding school, half the time each day being devoted to literary and half to industrial pursuits. When the agency headquarters were here, carpentry, blacksmithing, shoemaking, etc., were taught, but since the removal of the agency headquarters, and consequent lessening of the force of employés, general farming has been the character mostly taught in the industrial line.

The past school year really began October 6, 1890, at the end of the annual vacation. Owing to the Indians here going to the hop fields with their children in September, the annual vacation is taken in that month, and school is in session during July and August.

During the last annual vacation it was the aim of your employés to as thoroughly as possible renovate and put in shape the buildings and surroundings, to enable us to begin in order and systematically.

The plant consists of about 27 acres (including hay meadow) under cultivation, and which furnishes abundant vegetables for the school tables and feed for the stock; an orchard that gives a large surplus of apples, pears, plums, and cherries. The school farm is virtually on an island at the mouth of the S'Kokomish River, surrounded by salt water at high tide, the buildings fronting an avenue along the bank of the river, and is beautifully and healthfully situated.

The buildings, 18 in number, are frame structures, commodious, and very well adapted to their various uses. While they are old, still most are in fair repair. A carpenter and a blacksmith shop afford conveniences for repair work, and enable the boys to learn plain work in that line. A commodious root house, brick lined apple house, commissary, and tool house. A boarding house; which, with an addition built the past summer 20 by 40, two stories high, for dining room, dormitory, and kitchen, is roomy and convenient. The boys' sitting room and dormitory is in a separate building. The two buildings easily and healthfully can accommodate 60 pupils, while the old buildings were crowded at 40. A school building of two rooms is capable of accommodating 80 pupils. There are also two residences, occupied by the missionary and physician, respectively; a cottage occupied by an employé and as a storehouse; a large barn and a horse stable; also, two cottages unoccupied, which completes the number.

The appliances and furnishings at this school, generally being adequate and fitted for their uses, might yet be bettered in several instances. (*Vide laundress report.*) Two washing machines needed, besides butter and cheese apparatus, notably a cheese press. There should also be a range for burning wood, and larger cooking utensils.

The water question is a little troublesome, the water being carried by boys to the various tanks, boilers, and barrels from the river. This in itself is no particular hardship, but that the water is a great part of the time brackish or salt, owing to the tides flowing to and beyond this point. This furnishes water really unfit for cooking or laundry purposes. There is a system of water pipes laid over the school grounds and an inch pipe laid from a spring half a mile away to the river. We expect soon to have connecting pipe across the river. I would suggest, however, that a small appropriation of money would lay a 4-inch main to and across the river, connecting with the pipes at the building, thus affording an abundance of fresh, healthful, spring water, and that pressure enough could be obtained to be very valuable in case of fire.

The drainage has been a problem, the island being so low that no fall sufficient to carry off refuse could be obtained. The water of the river being used for household purposes forbade it being drained in that way. No bad results have accrued from this imperfect drainage, the salt water covering the refuse twice a month acting as a disinfectant. We have just completed a new vault, connecting it by a drain 400 feet long with a cut-off of the river, and which has a fall of 6 inches, allowing us to flush the vault twice a month at high tide, and affords a very good outlet. I think it will do very well.

The school opened October 6, 1890, and in a short time there were more than 30 pupils in attendance, more than the highest number the preceding year. During January we reached our highest number—44. A few of the older pupils off the reservation were kept out in the spring, so that the attendance fell to the present number—19 males and 18 females. There being but about 25 pupils on the reservation we drew from the families scattered over the adjacent territory. The reservation children were easily brought in and every effort was made to induce outside families to send their children.

The work during the entire year has been divided into industrial and literary pursuits, the morning hours being devoted to school studies, while in the afternoon the pupils labored in the various departments, an evening hour being devoted to study and general exercises, music receiving particular attention. The amount and quality of the work performed by the pupils the past year has been very satisfactory, and would really be creditable to older heads and the white race. The reports of the different heads of departments attached hereto will show the character of work performed. It is but just to add that the surroundings now are far different from those of a year ago, and very much for the better, the industrial departments having brought order out of chaos, and gaining in neatness each day.

In the schoolroom the same earnest work on the part of pupils has been performed. The course of study sent out by the Commissioner of Indian Affairs was put into effect and the school graded at the outset. While there have been but few promotions from grade to grade owing to pupils having been crowded a little beyond their capacity previously, yet at present the different grades are fully up with the course of study. The sixth and eighth grades are without pupils, but will be filled the ensuing year. The course of study is well adapted to the requirements of this school at least, and there is no hindrance to its successful working. These children in thought and action are no different from white children, and can be taught by the same methods. They may lack in capacity to digest and retain, or are of slower mental growth, yet I can see no other difference.

The employés have worked together throughout the year in harmony for the advancement of the school. I can not refrain from particularly mentioning the matron and the cook, who have been faithful at all times. What the matron has lacked in experience has been fully made up by an energy of purpose that accomplished much in order and system. The cook, an Indian girl, has been an employé here the past eight years, and brings to her duties a native refinement, intelligence, and patience which many more worldly wise might copy with profit, and does wonders in her department.

The health of the pupils has been excellent the past year, due, no doubt, to abundance of fruit and absence of pork. All signs of scrofula and sores disappeared early in the fall not to reappear again. A short siege of whooping cough during the spring caused but little trouble. The two deaths of pupils occurred at their homes on the reservation, being taken sick there while on leaves of absence, and could not be brought in without causing serious trouble. Had they been here I am satisfied they could have been saved.

The religious instruction has been ably conducted by the resident missionary, Rev. M. Eells. A Sabbath school holds a session each Sabbath morning, at which the employés assist. There is also preaching attended by the school and Indians from the reservation. Sunday evening services, also a prayer meeting one night each week, attended by all the pupils. There are three of the older pupils regular communicants of the church established here, and all seem to attend reverently to the services.

In conclusion I would say that much has been accomplished the past year in endeavoring to prepare the youth here for American citizenship in all that it means. We expect to do more and better work the coming year. Could we have one more employé, a farmer, the boys could then be taught the rudiments of trades and more thorough industrial teaching done. We look forward to and hope for a fair share of success in our chosen work for the coming year.

I have the honor to remain, your obedient servant,

D. G. RUDY,  
Superintendent S'Kokomish.

The COMMISSIONER OF INDIAN AFFAIRS (through Agent Edwin Eells).

## REPORT OF TULALIP AGENCY,

TULALIP AGENCY, WASH., August 19, 1891.

SIR: Pursuant to instructions I have the honor to submit this my first annual report of the Tulalip Agency, including the Tulalip, Port Madison, Swinomish, Muckle-shoots, and Lummi reservations, for the fiscal year ending June 30, 1891.

Census of June 30, 1891.

	Tulalip.	Port Madison.	Swinomish.	Muckle-shoot.	Lummi.	Total.
Males above 18 years .....	141	46	74	29	82	372
Males under 18 years .....	75	23	43	23	63	227
Females above 14 years .....	167	59	78	28	86	418
Females under 14 years .....	60	19	37	20	64	200
Total of all ages .....	443	147	232	100	295	1,217
Children between 6 and 16 .....	89	36	46	28	78	277

The Court of Indian Offenses at Tulalip comprises three judges who are men respected by all and whose influence is for general good. Their zealous attention to duty is a source of improvement to each and every Indian on the reservation. They conform to civilized ways, wear citizen's dress, and speak English understandingly, while one, George Archille, is well educated, can both read and write, and is a subscriber to several daily papers. David Tense and Dick Shoemaker, the remaining judges, while lacking the education of the first-named, are generally well informed, and the decisions of all are notable for their fairness and the true sense of justice displayed thereby. In no case have the decisions of the court been appealed from, and the same are accepted as final and give general satisfaction to the Indians concerned. The attitude of the court on the bench is judicial in the extreme, and the utmost deference is shown the judges. The position of prosecuting attorney is creditably filled by Jim Thomas, who is also captain of police, and who shows more than general ability in his conduct of cases. The defense has the privilege of employing an attorney from among the several self-constituted lawyers on the various reservations, who are mostly men of shrewdness capable of looking after the interests of their clients. The court has jurisdiction in matters civil and criminal, other than disputes in regard to land and where the alleged criminal offense is of more than usual seriousness, which cases are referred to the agent to be disposed of as the circumstances of same warrant.

Criminal offenses:	Cases.
Adultery .....	2
Assault .....	2
Intoxication .....	39
Neglect of sick .....	1
Perjury .....	5
Ta-man-no-us (Indian conjuring) .....	1
Wife-beating .....	2
Total .....	52
Civil suits:	
Number of cases .....	48

As shown by foregoing statement of crimes that of intoxication is the most prevalent, and is for many reasons more difficult to prevent than any other offense. A comparatively recent decision of the United States Court, in substance that an Indian to whom a patent for land has been issued is a citizen of the United States, and as such is entitled to purchase liquor, seriously interferes with the agent and his subordinates in their earnest efforts to eradicate this destroying and debasing evil. The difficulty of obtaining sufficient evidence from the Indians as to the persons from whom the liquor was obtained, and that of convicting such persons, on the evidence of Indians, in the regular courts, are all but insurmountable obstacles in the way of reform. It is to the Indians themselves that the agent is indebted for such help as he may receive in his endeavor to lessen the amount of drunkenness, as he simply receives such assistance from authorities off the reservation as they are absolutely forced to render, and much carefully collected evidence which would be considered competent if adduced by a white man is too often declared insufficient when the one offering it is an Indian.

The police force consists of one captain and 11 privates, of whom 6 are employed on the Tulalip, 2 on the Swinomish, 2 on the Lummi, 1 on the Port Madison, and 1 on the

Muckleshoot reservations. All are obedient and attentive to their duty, and are deserving of more adequate compensation than they received for their arduous and, at times, hazardous work. The captain and his men are most zealous in ferreting out crime and in bringing offenders to court, regardless of relationship or friendship existing between police and prisoner. Several cases have been brought to my notice where comparatively large bribes have been offered the police to overlook some offense discovered by them, which bribes were indignantly refused.

#### Indian Lands.

	Tulalip.	Port Madison.	Swin- omish.	Muckle- shoot.	Lummi.
Number of allotments.....	97	34	48	None.	75
Unoccupied allotments.....	12	20	5	None.	15
Number on definite unallotted tracts.....	10	6	5	17	9
Applications for allotments.....	85	22	15	24	17

All the Indians are strongly in favor of the allotment of land in severalty. The main difficulties in the way of an equitable division are the insufficient amount of land for the bona fide applicants and the lack of clearness of title of claimants as heirs or legatees to such allotments or filings as have been made in the past to or by parties now deceased. Various claimants to Indian lands holding patents thereto or having filed thereon, who have never occupied or improved the same, who have either left the reservation or never lived thereon or had any intention of doing so, and whose sole purpose has been and is speculative, prevent the taking and improving of said land by reservation Indians to their serious detriment.

The question of title by descent and testamentary is a serious one, as, in the first case, to trace the degree of relationship, if any exists, between alleged heirs and original allottee or person filing on the land is often most difficult. In the second case the title of legatees as opposed to claims of the heirs at law depends oftentimes on the unwritten will of decedents supported by the evidence of one or more witnesses. In the event of the death of all witnesses to such verbal legacy the status of title, unsupported by occupancy of the land in question, is difficult to determine in equity. Moreover, the matter is sometimes complicated by verbal agreement between claimants to a tract, which agreement it is all but impossible to prove when called in question in disputes between heirs of said claimants or between the heirs of one or more parties to said agreement and an original party thereto.

In my mind the situation requires, and I would, therefore, suggest, that the Indian Office send a special agent with authority to allot all unallotted tracts on each reservation and to fix and determine the status of all allotments or filings heretofore made, particularly in the cases of nonresident speculative claimants to reservation lands. That part of above suggestion which refers to determining the rights of nonresidents as against those bona fide settlers who reside permanently on the reservation, I have made the subject of a special report, forwarded to the Indian Office, bearing date January 29, 1891.

The farms of the Indians on these reservations are, with the exception of those on the Muckleshoot Reserve, covered with a heavy growth of green timber, to remove which, for purposes of cultivation, would require an amount of money which they can only command by being allowed to dispose of said timber. If so allowed the proceeds therefrom, expended under reasonable regulations laid down by the Department, would enable these Indians to clear their land and would put them in a position to become, in a comparatively short time, independent of aid from the Government, self-supporting and successful farmers. It is safe to assume that no white man could, under the restrictions now placed on the Indian, take an allotment on any of these reservations, and unassisted make a living for himself and family therefrom. It is a matter to be regretted by all who have the welfare of these Indians at heart that the present law regarding the removal of standing timber from the land prevents absolutely such improvement as is necessary to enable them to become self-supporting. The hopes and desire of the Government as regards the improvement of the condition of the Indians are defeated, in this case, by a law made presumably for his protection. This is a matter of great moment to the Indians on four of the reservations under my charge, and it is to be hoped that the Congress of the United States will at an early day remove the restriction against the power of alienation, that these Indians may be authorized to dispose of their timber in a suitable manner as the necessities of the situation require.

**Increase of Civilization and General Improvement.**—The Indians on these reservations are for the most part industrious, peaceable, and law-abiding men and women, eager to know and conforming to the ways of civilization. They all live in more or less comfortable houses built for them by the Government or by themselves. They appreciate the benefits of education, dress in the costume of the whites, and a large proportion are zealous converts to the Roman Catholic faith. A few of their com-

fortable farm houses, with barns and outhouses surrounded by carefully tilled fields, would be a credit to any community of farmers. One may rightly apply the term civilized to many of these people. They need but a guiding hand to protect and direct them in their progress, judicious allotment of their lands, and a liberal policy in allowing them the only means they have to improve the same, to make them truly prosperous.

Acres cultivated, crops raised, and other results of farming.

On the Tulalip Reservation all are industrious. Some cultivate their land and others find a means of livelihood in the sale of cordwood, though the fact that there has been in the past year but one steamboat stopping at Tulalip for fuel has materially decreased the amount of wood sold as compared with former years. Collecting logs, which have escaped from booms, and selling same after they have been duly advertised, is a source of income to a few. At certain seasons of the year they pick berries, large quantities of which are canned or dried for winter use, smoke salmon, and in the month of September, with but few exceptions, all the Indians go to the hop-fields, where men, women, and children earn three, two, and one and one-half dollars per day, respectively, picking hops. By these various occupations do they succeed in comfortably providing for themselves and families, both winter and summer.

The Indians on the Port Madison Reservation engage in occupations for wages, being employed in the sawmills and logging camps in the vicinity. They are not farmers, though some attempt is made to till the soil, which, however, is less fertile than that of other reservations, and the number of acres adapted to farming purposes is comparatively small. With them the sale of fish and clams is a main industry and the income derived from it, together with the wages received for day labor, serves as a sufficient means of support.

The land on the Swinomish Reservation is extremely productive and an immense number of bushels of oats to the acre is raised by these Indians, who depend almost solely on farming for their subsistence. They are the joint owners of a threshing-machine, and have so benefited by the instruction which they have received that they are in demand as experienced hands by neighboring white farmers at harvest time. They also combine salmon fishing successfully with their labor as farmers.

The Muckleshoot Reservation is likewise a fair farming country, and there is a greater diversity of production than at Swinomish, though with smaller results. These Indians are moderately successful in raising oats, hay, and potatoes, and they alone have attempted hop-growing, though on most of the reservations conditions are favorable to that industry, which, if started, would doubtless be remunerative.

One of the largest and naturally most fertile of the five reservations is the Lummi, but, being more remote and less accessible from the agency than are the others, the same discipline can not easily be maintained with these Indians—exposed to the evil influence of whites and Canadian Indians—as with those on the other reservations. They are more independent and show less inclination to cultivate their land than do the Indians of most of the reserves, though not a few of the younger men have industriously cultivated their several holdings and have comfortable farm-homes. For the most part, however, they engage in fishing, sealing, and logging.

In conclusion I desire to express my appreciation of the invariable courtesy and great liberality shown me by the Indian Office during the brief period of my incumbency.

I am, sir, very respectfully,

C. C. THORNTON,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF PHYSICIAN, TULALIP AGENCY.

Tulalip, August 19, 1891.

SIR: In compliance with your request I have the honor to present the following report for the fiscal year ending June 30, 1891.

The sanitary condition of the D'Wamish and allied tribes is fairly good, although a great many are victims of constitutional syphilis, scrofula, consumption, and rheumatism. This is especially true of the Snohomish and Swinomish tribes.

Many of the younger generation who have mingled more with the whites, and have had the advantages of education, live in neat houses and are cleanly about their persons, but those who are under the influence of the older element remain Indians with all that the name at present implies.

The spread of consumption is largely due to their living in badly ventilated houses where some consumptive patient expectorates on the floor, wall, or surrounding articles, where it dries and, rising with the dust, is inhaled by other persons, thus carrying the fatal germs to many.

During the months of January and February there was quite an epidemic of measles, followed in April and May by many cases of "la grippe." Tonsillitis has also prevailed to a considerable extent.

The accommodations at the school are amply sufficient for the number of pupils attending, and with an addition to both the male and female infirmaries would be a credit to any reservation in the country. At times throughout the year I have given instruction to the school children in anatomy, physiology, and hygiene, which seemed to interest them, and certainly benefited at least a few.

A hospital at this agency is much needed, and I am satisfied that the Indians would gladly avail themselves of its benefits, and that it would be the means of saving many lives. The reservations connected with Tulalip are so far distant that it is impossible for one physician to attend their medical wants with any regularity, but if a hospital was established serious cases could be removed here and receive proper treatment.

I have given medical treatment to 439 cases during the year; of this number 379 have recovered, 44 discontinued, 35 died, and 26 remained under treatment. Thirty-one births occurred. It is often difficult to secure accurate information of the births and deaths on the distant reservations in time to enumerate them on the monthly sanitary reports; for instance, I have lately received a report of 17 births and 17 deaths that occurred during the latter part of the fiscal year. These, of course, will appear in your statistics, but will make a discrepancy between the totals of the sanitary and your annual report. However, it will right itself in the census.

Thanking you for many courtesies received, I am, very respectfully,

E. BUCHANAN,  
Agency Physician.

C. C. THORNTON,  
United States Indian Agent.

## REPORT OF SUPERINTENDENT OF TULALIP SCHOOL.

ST. ANN'S MISSION, TULALIP, WASH., August 19, 1891.

SIR: In compliance with your request I submit to you the following report of the Tulalip school:

The Tulalip Male and Female Industrial Boarding School, situated 1 mile southeast of the agency, has been run during the past fiscal year by a Roman Catholic priest and eight Sisters of Charity under contract with Catholic Indian Bureau, of Washington. Apart from the priest and eight Sisters there is a male teacher and three male employes, two of whom are Indians.

The amount of money allowed the Catholic Indian Bureau for the board, clothing, and teaching of 110 children in this school was \$27 per capita per quarter. Though having accommodations for 150 pupils, the greatest number that has been crowded into the school at any time during the year was 135, the average attendance being about 110, the number of pupils enrolled 139.

The whole forenoon has been devoted to the schoolroom exercises, a part of the afternoon to industrial work, and the evening to study.

The year has been one of prosperity and advancement in every respect. The schoolroom and industrial work has been done by the most careful and painstaking teachers. The branches in which the children have advanced most are mathematics, English, and history. In fact, so well have they learned our language that they converse as freely in English as white children.

In the schoolroom great efforts have been made, and I must add with marked success, to teach them to think about what they are reading and give the same in their own words, and to solve practical problems in arithmetic that will be of use to them in the transaction of their own business in after life. All the large boys have been taken to the field by the industrial teacher and shown to assist in some way in planting, raising, and caring for the crop. Our garden is in excellent order and supplies us with all sorts of vegetables. The smaller boys have been obliged to do light work, such as carrying wood, assisting with the sweeping, and clearing the school grounds of rubbish.

Besides the work in the garden the boys are taught shoemaking, carpentering, engineering, and baking, whilst the girls are instructed in cooking, baking, sewing, butter making, and general housework.

The number of buildings occupied by the school are seven, of which five belong to the Government and two to the Sisters of Charity.

The stock belonging to the school is as follows: Horses, 2; oxen, 2; cattle, 14; swine, 8. Number of acres under cultivation, 14; bushels of potatoes, 80; bushels of fruit, 100; bushels of onions, 20; bushels of turnips, 10; bushels of beans, 5; bushels of other vegetables, 75; pounds of butter, 300.

In conclusion, I can conscientiously say good progress has been made during the year.

Thanking you for your kind support and interest, I am, very respectfully,

N. J. POWER,  
Superintendent.

C. C. THORNTON,  
United States Indian Agent.

## REPORT OF YAKAMA AGENCY.

FORT SIMCOE, WASH., August 10, 1891.

SIR: I have the honor to submit my first annual report of this agency for the fiscal year ending June 30, 1891.

**The Reservation.**—The jurisdiction of this agency extends over an area of about 800,000 acres, a great part of which is sage-brush desert land, entirely worthless without irrigation (except a strip of pine timber on Simcoe Mountains). I estimate the amount of tillable land on reservation at 150,000 acres, on which it may be possible to obtain water for irrigating purposes, and even this can not be done without a great deal of expense.

The Indians are now having great difficulty in obtaining water on the small patches of ground they are trying to cultivate, and at this time are using all the water from the streams, except the Yakima River, which is available to only a few. I find it a great deal of labor to try and have the water properly distributed where it will do the most good to the greatest number.

In regard to obtaining a greater supply of water, the only practical method I can suggest is one the nature of the country suggests for itself; that is, by artesian wells, and I hope the Government can be induced to try the experiment on this reservation. Very little advancement can be made in the way of agriculture unless a greater supply of water can be obtained, and the industrial work of the school is also greatly retarded. Agriculture and stock-raising are the principal industries of the Indians under my charge.

**Destitute.**—There are on the reservation about 100 old and decrepit Indians (most of them are women) without any means of support. It is a difficult matter to render them the needed assistance, as they are scattered over so large a territory, and articles of subsistence can not be sent to them by other Indians with any assurance that they will be delivered to the needy persons to whom sent; and if there be set apart a certain day in each month, to be designated "issue day," nearly one-half of the people on the reservation come clamoring for issues. I am trying to obtain a list of those most needy and destitute, but I find so many that it is difficult to know where to draw the line. I would recommend the building of a hospital on the reservation by the Government expressly for the aged and destitute sick, where they may receive proper care and treatment.

**Crops.**—Upon careful personal observation and extended inquiries I am satisfied there will not be half of the amount of produce, etc., raised on the reservation this year that there was last, on account of there being so little snow in the mountains, and it is an extremely dry season.

**Industries.**—The Government has a good sawmill and planer on the reservation, and employs an engineer and a Sawyer. The Indians haul the logs to the mill and assist in sawing their lumber. About 400,000 feet was sawed during the fiscal year ending June 30, 1891. There is also a gristmill that does most of the grinding for the Indians and for the school, making a fair quality of flour. A blacksmith, car, penter, and wagon-maker, and a harness-maker, and shoemaker are also kept constantly employed in their respective departments, repairing machinery, wagons and harness for the Indians.

**Missions.**—There are on the reservation four churches, three Methodist and one Catholic. Two of these (one of each denomination) are very nice and commodious buildings. The Methodist missionary in charge reports 400 communicants, and the Superior of Catholic missions reports 150 communicants as living on the reservation and 350 outside of the reservation, but belonging to the reservation tribes. This report indicates that a large number of our Indians are not residing on the reservation, and, consequently, not included in the census.

**Census.**—The number of Indians now on the reservation, as shown by the census just completed, is 1,434.

Males above 18 years of age.....	447
Females above 14 years of age.....	527
School children between 6 and 16.....	260
Children under 6 years of age.....	200
<b>Total.....</b>	<b>1,434</b>

There are a great number of our Indians belonging to this reservation scattered throughout this State and Oregon not included in the census. Their number has been estimated by my predecessors as high as 2,000.

**Schools.**—I assumed my duties as agent at this agency May 28, 1891, and as school closed June 30 for two months' vacation, I will not at this time attempt to make a very elaborate report. For particulars I refer you to separate report of schools obtained from files in this office. There were nine months of school beginning October

1, 1890, and closing June 30, 1891, with an average attendance of 44; number of pupils enrolled, 78. There are 50 children belonging to this reservation reported as attending school at the contract school in North Yakima and other places, making a total of 128 Indian children belonging to this reservation attending regularly the various schools, which is about 50 per cent of all the children reported in our census as being of school age, viz, between 6 and 16.

There is great room for improvement in every branch of the school work and its appurtenances. The Government has been very liberal in its supplies and expenditures for school purposes, and yet there is a great deal to be accomplished in the way of repairing, painting, and furnishing the school buildings ere they will be in a good state for occupancy. One of the items requiring the greatest expenditure will be means to obtain a greater supply of water, which I hope to be able to do in the near future.

A great many of the Indians leave the reservation during the months of August and September to pick berries and hops, taking their children with them, so it is almost impossible to get the children into school until hop-picking is over, early in October. The Department at Washington is doing all that could possibly be expected for this school, and it is my earnest desire and intent to build up and improve this important branch of the service.

**Complaints and grievances.**—The Indians complain very bitterly that they have been and are being treated unjustly by the Government in regard to their fishing grounds, especially at Tumwater fishery. The Indians still claim this as their fishing ground under the treaty, but on account of the trails being fenced and fish wheels being placed in the Columbia River they are practically prevented from catching any fish. I quote the following from a report of Deputy Special Indian Agent Thomas S. Lang, 1889, in which he says:

There is no doubt that these land-jobbers intend to worry the Indians out of all rights they have in the fisheries, and to my certain knowledge have annoyed and molested their free enjoyment of their treaty rights under the decree of the court of Washington Territory in their favor, and intend to drive them off from the enjoyment of this great privilege.

What was predicted in that report has come to pass, and very bitter if not hostile feeling exists among all the Indians in regard to this matter.

Another cause of ill-feeling is that the Ahtanum Creek, designated as a reservation boundary line for a considerable distance and in times past was an excellent stream for catching fish in, is now used by the whites for irrigating purposes, so that there is not now water enough left in the creek for the use of the stock, even, belonging to the Indians living on that portion of the reservation along the stream.

Another source of complaint is the stock on the reservation belonging to the whites. As these questions must be settled by the courts and the Indians seem to have lost all confidence in the courts doing anything to assist them, it is very difficult for the agent to prosecute a case successfully, depending as he does and must altogether upon the Indians for witnesses, as the Indians say, "White man's court no good for Indian."

A new survey was made last year of the western and a portion of the southern boundary lines of the reservation. The Indians are unwilling to recognize this new line as the boundary line established by the treaty, and unless this matter is settled soon I fear there will be serious trouble between the stockmen and the Indian police. I am trying to gather the required evidence in regard to stock on the reservation and hope to be able to successfully prosecute a few cases.

**Allotments.**—No allotments have been made, although there are about 30,000 acres under fence. As I have been here so short a time, am not prepared to state just how the Indians feel in regard to the matter, but the condition of things is such that I am satisfied it is only a matter of a short time when the Indians will be willing to accept the situation and do what seems evident is best for themselves.

**Health.**—I transmit herewith report of Albert Wilgus, agency physician, and respectfully ask that it be made a part of my report.

To the Department I return sincere thanks for courtesy shown and consideration given to my suggestions and requests during the short time I have been in the service.

Respectfully submitted.

JAY LYNCH,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF PHYSICIAN, YAKAMA AGENCY.

YAKAMA AGENCY, WASH., August 13, 1891.

SIR: I have the honor to submit this, my third annual report, relative to the sanitary condition of the Indians belonging to and located on this reservation.

During the year 1,280 Indians received treatment; of this number 600 were male and 680 were female. I heard of 63 deaths, 42 male and 21 female. Several of these deaths occurred off the reserve and were not reported until the 4th of July celebration; then the Indians from all the adjacent country meet here and talk of the deaths and births in their several localities. The births are more difficult to obtain than the deaths; I learned of 23 births, 10 male and 13 female.

During the past spring a very serious epidemic of "la grippe" visited us. The disease was more malignant than it was the preceding year; a greater number were also affected. Reference to my monthly report for March shows 600 people down with the disease. This condition of things with its resultant complications of pulmonary troubles accounts for the increased death rate.

From personal knowledge and reliable information I feel justified in giving the cause of death as follows: Scrofula, 12; consumption, 17; la grippe, 10; pneumonia, 12; inflammation of brain, 2; inflammation of stomach, 1; accidental, 3; drowned, 1; convulsions, 2; blood poisoning, 1, and remittent fever, 1. My services were more in demand the year past than in the previous year, showing increased confidence in the "Boston doctor," as the agency physician is called here.

I continued instruction in hygiene, anatomy, etc., both in the school and at the Methodist church as opportunity offered. The health of the school children has been phenomenal throughout the year. A number of the children had the "grippe" during the epidemic. The disease was much more tractable in the school than on the reservation.

This leads me to again bring the matter of a hospital to the notice of the Indian Department. What is needed is a building that would answer the purpose of a home for the old and indigent Indians, with hospital privileges combined. There is a lady (Mrs. Dr. Miller, of Massachusetts) at present laboring as missionary among this people who would aid us in the enterprise if inaugurated. Agent Lynch is also favorable to the enterprise.

The girls' dormitory built during the year is a commodious substantial building. The drainage and sanitation of the several buildings at the fort is good. The drugs sent the past year were a long time coming. I find them superior in quality to the medicines of the previous year.

Very respectfully,

ALBERT WIGGUS, M. D.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN WISCONSIN.

## REPORT OF GREEN BAY AGENCY.

GREEN BAY AGENCY,

Keshena, Wis., August 28, 1891.

SIR: I have the honor to present this my second annual report, showing condition of affairs at this agency.

The agency office is at Keshena, on the east bank of the Wolf River, within the Menomonee Reservation, 8 miles from Shawano, the nearest railway station. The Menomonee Reservation consists of ten townships of land, but one section in each township has been claimed as "school lands," and the title held in dispute for a number of years, a source of continual trouble and annoyance, as I endeavored to show in my last annual report.

**Stockbridge.**—By treaty 12th of May, 1854, twelve townships of land were conveyed to the Menomonees by the United States Government. By treaty of 11th February, 1856, two of these twelve townships were purchased from the Menomonees by the Government to form a reservation for the Stockbridge and Munsee Indians, and a few years later (1865) the larger portion of said two townships was authorized to be sold for the benefit of Stockbridge Indians who might decide to become citizens under provisions of that act. Eighteen sections have been retained as a reservation for the remnant of the tribe, numbering now 139 upon the rolls, with perhaps as many more on the land denominated, "intruders." Under act of 1871 much of this reservation was allotted in severalty in 1874, but the allottees have not yet been placed in possession of their allotments.

One school is maintained by the Stockbridge Indians at an expense of \$500 per year, taken from their annuity money. Their schoolhouse is in very bad condition, and a new one ought to be erected immediately. The Stockbridges use the English language in all intercourse so fully that many can not understand their native tongue. They support themselves by cultivating their small farms and in labor for outside parties, their timber interests having been exhausted.

The Menomonees have a valuable tribal property in a fair quality of farming lands and a belt of good timber extending across the reservation, which is expected to furnish business in lumbering for many years to come. The logging of last winter was managed under the act of June 12, 1890, which provides that 20,000,000 feet may be logged and sold each year. During last winter, from causes unnecessary here to explain, a surplus was unintentionally cut; all was sold, realizing the sum of \$232,262.78. Labor and other expenses incurred in banking said timber amounted to the sum of \$77,174.05, leaving a net sum of \$155,088.73. By the terms of the law,

one-fifth of net proceeds is to go into the Treasury to be used for the benefit of the Menomonee Indians at any time in such manner as shall receive the approval of the Secretary of the Interior, the four-fifths to form a fund on which the Government is to pay 5 per cent annually.

A good sawmill and a roller-process flouring mill, for which power is furnished by the Wolf River, are found very useful for the Menomonees.

A new hospital building for the Menomonees has also been undertaken, and will be completed before the beginning of winter. Sundry other improvements in the enlargement and repair of buildings, construction of bridges, etc., are in progress at the present time.

The bureau of Catholic Indian Missions has also erected a new building, nearly complete, for use as a contract school, larger than that destroyed by fire last January.

The Oneida Reservation, situated between the counties of Brown and Outagamie, about 45 or 50 miles in a southeasterly direction from this office, contains a little less than three townships, 65,540 acres, allotted in severalty by Special Agent Lamb, which allotment was completed a little more than a year ago. The Oneidas have a fair quality of farming land, with some well-cultivated farms and a few good buildings; but there is a general negligence in the care of fences and also in supplying manures and fertilizers to the land, without which crops must become poorer and fail.

There are six day schools maintained upon this reservation at Government expense; two teachers are white; the other four are Oneida graduates of Indian schools elsewhere.

The Episcopalian Mission church is a large and substantial stone structure, with good parsonage buildings of wood adjacent thereto.

The Methodist Episcopal Mission has now partly completed a new church edifice of fine proportions and larger extent than the old one. Each of these missions has an allotment of land from the Government.

Only five new dwelling houses are reported as having been erected by Oneidas during the past year, and only a small acreage of new land has been broken, 50 to 75 acres. They support themselves by farming, by picking up and selling dead wood for fuel and for making charcoal. Many of them leave the reservation a part of the year to earn wages by the month or with their teams.

The population, as returned for 30th June, is:

Males .....	940
Females .....	806
Total .....	<u>1,746</u>
Children of school age:	
Males .....	249
Females .....	230
Total .....	<u>479</u>

Only about 10 per cent of those over 20 years old are able to read, while 90 per cent of those under 20 are reported to have learned sufficient English to accomplish that result.

**Farming.**—Upon the Menomonee Reservation quite a number of fields once cultivated have been abandoned, the occupants going elsewhere in the hope of doing better. As reported, 2,616 acres are under cultivation this season, 166 of which is new land. Within the Stockbridge Reservation 500 acres are reported as under cultivation and 6,000 acres are reported for the Oneida Reservation. Upon each of these reservations about the same classes of crops are grown, viz, oats, wheat, corn, potatoes, beans, and other vegetables, as shown in accompanying papers.

Of the leading products grown the estimated harvest will be:

	Oneida.	Stockbridge.	Menomonee.
Oats..... bushels..	32 000	2,250	13,000
Corn..... do.....	9,000	1,100	6,800
Potatoes..... do.....	6,000	400	18,400
Wheat..... do.....	4,000	400	1,250
Beans..... do.....	1,200	120	4,505
Hay..... tons.....	930	25	920
Rye..... bushels..			192

The Oneida Reservation suffered more from dry weather than did the Menomonee, but all have suffered,

Of stock, the three tribes are in possession of the numbers stated below:

	Menomonees.	Oneidas.	Stock-bridges.
Horses .....	593	400	19
Mules .....	4	-----	2
Cattle .....	389	580	63
Swine .....	316	520	45
Fowls .....	3,742	5,000	600
Sheep .....	-----	40	-----

**Schools.**—A Government boarding school, located about half a mile east of this office, provides for about 100 pupils. A new building 40 by 72 feet, with basement and two stories above, is in process of erection. When completed, about 50 pupils more can be received.

The contract school, located one-fourth mile east of this office, heretofore under control of the Catholic Bureau of Indian Missions, usually provides for 140 pupils. A new building is nearing completion in place of a smaller one burned last January, by which the management of said school can make much more comfortable provision for its pupils.

One day school upon the Stockbridge Reservation and six day schools upon the Oneida Reservation are accomplishing good results in their respective fields, but all labor under the heavy disadvantage of irregular attendance of pupils.

The number of children of school age upon each of these reservations is reported as follows: Menomonee, 305; Stockbridge, 37; Oneida, 479. The exact number of children from these reservations who are pupils in the different training or contract schools has not been reported to this office, but these tribes have a goodly representation in several of the large training schools abroad.

**Indian court.**—For the court of Indian offenses the same judges have been continued, namely, Chickeny, Ne-o-pet, and Ne-ah-tah-wah-puny. This court renders good service in settling many vexatious questions arising among members of the tribe and in suppressing the use of liquor on the reservation. During the fiscal year the sum of \$179 was collected from fines adjudged by this court—some fines uncollected—and from this money there has been paid for additional police service during log payments the sum of \$112.50. During the year 42 cases have been tried by this court.

In the United States district court there have been prosecuted for violation of laws relating to the sale of liquor upon the several reservations in this agency 30 cases, 19 of which resulted in convictions and 1 case is still pending. County authorities are very unwilling to take action for punishment of crimes where Indians are sufferers; therefore many go unpunished.

**Indian police.**—A captain with 9 privates constitutes the present police force at this agency; 5 of these are in service on the Oneida Reservation and 6 of them upon the Menomonee Reservation. One more is to be added when needed. The policemen have been found faithful and efficient in all emergencies so far, and the liquor nuisance could not be controlled without the rigor of an energetic police.

The mass of the Indians in this jurisdiction are well disposed and desire to advance in material interests pertaining to civilization, but some indolence pervades; the Indian character, and hereditary tendencies are not easily overcome. Many of them will leave any kind of work, without regard to its importance, when the whim seizes them to take a vacation. Persistent application in some line of work is one of the needed acquirements.

The most serious foe to industry and obstacle to improvement is the use of liquor, which but few Indians appear able to resist when the commodity is within reach, and the iniquity of the depraved whites who supply the debasing liquids is correspondingly great.

Very respectfully yours,

CHAS. S. KELSEY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS,

#### REPORT OF LA POINTE AGENCY.

LA POINTE AGENCY,  
*Ashland, Wis., September 10, 1891.*

SIR: I have the honor to submit herewith my third annual report.

In the La Pointe Agency are seven reservations, four in Wisconsin and three in Minnesota. Those in Wisconsin are the Lac Court d'Oreilles, Bad River, Lac du

Flambeau, and Red Cliff, and those of Minnesota the Boise Forte, Fond du Lac, and Grand Portage. Following is a brief description of each of them:

**Lac Court d'Oreilles Reservation.**—This reservation is located 80 miles from Ashland and 22 miles in a southeasterly direction from Hayward, a station on the Chicago, St. Paul, Minneapolis, and Omaha Railroad. It occupies portions of townships 38, 39, and 40, north, of ranges 6, 7, 8, and 9, west of the fourth principal meridian, in Sawyer County, Wis. The surface is gently rolling and the forests include all the varieties of timber found in the northern part of Wisconsin. Among the hard woods are oak, ash, elm, maple, and birch, and among the soft woods are basswood, white and norway pine, spruce, and cedar. The soil varies from a light sand to a heavy clay, and is well adapted to agriculture and pasturage. The country is well watered with springs, brooks, and numerous lakes, varying in extent from a few acres to several square miles.

The large lakes are well supplied with different varieties of fish. Game is scarce. Indigenous fruits, strawberries, raspberries, blueberries, and cranberries are found in great abundance.

On this reservation are two villages, Lac Court d'Oreilles and Pahquauh Wong, and a good wagon road connects these settlements with Hayward. The houses, both frame and log, are well built. They are generally provided with tables, chairs, beds, and other appurtenances, and were built with the proceeds of timber sold from allotments in former years. It would have been better for the owners if the houses had been placed on the allotments and an earnest effort had been made to clear the land for cultivation and to establish thereon permanent homes. In the best homes are found the most progressive of the Indians.

At Lac Court d'Oreilles are found a Government day school, a Catholic mission day school, and a Catholic church. At Pahquauh Wong are a Government day school and Catholic church. These people have made considerable progress in the way of civilization; they wear the garb and many of them speak the language of their white neighbors, and they are taking quite an interest in the cultivation of the soil. During the winter most of the able-bodied men are engaged in the numerous logging camps scattered along the Chippewa River and its tributaries, and in the spring they find remunerative employment in driving the logs to market or to the mills on the lower river. This is a laborious and hazardous vocation, but one to which they seem peculiarly adapted. They are self-supporting, and receive no aid from the Government except a small allowance distributed in the winter season to those who from age, disease, or other infirmity are unable to procure sufficient subsistence. The Government also provides them with medicine and medical attendance. They are unable to support needed schools and to provide necessary medical attendance, but in all other respects they are able to take care of themselves.

**Bad River Reservation.**—This reservation is in Ashland County, Wis., and is bounded on the north by Chequamegon Bay and Lake Superior. It lies in townships 46, 47, and 48 north, of ranges 2, 3, and 4 west of fourth principal meridian, and includes 124,333 acres. It is traversed by two streams—the Bad River and the White River, its main tributary. The water of Bad River flows into Lake Superior. Some parts of the reservation are hilly and rugged, others gently undulating, and still others quite level. It was formerly covered with a dense growth of timber, excepting that portion occupied by the delta of Bad River. The lands in the valleys of the rivers are exceedingly fertile, no better soil being found in northern Wisconsin. The high lands adjacent to the rivers, when cleared of timber, furnish good pasturage.

The timber includes nearly every variety known to the forests of northern Wisconsin—birch, ash, elm, soft and sugar maple, as well as numerous evergreens, balsam fir, cedar, spruce, white pine, Norway pine, and hemlock, from which resources the Indians derive a large portion of their support. Many of them hold lands in severalty, and from these lands they manufacture railroad ties, fence posts, telegraph poles, cord wood and mining timber for the mines along the Gogebic iron range.

All these forest products find a convenient and profitable market along the lines of the two great railways that traverse the reservation—the Duluth, South Shore and Atlantic Railway, that crosses the southern border, and the Milwaukee, Lake Shore, and Western Railway in the northern part.

The principal settlement is in the vicinity of Odanah, a station on the Milwaukee, Lake Shore and Western Railway, 10 miles east of the city of Ashland. It is located in the fertile valley of Bad River, and on all sides may be seen the comfortable houses and cultivated farms of the natives, with two stores of general merchandise owned and managed by Indians. Here also is the Catholic day and boarding school, the Catholic church, the Presbyterian church, and the Presbyterian schoolhouse, in which, however, school has been discontinued for several years. There is also a public school recently established, a part of the common school system of the State of Wisconsin.

The United States Government has no school on this reservation, but it instructs and maintains a number of pupils at the Catholic school under the contract system;

420 of these people are followers of Christianity, and are about equally divided between the denominations above mentioned.

If their lands were allotted and the surplus lands disposed of they could be left to solve their own problems and to work out their own destiny, the same as any other citizen of the State of Wisconsin.

They are familiar with farming, and the more difficult art of manufacturing and handling the product of the forests is as well known to them as to their white neighbors, with whom they have been associated in that branch of industry for many years. Except in the matter of schools, national supervision over them is needless, and the opportunity to appeal to the General Government for support is a source of weakness, not of strength. The nonprogressives claim that the less the Indian does for himself the more the Government will do for him, and the more he does for himself the less the Government will do, and this argument is employed by the idle and shiftless to discourage those who are disposed to be industrious. When the Government is eliminated from the problem this argument will be shorn of its strength. These Indians are as highly civilized to-day as they ever will be while they remain wards of the General Government.

**Lac du Flambeau Reservation.**—This reservation is found in Oneida County, State of Wisconsin. Its area includes 62,817 acres, in townships 39, 40, and 41 north, of ranges 4; 5, and 6 east of the fourth principal meridian. The surface is undulating, and is broken by numerous lakes ranging in size from a few acres to 5 or 6 square miles. Some portions are low and swampy and covered with a dense growth of spruce and cedar, and there are open meadows which produce a luxuriant growth of grass.

The soil in some portions is quite sandy; in others it is a loam with gravel subsoil. Excellent water is found everywhere in springs, lakes, and streams. This territory was formerly well covered with timber. In many places over large areas only tall stubs blackened by forest fires remain to tell the story of the destitution that has been wrought in former years. Among the deciduous trees are found elm, ash, sugar maple, birch, basswood, and tamarack, and the evergreens are represented by hemlock, spruce, cedar, white and Norway pine. Nor is the country lacking in a supply of native fruits—strawberries, raspberries, blackberries, blueberries, and cranberries. Wild rice flourishes in some of the streams and lakes. The supply of fish is meager, and the game has disappeared. Beyond the limit of the reserve the deer and other game are protected by the State laws, and the Indians can not capture such game out of season without incurring the penalties of the law. These conditions have cut off the supply of food on which they have been accustomed to rely, and they have been compelled to turn to the cultivation of the soil for support. As a consequence during the last two years they have made considerable progress in the art of farming.

The principal crop is potatoes. Last year the yield was abundant, but this year, on account of continued drought, the prospect is not encouraging.

This reservation is not lacking in natural resources, yet these people are the poorest of any in the La Pointe Agency. Until recently they had no school and they lack intelligence and experience.

They have associated less with the whites and have participated less in the labor of the logging camps than any others of the Wisconsin Chippewas. The logging camp is not a Sunday school, but it teaches them the most important lesson they have to learn in the effort to compass civilization, the value of persistent labor. The logging camp harbors no idlers, its heavy work commences at dawn and is pursued with unabated vigor until darkness closes the scene. The Indian graduate of the logging camp may acquire some vices, but indolence and mendacity are not among them. On account of their extreme poverty it is very difficult for them to make a start on the highway of civilization, and they must be assisted in order to enable them to begin the work. They have a valuable property in pine timber, which should be utilized for their benefit. Their lands should be allotted, the pine timber sold, and the proceeds devoted to the establishment of a home upon the allotment for the allottee. With a little field ready for cultivation, a house provided furnished with some of the conveniences of civilized life, and a supply of the necessary tools of husbandry, the Indian would soon learn that he has the ability to take care of himself.

They possess a large supply of small timber, which manufactured into ties, poles, etc., would yield a revenue sufficient to keep them from want. An important line of railway crosses their reservation and affords a ready market for all these forest products. With a little help and a little experience they would soon be able to manufacture and market their surplus small timber as advantageously as their neighbors at Bad River. It is impracticable to protect the timber from the ravages of forest fires, and the sooner all that part of it having commercial value is disposed of the better.

The principal village is at the foot of Lac du Flambeau. It contains houses substantially built, some of frame, others constructed of hewn logs; the Government school, the farmer's residence, Catholic chapel, and three small stores owned by Indians.

A few speak English and all wear the usual apparel of white people. A few are members of the Catholic Church; the rest are pagans.

**Red Cliff Reservation.**—This reservation is 25 miles north from Ashland and 5 miles from Bayfield, the nearest railroad station. It lies along the shore of Lake Superior, adjacent to the Apostle Islands, occupying a strip of country varying from one-half to 2½ miles in width and nearly 25 miles in length. Its area is 11,457 acres, its surface gently rolling, and its natural resources are immense. It is well supplied with timber, all the varieties found in northern Wisconsin, and possesses an inexhaustible supply of the finest building stone to be found in the United States, which is known in commerce as the brown sandstone of Lake Superior, and is found in bold cliffs overhanging the waters of the lake. The quarries are not yet opened on the Indian lands, but at no very distant day these magnificent deposits of sandstone will yield a princely revenue to their fortunate owners.

The reservation is well watered with springs and creeks and the soil is fertile. The wild fruits, strawberries, raspberries, blueberries, and cranberries abound. As a rule, abundant crops reward the labors of the husbandman, and, excepting in swampy sections, the entire reserve is well adapted to agriculture. The waters of the lake yield a bountiful supply of excellent fish and the surplus catch and all other surplus products find a ready market in the city of Bayfield. In capturing the fish both gill nets and pound nets are employed. The natives own a small fleet of sailboats, and in navigating their little craft they display the confidence and skill of experienced sailors.

The Indian village is located on Buffalo Bay, about 5 miles from Bayfield, and a good wagon road affords easy communication between the two places. There are no Government employes on the reservation and no Government building except the schoolhouse. The school is conducted by Catholic Sisters under contract with the Government. The Catholics have a chapel here and most of them are members of the Catholic Church. They receive but little assistance from the Government and are practically self-supporting. Nearly all of them occupy log houses provided with many of the comforts and conveniences enjoyed by their white neighbors. They are all fairly well dressed and most of them speak some English. On the whole, they seem to be enjoying their share of the happiness allotted to human kind.

**Boise Forte Reservation.**—The Boise Forte Indians occupy three reservations aggregating 131,120 acres. One of these reservations is at Vermillion Lake in St. Louis County, Minn., and its area, 1,080 acres. The nearest railroad point to this reservation is Tower, a thriving mining town on the Duluth and Iron Range Railroad. The Government buildings provided for the use of the Government blacksmith, farmer, and teacher are on this reservation and are distant from Tower about 3 miles. Not more than 300 acres are adapted to agriculture, the remainder being too swampy or stony for cultivation. About 200 acres have been cultivated by the Indians for a number of years, and the bountiful crops produced demonstrate the fertility of the soil.

For any surplus products, the Indians have a convenient market at Tower. The native raspberries and blueberries flourish and in their season are gathered by the Indians and readily sold. There is but little timber, none of value except about 100 acres of Norway pine. Formerly the Indians frequented this locality in large numbers, but with the advent of the railroad and white settlers, the Indian population has gradually diminished until but few permanent residents are left at Vermillion Lake.

During the next two years it is expected that all these Indians will take allotments. When the work has been completed the great body of them will doubtless be located on the Boise Forte Reservation proper, situated about 75 miles to the northwest of Vermillion Lake. This reservation, known as the Boise Forte or Net Lake Reservation, occupies 107,509 acres. The township line has been established, but the subdivisional line has not yet been made.

This reservation is in the midst of a vast wilderness; it is inaccessible in the summer season, save by Indian trails. In the winter when the swamps and streams are bridged with ice it may be reached over the roads built by lumbermen, who have already carried their enterprise beyond the Indian reservation down to the Canadian frontier. In many of the logging camps, scattered through these woods, some of the Indians find employment, and later in the season many of them are engaged in driving the logs down the streams to Rainy River, on the northern border.

The surface of the reservation is uneven. There are many abrupt rocky ridges with scanty vegetation with narrow wooded valleys between. Streams and lakes furnish abundance of excellent water, and the soil is fertile, especially along the valleys of the streams. Deciduous trees are represented by the birch, maple, and oak, and the evergreens are pine, both white and Norway, and cedar and fir.

The largest village of the Boise Fortes is found on the south shore of Net Lake, a body of water about 10 miles long and from 2 to 4 miles wide. When making the annuity payment to them last November, I noticed large quantities of rice stored

in the dwellings. Game is also abundant. Large animals, such as the moose, caribou, deer, and black bear, are still found in that region.

The Deer Lake Reservation lies about 15 miles southwest of Net Lake. It embraces a single township, and is occupied by 20 Boise Fortes, under Chief Mountain Traveler. The natural resources of this reservation are substantially the same as those of the principal reservation at Net Lake.

Excepting 70 persons residing at the northern extremity of Vermillion Lake, these Boise Fortes are pagans. They are enveloped in the ignorance and superstition of their fathers, and are largely under the control of their medicine men, and afford a wide field for missionary effort. Their educational advantages are very limited; they should be provided with more schools, and a boarding school is very much needed. The great obstacle in the way of aiding them is the difficulty of reaching them in the summer seasons. In all that vast region, stretching from Vermillion Lake to Rainy Lake, there are no wagon roads, only narrow trails, along which the Indians and explorer pursue their way in single file. But white settlers are rapidly filling up the territory; roads will soon be constructed by the hardy pioneer, and the vehicles of civilization will soon be able to reach this hitherto inaccessible region.

The cash payment was made to these Indians last November at Net Lake. They were well provided with food, having an abundance of potatoes, wild rice, fish, and game. Some occupied log houses and others were in wigwams. They were very much in need of clothing and shoes. The leading men informed me that they were anxious to have a school in the village, and that one was greatly needed was evident. But the difficulty of transporting thither material for a school building and teacher's residence, and the difficulty of finding a qualified person to go so far beyond the limits of civilization to take charge of the school, deterred me from making any recommendation to the office.

**Fond du Lac Reservation.**—The Fond du Lac Reservation is located about 24 miles west of Duluth. The St. Louis River forms its boundary for 25 miles from the mouth of the Savannah River to the head of Knife Falls on the St. Louis River. This reservation embraces about four Congressional townships of land and its area is 92,346 acres. Its surface is undulating and is generally covered with timber and underbrush. Along some of the small streams open meadows are found, which furnish a luxuriant growth of grass. Among the forest growth are found white and yellow birch, hard and soft maple, white and Norway pine, and in the swamps tamarack, cedar, spruce, and fir. There is a great variety of soil, ranging from a pure silex to an argillaceous loam, and a number of beautiful lakes still well stocked with fish and aquatic fowls. Excepting the swampy lands the entire area of this reservation is adapted to agriculture, and under the crude methods of cultivation pursued by the Indians the soil yields abundant crops of potatoes and other vegetables. A ready market is found at Cloquet, a flourishing town on the St. Louis River 1 mile east of the reservation.

There are two railroads, the Northern Pacific traversing its southern border, and the Duluth and Winnipeg following the windings of the St. Louis River from the village of Cloquet to the northwest corner of the reservation.

These railroads furnish a market for the forest products and for a number of years to come the railroad ties, fence posts, telegraph poles, and saw logs manufactured along these roads will be a source of revenue to the industrious Indians. There are two villages on this reservation. One of them is 2 miles from Cloquet, and the other, Normantown, 10 miles distant, near Sawyer, a station on the Northern Pacific railroad.

The Government day school is in the village 2 miles from Cloquet and there is also a Catholic church, where church services are held at regular intervals, many of these Indians being members of the Catholic church. All occupy houses, which are generally provided with many of the comforts and conveniences of civilized life. Most of them manage to speak some English and they are all well clad. Many of them have horses and oxen, wagons, sleighs, plows, drags, and other implements of farming.

The railroads that cross the reservation afford a ready market for the products of the forest, and during the past year many of these people have been actively engaged in manufacturing railroad ties, telegraph poles, and fence posts for shipment over these railroads, for which they have received remunerative prices. They have also manufactured about 10,000,000 feet of pine logs and sold them to the mills at Cloquet at \$5 per thousand feet, the fair market value of such property at that place. These were taken from lands which the owners were endeavoring to clear of timber and improve for farming purposes. This work involved a large amount of labor in the preparation of roads over which the timber must be moved to the river or railroad for shipment to its destination, and in this work the Indians displayed commendable energy and enterprise. The small timber and the low-grade pine timber of this region have but little stumpage value, and when manufactured and prepared for market the labor cost of the manufactured article is nearly equal to its market

value. But in doing this work the Indians acquire habits of industry and a valuable experience worth far more to them than money.

The farming was well done and the little fields give promise of an abundant harvest. The small settlement of Normantown was unfortunate in being swept by a furious hailstorm, which nearly ruined the crops.

These people are quite intelligent. Many of them are able to read and write. They have been associated for years with white men in various branches of industry. They have labored in the logging camps, and they have been engaged about the mills and in making improvements in the village of Cloquet. They understand their rights and duties quite as well as the average white man, are able to take care of themselves, and need no aid from the Government except support for their schools.

**Grand Portage Reservation.**—The Grand Portage Reservation is located 200 miles from Ashland, on the north shore of Lake Superior. It is bounded on the south by the lake and on the north by Pigeon River. The eastern and western limits are conventional lines. The national system of surveys has not yet been extended over it. The surface of the reservation is stony, rugged, mountainous in places, and affords but little scope for agricultural labor; neither does it possess timber of any value. The Indians claim that it contains valuable minerals—iron, copper, and silver—and, as it lies in a region which is known to carry valuable mineral deposits, the claim may not be without foundation. Along the lake shore and in the valley of the streams there is some good farming land, which is cultivated by the Indians and produces an abundant yield of potatoes and other vegetables.

They rely chiefly upon fishing for subsistence, and the supply of fish in the great lake is apparently inexhaustible. They are expert sailors and display a high degree of skill both in the construction and management of their sailing craft. They also carry their hunting and trapping expeditions across Pigeon River, the sectional boundary into the Canadian country. They frequently obtain good wages as guards and packers for parties engaged in exploring the neighboring country for valuable minerals.

The village is built along the shore of Grand Portage Bay. Its public buildings are a Government schoolhouse and a Catholic church. Some of the residents occupy commodious log houses and others dwell in wigwams. Many speak some English and all wear the customary garb of the whites.

Some time ago Major Shuler informed me that he intended to make an effort to remove the Indians from Grand Portage to White Earth. If this is not done a new school building should be provided for them, as the old building is too badly damaged to justify extensive repairs. With a little expense, however, it may be made tenable until another can be erected.

**Census.**—The aggregate population of these reservations is 4,930 and is distributed among the reservations as follows:

Lac Court d'Oreilles .....	1,226
Vermillion Lake .....	800
Fond du Lac .....	761
Lac du Flambeau .....	683
Bad River .....	626
Red Cliff .....	511
Grand Portage .....	323
<b>Total .....</b>	<b>4,930</b>

It is a very difficult undertaking to obtain an accurate enumeration of these Indians. In many cases it is necessary to rely upon the statement of the chief for the census of a number of the families in his band. The foregoing statement was obtained after diligent inquiry and may be regarded as substantially correct. The following table compiled from the census returns presents the numbers of the different classes of persons required by section 211 of the Indian Regulations:

Name and band.	Males above 18 years.	Females above 14 years.	School children between 6 and 16 years.
Lac Court d'Oreilles .....	365	410	326
Vermillion Lake .....	258	251	187
Fond du Lac .....	188	254	283
Lac du Flambeau .....	216	265	155
Bad River .....	220	222	150
Red Cliff .....	134	138	175
Grand Portage .....	84	104	77
<b>Total .....</b>	<b>1,465</b>	<b>1,644</b>	<b>1,303</b>

**Employés.**—The following table contain a list of the agency employés, gives the position occupied by each, and the place at which they are located:

Name.	Position.	Where employed.
R. G. Rodman, jr.....	Clerk.....	Agency.
J. K. McDonald.....	Additional farmer.....	Vermillion Lake.
Daniel Sullivan.....	do.....	Lac du Flambeau.
William G. Walker.....	do.....	Bad River.
J. W. Morgan.....	do.....	Lac Court d'Oreilles.
J. P. Cox.....	Physician.....	Do.
George E. Wheeler.....	Blacksmith.....	Vermillion Lake.

During the past year they have been faithful in the discharge of the duties assigned them.

The work devolving upon the solitary clerk allowed this office is greater than one person can properly perform and it has been found necessary to impose upon the time and good nature of some of the teachers and farmers to assist him. This method of transacting business is very unsatisfactory, but it is unavoidable so long as the clerical force of the office is limited to one person.

By direction of the Indian Office the official interpreter was dismissed at the beginning of the year, which renders it necessary for the Indians to bring an interpreter with them. The absence of this employé is felt in the office, as he was accustomed to lend considerable assistance to the clerk.

**Farming.**—During the past year considerable improvement has been made in the matter of farming, the Indians having taken a livelier interest in the work than ever before. But little attention has as yet been given to the cereals. The principal crops are hay and potatoes. Onions, turnips, rutabagas, pease, and beans have been produced in large quantities.

The following statement shows the amount of the principal farming products during the year:

Hay.....	tons..	1,692
Potatoes.....	bushels..	24,650
Turnips.....	do....	7,575
Onions.....	do....	420
Cabbage.....	do....	560
Beans.....	do....	175

The raising of domestic animals by the Indian is not a success; he is too indifferent to their comfort in the winter season to provide the requisite shelter and fodder; he is disposed to let them shift for themselves; and the winters in this latitude are too severe and protracted and the snows too deep to permit domestic animals to sustain themselves without a supply of forage. Some of them own horses and cattle and provide them with food and shelter. On the several reservations they own 145 horses, 373 cattle, and 94 hogs. Besides the farm products they harvest and sell to the neighboring white settlers large quantities of wild fruits, strawberries, raspberries, blackberries, blueberries, cranberries, and plums.

In many of the streams and lakes of these reservations wild rice grows luxuriantly. This important cereal is carefully harvested by the Indians, and constitutes an important part of their subsistence stores. It is palatable and nutritious and by many white people is preferred to the white rice of commerce. The rice fields are the resort of numerous wild fowl, which are captured by the Indians and either consumed at home or sold in the neighboring towns. The revenue thus derived from the rice fields renders them a very important part of the Indian domain.

Last spring the Department furnished each of the farmers on the Fond du Lac, Lac Courte d'Oreilles, and Lac du Flambeau Reservations with teams, plow and harrow for the use of the Indians, and under their direction many of the Indians learned for the first time that it is not a very difficult undertaking to hold a plow. They manifested unusual interest in tilling the soil and kept the teams constantly engaged during the planting seasons. New fields have been plowed and fenced, and the work of cultivating has been carried on in such a measure as to afford great encouragement to the Government farmers.

The work of clearing a farm in a timbered country is a slow, laborious process even for a white man. Success in this work requires great energy and persistence, qualities but feebly developed in the Indian. His movements are spasmodic, and he is easily discouraged; he lacks patience, and if the reward of his labor is remote he is not disposed to pursue it with energy. The maturity of a crop lies too far in the

future to excite his cupidity or rouse him from his lethargy. In his native state he plunged into the woods in the morning on his hunting expedition, and at night returned with his game. This ancient habit still attaches to him, and at the end of the day he wants his pay. For this reason he is much better satisfied to work in the woods in the manufacture of the various forest products, than to devote his time to farming. Years of association with the whites in logging operations have vested many of them with skill in woodcraft, and they are competent judges of quality and price. For a number of years the principal and favorite occupation of most of them will be the preparation of timber for the market. The returns are more prompt and more certain than those of agriculture.

When the timber is gone the woodsmen will be found on the farm. The timber is perishable, many thousands of acres being destroyed every year by wind and fires and the sooner the Indians dispose of their timber the sooner they will resort to agriculture to secure their living. No precautions can save the timber from destruction by fire and for this reason I have constantly urged the Indians to persevere in the work of cutting and disposing of it under the rules prescribed by the Department.

Under these circumstances occasional complaints of trespass are unavoidable; but it is less annoying and mortifying to entertain the suspicion that an Indian has cut over the lines or committed some petty violation of the timber regulations than to see him hanging about this office begging for bread.

The nonprogressive Indians are full of complaints and are continually interfering with those who are disposed to be industrious. They will do no work themselves and will allow no one else to engage in honest industry if they can prevent it, claiming that the Government should take care of them.

These idlers are usually self-styled chiefs or medicine men who labor to perpetuate the tyranny of the tribe over the individual. They pose as representatives of the tribe out of which they manage in some mysterious way to sponge a living. They are not slow to perceive that the destruction of the tribal relation means the loss of their occupation; hence their opposition to any movement intended to liberate the individual from the thralldom of the band.

Allotments.—No allotments have been made during the last four years. Arrangement has been made for a speedy allotment of land to the Indians of Minnesota under the provisions of the general allotment act, and it will not be very long before all the Indians of Minnesota will be provided with lands in severalty, either on the reservations where they belong or at the White Earth Reservation. No steps have yet been taken to bring about the general allotment of lands to the Wisconsin Indians of the La Pointe Agency, but they are anxious for allotments, either under the treaty of 1854 or under the provisions of the allotment act.

By direction of the Indian Office, schedules of allotments of Bad River and Lac du Flambeau Indians were sent to the Department last October, but have not yet been approved. These Indians claim that treaty allotments have hitherto been accorded to them whenever they asked for them, and they can not understand why the Government should at this late day adopt a different policy. The failure to make these allotments has created a feeling of hostility, which finds expression in a general dissatisfaction with the management of their affairs.

The Indians have risen to an appreciation of the value of the ownership of land in severalty, and they are reluctant to go upon a piece of land to undertake its improvement, and to establish a home until they hold an undisputed title. It is clear that the best movement the Government can make to subserve the interest of these Indians is to allot their lands and to dispose of the surplus at an early day. The presence of tribal property will tend to perpetuate the tribal influence, which is everywhere retrogressive.

Whether the lands are allotted or not, measures should be adopted to dispose of the pine timber which is exposed to inevitable destruction by fire. The risk has greatly increased in the last few years. Every winter thousands of men are engaged in cutting pine timber in the forests surrounding these reserves; the slashings thus made are exceedingly inflammable, and give rise to extensive forest fires which sweep over many miles of territory, and kill or destroy all the timber in their pathway. The money arising from the sale of timber should be taken and managed by the Government in such a way as to confer upon the Indians a permanent benefit. It should be expended in making clearings and houses on the allotments, in providing household furniture and the ordinary implements of husbandry. This plan would give the Indians a start, and they would gradually be able to supply their needs from the products of the farm.

The experience at this agency has shown that any considerable sums of money paid to Indians is a great damage to them, as they will promptly exchange their money for whisky, which means mental, moral, and physical degradation. Cash payments should be avoided except as compensation for labor performed.

The following table indicates the number of allotments made on each of these reservations to date, the number of allottees, male and female, and the number of acres allotted:

Name of reservation.	No. of allotments.	Sex of allottees.		Number of acres allotted.
		Male.	Female.	
Lac Courte d'Oreilles.....	477	315	162	87,582.56
Bad River.....	357	246	111	27,437.79
Fond du Lac.....	99	59	43	7,805.75
Lac du Flambeau.....	89	57	32	7,086.32
Red Cliff.....	35	28	7	2,535.91
Total.....	1,057	702	355	82,448.22

**Schools.**—Connected with this agency are 13 schools, 11 day and 2 boarding schools. Of the day schools 6 are maintained by the Government and 5 by religious denominations.

The following table gives the names of the several schools, their location, the names of the teachers, and the compensation of those paid through this office:

Name of school.	Reservation where situated.	Average attendance.	Name of teacher.	Salary per annum.
<i>Day school.</i>				
Lac du Flambeau.....	Lac du Flambeau.....	32	Cordelia Sullivan.....	\$600
Fond du Lac.....	Fond du Lac.....	22	Julia Curran.....	400
Vermillion Lake.....	Vermillion Lake.....	36	Celia J. Durfee.....	600
			A. L. Flett.....	600
			Anna Flett.....	400

			Sister Kunigunda.....	.....
<i>Boarding schools.</i>				
St. Mary's.....	Bad River.....	32	Sister Kunigunda.....	.....
Bayfield.....	Bayfield, Wis.....	38	Sister M. S. Reineck.....	.....

The boarding school at Bayfield, the day school at Red Cliff, both the day and the boarding school at Bad River, and the day school at Lac Courte d'Oreilles are conducted by sisters under the direction of the Catholic Bureau of Indian Missions. The Round Lake mission day school, taught by the Misses Dougherty, is maintained by the Presbyterian Board of Foreign Missions.

The schools conducted by the Catholic sisters are paid by the Government a compensation of \$7.50 per quarter for each pupil in the day schools, and \$27 per quarter for each pupil in the boarding schools.

All these teachers have labored assiduously in the discharge of the onerous duties imposed upon them, and they are entitled to great praise for the measure of success which their zeal and energy have secured.

The great difficulty in the way of progress is found in the irregular attendance; the seasons of berry-picking, sugar-making, and the rice harvest take the Indian and his family out of the settlement and away from the school. These frequent interruptions are a serious hindrance to the progress of the pupil. Frequent absence also adds largely to the labor of the teacher as it renders a proper classification of the pupils well nigh impossible. The progress of the pupils in the day school is slow, but this should occasion no surprise when the unpropitious surroundings are taken into consideration. The child is not kept at school continuously; he is not properly clothed and fed, and spends six hours a day in the civilizing influence of the school and eighteen in the atmosphere of barbarism. He is in utter ignorance of the language of the school, and before he can make a beginning in the work before him he must learn to receive and convey ideas in a foreign tongue. This is a slow process, especially when play-mates and parents in ordinary intercourse employ only the native language.

To transform these Indian children into intelligent men and women they must be properly fed, clothed, and trained, and these conditions can be supplied only by the boarding school.

The teachers of the Government day schools all agree that the noon lunch exercises a potent influence in securing attendance. Many of the children seem to be provided with no food during the day except that distributed to them at noon by the teachers and many are scantily clad and must suffer from cold during the rigorous winter of this high northern latitude. Under such circumstances those at a distance are compelled to remain at home, and some families are located so far from the villages that their children are not able to attend school at all.

In order to provide these children with the literary and industrial training essential to transform them into worthy citizens, Government boarding schools should be established on all the reserves of this agency.

The following table shows the number of persons of school age, the number enrolled in the schools, the average attendance for the year and for the last quarter of the year:

Name of reservation.	Persons of school age.	Number enrolled in schools.	Average attendance for year.	Average attendance for last quarter of year.
Lac Court d'Oreilles.....	326	220	110	105
Vermillion Lake.....	187	67	36	40
Fond du Lac.....	233	52	22	21
Lac du Flambeau.....	155	78	32	36
Bad River.....	150	129	62	90
Red Cliff.....	175	44	35	32
Grand Portage.....	77	20	7	8
Total.....	1,303	610	304	332

**Police.**—During the year 17 policemen have been employed on the several reservations. These men are distributed as follows: 5 at Bad River, 3 at Lac Court d'Oreilles, 3 at Fond du Lac, 3 at Lac du Flambeau, and 3 at Vermillion Lake.

The only serious trouble arising on these reservations has its origin in drunkenness. The Indians are as quiet and law-abiding as any white community as long as they are free from intoxicating liquor, but when under its influence they are disorderly and dangerous.

The police are valuable aids to the farmers in preventing the introduction of liquor upon the reserves, but the efforts to maintain order would be greatly promoted by the presence of a jail on each of the reserves.

Justice is administered in the local tribunals and in the United States courts. Cases of petty larceny, assault and battery, wife-beating, using indecent language, have been prosecuted in the local courts and the culprits fined and imprisoned in accordance with the provisions of the penal code of the State. These proceedings impress them with the fact that they are governed by law, and exercise a powerful influence.

**Sanitary condition.**—During the past year the Indians have suffered considerably from la grippe, and a number deaths occurred among the Boisé Fortes from this epidemic. Pulmonary consumption prevails and the greatest mortality is occasioned by that dread disease.

The Government provides no medical attendance for any of these reservations except Lac Court d'Oreilles, whose medical needs are supplied by Dr. J. P. Cox, the agency physician. On account of the great distance separating the reserves it is not practicable for the doctor to visit the other bands of Indians, and his services are restricted to the people at Lac Court d'Oreilles.

**Railroads.**—The Duluth, South Shore and Atlantic Railroad was constructed across the Bad River Reservation four years ago and the Indians have not yet been paid for the right of way. It seems that the Indian and the railroad company have not been able to agree on the amount of compensation that ought to be paid. The railroad company is occupying and using the land belonging to the Indians and its failure to effect a settlement with them gives it no inconvenience. The Indians should be paid, and the Government should adopt measures to effect an early adjustment of the controversy.

Two years ago the Duluth and Winnipeg Railroad was constructed across the Fond du Lac Reservation. The compensation for right of way was agreed upon, but for some reason unknown to this office the money has not been paid to the Indians. During last April and May in councils held with the Boisé Fortes, Fond du Lac, and Grand Portage bands they consented to grant the Duluth and Winnipeg Railroad Company right of way across the Red Lake and other Chippewa

reservations in northern Minnesota. The compensation agreed upon was \$5 per acre for the land required by said railway company.

The Northern Pacific Railroad is built across the Fond du Lac Reservation along its southern border, about 12 miles. The Indians claim that the railway company has not paid them for the land taken for right of way, and if they are entitled to compensation steps should be taken to secure it for them.

**Highways.**—Highways or public roads are greatly needed and the road laws of the State should be extended over the reservations. The Indians are unable to construct highways on account of lack of funds, but in many cases the county authorities would build roads across the Indian country for the accommodation of the public if they had authority to enter upon the lands and to make the necessary preliminary arrangements with the Indians for right of way.

**The sixteenth section.**—On all the reservations of this agency in the State of Wisconsin it appears that the sixteenth sections have been claimed by the State and sold to divers parties. Some of these lands were valuable for the pine timber growing on them. In many cases the timber has been removed by parties claiming title from the State; some of these parties are dead, some have gone to parts unknown, and others are insolvent. Under a recent opinion of the Attorney-General of the United States it is held that the State of Wisconsin has no title to these lands. Within the past year, in the trial in the United States court at Madison, of an Indian charged with having committed murder on Sec. 16, T. 40 N., R. 8 W. of fourth principal meridian, the judges were divided in opinion as to the status of this section, one of them holding that the section belonged to the State of Wisconsin, the other that it belonged to the Indian reservation. The Indians have always claimed the sixteenth section as a part of their reservation, and they have always protested against the appropriation of these lands by whites.

**Claims.**—The Indians claim that there is due them from the Government, under the treaty of 1854, the sum of \$120,000; they also allege that large sums of money are due under the provisions of former treaties. These claims should receive the early attention of the office, and if they are just they should be paid. On the other hand, if they should prove to be without foundation the Indians should be so advised, so that all further controversy in relation to them may be terminated. These claims are a source of constant irritation, and the Indians waste a large amount of valuable time in their discussion. The agitation of these tribal matters gives prominence to the so-called chiefs and magnifies the prestige of the nonprogressives, who do not hesitate to charge the Government with bad faith in failing or refusing to execute solemn treaty stipulations. By persistent talk over these treaty claims and other tribal matters this party of chronic kickers makes a demonstration of its strength and exercises a deleterious influence over the mass of the Indians. The peace and prosperity of these people require that all controversies growing out of their relations to the National Government should be speedily and satisfactorily determined.

**Missionary work.**—Christian missionaries have been engaged for many years in the effort to convert these Indians to Christianity. Many of them have embraced Christianity, but the greater number still adhere to their ancient superstitions. The Catholic Church has planted the standard of the cross on all these reservations except that of the Bois  Fortes. With this exception it has a chapel on each, in which religious exercises are held at regular intervals. The Presbyterian Church maintains a missionary at Round Lake on the Lac Court d'Oreilles Reservation, and another at Odonah on the Bad River Reservation.

**Conclusion.**—The Indians of this agency as a whole are making some progress in civilization. They manifest a better appreciation of the value of civilized occupations and a greater earnestness and persistence in the pursuit of them. Some of them are abundantly able to manage their own affairs and no longer require the guardianship of the National Government. The Government should assume the burden of maintaining literary and industrial schools among them for a number of years.

As rapidly as they display the ability to provide themselves with food, clothing, and shelter in a civilized way they should be thrown upon their own resources. Dependence upon the Government is demoralizing; it is destructive of that manly self-reliance without which success is impossible.

When the Indian has obtained a fair knowledge of any of the industrial pursuits followed by civilized men; when he has acquired the rudiments of agriculture, manufactures, and trade and learned to give intelligent direction to the forces of nature, he should then, like the rest of humanity, be left to the guidance and government of the divine injunction, "In the sweat of thy brow shalt thou eat thy bread."

Respectfully submitted.

M. A. LEAHY,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN WYOMING.

## REPORT OF SHOSHONE AGENCY.

SHOSHONE AGENCY, WYO.,  
*August 17, 1891.*

SIR: In compliance with instructions of office circular July 1, 1891, I have the honor to submit my second annual report of the condition of this agency and the Indians' under my charge.

The year has passed without any startling incidents. Each day brings with it its cares and responsibilities to the agent, who, if he personally supervises the affairs of his agency, will find that from early morn until late at night his time will be fully occupied, his patience well taxed, and but little time for bodily rest left him.

The Shoshones have never been affected by the "ghost dance craze," while a part of the Arapahoes have. Last year they spent a large share of their time dancing, thus neglecting their work. This season they have attended closer to their farms and hay crops, and, I think, now see the folly of the delusion and will not again engage in the "ghost dance."

Their grain and garden crops look well, and they are putting up much more hay than in former years. Both the Shoshones and Arapahoes are now very busy hauling wood to fill the contract at Fort Washakie, where they have already delivered about 600 cords. They will furnish about 300 more. They have, besides, delivered 96 of the 120 cords required for this agency and school. The remainder will all be brought in by them in a few days. They have also freighted nearly all their flour from Lander, a distance of 15 miles. During the past year the two tribes have built 30 log houses, made new fences and ditches, repaired the old ones, and constructed wagon roads in the mountains to enable them to get out fence poles and wood to sell and for their own use.

The Government boarding school at this agency has been successfully managed by Superintendent Roberts, who has devoted his entire time and energy faithfully to the work. Since the school was first started there has been no year in which the Indian pupils have made better progress in their studies in the schoolroom or in their industrial training. The boys have done well and taken interest in their outdoor work. The girls have done well, assisting in laundry work, cooking, sewing, etc. The employes each attended to their respective duties faithfully and wranglings and bickerings have been unheard of; harmony and good will has prevailed, much to the satisfaction of myself and the superintendent, Mr. Roberts. The only drawback is the difficulty of inducing the Indian children to speak the English language. Many read and write well, but will not talk, yet understand what is said to them.

Splendid results were obtained by lighting the grounds surrounding the school building with street lamps and by the presence of a policeman. Good order was more readily obtained, and there was no prowling around the building at night by those from the camp.

The St. Stephen's Roman Catholic mission school has not been conducted to my satisfaction since I have been in charge of the agency. In the first instance, there was some trouble between the superintendent (Father Cuppens) and the bureau of Indian missions. When a change was finally made hopes were entertained that the school would be properly conducted, and I rendered the new management every possible assistance. Misunderstandings, however, soon came up between themselves. They could keep no employes any length of time. The pupils took advantage of the situation, and the parents became dissatisfied, and the school was closed about May 15, 1891, with only some 8 or 10 pupils in attendance at the time, while the "statement of attendance" for the second quarter, 1891, shows that there were 92 pupils enrolled. I would therefore earnestly recommend that the entire management of this school be changed before it is again opened in September next.

The health of the Indians is good at present. There are some chronic cases of scrofula and consumption. There were reported 48 deaths; 15 births, male, and 24 female children, making 39 births as against 48 deaths. There were 2,390 cases of sickness reported for the fiscal year, of which August shows the lowest number, 122 cases, and April the highest number, 292 cases. There were no doubt more deaths than were reported, as the Indians will not report a death if they can help it, as by so doing it takes one from their ration check; yet they report promptly each birth and have one more added to their ration check.

The agency employes' buildings were pointed with lime and sand mortar last November, which made them reasonably comfortable for the past winter. The roofs are bad and need reshingling. During the rainy season in April and May last the roofs leaked badly, doing considerable damage to plastering and walls. These build-

ings should be sided and repaired before the coming winter. New floors and doors are much needed; they are open and the cold and dust comes in. The blacksmith shop has been sided with new lumber and an addition added as a storage room for iron, bolts, etc.; the building has been given a coat of mineral paint, and is comfortable and convenient. Caution has been taken to construct the forge and flue properly so as to avoid danger by fire.

A new and commodious slaughterhouse and shooting pen combined has been constructed, which was much needed. The building has been given a coat of mineral paint to protect it from the weather. A new cattle scale has been erected, with shed to protect it from the weather; this was also badly needed. The old scale was worn out, the timbers were decayed, and the weights were unsatisfactory. The new scale weighs very accurately, and will in a short time save to the Government and Indians more than the cost of its construction.

A new barn for agency stock is much needed. The old one was built eighteen years ago, on the banks of Trout Creek, and the late high water cut away the ground so that one corner of the stable fell out, thus leaving the harness and other articles exposed and liable at any time to be stolen. A large shed is much needed to protect wagons and farm implements from the weather. A new office should be built with room for the dispensary. The building now used is too small and inconvenient and very liable to take fire at any time. Some outbuildings are required for the school, but in view of the contemplated construction at an early date of the new school building these could be dispensed with (except a new root cellar). By building a barn for the agency a part could be used for school stock until such time as suitable buildings can be erected near the new school building. An appropriation should be made for the above proposed buildings in order that the same may be erected before cold weather.

The agency and school fences have been repaired and one hundred rods of picket wire fence with cedar posts have been put up. The material of the fences thus removed has been used in repairing other fences.

This has been an unusual rainy season, as will be seen by the following table, kindly furnished me by Mr. E. M. Crawford, observer, Weather Bureau, at Fort Washakie:

	Precipitation.	Prevaling wind.	Maximum temperature.	Minimum temperature.	Mean.
1890.					
July .....	.97	SW.	*93	37	*69.4
August .....	.73	SW.	91	39	63.8

\* Highest.

† Least.

‡ Lowest.

§ Greatest.

The roads were almost impassable, on account of deep mud during the latter part of April and May. The streams, owing to the heavy rains and the melting snows on the mountains, were all very high. Bridges, irrigating ditches, culverts were torn out by the floods. On the 1st of June the high water caused a break in the Arapaho ditch by cutting around the head gate. It carried away between 50 and 75 square yards of earth before the water could be shut off. The ditch below was also damaged, but was repaired in time to supply the Indian farmers with water to irrigate their crops.

The number of Indians of both tribes located on the reserve as per census completed June 30, 1891, is as follows:

Shoshones of all ages .....	883
Arapahoes of all ages .....	849
Total .....	1,732

Shoshone tribe:	
Males above 18 years of age .....	219
Females above 14 years of age .....	273
School children between 6 and 16 years of age .....	257
Arapaho tribe:	
Males above 18 years of age .....	201
Females above 14 years of age .....	268
School children between 6 and 16 years of age .....	249
Shoshone school children:	
Males .....	131
Females .....	126
Arapaho school children:	
Males .....	128
Females .....	121
Total number of school children in both tribes .....	506

I estimate that there are 20,000 head of horses and cattle on this reservation belonging to outside parties, from which the Indians derive no benefit. There has been considerable thieving going on this spring. Some parties were in advance of the "round up" and branded colts and calves, and in some instances grown horses and cattle, especially those belonging to Indians. This thieving is carried on with such slyness that is almost impossible to secure enough evidence to make a case against anyone engaged in it. At the late term of the district court held at Lander, one Thomas Maddan, indicted for horse stealing (and now in the penitentiary), confessed in open court that there was a gang of horse and cattle thieves that operated from Kansas to the British Possessions; that stock had been stolen in various parts of Fremont County, including this reservation. Some of the Indians lost all their horses by theft and have heard nothing of them, while some have been heard from scattered through Nebraska, and can not be recovered only by expending more time and money than the stock is worth.

Whisky selling to Indians has been carried on as usual by white men. On December 6 last, one George Wesaw, a Shoshone Indian, while drunk, shot and instantly killed a Shoshone boy named Dry Mouth, aged about 15 years. The shooting was done without any cause or provocation. Wesaw was promptly arrested by the Indian police and placed in the guardhouse. Although shackled to the floor he managed to escape and has not been seen since by any white man. Efforts have been made to recapture him, but without avail.

The white man referred to in my last annual report as being in jail awaiting the action of the United States grand jury has since been found guilty and sentenced to eighteen months' imprisonment, after one year's imprisonment in the county jail. On the 1st of this month two men were arrested for giving whisky to Indians. At the preliminary examination the evidence was positive against them and the United States commissioner held them to answer to the United States grand jury at the next term of the court. In default of bail they were confined in the Fremont County jail.

There is a gang of half-breeds who operate on the southeastern portion of the reservation from 15 to 30 miles from the agency. They have frequent drunken brawls among themselves. This I can hear of after it is all over and nothing can be learned as to where they get their whisky. Only a short time ago they had an altercation and one of them was pretty badly cut about the head and face with a clubbed revolver. The citizens living south of the reserve can not be induced to make complaint against any of them, fearing that they will do some injury to their property in retaliation.

In this matter of whisky selling and horse and cattle stealing on the reservation a good United States detective should be detailed to trace up the guilty parties who engage in these nefarious practices seriously endangering the lives and property of innocent citizens.

The court of Indian offenses has rendered good service. Many matters of dispute have been settled by the judges of both tribes of which no formal report has been made to this office. This court has been the means of relieving the agent of many petty cases which are sometimes very annoying.

The Indian police force has preserved good order among their respective tribes. They obeyed orders readily and have rendered good service for the amount of money that is paid them.

I have been careful in selecting the agency employes who have been faithful in the performance of their various duties, which they did cheerfully and well, and all have the confidence of the Indians.

In conclusion allow me to express my sincere thanks for liberal allowances by which much needed improvements have been made at this agency; also for the many courtesies extended me by the Indian Office, and it shall be my constant endeavor to merit the continuance of the same.

Very respectfully yours,

JOHN FOSHER,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF SHOSHONE BOARDING SCHOOL.

WIND RIVER BOARDING SCHOOL,  
*Shoshone Agency, Wyo., July 23, 1891.*

DEAR SIR: In accordance with official instructions, I have the honor to submit the following report of this school:

**Buildings and grounds.**—The school is at the agency. It occupies a low adobe building erected by the Government in 1884. It was badly constructed and is already in a dilapidated condition. It is surrounded by grounds about 10 acres in extent, 3 of which are taken up by the garden and farmyard; the rest is in grass. In front is a large lawn used as a playground. The carriage drive running through is skirted by young trees, which are beginning to afford a little shade. Close to the school is the Episcopal Church building, which is used as a schoolroom as well as for divine services.

**General welfare.**—The past year has been a prosperous one in every respect. The employés have been faithful and successful in the performance of their respective duties. The health of the pupils has been remarkably good, and the progress in every department has been satisfactory.

**Schoolroom work.**—In obedience to instructions, the classes were reorganized on the basis of the new "Course of Study" issued from the Indian Office at the commencement of the year. The directions of the honorable Commissioner with regard to the method of teaching and the subjects to be taught were strictly followed, and the result has been very encouraging. The pupils of the most advanced class took the course prescribed for the "advanced grade," "second year." They read in the fourth reader, spell creditably, are proficient in arithmetic, and have done fairly well in language, geography, penmanship, drawing, and the other subjects taught. The value of the new course of study is especially proved by the unusual progress made by the primary classes. I have been connected with the school since it was established and never before have the little ones made such rapid progress or shown such interest in their studies.

**Industrial training.**—The girls have received careful attention at the hands of the matron and the other lady employés. They have been regularly detailed to perform the various duties connected with housekeeping, working by turns half their time in the kitchen, laundry, sewing room, etc. The larger girls are able to cook, bake bread, wash, iron, use a machine, and do all kinds of sewing.

The boys have also been detailed according to the roster to do all necessary outdoor work, and to assist when occasion required in the general housework, such as scrubbing, mopping floors, heavy washing, and in the care of their own dormitories. They have with the assistance of the industrial teacher sown 14½ acres in grain and grass seed, planted 4 acres of potatoes, raised a good crop of alfalfa hay, cultivated a garden of 1½ acres, dug two wells, and put up a new wood yard and coal house.

**Farm.**—The use of one of the agency fields being assigned the school, most of the crops are in it. They are doing well and good yields are looked for. The live stock consists of 2 work horses, 10 hogs, and 19 head of cattle; the latter, owing to the want of an inclosed pasture, are herded on the prairie with the beef cattle.

**Discipline.**—The employés by their personal influence have been able to maintain order in the class rooms, in the different industrial departments, and on the playgrounds. Corporal punishment has not once been resorted to. Runaways and truants have been promptly brought back by the resident policeman. The lighting up of the grounds by means of street lamps, together with the presence of the police, has put a stop to the nocturnal visits of young Indians and other trespassers.

**Attendance.**—There has been an average attendance of 54 pupils out of 80 enrolled. Every effort has been made to induce the Indians to send their children to school voluntarily, but no compulsory measures have been resorted to, in view of the fact that 30 per cent of those who attended school from 1883 to 1889 died, and several others returned to their friends broken down in health. Your humane and considerate rule in avoiding harsh measures to swell the attendance can not but commend itself to all interested in the welfare of these children. I have also taken the liberty of granting any scholar who felt "under the weather" special leave to go home for a few days to recruit. By so doing an excellent health record has been gained for the school during the past year, though the average attendance was somewhat lowered thereby. Thanking you sincerely for your uniform kindness and untiring zeal in supporting me in the management of the school,

I am, very respectfully, your obedient servant,

J. ROBERTS,  
*Superintendent.*

J. FOSHER,  
*United States Indian Agent.*

## REPORT OF THE SUPERINTENDENT OF INDIAN SCHOOLS.

---

IN THE FIELD, *September 30, 1891.*

SIR: During the past year I have spent all the time, except about fifty days, in the field, inspecting schools, examining the question of locating new schools, and doing such other work as has been assigned me. Since the beginning of my labors on the 1st of May, 1889, I have made 163 visits in Indian schools within 34 different agencies and on 70 reservations, in doing which I have traveled 50,601 miles, of which 4,549 have been in wagons.

I am grateful for the large opportunities thus afforded of studying the multiform phases of this Indian question, and the diversified and complex character of the Indian populations. Accustomed for months to live away from the best civilization, on the confines of the densest ignorance, superstition, and barbarism, I have closely watched the dawning of a better condition in those dark haunts. Nor have I looked in vain. There are evidences that the darkness is breaking and the mists of a long night are slowly gathering up their dripping skirts; and though fogs and shadows still linger on the hillsides and in the forests, there is the sure coming of a new day. What if the new light reveals ugly features and difficulties more radical than had been anticipated by sanguine reformers, nevertheless this same revelation helps us the better to understand the case, and we may well adopt for our prayer, "Lead kindly, Light, amid the encircling gloom."

The study of the Indian problem in Eastern sanctums is deeply interesting and fascinating, inspiring lively sentiments; but the best poems and romances relating to Indian life, by Cooper, Longfellow, and Parkman, were the products of previous patient and exact study of Indians, their customs, localities, home life, etc., with notebook in hand. Thus the pictures were drawn from the life. So it must be in the solution of this question. The light can be used best at short range, face to face with the actualities of the reservations, studying the conditions, the environment, and the trend. Many who were over sanguine at first have been moderately toned down, and are now more wisely and surely directing their efforts.

After personally investigating the Indian character and condition on seventy reservations, and in a great variety of stages of debasement and improvement, I am glad to say that my confidence in the capacity of the red men for elevation has not been abated, but rather increased and strengthened. Not that I think all can be equally lifted, or will advance with equal rapidity, any more than among whites. In some souls more than in others, whether white, red, or black, the inertia is greater, and remedial measures, physical, intellectual, or moral, take effect more slowly.

## NEW DUTIES.

The Indian appropriation bill for the fiscal year 1891, after the usual paragraph relating to the superintendent of Indian schools (p. 3), contained the following supplemental clause, never previously enacted:

*And provided,* That he shall perform such other duties as may be imposed upon him by the Commissioner of Indian Affairs, subject to the approval of the Secretary of the Interior.

On the 26th of August, 1890, you officially addressed to me a letter containing the following passages:

You will observe from this that there are new duties imposed upon you. I have not yet had time to consult with the Secretary in reference to the nature of these new duties, but I take the liberty of asking you to look more carefully than ever into the moral condition of the agencies you visit. By this I mean the condition of things as a whole from the moral standpoint, with especial reference to the character of the agent and chief employés, their example, influence, the aims by which they are governed, and the objects which they have in view.

I do not wish to impose upon you all the duties of an inspector, but I should be glad to have you extend your inquiries at any agency in any direction required by the good of the service. There are many questions vital to the matter of Indian civilization aside from the matter of schools. Besides, the environments of a school may be such as to paralyze its best efforts.

So far as your time and opportunity will allow, I would be glad to have you inquire into the moral character of the physician and the general influence of Indian traders.

Be kind enough to submit your reports on each of these topics separately, and accompany your recommendations with such full and explicit statements, and with such evidence, documentary where practicable, as will enable me to make positive recommendations to the Secretary.

I accepted without demurrer the additional duties assigned me, touching as they do the moral environment of the Indian agencies, and consequently the welfare of the schools themselves, and the whole work of Indian civilization. I have appreciated the delicacy of the task, and have endeavored to discharge it considerably and firmly. In performing these duties I have been obliged to tarry longer at some agencies; and sometimes, on account of the pressure of other school matters elsewhere, perhaps I have not tarried long enough. The real animus of an Indian agency is not always easily discerned. Varnishing processes, skillful misleading, artful scheming, and fictitious exhibits sometimes thwart an inspector. This new work has added much to the number and volume of my occasional reports to the office.

It affords me great pleasure, however, to report, as the result of careful discrimination and many studies of the past history of the Indian reservations, that a great improvement in the *morale* of the Indian service is taking place. Government officers are being impressed with the determination of the Department not to tolerate the vicious practices current in former years. Agency headquarters are not so chaotic, lawless, and immoral as in other days, and Government centers among the Indians are becoming—what they were always intended to be—centers of the best civilizing forces. Shall the Indian have the best Christian civilization of American society or the civilization of outlaws, of unscrupulous, mercenary, partisan officials, and of profane, reckless, libertine employés? He must needs have some kind of civilization. Which shall it be? This is "the Indian question," and it will be determined largely by the *morale* of the Indian agencies.

## CIVIL SERVICE.

The decision of the Government, formally proclaimed by the President of the United States, that henceforth the superintendents, teach-

ers, matrons of the Indian schools, and the physician of the agency shall be appointed under civil service rules, is received with great satisfaction by most persons in all sections I have visited, though some individuals seem to give only a quasi assent. The embarrassments and absurdities of the old method of partisan appointments will now, it is hoped, speedily cease. For an agent or a school superintendent to delay sending in his nominations for important positions in the work of educating and civilizing the Indians, until he has submitted the list to a Senator or Representative in Congress, and obtained his approval; and for said officials to feel that they must make room for candidates pressed upon them by a leading politician who has no just appreciation of the qualities essential to this service, is totally at variance with all true theories of Indian progress. How many have been recommended who were shipwrecked in character, and had no aptitude for success! When objections are made to such candidates, the answer is, "O, he'll do to teach Indians farming," or "He is good enough to manage an Indian school," or "She knows enough to teach Indians." "Anything is good enough for Indians" is a style of speech which should be speedily relegated to the list of obsolete phrases.

Having spent so much of my time in the field, and in personal contact with the workers, I have keenly felt the evils of the old method, and joyfully hail the new regime, in the hope that much good will result. Ever since my appointment to this office I have carefully and conscientiously practiced the principles of the new system, and have recommended the continuance in the service of individuals of divers political and religious faiths, honoring the qualities of high character, intelligence, and efficiency wherever found.

I may be permitted to say, however, that the Indian school work is so peculiar, has so much to do with actual life and character, gives special importance to the personnel of the employés, and involves so much of what may be styled the missionary spirit, not in the technical but in the broadest sense, that it will be necessary to adapt the system of civil service to this department, by rules or provisions not so needful in other kinds of service. A first-grade certificate will, of course, always give a teacher credit and currency; but in this work many teachers fail because more than scholarship is necessary. We must emphasize the personnel, the personnel, the personnel—qualities of temperament, habit, self-sacrifice, and that most subtle but not easily defined, but consciously present and potential element, which we call character.

#### TEACHERS' INSTITUTES.

The first recorded teachers' institute held upon an Indian reservation was convened at Puyallup, Wash., in 1884. Since that time, three other like gatherings have been held within the limits of that agency. In August, 1890, I was permitted to attend. This meeting was presided over by Major Eells, the Indian agent, and composed of the superintendents, teachers, and matrons from four boarding and two day schools in that consolidated agency. General and Mrs. Whittlesey and Mrs. Dorchester were also present. A good programme of exercises had been prepared, and many interesting phases of Indian work were profitably discussed.

Another institute was held April 16 and 17, 1890, at Marietta, Cal., under the direction of the superintendent of the Mission Indian schools, Mr. C. T. Beach. Seven of the teachers from that agency were present,

with five visiting members. The papers read were described as "valuable contributions, eliciting much discussion." Every teacher present expressed great enthusiasm over the benefits she had received from this interchange of thoughts and methods.

During the first three days in July, 1890, a teachers' institute was held at the Pine Ridge Agency, under the guidance of Miss Elaine Goodale. Ten Government school teachers, the superintendent of the Ogallala boarding school, the superintendent of the "Holy Rosary mission" school, the agency physician, with occasional visitors, constituted the institute. An interesting sketch of the exercises appeared in the Independent (New York City), July 31, 1890, from the sprightly pen of Miss Goodale.

Much desire has been expressed for the continuation of such gatherings and their multiplication elsewhere. One great impediment is the "magnificent distances" and consequent expense attending travel in States where from 4 to 6 cents per mile are charged by railroads or where long hard routes by wagon must be traversed. But in some instances where the teachers have been anxious for an institute, even at these great disadvantages, the Indian agent has not seen his way clear to encourage such gatherings. If the Department could take some action to open the way for these institutes and to aid them, agents might be freer to act. These teachers, isolated by such long distances, seldom able to examine any other Indian school save their own, would be stimulated by new ideas, aided by new suggestions, and refreshed by contact with other workers.

#### SIX NEW TRAINING SCHOOLS.

Six large Indian training schools have been opened during the past year.

**The Santa Fé school.**—The one at Santa Fé, under Superintendent Cart, I have not visited since it started in its work. It is finely situated on a commanding site 2 miles from the city, and the buildings are magnificent brick structures. Superintendent Cart has made a good showing of pupils, over 80, I think, for the first year. This, in a Territory whose people are exceedingly conservative in educational matters, and where pupils are obtained only with great difficulty, is a great achievement. Superintendent Cart is one of the most capable, judicious, and hard-working men in the service. I visited the locality as the buildings were approaching completion, in April, 1890, and only regret it has not been my privilege to witness his school in active session.

**The Pierre school.**—It is with much pleasure that I report the large Indian training school at Pierre, S. Dak., as now fully under way. The long water main, the difficult sewer, and other essential appointments occasioned considerable delay in completing the plant, but Superintendent Davis was fully equal to the hard task, and happily solved many knotty problems connected with finishing the edifice and inaugurating the school.

The first arrival of Indian pupils was on the 14th of February, 1891, and before the spring term closed over 80 were enrolled. In September the number reached 157.

The buildings are of brick, large, substantial, well arranged, heated by steam, and possessing other modern appliances. With the additions now about finished, this is one of the best Indian school plants connected with the Bureau, and will accommodate 160 pupils. The interior is airy, with ample spaces, pleasant, and wholesome. A good

variety of trees, shrubs, and vines has been planted, and preparation is made for crops. It is intended that shops for teaching trades shall soon be ready. But the fatal drawback to teaching agriculture at this place is the terrible gumbo soil which baffles the best skill of the most experienced agriculturist. The area of the school plant is small, but I would not advise its enlargement by the purchase of contiguous grounds, which are held by speculators at a high price, and are worthless for cultivation. Shops and trades should be the chief industrial features of this school.

For this school the city of Pierre donated 20 acres in township 110, 2 miles east, and 180 acres 3 miles north of the court-house. The last tract is at present of no practical value, being 5 miles from the school—too far for the pasturage for milch cows. It is also high ground with no water, and is so dry a section as to give no encouragement for agriculture.

The Pierre institution is located in the valley of the Missouri River, a third of a mile back from the stream, on a spot which recent developments show to be historic in Indian annals. The site is part of a burial or battle (uncertain which) ground of a tribe of Indians. It is reasonably conjectured that here the Mandans had a village, and that the skulls found in this spot are of that tribe, because of the low, retreating forehead and high cheek bones especially characteristic of that race; and the leg bones are shorter than those of other Dakota Indians. Here also are pits and mound circles indicating ancient homes, usually 40 or 50 feet in diameter, as were those of the Mandans. This race of wild people are supposed to have occupied these banks of the Missouri about the time of the dawn of our country's liberty. How fitting to perpetuate this site in the Indian school service.

This school is situated in the heart of South Dakota, quite near the Cheyenne River, Crow Creek, and Lower Brulé reservations, and only about 65 miles from the nearest Indian day school on the Rosebud Reservation. It is sufficiently near the reservations to be a good object lesson to the adult Indians, and to keep the pupils so in touch with their homes as to exert an elevating influence upon the tribes. Thus situated, the trend of the school will be to teach the parents and others the ways and habits of a better civilization. What the pupil learns in the schools near home is not lost, as is sometimes said, by reason of close home contact. Any stranger in an Indian camp near one of these schools will notice a favorable contrast between those children who have and those who have not had these advantages.

The Whipple Indian training school at Fort Totten.—A military plant, costing the Government a quarter of a million dollars, is the basis of this school. The buildings are of brick, large and ample enough to accommodate 300 pupils if fully utilized. The buildings are upon a slight elevation facing Devil's Lake, called by the Indians Minnewaukan or Haunted Waters. The site is about 15 miles from the Great Northern Railroad, with which it is connected by a daily steamer. The military reservation in which the school stands, and to whose use it is devoted, comprises 36 square miles of land, divided into good proportions of arable, grazing, timber, and hay fields. The usual conveniences and facilities found at the best military posts abound here, and the buildings are in fair condition, requiring not very expensive repairs. The post is a hollow square inclosing a grassy lawn, with gravelled streets and solid oak-plank walks. It is a very healthy place.

The plant was transferred to the Interior Department in the summer of 1890, but the delay of the military in vacating made the opening of

the school impossible before January, 1891. The enrollment of pupils during the last fiscal year was 107, with an average attendance of 97. A good corps of officers and employes is provided, and it is the purpose to make this the great training school of North Dakota. Everything in the situation favors such a result. Here are ample buildings for shops and the land is favorable for farming and cattle raising.

**Stewart Institute, Carson City, Nev.**—This is another large training school which has entered upon its course during the past year. The location is about 3 miles from Carson City, on a fertile tract of land, and the buildings are of a superior class. About 100 pupils were enrolled during the last fiscal year. Its field is among the Pah Ute Indians, who much need its benefits.

**Herbert Welsh Institute, Fort Mojave, Ariz.**—This military post was vacated in the summer of 1890, and has become an Indian training school. Standing on a bluff, 100 feet above the Colorado River on its eastern bank, and within easy reach of the Mojave, Hualpi, and Supai Indians in Arizona and the Pah Utes in southwestern Nevada, it gives promise of becoming a large school in a much needed district. The school has taken an appropriate name.

**Phoenix Institute, Phoenix, Ariz.**—In this thriving city another large training school has been started, with full attendance and a good foundation. Indians from the Colorado River Agency, the Gila Bend, the Maricopa, Pima, and Papago reservations will be accommodated here and still leave ample numbers to necessitate the enlargement of the Pima Reservation school and the opening of another school among the 4,000 Papagoes.

#### INDUSTRIAL EDUCATION.

Whatever else is taught or is not taught, the industrial training should have the foremost place, for it is at the very foundation of what the Government desires to do for the red men. I am sorry to say that in most of our reservation boarding schools this department receives too little attention. Not that the Indian Bureau has ignored this field of labor, as is presumed by some facile and caustic critics, in the public press, and sometimes in the halls of Congress. To such persons I commend the reading of sections 56 to 63 in the Rules for Indian Schools. Most of those rules are as well carried out as they can be until larger appropriations shall furnish the means for establishing shops and suitable teachers of trades. The points I desire to emphasize are contained in section 53, the part referring to shops and trades, which is now the weak point in reservation schools. The trouble is that the appropriations for the schools have been absorbed for other needy items, and the shops have not been adequately provided for. A considerable part of the expenditures to be made in the ensuing year should be devoted to the furnishing of larger facilities for workshops, tools, and teachers.

I desire to emphasize the assertion that industrial work is not incidental nor accidental, but fundamental to the true theory of Indian education. It is a necessary condition to true self-knowledge, to the best self-discipline, and of access to the best avenues of knowledge in the outside world. Manual training and industrial occupations impart the fiber of high moral character. The idea is not merely to learn how to make a living, important as that is, but how to enter into life itself. Teachers should be employed in industrial instruction who have the disposition and the ability to impress these views upon young Indians.

## HIGHER EDUCATION.

This phrase, in reference to Indians, does not yet mean exactly what it does when used in the older communities. It has a relative significance. Those who have visited the Indian schools have noticed that there are many exceptionally bright, strong minds in course of development, for whom something better than the ordinary routine of study must be provided. Numerous appeals have been made to me to open the door for larger educational privileges. These are afforded already, to some extent, in our best schools; but occasionally something more will need to be done, or we shall be guilty of suppressing the aspirations of the noblest minds. The more advanced lines of study have already been provided for, in a limited degree, in the Indian appropriation act, which reads:

For care, support, and education of Indian pupils, at industrial, agricultural, mechanical, and other schools, other than those herein provided for, in any of the States or Territories of the United States, at a rate not to exceed one hundred and sixty-seven dollars for each pupil, seventy-five thousand dollars.

This provision should not be restricted within very narrow limits; and I believe the American people, in the absence of other provisions for aiding these worthy youth, will justify its wise use.

There is a "higher education," which must be recognized by the Indian Bureau. We have already Indian training schools, in which this idea is realized in a good degree. There are many Indian pupils who are pressing upward to be teachers, preachers, interpreters, and business men. Of course, the raising of the educational standard for Indians has necessarily been slow. The first step was to plant the very idea in the Indian mind, and then to carefully foster its growth. In the more advanced tribes there has been a remarkable uplift in ideas upon this subject, and a goodly number are anxiously seeking the best educational advantages.

Such an institution as the Agricultural College at Brookings, S. Dak., where agriculture is taught from the Dakota standpoint, with reference to the peculiarities of soil, climate, etc., of that region, I am informed, will welcome such young men, and I doubt not will be a great advantage to them. In this college they will be able to earn sufficient money, by labor on the school farm, to meet the larger part of their needs. A little Government aid will be of great value.

## A PROGRESSIVE EDUCATIONAL SYSTEM.

Stereotyped, old-time methods of education will not meet the demands of the present age. We can not afford to turn the backs of our youth to the brightening future and face them toward the dark ages. While all departments of science are progressing, and even language and lexicography are making immense strides, so that we can not think and speak in the language of the olden time, the Government would be recreant to a great duty if its Indian school system failed to bring forward those whom it is educating for citizenship to march abreast with the advancing column of the American people. Under the present administration the Indian Bureau has spoken no uncertain words on this subject, and has received the gratifying commendations of the enlightened public. Clearly defined educational ideas are demanded of all who participate in this work under the present Government auspices. It is gratifying to find that ultraconservatism, which has long unpardonably loitered behind the march of ideas, is quickening its pace.

I quote with pleasure the emphatic words of the editor of the *Catholic Mirror*, September 5, 1891. Though uttered with reference to their own parochial schools, they are exactly in accord with the familiar sentiments of the Indian Bureau during the last two years.

Individuals with hazy and antique notions of the practical work of education make very poor conductors of parochial or any other schools. That parish is unfortunate which has at its head a person whose actual administrative capacity, in this important line of duty, is, as sometimes happens, in inverse ratio to the theoretic valuation at which it is estimated. No business or professional enterprise can hope to succeed that is not engineered by hands and brains expressly adapted to the peculiar requirements of the undertaking. Fewer still are the chances of success in the conduct of institutions where so much depends on correct knowledge and great skill in the application of available ways and means. It is not enough that the one who assumes the task is conscientious and zealous. It is imperative that he should be thoroughly competent besides, and possess that practical acquaintance with the whole subject which will enable him to steadily improve and develop the plan in all its bearings.

A successful school system can not be stationary and changeless. No branch of scientific inquiry and experiment shows more healthy and solid products than mark the advance in pedagogy, and the school whose methods and results do not attest the value and soundness of the principles involved is not keeping abreast with the spirit of educational progress, and consequently will be unable to hold its own in competition with others conducted upon a wiser and more enlightened policy.

This sound doctrine should be widely applied and enforced.

**Oversystematizing.**—At the same time it should be said that there is danger of oversystematizing schoolroom methods and hardening them into rigid iron molds. This condition, however, will depend more upon the genius of the living teacher than upon the system itself, though it must be confessed that sometimes a system is so rigidly enforced as to cripple or destroy the individuality of even the best pupils and teachers. The Indian Bureau can not look too closely at the personnel of its teachers. The personnel of the teacher avails more for good or ill with Indian pupils than any other quality. The best lessons come from what the teacher *is*. Some second or even third grade certificate teachers do first-class work in instructing and molding their pupils. They achieve this superior success because of stronger and better personal qualities, and because they bring their individual life more directly in contact with the lives of the pupils.

Something besides fixing formularies in the minds of the pupils will be the aim of the true teacher. Such a teacher will be independent of books and forms, free as the air, radiant, and full of suggestions, imparting flash lights to lead the young mind into new and wider fields of inquiry.

#### WASTE.

Waste is not confined to low conditions of drift and decay, but often appears in the highest stages of progress. All along the lines of transition in society, even to the better stages, there is much waste. Much of absolute rot and waste as appears in some of the older European and Asiatic nations, yet, nevertheless, the transference of large bodies of these populations to the better conditions of the United States is attended with much waste. So it is in the lifting up of our aboriginal people into the better conditions of civilization. There are many who can not endure the strain, because they do not seem to possess a sufficient degree of staying and recuperative power. They break and fall under the pressure. Many melancholy examples illustrating this truth appear on all our Indian reservations, and not a few among those pupils who have had the advantages of our best training schools. Nor is this

peculiar to Indian boys and girls. There are conspicuous examples of lapse and waste among promising white youth who have had the very best educational advantages.

These evils may be owing to something faulty in the culture, and probably are not wholly beyond remedy. Successful culture will be broad, generous, extending to all departments of the individual soul, to the intellectual, moral, and religious susceptibilities, to the springs of thought and motive, and to the grooves of the outward life. In the fullest sense of the term, there must be character building. This true character, so much desired, is not dependent upon impulses, but controls impulses; is not the creature of fickle, transient motives, but is the product of the highest motives, a creation produced by the purest and most enduring principles fixed in the heart. In short, intellectual culture, united with a high sense of honor, true self-respect, and conscientiousness, in our rising youth, will reduce to a minimum the deplorable wastes of society.

#### UNATTRACTIVE AND ATTRACTIVE SCHOOLS.

I have had occasion during the year to rebuke the harsh and barbarous methods of discipline resorted to in a few of the schools. Some superintendents and matrons have used heavy whips and small boards in subduing the pupils, and have even applied shackles to the ankles. These severities have appeared alike in Government and in contract schools. Those officials have been told plainly that the Government does not tolerate such treatment, and that employés who are incapable of controlling the Indian pupils by the power of tact and kindness, with such privations as a wise, firm administrator can easily devise, are not wanted in the service.

In many cases where severe inflictions have not been applied the school administration has been cold and heartless, without inspiration or generous appeals, and the schools have rolled lumbering along, utterly failing to impart those better ideals of life and action necessary to the development of a higher civilization.

In most of the schools there are no pictures on the walls, nothing to beautify the rooms and make them attractive. Bare walls, often dingy, broken, and inclosing a small space for sitting rooms, tell the story. In too many cases there are no sitting rooms at all for either boys or girls. In one contract school there are ample accommodations for girls, but no sitting room or even wash room for the boys, unless the roughest kind of a shed, scarcely fit for a chicken roost, could be so designated.

Under such circumstances it can not be an easy matter to keep schools full of pupils. No children, white or red, will crowd institutions conducted by heartless, repulsive, tyrannizing employés, and in buildings wholly destitute of attractions. It is not strange, therefore, that there is much difficulty in keeping a good attendance at such Indian schools. The agent and the police are often severely taxed to bring in pupils, and the efforts need to be repeated over and over every week or two. A harsh superintendent complained to me that the boys "skipped away like jack rabbits," until he had only half as many as at the beginning of the term. "I can not hold them," he repeated. He did not seem to realize that he himself was the repelling force. Rough in exterior, harsh in voice, using no tact and no method, except that of rigid compulsion, what else could be expected? I have seen contract schools in which great attention is paid to the girls, the best rooms, the best of everything bestowed upon them (none too good, none too much), but

the boys were left to sleep in badly soiled beds in foul dormitories, and when out of doors to range much like the dogs, reminding one of the facetious little poem on "The Colorado Philosopher," the burro:

They say he'll do; he'll worry through;  
He's a wonderful brute to rustle.

While noticing such tendencies as one of the evils in some of the Indian schools, it is very refreshing to find other managers of these institutions who appreciate the importance of making them attractive to both pupils and parents. Indian parents with very ardent affection for their offspring reluctantly yield their loved ones to the schools, and a new school will be quite a considerable time in winning their confidence. One of the new training schools well illustrates what can be done. It was opened in February. One thousand four hundred miles were traveled in getting in the 90 pupils, and a great amount of persuasion was expended. At last, after giving their children into the hands of the superintendent, the Indians visited the school and were kindly received. They became acquainted with the employés, learned the methods and the advantages of the school, and before the close of the year were favorably impressed. Many parents came to the closing exercises and were as enthusiastic over them as were the white visitors. It was easy to tell who were the parents, when the children appeared upon the rostrum. The dusky fathers and mothers rose in their places, their faces lighting up with delight when the white element applauded and endorsed. At the close the parents took their children to the tepees, an average distance of 100 miles away.

Several of the girl pupils, some of them orphans, declined to go home, preferring to stay at the school during the vacation. Many, both boys and girls, went home under protest, because they had begun to appreciate the difference between civilization and barbarism. One of the older girls said, "I can not see that it is good for me to go back, because a life in a log hut is not the life for me to lead." Another girl, after staying at home ten days, went back to the school of her own accord and asked to be taken in, saying, "I do not like to live in an Indian camp any more." She is a full-blood Indian.

The administration of this school is marked by strictness, firmness, and kindness, beautifully blended; and its affairs move with clocklike regularity. The child heart and the gush and impulse of early manhood and womanhood are well understood, generously appreciated, and never snubbed or roughly trampled upon. Young men and young women are treated with the respect which begets confidence. These are lessons which are conspicuous in many other Indian schools, and which should be well learned by all who aspire to successfully prosecute the work of Indian education.

#### WEAKNESS OF CONTRACT SCHOOLS—WHAT THEY NEED.

A noticeable fact has impressed me while in this work of inspection. The Government schools have so much improved during the past two years in character, in morals, in scholarship, in general regimen, and in their hold upon the confidence of the Indians as to excite jealousy from the managers of some contract schools. In my rounds I have taken pleasure in visiting both classes of schools, I have been glad to report some contract schools as "first class," and wish I could have always done so. The assumption made in some quarters that the contract schools of any or all religious bodies are the best schools is without

foundation. I can cite Government schools which are superior to any contract school, whether Catholic or Protestant; and, as a whole, I believe those of the Government are very much the better.

This improvement of the Government schools is due directly to the policy of the Commissioner of Indian Affairs. The Indian Office has insisted upon the lifting up of the Indian school service. This purpose has been pressed constantly upon the Indian agents and school employés. The work of Indian education under the Government has been systematized; chaos is giving place to order; the low aims of employés occupying places merely to draw salaries is being sharply stigmatized; unworthy persons are being driven out of the service; the supervision is increased and improved, and the whole educational system is broadened and brought more and more into harmony with the most enlightened educational work of the country.

A corresponding improvement, so it seems to me, has not taken place in many of the contract schools. As a whole they are inefficient. They lack the pressure of a strong unifying hand. Recent writers in Roman Catholic newspapers have confessed the imperfections of their school system. An editorial in the *Catholic Mirror* (Baltimore, Md.), July 18, 1891, utters some plain truths which I commend to the attention of the managers of Protestant contract schools. The article has for its caption "Catholic popular education," and refers primarily to their parochial schools, but applies with the same force to their Indian schools, which are similarly conducted. In its phraseology and drift it reads much like many of the utterances from the Indian Bureau, during the last two years. It says:

We recently urged the importance of a better system—better in regard to judicious supervision, the adoption of uniform methods, and a standing curriculum. If our schools are ever to amount to anything aggregately, as a system, practical principles must be applied to their management. As long as separate schools are subject to the whims of idiosyncratic pastors and the ironclad rules of the "teaching order" in charge, there is certain to be a vast wastage of money and effort in their maintenance and a corresponding lack of zeal on the part of the laity in their support.

Until the prevalent slipshod go-as-you-please system is abandoned, and all the schools are brought under some sort of intelligible and uniform management, it is worse than idle to expect anything like good results in school work, and manifestly preposterous to count on the development of sound educational growth commensurate with the money and talent expended in their maintenance.

No wiser or more needful words were ever uttered. They touch the weak points of most contract schools, now being rapidly outgrown by the Government schools under the present vigorous regime of the Indian Bureau.

#### RELIGION IN INDIAN SCHOOLS.

This is a delicate question; nevertheless much can be safely said upon it. To say it is impossible to speak upon it at all, is not creditable either to the head or to the heart, in these days of an enlightened, discriminating liberality. It is often said that religion must be wholly ignored in the Government schools; that Roman Catholics will object to the teachings of Protestants, and Protestants will object to the teachings of Roman Catholics. This is all true, if either party attempts to inculcate in the schools its distinctive ecclesiastical tenets; but are there not broad grounds of essential ethics and positive religious truth on which all who accept, in any form, Jesus Christ as the great teacher, can stand and work in harmony? There ought to be no difficulty, on the part of any person, in accepting such passages from the Bible as the Beatitudes, the Ten Commandments, the 1st, 15th, 133d, and 148th

Psalms, and the 8th chapter of Proverbs. The Lord's Prayer will excite no objection, and the story of the Prodigal Son is universally accepted as a beautiful classic, teaching religion of the purest quality. I have examined all these passages, in the Douay and in the Common English versions, and find that, notwithstanding some slight variations in the rendering, there is entire harmony in the principles inculcated in both versions. I have also consulted with prominent ecclesiastics in the Roman Catholic Church, who have frankly said there could be no objection to the use of these passages in Government schools attended by Roman Catholic pupils. They also said that they require the Ten Commandments to be taught in their schools.

I submit whether it is creditable to the common sense or the Christian sense of the American people to say that passages so pregnant with truths necessary to public morals and to the building up of a wholesome character and life must be discarded. I can not believe it is. I am confident that all will agree in one thing, that every teacher, without hindrance, may breathe forth a Christly spirit and exhale the perfume of true piety, a piety which rises far above cant and dogmatism. How sweet is even a piece of earth on which a rose has rested. So fragrant will be the environment of a genuine Christlike example and life that none, Agnostic, Jew, Roman Catholic, or Protestant, will criticise.

#### THE SIZE OF THE INDIAN SCHOOLS.

This is coming to be an important question. Under the provisions already made the Carlisle school has now attained, or will probably attain, a capacity for 1,000 pupils, and the Haskell Institute a capacity for 600 pupils. The present plans will of course be carried out; but, in my opinion, neither of these schools should be made larger than indicated by the preceding figures. They should be improved steadily, be enriched in their appointments and facilities, and become mightier factors in the great work of Indian elevation.

Several of the other large training schools—Genoa, Chilocco, Albuquerque, and Chemawa—are in course of enlargement to a capacity of 250 or 300 pupils. All of this is matter for congratulation. But my observation and study lead me to the conclusion that the capacity of these schools should not be extended beyond the present proposed limits. There are reasons why Carlisle and Haskell should hold the preëminence in point of numbers; but the conviction has matured and settled in my mind that none of the other schools should exceed an enrollment of 250 to 300 pupils.

As I have elsewhere stated, no class of students are more in need of feeling the personal qualities of their instructors than are Indian students. It is well known that the great English universities, Oxford and Cambridge, are divided into subcolleges or chapters, in separate groups, isolated from each other, comprising about 250 students each. The reason for this subdivision, as given by a gentleman holding a prominent position in one of these universities, is that the students may be kept more directly and sensibly in touch with the professors and tutors, and be impressed and molded and stimulated by this personal influence. If young white men need such aid, how much more young Indians.

There are few reservations on which the schools should contain more than 200 pupils; and at such remote points of civilization, those of 100 pupils are generally better. It is a fact worthy of special consideration that that notable and widely experienced frontier bishop, the Right

Rev. Bishop Hare, of South Dakota, has found that schools accommodating from 50 to 60 are the best adapted to produce the desired results. His schools—the Hope, at Springfield, S. Dak.; the St. Paul's, at the Yankton Agency, S. Dak.; the St. Mary's, on the Rosebud Reservation, S. Dak.; the St. John's, at Fort Bennett, S. Dak.—are limited in numbers to 40, 50, 46, and 50 each; and the reason assigned is that schools on this family plan have been found by experience to be the best for molding these youths.

#### LARGE EXPENDITURES FOR RESERVATION SCHOOLS.

The time has fully come for greater advances and larger expenditures for schools on the Indian reservations. While there are still many conservative Indians who take no interest in the education of their children, and others who have only meager conceptions of it, yet there is a considerable waking up on the subject among large masses of Indians. In my late extensive rides on the Pine Ridge and Rosebud reservations, talking freely with all classes of Indians, I found not only a great willingness to have their children educated, but even a demand for schools, and feelings of jealousy lest their reservations should fail to get a proper share of these institutions. But they wish the children educated on the reservation, amid the climatic conditions to which they have been accustomed.

Talk as we will, we can not remove the impression that many of their offspring have suffered in health and died in consequence of removal to the far-away schools. After making careful and painstaking discrimination, and extending my inquiries back through a term of years, it seems to me that the Indians in many localities are settling down and hardening into a condition of opposition to the removal of their children to schools far from the reservation? And why quarrel with them about this matter, so long as they are willing and even anxious to have their children educated on the reservation. I understand very well that this sentiment for education is not yet deep and strong in Indian minds, and that there are more or less of selfish considerations of secular advantages accruing which enter into the case; but it should be accepted as the first uplifting of a degraded people toward better conditions, and hopeful in its character. We should rejoice in it and cherish it, especially when the reservations themselves need the illuminating and elevating influences of the schools as object lessons.

It is true that the reservation schools do not lift young Indians as rapidly nor to so high a point as the large training schools away from camp environments; but with all this gain at the training schools there are serious disadvantages following, very familiar to those who understand the struggles of students returning to the reservations. I have had many interviews with these young people, long and anxious consultations, seeking to find positions for them and to organize them among themselves. Strangers can not realize the heavy gravitation of ignorance, superstition, and social customs against which the returning students have to contend. There are many interesting examples of victory and high achievement, and painful cases of failure; some would gainsay the former cases, some the latter; but both are indisputable. The trouble in the case is that in the three or five years' absence from home the pupils are educated out of sympathy and out of touch with their own people, and when they return it is difficult for them to bring themselves to accept the conditions of the camp and camp environments, and of course they can not at once lift the parents and friends to their

own higher standard. Hence often mutual revulsion, in which ridicule, opposition, and ostracism act conspicuous parts. But this is only one phase of the uplifting movements to be found among all peoples advancing into better conditions.

The quickest and worst lapses are found among students returning to reservations on which the rations system and Government annuities prevail. The young Indian who has been trained to industry, and has learned a trade in the distant school, comes back to the reservation where there is no opportunity to practice his trade, and in many cases where there are few opportunities for successful agriculture; but where rations and annuity clothing are assured him, by right, under solemn treaty stipulations. Is it a wonder that some lapse into idleness, and with that into other Indian habits and ways? Is it a wonder that young girls who have been taught housekeeping at these distant schools should sometimes decline to accept positions to serve in families, even at good wages when their livelihood is assured by the Government by solemn treaty?

The plea that if Indians wish work they must go where it is, is of little avail with the rations class. They are not very anxious about work for if they go from the reservation it is in pursuit of uncertain opportunities to labor, for which they abandon the certainty of the rations and annuities. Indians are shrewd enough to realize this, and naturally remain at home and drop back into the old ways. The percentage of white people who would do the same under similar circumstances is by no means small; and the percentage of returned students in this class of reservations who rise above this tendency is too small, though there are interesting examples.

I have admitted that, as a whole, the education imparted in the reservation schools is inferior to that in the large training schools outside. This statement should not go unqualified. I can point to reservation schools in which the scholarship is fully equal to that of any Indian school outside the reservations. A Boston teacher, of seven years' experience in the Boston girls' high school, recently had a good opportunity of visiting a reservation school for several days. She reported to me that she has "seen no better teaching in Boston than in the primary department of that reservation school, and the principal teacher could take a high position in the Boston schools." She was surprised at the proficiency of the pupils, their independence and self-reliance in recitations. I can cite other boarding and day schools on reservations which belong to the same high class. Of course the industrial work, particularly in the line of trades, in the training schools, is superior to what is found in almost all the reservation schools.

Nevertheless, as a whole, progress in the knowledge of English in the reservation schools is slower and more unsatisfactory. But here the work is begun, and with every return of the pupils to their homes for occasional visits or vacations, and with every visit of the parents to the school, new ideas from that school are carried out into the reservation. Thus a leaven of civilization is diffused in the very haunts of the densest ignorance and superstition. Boarding and day schools thus become elevating factors, preparing the way, on the reservation, for the students from the distant schools to return with less disadvantage.

To my mind it is plain that it is the wiser course to give the present generation of young Indians as much education as they can easily receive, in boarding and day schools on the reservations, because of the leavening influence they exert directly upon the Indian camps. By perfecting the grading system the brighter pupils from the camp schools

can be promoted to the boarding schools, and from the boarding schools to the training schools, for I believe we need all of them; but the reservation schools are doing the most vital work in lifting the Indian people, because they work directly in the dark haunts which we are most anxious to enlighten and transform.

#### NEW BUILDINGS, ENLARGEMENTS, REPAIRS, ETC.

No small part of my work during the last year has been to examine and report upon the condition of the various school buildings of the institutions I have visited, and upon the question of establishing new schools in localities where they do not now exist. I have studied these questions closely, from a practical standpoint, taking into consideration the number of children of school age on the given reservation, the number attending the larger training schools outside, the capacity of the local schools, the increase or decrease of the tribe in population, and other matters of an incidental character. I have recommended such additions and improvements as each case demanded. In doing this I have not stopped to inquire as to the amount of money appropriated for such purposes, or the amount then remaining unexpended. It is impossible for me, in the field, to keep acquainted with the expenditures and resources of the Bureau, nor is it necessary. I report what is needed and the Department must decide what can be done.

Large expenditures have been made each year, and very excellent buildings erected. It is creditable to the Government that so much has been done during the last two years. At Pierre, Santa Fé, and Carson City new large and magnificent training schools have been established. At Sacaton, Ariz., entirely new buildings take the place of those destroyed by conflagration. Fort Mojave, Ariz., has been taken and occupied by a boarding school having 100 pupils. New training-school buildings are in course of erection at Phoenix, Ariz., and at Perris, Cal. A new building doubles the capacity of the Navajo school at Fort Defiance, N. Mex. The Fisk training school at Albuquerque has had its capacity increased 50 per cent by a dormitory building for girls; just completed, and by an assembly and recitation building now going up. At Siletz there has been enlargement and improvement. Chemawa has had several fine buildings added to its plant. Umatilla has two valuable new buildings, entirely superseding the old shaky structure. Puyallup has now very fine and commodious buildings, a great gain upon the old wornout structures. A new girls' building at Fort Simcoe takes the place of one destroyed by fire. The new building on the Okonagan Reservation, which stood two years unoccupied, has been furnished and a school opened. Large additions have been made to the Nez Percés school at Fort Lapwai, and two schools 4 miles apart are now conducted. After considerable delay, a new edifice is in course of erection for the Government school on the Crow Reservation in Montana. Genoa is greatly enlarged in capacity by new and valuable additional buildings. A new building for an assembly room at Santee is in course of erection, and an enlargement is being made to the schoolrooms. At Yankton a new girls' building, very attractive, has been built, and the boys' building is raised one story, much increasing its capacity. Valuable additions are being put upon the Sisseton school edifice. The first steps are being taken towards the erection of one of the finest training-school edifices at Flandreau and another at Pipestone, Minn. Plans are ready for the enlargement of the boarding school at Pine Ridge. A site is selected for the long promised boarding school on the Rosebud

Reservation. At Osage a first-class girls' boarding school is under way, and the boys' school building is greatly improved. Carlisle has added another large building to its plant.

The foregoing statement does not include all the new buildings, additions, and improvements, but such as have come more or less to my personal knowledge. They have involved large outlays and given a great impulse to the cause of Indian education. These improved conditions are in themselves civilizing, introducing more widely the spirit of modern progress among the Indian population.

While during the last two years the appropriations for the reservation schools have been liberally increased, the great work of Indian education has so greatly advanced, and the readiness of the Indians for the education of their children has so much improved, that larger demands are made upon the Indian Office than formerly. More ample sums must be provided by Congress to meet the pressing needs of education on the reservations. Some of these needs, coming to my personal knowledge, I respectfully represent to the Department.

Beginning with the largest and most neglected tribe of Indians, the Navajos, two entirely new boarding schools should be founded within the limits of that reservation. Either Keam's Cañon school should be rebuilt and enlarged, or a new school should be established on the Moqui Reservation, at a point between their largest villages. The White Mountain Apaches are very worthy Indians with sufficient numbers to demand the setting up of a boarding school near Fort Apache. I hope that new buildings are already in course of erection at San Carlos; if not, they should be commenced without delay, for the case is one of great urgency. The Papagos, numbering full 4,000, hitherto almost entirely neglected, should have a boarding school. The Pima school among 4,000 Indians is full to overflowing and will bear further enlargement, and then the reservation can contribute a large number to Phoenix and Albuquerque.

Hoopla Valley, in northwestern California, deserves better treatment than it has received. The military post at that place should be abandoned and the buildings converted into a boarding school for the Hoopla and the Klamath River Indians occupying contiguous territory, for whom absolutely nothing has ever been done by the Government. These Klamath River Indians are orderly, worthy, and self-supporting. They must not be confounded with the Indians on the Klamath Reservation in Oregon, 200 or 300 miles away. But the first step is to remove the military from Hoopla Valley.

Coming to Oregon, the Klamath, Yainax, Warm Springs, and Sina-masho boarding school buildings are all of an inferior character. They are old, and were never what they should have been, are more or less dilapidated, and must have liberal outlays in the way of repairs, or else should be superseded by new structures. At Klamath Agency I suggest whether the recently abandoned fort, 6 miles away, could be occupied by the school to great advantage? There are two fine buildings for dormitories for boys and girls, some 200 feet apart, and in quite good condition. A nearly new first-class bakery stands near by, and the late military hospital, also in a good state of repair, has ample rooms for assembly and recitation purposes. The quarters lately occupied by the military officers will furnish accommodations for the employés. There is a first-rate large barn, in good condition. A mountain stream of clear water perpetually flows close by, and can easily be carried all over the grounds. These buildings surround a beautiful grassy lawn. An abundance of the best wood and timber closes in on two sides one of the finest hay fields in Oregon, and an unlimited amount of pasturage completes the statement.

The school buildings at Skokomish, Quineault, and Quillehente are far from being creditable to the Government and occasion much vexation and trial to the employés. They should be new, at least in part, but will not involve large outlays, for the school population is small. They are, however, situated at such remote points that they can not be blended with other schools, nor can the pupils be easily transported elsewhere. The two latter are upon the outer rim of the continent on the Pacific coast. Liberal repairs should be made upon the Neah Bay school buildings.

Colville Reservation comprises eight tribes of Indians, numbering 2,421. For the education of the Cœur d'Alénes, the Nespelims, Okanagans, and the Colvilles, numbering 1,110, provision of some kind has been made, leaving 1,300 unprovided for. They should not be neglected, and I recommend that for the Lower Spokanes, the Columbias, and Joseph's band of Nez Percés a boarding school be erected not far from the agency on a fine table-land overlooking the agency and the junction of Spokane and Columbia rivers. Excellent water is at hand and at such an elevation on the butte as will carry it into all parts of the buildings. If Fort Spokane is to be abandoned by the military, as has been reported, that plant would make good quarters for a school.

At Cheyenne River Agency, just removed to a point on the Missouri River, opposite Forest City, of course it will be necessary to erect boarding school buildings. The Government school at the late agency quarters, a poorly constructed building nearly ten years old, will answer a short time longer with a few repairs, but even then its capacity is only 65 and it is adapted only to boys. The St. John's Episcopal school for girls, close by, accommodates 50; the day schools accommodate 194, and the Oahe school accommodates 60, making in all accommodations for 369, and leaving about 200 children of school age not provided for except some in outside schools. The school at Pierre has gathered in about 130 of this number. This shows the need of another boarding school at the new location opposite Forest City.

At Yankton, in addition to the girls' new dormitory, there should be another building devoted to assembly and recitation rooms, with dining room and kitchen at the rear. Then the 75 girls on this reservation not now provided for can find school accommodations. The St. Paul's Episcopal school at this point is for boys alone, and the Government building for boys has accommodation for about 50 per cent more than the girls' building. These statements show the lack of provision for girls.

In addition to the new assembly building at Santee there should be an enlargement of the principal edifice, so it will not be necessary to lodge 3 and 4 pupils in each bed, and in dormitories already too limited in respect to breathing space.

I make these recommendations in reference to schools with which I have become personally familiar; but I doubt not there are others just as needy.

Many of the Government buildings have been in existence ten or more years, and are not in condition to meet present needs; and some that have seen less years are open to criticism, because of faulty construction, inadequate accommodations, and other causes. Indeed these criticisms apply to both classes. I insert at this point some samples of criticisms sent the Department. In one case I said:

I find the dormitories more crowded than any others I have elsewhere seen, most of the beds having in them every night 3 or 4 boys; all but three beds have 3 boys each, and four beds have 4 boys each. The girls are nearly as much crowded.

There are no suitable sitting rooms for either boys or girls, only rooms which would be small even for bedrooms, with 50 or 60 boys and nearly as many girls to use these rooms; no space for chairs or tables; no chance for any of the amenities of civilization.

The accommodations for the employés are very small, distressingly contracted, rooms 11 by 13 feet, giving painful occasion for practicing the gospel of thankfulness for a little. In most cases 2 employés are obliged to occupy one small room together.

The present laundry is two rooms, the better of which was built for a chicken coop. The other is an addition built on to the first, partly with rough boards taken from a pile of rejected lumber, and partly with boards taken from an old fence. It sits flat on the ground. How the civilization of cleanliness and decency can be promoted in such a building is a grave problem respectfully recommended to the Indian Bureau for solution, or perhaps more justly to Congress.

The bathing accommodations are two bath tubs for over 60 boys, and two for 54 girls.

The storehouse for tin, wooden ware and hardware, crockery, glass, etc., is the upper story or garret of an old building 12 by 30 feet, used as the hoghouse, such a hog-house as would not be tolerated in the decent quarters of any modern civilized community.

The school barn is a miserable apology, only 20 by 36 feet, one and one-half stories high, leans badly out of plumb, sits right on the ground, with no floors, leaks badly, and cattle and horses often stand in water. The accommodations are utterly inadequate for the stock.

This school of 120 pupils has only two or three milch cows. A dozen or more should be purchased.

There is no granary, though the school has this year 40 acres of splendid grain growing.

One of the great deficiencies almost everywhere in Government schools on reservations is the lack of sitting-rooms for either pupils or employés. In one of the largest reservation schools, in which for most of the time there are more than 100 boys, the only room that could by any construction be denominated the sitting-room was a wash-room. This is not large enough for all to stand in at one time unless packed as closely as sardines. It has a sink running the whole length on one side, and seven bath tubs are in the room, besides a large stove in the center. There is no table, chair, or bench. If the boys sit at all they must roost like turkeys on the edge of the sink and bath tubs, and frequent rotation in position is necessary to accommodate all round. In the coldest weather, when the boys are all driven in from outdoors, part of them find sittings in the hall, on the balustrades and stairs. The girls have little better accommodation.

In another school I was obliged to report that what is called a sitting-room for the boys is simply disgraceful; small, dark, dingy; no table; no chairs; and the dormitory accommodations for the boys are only a little better.

In another school of 80 pupils the girls have a pleasant, cheery sitting-room; the boys, fully equal to the girls in number, have a sitting-room scarcely half so large, dark, never touched by the sun, without furniture, and pictureless. Most of the sickness in that school is among the boys, very little among the girls.

#### THE BUILDINGS OF GOVERNMENT AND CONTRACT SCHOOLS COMPARED.

While the Government industrial training schools are, without exception, in very excellent buildings, not exceeded by any contract schools off from reservations, on the other hand, within the reservations the contract boarding school edifices, as a whole, are superior to those of the Government. In some cases the superiority is very great, making the school much more attractive and investing it with more potent civilizing influences. The later school buildings erected under Bishop Hare's supervision are models of convenience, ample space, water,

sanitary provisions, and architectural taste; and all this without extravagant expense. I have been surprised at the very reasonable cost of these buildings, as reported to me, far less than the Government often pays for poorer results. The Roman Catholics also have many boarding-school edifices of the best quality, with the most modern appointments, and the cost of these, as stated by definite figures, is a marvel.

These contract schools to which I have referred are seldom stinted in room, have better assembly rooms, a good supply of pleasant, airy sitting rooms, and separate play rooms for the younger children. One is particularly interested in noticing the lavatories and water-closets adjoining the dormitories. The barns are what barns should be. The Protestant Episcopal, Presbyterian, Congregational, and Unitarian schools are well supplied with libraries, papers, tracts, toys, etc. As a whole the gardens of contract reservation schools are larger and better than those of the Government reservation schools. This latter fact is due in part to the larger number of employes furnished the contract schools. If the class-room work was equal to that in Government schools, these contract schools would be what some now claim they are, the best schools; but as a whole in this respect they are much inferior.

It should be said, in partial explanation of the crowded condition of many Government reservation schools, that it is chiefly owing to the improvement of these schools, during the recent years, in scholarship and general administration.

Very few sitting rooms, and I may add very few rooms of any kind in Government reservation school buildings, have pictures or any kind of ornamentation upon the walls. Nevertheless, if the sitting rooms were large, airy, and convenient, with proper, simple furniture, the case would be more tolerable. The sitting rooms I have described are among the worst, but there are numerous others only slightly better, and in many cases there is nothing which can be called a sitting room. One school of 90 pupils had no sitting room for employes or pupils and no office room for the superintendent. His office desk stood in his bedroom. I will only hint of evils which grow out of such conditions, but the blame for which, in charity to the employes, I charged upon the Government.

One sitting room for boys was only a shed, without a floor, but with a badly cracked, antiquated stove, and benches, upon which the boys were accustomed to take primary lessons in woodwork with their jack-knives. In another school on this same reservation the boys' sitting (standing) room is in an old abandoned log house, floorless in part, with only a stove and table. This building is very small, stands at such a distance from the boys' dormitory that when they retire at night, in that mountain region where the thermometer falls to 40° below zero, these boys go through the snow, up a flight of outside stairs into sleeping rooms without fire, and in a building little warmer than a barn. This on a reservation of about 1,000 Indians. The descriptions are not caricatures, nor do they apply to the smallest and poorest reservations.

I hope by calling attention to these deficiencies in this annual report to impress Congress with the necessities continually pressing upon the Indian Bureau for immediate relief.

From one large reservation school, ranging in numbers from 175 to 225, I made the following report upon a building called a barn:

I can not imagine how this school has hitherto got along without a barn. The miserable shed of thin boards, 30 by 12 feet on the ground, with slightly pitched roof and eaves only 7 feet above the ground, can not be called a barn. It has no

place for hay or grain, nor is it in any sense an adequate shelter for stock. School cows kept for milk to be used for the pupils, it is well known, must have shelter or they will be worth little for milk. It must be understood there is no barn here. The poultry occupy most of this shed.

The school has 16 head of cattle, 6 of which are cows, giving milk for 175 pupils in school most of the time. The number of cows should be increased to 12 or 15.

Another school of 50 pupils had no milk at all.

Besides lack of sitting rooms, assembly rooms, and barns, I have often reported the entire absence of play rooms, toilet facilities, laundry accommodations and furnishings, poor facilities for bathing, and unsanitary outhouses.

The sewerage question is a very grave one, and also the question of the water supply. One school of 65 pupils for eight or ten years has hauled all the water used with horses and in barrels winter and summer from a spring a half mile away, and a pipe would easily bring the water into the building. At another school of 50 pupils, during a dry season, in which the spring failed because no money had been appropriated to properly develop it, for thirteen months all the water for school and stock was hauled  $2\frac{1}{2}$  miles by teams. Nor has this school a sewer. At one day school where the teacher resides in the building, having no other possible place of residence, all the water for teacher and pupils is hauled by the Indians twice a week, in a barrel, a distance of  $2\frac{1}{2}$  miles. With the thermometer  $90^{\circ}$  plus, much of the time in summer, water which has stood in that barrel for one, two, or three days is the only refreshing (?) beverage.

#### DAY SCHOOLS.

I have mentioned this class of schools several times, but I will now speak of them more at length. I was very much interested in those among the Mission Indians of southern California; a part of those in the vicinity of Hopland and Ukiah, in northern California; the Ponca, in Nebraska; and the Pine Ridge and Rosebud, in South Dakota. Of the latter I will give a somewhat extended view.

They are thirteen in number, scattered in various Indian camps, from 15 to 50 miles from the agency, and consequently where superstition and ignorance and old-time religious customs and prejudices are densest. The buildings are the best, for the purpose designed, I have found in the service, and a heavy bell rings out its notes of civilization far and near. Wells have been dug or bored in connection with each school, and a piece of land is inclosed and broken up for a teacher's garden, and another piece for the Indian boys of the school. Adult Indians come and watch with great interest the planting and raising of vegetables, and become anxious for seed, that they may raise a larger variety of products in their own fields.

The day-school employés on this reservation, considering the position they are called upon to occupy and the character of the work they perform, are seldom exceeded in faithfulness, devotion, and success. They are in difficult and trying positions, so far from the agency, and as far removed as possible, in a country like this, from civilization. Amid such surroundings none but genuine missionaries, themselves true object lessons, can perform the work desired by the Government. It is a work taxing their strength day and night, because it brings them almost constantly in direct contact with squalor, superstition, and paganism.

I call attention to figures taken from the school registers, showing the large average attendance:

Enrolled.....	20-34-24-28-20-19-24-32-31-31.
Average attendance....	16-32-21-25- - - -31-28-30.

It will be admitted that these averages are unusually large, the practice of giving the pupils a midday lunch having doubtless contributed to this result. The children come to the school from distances varying from a half mile to 4 or even 7 miles, for the local camp in which the school is situated stretches along the narrow valley, skirting the little "creek" which gives the locality its name. Those coming the greatest distance usually ride ponies, which are picketed on the field near by till the return. Few Indian families are sufficiently advanced in civilization to provide school dinners for their children, for cooking and eating by red men are still irregular habits. It is feared that too often the children have little breakfast before leaving home in the morning. Provision for this midday lunch is made by the agent, by methods creditable to both his head and heart. The lunch consists of three hard-bread crackers and a drink of coffee, served to the pupils before they leave the desks for the noon intermission.

Everywhere else, in day schools, I have found the girls wearing shawls over their heads, generally even during recitation; but in all the Rosebud day schools girls wear sunbonnets to school and hang them and their shawls in the hall. All the boys at this agency attend school with short hair; but this has been found impossible in other reservation day schools. Children coming directly from the camps are continually under the influence of their parents, and are tenaciously held back by the old time conservatism. Camp school teachers have generally found it impossible to overcome these customs; but Agent Wright has helped his teachers, interposing with a firm hand, and insisting that all the boys shall have their hair cut short.

The assistant teachers in these schools are not such merely in name. All the clothing for the girls, and a part of that for the boys, is made by the assistant teacher or under her direction. Two afternoons in each week are devoted to this work by the schoolgirls. They assemble in the industrial room, garments are cut and fitted, and the girls usually do the sewing; the older girls soon learn to cut and fit. Some of these teachers also instruct the girls in washing, starching, and ironing their dresses, aprons, and sunbonnets. In some camps the sunbonnet is becoming popular with all but the oldest women; and in some cases the women bring flour to the schoolhouse, and take lessons in bread-making.

The large boys help about planting and raising vegetables, whatever they raise being their own. They have a garden close to the teacher's garden, varying from a half acre to four acres, in which they are taught to raise tomatoes, cabbages, beets, radishes, parsnips, carrots, peas, squash, corn, potatoes, onions, and melons. In some districts the variety is smaller. In most instances, the boys work cheerfully in their gardens, at least two half days in each week; and in other cases they are more reluctant to work.

The principal work in these schools is to promote the knowledge of English, and this is a very difficult task, because the pupils are so constantly in contact with their homes. It requires great skill on the part of teachers. I watched this phase of the school work closely, and was pleased with most of the methods used and with the results gained.

The influence of these day schools upon the remote portions of the reservations is very helpful. They are attracting a great deal of attention from the parents, who frequently visit the schools, coming and occupying vacant seats, listening with eagerness to catch hold of something they can understand, and by rude methods expressing approval. Friday afternoon is visiting time in some of these schools, when the

parents are particularly invited to be present. The exercises are varied, reading, spelling, "spelling down," declamations, singing, etc., which the parents often applaud. The parents also show much interest in the industrial work, and many Indian women, so far removed from civilized society in these remote camps, are adopting the white woman's style of dress. The teachers require cleanliness from their pupils, in person and in dress, and this practice, in connection with instruction in laundering, is exerting a purifying influence in the camps.

On Sunday, in most of the camp schools, Sabbath school exercises are conducted, and all the teachers, so far as is in their power, though of diverse religious denominations, cooperate harmoniously in the religious work of the Episcopalians and Congregationalists (A. M. A.) in the neighborhoods. The moral and social atmosphere of the schools is most excellent and bracing. Some of the teachers have been several years in the same school, and because of the great influence they have acquired over the Indians their practical wisdom and constancy have become almost indispensable to the uplifting of the reservation. In short, I have become fully convinced that camp schools, with such outfits of teachers and assistant teachers as these have, and conducted as these are, accomplish the very best work for the civilization of the Indians. They carry civilization right out into the heart of the reservation. But such schools need "hand-picked" teachers, selected by an agent who has the right ideal, a good knowledge of men, and the ability to adapt them to the work he wishes accomplished.

I have found here the best and most complete plan for securing the attendance of pupils. In selecting his policemen two are chosen from each day school camp. One is on duty at the agency and the other at the school, changing places every fifteen days. On going to the camp the policeman carries to the teacher a paper from the agent, stating how long he is assigned to that camp, and placing him under the direction of the teacher for the given time. When the policeman returns to the agency, he carries with him the aforesaid paper, with remarks from the teacher telling the agent how he has performed his duty while at the camp. He is on duty at the school during school hours. One half hour is allowed each morning for the pupils to reach the schoolhouse. At 9:30 o'clock the names of absent pupils are given the policeman, who immediately goes and brings them in. If the family have left the camp the policeman reports the case to the teacher and the teacher to the agent; and any case of continued absence is reported in the same way. The agent gives the name of said family whose children have been absent from school to the commissary clerk, who takes up the "rations ticket" of that family when presented to him on "issue day," and the Indian is sent to the agent to make explanations. The object of this is to bring the Indian to the agent and have the case understood. Generally this is sufficient. It is rarely necessary to resort to any other means. Agent Wright says he has never been obliged to stop the rations. Sometimes, in bad cases, the children are brought to the agency by the policeman, where they are kept for a time in attendance upon the agency day school, until the parents will promise to keep them in the camp school. It is a remarkable fact, confirmed to me over and over in response to repeated inquiries at all the day schools, that there are no children of school age within reasonable distance of each school who are not enrolled as pupils; and the average attendance, as given in the preceding paragraph, is the largest I have ever found. The beauty of the plan is that it works smoothly and all seem happy under it.

Several times during the past two years I have urged the importance

of larger expenditures for schools on the reservations, and have indicated many points which might be profitably occupied by reservation boarding schools and day schools. These convictions grow upon me every day and upon every reservation I have visited.

A gentleman of long and varied experience in the Indian work writes:

I quite agree with you that the present most urgent demand is for more and better reservation schools. Vast good can now be accomplished upon the adult Indian population by maintaining in their midst for the education of the youth these promoters of civilization. The base of operations and the main effort should be on the enemy's own ground. These have been my views for sometime past, and I am glad to find that your personal contact with the work in the field convinces you of their correctness.

#### INDIAN SCHOOLS IN THE DAKOTAS.

Having spent six months in these two States, closely studying the Indian school work, the number of Indian children of school age, the number and capacity of the schools, the actual enrollment, the average attendance, and the number of Dakota pupils in schools outside the two States, I am able now to make such an analysis of each reservation, and of the reservations as a whole, as will show which localities are well supplied with school accommodations, and where are the greatest and most urgent needs. I have done this prompted by the conviction that the Department is now reaching a point where it is more needful than formerly to closely discriminate in each case as to the necessities or the relative necessities of each particular field.

The following tables aim to give the exhibits for each Indian agency in North and South Dakota. The statistics are the latest available, for the fiscal year ending June 30, 1891. The figures showing Indian pupils from the Dakotas, in schools outside these States, I have gathered by correspondence with said schools. The number of school population, except in a few instances where the agent has given me the figures or the last census of children, has been calculated by the method used in the Indian Bureau\*—20 per cent of the total population.

From the total number of children of school age I might deduct 10 per cent for those diseased or otherwise unfit for school; but this number is balanced by pupils in school who are over 16 years, and most of those who attend schools off the reservations are over 16 years of age; I therefore make no deductions.

**Fort Berthold Agency, N. Dak.**—Total Indian population, 1,183; children of school age, 236.

Schools.	Capacity.	Enrollment.	Average attendance.
Fort Stevenson, Government (boarding) <sup>1</sup> .....	125	113	98
Contract Mission, boarding .....	54	40	38
Mission House at agency .....			
St. Edward's, day .....	20	12	8
Little Missouri .....			
Three schools .....	199	165	144

<sup>1</sup> All pupils in the Fort Stevenson school are from the Fort Berthold Agency.

\* Since preparing this report the Indian Bureau has extended the period of school age from 5 to 18 years, which would increase the school population considerably. Some agents have given me the census of pupils from 5 to 17, some 7 to 18.

Pupils in schools outside the Dakotas: In Carlisle, 4; in Genoa, 8; in Santee, 2; total, 14. Total pupils from this reservation enrolled in schools somewhere, 179.

Here are 236 children of school age, with school accommodations for 199, leaving 37 not provided for and 57 not enrolled in any school.

These are mostly in the band of "Crow That Flies High," living off the reservation but enumerated with Fort Berthold Agency. This band is stoutly opposed to the education of their children.

**Devil's Lake Agency, N. Dak.**—Indian population: In Devil's Lake Reservation, 1,038; from 7 to 18 years (by census), 226. In Turtle Mountain Reservation 1,458; in country contiguous to Turtle Mountain Reservation, but not belonging in Canada, half-bloods, etc., 686; from 7 to 18 years (by census), 404. Total Indian population, 3,182; total of school age, 630.

Gentlemen long familiar with the population in the northern tier of counties from Bottineau to Neche, a distance of 120 miles, in which the Turtle Mountains are included, estimate that there are 3,000 Indians, half-bloods, and quarter-bloods in said district who are mostly a stable population, making 4,038, including those of the Devil's Lake Reservation. But strictly within the limits of the two reservations there are only 2,496 Indians. In the larger construction there are in this region 806 children of school age; in the smaller, 498; and in the medium construction (see above) there are 630. As a matter of fact, pupils are found in Indian schools, supported either wholly or in part by the United States Government, from all the large area of 120 miles from Bottineau to Neche.

Schools.	Number.	Capacity.	Enroll-ment.	Aver- age attend- ance.
<b>Devil's Lake Reservation:</b>				
Government, boarding—				
Fort Totten department .....	1	*300	107	97

No. 3, Government, day .....	1	45	52	16
<b>Total .....</b>	<b>4</b>	<b>320</b>	<b>345</b>	<b>203</b>
<b>Private:</b>				
Protestant Episcopal, day, at Bellecourt, on reservation .....	1	50	27	9
<b>Aggregate .....</b>	<b>6</b>	<b>770</b>	<b>583</b>	<b>407</b>

\* Three hundred and fifty, with small additional outlay in fitting up the buildings.

Pupils from this agency in schools outside the Dakotas during the fiscal year ending June 30, 1891: In Clontarf, Minn., 94; in Morris, Minn., 83; in Avoca, Minn., 3; total in Minnesota, 180; in Rensselaer, Ind., 8; in Santee, Nebr., 3; in Denver, Colo., 36; elsewhere, 47; aggregate, outside of reservations, 227.

There are, in the largest construction, on these two reservations, 804 children of school age, with a capacity for accommodating 770 pupils in the reservation schools. During the last year there were 583 pupils enrolled in schools on the reservations, and 227 in schools outside the res-

ervations, making a total of 810 enrolled pupils from Devil's Lake Agency. But the Fort Totten school has capacity for 193, possibly 243, more pupils than it has yet enrolled.

The pupils in Clontarf, Morris, and Avoca, in Minnesota, and in Denver, Colo., and in Rensselaer, Ind., 224 in all, were gathered from the northern district, in and contiguous to Turtle Mountain, which country has come to be a famous hunting ground for pupils, with sharp competition.

**Standing Rock Agency, N. Dak.**—Total population, 4,096; of school age, 818.

Schools.	Number.	Capacity.	Enroll-ment.	Average attend-ance.
Government, boarding.....	2	200	251	175
Protestant Episcopal, boarding.....	1	40	35	28
Government, day.....	7	280	326	168
Total.....	10	520	612	371

Pupils in schools outside of reservation: In Hampton Institute, 21; in Yankton Episcopal school, 7; in Avoca, Minn., 8; in Clontarf, Minn., 9; in Rensselaer, Ind., 3; in Santee, Nebr., 1; total enrolled in any school, 612 plus 49 equals 661.

Of the 818 children of school age on this reservation 661 are already in schools, and 157 not yet brought in.

The 157 children on this reservation and the 37 on Fort Berthold Reservation, now without accommodations, can mostly be provided for at Fort Totten. Those from Fort Berthold can be transported on the Great Northern Railroad via Minot, about 60 miles from that agency, direct to Devil's Lake. Thus all the Indian children in North Dakota are provided with school accommodations.

**Cheyenne River Agency, S. Dak.**—Total population, 2,823; of school age, 564.

Schools.	Number.	Capacity.	Enroll-ment.	Average attend-ance.
Government, boarding.....	1	60	70	61
Contract, boarding.....	1	60	61	49
Contract, semiboarding.....	1	40	50	47
Government, day.....	8	194	184	149
Total.....	11	354	365	306

Pupils in school outside the reservations: In Hampton Institute, 5; in Lincoln Institute, 1; in Immaculate Conception at Stephan, 13; in Genoa, 7; in Santee, 6; in Pierre (Government), 73. Pupils in reservation schools, 365; in outside schools, 105. Total in school somewhere, 470; not provided for, 94.

A new school building for both sexes will be provided at the site of the new agency, opposite Forest City. The old edifice at Fort Bennett, with some repairs, will suffice for a short time, but the school will be conducted at a disadvantage on the ceded lands below Cheyenne River (55 miles away from the agency). The supplies will be shipped to the new site opposite Forest City, the terminus of the railroad.

**Crow Creek and Lower Brulé Agency.**—Total population, 2,084; of school age, 416.

Schools.	Number.	Capacity.	Enroll-ment.	Average attend-ance.
Government, boarding .....	2	145	144	132
Contract, boarding .....	1	150	95	90
Miss Howard's, contract .....	1	30	16	14
Government, day .....	3	78	63	54
Total .....	7	403	318	290

Pupils in school outside the reservations: In Hampton, 23; in Lincoln Institute, 5; in Pierre, 8; in Genoa, 6; in Santee, 12; in Hope school, 4; total, 58. Total school population, 416; accommodations on reservation, 373; total enrollment, 376; not in any schools, 40.

**Pine Ridge Agency, S. Dak.**—Last year's report: Total population, 5,701; of school age, 1,140. Revised figures: Almost 600 Brulé Indians from Rosebud have been transferred recently to Pine Ridge, giving at present, total population, 6,301; of school age, 1,260.

Schools.	Number.	Capacity.	Enroll-ment.	Average attend-ance.
Government boarding .....	1	180	185	165
Contract boarding .....	1	200	140	129
Government day .....	8	320	385	233
Total .....	10	700	710	527

Pupils in schools outside of the reservation.—In Carlisle, 72; in Lincoln Institute, 46; in Genoa, 37; in Wabash, 30; in Haskell Institute, 9; in Avoca, 4; in Santee, 4; total, 202.

With school accommodations on the reservation for 700 pupils, 710 were enrolled last year, and 202 were in schools outside the reservation, giving 912 who were provided for. This, according to the population of last year, left 228 children not provided with school accommodations. With no increase in school capacity for this year, but with 120 more children, there will be 348 who will need school accommodations. To meet this need an enlargement of the Ogallala boarding school, and several new day schools, have been planned.

**Rosebud Agency, S. Dak.**—Last year's census: Total population, 5,345; of school age, 1,068. Revised this year: About 600 Brulé Indians from Rosebud were transferred to Pine Ridge. Recent numbers by agency census give: Total population, 4,723; actual census of children from 6 to 18 years, 1,500.

Schools.	Number.	Capacity.	Enroll-ment.	Average attend-ance.
Semicontract .....	1	56	58	51
Contract boarding .....	1	100	98	89
Government day .....	13	416	356	285
Total .....	15	572	512	425

Pupils in schools outside the reservation: In Carlisle, 11; in Lincoln Institute, 11; in Genoa, 49; in Santee, 6; in Avoca, 31; in Ste-

phan, 18; total, 126. Total number pupils of school age, 1,500; total enrollment, 638. A large boarding school is already planned, and several more day schools.

**Sisseton Agency, S. Dak.**—Total population, 1,509; of school age, 300.

Schools.	Number.	Capacity.	Enrollment.	Average attendance.
Government boarding.....	1	130	128	77
Contract boarding.....	1	135	113	94
Total.....	2	265	241	171

Pupils in schools outside the reservation: In Carlisle, 4; in Hampton Institute, 1; in Genoa, 2; in Santee, 13; in Stephan, 13; in Clontarf, 3. Total number of children of school age, 300; enrolled in reservation schools, 241; enrolled in schools outside, 36; total enrollment, 277.

Some enlargement has been made to the Government school this year.

**Yankton Agency, S. Dak.**—Total population, 1,775; of school age (7 to 17, as taken by agent), 377.

Schools.	Number.	Capacity.	Enrollment.	Average attendance.
Government boarding.....	1	125	146	115
Somicontract boarding.....	1	48	50	45
Presbyterian day (private).....	1	20	18	15
Total.....	3	193	214	175

Pupils in schools outside the reservation: In Haskell, 12; in Hampton, 5; in Lincoln, 1; in Avoca, 4; in Wabash, 1; in Genoa, 6; in Hope, 27; in Santee, 23; in Stephan, 13; total, 92. Children of school age, 377; school accommodations on the reservation, 193; enrollment in reservation schools, 214; outside, 92; total enrolled, 306; not accommodated on the reservation, 184; not accommodated either on or off the reservation, 92.

**Flandreau (nonreservation) Indians, S. Dak.**—Total population, 292; of school age, 58. There is one Government day school, capacity, 50; enrollment, 60; average attendance, 30.

Pupils in schools away from Flandreau: In Santee, 10; in Hope, 7; in Stephan, 1; total enrolled in all schools, 78.

A large industrial training school is in course of erection at this place.

### Recapitulation.

#### NORTH DAKOTA.

Agencies.	Children of school age.	Capacity of reservation schools.	Enrolled in reservation schools.	Capacity in reservation schools not occupied.	Children in schools outside agencies.	Children not in any school.
Fort Berthold.....	236	199	165	34	14	37
Devil's Lake.....	804	770	583	187	227	42
Standing Rock.....	818	520	612	(*)	49	157
Total.....	1,858	1,489	1,360		230	236

\* Enrollment greater than capacity.

It will be noticed that while there was a large unoccupied capacity in the Devil's Lake Agency school, *i. e.*, Fort Totten Training School, sufficient for 187 additional pupils, at the same time there were 227 pupils from that agency in schools outside the Dakotas, and there were only 42 children not in any school. But Fort Totten has sufficient capacity also for a large part of the children not accommodated at Fort Berthold and Standing Rock, besides all those from Devil's Lake.

Pupils in schools outside the above agencies (all but 7 of these pupils are outside the Dakotas): In Avoca, Minn., 11; in Clontarf, Minn., 103; in Morris, Minn., 83; 197 in Minnesota. In Carlisle, Pa., 4; in Genoa, Nebr., 8; in Santee, Nebr., 6; in Rensselaer, Ind., 11; in Denver, Colo., 36 (these have now returned home); in Hampton, Va., 21; in Yankton (St. Paul), 7; total, 290.

SOUTH DAKOTA.

Agencies.	Children of school age.	Capacity of reservation schools.	Enrolled in reservation schools.	Capacity in reservation schools not occupied.	Children in schools outside agencies.	Children not in any schools.
Cheyenne River .....	564	354	365	(*)	105	94
Crow Creek and Lower Brulé .....	416	403	318	71	58	40
Pine Ridge .....	1,260	700	710	(*)	202	348
Rosebud .....	1,500	572	512	60	126	862
Sisseton .....	300	265	241	24	36	23
Yankton .....	377	193	214	(*)	92	71
Flandreau .....	58	50	60	(*)	18	.....
Total .....	4,475	2,537	2,420		637	1,438

\* Enrollment greater than capacity.

It will be noticed that the enrollment in the above table is nearly equal to the capacity of the agency schools. It will also be seen that, with the large Pierre school to draw from the reservations bordering on the Missouri River, not many more pupils can be spared for the outside schools. The agencies which have the largest surplus of children not in schools are the Pine Ridge and the Rosebud; but a large boarding school is already projected, and several additional day schools for the latter reservation, and an enlargement of the Government boarding school and a half dozen day schools are planned, for the former reservation. The new boarding school at Flandreau will have to be filled from some of these reservations.

Pupils in schools outside of the above agencies: In Avoca, Minn., 39; in Clontarf, Minn., 3; in Lincoln Institute, Pa., 64; in Wabash, Ind., 31; in Haskell Institute, Kans., 21; in Pierre, S. Dak., 81; in Stephan, S. Dak., 58 (from outside the Crow Creek Reservation, to which it belongs); in Carlisle, Pa., 87; in Hampton, Va., 34; in Genoa, Nebr., 107; in Santee, Nebr., 74; in Hope, S. Dak., 38. Total, 637.

NORTH AND SOUTH DAKOTA.

	Children of school age.	Capacity of schools.	Enrolled in reservation schools.	Enrolled in outside schools.
North Dakota .....	1,858	1,539	1,360	290
South Dakota .....	4,475	2,537	2,420	637
Total .....	6,333	4,026	3,780	927

North and South Dakota have 1,626 Indian children of school age not in any school, either on or outside the reservations. Of these 1,222 are on the Pine Ridge and Rosebud Agencies, and 404 are scattered in seven agencies. The Dakotas furnished last year 748 pupils for Indian schools outside of these two States; 239 of them went to fill schools in Minnesota, at Clontarf, Morris, and Avoca.

The progress made by Government in providing for the education of the once wild Dakotas is clearly demonstrated by the foregoing statistics, and the points towards which attention should now be directed are clearly marked.

#### RETURNED STUDENTS.

It is a well-known fact that in some circles there is a disposition to disparage and denounce the young Indians who have returned to the reservations after an absence of a few years at the great Indian training schools. This is not peculiar to any one section of the country, in reference to any single class of Indians; but inasmuch as the two Dakotas have furnished more students to these schools than any other locality, they have been more severely subjected to this criticism.

My attention was called to two very grave allegations, which appeared in the Washington Star the 11th of October, and are here quoted.

##### Allegation first:

Go to Pine Ridge or Rosebud, and select from the thousands the most gaudily dressed of the young savages, those whose faces are continually smeared with paint, those whose feet now know no covering but heavily beaded moccasins, those whose blankets are decorated to excess, and you will discover a Carlisle or Hampton boy.

##### Allegation second:

Go through the camps, make patient inquiry as to the identity of those females whose immorality is a matter of public knowledge and open comment, write their names down, and then carrying your investigations a little further, look in the records of the educational institutions for Indians, and find nine-tenths of the names on your list recorded on the roll of graduates.

Feeling that charges so grave demanded more than a passing notice, and should be met by definite testimony from persons long and familiarly acquainted with the great Sioux Reservation, I sent out a letter to a few persons, the body of which I here give, soliciting specific information in regard to the matter. In that letter I inquired:

Are the allegations true, according to your best knowledge?

If so, of how many or of how large a portion?

How are the average returned male students doing?

How are the average returned female students doing?

What kind of housekeepers do the latter make, so far as they have the means?  
How do their homes compare with the homes of Indian women who have never been away to school?

How much justification is there for the allegations.

I received the following replies, which deserve candid study:

STATEMENT OF MAJ. J. GEORGE WRIGHT, UNITED STATES INDIAN AGENT, ROSEBUD AGENCY.

Referring to your letter of November 2, inclosing copy of allegations regarding returned Indian pupils, and requesting me to state frankly the results of my observation on this agency, I have the honor to report that according to the best of my knowledge the allegations are strained and exaggerated with reference to our returned pupils.

The average male student is doing as well as could be expected under the circumstances and with the means at his command. There are but few returned Indian girls of full blood here, nearly, if not all of whom are married. Some of these "ran

away," or married according to the Indian "custom," but subsequently have been induced to be legally united. Those who have married have houses kept as well as their means and surroundings allow, and above the average house of Indian women.

I am of the opinion that while there may be individual cases such as reported, they will prove the exception, not the rule. It can not be otherwise that males or females returning to their former homes and camp life (and they have no other to go to) must of necessity either raise their people to the standard they have been taught when at school, or in a very great measure drop to their level. To adopt the way of the masses is the natural consequence with all, whether Indian or white, for there is no other course or opportunity open to them. Without permanent employment, they naturally fall back to original camp life, and being freed from recent restraint, sometimes use their liberty to excess. There can be but one result with children of both sexes sent away to school for a period of three to six years and on their return thrown on their own resources among their own people. The fascinations of a wild camp life would ruin many of the average white college graduates, if the same opportunities were offered them as to these Indians. With rations, clothing, etc., sufficient, they are not compelled to labor in order to live. White men generally do not work for recreation or ambition.

Unfortunately many learn trades, while at school, unavailable at this agency, such as tanners, tailors, bakers, etc.

Many on their return find their houses and homes, life and habits, so changed from their life while away, that they are discontented and breed dissatisfaction among others.

It can hardly be said, with justification, that at this agency they are as bad in their habits as the average Indian, but the fact of their being "returned students" causes them to be especially pointed out as delinquents, while others are passed unnoticed.

Out of 32 returned male students at present on this agency, I have 9 employed in various capacities, and 8 have enlisted in the United States Army.

I have no position for girls except in day schools. My experience has demonstrated the fact that their qualifications or stability does not fit them for this position.

#### STATEMENT OF REV. AARON B. CLARK, MISSIONARY OF THE AMERICAN MISSIONARY ASSOCIATION, ROSEBUD AGENCY.

Your communication of November 2 concerning certain recent allegations unfavorable to the character and standing of students returned from Hampton and Carlisle is now at hand.

From my knowledge of the people, gained by two and one-half years' residence and constant labors and journeys among them, I am able to say that the allegations in question are, on the whole, either barefaced falsehoods or else blind misstatements of the facts, calculated to deceive those who may see them.

Considering their present surroundings, the condition in which they find their parents, and which it is impossible to improve much, under the present state of things, the returned students generally are holding on to the knowledge, the dress, the manners, and the morals of their school life with as much tenacity as human nature is capable of anywhere.

Cases such as are suggested by these allegations as exceedingly common are very rare. I could not name ten among all those living here. Give them an opportunity to put in practice their education, without sacrificing their homes, and see then what would be the result.

#### STATEMENT OF MISS M. NELLIE WRIGHT, DAY SCHOOL TEACHER, ROSEBUD AGENCY.

Yours of November 2 reached me some days since. I think the allegations you sent me are very much overdrawn, as they are always apt to be.

In many cases the returned students do not do as well as we hope, or perhaps as well as they might do upon their return to their homes. But one should remember they were held up and supported all the time they were away, and when those supports are taken from them they find themselves not as strong as they or others thought. At school they have every convenience and help which modern invention can give, and at home they have nothing more than the bare necessities; so the difficulties to meet are great and very discouraging.

Most of the students here returned before I came back, and have scattered. Almost none live at or near the agency. So I have little opportunity of knowing or keeping track of them. That some of the male students have gone back to the blanket and paint I understand to be true, but not the greater portion, I am sure. I have no means of knowing how many.

I went to an Omaha dance not long ago, where there were between twenty and thirty dancers, but not one had ever been a Carlisle student. Several of the students have enlisted in the company of Indian cavalry, and I understand are doing very well. Not many are engaged at the agency, for at the schools they are taught trades, and there are no shops here.

The majority of female students whom I can now recall (there are only two living at the agency) have not returned to their Indian dress. I do think when they have married returned students their homes are neater and better in every way than those of the Indian women who have not been away. But when they have married others, I do not think their homes are any neater than the average Indian woman's. I do think they take more pride in keeping their children clean and neat. In that I see a marked difference. As regards their morals, of course we expect more of them than of those who have never been taught. Therefore their wrongdoing attracts more notice and comment. But I do not believe that "nine-tenths of the women's names on the list" will be those of returned students. No; nor one-half.

While there may be some grounds for these allegations, whoever wrote them is far too sweeping in his accusations, to my knowledge.

#### STATEMENT OF B. J. GLEASON, ADDITIONAL FARMER, PINE RIDGE AGENCY.

Yours of November 2, relative to returned students, received.

Allegation No. 1 is a libel, as relating to Pine Ridge. During the last thirteen months, which covers my residence here, I have seen but two returned students with any paint on them. During the warm season it is not uncommon to see them with moccasins on their feet, but seldom in cold or wet weather. It is an unusual thing to see one with a blanket.

Their education shows in their personal appearance, in their mode of living, etc. Many are doing well; some are clerks, others are employed by the agent, doing various kinds of work, and others are trying to raise stock, and are progressing.

Allegation second is not true. I do not know of one woman who comes under this charge, and I am told by a person who is fully qualified to know that but two women (returned students) come under this head. Many are married and have clean, cosy homes, far in advance of the homes where the inmates have not been at school. The unmarried are honorably employed. These statements will bear investigation.

#### STATEMENT OF MAJ. J. McLAUGHLIN, STANDING ROCK AGENCY.

Replying to the inquiries regarding returned Indian students, contained in your letter of November 2, I have the honor to submit the following as my observations, covering a period of ten years at this agency:

Since October 1, 1881, there have been 196 boys and 58 girls, total 254, belonging to this agency, who have attended nonreservation schools, of whom 98 were at Hampton; 44 at Feohanville, Ill.; 32 at Clontarf, Minn.; 16 at Avoca, Minn.; 8 at Rensselaer, Ind.; 1 at Lincoln Institute, Philadelphia; 17 at Yankton, S. Dak.; 3 at Hope, S. Dak.; 4 at Oahe, S. Dak.; 10 at Santee, Nebr., and 25 recently transferred to Fort Totten, N. Dak. Nine of the above number returned for a second term, and 60 are yet absent in the respective schools; 16 died at the schools, and 24 have died since they returned.

Two of the girls, one at Lincoln Institute and the other at Hampton, after being at school about two years, respectively, misbehaved while at school, and were returned to their homes before the expiration of their terms. One of these girls undoubtedly inherited the weakness, and is still of questionable character and unmarried; the other married some years since, is a good housekeeper, dresses like a white woman, and has the reputation of being a faithful wife. Another girl was wild and reckless, conducting herself badly, from the time she returned, and died in the agency hospital, about two years ago, from an illness brought on by exposure and her own recklessness. A fourth girl gave birth to a child by a young mixed blood, but subsequently married another mixed blood and removed to Crow Creek Agency, where I believe she is doing well. A fifth girl married a young man, also an Eastern school student, and after living together for about a year, she deserted him and eloped with another young Indian, going to Fort Peck Agency, since which time (about a year ago) I have not heard of her.

This makes only 5 girls out of 58 who did not meet the expectations of their friends; and when all things are considered, with the family influences in the three last-mentioned cases tending to produce just such results, the wonder is that so many—33 out of 58—have profited by the instructions received, and are now either well-behaved unmarried girls or happy wives, exerting a wholesome influence among the Indians in their respective avocations.

While there have been no very dissolute characters developed amongst the re-

turned boy students, yet about a like percentage of them have been indifferent and lack stability. The principal weakness in them is that they labor under the impression, inherited or inculcated, that the Government should provide a paying position at the agency for each, upon his return home. The majority, however, have done well and are steadily improving; and when married to girls who have been at boarding schools, either on or off the reservation, their homes are more attractive and kept in better order than are the homes of those Indians who never had the advantage of any special training.

As a rule the returned student needs encouragement, and I have always advised and endeavored to assist them in every possible way; also to reward, reprimand, or punish, as their conduct merited. I can say without fear of contradiction that the development and behavior of the returned students of this agency, together with the graduates of our agency boarding schools, will compare favorably with the whites of any frontier community. The larger number are doing admirably, and the small percentage of failures is no greater than occurs among a like number of whites.

I will say in conclusion, however, that I am a strong believer in home education for Indians, as, by having the schools on the reservation, the parents are kept "in touch" with the pupils; it is the "leavening process," and though the advancement of the pupils may not be so rapid, it is more beneficial and permanent. The parents coming in frequent contact with their children aids in the education and elevation of the whole people.

I am also an advocate of the Eastern schools, for the brighter pupils of suitable health and condition, as it not only enables the student to see the comforts of civilized life, but also educates public opinion in their interests.

STATEMENT OF COL. A. T. LEA, SPECIAL U. S. CENSUS AGENT, STANDING ROCK AGENCY.

In compliance with your request, I submit this brief statement of my personal observations of the Indians upon the Great Sioux Reservations.

My observation has been that education has done more to bring about a state of civilization among these people than all other measures combined. But when I make this sweeping assertion I do not mean merely the schoolroom, but comprise all the other educational agencies brought to bear upon this once wild race. For instance, every white man sent among this people is supposed to be a teacher, an educator, and especially is this the case with agency farmers and like employés.

After having been brought into daily contact with these people, at their places of abode, for more than two years, I must say that in many respects they are not unlike the white race, though there is some difference in temperament and in present capacity to learn the arts and sciences. Hence education does not affect all alike. While some are amiable in temperament, others are vicious and disposed to be ugly. The first class more readily accept industrial positions, while the vicious element decline positions which require industry and good behavior. I am most happy to state that the latter class of returned students is far in the minority, and even these show that they have been materially mellowed by the education which has been thrust upon them.

I have seen every living man and woman, boy and girl, who has been educated in Government schools and returned to the great Sioux Reservations, prior to my visit at each agency; and, in a large majority of instances, I have found the men in citizens' dress with hair cut. I have found the women in civilized dress, and when they are housekeepers their houses are more like those of white people than of Indians. But I regret to say that I have found a few of the males with long hair, wrapped in a blanket, with leggins and breechcloth to complete their wardrobe, instead of wearing the clothes furnished by Government. Among the women I find a few in squaw dresses, and as filthy around their houses as if they had never been inside a schoolroom, and with no apparent ambition to do better.

The great mass of those who have had the advantages of education show the good effects in their lives and morals. There is a smaller percentage of immorality among the educated than among the uneducated. Few young men and women who have been at the schools show any disposition to live together as man and wife, except through lawful marriage. There is little tendency to prostitution among the Indians. I have made it a part of my official work to inquire into these matters.

In conclusion, permit me to suggest that if proper employment could be furnished these young people on their return from the schools they would, in my candid judgment, be ready and willing to accept industrial pursuits, and would rarely think of going back to the habits and customs of the old Indian life.

## STATEMENT OF HENRY S. PARKIN, TRADER AT CANNON BALL, N. DAK.

Mr. Parkin is a very intelligent gentleman, a member of the North Dakota legislature, and for seventeen years a resident on or near the Standing Rock Reservation. I proposed to Mr. Parkin the following question, and received the answer which follows.

*Question.* It has been stated quite freely, by persons disposed to criticise the work of Indian education, that the girls returning from eastern training schools become in most cases loose women on the reservations, and that the boys who return from said schools speedily adopt the old Indian costume, paint, and roving ways, and lead dissolute lives. What is your opinion so far as the returned students have come under your observation?

*Answer.* These reports are not true. They are a slander, a libel upon those young people. As a rule the girls marry very quickly after returning home, and conduct themselves with propriety. I know of but one who has turned out to be a loose woman, and her mother was bad. These girls make better housekeepers than do the untought women, though they often have but little means to do with.

I know quite a number of Indian boys who have returned from the schools, and they are doing as well as they can in their limited circumstances. They have little to do with, but they marry, get a yoke of cattle or a team of horses, and a house, and are fairly industrious and honest. They are ready to work when they can find a chance to earn something. It is astonishing that they do so well. Government can employ but few of them, and they have little to start with. The suit of clothes they wear home from school is soon gone. Then comes the "tug of war," with meager opportunities for getting money. I wonder they do so well. I do not know of one who is vicious or addicted to bad practices. The statement that "they are the worst Indians on the reservation" is false and malicious. I have known every one who has returned here from the schools.

## PROGRESS OF THE DAKOTA INDIANS, INDUSTRIALLY, SOCIALLY, AND MORALLY.

Having spent seven or eight months in the two Dakotas, closely studying the general progress and condition of the Indians, as well as their educational needs and progress, it seemed to me to be very desirable, in my annual report, to group the best information possible, showing the condition and advancement of these Indians toward civilization and self-support. That I might be able to do this in a more definite and tangible form, I addressed letters to gentlemen long familiar with the Dakotas, their manners, customs, etc., for testimonies which might be used. The persons addressed are gentlemen of such high intelligence, candor, and discrimination, that their statements must be weighty and helpful to those whose minds are dark and pessimistic in regard to Indian matters. I also requested brief practical suggestions as to what may contribute to the further improvement of the Indians.

As the result of these inquiries I give the following letters:

## STATEMENT OF THE RIGHT REVEREND BISHOP W. H. HARE, D. D.

SIoux FALLS, S. DAK., *December 12, 1891.*

MY DEAR SIR: My acquaintance with the Sioux began in 1873, and I have been quite familiar with their condition, having traveled their reservation over in every direction, and shared not a little in their camp life. Though they are a warlike people, and capable, when exasperated, of deeds of great violence, I have found them under fair treatment very cordial, kindly, and reasonable, and ready, when shown to be in the wrong, to make all honorable amends. There need never be any trouble with them unless the Government, by negligence of its obligations or delay in discharging them, provoke it.

When I first met them, the Sioux were, almost to a man, living in tents and pursuing a roving life. In some cases they indignantly tore down log houses erected for their chiefs by the Government as innovations which infringed on their known tastes and wishes. Now the great majority of the people—nine-tenths I should say—are settled in log houses. Of farming, twenty years ago there was none. The

people were hunters and lived upon game. Now their country is dotted over with beginnings of farm life, and in favorable seasons many of them raise considerable crops.

In 1873 there did not exist among them a boarding school of any kind whatever, while now there are over twenty, and all of them in full operation. The results of school work have been in the most marked way beneficial. Before schools were introduced there were but two or three persons in the tribe who understood both English and Dakota; and the poor people when they came together to make known their wishes or grievances, or to learn the will of the Government, were entirely at the mercy of one or two persons, who might easily be bought up by interested parties and grossly misrepresent the Indians or the Government, or both. Now, thanks to the work of the schools, there are dozens of persons in every tribe ready and competent to expose any such doings. A marked improvement in the general intelligence of the people has resulted from the educational work.

Much has been said of the tendency of the educated Indian to "return to the blanket;" and of course, as in all school work everywhere, one meets with grievous and flagrant cases of nonsuccess. But as a matter of fact any careful observer who should travel through the Indian country would have his attention attracted by a large element totally distinct in its bearings and appearance from the old Indian life; and should he inquire what is the history of the young people who thus attract his attention, by their appearance and by the work they are doing in the schools, churches, offices, and shops, as teachers, catechists, preachers, apprentices, clerks, etc., he would find that they are persons who have had the advantages of education in the mission or Government schools.

In mission work I know of no field which yields larger results. In the mission of which I have charge (it is but one of several) there have been redeemed from heathenism, and are now engaged in mission work, 9 clergymen, 7 candidates for orders, and nearly 50 catechists and other workers, the whole number of Indian communicants being over 1,600. The offerings of our native Christians have increased from year to year since we have been able to make systematic effort in this behalf, from \$585 in 1881 to \$2,500 in 1890.

With warm sympathy in all your efforts for the elevation of the Indian, very sincerely,

W. H. HARE,  
*Missionary Bishop.*

REV. DANIEL DORCHESTER, D. D.

STATEMENT OF RIGHT REVEREND BISHOP M. MARTY, OF THE ROMAN CATHOLIC CHURCH.

SPRINGFIELD, S. DAK., *November 13, 1891.*

SIR: Please accept my thanks for your welcome letter of the 2d instant, and the kind invitation to give you some facts of my experience concerning the progress of the Dakota Indians. I am here without books or papers, and therefore can only answer your questions in general terms.

I came to Standing Rock Agency, which by President Grant had been assigned to the supervision of the Catholic Church, a month after the so-called Custer massacre, in 1876; and I have since visited annually this and the other Indian agencies of the Dakotas, especially Devil's Lake, Crow Creek, Rosebud, and Pine Ridge, where we have boarding schools.

Industry was then a thing unknown to the Dakotas, who only spoke of war and hunting. At present there is not an able-bodied man among them who is not willing to work at any time and at anything. They would be self-supporting to-day, if they did not live in a country where the best white farmer can seldom succeed in raising a good crop. Those among them who have a start are now making money at stock-raising.

Socially, marriage, as a permanent union and a basis of family life, was unknown among them in 1876. Polygamy and the sale of their daughters to white men was very common among them. Gambling and drinking were practiced by a good many. The sound of the drum for dancing was heard in different directions every night. Now hundreds of them are united in Christian worship; husbands work hard to make their wives and children comfortable and happy; women endeavor to make their homes cheerful and attractive, and the children are trained to regularity of life. Nearly all have adopted citizen's dress, eat three meals a day, stay at home to do their work in the house and on the farm, whilst in 1876 they were all in blankets, spent their time in talking, smoking, and going from tent to tent to get something to eat.

Then they had no property but their tents, ponies, robes, and some trinkets; and even those would be given away at dances or taken by any one at the death of the

proprietor. Now they have their houses and furniture, farms, cattle, barns, corn sheds, haystacks, and provisions, of which they take proper care, and are anxious to provide something for themselves and for their children.

They have always been commendably peaceful among themselves; and if anyone was injured, he was protected or avenged by his chief; but now they have their own courts of justice, presided over by the agent, and their submission to its decisions, and to law and order in general, is truly remarkable.

We have baptized about 3,500 at Standing Rock, 2,500 at Devil's Lake, 1,000 at Rosebud, and 500 at Pine Ridge; and nearly everywhere one finds among them the fervor, docility, punctuality, and charity of the early Christians. They attend Divine service on all holy days and Sundays, receive holy communion once a month, perform their morning and evening devotions at home, and the young men and women have formed societies for mutual benevolence in health and sickness, and social enjoyment in reading, recitations, and singing on appointed days. We can say of them in truth that they are one heart and one soul.

But whilst they are men and women of good will and great moral worth, their intellectual and material progress, within the lifetime of one generation, can not go beyond certain limits; and the same law of development which history shows in the gradual civilization of other nations can be clearly traced in our experience among the Indians. We must be satisfied to bring our pupils to a stage within their reach, whilst we see that their children will doubtless be able and willing to go higher and traverse other regions of science, art, and culture.

Hoping that the friends of the Indians will ever work harmoniously in aiding and directing them, I have the honor to remain, reverend sir, your obliged servant,

BISHOP M. MARTY.

Rev. Dr. DORCHESTER,  
*Superintendent of Indian Schools.*

---

STATEMENT OF MAJ. JAMES G. WRIGHT, INDIAN AGENT, ROSEBUD, 1883-1886.

No. 36 WOODLAWN PARK, CHICAGO, *November 9, 1891.*

DEAR SIR: I have the honor to acknowledge yours of the 2d, and in reply beg to say all data or statistics that I could give as to my work among the Indians will be found in my annual reports from 1883 to 1886, to which I beg to refer. I have not these reports with me, and can not give statistics from memory.

I went to Rosebud, Dak., as agent July, 1883, and remained till October 1, 1886. My attention was first attracted to the want of school facilities, there being no schools on the reserve at that time. After persevering correspondence with the Department I obtained permission and built two schoolhouses in 1883; in the spring of 1884 two more; and in 1886, when I left the agency, I had built eleven school and teachers' residence buildings. The success of these induced the Protestant Episcopal Church to build two chapels, which were turned over to the Government for school purposes, also the building of two mission boarding schools—the Protestant Episcopal and the Roman Catholic. These, with two mission day schools, making seventeen schools on the reserve, were all (except the two latter) eminently successful.

About the same time, my attention was attracted to the advantage to be gained by inducing the Indians to leave the vicinity of the agency, where about seven-eighths of their whole number were located, and where they were incapable of any industrial pursuits. This effort was also successful, and many camps and settlements were made on fertile lands, varying from 10 to 100 miles distant, where some agricultural effort could be made, and where they were induced to build houses in lieu of the canvas "tepee."

During my sojourn, the Protestant Episcopal Church built three chapels and one church (at Oak Creek, they having one at the agency). These were built at special request of the Indians (as were also the schoolhouses), who manifested their interest by hauling the building material of at least two of these a distance of over 50 miles free of charge, purchasing bells, and making other improvements at their own expense. This speaks well of them from a religious inclination.

I suppose it is well known that the marriage relation among Indians is rather lax, though there are many very creditable cases where it is stable and permanent. My endeavor was to strengthen this, and whenever possible to induce parties to be legally united. I was gratified with the encouragement I met. I had cases come to me and request to be legally married and protected in their relations subsequently.

For the success of the school and the Indians' interest therein, I would refer to statistics in my annual reports, showing the number of children in school on the

reserve, and away at Carlisle, Genoa, and other schools during the years from 1882 to 1886, inclusive; also, the number of houses built, and the acreage under cultivation, with the changes in dress and mode of living, from the blanket to citizen's clothing. In point of industry I believe, from experience, that most Indians will work where they see profit in money therefrom, but, like white men, they are not desirous to work without some return. I see much advancement in the Sioux since I first knew them, and though it may be slow I think it is sure.

With much respect, yours, truly,

JAMES G. WRIGHT.

DR. D. DORCHESTER,  
*Superintendent of Indian Schools.*

---

STATEMENT OF DR. T. V. MCGILLICUDDY.

RAPID CITY, S. DAK., *November 17, 1891.*

DEAR SIR: Yours of the 2d instant received, and in accordance with the request contained therein I will first state briefly the condition of the Ogalallas, or Pine Ridge Indians, when I took charge of them as agent in the spring of 1879, and which was virtually their condition for the four years prior, *i. e.*, from 1875 to 1879, during which time I was more or less associated with them, while connected with the Army.

When I assumed charge, the Sioux and Northern Cheyennes belonging to the Pine Ridge Agency were living in large villages or camps, consisting entirely of canvas or skin lodges, within a mile or two of the agency. There was not an Indian dwelling house upon the reservation and never had been. There was not a schoolhouse or church, and never had been. There was not over one dozen Indians wearing civilized costume. There was no police force. The Indians were not farming and never had been. They owned no breeding beef stock. Indian freighting was just being tried as an experiment. In fact, the Indians were a wild, refractory mob, holding no allegiance to the Government, and fully under the control of the chiefs and the tribal system. The sun dance, an aboriginal semireligious ceremony, was in existence with all its demoralizing and brutalizing features and tortures.

When at the end of seven years I was removed as agent, in the spring of 1886, the condition of these Indians had changed as follows: Their villages and settlements were scattered out to a distance of 50 miles from the agency, occupying over 1,000 miles of creek bottoms. They were occupying over 1,000 log houses of their own construction, to which were attached many small farms and gardens. One central boarding school at the agency of 200 capacity, and 8 district day schools of 400 capacity, were in operation and were fully patronized, constructed, and operated by the Government. Two churches were in use and well patronized. White labor at the agency was largely supplanted by Indian labor.

Five hundred freight wagons were in use among the Indians, and their war ponies had become freighting animals. With their wagons the Indians not only transported their own supplies, amounting to 4,000,000 pounds a year, distances varying from 25 to 200 miles,\* but many of them were engaged in freighting white men's supplies to the Black Hills.

A police force, consisting of 50 full-blooded Indians thoroughly organized, disciplined, and uniformed, had entire control of the peace of 4,000 square miles of reservation, and maintained that peace without the aid of the military for seven years, notwithstanding repeated attempts on the part of the mob element among the Indians and whites to cause trouble.

In 1883 the time-honored sun dance was suppressed at Pine Ridge without bloodshed, notwithstanding shrieks and fears of an outbreak. Rosebud followed suit the next year. For the administration of justice there was a general police court, presided over by a native judge, with an Indian jury, and a guardhouse or jail well patronized. Many thousand head of breeding cattle were owned by the Indians, and in 1885 they sold \$4,000 worth of 3-year-olds of their own raising. Three-fourths of them had adopted civilized costume. Plural marriages decreased largely.

In the way of morality the Sioux take the lead among the Indians of the plains, and they are to be commended for their high standard. They are naturally a superior Indian in this respect. In my time private diseases and prostitution were very limited among them, but I regret to state that they are now on the increase.

The above changes among the principal ones were accomplished as follows: By continually, everlastingly, and unremittingly antagonizing the chiefs and tribal system, to individualize the Indian; by rewarding and encouraging the progressive Indians, and in every way discriminating against the nonprogressive element; by

\* To Rosebud Landing, on the Missouri River, for a time.—D. D.

visiting swift and unwavering punishment upon all offenders against established laws and regulations, and of the severest kind if necessary; by insisting on and sustaining the established authority of the police force, even going so far as to sacrifice human life, if necessary, in so doing; by seeking and securing the backing and support of the younger and growing element (which is the warlike and dangerous element) and switching their superabundance of energy into new channels.

Practical suggestions.—My suggestions for the future would be in the above line of policy.

The most attention should, however, in the future be given to education in agency day schools, boarding schools, industrial schools, and shop training; and in schools off the reservations, both in the East and in the towns adjacent to the reservations.

Let the old die off and labor with the young. But by all means provide some employment for the Indian children after you have educated them and given them trades. Don't turn these young Indians loose among ten times their number of uncivilized young Indians on the reserve. The old parable of leavening the mass don't work. The leaven is lost, forced back into a state of more hopeless barbarism than was the original condition of the child. It is positive cruelty.

Give more attention to securing a better class of people for agents and employés generally. It is very well to claim that the service has improved in that respect, but seventeen years' knowledge of the Indian service convinces me to the contrary.

So far as the Sioux nation is concerned, with its six agencies, it is very important that there should be a resident supervising agent, or inspector, or whatever you wish to call him. He should put in his whole time seeing that the various agents or agencies work in harmony under one common uniform system that has been tested and found practicable; and he should insist on the agents working together. In this one respect our handling of the Sioux agencies is defective.

Yours, truly,

V. T. MCGILLICUDDY.

Rev. Dr. DORCHESTER.

---

STATEMENT OF REV. JOHN P. WILLIAMSON, LIFE-LONG MISSIONARY OF THE PRESBYTERIAN CHURCH IN DAKOTA.

PINE RIDGE AGENCY, S. DAK., *November 18, 1891.*

DEAR SIR: Owing to my removal from Yankton Agency to this point, I have been unable to answer your letter of November 2 until now.

I have been acquainted with the Sioux Indians ever since I can remember, first in Minnesota and since 1863 in Dakota. Before 1863 I do not think there was a full-blood Sioux in Dakota who dressed in citizen's clothes or had learned to read in English or any other language. A few Sioux in Minnesota had so far advanced. Neither had there been a church or school-house for Indians in Dakota. At that time the sole dependence of this people for a livelihood was on the chase. The men killed the buffalo, and the women manufactured therefrom food, clothing, and tepees. That was the extent of their industrial pursuits.

The defeat of rebellion and heathenism, after the Minnesota massacre of 1862, made a way for civilization and Christianity among the Minnesota Sioux, and their subsequent removal to Dakota had its effect in opening the eyes of the prairie nomads to the dawn of a new era.

The most powerful factor, however, in changing their mode of life was the treaty of 1868, the influence of which, beneficial and otherwise, will be felt for generations to come. As a result of that treaty the Sioux who had previously roamed at will from the Minnesota border to central Wyoming have now for twenty years been settled down on the different reservations in Dakota, very much as we now find them.

These twenty years have wrought a wonderful change in their exterior life, and, could we see it, I have no doubt as great a change in their interior life. Then in thought and habit they were the same savages Columbus discovered in the fifteenth century. They received from civilization only such articles as were adapted to their wild life, nothing that would change that life. Blankets had largely taken the place of robes in dress, and guns of the bow and arrow, but had not as yet displaced them. As yet a man was never seen without a weapon at his hand, else he was no man. They were radiant with paint and bristled with spears, knives, tomahawks, war clubs, and quivers. I need not tell you how completely these things have passed away, for your own eyes have seen it.

God in his providence has brought about a change. There was no longer a place for the roaming savage. He has been corraled, and is insensibly losing his wildness. Much remains to be done. But the past gives hope for the future. A firm,

steady hand, guided by patience and love, and directed by wisdom, will overcome the obstacles still in the way.

New observers are apt to think the progress of the schools has been slow. Having watched the schools—Government and missionary—from their very beginning, I am convinced remarkable progress has been made in the Indian schools. Let them press on with an enlightened management and such improvements as experience shows from time to time are needed, and in another score of years the sun will rise upon an enlightened Dakota race.

Yours, respectfully,

JOHN P. WILLIAMSON,  
*Missionary of the Presbyterian Church.*

Rev. Dr. DORCHESTER,  
*Superintendent of Indian Schools.*

STATEMENT OF LIEUT. COL. W. F. DRUM, U. S. ARMY.

STANDING ROCK AGENCY, N. DAK., *November 7, 1891.*

DEAR SIR: In reply to your inquiry concerning the advancement of the Indians on this reservation, I will say that officers who knew them a few years ago note a great change for the better. Then they were indeed "wild or blanket Indians," and took little or no pains to conceal their dislike to the white people or the advancement of civilization. Now a large majority of them are taking an interest in farming and stock-raising. They live in houses in winter instead of in tents. Many of the men cut their hair and wear the clothes of the white man; while the women are becoming interested in housekeeping, and are dressing more like white women. Less paint is used than formerly, and they are beginning to know something about cleanliness.

The schools are well attended and the children appear to be making progress. There are several missions, and at the time of trouble last winter it was estimated there were about 600 Christian Indians on the reservation. It is to this fact and to the wise administration of affairs by the Indian agent that I attribute the reason why so few of the Indians joined in the "ghost dance." Of course the presence of troops ready to sustain the agent, may have had some effect, but the two reasons given I believe are the principal ones. I am credibly informed that many of the adherents of Sitting Bull who, last fall, were "ghost dancers," have since their return united with some religious denomination on the reservation.

The Indians last fall sold about \$20,000 worth of cattle they had raised, and it is estimated that they earned about \$10,000 more by their labor and with their teams. They show a willingness to work which is certainly commendable. This year the crops have done well, and while there are no large farmers among them, it is thought that their earnings will exceed that of last year. Most of the Indians put up some hay for their stock in winter. A number of young Indians are working in the agency shops and learning to be mechanics.

It can not be expected that we can at once make good citizens out of a race that for centuries has been savages; but they are improving, and the people who feel an interest in their welfare have reason to be encouraged.

I am, doctor, with much respect, very truly yours,

W. F. DRUM,  
*Lieut. Colonel U. S. Army, Commanding Fort Yates.*

Dr. D. DORCHESTER.

STATEMENT OF H. F. DOUGLAS, POST TRADER.

STANDING ROCK AGENCY, N. DAK. *November 21, 1891.*

DEAR SIR: I take pleasure in complying with your request of November 2. My residence on this reservation dates from 1876. At that time but little had been done in the way of civilizing the Indians; they knew no habitation save the tepee, and their clothing was of the most primitive kind. Moccasins, a breech clout, a buffalo robe or blanket, with a liberal supply of paint and feathers, constituted the wardrobe of the Indian man; and that of the Indian woman was not more modern. From 1876 to 1881 the improvement in the condition of these Indians was very slow; in fact it was hardly noticeable.

Since 1881, however, their progress has been steady, and for the past three years very rapid. The Indian of to-day cuts his hair short, has discarded the blanket and buffalo robe, the paint, feathers, and trinkets with which he formerly adorned himself, and he is clothed as well as you will often find the average Western farmer.

In the past the women and children were sadly neglected; now the husband and father provides, first for the wife and children, and then for himself. When they have the means, they buy everything that white people in this community use—table cloths, carpets, curtains, clocks, sewing machines, and articles too numerous to mention, showing that they now have a full appreciation of that class of goods which will add most to their comfort.

The sullenness which is peculiar to the Indian savage is now seldom seen. They are social, and fond of showing to their neighbors any addition to their household goods or wearing apparel. The men are willing workers and are ready to work either with their teams or without them. During the summer many of them work on the steamboats as roustabouts. They no longer regard it as beneath them to labor, and are only too glad to have employment.

Immorality does not and never has existed to any extent among the Sioux in this vicinity.

In no particular has their progress been more marked than in the interest which they now take in their churches and schools. The churches on the reservation are well filled every Sunday with well-dressed, orderly, and attentive congregations, and the schools are taxed to their utmost capacity. The parents no longer, as in years past, object to sending their children to school; on the contrary they are very anxious to have them educated. Very much of this is due to the vigorous policy of the present administration in promoting and improving the school system and the efforts of the agent in carrying out this policy.

I am convinced that if you want to educate the Indian, you must give him good reservation schools right at home, where his growth and progress may be daily observed by his parents and fellows. Don't send him away to an Eastern school, from which he returns so changed that his own family hardly know him, and feel as though he were no longer one of them. In this connection permit me to say that, in my opinion, the establishment of an industrial school on each reservation would greatly contribute to the improvement of the Indians and hasten the time when they will become self-supporting. Clothing, shoes, and many articles now issued to them might be made; and while one could not expect such schools to become self-supporting, I am satisfied the expenditure would be a satisfactory one.

I am, sir, very respectfully yours,

Dr. DANIEL DORCHESTER.

H. F. DOUGLAS.

---

STATEMENT OF J. F. KENNEY, JR., SUPERINTENDENT ST. JOHN'S MISSION SCHOOL.

FORT BENNETT, S. DAK.,  
November 9, 1891.

DEAR SIR: Your favor, desiring that I should give my impressions of the progress of the Indians in the Dakotas for the past ten years, has just arrived.

I have the honor to state that I have been closely connected with the educational department of the Protestant Episcopal mission work for the past twelve years, and while there have been many discouraging instances of individual failure there has been a steady improvement in the Indians as a people.

Among many steps taken forward I will mention the following: From the blanket to civilized clothing; from paint to soap; from the war club to the hoe. They are also, as a people, discarding their superstitions and dances, and in lieu thereof are adopting the different forms of worship in use among civilized nations of this country. In place of the chase they have, in a small way, tried agricultural pursuits, with discouraging results, but they have been more successful with cattle and horses. As a whole, I should say the Indians have advanced as rapidly as could be expected. The process of civilization is necessarily slow, and we find in our efforts that first to tame, next to train, and then to teach, are the necessary steps to be taken.

Future steps.—For the further improvement of the Indians, I would suggest that a thoroughly equipped hospital with a corps of trained nurses be established on each reservation; that the Indians be made to dispense with their dogs, and that sheep, hogs, and chickens be substituted; that the Indians shall be, as soon as possible, deprived of their rations and receive a monthly payment of money, and that this should be commenced at once by issuing part money and part provisions.

Yours, very respectfully,

Hon. DANIEL DORCHESTER,  
Superintendent of Indian Schools.

J. F. KINNEY, JR.

The following statement is taken from a conversation with Mr. H. S.

Parkins, a trader on the Cannon Ball River, close to the Standing Rock Reservation, North Dakota:

I have been in this region since 1874. At that time Indians considered it a disgrace to wear pants with seats in them. They cut out the seats, and would not wear a coat. Cattle issued to them as stock were soon eaten up. There was constant war between them and cattle men, because of lawless shooting of cattle, making much trouble for the Indian agent. Some of the older Indians did not make these deprecations, but the younger bucks did.

Then there was not an Indian who could talk English, nor one who could read the letters on a sign, nor was there any school until 1877. Then every Indian carried a gun or a revolver and a knife. There was not a yoke of cattle on the agency. They did their traveling on two long poles hitched to a pony and running back upon the ground, on which they packed their goods and children. Now nearly all have wagons. Then they had as many wives as they could get; now only a few old Indians have plural wives. Then an Indian girl had no protection; there was no punishment for rape. Then the Sioux did nothing or almost nothing in raising grain or vegetables—only a little corn. Then Indians thought it no crime to steal from any persons with whom they were at variance. It was no crime to steal a horse from anyone, but a brave, meritorious act; but now there is very little, if any, thieving.

There is not much sexual looseness among them; seldom find Indian prostitutes; and they are not as loose as the lower orders of whites. The Indians observe their relation ties more strictly than white people, and will not marry their cousins of the second or third degree.

Their homes, beds, and comforts are much better than formerly. Then they had wild game, meat and furs, which are now gone. They have only the Government rations, and the small crops they raise. Only a few are without fields of grain—20 to 30 acres. The wonder is that they are not discouraged in attempting to cultivate the soil—there are so many failures in crops. I am certain these Indians can not depend upon agriculture for a livelihood—I could not—*i. e.*, on this reservation or in this vicinity. This reservation has as good soil as any in Dakota, but not sufficient moisture as a general rule. This year is better, but phenomenal.

Cattle-raising is their only hope for self-support. Some full-blood Indians have already from 50 to 100 head, others very few. The half-bloods are doing more with cattle, as a rule, some having 300 to 400 head. Agent McLaughlin purchased considerable beef last year from Indians and mixed bloods.

The tribal feeling is declining; almost entirely gone. The chief is only so in name and by courtesy. Chiefs do not try to exercise power as formerly. Indians care little for chiefs now, but do care for the police. The "Soldier Band" of the olden time, which surrounded the chief and inflicted vengeance upon Indians who did not comply with his wishes, has passed away. The medicine men have little influence now, only as they show skill as doctors. It was one of the complaints of Sitting Bull in his last days that he no longer had any authority, and but little influence.

#### TESTIMONIES OF RESERVATION AGENTS.

Late in the autumn, when the crops were nearly or quite gathered, I sent to the several Indian agents in North and South Dakota letters containing eighteen leading inquiries, touching upon points relating to the advancement of the Dakota Indians, toward the better life which the Government is anxious to promote among them. These inquiries clearly analyzed the situation, and it is hoped the answers will convey to many citizens of the United States more definite views of the real status and trend of the Sioux.

Very late changes in some of the agents have prevented my receiving replies from several of the reservations. While the data which follow may not be all that could be desired, nevertheless it must be accepted as a valuable contribution toward the better understanding of the Dakota problems.

Question 1. Are the Indians connected with your agency improving in industry? If so, is it quite marked or only slight? State facts.

Maj. E. W. Foster, Indian agent at Yankton Agency, answers: My Indians are improving. The improvement is slight, if compared with a recent period; quite marked, if compared with ten years ago. It is

estimated that about 30,000 bushels of wheat raised by Indians have been sold from this reservation this year; price, 60 to 75 cents per bushel.

Agent A. P. Dixon, of Crow Creek and Lower Brulé Agency: Improvements are rapidly being made in morals and in industrial pursuits.

Agent P. P. Palmer, Cheyenne River: The Indians of this reservation are quite industrious, and are improving. The fact is, these Indians are good workers, when they work. They do not like to work steadily, and prefer plenty of company when they work. When they are employed to do any kind of labor, they do it as well as they know how to do it.

Maj. James McLaughlin, Standing Rock Agency: These Indians are improving. The progress is not marked by rapid strides, but by steady improvement from year to year.

Maj. John S. Murphy, Fort Berthold Agency: I have no hesitation in saying that in the matter of industry there has been great improvement. I do not however like to make any distinction between the tribes, as to which has shown the greatest amount of improvement. There are of course drones among each tribe of Indians, the same as in every community of white people. The Arickarees have in the past been considered the most industrious, but during the last year the Gros Ventres and Mandans have been so willing to work, and have done so well, that I think it would be manifestly unfair to make any distinction between them in this matter.

Maj. John H. Waugh, Devil's Lake: During the past year, 58 young men have been induced to begin farming.

The Flandreau Indians are not upon a reservation, but upon land taken up and occupied for more than twenty years. Rev. Hosea Locke, the day school-teacher among them for the last seven years, reports: A marked improvement is quite visible among the Flandreau Indians in farming; many of them seem to do as well as their white neighbors.

Question 2. What amount of land have your Indians had under cultivation this year (approximately)? How many acres do they average? How many have only 2 or 3 acres? How many do not try to cultivate any land? Does the agency farmer have to use much influence to keep the Indian attentive to his farming?

Maj. E. W. Foster, Yankton, reports: Nearly 5,000 acres have been under cultivation this year. They average 7 to 8 acres each. Forty to fifty old Indians have only 2 or 3 acres each. None except the feeble and very aged neglect to cultivate some land. Frequent visits at Indian homes, urgent and continued exertions by farmers, are well repaid by the encouragement they give to the Indians.

Maj. A. P. Dixon, Crow Creek and Lower Brulé: Six thousand acres have been cultivated this year, an average of about 10 acres each. Few of them cultivate as little as 2 or 3 acres; but about one-quarter do not try to cultivate any land. It is with difficulty that a large number are made to care for their farms.

Maj. P. P. Palmer, Cheyenne River: About 3 acres is a fair average cultivated, but quite a number from 8 to 20 acres. Thirty-five acres is the largest farm reported. The Indians prepare the land for crops without much trouble to the farmer. About all he has to do is to instruct them as to what kind of a crop they shall raise, how and when to prepare the ground, how and when to plant. The fact, is the farmers who have been among these Indians formerly have known very little more about farming than the Indians themselves—not much more than a dry-goods clerk in a great city. Most of the half-blood farmers are lazy and shiftless. The full-blood Indians are universally the best workers.

Agent McLaughlin, Standing Rock: About 5,000 acres have been under cultivation this year, an average of 5 acres to each Indian, though a majority have less than 3 acres each. Every family cultivates some land. The majority require constant urging by the agency farmer to make them properly care for their fields.

Maj. Murphy, Fort Berthold: Nearly 1,100 acres were under cultivation last summer. The general average in past years has been somewhat less than that, but during the past summer I have had the Indians "summer fallow" about 750 acres of an old field which had not been cropped for some time, and which, together with what breaking has been done, will give them in the neighborhood of 1,900 acres for cultivation next year, and I intend to see that it is all put into some kind of a crop. Thirty-five acres is the largest amount put in by any one Indian. There are quite a number who only cultivate 2 or 3 acres, but every family who has a male in it able to work must next year crop at least 5 acres. The small patches are usually devoted to corn, and are owned and worked by the old women.

Prof. Locke, Flandreau: About 1,000 acres are cultivated this year by these Indians, an average of about 16 acres. Only two families cultivate as little as 2 or 3 acres, and there is no family which does not cultivate some land. These Indians not being on a reservation there is no "agency farmer." Rev. John Eastman (Indian) is the overseer; I also encourage and advise them.

Question 3. What quantity of crops have the most successful Indians raised this year? The most successful half-bloods?

Maj. Foster, Yankton, replies: Best Indians, wheat, 300 bushels; oats, 300; corn, 600. Best half-bloods, wheat, 1,000 bushels; corn, 600 plus.

Maj. Dixon, Crow Creek and Lower Brulé: Whole tribe, wheat, 10,000 bushels; oats, 6,000 bushels; corn, 5,000; potatoes, 3,000; besides many garden vegetables.

Maj. Palmer, Cheyenne River: One hundred bushels of corn is the largest crop reported by any one Indian. The half-bloods do not do much farming. While the Indian can be and is required to do what he can in the way of farming, the half-bloods object somewhat, and the "squaw men" insist that they are not required to till the soil.

Maj. McLaughlin, Standing Rock: One Indian raised 300 bushels of oats, 50 bushels of wheat, 100 bushels of corn, and 100 bushels of potatoes. One half-blood raised 350 bushels of oats, 100 bushels of wheat, 200 bushels of corn, and 150 bushels of potatoes.

Maj. Murphy, Fort Berthold: The best crop by any individual was 375 bushels of wheat, 95 bushels of flax, and 110 bushels of oats.

Maj. Waugh, Devil's Lake: About 2,000 acres on this reservation have been devoted to wheat and 600 acres to oats. One Indian woman raised 2,200 bushels of wheat; another woman, 1,800 bushels of wheat; one Indian man, 2,000 bushels of wheat; another averaged 33 bushels to the acre. Very few indeed have raised only small crops.

Mr. Locke, Flandreau: The most successful Indian has raised 600 bushels of wheat, 700 of oats, and 100 bushels of potatoes. One half-blood has done a little better than the above.

Question 4. Are the seasons so precarious from drought, hot winds, frosts, etc., as to make crops very uncertain? How much can be realized from crops in the poorest seasons? How often do these bad seasons come?

Maj. Foster, Yankton: The seasons are very precarious. In the poorest seasons nothing is raised. Three out of four years the crops are generally damaged from want of moisture, etc., from 25 to 90 per cent; and sometimes they are a total loss.

Maj. Dixon, Crow Creek and Lower Brulé: Crops are very precarious and uncertain. In the poorest seasons the harvest does not equal the amount of seed sown. About three out of every five seasons are very bad.

Maj. Palmer, Cheyenne River: Nothing can be realized in the poorest seasons, and very little in the best. There has been no good season for many years. The past four years have proved a total failure except in a few sheltered places. This year the amount harvested will not be more than the seed put into the ground. On the 65-acre field at the boys' school, 33 bushels of potatoes were planted, and not more than 15 bushels harvested. There was a fair crop of summer squash, but a hailstorm about the 1st of August ruined the squashes, corn, cabbage, etc.; and no crop except the potatoes was harvested.

Maj. McLaughlin, Standing Rock: Crops are very uncertain. In the poorest seasons not more than 10 per cent is harvested, and two out of every three are bad seasons.

Maj. Murphy, Fort Berthold: The seasons are certainly precarious, this year's being the first good crop harvested since 1885. In the poorest seasons nothing is raised—many times a loss both in seed and labor. In 1886, 1887, 1888, and 1890, either drought or frost damaged the crops so that not enough could be realized out of them to pay for the seed and harvesting.

From Flandreau we have reported: There is never a total failure here in crops. In the poorest seasons we get a half crop. In 1887, 1888, and 1889, we had hard seasons, but only a partial loss of crops. This year, a good average crop.

Question 5. How much are these Indians and half-bloods doing in cattle raising? How many cattle have any of them? How much beef has been bought of the Indians, the half-bloods, and the "squaw men," to be issued as rations, during the last fiscal year? Have any of your Indians sheep? How many, and with what results? Have any steps been taken by the Government towards issuing sheep to the Indians, and if so, what?

Maj. Foster, Yankton, reports: Not much is being done in cattle raising; a few have 25 head. No beef has been bought of the Indians except by contractor, who has purchased probably 20 head. One half-blood Indian keeps a few sheep, 16 head, with good results. Government has not issued sheep on this reservation for twenty years.

Maj. Dixon, Crow Creek and Lower Brulé: These Indians do what they can with cattle. They have little stock. A few have 50 head. No beef has been bought of the Indians. There are no sheep on the reservation, and I do not know that any were ever introduced here.

Maj. Palmer, Cheyenne River: The Indians and half-bloods are doing well in the way of cattle raising. The Indians have from 2 to 100 head of cattle each, average about 8. There are a number of large herds among the half-bloods and "squaw men." About 1,500,000 pounds of beef cattle were bought from Indians, half-bloods, and "squaw men" last year, and all—3,000,000 pounds—is to be bought from them this year. None of the Indians on this reserve have sheep, and so far as is known no steps have ever been taken by Government in this direction. I believe that a herd of sheep in common, for the full-blood Indians, would be a very good venture for the Government.

Maj. McLaughlin, Standing Rock: The Indians and half-bloods are becoming interested in cattle raising, and a number have now a good start. Several Indians have from 20 to 55 head each, and several mixed bloods from 50 to 300 each; 749,460 pounds of beef for rations were bought of these people, for which they were paid \$21,134.76.

None of the Indians here have sheep. I regard cattle better to start them on. Sheep require more care. No steps have been taken by Government toward issuing sheep, as it is not yet deemed advisable.

Maj. Murphy, Fort Berthold: There were 400 cows issued during the month of September. Before that the Indians owned 233, making a total of 633. Every head of a family and every male over eighteen years has at least one cow. Some of the Indians have now as many as 18 head of cows; generally they take good care of them. The chances for grazing are unlimited. Twenty-five hundred sheep and 128 rams are held here as an agency herd; none have yet been issued to the Indians, and I am unable to say when it will be done.

Maj. Waugh, Devil's Lake: These Indians are not in the stock-raising business, and have nothing but work oxen, except some cows, etc., which have been issued this year.

From Flandreau it is reported: Some of the Indians are doing well in cattle, averaging from 2 to 18 head. No beef has been bought of the Indians for rations, for no rations are issued here.

Question 7. What kind of houses do your Indians live in? How large? How many windows? Any floor? How many rooms in a house? What proportion have more than one room? What furniture?

Maj. Foster, Yankton, says: My Indians live in log houses, with dirt roofs and floors, except some built for them by the Government. The former are generally quite uncomfortable and unfit to live in during cold weather. The smaller are 10 by 12 feet; but some are 18 by 20 feet, with from two to three windows and one room. A better class of houses is now being built, with floors and shingled roofs. The furniture is generally home made, or made at agency shops, except a few chairs and bedsteads which are issued.

Maj. Dixon, Crow Creek and Lower Brulé: These Indians live partly in log and partly in framed houses. The log houses average about 15 feet square, and the framed houses about 30 feet square. The log houses have from one to three windows, and the framed houses six. The framed houses have floors and four rooms, but the log houses generally one room—one-half have only one room. The furniture consists of a stove, chairs, cupboard, table, and bedstead.

Maj. Palmer, Cheyenne River: Most of these Indians live in small log houses, 12 by 20 to 14 by 24. A number have double houses; many have floors, and all would if they could get the lumber for floors. About one-fourth of these houses have more than one room. Every house is supplied with some kind of a stove, and nearly every one with cooking utensils, crockery, lamps, and other necessary articles. Nearly all have one or more bedsteads, many have mattresses and pillows. About 700 chairs were issued at this agency last year. The most progressive Indians have good furniture. The house of the Indian is as good and sometimes better than that of the "squaw man."

Maj. McLaughlin, Standing Rock: These Indians live chiefly in log cabins, with earth-covered roofs; average dimensions 16 by 24 feet inside, mostly with one window, though some have two. About half the houses have floors, and few have more than one room. Seventeen families have three or more rooms, and about forty families have two rooms. Nearly all have two or more chairs, and about half have tables and bedsteads.

Maj. Murphy, Fort Berthold: The Indian houses here are, nearly without exception, log, with dirt roofs and floors. I hope to be able to put in floors. They are usually about 12 by 14 feet, about one-half with

more than one room and more than one window. Their stock of furniture is usually limited to a bedstead, a table, and sometimes two chairs.

From Devil's Lake we learn that the houses are almost entirely of logs, size 12 by 14 feet, 16 by 18 feet, 18 by 18 feet, and 24 by 40; height, 7 to 9 feet inside. All but fifty with sod roof, seldom more than one or two windows, except in the largest. Government has just provided for putting a shingle roof upon these houses, supplying them with floors and windows, and ceiling them overhead.

The Flandreau Indians live in the best class of Indian houses.

Question 8. In what manner are your Indians married; do they often separate; is there improvement in these respects, say, within the last ten years?

Maj. Foster, Yankton, replies: These Indians are for the most part married legally, though some still take wives in the old Indian fashion. They occasionally separate. There has been a very considerable improvement within the last ten years. The Indians who have married during the past year have been required to take out licenses and marry legally.

Maj. Dixon, Crow Creek and Lower Brulé: My Indians are married either by a clergyman or by the agent. There has been marked improvement during the last ten years in this respect, but there are still occasional separations, for which they are held to strict account before the Indian court.

Maj. Palmer, Cheyenne River: Marriages are all solemnized in church. This is one of the agency rules, and to disobey would make the offender liable to confinement in the guardhouse from thirty to sixty days, and then to be married in church or serve another term of imprisonment. The Indians seldom separate after being married. Plural marriages are no longer tolerated by these Indians.

Agent McLaughlin, Standing Rock: At the present time marriages are consummated either before one of the several missionaries or before the agent. Separations seldom occur now. A wonderful improvement in these respects within the last ten years, the greater part having been within the last five years.

Maj. Murphy, Fort Berthold: But a small portion of these Indians are married according to any religious rite or ceremony. The greater part are married according to whatever may be the method in vogue in the tribe to which they belong. Separations are but few now, except for a just cause. I began a reform in this respect soon after taking charge of the agency, punishing the offending parties, and compelling them to go back and live together. I can truthfully say there has been much improvement in this respect.

Agent Waugh, Devil's Lake: These Indians are now married by regular forms; there are a few cases of separation, but none of divorce.

The Flandreau Indians are nearly all Presbyterians and Episcopalians, and are married according to the rites of those churches.

Question 9. Is there much sexual looseness among your Indians?

Maj. Foster, Yankton, replies: Not much; but young people, just coming to maturity, require to be closely watched for a time to prevent looseness.

Agent Dixon, Crow Creek and Lower Brulé: Their idea of virtue and morality is creditable, and sexual familiarity is looked down upon, and severely punished by the Indian judges.

Agent Palmer, Cheyenne River: The Indians of this reservation are a virtuous people; very few are otherwise. Adultery is severely punished by the Indian judges.

Maj. McLaughlin, Standing Rock: There is very little sexual looseness among these Indians; their morals are of a high order.

Agent Murphy, Fort Berthold: Taking their condition ten years ago and speaking comparatively, there is not much sexual looseness. In fact, I think I can safely say that there is but little more than would be found in a white community numbering as many people.

Major Waugh, Devil's Lake: These Indians are quite free from licentiousness; there are very few cases of bastardy.

The Flandreau Indians rank high in all phases of morality.

Question 10. Is there much thieving?

Agent Foster of Yankton answers No.

Agent Dixon, of Crow Creek and Lower Brulé: Very little.

Agent Palmer, Cheyenne River: These Indians are honest; they do not steal; any kind of property can remain unprotected anywhere on this reservation and an Indian will not touch it, but will care for it if need be.

Agent McLaughlin, Standing Rock: Very little; occasional petty thefts, but of rare occurrence.

Agent Murphy, Fort Berthold: Very little, if any. I have not had a case of it reported.

Agent Waugh, Devil's Lake: No, and seldom a case of assault and battery.

The Flandreau Indians are proverbially honest.

Question 11. Do your Indians live more comfortably than formerly, if so, is it owing to more liberal issues by the Government, or to greater industry and devotion in crops and cattle than formerly?

Major Foster, Yankton, replies: Undoubtedly their comforts are much increased by diligent farming and good crops. There has been no increase in rations. The old and infirm sometimes suffer for want of food in cold weather.

Agent Dixon, Crow Creek and Lower Brulé: They are in more comfortable condition than formerly, which is due to both causes, but principally to their advanced ideas of civilization, greater efforts to better their condition, and better care of articles issued by the Government.

Agent Palmer, Cheyenne River: These Indians live more comfortably than in the past. They have better houses and have learned to economize. There is no longer any game, and they are learning to live on what they get from the Government and what they can get by "rustling" for themselves. They nearly all have money and buy what they need. They sell cattle, horses, wood, hay, and work for pay, for each other, and for the "squaw men." They do all the freighting for the Government, which amounts to \$4,000 or \$5,000 each year.

Agent McLaughlin, Standing Rock: My Indians live much more comfortably. Both the assistance received from the Government and their own industry contribute to this improved condition.

The Fort Berthold, Devil's Lake, and Flandreau Indians possess very much greater comforts than in former years.

Question 12. Is much force necessary to get the children into the schools?

Agent Foster, Yankton, says: With a good many, yes.

Agent Dixon, Crow Creek and Lower Brulé: Few children of school age not in school, but about 3 per cent need the help of the police.

Maj. Palmer, Cheyenne River: Much force is necessary to get some of the children into the schools and to keep them there. Very little trouble is experienced in getting in the children of Christian Indians.

This class do as they are told to do by the agent. The wild pagan Indian always objects, and nothing will awaken his hostility quicker than to tell him that his children must go to school. It is only through fear of punishment, or of having his rations withheld, that any of the children of this class are allowed to be taken to school. It has been the custom with this class to send or take their children to another agency whenever a demand has been made for their children to go to school. Some trouble was experienced this year on account of a report current among the Indians that they could not be compelled to send their children to the school. They had been so informed by the military at Fort Bennett, who said the courts had so decided. Notwithstanding these reports, however, the schools are full for the first time in many years, and not one case of truancy has been reported at the boys' school since it opened.

Maj. McLaughlin, Standing Rock: It requires a great deal of persuasion in all cases, and of coercion in some.

Agent Murphy, Fort Berthold: In the few cases where there is any trouble, the withholding of the rations for one issue usually brings about the desired result.

All the children at Flandreau are in schools, the result of the moral sentiment of the tribe.

Question 13. Are the adult Indians improving in the knowledge and use of English?

Agent Foster, Yankton, answers, "Not much." Agent Dixon, Crow Creek and Lower Brulé, "Rapidly." Maj. McLaughlin, Standing Rock, "Yes, I am confident that many adults are acquiring an understanding knowledge of English, but do not make use of it unless to their interest." Agent Murphy, Fort Berthold, "I notice but little disposition on the part of the adults to acquire the English language." From the Flandreau Indians there is reported a marked improvement.

Question 14. On the whole, what is the average trend among your Indians, morally, socially, and intellectually, as compared with ten years ago?

Agent Foster, Yankton, replies: Morally, no special advancement is noticeable, unless the abandonment of dances is so regarded. The abandonment of dancing comes from the breaking up of camps or villages, occasioned by the building of houses on the allotments, more than from any moral influence. This remark is applicable to their social status also. Intellectually, there is doubtless a great advance within a few years, which advance is still going on.

Agent Dixon, Crow Creek and Lower Brulé: They have made wonderful progress morally and socially, and their progress intellectually has also been good.

Maj. Palmer, Cheyenne River: The trend among these Indians morally has not improved by contact with the whites. Socially, they are unchanged, being social to a fault. Intellectually they are greatly improved. The Christian Indians along the Missouri are a grand people. Many of the half-bloods are good, and some of the "squaw men" may be.

Maj. McLaughlin, Standing Rock: A steady and wholesome advancement is apparent all along the whole line. It is not so noticeable to those who see them daily, except by yearly retrospection; and when compared with ten years ago the improvement is truly wonderful.

Maj. Murphy, Fort Berthold: From what I can gather, I should say that in a moral sense they have improved vastly, but their social ways have changed but little. They still cling to a great many of the old customs. Intellectually they have improved greatly, and as the old

people die off and the rising generation comes to the front, the improvement will be still more marked.

Rev. Hosea Locke: The morals of our Flandreau Indians are very good indeed. They are nearly all church members; ten years has made a great change along all lines. We have ample proof of this.

Question 15. What is the prospect for your Indians to become self-supporting? Can they do this on your reservation by agriculture alone, or chiefly by cattle-raising?

Agent Foster, Yankton, answers: I think they can become self-supporting within fifteen to twenty years. If it were practicable to irrigate this country, which it is claimed can be successfully done, through the use of artesian wells, this would be one of the best producing countries in the world, and agriculture would be very remunerative. As it is now, cattle-raising is the safest business.

Agent Dixon, Crow Creek and Lower Brulé: If provided with a sufficient number of stock-cattle, the majority are now capable of self-support, but it must be by cattle-raising.

Maj. Palmer, Cheyenne River: This is a hard question to answer. If it applies to individuals, many are self-supporting now or ought to be; if it applies to the whole, then I will say they never will become so on this reserve. Take away the rations and annuities from this people and they could not exist. This is not an agricultural country and never will be.

Agent McLaughlin, Standing Rock: It can not be done by agriculture alone, unless we have some climatic change that will bring about more rainfall, and it will require some years of patient instruction and encouragement by cattle-raising; but I believe that eventually they can be made self-supporting if a fixed system is followed. A great obstacle to advancement of the Indians is the too frequent changes of policy pursued.

Maj. Murphy, Fort Berthold: This is grappling with the Indian problem. Of course, with the present small farms operated by these Indians, it would be impossible for them to support themselves. The allotments to these Indians will be made I hope next spring. As soon as each individual head of a family shall have been settled on a farm of his own I intend he shall do what breaking he can each summer until he has a farm which would ordinarily support a farmer. I shall compel this of them, either by withholding their rations and annuity goods, or by any other means in my power. The farms, together with what stock they will get under the new treaty, should, by the time the treaty funds are exhausted, put them in such shape that they will be able to support themselves without the aid of the Government. I really believe with good management this result can be brought about.

Agent Waugh, Devil's Lake: The prospect of self-support is very favorable with good seasons for raising small grain, as the Indians are industrious enough so far as the work is concerned.

Rev. Hosea Locke, concerning Flandreau: These Indians are now self-supporting, excepting the annuities, which are given to them according to an old treaty made with them. They took up homesteads about twenty-two years ago, and are now farming, raising grain, etc.

Question 16. Is the number of Indians connected with your agency increasing from year to year, or otherwise?

Agent Foster, Yankton, says: My Indians are gradually decreasing.

Agent Dixon: My Indians are decreasing.

Agent Palmer, Cheyenne River: My Indians have not increased, nor have they decreased materially within the past few years.

Agent McLaughlin, Standing Rock: Decreasing.

Agent Murphy, Fort Berthold: Each census shows a small decrease among all the tribes here, except the Mandans, who this year show a slight increase.

A small increase is reported at Flandreau for the last two or three years.

Question 17. Is the power and influence of the chiefs declining?

Agent Foster, Yankton, answers: The influence of the chiefs is not very noticeable, except when supported by the agent.

Agent Dixon, Crow Creek and Lower Brulé: Yes. There are no chiefs recognized at this agency. Persons are chosen to represent bands, and are called heads of bands. There are twelve bands at Crow Creek, and twenty-two bands at Lower Brulé.

Agent Palmer: Chiefs are no longer recognized on the Cheyenne River Reservation.

Maj. McLaughlin, Standing Rock: The chiefs are steadily decreasing in influence here. Individuals begin to think and act for themselves in all matters independent of their former chiefs.

Maj. Murphy: On the Fort Berthold Reservation, the Indians still, in a measure, listen to or obey the head men or chiefs; yet it is safe to say that their power and influence is rapidly declining. This is especially true when they try to use power and influence for evil.

From Flandreau comes the report that "Big Eagle, one of our former chiefs, has long since become a citizen of ———, and is now farming for a living."

Question 18. What is the disposition and ability of your Indians to care for their work-horses, cattle, wagons, harness, etc.?

Maj. Foster, Yankton, replies: Equally as good as the average white settler in this country, except in the care of work horses. The Indian will make a saddle or a driving horse of any of the equine species.

Maj. Dixon, Crow Creek and Lower Brulé: Not what it should be; only fair.

Maj. Palmer, Cheyenne River: The Indians take very little care of anything. They let their cattle and horses run at will, only going out to look after them when it is most convenient. As to wagons, harness, and other articles, very little care is taken of them, as it is well known that repairs cost nothing.

Agent McLaughlin, Standing Rock: Their dispositions are very good, but their natural indifference makes them careless, and they require constant prompting in matters of this kind.

Rev. Hosea Locke reports of the Flandreau Indians: On the whole they take very good care of their stock, especially of their horses. There is less of selling or trading off wagons and farm machinery than formerly. They begin to understand the necessity of keeping their property.

#### THE MESSIAH CRAZE.

As to what were the causes which incepted the late Indian revolt, there has been much speculation. Lack of food was doubtless one cause, but, I judge, in not so wide an area as has been supposed. With many it was the unconsidered result of years of discontent; but with the shrewder leaders, who had long contended against progress, it was a desperate stroke of policy. The ghost dance was seized as the most

available factor for rousing and fusing their people and bringing on the contest. I came to Dakota in the wake of the hostilities, when the Messiah craze had lost its vitality.

All depressed peoples have their Messiah. The Pueblo Indians, who look for the coming of Montezuma as their deliverer, are conspicuous examples. In his honor a fire in their *estufas* or shrines is kept burning perpetually, awaiting his advent; and because tradition says he will come with the rising of the sun, the old men, with the dawning of each day, look toward the east, prepared to meet their Saviour, Montezuma.

In 1855 and 1856 a Messiah craze agitated the Indians in eastern Oregon and Washington. An Indian named Smohalla, living near Walula Junction, was a famous dreamer, and as such was much revered by the tribes. One day he dreamed he was in the presence of the Great Spirit, and was told that soon the Messiah would come and deliver the Indians from their abject condition; that when he came the Indians must go forth and kill off the whites; that the dead Indians would rise and join in the contest; that the Indians would be victorious and once more possess the land, and that then the buffalo and deer would be as abundant as formerly. The effect in that region of the promulgation of the dream was a severe war, during which the Indians were badly whipped. Since then the Messiah doctrine has been held quietly by a few, but seldom referred to, save historically, until the spring of 1890.

On the 11th day of March, 1890, three Indians from Dakota, giving their names as Broken Arm, Elk Horn, and Kicks Back, appeared at the Umatilla Agency, in eastern Oregon, where they remained two weeks. They came without official leave, making their way across the country via the Shoshone Agency. They were quiet, well-behaved men, and made no disturbance. They conversed chiefly by signs, not knowing many words in common with the Western Indians. The object of the visit was to learn about "a great man who could bring dead animals to life," endow men with immortality, and perform other like wonderful acts. They heard he was somewhere in that country; and they remained long enough to gather up the old story of the Messiah which infatuated the Oregon Indians thirty-five years before. Fearing lest, if they remained much longer, they might attempt to inaugurate the ghost dance, Agent Morehouse bought tickets, put these Indians on the train, and sent them home.

On their return to Dakota these Indians seem to have come in contact with Sitting Bull, who, seeing material easily utilized to subserve his purposes, seized upon the Messiah idea and started the ghost dances. Sitting Bull was not a chief, as some seem to suppose; but he was a medicine man and a skillful demagogue. At previous periods in his life, when his influence waned, he had seized upon some new expedient for agitation, and thus recovered his preëminence. It was so now. Through his influence the ghost dances spread rapidly and hostilities were commenced.

As early as about the 20th of June the ghost dance commenced among the Sioux attracting little attention at first. A teacher in the Government day school on White Clay Creek in the Pine Ridge Reservation, who was an eye witness, finely described this strange dance. I insert her account for its historical value:

We drove to this spot about 10:30 o'clock on a delightful October day. We came upon tents scattered here and there in low sheltered places, long before reaching the dance ground. Large herds of ponies were feeding on the hillsides, watched over by numberless little urchins lazily sauntering in the sun, or gathering in merry

groups. The Indian always takes his ponies and dogs wherever he goes. Presently we saw over three hundred tents placed in a circle, with a large pine tree in the center, which was covered with strips of cloth of various colors, eagle feathers, stuffed birds, claws, and horns—all offerings to the Great Spirit. The ceremonies had just began. In the center, around the tree, were gathered their medicine men, also those who had been so fortunate as to have had visions, and in them had seen and talked with friends who had died. A company of fifteen had started a chant and were marching abreast, others coming in behind as they marched. After marching around the circle of tents they turned to the center, where many had gathered and were seated on the ground.

I think they wore the ghost shirt or ghost dress for the first time that day. I noticed that these were all new, and were worn by about seventy men and forty women. The wife of a man called Return-from-Scout had seen in a vision that her friends all wore a similar robe, and, on reviving from her trance, she called the women together and they made a great number of the sacred garments. They were of white cotton cloth; the women's dress was cut like their ordinary dress, a loose robe with wide flowing sleeves, painted blue in the neck, in the shape of a three-cornered handkerchief, with moon, stars, birds, etc., interspersed with real feathers, painted on the waist and sleeves. While dancing they wound their shawls about their waists, letting them fall to within 3 inches of the ground, the fringe at the bottom. Some wore beautiful brocades, and others costly shawls given them by fathers, brothers, and husbands who had traveled with Buffalo Bill. In the hair, near the crown, a feather was tied. I noticed an absence of any manner of bead ornaments, and as I knew their vanity and fondness for them, wondered why it was. Upon making inquiries I found they discarded everything they could which was made by white men.

The ghost shirt for the men was made of the same material—shirt and leggings painted in red. Some of the leggings were painted in stripes running up and down, others running around. The shirt around the neck was painted blue, and the whole garment fantastically sprinkled with figures of birds, bows and arrows, sun, moon, and stars, and everything they saw in nature. Down the outside of the sleeve were rows of feathers tied by the quill ends and left to fly in the breeze, and also a row around the neck and up and down the outside of the leggings. I noticed that a number had stuffed birds, squirrel heads, etc., tied in the long hair. The faces of all were painted red with a black half moon on the forehead or on one cheek.

As the crowd gathered about the tree the "high priest," or master of ceremonies, began his address, giving them directions as to his chant and other matters. After he had spoken for about fifteen minutes they arose and formed in a circle. As nearly as I could count there were between three hundred and four hundred persons. One stood directly behind another, each with hands on his neighbor's shoulders. After walking about a few times, chanting, "Father, I come," they stopped marching, but remained in the circle, and set up the most fearful, heart-piercing wails I ever heard—crying, moaning, groaning, and shrieking out their grief, and naming over their departed friends and relatives, at the same time taking up handfuls of dust at their feet, washing their hands in it, and throwing it over their heads. Finally, they raised their eyes to heaven, their hands clasped high above their heads, and stood straight and perfectly still, invoking the power of the Great Spirit to allow them to see and talk with their people who had died. This ceremony lasted about fifteen minutes, when they all sat down where they were and listened to another address, which I did not understand, but which I afterwards learned were words of encouragement and assurance of the coming Messiah.

When they arose again they enlarged the circle by facing toward the center, taking hold of hands, and moving around in the manner of school children in their play of "needle's eye." And now the most intense excitement began. They would go as fast as they could, their heads moving from side to side, their bodies swaying, their arms with hands gripped tightly in their neighbor's, swinging back and forth with all their might. If one, more weak and frail, came near falling, he would be jerked up and into position until tired nature gave way. The ground had been worked and worn by many feet, until the fine flour-like dust lay light and loose to the depth of 2 or 3 inches. The wind, which had increased, would some times take it up, enveloping the dancers and hiding them from view.

In the ring were men, women, and children; the strong and robust, the weak consumptive, and those near to death's door. They believed those who were sick would be cured by joining in the dance and losing consciousness. From the beginning they chanted to a monotonous tune the words—

Father, I come;  
 Mother, I come;  
 Brother, I come;  
 Father, give us back our arrows.

All of which they would repeat over and over again, until first one and then another would break from the ring and stagger away to fall down. One woman fell a few feet from me; she came toward us, her hair flying over her face, which was purple, looking as if the blood must burst through; her hands and arms moving wildly; every breath a pant and a groan; and she fell on her back and went down like a log. I stepped up to her as she lay there motionless, but with every muscle twitching and quivering. She seemed to be perfectly unconscious.

Some of the men and a few of the women would run, stepping high and pawing the air in a frightful manner. Some told me afterwards that they had a sensation as if the ground were rising toward them and would strike them in the face. Others would drop where they stood. One woman fell directly in the ring, and her husband stepped out and stood over her to prevent them from trampling upon her. No one ever disturbed those who fell or took any notice of them except to keep the crowd away.

They kept up their dancing until fully 100 persons were lying unconscious. Then they stopped and seated themselves in a circle, and as each one recovered from his trance he was brought to the center of the ring to relate his experience. Each told his story to a medicine man, and he shouted it to the crowd. Not one in ten claimed that he saw anything. I asked one Indian, a tall, strong fellow, straight as an arrow, what his experience was. He said he saw an eagle coming toward him. It flew round and round, drawing nearer and nearer, until he put out his hand to take it, when it was gone. I asked him what he thought of it. "Big lie," he replied. I found by talking to them that not one in twenty believed in it.

After resting for a time, they would go through the same performance, perhaps three times in a day. They practiced fasting, and every morning those who joined in the dance were obliged to immerse themselves in the creek.

This infatuation was one of the factors which prepared the way for the hostilities.

To the country at large the affair at Pine Ridge seemed very alarming. My study of the Dakotas for six months at the date of this report, much of the time amid the late hostile localities, has led me to wonder why such an ado was ever made. Take away the newspaper sensationalism and the scare is reduced one-half. Take away the spectacular military display, with the theatrical and almost farcical deploying of troops at a cost of \$2,000,000, and we reduce the trouble to a minimum.

Only a small per cent of the 26,000 Dakota Indians were hostile, probably not over 4 per cent; some have estimated them as low as 2 per cent.

Visiting the localities outside the reservation, I was astounded at the stories of timidity, alarm, and hurried flight everywhere related; the vacating of homes, in many cases permanently, and the enormous decline reported in real estate. It was freely declared by prominent gentlemen that "real estate in this region will not recover from the Indian scare in fifteen years." With some of these people, the condition described has become chronic, and the talk is staple—a convenient plea to excite sympathy over imaginary losses. Some white settlers fled to the cities, making great ado; but when the excitement was over and anything was said about returning to the ranches, these refugees replied: "What have we to go back to?" Not that the Indians "had cleaned them out," for no Indians had been within 50 or 75 miles of these homes. Successive failures of crops and general shiftlessness had left little in hand.

At one place, about 20 miles from a reservation of Indians, largely Christian, and separated by the Missouri River, the scare was excessive. A poster was distributed advertising "Safety in the round-house for refugees. On the approach of the hostiles the whistle will sound." One night a family from the country drove in a wagon so furiously that a little boy 6 years old was lost out without being noticed by his parents; but the lad, with characteristic western push, found his way to the city with his scalp unharmed. None of the Indians within 80

miles of the last named city had joined the hostiles, and they were indignant beyond measure at those who fomented the "ghost craze." But these Indians could hardly forgive the distrust of the frightened whites across the river, and said: "We have lived here twenty-five years and have never harmed the whites. We have always been their true friends, and have told them over and again that whenever we heard of any danger threatening them we would let them know, and yet they can not trust us."

In another city, a place of 3,000 inhabitants, 75 miles from any Indians and 150 miles from any "hostiles," word came about 2 o'clock Sunday morning for the militia to be in readiness. The company promptly assembled, were instructed and drilled. In an evening church service one of the pastors broke out in prayer: "O Lord, prepare us for what awaits us. We have just been listening to the sweet sounds of praise, but ere the morning sun we may hear the war whoop of the red man." The effect on children and nervous persons may be imagined. The legislature was in session, and the impression upon that body was such as to lead it to make an appropriation for the benefit of the State militia at the expense of one to the State agricultural fair.

The general effect of the recent hostilities upon the "hostiles" themselves was bad, leaving "their hearts sore and bitter;" and some of the nonhostile class shared somewhat in the same feeling. The memory of the loss of kinfolks and friends rankled, and was a source of long discontent, which would easily have broken out if only a match had been applied. They were in a state of unrest and were reluctant to commence farming. Houses and property had been plundered by the "hostiles" and there was much discouragement and unwillingness to try to fit up the homes again, lest another outbreak should turn their work to naught. Some turbulent spirits, upon whose future no one would risk a prediction, sullenly accepted the situation. This class was not numerous. The Christian Indians, who almost to a man stood aloof from the hostilities, constituted a large part of the Indian population and were disgusted at the action of the "hostiles."

In May and June I traveled by wagon 550 miles on the Pine Ridge and Rosebud reservations, talking freely with farmers, police, missionaries, teachers, and Indians, questioning closely, but could discover no ground for apprehending future trouble. The ghost dances subsided several weeks before, even in the outlying districts. It was then said that several of the younger Indians had fixed upon the 4th of July as the time beyond which they would cease to look for the Messiah. In the meantime a few Indians were watching from the hilltops, in the belief that when the Messiah came the hills and mountains would move—a signal that then the Indians should act.

On the Rosebud Reservation, about May 10, certain superstitious notions were current. It was said that each night an impenetrable shadow of intense blackness, about 2 feet thick, passed over the earth from west to east. In the east a star of great magnitude and brilliancy was reported to flicker with indescribable colors and marvelous beauty. From behind each star and the moon, the face of a person was seen peeping at the "faithful." This wonderful state of affairs was said to continue from about midnight till dawn. When light in the east heralded the approach of day, the shadow rapidly passed back to the west, the wondrous star darted hither and thither and sank below the horizon, and inhabitants of the starry world retired into the deep mystery from whence they came. Each night the shadow was reported to advance farther to the

eastward than on the preceding night. These superstitious Indians held the opinion that when this shadow, the type of the coming new earth, reached the Atlantic, then the new earth would suddenly come in all its grandeur and destructiveness. These marvelous phenomena were invisible to those who had not been consecrated by Short Bull and his apostles. They held that none but the faithful were to inhabit the new earth, toward the coming of which their minds were ardently bent. These are specimen superstitions connected with the prevalent "craze."

Associated with these superstitions is the peculiar organization among the Indians in some sections through which their strange notions have been circulated and made effective. Each Indian village or camp is composed of warriors, who have a sort of feudal chief, an autocrat in his band. No man lives in his village who is not loyal to him. He has warriors who belong to the dancing clubs. These clubs are ostensibly social in character, but they are the means by which the chiefs maintain control and summon their men together at a moment's notice. A chief becomes such in the fullest sense by his prowess in battle. What he says is accepted as law. This feudal chief system, together with the cunning of the medicine men, lies at the bottom of the dangerous elements among the Indians. By means of this system and the ghost craze, Sitting Bull succeeded in widely arousing and concentrating many Indians in Dakota against the Government. This system is fast passing away.

It has been said that the late "campaigns" have not made the desired impression upon the Indians; that there was "a theatrical display of force without any adequate use of it;" that "the policy of conciliation seems to have been adopted at an inappropriate moment, and bids fair to be but half carried out;" that there has been "ineffectual bullying and weak temporizing;" that "after all the Indian has not been successfully conciliated," "nor in any sense conquered;" and that sooner or later the result will be "serious trouble."

There are some half truths in these statements, but the situation, as I studied it for several months, does not justify these sweeping assertions. A few things should be said. On the Rosebud Reservation the trouble was instigated by a few leaders, nonprogressive Indians, who led away to Pine Ridge some 1,500 Indians. So infatuated were they that when they left Rosebud they destroyed the property in their homes, smashing stoves, etc., and other Indians remaining at home continued the work of destruction, tearing down houses, etc. Those returning found the condition different from what they expected. They became sullen, discontented, talked of revenge, boasted of bravery and what they would yet do. But these leaders have lost much of their former influence; they have a small following and do much grumbling; they persist in remaining on the barren sandhills where there are no inducements to work, discouraging and sometimes threatening the lives of those who attempt to raise crops. Had these leaders been arrested and removed, the welfare of the reservation would have been promoted.

During these troublous times all the camp day schools were closed, four day schoolhouses were burned, and others pillaged. All the camp schools were closed for three months, some for four months, and some remained closed till the end of the year, a part of the latter owing to the scattering of the Indians, and others owing to the destruction of the school edifices.

## RELIGIOUS FACTORS.

I am certain that citizens who broadly study the Indian problem will be interested to learn to what extent the churches of the United States are entering into the work of elevating the Indians, and with what success. I confine this statement to the Indians in the Dakotas, who are recently brought into such conspicuous prominence. It is not long ago that "the fierce and intractable Dakotas," as they were then called, were wholly pagan, and this Christian country had within easy reach of some of its largest cities the darkest and densest paganism and savagery in the world. I have been surprised to learn to what an extent the work of Christianizing the Dakota Indians has progressed, and I know that many will be gratified with the information I now give. It has been gleaned from church authorities, and I only wish I could make the statement more full and complete.

The Roman Catholic Church has the following missions in the Dakotas:

Belcourt—Chippewa and Cree Indians; 2 priests.  
 Devil's Lake Agency—3 priests, 2 boarding and 1 day schools, 15 teachers and employés.  
 Fort Berthold Agency—1 priest, 1 school with 5 employés.  
 Standing Rock Agency—2 boarding schools, 25 employés.  
 Pine Ridge Agency—2 priests, 1 boarding school, 20 employés.  
 Rosebud Agency—3 priests, 1 boarding school, 15 employés.  
 Crow Creek Agency (Stephan)—3 priests, 1 boarding school, 12 employés.  
 Totals—Missions, 7; priests, 17; schools, 8; employés, 92; total Roman Catholic Indian population, 4,740; churches, 12; pupils, 841; baptisms, adults 743, children 1,350.

NOTE.—The above figures were taken from Hoffman's Roman Catholic Year Book for 1891.

The Presbyterian Church has the following exhibit, furnished by one of its oldest ministers. Its missions are situated in the Yankton, Crow Creek and Lower Brulé, Sisseton, and Devil's Lake agencies and at Flaudreau:

Native communicants .....	1,104
Native members of Sabbath schools .....	736
Native churches organized .....	15
Native pastors installed over churches .....	8
Stated supplies in charge .....	7
Added on profession of faith last year .....	120
Number of deacons .....	213
Number of ruling elders .....	44
Number of chapels .....	15

Of the 1,104 communicants only one was known to have been led away by the ghost dance.

Judging from the above figures of communicants, the Indian adherents of the Presbyterian Church in the Dakotas must be not far from 3,000.

Congregational (A. M. A.), missions are as follows:

Cheyenne River Agency—9 stations, 25 laborers, 1 school.  
 Standing Rock Agency—5 stations, 13 laborers.  
 Rosebud Agency—3 stations, 6 laborers.  
 Fort Berthold Agency—5 stations, 12 laborers, 1 school.  
 Totals—4 missions; 7 ministers (4 at Cheyenne River and 1 at each of the other places); 22 stations; 56 laborers and 2 schools. Communicants not known.

## The Protestant Episcopal Church has the following:

Missions.	Churches.	Chapels.	Stations.	Clergy.	Deacons.	Catechists.
Cheyenne River Agency.....	1	6	1	1	1	6
Crow Creek and Lower Brulé.....	1	1	7	1	1	7
Pine Ridge Agency.....	1	6	3	1	1	9
Rosebud Agency.....	1	6	3	1	3	4
Sisseton Agency.....	1	2	.....	1	.....	3
Standing Rock Agency.....	1	.....	1	1	1	1
Yankton Agency.....	1	2	.....	1	1	2
Yanktonais.....	1	2	2	1	1	3
Flandreau.....	1	.....	.....	1	.....	2
Total, 9 missions.....	9	25	17	9	8	37

Communicants.....	1,712
Indian contributions, 1890.....	\$2,575
Average church attendance.....	2,609
Church sittings.....	4,672
Church property.....	\$61,246
Total population Episcopal Indians.....	6,200

It is not a wild estimate to say that probably there are from 10,500 to 11,000 Indian adherents of the Protestant Episcopal, Presbyterian, and Congregational churches in the Dakotas.

The Indian population has become a subject of special interest to the Dakota churches. It was at first a question of responsibility with the churches, because of their proximity to great palpable needs; but it is now nearer to the hearts of the people, for the Episcopalians, Congregationalists, Presbyterians, and Roman Catholics have absorbed large numbers of red men into their ecclesiastical organizations, associations, convocations, presbyteries, congresses, and dioceses, which advance very materially the stages of progress towards civilization. In these gatherings there have been two conspicuous figures, Red Cloud and Ehanamani, both early trained on the warpath, active in war scenes, and long supposed to be incorrigibles. The latter has been for a score of years, pastor of one of the oldest Indian churches, and has conspicuously demonstrated the influence of Christianity over the fierce Dakota heart.

Many faithful missionaries patiently labored year after year, as a kind of fire department, quenching the flames of hostility and paganism. But little more, seemingly, could then be done by way of planting the principles of a better religion. Occasionally some unlooked-for circumstance has opened the way for deeper heart culture.

This was illustrated by Rev. T. L. Riggs, of Oahe, before the South Dakota Association, a few weeks ago, who cited one small circumstance which resulted in fruitage out of the late hostilities seemingly so disastrous to Indian progress. Some weeks after the death of Sitting Bull and the desertion of his village, Mr. Riggs, with several Indians, went to bury the dead of that desolate spot. The impression made by that generous Christian act upon the Indians of that neighborhood was so great, that they expressed a desire for a religion which prompts to such humane acts, and have since been asking for teachers and preachers.

The Indian women, too, naturally much more conservative than the men, are beginning to appreciate the benefits of Christianity, and desire to share them with those people not yet so highly favored. Various women's societies have been organized, in all the religious, bodies to raise money for the support of native preachers among their less fortunate brothers and sisters. Sewing circles are formed and conducted like similar circles among white women; quilts are made, and clothing, embroidery, and curiosities, by the sale of which, and by personal con-

tributions, quite large sums of money are raised for the support of native pastors and for other benevolences.

During the past summer there were held three large ecclesiastical assemblages of the Christianized Dakota Indians, one by the Roman Catholic Church, another by the Protestant Episcopal Church, and another by the Presbyterian Church.

On the 4th of July last, "the First Catholic Indian Congress among the Sioux nation" was held at Standing Rock Agency, with representatives of Catholic Indians from the various Dakota reservations—100 families from Devil's Lake, 20 from Cheyenne River, about the same number from Rosebud, and some from other localities. Chief Red Cloud was prevented from coming by old age and sickness. Maj. James McLaughlin, agent, made fine arrangements for their accommodation. Right Rev. Bishop M. Marty, of South Dakota, and Right Rev. Bishop J. Shanley presided, and gave direction to the exercises during the four-days' session. Eight missionaries were present and participated. The visiting Indians enjoyed the full benefit of all the privileges and favors the honorable Commissioner of Indian Affairs had granted for the occasion.

Fourth of July was celebrated by appropriate addresses from leading Indians and Bishop Marty. The Indians spoke freely of their experiences in the past, and how they came to abandon the ways of savagery and paganism by hearing the gospel message. Resolutions were passed expressing love and devotion to our country, and a determination to endeavor to become worthy citizens of the Republic, contributing their share to its greatness and prosperity.

Fully 800 persons were present at the exercises, and 224 were "confirmed," some of them followers of the late Sitting Bull. They had revolted on account of the failure of their leader's promise of the Indian Messiah, and become zealous neophytes of the Christian faith. Indian women, presidents of the various local women's circles, spoke eloquently of their work at their reservations.

The second of these large gatherings comprised the Presbyterian Indians and their missionaries, and was what the Indians call the Paya Owohdake (united talk). It met at Yankton Agency, S. Dak., September 17 to 20. Hundreds of Indians came hundreds of miles by wagon, and many by railroad. The assembly hall was a large Government warehouse, that was made to seat comfortably 690 people. As many as a thousand were gathered at one time. The walls and ceiling above the speaker's platform were decorated with flags and asparagus plumes, and directly back of the chairman's seat hung a picture of Dr. Thomas S. Williamson.

The practical character and trend of the meeting will be seen from the following topics which were discussed during the two and a half days of the convention:

- How to prevent the people from being led away by false religions.
- Can a church live and prosper without growth in faith and good works?
- Should mourners refrain from attending public worship?
- The proper uses which the Dakotas should make of money annuities.
- What courses of instruction should we encourage our children to pursue?
- How to make preparation for the Sabbath.
- What means can be taken to stay the decrease in the Indian population?

The last topic was proposed by the Indians themselves, and quite intelligently discussed. They emphasized hygienic and moral life and education, in order to enable them to cope with all the new and rapidly changing conditions of existence.

During every evening but one, the Young Men's Christian Association held sway. These Indian associations have become a power in the land of the Dakotas. Saturday afternoon, the women's missionary meeting fully occupied the large assembly hall. The last great missionary meeting of the occasion was the anniversary of the native missionary society organized in 1875, in which year the Indian churches contributed \$249 for mission purposes. During the year just ended this Indian Board of Missions received \$1,386 from the Indian churches and kept four Indian missionaries in the field.

The progress has been great, but the encouraging feature is that the advance is so steady and sound.

The Annual Protestant Episcopal Convocation of Indians for South Dakota was held on the Rosebud Reservation August 28 to 31. More than 2,000 Indians, it was estimated, from all the South Dakota reservations, and from Santee and Standing Rock, came with teams across the prairies and settled down upon a broad plain on Antelope Creek. They formed their tepees, 470 in number, in a circle half a mile in diameter, with wagons in the rear, and 2,000 to 3,000 horses feeding upon the plains beyond. Their beloved Bishop Hare, with clergy, deacons, and catechists, was present, holding religious services in a large booth constructed in the center. All the Indians were in citizen's dress, and, as a whole, impressed me as evincing much intelligence, high character, and other evidences of progress in civilization.

The last day of the convocation was devoted to business affairs, and the meeting of the Woman's Auxiliary Missionary Board was a special attraction, and was thus reported:

As the bishop would call for reports from the different churches and chapels, the woman who made the report stepped forward and placed the amount of money her society had gathered, the past year, on the table before the bishop and other officers of the society. When all was gathered in, the money was placed in a large, beautifully wrought bead bag, the work of skillful Indian women. The offerings from the different societies ranged from \$13 to \$87, the total amounting to upwards of \$1,000. This is a very good showing coming from "the heathen." This is all the work of the Indian women, and the delegates representing the different societies were Indian women. Many of them made quite lengthy addresses, and by the manner in which they addressed the hundreds of interested spectators it would seem that Indian women, as well as the men, possessed the powers of oratory.

In the evening vesper service closed the day's work. The next morning the hundreds of white tents were taken down, the people stowed themselves in their conveyances, and started on their homeward journey. Lieutenant Dravoe brought the troop of Indian cavalry, many of whom are Episcopal Indians, from Fort Niobrara, that they might enjoy an outing. They encamped close by the convocation, much to the joy of their friends; and thus closed a most interesting event in the lives of the Christian Indians of South Dakota.

As to how far intelligent Christian ideas have come to pervade Indian minds there is much skepticism in some quarters. Undoubtedly a considerable residuum of old pagan notions long adhere to them, as in the case of all other people coming out of paganism. A distinct crucial test of the effects of Christian civilization among the Dakotas, I am glad to cite, as exhibited during the period of the late hostilities. It shows very clearly the benefits which are accruing to the Government from its large expenditures among these Indians for their education and civilization. The well-authenticated statement is made by one in the midst of the late troubles "that in no Indian village where there has been active church work for any length of time did any large number join the hostiles." In many cases it is said that the persons unfriendly to mission work were the only ones to go on the warpath.

**A missionary writes:**

To many of our native Christians it was a severe test, but in every case they came out on the right side. For example: Among our members at —— church, one man had a pass to leave Rosebud and go to Pine Ridge; when about half way from home he was overtaken by the fleeing "ghost-dancers and hostiles." They tried to have him join them, but he turned round and immediately came home. One young woman refused to join the hostiles with her husband, and stayed at home alone. Another family stayed at home, while the parents, brothers, and sisters of both husband and wife went away. There are other cases as marked as these, where the native Christians remained faithful.

**One Indian wrote:**

While the heathen Indians were in constant terror, by day and by night, the Christian Indians slept quietly through the night, without alarm or fear.

While the period of the Indian trouble was very disheartening to the laborers, in both educational and Christian lines of effort, it has, nevertheless, become exceedingly interesting, in the proofs it has afforded that Indians can become, under proper training, industrious, intelligent, reliable, Christian men and women.

Another advantage coming out of the late troubles is a growing sentiment against the old degrading Indian dances. Indian agents can more easily than formerly carry out measures for their suppression. The Grand River Indians, some time ago, had got along without the dance for months, and turned their attention more fully to the school and the church. If this state of things can continue, much good will result from the Indian trouble, and a great hindrance to educational, mission, and civilization work will be removed. On the whole, the indications are hopeful. Of course such a people is not to be born either into the kingdom of God or into an enlightened citizenship in a day, nor can the darkness of long centuries be dissipated in a single year.

While the Government can not organically promote Christianity, it can, nevertheless, open the way for the churches, remove obstacles, and encourage them, irrespective of sects, in their work. This is important, because the Indians are thoroughly controlled in all their ideas and customs by their pagan notions. It is surprising to how many very common customs these old beliefs apply and how firmly they are held by them. Their pagan beliefs therefore constitute the chief basis of life, so that little change is possible, except through a change in religion. Pagan Indians have a peculiar religious philosophy which so powerfully, shapes their lives in the wrong direction that only the inculcations of the true religion can set them right. The hope of the Indian's regeneration, therefore, lies not in education alone, nor in civilization alone, but in Christianity united with these great forces.

Respectfully submitted.

DANIEL DORCHESTER,  
*Superintendent Indian Schools.*

The COMMISSIONER OF INDIAN AFFAIRS.

## MORAL TRAINING IN INDIAN SCHOOLS.

[A paper read by D. Dorchester, superintendent of Indian schools, at Lawrence, Kans., December 23, 1891, before a conference of Government Indian school officials.]

The moral training in Indian schools will depend—

*First.*—Upon the moral environment of the schools.

This principle will apply alike to schools on Indian reservations and to those outside of reservations. The variations, if any, will be only in degree.

Some nonreservation schools are in communities where the moral sentiment is very low and the moral influence weak. I refer to frontier towns and cities, where real estate schemes and scrambles, projects for opening up and grabbing Indian lands, and the idea of using the Indian so as to make money out of him—"that is all he is good for"—permeates the popular thought. Such communities have no faith in the high moral possibilities of the Indian, and care less. The churches in such places have only a minimum of religious power. Only the most meager estimates of the importance of education exist, and the educational standard is very low. The atmosphere of such communities is not bracing and helpful to Indian schools, and the type of civilization is bad.

The moral training in such a school is very difficult, and will involve a larger outlay of power than on many of the Indian reservations. Far better than in the frontier towns I have described is the moral environment directly on the reservations of Standing Rock, Cheyenne River, Devil's Lake, Yankton, Crow Creek, Cœur D'Alene, Tulalip, Skokomish, Chehalis, Yakima, Yainax, Pima, and Papago.

Other reservations and reservation schools are so near to towns and cities in which intoxicants and other evil elements abound—like Umatilla close to Pendleton, Puyallup to Tacoma, Lemhi to Whatcom, Jamestown and Port Gamble to Port Townsend, Lapwai to Lewistown, Pyramid Lake to Wadsworth, Yuma to Yuma City, and the Indian missions in California to like places—that the evil environments work powerfully against all efforts toward moral improvement.

The evil environment directly around schools on the reservations has often been a serious impediment to moral training. I refer to agency officials and employés. I will mention some cases in which the moral training has been difficult:

When an Indian agent celebrated his coming to an agency and sought to ingratiate himself into the favor of the Indians by joining personally in their pagan dances till late at night; when the agent spent many evenings at the post trader's store, acting pantomimes and telling low stories; when the agent put forth no positive efforts towards getting or keeping the children in the schools; when an agent was so anxious to get a friend into the superintendency of the school that he gave only a quasi support to the existing superintendent, and pursued a course calculated to divide the school force against him; when an agent had such low views of the comfort and necessities of the pupils that he reduced the drawing of supplies to a minimum, or allowed the reduction by "the issue clerk" until the table crockery was little better than that of paupers in the most straightened circumstances; when an agent indulged in the most foul-mouthed obscenity and profanity in the presence of both whites and Indians, children and adults; when an agent openly and loudly declared against all stringent discipline in the school and boasted that he had no need for a lockup, unless, perhaps, for meddling Government officials; when an agent condoned improper sexual relations among Indian pupils, occurring in consequence of the relaxing of the regulations at his behest, by saying, "O, that's only human nature;" when an agent stood in fear of the nonprogressive Indians, yielded passively to their whims, exerted no power to lead or enforce progress, and allowed his police to disregard his orders with impunity; when an agent was so wanting in moral and executive ability that he could keep the pupils in attendance upon the school only by erecting a 12-foot board fence around the premises; when an Indian agent allowed girls of 15 or 16 years of age, year after year, to drop out of school and pursue the business of prostitution among the soldiers located at the agency; when Government inspectors and special agents indulged in terrific oaths while visiting the agency; when the agency clerk could not go to a neighboring town and return sober; when an "issue clerk" in his office cursed Christian Indians with round oaths; when

agents and school superintendents boasted that they "knew how to fix inspectors and special agents"—with rich dinners and fine entertainments long protracted; when the purest men and women in the school were vilely slandered and worried into resigning their positions in disgust by worthless agency officials seeking to make places for their friends; when employes, anxious to raise the standard of school administration, standing up with becoming firmness for better things, were removed from their places under charge of being "troublesome elements;" and when agents and superintendents could not nominate school employes or recommend the removal of unworthy ones except at the will of politicians.

These are some of the environments which have made the moral training of Indian schools difficult. A part of these ill conditions have belonged to the schools on reservations and a part to schools off reservations. Bonded schools have not been free from these evils, nor contract schools. The much boasted harmony of the latter may be heavily discounted.

The cases I have cited are not imaginary ones. Though, thank God, they belong to the past, yet they have projected their shadows over into the last two years. I refer to them because a large residuum of evil has flowed from them, in some cases traceable down through several years. The evil seeds were sown in so rich a soil that they have not yet been wholly exterminated. The confidence of Indians in those sent by Government to civilize them has often been fatally impaired. In some cases it was a herculean task to do much to lift the schools. The odds were heavily against the workers, and they were compelled to study the grace of quiet endurance, or else to conclude that quiet endurance under such circumstances was not a grace, and resign their positions in disgust.

The moral training of Indian schools depends more upon the moral environment than upon any other one thing.

*Second.*—The moral training of Indian schools depends also very largely upon the moral character of the school force.

I do not look for paragons of perfection. Some slight blemishes and eccentricities are inseparable from human nature. Nevertheless, I shall be understood when I say that the presence of an unworthy superintendent, matron, teacher, or other employe, will militate against the effective moral training of the pupils.

For instance, a superintendent who is profane, who uses tobacco, who is fractious or violent in temper, who spends much time in hunting, who is unchaste or untruthful, can not impart good moral training. There were formerly superintendents and industrial teachers who used profane language freely among the pupils, and, in one of my first visits, I found an assistant matron who swore the roundest oaths among the girls. She was quickly removed. Though a year and a half have elapsed since the last example, it is still quoted by Indian boys and girls, who say, "White woman swear; why can't we?"

When half the school force is warring against the other half, how much moral training can be expected? When the matron and the industrial teacher set at naught the superintendent, and "run the school," with the support of the agent, what moral elevation can be expected of the pupils? When an Indian laundress and Indian assistant, with whom the large girls are in close contact in their work, were dissolute, but were long retained by the agent, under the plea of smaller salaries and the obligation to employ Indian help, what could be said of the moral atmosphere of the school?

Shall I proceed to mention the case of a teacher who gave whisky suppers at the hotel near the school, and who felt sorely grieved and persecuted when removed from the service? Shall I ask how can a superintendent who is exceedingly jealous, peevish, and fretful under the slightest provocation, and often under only imaginary provocations, administer moral training? Or shall I attempt to solve the dubious problem how a superintendent who openly discards any recognition of Christianity can impart moral culture? Or shall I start the inquiry how a superintendent who lights his cigar as soon as he passes beyond the school grounds and smokes all over the reservation can look his pupils in the face and presume to inculcate moral training?

The cold selfish employe who scouts the idea of being a missionary, even of civilization, and frankly says he is in the service only for the money he can get out of it, is not a moral force in any school. There are, however, interesting examples of men and women who, prompted simply by self-interest, entered the school service; but, when they came to live face to face with the painful necessities of an Indian reservation, felt a wonderful resurrection of their better natures and became zealous missionaries of the best type of civilization.

Transparent purity, honesty, and sincere devotion to the good of the Indian children are needful qualities in those who would effectively train these young wards of the nation into higher types of living. Indian children are noted for their quick discernment of character. They seldom fail to detect shams. The silent thoughtful Indian pupil, sometimes called stolid and sullen, is often reading character and detecting foibles which undermine confidence in the instructor.

Character is a wonderful thing—one of the most potential elements in the world. In the teacher it gives untold potency to spoken words. There is a principle recognized in gunnery which I may not express with exact accuracy, but which is about as follows: A gun must be a thousand times heavier than the projectile. The words uttered by a man of light flippant character, however wise and true in themselves or eloquently expressed, produce little effect for good; but the plain quiet utterance of a person of clear weighty character sink deeply into the heart.

*Third.*—The moral training of an Indian school depends largely upon the character of the means used and how they are used.

I would not say that physical inflictions and privations do not exert a moral influence. They may need to be resorted to in extreme cases—cases of great perversity. I do not believe, however, that the element of perversity is as prominent in Indian children as in white children. An Indian school can be more easily managed than a white school. Some think the contrary, because they have had considerable difficulty in managing Indian pupils, and claim they have been obliged to resort to severe measures. Such persons should pause, and inquire whether they may not have been more at fault than the pupils, by unwise steps needlessly precipitating a condition of stout resistance.

These Indian children have only a slight familiarity with our language and do not readily catch the full import of what we say. Even when they have picked up some English words and begun to use them, they often have only a slight conception of the real meaning. How often are lessons read in the classes, sometimes quite glibly, which the pupils fail to comprehend. Some teachers do not seem to appreciate this fact, and when the Indian girl or boy fails to promptly respond to their commands, in a moment of impatience, the pupil is driven to an attitude of stout resistance, for which the superintendent or teacher is alone to blame. But, it is said, "He is an incorrigible fellow," and a severe penalty is administered. This is not good moral training. Every person familiar with teams knows that some drivers never have balky horses and that other drivers always have them. Generally it is the driver who is balky, and not the horse. So some teachers and superintendents in the Indian schools are more perverse than the pupils.

*Fourth.*—In order to the best moral training, the moral powers should be intelligently developed.

The best moral action is based upon intelligent moral convictions. The mind should be clarified and the conscience developed. Pupils should be trained to the habit of acting upon convictions of right and duty. It is astonishing how easily Indian children, when properly approached, respond to moral appeals. Training on these points should not be occasional, but constant, as opportunity opens, by superintendents, matrons, teachers, industrial teachers, seamstresses, and indeed by all employés. The method is the old one, "line upon line." The beneficiaries of these labors are just out of the densest ignorance and superstitions of barbarism and paganism, an inheritance of centuries. What an opportunity to cast new seed into fresh soil and cherish the germs until they become strong and choke out the old weeds. But much enriching of the soil with moral and religious influences and constant cropping of the old growths will be necessary. But the more beautiful flora of a new creation will be the result.

God has nowhere invested man with the prerogative of creating the slightest object in the material universe; but in the moral realm, which infinitely exceeds the material world in importance and in grandeur, he has made it our privilege to develop that highest and most enduring of all potencies, character.

Such training is necessary to the investiture of the Indian pupils with the elements of the best civilization and citizenship. In this training all Indian school employés should participate *con amore*.

*Fifth.*—Such moral training must have a religious basis. I do not say a sectarian basis, a Roman Catholic basis or a Protestant basis. I speak more broadly—a religious basis. There is a Christianity that is broader than Protestantism, or than Romanism, or than all sects; and, in its breadth, it loses none of its positiveness. Because it is broad, it is not therefore latitudinarian; for latitudinarianism ties up to nothing. I detest that condition. The broad Christianity to which I refer is full of roots which strike down into eternal verities and draw nutriment from the richest elements of the divine spiritual kingdom; and the flora and the fruitage which it produces, in renewed lives, infinitely transcend, in beauty and sweetness, the sour and shriveled products of a cold sectarianism.

This broadest Christianity comprises the deepest, the highest, the acutest, and the most influential elements of all religion that is worthy of the name. It holds strictly to accountability to God and loyalty to Christ; not a dogmatic Christ, but the Christ of the New Testament, is the test. It hallows the moral and religious nature of man. It inspires self-sacrificing devotion to humanity; and charity, chastity, honesty, and love for one's neighbor are its most constantly exhibited fruits. I pity the man or the woman who can not find out and inculcate the great, broad, positive elements of true religion, and rise superior to sectarian narrowness, in the training of Indian pupils.

Here is an enduring basis for moral training. In the case of Indian children, a Christian basis for such training is particularly necessary, from the fact that the barbarism, the polygamy, the abject subjection of woman, the dance rites, the medicine superstition, and many other evils common among Indian races are founded on their old pagan philosophy. These notions, so prolific of evil, will not be effectually removed until the great essential truths of Christianity are implanted in Indian minds.

Let the Ten Commandments be taught and repeated daily in all our schools; the Beatitudes and prominent psalms of praise also. Let the parable of the prodigal son be frequently recommended for reading or recitation, and I care not what version of the Bible you use. And let us recognize and inculcate the essence of Christianity as concentrated in this beautiful "collect." "Oh, my God, I love Thee above all things, with my whole heart and soul, because Thou art infinitely good and worthy of all love; I also love my neighbor as myself, for the love of Thee; I forgive all who have injured me and ask pardon of all whom I have injured. Amen."

### SUGGESTIONS FROM THE FIELD.\*

[By Mrs. Merial A. Dorchester, special agent Indian school service.]

*To the Honorable Superintendent of Indian Schools:*

It is very clear to those most closely studying the "Indian problem" that the elevation of the women is, to a greater degree than many realize, the key to the situation. That the men are from 15 to 25 years in advance of the women is a no more freely admitted fact than that the children start from the plane of the mother rather than from that of the father. Therefore the great work of the present is to reach and lift the women and the home.

For years the appointment of field matrons as helpers for the women, similar to the reservation farmers as helpers for the men, has been advocated. It is a matter of congratulation that the last Congress took advanced action, and that during this fiscal year there will be three field matrons at work among the tribes of the United States. It is hoped the number will be greatly increased. Without some prospect of help for the mothers, many toilers have felt there was little encouragement to insist upon more training for the daughters; but now a better teaching of home duties must be given the girls if we are to gather a respectable harvest from the field matrons' sowing.

One agent says about field matrons:

"I regard the position of field matron as of the greatest importance in the matter of the education of the Indians. Civilizing influences commenced at home are of infinitely more value than the little knowledge that is grafted upon the savage stock. The virtues of cleanliness, thrift, and economy can be best learned in early youth, and, so learned, are of enduring influence in the forming of character. The rations issued are ample if economy could be used in preparing them for food. In actual practice the Indian is alternately in a condition of feasting and famishing, and the proper use of vegetables is almost unknown to him.

"As many as 12 good, practical women could be employed on this reservation to great advantage in the prosecution of this work, and money could not be expended to better advantage as a means of practical education. The effect of it would be far-reaching and of great value as a means of making the next generation of Indians self-supporting."

Besides these field matrons appointed by the Government, there are women missionaries regularly appointed by missionary societies, and at least two self-supporting women who have done missionary work on two reservations during the last year.

There is no work which seems to bring quicker returns than this labor among the homes and for the Indian women. And when the laborer is a sympathetic woman, able to reach the hearts and with tact enough to conceal the matron behind the woman, lasting good will be the result of her teaching.

But my work has been among the schools, and I wish to speak of the ways in which the girls are being helped to become the good mothers of the next generation and to give some hints as to how they may be more efficiently encouraged to make the most of themselves.

Two years ago I was ready to say, "Open every door of pleasure and profit to the girls in the schools as freely as you do to the boys. Teach the girls telegraphy, shorthand, typewriting, bookkeeping, and fit them to go into offices, stores, shops,

\* This is the substance of two papers presented by Mrs. Dorchester to the conference of Government Indian school officials, at Lawrence, Kans., December 23 and 24, 1891.

etc." I knew they could master these studies and was proud of their intellectual strength. Experience sometimes brings wisdom. I am now more thoroughly acquainted with these girls, I understand them better, and my love and respect has grown with the years and strengthened with the acquaintance; but the truth borne into my soul by the visit to every school and hardened by every reservation experience is that these girls, sweet, affectionate, and attractive as they surely are, follow many years behind their brothers.

Now I can only say, teach them every industry which may be prosecuted at their homes, but do not shove them out of the home nest, poor and unsheltered as it may be. Only a few—mostly mixed bloods of the better type, or girls who have had especially good training from individual friends—are fitted to meet the outside life.

I have yet to find the Indian worker of much experience who does not acknowledge that the Indian men are far beyond the Indian women in intelligent industry and mental training.

Coming directly to the schools, I am glad to say that on nearly all lines of work there has been great progress since the last annual report. As a whole, the employes are more efficient, the supplies are better, the environments of the schools are more encouraging, and the children are accordingly more appreciative.

In the matter of food there has been much improvement during the time I have been in the service. It is now more than two years since I found a wagonload of rotten hams at one school; and wormy fruit by the half ton is an item of the past, as is also rancid lard. But while this is all true the cooking and serving at many schools is still far from appetizing. At present the greatest need in the kitchen is a better-paid cook. It is as necessary to have an intelligent woman, with manners above reproach, in the kitchen as in the class room. The girls are less upon their dignity in the kitchen than elsewhere, therefore more impressible, and many of the large girls spend more time cooking than studying books. In some instances the good influences of the teachers and matrons are wholly dissipated in the kitchen.

In serving the food there is need of more crockery, more help, and more instruction. Sometimes the warehouse is quite well filled with crockery, but the agent is saving, lest Uncle Sam should be crippled. In one dining room where coffee, soup, and sirup were all on the menu for the same meal, each was served in the same-sized large water pitcher, and a boy who wished for soup tipped two or three pitchers before he got the right one. While soups are a favorite dish at many schools, very few dining rooms have soup plates, and soup and sirup are often eaten from the same shallow plate. At many schools no saucers are given with a cup of coffee, because it saves work and there are so few workers.

In a warehouse, not long ago, I saw a large number of tumblers, and asked why they were not used in the dining room. The reply was, "The children drink out of coffee cups." Yes, and they might drink water, milk, or coffee out of bowls, three girls to one bowl, as I have seen them drink; but why not give them tumblers? Tumblers are not a great luxury, and the Government is willing to furnish a supply.

I know of but one Government school where napkins are used, and they were put in years ago. When I ask that such table linen be introduced the reply is, "We are not allowed napkins; I can not carry them on my property list." One superintendent is solving this problem by making the napkins out of brown crash and carrying them as towels. The older pupils are delighted in having their table like the "mess" table, and when some individual butter plates were offered their joy and pride in the school were increased perceptibly. A napkin, a tumbler, or a plate may not be so essential as a reading book; or, it may be—that depends upon how each is used. But if the customs of civilized life are taught the pupils they certainly give them more self-respect and more confidence. And what qualities do they so much lack? The best-behaved pupils I know are in a school where each one uses a tumbler and a napkin at every meal, and their table is set exactly like the teachers' table. These small matters do not cost much, but the civilizing and refining influence, especially upon the drove of boys who are usually turned into the dining room three times a day, can not be estimated.

In the best-appointed dining rooms we find small tables with a pupil at each end to serve the food; but the size of many dining rooms prevents this arrangement. If these children came from well-organized home tables the teaching of dining-room etiquette would not matter so much; but most of the table manners ever learned by these bright pupils will be gotten at the schools, and in too many dining rooms very little attention is given this subject.

For two years I have believed that the quickest and easiest way of solving dining room and kitchen problems is to put the employes and children all into one dining room, and let them fare alike. Then good-by to sour bread, half-baked meat, sloppy soups, and all the list of untidinesses which horrify so many new employes in the schools. A white man or woman has some rights which his white neighbor is bound to respect, and when, on the dinner question, he makes common cause with an Indian it is a good day for the Indian. My faith in this plan has been strength-

ened continually by finding so many of the best and most self-sacrificing workers in these schools who believe in this plan and are advocating it.

Cooking should be taught in such a manner as will qualify these girls to cook for a family, and such training can not be expected in any desirable degree under the present system of instruction, even when every woman employé is doing her best. The girls should not only be taught to cook and serve simple foods in a healthful and appetizing way, but should know how to cook for invalids and children, and how to save and use the scraps and pieces. Canning, drying, and preserving fruits, if learned at school, will add many healthful and tempting dishes to the future Indian tables; will help crowd out the always-present beef, and teach the fathers and brothers the value of fruit growing.

Perhaps there is no department of industrial work where greater improvements have been made during the last three years than in the laundry. I have no objections to steam laundries, and no fear that our girls will not learn how to wash. The great trouble is to teach them to keep clean. But as all schools can not have steam laundries they should be supplied with steam boilers or washing machines, either of which a smart girl can secure for her own home, and which are beginning to enter into the calculations of the more advanced Indian mothers, as sewing machines have done already. Washing machines are an especial blessing at reservation schools where the girls are quite young. The fact that all new laundries are made, by order of the Commissioner, with a drying room above and more conveniences below is another cause for congratulation. Now no matron need let the children sleep between the blankets because the sheets can not be laundered in winter. Four or 6 sheets could be managed, but 75 is another matter.

The same need for a better paid employé is felt in the laundry as in the kitchen, and for the same reasons. The laundress who will say, "I told the girls not to go with wet feet, and now, if they do, it's their own fault," should be discharged at once. She is in the laundry to teach the girls how to wash; girls are not born with the bump of careflessness well developed. I have seen girls with wet feet, wet ankles, dragged skirts, working for hours in a room full of steam, and then we wonder why they sicken and die.

In many localities where schools are established the water is very hard, but on most buildings there is roofing sufficient to catch rainwater enough for all practical purposes. A cistern, piping, pumps, etc., would pay for themselves in a little time from the saving on clothes. But those agents and superintendents who have always lived on the frontier, and have let their wives wash in hard water, will likely wait till they feel the Department behind them before they take any active steps toward securing soft water for the laundry. Every school should be supplied with pear-line, soapine, and gold dust, etc., and the concentrated lye now in use should be banished from the list of allowable articles. The lye is hurtful to the girls' hands as well as to the clothes. Many complaints about poor material would be stopped if the arrangements for washing were better.

Some superintendents and industrial teachers are learning that a wet sink with a long trough, properly arranged, will carry off waste suds as well as two girls with a tub, and almost as far. Such helps greatly simplify the work of the women and girls, and are almost as useful as a thrashing machine in a wheat field.

If inexpensive laundry helps are used at the schools and the girls taught how to wash in a healthy manner, some girls will be enabled to earn quite a good livelihood by doing fine laundrying.

All schools should have large, well-lighted, properly warmed, and fully aired dormitories, with hot and cold water carried to each, and all slops piped away. This is the ideal standard, reached as yet by only a few, but not beyond the attainment of every school. The furniture should be simple—a bed, chair, bureau, and wardrobe. Where so many sleep in one room much furniture must be avoided, but an ordinary box, painted or covered with oilcloth, will help to individualize property, by making a place "all one's own." The best sleeping arrangement for the large girls is to have the dormitories divided into small rooms for two girls; and this is just as true for the boys. Some employés believe that in order to "toughen" these children for the hard lives which they think is before them, there should be no fire in their dormitories, and the clothing must not be too warm. But this theory may be carried too far. In order to save the largest proportion of very small children, and to help them grow up strong and healthy, the heat and cold must be tempered by clothing and artificial warmth. The girls should be taught how to arrange their dormitories or chambers in a plain but attractive manner, and how to keep them clean and healthful.

Housekeeping is important for every day, and must be well taught in the schools, for the sake of the lesson more than for the sake of getting the work done. But we should be careful not to teach, even by precept, that spotless floors and perfectly transparent windows are the chief aims of a woman's ambition, lest these girls think of us as one of their mothers said, "poor white woman, she work all the time."

One of the best evidences of the progress of Indian education is the fact of a large herd of milch cows at so many schools. It is more than a year now since I found a school without a drop of milk to use for the children. I have never yet been at a school where the girls are not very anxious to help in the dairying. Within two months this story came from Oregon. At a small school where, last year, in October, there were four cows only, and they fit for nothing save to be slaughtered, the dairy has since been increased, and the matron, during the past summer, with the help of one girl, made 100 pounds of butter. When this girl went home for vacation and told what she had been doing, her father immediately bought a cow, and the girl taught her mother how to make butter. Two years ago many schools had no butter at any meal. During the last year I have known many cases where the pupils had butter once each day. I see no reason why every Western school should not have all the butter it needs.

Poultry-raising is becoming quite an industry among the girls at some large schools, and there are a few small schools where the children would think themselves badly used if they were denied butter, milk, eggs, fresh fruit, and vegetables, and all of their own raising. The only objection I have ever heard against teaching the girls to raise poultry was given me about fifteen months ago, when some employé said, "I don't see how the children can have any hens here; they would get mixed with ours."

I notice that in the West, on or off a reservation, wherever gardening is done, it is often the work of the women, white or red. Why not teach our girls to garden scientifically and profitably.

Cutting and sewing should be taught all these girls. They will cut and make dresses; the manner in which it is done depends upon the schooling. Each girl, when able to cut a dress by a model, should be given one for her own personal property. Will she not destroy it by carelessness and inefficiency? Maybe, but this will not be worse than for her father and brothers to make a mud hole passable by throwing into it farm machinery, as in some former days.

Early last autumn I saw some little dresses which had been worn for best during five winters. At the same school I saw linsey dresses which had been worn a month, had never been washed, and were past repairing. It takes just as much time, labor, and material to make the last-named dress as the first. Here is the recipe for sewing-room supplies: good goods. This year's new goods are much superior to most supplies previously found in sewing rooms. If no more prints or linsey goods are sent to schools, but Scotch or German ginghams instead, money will be saved; the girls will look better and be taught a much needed lesson in economy, and time will be saved which may be used in teaching the girls many industries now utterly impossible to be taught.

My second recommendation for the sewing room is to employ just such a woman as we would hire for our own family dressmaking, even if she has no "political backing;" and this also will be a saving in goods. Whenever the girls of a school prefer to wear to a sociable a dress made at home, rather than a school dress, there is something wrong about the seamstress. If possible, let there be more help and let all the garments be made at the school. This is a saving financially and is much better instruction for the pupils. Is it a sarcasm to say, Indians cannot afford to buy ready-made clothing; none but wealthy people can? Well, it is worth thinking about.

It would be better to have the shoes made at the school, and the superintendent or agent, if a sensible man, should buy the stock. In former years many of the shoes sent to the school were so hard and coarse that the tender feet, used to moccasins, were crippled. "Is that boy lame?" was asked. "Oh, no; I presume it is his shoes." The supplies of shoes sent this year are of a better grade than ever before. Let the children wear their moccasins in the house and keep the shoes for outdoor purposes. Some matrons tell me that the children can not be taught to change shoes or keep their feet dry; but the success of many other matrons assures me it can be done, and without scolding or corporal punishment.

When a little girl is asked to do an errand, and says, "May I get my hood first?" it is very apparent that one girl has been broken of the habit of wearing a shawl over the head. Enough hoods and hats should be furnished so that no matron may make the lack an excuse for not teaching the use.

There is a great and almost universal need of a larger supply of employés, especially women employés. This is more necessary in the reservation schools, as one usually finds the primary children there—children who know neither how to speak English nor to do work, who can not even understand a request. But reservation schools are not the only sufferers. At one training school the seamstress cut and, with the help of the girls, made 427 garments (dresses, sheets, union suits, pillow slips, aprons, and skirts), in fifty-one days; this is an average of eight and one-third garments a day. How much teaching could be done? No real teaching can be given,

unless time is allowed to a certain work, for the sake of teaching, rather than for the sake of getting off the work. Many seamstresses can not find time to teach the little girls. At an age when they are quite crazy to learn to sew the seamstress is too busy to have them "bothering around," and by the time when they have to go into the sewing room the seamstress is too "rushed" to give them good instruction, and so the poor girls pick up what they can and work at a disadvantage all their lives. This is just as true of kitchen and laundry, and true of nearly every school within my knowledge, though a few are able to do quite good work.

But I know one complete exception to this rule. It is a good school, a regular Government school—clean, quiet, orderly; children well dressed, polite, smiling; work always out of the way, never driving, everything seeming to be just done. I staid a week and solved the problem. The superintendent is a woman, but that is not the solution. There are more girls than boys, but, though that helps, it is not the solution. The real reason for the excellence of this school is in the fact that there are four more workers on the school force than there are paid employés. In other words, they have all the employés allowed the school and four more, who work without pay, but work all the time—3 women and 1 man. There are no more helpers at the school than the case demand. I saw no one idle while I was there, for more than a week, but the work was always done on time and there was no unseemly or unhealthy rush. The superintendent said to me, "I could not manage the school with just the employés allowed by Government." At this school every little girl is taught to knit and sew, and crochet, and braid rugs while she is a little girl; and there is a matron detailed to attend to such teaching of these little girls for an hour each day. But this could not be done with the usual number of employés. So far as the industrial work is concerned this is one of the very best schools I know, and every person praises it justly. No inspector can help seeing that this school is better than most others, but not many will find out the reason. One great need in Indian schools is more employés.

In nearly every school there are several girls who are much interested in vocal and instrumental music, in drawing and painting. Such girls should be encouraged by every possible means. Not because we expect them ever to make marked success, but because there is no instrumentality more civilizing than music and because between what these girls now are and what we wish them to be there must be crude attempts at everything which goes to make up civilization.

At a few schools where I have visited, it has become possible so to break down the partition wall between pupils and teachers that every girl feels at home in any part of the house and yet is not obtrusive. When guests visit the school, the large girls are introduced to the company as daughters would be. This has an elevating and refining influence upon the girls; and sometimes it does as much good to the guests in broadening their minds and adding to their stock of knowledge.

If it can always be remembered that every employé in an Indian school is a teacher; that every teacher, whether in or out of the class room, is constantly teaching; and that these children have everything to learn, even the language in which instruction is imparted, there will be little trouble in recognizing that, while educational qualifications are quite indispensable, much more depends upon the personnel of the employés. If we can only put such people in the schools as we wish the pupils to copy, we shall soon have schools of which we may be proud.

In the storerooms of most schools there is a large pile of old new books, which, I presume, were sent out sometime last century, but will never be used in class work. Some agents and superintendents dare not allow these old books to be used for school scrapbooks, because it will affect their "property list." I do not know the law, but in a country where the people make the laws, it seems as if some way might be devised by which these old books could be used to supply a long-felt need. Many valuable illustrations might be collected and the class-room work greatly aided, besides teaching the girls to make scrapbooks and keeping the little pupils amused and instructed. This will not destroy the books as books, but put them to some use.

I have been in several class rooms where, as soon as the pupils had read, or tried to read, the books were gathered up and laid away until the next recitation, and the poor little children left to swing their feet and bite their finger nails and chew gum. In such cases, much as I dislike the habit, I am always glad of the gum. Do you wonder these children like to play truant? Not many words of the exercises by the older pupils can they understand, and I often wonder what is their real opinion of the benefits of an education.

Kindergarten helps, clay for molding, sand for mapping, scrap books, picture books, toys, games, tables in abundance, in fact all the helps which make teaching pleasant for teachers and learning pleasant for learners, should be provided for these restless bits of humanity who are trying to master an education and a language, and who are too often forced to take it in that order.

Most school buildings lately erected have sitting rooms for both boys and girls, but many old ones and some new are still destitute. These rooms should be furnished as you would furnish your own sitting room if you lived near a reservation

and had a large family of children. There need be no expensive articles. Comfort is not spelled like expense. But the rooms should be home-like, with papers, books, games, etc., lying around, with simply framed pictures hanging on the walls, with potted plants in the windows and mats on the floors. Make it the brightest, cheeriest room in the house, and then let the employes, by their presence and help, make the evening hour the happiest, gladdest hour of the day. The big boys and girls should each have an additional room where, under proper rules, they will be free to read, study, write, or play, and where the little people are not expected.

At each school should be abundant grounds for all outdoor sports; these pupils need much air, outdoor air, and plenty of exercise. There should be games, and Congress ought not to make it necessary for the employes to take up a collection every time a new game is bought.

The matter of industrial details is one which has caused much anxious thought. It has seemed that if rightly managed the girls might do more effective work with less fatigue. During the last three months I saw at a reservation school an entirely new method in full operation and it was working charmingly. Another reservation school is using a part of the same plan.

This new plan, in outline, is as follows: The schedule is made out for the year and pasted in several places, where the girls can read and digest. The details include the work of the laundry, the kitchen, and the sewing room. No detail work begins till 9 o'clock in the morning, and no period of work is more than three hours long. One period is from 9 to 12, one from half-past 1 to 4, and the other from 4 to 6. No girl does the same work longer than one period. All change at noon and at 4 o'clock. If a girl is in the laundry three hours some mornings, she will not be there again till every large girl in school has been on the laundry detail; if she irons some morning, she will not iron again until all the large girls have ironed one period. Thus the work is more like home work, where we expect to wash one day, iron another, and bake another. No detail work begins till 9 o'clock; but, before that hour, the girls are not idle. Each girl makes her own bed. Then there are "offices," each of which is filled by a girl or a number of girls. It is the "office" of one girl to sweep the halls, of another to put the reception room in order, of others to clean the lamps, wash the dishes, reset the tables, etc. In fact all the work, save bed-making, which is not performed in laundry, kitchen, and sewing room, is done by the girls who hold these "offices"—and no politician is ever prouder of being in office than are these girls.

The school is a very beehive of industry from breakfast till 9 o'clock, but when the school bell rings all the morning work is done, the halls are swept, the dormitories are in order, the dining room ready to receive the noon supply of food and children, and every part of the house is ready for inspection. At this hour, as many girls as are detailed, go into the laundry, the kitchen, and the sewing room. As these details are made by classes, the work of the class room is not affected. At the school mentioned every girl gets at least four hours of school work daily; no girls have more than two weekly periods of work in the kitchen, or more than two in the laundry, but each girl has from twelve to eighteen hours of weekly work in the sewing room. Of course the seamstress has time to teach many uses of needles and hooks. These girls work more hours than do the girls of most schools, but the frequent change of employment, which is always restful, always the natural way of doing housework, keeps them in good spirits; besides they are pleased to learn so many extra kinds of work. It takes two weeks or more to adjust a school to this plan, but when adjusted it works for a year and saves making out new details. The offices change every week, and as a special reward for good behavior or excellence in school work, the small girls are sometimes given an office.

Because every pupil has at least four hours of class-room work each day there is no need of a study hour, and this is a great advantage to weak-eyed pupils. The teachers take turns in helping make the evening hour the attractive hour of the day with lectures, talks, music, etc.

At the other school, where the same plan is partly used, I asked why the whole work was not put on the same basis, and was told by the superintendent that he had not help enough to try it. But he has tried the plan only a little time. The superintendent in the first school named said she believed the girls really did more work by this plan, after they had fully learned the details, and it is learned for the whole year. This method seems so much easier to the girls. The periods are so short. They enter upon a three-hours washing, ironing, or baking with the thought of a change at the end of the period, and it is not so wearing as the thought of being obliged to do this work every forenoon for a month. It is also much better for the health, and I believe that the wise forethought and management of the superintendent can secure for the school employes enough to put this plan in full operation.

I think every reservation school should be supplied with a "model home" near the buildings, and every training school should have a "model room" and a "home mother" to preside in that room. This "model home," which I wish to see at every reservation school, should be built of the best material to be found on the said reserva-

tion, but nothing should enter into its construction that a smart young Indian could not procure for his home. Taking no Indian's house or frontiersman's house for a sample, this home should be as large as common sense and the needs of a respectable family will dictate. Let it be built with all the conveniences that said young Indian may be able to obtain. Put into this model home all the furniture the Government provides for any Indian home, then supplement it with every article needed which an ingenious woman can make of ends and scraps. Make an old barrel into a chair, a drygoods box into a side table, a washstand, or a lounge; a board and four wardrobe hooks into a footstool. Let shoe boxes be painted and hinged for low seats and also for receptacles. With a saw and piece of board make a bracket, and evolve a book case out of boards, a string, and empty spools, etc. Let the girls have a chance to make pretty articles and hang them in this "model home" till the girls leave the school. In fact make this home just as pleasant as possible, remembering the laws of health and of beauty in simplicity.

It may not be practicable to have a model home at a training school, because the pupils come from such widely differing reservations. One is from Arizona, where adobes must make the home; another is from Washington, where lumber is easily obtained; and another from Dakota, where the houses must be made of logs. But a "model room" with a "home mother" will answer every purpose. Because there are so many large girls at a training school this "home mother" will need to be an extra employé. Let this "home mother" teach each girl how to furnish and care for a house, how to cook well and economically for a family, how to care for and cook for the sick, how to make her family happy, and how to entertain her friends; in fact, teach these girls just as she would teach her own daughters how to be true, earnest, helpful women.

One word more: for the highest development in character building (the desired end in all teaching) each school must have a true motherly matron. She should have method, discipline, and promptness in her management; but her methodical ways must never smother her motherly heart; her discipline must be steeped in love, and her promptness admit of kindly delays. Above all other needs is the one need of a mother for every boy and girl in our schools, and a matron should never be so pressed for time that she can not stop to "mother" any child who, physically, mentally, morally, or spiritually, needs her "mothering."

Respectfully submitted.

Mrs. M. A. DORCHESTER,  
*Special Agent, Indian School Service.*

## REPORTS OF SUPERINTENDENTS OF SCHOOLS.

### REPORT OF HERBERT WELSH INSTITUTE, FORT MOJAVE, ARIZ.

FORT MOJAVE, ARIZ.,  
August 1, 1891.

SIR: In accordance with instructions I have the honor to forward herewith my first annual report as superintendent of the Herbert Welsh Institute, occupying the reservation and buildings of what was formerly known as Fort Mojave.

The reservation and buildings were formally transferred to me as the representative of the Interior Department by Lieut. Hersey, commanding, on the 22d day of August, 1890.

The school retained the name of the post until March 9, 1891, when I was informed that "The school will be known hereafter as the Herbert Welsh Institute, in honor of a gentleman who has given so much time, service, and money, and worked so efficiently in the interest of Indian civilization." No more honorable name could be conferred upon any institution.

The school is situated on a gravel bluff, on the east bank of the Colorado River, near the head of Mojave Valley; latitude,  $35^{\circ} 6'$  north; longitude,  $114^{\circ} 31'$  west; altitude, 535 feet above sea level, and 75 feet above the river. The plateau extends north and south about 40 miles, with an average width of about 12 miles. There are two reservations containing, jointly, about 15,000 acres, 10,000 of which is rich bottom land.

The post was established in 1858 as protection for emigrants from the East over the southern overland route to California, the Mojave and other tribes of Indians being then hostile. The Indians remained hostile until severely whipped by Maj. Armistead, who encountered them in the valley below the fort. They then sued for peace. The fort was abandoned in 1861 and regarrisoned in 1863 by two companies of California volunteers.

The climate is comparatively healthy, with pleasant winters, but intensely hot summers. The extremes of temperature are  $35^{\circ}$  and  $122^{\circ}$  F. There is no rainy season, though thunder showers are frequent in July and August. The prevailing winds are from the south in summer and north in winter. Terrific sand storms are frequent. Vegetation on the mesas is scant, consisting principally of grease wood.

**Buildings and improvements.**—The school buildings number 24, most of them in good repair. Within the past two months we have completed a very cosy dormitory, intended for use of girls, with a capacity of about 30. New schoolrooms have also been completed, dining room and kitchen separated and repaired, boys' dormitories better ventilated and lighted, all the buildings painted and whitewashed, and school grounds fenced. In all of this work the boys of the school have assisted. No new building will be required for the accommodation of 100 pupils.

**Farming.**—Farming can not be successfully conducted here without a thorough system of irrigation. We have done what we could. At immense labor we have hauled soil from the bottoms and deposited it on the mesa near the school to the depth of about 8 inches. In this way we have covered nearly 2 acres. Here we have raised lettuce, beets, radishes, turnips, melons, etc. With a good pumping apparatus whereby water could be taken from the river and distributed over the fertile bottom lands by means of canals, an abundance of every kind of vegetable could be produced.

In March last I submitted an estimate for such machinery, etc., as would be necessary for the proper irrigation of 1,000 acres, 200 acres of which were to be used by the school, and the balance to be allotted to individual Indians in 5 or 10 acre lots. This plan, if adopted, would be of inestimable value to the tribe as well as being a source of revenue to the school. Since then I have learned that my views were heartily approved by the Indian Office.

In March of last year the school set out nearly 1,000 trees, vines, roots, etc., of various kinds. This was no small task when you take into consideration the character of the ground. Owing to the fact that these young plants would require con-

stant care and attention during the heated term, it was necessary to set them out where they could be irrigated by the pumping plant used for furnishing water to the school. Thus they had to be set out in the mesa, but as they would not thrive in gravel and sand, we took out our picks, grub hoes, and shovels and for five long weeks dug and shoveled until we had trenches 4 feet deep by 4 feet wide and long enough to contain all our trees set 16 feet apart. These trenches were filled by soil hauled from the bottom mixed with stable fertilizers and bones ground fine. Then the gravel dug from these trenches had to be all carted away. A part of this work was done by the schoolboys who accompanied their work by a great many complaints. They did not come to school to work and thought they should be paid for work done.

I am very happy to state that 85 per cent of the trees and 95 per cent of the vines are in a most flourishing condition.

The school stock consists of 4 mules, 2 horses, 5 blooded Durham cows, 2 calves, and 1 thoroughbred Polled Angus bull. This herd should be increased by at least 5 additional milk cows.

**Industrial work.**—Industrial work has been carried on in the carpenter and blacksmith shops, bakery, sewing room, laundry and kitchen, with an average detail of 6 in each department. Owing to the fact of this being a new school, having no tools or material to work with, not as much has been done in industrial work as might have been. They have, however, been taught to handle tools to a limited extent, and what is more important, to handle themselves, to keep themselves clean and neat, and to obey.

**Literary.**—In literary work we have found the pupils apt and eager. They love to draw and write, and are as fond of music as the negro. School work has been carried on along the line of the system adopted by the Indian Office by an able corps of teachers. No fault can be found with our literary work. Marked progress has been made, and but a few more years of such work will make an English-speaking nation of these Indians.

Many of the older Indians are opposed to sending their children to school, and living so near the school are a source of constant annoyance. However, we gathered over 100 of the little ones into school last year, and I think we can do as well this year.

**Indian courts.**—An Indian court would be of great advantage to the superintendent in controlling these Indians, who are off the reservation and consequently think they are their own masters.

**The Mojaves.**—The "solution of the Indian problem," as applied to the Mojaves, is simply a question of time; but I am very sorry to have to state it as my honest opinion that the necessary time will probably require generations instead of a few months or years. The Mojaves have some good traits. They are peaceable, partly because of their indolence, and partly because of a good sound thrashing given them by the United States soldiers in 1868. In this one battle they lost 72 braves. They are kind to their offspring through indifference. They exercise no control whatever over their children. While not polygamous they are at liberty to leave each other whenever they please and consort with anyone else. They build brush sheds for summer dwellings and caves for winter. They bestow no care whatever on the selection, erection, or adornment of their homes. Three or four families often live in one shack. They are dirty and filthy in their personal appearance. They are exceedingly improvident, literally taking no thought of the morrow. After the spring overflow of the Colorado they plant their seeds—melon, pumpkin, corn, wheat, barley, beans, and squash. All these grow in abundance and for three or four months they live well. Colorado Valley produces an abundance of mesquite and screw beans, which is the staple article of diet for the Indians.

Many of the middle-aged Indians of late years have found employment on the Atlantic and Pacific Railroad as section hands. For this work they get \$1.25 per day. Their employers have told me that they do excellent service for short periods of time, but they will not stay longer than a month or two at a time. There are a few exceptions to this rule—not many. This road employs from 100 to 300 Indians every day throughout the year. Mr. Murphy, their paymaster, informs me that every month the Indians are paid from \$5,000 to \$12,000.

This is a big sum of money, and renders them self-supporting. It also enables the men to dress a little better, but here the good ends. They live in the same old shacks; their food is cooked and devoured in the same old way. Their houses remain unadorned. They paint their faces more profusely and more hideously. Their women and girls dress more gaudily and are bolder by far, and they gamble more, because they have more to gamble with. Not a cent is saved; not a good habit formed or improved, except, perhaps, the habit of work. They gamble at all times when they have a cent. This, and the fact that when a person dies he and all his property of whatever description is burned together, keeps them a poor people.

But there is one thing worse than all. The whole tribe is terribly syphilitic. I think it perfectly safe to say that 90 out of every 100 have this disease in some stage.

The women of the tribe are entirely without virtue. The towns along the line of the railroad are infested with them—hideously painted and gaudily arrayed. Seventy-five out of every 100 will sell themselves for 25 cents, and boast of having made the money so easily. This is what the young girls have got to grow up to. As soon as they reach the age of puberty they are sold to some degraded and diseased white man—very often by their own parents. They have no ambition for anything better.

The authority given the Indian Office by the last Congress ought to be exercised in the case of these Indians, and every boy and girl of school age ought to be put into some good school for a long term of years.

**Missionary work.**—Here is a great field for missionary labor. Nothing of the kind has ever been attempted among the Mojave Indians. I have tried to get several churches interested in the work, offering a home for a missionary and a room for chapel use, but as yet without success. Why don't some good missionary man and wife take up their life work among these people and assist us in their evolution? Why don't some of our societies in the East take this matter up and send some one here? The field is as large and promising, and the work could be conducted more cheaply than almost any other place.

**The Hualapais.**—There is always a vast difference between mountain and valley Indians. The Hualapais are mountain Indians, bold and fearless, remarkably good shots, daring riders, the best trailers in the world, cunning, and treacherous. Unlike the Mojaves, they are exceedingly quarrelsome among themselves, and their quarrels usually end in blows, knife or bullet wounds, or death.

Many years ago their reservation provided them with subsistence in the shape of game, grass-seeds, piñon nuts, and roots. Of late years, however, many herds of cattle have been permitted to overrun their reservation, the game has mostly disappeared, and the Government has found it necessary to furnish them with a certain amount of their living.

From what I have been told by reliable men who have good opportunities for knowing, their reservation does not contain 5 acres of agricultural land. But even if it was made up of the best soil in the Mississippi Valley these Indians would not work it. They are constitutionally opposed to anything so degrading. They will not work at farming. Occasionally a young Indian can be hired for a few days to assist in "rounding up" cattle. This is a work they rather enjoy for a time. Like all Indians they are inveterate gamblers.

This tribe, like all others that I am acquainted with, is kept back by a few of the old leaders. These old chiefs, nourished with blood, long constantly for the old diet. The barbarous past rises before them like a dream, and visions of wild orgies, of horrible blood-lettings, and cruelties unspeakable dance before them still. Their hearts gloat over such visions, and as they realize that the time for such things is nearly past, not through any desire of theirs, but for fear of a brute force more powerful than they can wield, they gnash their teeth in impotent rage, and sulk. They never will accept the new order of things, but be forever a disturbing element.

Such was Sitting Bull. Such is Serrum, the chief of the Hualapais. Cruel and cunning and bloodthirsty as ever, he is only restrained from outward violence by fear. He rules his tribe with a powerful hand. One of the first to catch the "Messiah craze," he has had his tribe dancing ever since. Covertly he is doing all he can to keep a wide chasm between his Indians and white civilization. He is constantly killing cattle belonging to white settlers. Covertly he is gathering arms and ammunition to be ready for the conflict when the "Messiah" comes. He is in constant communication with the Piutes and northern Indians. He is bitterly opposed to schools, and will never willingly consent to sending his or any of the tribe's children to school. As his influence is entirely and constantly bad, he ought to be taken away from his tribe and locked up.

A number of years ago when the Hualapais were on the warpath, a half-brother of Serrum, now known as "Hualapai Charlie," was arrested and sent to San Quentin for three years. Before going he was as bad as Serrum. Since his liberation he will have nothing to do with the wild, fighting element of his tribe. He lives at Kingman, Ariz., dresses and acts like a white man, and last year sent his children to my school.

The Hualapai women are more virtuous than the Mojaves. The Hualapais are polygamous.

In conclusion I wish to thank the Indian Office for uniform and constant kindness and assistance.

Very respectfully,

S. M. McCOWAN,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF MOQUI SCHOOL, KEAM'S CAÑON, ARIZ.

KEAM'S CAÑON, ARIZ., August 27, 1891.

SIR: The first work which engaged my attention after taking charge, July 1, 1890, was the rearrangement of and repairs to the school buildings. This work was sufficiently done to open school September 15, and all buildings are now under good roofs.

After opening school the most difficult task of the year commenced—that of filling the school. The Indians were informed in council September 1 that school would be opened September 15, and that they should have their children here promptly. The numbers varied from 2 to 18 until November 2, while I labored with them diligently, by every peaceful means in my power, to get them to send their children to school. They were informed that since they had asked the Government to establish this school for the education of their children, and it had done so, and spent much money therefor, it was now entitled to have their children for education. But while the headmen were willing for the children to come, and so spoke in council, yet they had few children of their own, and referred me to the parents, while the fathers said the mothers controlled the children, and the mothers said the children would cry, and hence they would not send them.

And thus the matter rested when Commissioner Morgan and Gen. McCook arrived November 1. The commissioner informed the Moquis that they must fill this school, and that each village must furnish its quota, and that they must have 25 here at once, 25 in another week, and 25 more in two weeks from that time, making 75 in all. When the two weeks had expired, no children had arrived and I waited another week, being informed in the meantime by Lololomi that he was being opposed by a large party in his village (Oreiba) in his efforts to get children.

Then, in company with Mr. Julian Scott, special agent of the Census Bureau, and Mr. Keam, the trader here, and five Moquis friends, I went to Oreiba, called a council, and was informed that all except Lololomi and a few of his friends would not come into a council. We then went to the leader of the opposing faction and brought him to the council place, and informed him that he and his people would be given fifteen minutes in which to produce the children which the commissioner had told them they must furnish, and that unless they did so he would be taken away a prisoner.

The time having expired and no effort being made to get children we left the village taking this leader away prisoner, going to the second mesa village; and on the way, meeting a friend of our prisoner who attempted his rescue, we also arrested him, and found that he was just returning from a trip to the other villages for the purpose of arousing opposition to the school. The second mesa people were told that their quota of children must now be forthcoming or the leaders of the opposition among them would be arrested. One village furnished their quota at once, and the other two promised theirs in three days. I went to them again after three days and by a display of determination succeeded in getting their full number. For several days Lololomi's friends kept sending their children, but the opposition was more active than ever, and they arrested Lololomi, and confined him three days with threats to kill, etc.

Thinking I had done all in my power, I telegraphed the Indian Office and a company of troops was sent, and upon their arrival, Lieut. Greerson and troop, Special Agent Parker, Mr. Keam, and myself went to Oreiba and demanded enough children to fill the school, which by this time I had succeeded in making capable of accommodating 100 pupils. When the troops marched into the village we found all the people assembled in its center. Every man, woman, and child shook hands with every officer, private, and civil official there, and they formed the children in line and I took as many as I wanted; and thus on December 28, 1890, Keam's Cañon school was filled to its utmost capacity, having 104 bright, healthy pupils; none too old, none too young; one-half boys and one-half girls. Henceforward our number has never been under 100.

The schoolwork is carried on with the utmost regularity. All over ten years of age are classed in details which alternate and change work monthly, and work half the day and go to school the other half. All under 10 years of age attend school all day, and all attend evening session and Sunday-school. We put greater stress upon the speaking of English than anything else, but are trying our utmost to enforce the "Rules for Indian schools" in letter and in spirit and in fact, the only modifications being caused by the inadequacy of our buildings. The school is organized on the basis of the new course of study. The pupils are healthy, happy, and contented, and the parents visit them very often and express great satisfaction at their treatment and progress.

They are naturally industrious, and the boys have, besides doing the regular work at a school, made a road in the rock out of this cañon, which is worth \$500 to the Government; and they had cut and hauled from the timber a surplus of 50 cords of stove wood on the 15th of May.

The school farm consists of about 30 acres and has yielded quite well. We have 2 acres of beans which promise well, have had plenty of fresh vegetables, and will have plenty of hay for our stock unless the numbers are increased.

The cost of maintaining this school, which has heretofore been out of all proportion, is now I think coming within the prescribed bounds.

The work among the Moquis, which has been under my direct supervision, has been progressing slowly until recently. The Moquis have said they would move down from their mesas and build houses in the valleys, if the Government would protect them from the Navajoes, and give them some help in purchasing building material, which they can not get in their own country. The Navajoes have been removed from among them by the United States troops, and I now have most of the material upon the ground for the completion of twenty houses.

I have spent much time in looking up their water supply and have found thirty-six springs, hearing also of others. These springs nearly all need improvement, and piping and troughing material are now on the way for this purpose.

I have just returned from a trip among the Moquis, and find more than fifty houses now under way, many of which are ready for roofs, windows, and doors. Twenty of these are being built by the Oreibas. While there is still a large element opposed, in spirit, to civilization, yet I am persuaded that they will soon give way when they see the others reaping the benefits of a better way of living.

In general I think I am safe in saying that there has been no backward step taken in the civilization of the Moquis during the fiscal year 1891. They have been treated with great consideration in all things, protected in their rights, and made to do what was for their ultimate good with a firmness intended to convince them that there is a Government of the United States, and that in that Government lies the only hope of safety for themselves and of preservation for their posterity.

We have had an active, trying, progressive year, and I wish to express my sincere thanks for and appreciation of the efforts which have been made in behalf of this work by Commissioner Morgan, Gen. McCook, Special Agent Parker, Agent Shipley, Maj. McClelland, Col. Corbin, and Lieuts. Greerson, Brett, and Nance. They have all done their duty at this place nobly and well through many hardships and some dangers, and if there is failure here it will not be because of a lack of support from those whose duty it has been to give it. I am also under many obligations to Mr. Thos. V. Keam for numberless courtesies and services rendered in interpreting and other good works.

Very respectfully, your obedient servant,

RALPH P. COLLINS,

*Superintendent and Special Disbursing Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

---

#### REPORT OF FORT YUMA SCHOOL, ARIZONA.

SIR: Agreeably to instructions received from you, I herewith submit the following report of the work and progress of the Fort Yuma Indian Industrial School during the year ending June 30, 1891.

Five years ago last March I first assumed charge of this school as superintendent. During this time I have noticed many changes for the better in the Yuma Indians.

My acquaintance with the Yuma Indians dates back to 1880. At that time these school buildings served as quarters for the military. Where now is heard the hum of recitation and the joyous laugh of childhood, then resounded with the sound of the bugle and other incidents to military posts. At this time most of the adult Indians visited Yuma and vicinity clothed in nothing more voluminous than a willow skirt; some of them, it is true, to a certain extent, affected the conventional dress worn by the whites, but these were noticeable exceptions to the general custom.

On taking charge of this school, I found nothing had been done toward correcting this; my first efforts were directed to securing a change here. By forbidding the entrance of any parent not suitably attired into the school buildings, and the influence brought to bear on them by the contrast with their children's dresses, supplied by the Government, a reform was soon accomplished. In drawing a comparison at this day in the dress of the Yuma Indian I can point with a feeling of conscious pride to the influence, direct and indirect, exerted by this school over the adult Indians in this reform.

I found on arrival here five years ago an attendance of 7 scholars—5 boys and 2 girls; and such children! timid and shy as some wild animal deprived of its liberty. The second day of our arrival, Chief Pasqual, since deceased, brought in 50 children from the reservation, who until then had been conscious of no restraint placed upon their acts. At first they openly rebelled against discipline, manifesting their dis-

pleasure by breaking the glass in the windows and committing other deeds of vandalism. Persuasive measures, the exercise of great patience and kindness gradually overcame this objection, our efforts in this being ably seconded by Pasqual, chief of the Yuma tribe at this time. Their conduct at the present day in the schoolroom will compare favorably with that of the more favored race placed under more fortunate circumstances.

The attendance during the past year has been larger than that of any previous year. Greatest number attending, 143; average, 122. Of this number of pupils 97 were boys in years ranging from 6 to 16 years, and 46 girls aged 6 to 14 years. Such attendance surely proves that increased interest in the school has been aroused, and also shows the appreciation of the children of the benefits to be derived therefrom.

Great diversity of opinion is held by the Indians concerning the compulsory education act and its enforcement. I entertain no doubt of its utility; its beneficial effects are beyond question in increasing the attendance of many children who remain away from school, simply through the objection of their parents or a desire of their own to roam the reservation or the streets of Yuma. The fact of not being able to compel the attendance of children has worked serious mischief in the past, and has resulted in the loss of many promising pupils, through their removal from school by their parents, for some fancied wrong, more imaginary than real.

The improvement in the conduct of those pupils who have attended school for several years is most marked. It is to be regretted that the opportunities offered them after graduation are so very limited and few.

The progress in the several schoolrooms has been very satisfactory. Increased interest manifested by the scholars is observed, the marked improvement in many cases testifying to the attention paid their school studies.

The industry and application shown by the larger girls in the sewing room, where under the guidance of the seamstress the clothes for the school are manufactured, is quite commendable. In addition to this, many of them do crochet and fancy work that reflects great credit on their ingenuity and skill with the needle. In the laundry and ironing room they perform their work creditably, washing and ironing their own clothes in a very satisfactory manner. Under the guidance of the matron and cook of the school many of the girls have been taught the care of clothing, preparing and cooking of food; also, in the care of their dormitories and clothes room, instruction has been given. The improvement here has been manifested in the better care of clothing and in the exercise of more neatness of rooms inhabited. In the kitchen several of the larger girls have been instructed in the art of cooking properly. The interest taken by them in the attainment of this branch is very gratifying.

During the past year an effort has been made to improve the appearance of the school campus by planting trees, shrubs, and flowers. The hot sun here is very trying on shrubbery, but I trust I can succeed in my efforts to add to the attractiveness of the school grounds. Four acres of ground convenient to school have been cleared for cultivation, irrigated by a horse-power pump, and planted in fruit and vegetables. It furnishes necessary instruction to a number of boys under the direction of the industrial teacher. Each boy devotes three half days each week to this work. Several of them, having plats of ground for themselves, take great interest in cultivating same.

The carpenter's apprentices also show signs of improvement. They seem to appreciate the value of skilled labor, one of them, Vincent Mignel, a son of the chief, showing great aptitude for the work. They have been of great assistance to the carpenter in the building and repairs made during the year, performing the tasks assigned them in a very creditable manner.

During the year there has been erected a new pump house and stables, destroyed by the Colorado River flood of February last. New kitchens have been added to quarters of carpenter and industrial teacher; a workshop and dwelling have been repaired for shoemaker. Porches surrounding school buildings have been repaired. Plastering with a coat of hard finish the walls of adobe school buildings to preserve them from erosion by rain has formed quite an item of this year's expenses, this expenditure being necessary owing to the condition of walls of buildings long neglected.

The addition of a shoemaker to the list of employes for next year will furnish the necessary instruction in this branch of industrial training. I anticipate great results from this valuable department of school work.

Taking a general retrospection of the work so far I feel encouraged. That some of the seed has fallen on barren ground can not be denied. The results so far justifies the indulgence of a hope for the Yuma Indian of the future. That the generation to come will be bettered by our work in the present is my most earnest desire and hope.

In conclusion, I desire to express my appreciation of the coöperation and able assistance rendered me by the employes of this school, whom I have ever found ready

and willing in the discharge of their duty. For the courteous and considerate treatment received at the hands of the Department of Indian Affairs I return my heartfelt thanks.

Very respectfully,

MARY O'NEIL,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF PHENIX SCHOOL, ARIZ.

PHENIX, ARIZ., *August 5, 1891.*

SIR: In compliance with the instructions given in your circular letter dated July 1, 1891, I have the honor to submit herewith my annual report of the educational enterprise committed to my charge for the fiscal year ending June 30, 1891, embracing a brief account of the efforts made to establish the Fort McDowell Indian Industrial Training School, and of what has been accomplished toward the establishment of the Phoenix Indian Industrial Training School.

On the 16th of May, 1890, I was appointed superintendent of the Fort McDowell Indian Industrial Training School, and shortly thereafter was designated special disbursing agent of the same institution. Before starting for my future field of work I received from the Indian Office three elaborate reports of Fort McDowell, Ariz., and ten photographic views of the buildings and grounds at the post. These reports and views on the whole were highly favorable, and led me to believe that Fort McDowell was admirably adapted to meet all the essential requirements of a large and flourishing Indian industrial establishment.

In pursuance of instructions received from the Commissioner of Indian Affairs to proceed to my post of duty and to receipt to the officer in charge for the public property there, in company with several assistants I arrived at Fort McDowell on the 12th of August. The post commandant, Lieut. John A. Baldwin, gave us a cordial welcome, furnished us with quarters, a couple of cook-stoves, a few cooking utensils, chairs and other furniture, and some bedding. As no goods and supplies for the school had been or were subsequently secured at the post, our situation while there would have been attended with much inconvenience and heavy personal expense but for the kindness of this officer.

Lieut. Baldwin informed me that a board of Army officers appointed to determine the price to be paid by the Indian Office for the buildings and other permanent improvements at the fort had fixed their value in round numbers at \$50,000, furnished me with a copy of the findings of this board, and requested me to receipt to him for the post on this basis. Having been led to believe from my correspondence and personal interviews with the Commissioner that the post would be turned over to me for school purposes without cost to the Indian Office, I declined to comply with the post commandant's request, reported the matter to the Commissioner, and asked for instructions. I was finally directed by the Commissioner to receipt for the buildings and other permanent improvements without regard to their appraised value, as the Indian Office would not be required to pay any sum for them. In immediate compliance with this order, on the 15th of September, I receipted to Lieut. Baldwin for two large water-tanks, and thirty-one buildings with all the appurtenances thereto belonging, and at the same time assumed charge of the post.

Shortly after my arrival at the Fort, Lieut. Baldwin handed me a list of personal property, and informed me that, in accordance with the recommendations of a board of Army officers, the War Department had authorized him to turn this property over to me on my receipting to him for the same, at its original cost, including transportation. The listed prices of these articles aggregated nearly \$8,000. This property consisted of 20 tons of fairly good hay, 15,000 pounds of good barley, a steam boiler, pump and engine that had been in use for a considerable length of time, 800 cords of wood a part of which had commenced to decay, 2 old Army ranges, 4 cooking and 5 heating stoves, all bearing marked evidences of considerable use, an aged platform hay scale, and many other articles nearly all of which had long been in the service.

About the same time the post surgeon, Dr. Swift, furnished me with a long list of hospital goods and supplies, with prices given, embracing old cooking utensils, table furnishings, furniture and bedding, nearly all of which was much worn; quite a stock of medicines, a good dispensary set, office furniture and fixtures, several cases of surgical instruments, medical and surgical appliances, and other articles. He stated that in conformity with the recommendations of a board of Army officers, he had been duly authorized to turn these goods over to me on my receipting for them at their original invoice price increased by their cost of transportation.

This matter having been referred to the Commissioner of Indian Affairs, in obedience to his instructions I made selections from these lists of the goods that would be serviceable to the school, and designated the prices that, in my judgment, should be paid for them, and forwarded these selected lists to the Commissioner. I was subsequently instructed by the Commissioner to receipt for such of these articles as would be required by the school, and at the prices I had named. I was finally notified by Lieut. Baldwin and by Dr. Swift that, in order to obtain any of these goods, I would be required to receive all of the articles embraced in their respective lists and at the prices fixed by the War Department. I did not receive the goods for the following reasons:

(1) Many of them were not required by the school.

(2) With few exceptions, the prices asked for them were exorbitantly high.

A part of the goods were shipped to other posts, many of them were destroyed or abandoned, and the remainder sold at auction. The 800 cords of wood, listed at \$3.50 per cord and at a total of \$2,800, were sold at auction to an imprudent Phoenix man for \$11. Lieut. Baldwin did not get away from the post with his squad of men until the 5th or 6th of January. In other words, it took him nearly five months to dispose of this personal property.

My first impressions of the post were very unfavorable and disappointing, and my disappointment and surprise increased as I became more familiar with the prevailing condition; still, believing that the school would have to be established and maintained at the post, I accepted the situation with as good grace as possible, and at once proceeded to submit estimates for goods and supplies, and for labor and materials required for repairs and improvements, and to make all other necessary preliminary arrangements for opening the school as soon as possible.

I found the post to be situated 35 miles from Phoenix, the nearest available railroad station, and in the midst of an extensive and ir reclaimable desert, remote from all existing or prospective civilizing influences, and hence, regardless of all other considerations, wholly unfit for the site of an Indian industrial training-school. The Fort McDowell reservation contains in round numbers 25,000 acres of land. There are within its limits six disconnected bodies of rich bottom land along the river, varying in size from 30 to 300 acres each, and containing in the aggregate perhaps 1,000 acres. The balance of the reservation consists of rough, gravelly or rocky mesa, and of broken, rugged foot hills, wholly unsusceptible of cultivation and improvement. Even the bottom land, if not under irrigation, produces such vegetables only as is common to certain Arizona deserts, and is therefore essentially desert land.

The surface of the ground within and about the post during the rainy season is clothed with a quick growth of weeds, vines, and patches of "six weeks' grass" in favored localities; but this grateful vegetation quickly perishes with the advent of the long, dry, hot season in the spring, and for from six to eight months of the year it is quite bare, and beneath a semitropical sun seldom veiled by clouds becomes very hot, often radiating an atmosphere raised to a temperature of 145° in the sun, and from 112° to 118° in the shade. These conditions during the long hot period render the place very unattractive in appearance, trying to the eyes, and otherwise disagreeable.

I found the thirty-one buildings at the post as a rule to be very inconveniently placed and badly planned and constructed for school purposes; that a few of the minor ones recently erected were in fair condition; that the majority required extensive and costly repairs; and that quite a number, including two of the most important structures, were in a hopeless stage of dissolution. A careful, detailed estimate made with the assistance of the school carpenter, an excellent mechanic and an experienced and successful contractor and builder, disclosed the fact that to make the necessary alterations and repairs fairly to adapt the buildings to the immediate requirements of the school, render them tolerably comfortable and protect them from the disintegrating influences of wind and rain, would involve the judicious expenditure of fully \$15,000. It became obvious, also, that after this large sum had been thus expended, quite a number of the buildings, including the large ones to be used for schoolrooms and girls' dormitory, would be fit for temporary use only, and that the interests of the school would require them to be removed as soon as possible and the erection of suitable buildings in their stead.

I ascertained that the same repairs or new buildings would cost from 20 to 50 per cent more at the post than at or near Phoenix, and that the transportation of pupils, goods, and supplies and material from Phoenix to the school would be attended with delays, inconvenience and heavy annual expense.

The waterworks of the post were in good condition, but as the water was pumped directly from the river into two large tanks, and from thence distributed to the buildings immediately after heavy rains in the adjacent mountains or during freshets, it reached the buildings so roily as to be scarcely fit for domestic use. The river, it appeared, was liable during any freshet to change its channel and leave the pump-

ing station "high and dry." During the big water last spring it did so change its course, leaving the pumping station 200 yards from the stream, thus cutting off the water supply of the post, which is nearly a half mile from the river.

I found but one tract of land in cultivation, containing less than 100 acres. This tract is known as the Government farm, and is situated north of the post. About 25 acres, used for a post garden and a post pasture, were inclosed by pretty good wire fences. The balance of the land was surrounded by a miserable brush fence, affording secure harbors for numberless rabbits and other pests, and offering but a feeble resistance to the hungry cattle wandering over the range. The Mexicans who farmed this land were compelled to watch their crops day and night. The land was foul with weeds, grasses, and shrubs, and the irrigating ditch in bad condition. I found that to clear this land, inclose it with substantial wire fencing, and to clean and enlarge the main irrigating ditch so that it would afford a sufficient supply of water would cost not less than \$2,000.

Nearly a half mile of the upper part of this ditch I found ran through a sand bank, and parallel with and close to the river, and was therefore liable to be destroyed by any freshet in the river. During the high water last spring this portion of the ditch was swept away, and the Government farm cut nearly in two, thus rendering the latter wholly worthless for farming purposes.

The other bodies of bottom land were successfully cultivated for many years, but the shifting, turbulent river, in the process of deepening and widening its channel during freshets, destroyed one after another the heads of their main irrigating ditches and thus rendered their cultivation impossible.

There is at this time no land on the Fort McDowell reservation that can be successfully and profitably cultivated. Had the school been established there it would now be without an acre of land available for farming or garden purposes.

During my stay at the post the foregoing and many other matters relating to the post and school were submitted to the Commissioner of Indian Affairs. On the 10th of October the Commissioner visited the post. He was much displeased with the place, and promptly decided that no Indian school would be opened there with his consent.

At the Commissioner's request I accompanied him to Phoenix, with the view of ascertaining whether satisfactory arrangements could be made for opening the school there. The leading citizens seemed very anxious to secure the school. After the Commissioner had departed on his journey of inspection of Indian agencies and schools, I learned that the West End Hotel, a two-story brick building, that would fairly accommodate an Indian school of from 40 to 50 boys, could be leased on reasonable terms. I secured the refusal of the same, reported these facts to the Commissioner, and returned to the post.

On the 11th of December I received a telegram from the Commissioner directing me to submit immediately a written proposition from the Phoenix people for the donation of not less than 80 acres for the establishment of an Indian industrial school near Phoenix, and in case the West End Hotel could still be rented, to submit estimated cost of preparing the same for school purposes. I readily secured a guaranty signed by 41 of the leading citizens for a school site of not less than 80 acres, to be located within 3 miles of the city, and to be selected by the Commissioner. I secured an extension of the refusal of the West End Hotel, and made estimates of the cost of preparing the building and forwarded to the Commissioner the guaranty and estimates.

In obedience to instructions received from the Commissioner, on December 31 I left the post in charge of our engineer, and in company with my other assistants proceeded to Phoenix, entered into an agreement on behalf of the Government for the lease of the West End Hotel for school purposes, at \$100 per month for the balance of the fiscal year, with the privilege of a continuance of the lease from year to year, so long as required by the Government, and took possession of the premises.

It required but a few days to obtain our effects from the post and to establish ourselves in our new quarters. Having fitted up an office, I proceeded to submit estimates for goods and supplies for the school, and to make all necessary changes and improvements in the building, and arrangements for securing pupils and the additional assistants required. By the 1st of February I was prepared to open school, very soon after the arrival of the goods and supplies I had estimated for.

On the 20th of January my appointment as superintendent of the Fort McDowell Indian Industrial Training School was canceled, and at the same time I was appointed superintendent of the Phoenix Indian Industrial Training School, and on the 26th of January I was designated special disbursing agent of the latter.

Having been authorized by the Commissioner to select a suitable site for the school, I reported that with an appropriation by Congress of \$6,000 and what the citizens of Phoenix would contribute, a most desirable site of 160 acres could be secured. This appropriation having been made by Congress, after a careful examination of the many sites offered I recommended the purchase of 160 acres of improved

land of the finest quality, and most favorably situated, 3 miles north of town, at \$9,000; the Government to pay \$6,000 and the citizens of Phoenix, \$3,000. The Commissioner having decided to purchase this tract of land, in obedience to his instructions I forwarded to him on the 11th of April an abstract of the title to, and a warranty deed for, the same, and two "water-right certificates."

In compliance with the Commissioner's request I submitted a scheme for the disbursement of the \$50,000 appropriated by Congress for the establishment of the Phoenix Indian Industrial Training School, specifying the several sums required for buildings and other improvements to be made on the land and for the support of a school of 125 pupils and the necessary employes during the fiscal year of 1892.

In pursuance of instructions received from the Commissioner I employed Mr. J. M. Creighton, architect, to prepare plans and specifications for a school building to be erected on the school site. Preliminary sketches of the building designed to be erected were forwarded to the Commissioner on the 12th of May. These having met with his approval, complete drawings and specifications were submitted on the 22d of June.

The unprecedented floods that prevailed in the Gila and Salt Rivers during the last week in February and the first two weeks of March swept away the railroad bridges over these streams and otherwise seriously damaged the Phoenix and Maricopa Railroad. The goods and supplies shipped by the Indian Office to this school began to arrive at Maricopa about the time this destruction of railroad property occurred. Having ascertained that the railroad could not be repaired short of two months, I made repeated but unsuccessful efforts to have the goods forwarded to the school by means of freight teams. The goods remained at Maricopa until the road was in running order to Phoenix. They were received at this school on the 6th of June. As the hot season had then set in, and the fiscal year was near its close, I was instructed by the Commissioner to defer the opening of the school until the 1st of September.

The land purchased for the school site is well adapted to the cultivation of figs, apricots, raisin grapes, oranges, and all other varieties that are grown in this valley. It is the purpose to devote 80 or 90 acres of the farm to such fruits, with the view of training the pupils in the arts of cultivating, curing, and handling the same. Pupils so trained will readily find remunerative employment in the orchards and vineyards of the Salt River and Gila River valleys. Hence, the outing system can be successfully applied here.

Although little has been accomplished during the fiscal year just closing, it is confidently believed that the school now rests on a sound basis and that its prospects are very encouraging.

Very respectfully,

WELLINGTON RICH.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF TELLER INSTITUTE, GRAND JUNCTION, COLO.

TELLER INSTITUTE, GRAND JUNCTION, COLO., *August 31, 1891.*

SIR: In compliance with instructions from your office, I have the honor to submit the following report. Having taken charge of the institute only twelve days before the close of the fiscal year, my report from personal observation must necessarily be brief and it may be as creditable to all concerned to increase its brevity.

Arriving in May full of hope and enthusiasm with 53 new pupils, equally hopeful and enthusiastic, I looked over the situation. My enthusiasm weakened when I found a boy sick with the measles had been moved from room to room till there was not the remotest hope of escape. I looked forward to 53 cases of measles and was disappointed only in the fact that this number was exceeded. The weeks of nursing on the part of employes and suffering on the part of the children proved a black plague to enthusiasm.

Employes and such children as were able to be up were overworked. All were frightened or uneasy. Complications taking the form of pneumonia, acute bronchitis, sore eyes, etc., were developed. In the end, however, anything more serious than frightening 7 boys into fleeing to their reservation homes was averted. Since recovering from measles and complications not a child on the place has been confined to the buildings for a single day.

Sanitation.—I can conceive of no condition that would render sanitation more difficult. The site is flat. The soil is composed of an almost impervious adobe. My only hope lies in sinking cesspools to the gravel and underlying sheet water some 20 or 30 feet below the surface. These will need to be walled, close covered, and vented high in the air.

**Farm.**—What the farm is best adapted to growing has never been discovered; or if it has, such information has never been recorded or taken up, except in the case of hay. Trees, hay, and beets I know will grow, and to the cultivation of these we must devote ourselves for leading results and experiment in a small way till further information and a better condition of soil are obtained. Potatoes, beans, and garden vegetables are desirable, but if these have ever been successfully grown there has been neglect or oversight, as none have been taken up on the papers.

**Stock.**—Six horses and four pigs at the close of the year constitute the live stock—all good. Twenty-four colonies of bees of the most energetic variety and well cared for yield a desirable product in good quantity. In this connection I would recommend that the pigs be sold and the proceeds be expended in the purchase of domestic fowls and the erection of buildings for their proper care. The fowls will be more useful directly, and will furnish useful training to more children, besides getting rid of a stench that an ever-varying wind too frequently wafts into the dining room and dormitory from an undrained and undrainable piggery.

**Industrial work.**—In the farmer's work the present prospect indicates from 10 to 12 tons of hay and from 200 to 250 bushels of oats. In addition most of the farm has been put in condition for future seeding or for planting to orchard and vineyard. In the carpenter's work the barn, walks, and milk-house commend his efforts and the training of the boys.

There were but two girls in attendance until the 14th of May, at which time boys were detailed to the laundry, kitchen, and dining room, besides doing the sweeping and scrubbing. I suppose the two girls helped in the manufacture of the 282 garments made by the seamstress prior to my arrival. I know that the new girls helped in making the 141 articles manufactured from May 14 to June 30.

**School training.**—Sickness and the condition of the eyes of many of the children after suffering from measles precluded the possibility of thorough classification, and the time was devoted to working up such children as were behind and such as had never been in school, that classification might be simplified for fall work.

The enrollment for the entire year was, females, 22; males, 74; total 96. Average attendance 35.5 per day.

**Moral training.**—On taking charge June 19 I began preparations for the organization of a Sunday school, which is in operation and will so continue. I hope to secure at least occasional services from the ministers in the neighboring town.

**Improvement.**—The improvements of the year consist of an addition of 53 pupils, the partial erection of a two-story brick house, containing dormitories, dining room, kitchen, reception room, sewing room, sitting room, infirmary, and bathrooms; a large and well-constructed barn; a milk house; and a two-story brick containing carpenter shop, saddler and shoe shop, and tailor shop; as well as a small box blacksmith shop.

Very respectfully submitted.

THEO. G. LEMMON,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF FORT HALL SCHOOL, IDAHO.

FORT HALL BOARDING SCHOOL,  
*Blackfoot, Idaho, October 1, 1891.*

SIR: I have the honor to forward my second annual report of the Fort Hall Industrial School for the fiscal year ending June 30, 1891.

In our report of 1890 we gave as complete a history of the school and the buildings as the files of our office would afford.

As the name indicates, the original buildings were constructed by the War Department during the years 1870 and 1871, which were transferred to the Interior Department by an act of Congress in 1892 for Indian school purposes. The buildings are uniformly located around a rectangle 260 by 500 feet.

**School.**—At the opening of the school, September 1, we experienced very little difficulty in securing the attendance of all the children our buildings would accommodate. On November 14 we had on our roll 105 industrious and contented children. November 15 scarlet fever swept in upon us and struck down 68 children in ten days. Eight Indian children died in school and 30 died on the reservation. January 14, when the fever had apparently vanished and we believed the worst to be over, our own little girl 4 years old, the pet of the Indian children and the idol of our home, took sick, and January 19 God called her from earth to heaven.

The literary department of the school was closed from November 15 for four months. The children were not in condition to study on account of weak eyes for nearly two months after they were apparently well from the fever.

Notwithstanding our affliction, the average attendance for the year was 86, and the progress of the pupils in letters as well as in the varied industries was more than could have been expected.

**Farm and garden.**—Our greatest difficulty is on account of our children being young and able to do but a small amount of labor, averaging but 11 years; but with the help of the reservation Indians we have securely fenced 600 acres (in all, 1,100 inclosed), cleared, broken, and ditched 80 acres. While it is true that land in this climate is considered of but little value the first year after breaking, we can safely estimate our year's products as follows:

Wheat .....	bushels..	200	Peas .....	bushels..	15
Oats .....	do.....	250	Turnips .....	do.....	20
Potatoes .....	do.....	700	Hay .....	tons..	200
Onions .....	do.....	20	Melons .....	number..	200
Beets .....	do.....	50	Pumpkins .....	do.....	200
Tomatoes .....	do.....	25	Cabbage .....	do.....	1,500
Beans .....	do.....	20			

**Stock,** we are able to report in good condition, with an abundance of feed for the winter, except oats, of which we had a poor yield, on account of the land having been newly broken.

Horses .....	9	Hogs .....	35
Cows .....	26	Chickens .....	35
Cattle (other than cows) .....	85		

The harness shop is doing the same kind of work as that of last year. While it is unprofitable to the school from a monetary standpoint, it has proven to be a valuable industry to the reservation Indians. During the year we have repaired more than one hundred set of harness, the labor in many instances equal to that of making them from new material.

**Carpenter work** has been continuous during the year. In addition to the current repairs the carpenter has either superintended, or with the help of the boys constructed, one two-story barn and stable, 40 by 60 feet; one school building, 35 by 60 feet, with wing 30 by 40 feet; one hospital building, 30 by 40 feet; one dry house for laundry, 16 by 50 feet; one chicken house, 18 by 30 feet; one hog house, 12 by 40 feet; one bath house, 18 by 40 feet; two coal houses, 12 by 18 feet each; one milk house, 12 by 14 feet; and a number of smaller buildings.

**Sewing room.**—The work here, as in most other departments, was suspended for nearly four months, but during the year there have been fabricated 300 articles of clothing, in addition to the repairing constantly demanded of the sewing girls.

The laundry building has been remodeled, appliances for water power and the requisite machinery purchased with which the laundry work can be made a pleasure to the children instead of a dreaded duty, as it has been to them in the past.

**Moral and religious exercises** are held each evening and Sunday school every Sunday. The employes have subscribed funds sufficient to employ a minister at \$4 per day, for each alternate Sunday to preach for us the ensuing year.

The employes are persons of good moral character, most of them have had years of experience in the Indian service, and have proven themselves eminently qualified to discharge their respective duties.

I can say no less than that the industrial and literary work of the school, considering the great difficulties that confronted us has been executed in a manner highly commendable to those in direct charge. With scarcely an exception they have been untiring in their efforts to make the Indian school service a success.

**General.**—Our buildings have all been reclaimed from their dilapidation, and made fit for occupancy. The marked difference between the appearance and the comfort of these buildings now and one year ago has greatly contributed to the contentment of the children, and inspired them with energy to keep their rooms, their dormitories, and their persons more neatly than ever before.

We have been furnished water pipe with which we have conducted an abundant supply of pure water into or near all the buildings.

We have material contracted for to inclose 700 acres more land, which will in all make the school farm cover an area of 1,800 acres of as fertile land as can be found in the United States. We are now prepared to produce our own beef and furnish the agency with a large supply every year.

We have endeavored for the past two years to make the school the center of civilization on the reservation, and show by contrast the difference between life in neatly furnished and comfortable houses and the dusky lodges from which they came. I am confident that the wise policy of your office in assisting us in erecting new and repairing the old buildings has been more potent in creating a desire among the reservation Indians to erect houses for themselves than all other influences combined.

Extending my thanks to you and the honorable Secretary of the Interior for the liberal support you have given me, for the kindness, sympathy, and consideration you have shown us throughout our severe affliction,

I have the honor to be, respectfully, your obedient servant,  
 JOHN Y. WILLIAMS,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF FORT LAPWAI SCHOOL, IDAHO.

FORT LAPWAI, IDAHO, August 26, 1891.

SIR: In compliance with circular instructions, I have the honor to forward my first annual report of the Fort Lapwai industrial school. My bond was accepted September 19, 1890. I receipted to Mr. George W. Harper, my predecessor, for the public property and assumed charge of the school October 1, 1890; my report will therefore cover the last nine months of the year, and will contain a brief statement of the condition of affairs at this school and such improvements and changes as have been made during the year.

The Fort Lapwai buildings were erected by the War Department in the years 1861 and 1862, and in 1885 all the property belonging to the War Department was transferred to the Interior Department under an act of Congress in the year 1882.

The military reserve proper contains 669.66 acres and the old military hay reserve, 655.64 acres, which cornered with the military reserve, and could be reached only by going 1½ miles. This inconvenience has recently been overcome by an exchange (made under authority of July 2, 1891) of this hay reservation for 652.55 acres of land joining the school farm on the west, making the school land in a compact body of 1,322.21 acres. As the hay reservation lay it was of little value to the school, being so far away, and being in an irregular shape it affected the shape of Indian farms adjoining, so that the exchange was an advantage to the Indians as well as this school, for which I am indebted to Special Allotting Agent A. C. Fletcher for her kindness in assisting in having the exchange made.

**Buildings.**—Upon assuming charge of the school I found the buildings in a dilapidated condition, many of them already fallen and others unfit for use; no walks of any kind connected the buildings, so that the girls had to pass a distance of one quarter of a mile in going from their quarters to the schoolroom, through snow, rain, mud, etc. The girls' dormitory, a building which had previously been a military hospital, was the *only building on the grounds which had not been condemned*, and it was not large enough to comfortably accommodate more than 30 girls, although 60 have been obliged to occupy it.

The building used as boys' dormitory is one of the oldest on the place, and during the winter months, when the snow lay on the roof, we were obliged to put up props to prevent its falling, and it is now unsafe, so that the boys will occupy the old school building until new quarters can be erected. This old dormitory and the building used as kitchen and dining room are the old company quarters and will scarcely stand another winter, having been built about thirty years.

Since January 1, an addition, 30 by 60 feet, two stories high, has been built to the girls' dormitory, making it possible to accommodate 80 or 90 girls, the lower floor being used as a sitting and reading room and wash and bath rooms, while the upper floor is a sleeping room. We have also about completed a new schoolhouse of four rooms and a large assembly hall, which will be a vast improvement over the old arrangement and will give much more room. Authority has been granted for the erection of a large building for the boys, the plans for which I am daily expecting from the Indian Office, and in hopes of having the building completed before the severe cold weather, so that the boys may be as comfortably situated as the girls.

A sidewalk has been built from the girls' dormitory to the kitchen and dining room, so that they may go to and from their meals without having their feet wet and muddy.

The buildings are in a better condition and the pupils will be more comfortably situated than ever before, with the exception of the kitchen and dining room, which I hope to be able another year to replace with a new and more commodious one, also a new hospital building, which is very much needed.

**School.**—The school filled up very rapidly and the parents brought their children in willingly. I think the indifference heretofore manifested by the parents in the education of their children is fast giving way to an earnest desire to see them prepared to take their place along with white people.

They show a great pride in the progress their children have made this year, and especially are they proud of our brass band, which was organized last November, under the leadership of Mr. George W. King. They have furnished some very fine music for all our social gatherings and the closing exercises on the Fourth of July. They have been several times to the agency to play for an assembly of the prominent men of the tribe, and have had two or three invitations to play for celebrations at neighboring towns, and although they have never accepted an invitation of that kind, it was a source of gratification to them to feel that they were appreciated and desired.

The school was graded the first of the session and consisted of four departments, with 150 pupils. The attendance has been greater than ever before known and the progress made in the schoolroom work reflects great credit on both teachers and scholars. Owing to the great amount of sickness in the school last spring, the schoolroom work was much hindered, there being over one hundred cases of la grippe at one time. The health of the pupils, with the exception of this attack of la grippe, has been very good. I can not speak too highly of the valuable assistance rendered by all the employés at this time in caring for the sick.

One of the greatest difficulties met with in the Indian service is in securing good and efficient employés who are interested in the education and advancement of the Indian children and who can work harmoniously together. Only one or two of the old force was retained after I took charge, as there was an unfriendly feeling existing among some of them, so I deemed it for the best interest of the service to recommend several changes in the corps of employés and the appointment of others to the positions who would aid me in building up the school, the result being that I have had an able corps of employés, who have all worked together with me for the advancement of the scholars and the prosperity of the school. Whatever success I may have gained I owe great credit to my employés, who have assisted me in every way.

Our school session closed on the 4th of July, with a literary and musical entertainment given by the children, which was witnessed by several hundred Indians (among whom were the parents of the school children), who were assembled to celebrate the Fourth of July. They all seemed well pleased with the exercises and with the progress the children had made, and signified their appreciation of our efforts to please them. The exercises closed with fireworks in the evening, which pleased the children and the parents alike. Their feelings were expressed by cheers loud and long. The higher the rockets the louder the cheers.

**Shops.**—The carpenter, blacksmith, and shoe and harness shops have been under the charge of Indian employés, who learned their trades at Chemawa Training School. These departments have not been such a success as I had hoped for on account of lack of material to work with, although a great deal of repairing has been done by each. I feel confident that I shall be able to render a more satisfactory report the coming year.

**Sewing room.**—Work in the sewing room has been kept up the entire year, there being a detail of 8 girls each half day during school. The number of articles fabricated during the year is about 800, such as dresses, aprons, undergarments, sheets, pillowcases, and boys' underwear, as well as the repairing and darning for the entire school; the work of this department has been very satisfactory indeed, and we expect to improve with the aid of the new sewing rooms and new machines. The kindness of the Indian Office has allowed us the assistance of a tailoress, of which we were greatly in need.

**Laundry.**—The laundry work has been conducted by an Indian girl assisted by the school girls. The work has been well done considering the fact that all the water had to be hauled or carried to the laundry. We have had the advantage of three washing machines, which lightens the work very much. Authority has been granted to put in a system of water works, which will also greatly lessen the labor.

**Kitchen and bakery.**—The inconvenience of a small kitchen and a small range very materially affect the success of instruction in this industry. Considering these disadvantages the work has been very successfully managed. The girls have been taught industry and economy as well as to prepare good palatable food, care for the dining room, set and clear tables and wash dishes. Four girls are detailed each day to the kitchen and four to the dining room. The boys do the work in the bakery and are taught to make bread and yeast, and to cook pies and cake, all of the baking being done in the bakery on account of the kitchen being so small. We hope to have a new and more commodious kitchen this winter where the girls can learn more in the line of bakery.

**Farm and garden.**—The school farm land consists of 80 acres, 72 of which were sown to wheat for hay, but owing to the extreme dry weather and grasshoppers the crop did not yield as in former years, though we put up about 75 tons of hay. The yield was: Potatoes, 60 bushels; carrots, 30; turrrips, 5; onions, 20; cabbage, 400 pounds.

The old fence, which was in a very dilapidated condition, has all been repaired, and 160 acres of land fenced with barbed wire, and the campus with picket fence, which has been whitewashed. I intend to fence all the school land, taking in the new pasture, and much will be cultivated. I have posts all ready for the fencing, and will begin work as soon as the rains come and the ground is in a condition to be worked. Also the road out of the valley, which has been recently surveyed, will be worked as soon as possible. This will give us a shorter and better road than we have had before.

**Stock.**—The school stock consists of six horses, ten new milch cows, and a bull. We are greatly in need of another team, as one of the teams we have is old and can only be used to do work around the school ground, such as hauling wood and water, and such light work.

I am well pleased with the work in all the departments, and can see no reason why we should not make greater progress than ever before, and I believe that with the improvements in the buildings and the water supply we will make a record that will be a credit to the Indian service.

Thanking the Indian Office and the Commissioner for the kind considerations which have assisted me so materially in the advancement of the school, I am, very respectfully,

ED MCCONVILLE,

*Superintendent and Special Disbursing Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

## REPORT OF HASKELL INSTITUTE, LAWRENCE, KANS.

LAWRENCE, KANS., *September 1, 1891.*

SIR: I have the honor to forward my second annual report of Haskell Institute for the fiscal year ending June 30, 1891.

Haskell Institute is in good condition and doing a grand work. The attendance has been greater than ever before, the maximum reaching 531 with the average for the year nearly 500. There have been only a few severe cases of discipline, and weeks at a time when no pupil was under punishment. My aim has been to teach these children of nature reverence for God, cleanliness of body and mind, truthfulness, respect for the rights of others, habits of industry and frugality, and a recognition of obligations that arise from being members of society.

There has been on the part of employes a commendable willingness, and, in many instances, a hearty desire to cooperate with me in carrying out the policy of my administration. There is a spirit of harmony and unity among the employes with reference to the work that is truly gratifying and without which the results that have been achieved would have been impossible. In the schoolrooms, in the shops, on the farm, and in all the various branches of household affairs, the work has been carried on systematically, methodically, and with a spirit that gave evidence that the employes, as a rule, realized that it was an honor to be engaged in one of the great educational movements of the day.

The moral tone of the students has, I believe, been raised, though there is yet room for improvement. The material progress has, however, been great.

**Improvements.**—The introduction of city water has made possible urgent sanitary improvements. Individual bathrooms, water-closets, urinals, and lavatories are being provided in the basement of each of the boys' buildings. A large steel tank is about to be put in position in the basement of the boiler-house, so that in a few weeks the dormitories will all be provided with both hot and cold water.

The exterior of the hospital as well as all the inside walls and ceilings have been thoroughly painted, and other conveniences added, until it has every convenience, with the exception of gas or electric light, to be found in the average city home. The hospital is presided over by a physician, nurse, and assistant nurse, who reside in the building and devote their entire time to caring for the sick, ministering to their comfort, and keeping the building and its surroundings in a proper sanitary condition. Through your kindness, the hospital is now regularly provided with delicacies and luxuries, such as the sick and convalescent require. These Indian children receive far better care when sick than the average white child.

An addition to the boilerhouse and laundry has doubled its capacity, giving us two large rooms, one of which is used by the seamstress and the other by the harness-maker. A stone workshop 180 feet long and 50 feet wide is in process of erection. When this is completed it will be used for the manufacture of wagons, thus relieving the crowded condition of the present workshop, and giving for the use of the tailor and shoemaker, respectively, a large, well-lighted room. A storehouse

100 by 50 feet is nearly completed. The basement will be cemented, and a large part of it used as a cellar or storehouse for fruits and vegetables. The contract is about to be let for the erection of one of the largest hay barns and cow stables in the State, 155 feet long and 50 feet wide. One hundred and sixty acres of grass land on the southwest have been added by purchase during the year, also 10 acres near the entrance to the grounds. A neat and commodious office building is being erected on this last purchase, and it is hoped that during the year a residence for the superintendent and a home for the employes will also be constructed. Wardrobes have been built in many of the rooms in the boys' dormitories, and it is my plan, as soon as possible, to cut up the wards in the boys' dormitories into smaller rooms. The exterior of the boys' dormitories have been painted, and the halls and stairways wainscoted.

The greatest improvement has been made with the school building. New floors have been laid throughout the entire building, the ceilings and walls kalsomined or painted, the woodwork painted, all the furniture scraped, stained, and shellacked, and all the woodwork of the entire building neatly painted. When the teachers have their plants, pictures, and other decorations in these rooms, I believe there will be no pleasanter schoolrooms in the State of Kansas.

All of these improvements, with the exception of the erection of the new buildings, and the plumbing and more difficult parts of steam-fitting, have been done by the Indian boys themselves. To show that the Indians are capable, I will remark that the contractors for the erection of the office, storehouse, and workshop have employed at current rates of wages many of the Indian young men.

While the yield of small fruits, apples, peaches, some kinds of vegetables, corn, and grass have been abundant, much of the work on the farm has resulted in failure, owing to the excessive fall of rain from April 1 to August 1. The ground was so wet that seed potatoes decayed, and when the ground was again plowed and replanted, the newly-planted seed also decayed.

In contrast with a year ago, it gives me pleasure to state that we now have nearly 300 pairs of shoes, 300 pairs of pantaloons, and 200 coats made up in advance, while a year ago there were none, and it was well-nigh impossible to manufacture them as fast as needed.

We have few good milch cows, and the herd ought to be increased at once by the addition of 25 or 30 head.

Safety demands the introduction of an electric-light plant at as early a day as possible.

We have now 1,000 feet of hose pipe, which with the high pressure on our water mains affords ample exterior protection in case of fire. Standpipes, however, for interior protection, ought to be placed in all of the dormitories.

There should be erected at an early day a building to be used as a chapel and gymnasium combined. There is only one place of assembly on the reservation, and that is the chapel, in the second story of the school building. It was originally designed to accommodate 300, and can accommodate only that number fairly well. With the largely increased attendance of the past, and with this continued increase which we have a reason to expect, it is almost impossible for this large number to enter the room, to say nothing of comfortable accommodations. At the present time two schools are kept in the boys' dormitories.

**Exhibit of Industrial and School Work.**—I have confined myself almost wholly thus far to a description of new buildings and other improvements. Haskell Institute was established to provide Indian youth with an elementary English education and a trade as a means to civilization and citizenship. I have given little attention to the school and the trades up to this point in my report, for the reason that there never have been provided at Haskell Institute the conveniences and conditions essential to carrying on the work with the largest measure of success, and the highest degree of economy. When the improvements now under way and those contemplated are completed, the superintendent of Haskell Institute can devote himself wholly to furthering the purposes for which the institution was established. I can, however, refer only with pleasure to the progress that, under even unfavorable conditions, has been made during the past fiscal year in the school and shop work. The Indian students have shown an aptitude for the various studies and mechanical pursuits that have been to me very gratifying, and a surprise to the large number of people who have visited the institution and seen them at work.

The last of June, instead of the usual closing exercises, we had, in the chapel, a three days' exhibit of the industrial and school work of the year. This exhibit comprised every article made in the shops and samples of many things raised on the farm, together with a great variety of school work, such as written examination papers upon the various studies pursued, together with specimens of penmanship, drawing, and kindergarten work. The exhibit was an unqualified success, and was looked upon with great favor by the large number of visitors. The whole exhibit reflected great credit upon the teachers in the school and those in charge of the shop work.

My special aim in all lines of work has been to recognize the needs, the abilities, and the desires of the individual rather than to look upon the pupils collectively or in the mass. This will continue to be my aim, and is one of the reasons why I am anxious to cut up the large wards in the dormitories into smaller rooms, such as are provided in the average college for white students. The massing of 20 or 30 students in one room savors too much of the reservation idea.

In closing this report I can say that, while there are discouragements in this work, as in all lines of human activity, the future is full of hope, and if I could personally look back over a period of thirty years, as many Indian workers can, I should feel that wonderful progress had indeed been made, and that this progress was but the harbinger of greater and grander achievements that will be witnessed during the next thirty years. Indian education is no longer doubtful or impossible.

The good results that have been accomplished at Haskell Institute during the past year could not have been brought about by the superintendent and employés without the sincere and hearty coöperation of the Indian Office. I may be pardoned for saying that the confidence placed in me the last year, wherein my requests for authority, almost without exception, have been promptly granted, has been gratifying in the extreme, and encourages me to enter more heartily into the work of the coming year, and to strive to merit a continuance of your confidence and support.

I have the honor to be, very respectfully, your obedient servant,  
 CHARLES FRANCIS MESERVE,  
*Superintendent and Special Disbursing Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF GRANT INSTITUTE, GENOA, NEBR.

GRANT INSTITUTE, *Genoa, Nebr., August 28, 1891.*

SIR: I have the honor to herewith submit my third annual report for the year ending June 30, 1891.

In regard to the girls' department, I would say that during the past twelve months a more manifest improvement and advancement has been made than during any of the previous years of the school's history. The girls have numbered about 85, ranging from 5 or 6 years up to 20 years of age. All, with the exception of 10 or 12, have been regularly detailed to the different works of the household, and, as a general thing, have performed their duties to the best of their ability, are easily governed, and are always willing to try again, and learn to do as they are taught.

Increased advantages have been given during the year. A music teacher has been appointed, and many of the larger girls have made excellent progress, both in vocal and instrumental music. Some have marked taste and ability, and are able to play the organ in the Sunday services, and also to add very creditably to the school-room entertainments. A piano has recently been procured which will add still more to the pleasure and instruction of both boys and girls. Another advantage has been the sending by friends of the Indians of books, papers, and magazines, furnishing good reading, for which there is constantly an increased demand, showing that the minds of the children are being enlarged, and that they are learning, though perhaps slowly, to grasp new ideas and subjects which were unknown to their ancestors.

Through the suggestions made by Mrs. Dr. Dorchester during her visit of inspection, three circles of the "King's Daughters" have been formed. One for the large girls, called the "Golden Rule;" one for the medium sized, designated as the "Watch Circle," and another for the small ones, known as the "Little Pick-ups." The latter have been most useful in their "pick-up" duties, and the formation of these societies has had a good and refining influence over all. The desire to become members, procure suitable badges, and pay dues has spurred them on to industrious efforts in the way of beadwork, fancywork, etc., the sale of which articles will procure the money for the desired object.

Last year the girls had no sitting room or parlor. This year they have carpeted a small room, which is also the music room, and from their own earnings they have saved sufficient to help procure rocking-chairs and curtains, cover a lounge, and make cosy and home-like a room which was bare and unfurnished. Considerable taste has been displayed by them in the decoration of the walls with pretty pictures and engravings, for which we are indebted to Mrs. Dorchester and other friends.

Improvements are seen in the keeping of the dormitories, the private rooms of the larger pupils, and in the personal appearance of the girls, which is shown every day

in little ways, such as can be known more particularly by the matron, who stands in closer relationship to them, and who has a better opportunity of seeing every favorable change.

Good English is being rapidly acquired. The new girls, who have come during the past year or two and were unable to speak or understand a word of English, are now making excellent progress, while reporting at roll call for talking Indian grows decidedly less. With the exception of two or three new girls all are prepared to say "no."

Some of the girls have taken great pride and pleasure in the care of the chickens which have been added to the school farm. These are about 400 in number. A pleasant variety of food at the children's table is due to the fresh eggs and abundance of milk and butter, which now supplies the whole school. The farm furnishes the best of vegetables, and never has the school fare been better than at the present time. This variety of good food has proved healthful for the children, and the excellent sanitary condition of the school during the past year may be partly owing to this consideration.

Only one death has occurred among the girls during the year—that of one very delicate child who was unable to rally from a severe attack of la grippe. Sore eyes are quite rare among them, and the matron reports having been called up by illness only one night during the whole year. This better condition of health may be attributed partly to a greater degree of cleanliness and personal attention, the importance of which they are daily taught to observe. The bathing facilities are very good, but could be better.

**Farm and Garden.**—The farm consists at present of 480 acres of ground, 320 acres of which the Government owns, and the balance, 160 acres, is rented. The soil is a rich black loam, lying nearly level upon the first and second benches east of and adjoining the town of Genoa. The farm is crossed by the Union Pacific Railroad from east to west, the road running about 75 yards south of the main building. No particular change during the year has been made in the farm, except such as naturally comes in planting, raising of various crops, and caring for the school stock. A detail of 8 boys under the care of the farmer and an assistant do all the farm work except hoeing. During the weed season an extra detail of boys is made for the purpose of hoeing and killing weeds. The several yields this year have been exceedingly gratifying, and in many cases above the average. The farm and garden have been a source of great profit to our school. The children have had a bountiful supply of potatoes, beans, radishes, sweet corn, peas, carrots, etc., and I attribute the continued good health of the pupils largely to the fact that they have an ample and varied vegetable diet.

Following is a statement of the acreage of crops on our farm for the past year and present year, together with a fair estimate of yields and values and of the probable miscellaneous receipts of the school:

*Farm, garden, harness shop, and broom factory.*

Product.	Acres.	Yield.	Value.
<b>Past year:</b>			
Wheat .....	25	375 bushels .....	\$300.00
Oats .....	50	1,500 bushels .....	750.00
Potatoes .....	25	500 bushels .....	750.00
Indian corn .....	120	5,400 bushels .....	2,700.00
Broom corn .....	40	10 tons .....	1,100.00
Sorghum .....	20	500 gallons .....	250.00
Cabbage .....	2	7,000 head .....	210.00
Onions .....	1	75 bushels .....	75.00
Beans .....	4	48 bushels .....	50.00
Sweet corn .....	8	160 bushels .....	100.00
Beets .....	2	200 bushels .....	200.00
Peas .....	2	30 bushels .....	75.00
Squash .....	1	500 .....	50.00
Pumpkins .....	$\frac{3}{4}$	250 .....	25.00
Tomatoes .....	$\frac{1}{4}$	30 bushels .....	60.00
Radishes and cucumbers .....		20 bushels .....	50.00
15 cows .....			438.75
20 hogs .....			300.00
195 sets harness, at \$6.98 .....			1,361.10
175 sets harness, at \$17.50 .....			3,062.50
1,200 dozen brooms, at \$2.50 .....			3,000.00
100 dozen whisks, at \$1.10 .....			110.00
<b>Total .....</b>			<b>15,018.85</b>

## Farm, garden, harness shop, and broom factory—Continued.

Product.	Acres.	Yield.	Value.
<b>Present year:</b>			
Oats .....	30	1,200 bushels .....	\$300.00
Indian corn .....	80	4,000 bushels .....	1,000.00
Broom corn .....	85	25 tons .....	2,500.00
Millet .....	40	40 tons .....	160.00
Prairie hay .....	50	75 tons .....	225.00
Beans .....	1	15 bushels .....	30.00
Sweet corn .....	8	160 bushels .....	320.00
Cabbage .....		10,000 head .....	500.00
Beans .....	6 $\frac{1}{2}$	65 bushels .....	97.50
Peas .....	2 $\frac{1}{2}$	37 $\frac{1}{2}$ bushels .....	93.75
Radishes .....	$\frac{1}{2}$	20 bushels .....	50.00
Parsnips .....	$\frac{1}{2}$	40 bushels .....	100.00
Cucumbers .....	$\frac{1}{2}$	8 bushels .....	32.00
Tomatoes .....	$\frac{1}{2}$	50 bushels .....	75.00
Beets .....	1	100 bushels .....	100.00
Potatoes .....	21 $\frac{1}{2}$	1,612 $\frac{1}{2}$ bushels .....	806.25
Turnips .....		400 bushels .....	80.00
Grapes .....		20 bushels .....	40.00
12 wagons, at \$50 .....			600.00
60 tons ice, at \$10 .....			600.00
196 sets harness, at \$6.98 .....			1,368.08
277 sets harness, at \$17.50 .....			4,847.50
1,192 dozen brooms, at \$2.50 .....			2,980.00
142 dozen whisks, at \$1.12 $\frac{1}{2}$ .....			1,597.75
808 dozen brooms, at \$2.50 .....			2,020.00
<b>Total .....</b>			<b>19,084.83</b>

**The Printing Office.**—When there is taken into consideration the insufficient apparatus with which the labor is performed, and the inadequate means for facilitating work, a very fair showing has been made in the printing office. The school paper, the Pipe of Peace, is neatly and creditably printed, despite the unusual obstacles, and has already reached a circulation of nearly 1,000. The pupils are always eager to get their little newspaper, reading it thoroughly each week with infinite interest and to their evident benefit. Six boys, ranging in age from 13 to 22 years, have received instructions in the office and made advancement that is encouragement to all concerned, exhibiting an aptitude and ability to learn, in nearly every instance, quite as marked as might be expected in the average white youth; and in one case—that of a 14-year old, full-blooded Sioux boy—a degree of proficiency truly surprising. The printers, with a single exception, have taken a deep interest in their work, signifying their intention of completing the trade and following it for a livelihood. On various occasions several of them have given to the publisher of the village paper satisfactory assistance, both as compositors and pressmen, and there is ample evidence that, when qualified, they will have no trouble in obtaining remunerative positions in neighboring printing offices. I feel well satisfied with the progress these boys have made, as all have fairly demonstrated their natural capability to in a reasonable length of time learn the "art preservative."

**Kitchen.**—The assistants in the kitchen work are 2 in the morning and 2 in the afternoon. They are taught to prepare the food for the table, and have the cleaning of the kitchen and the utensils used for cooking. Many of the girls would be found capable of preparing a grand meal for a smaller household.

**Dining room.**—The dining room is in charge of a large girl, who gives out the bread sufficient for daily use, has the supervision of the dishwashing, and sees that the waiter girls are in attendance at the proper time and have their tables suitably arranged for the meals.

**Bakery.**—In the bakery there are detailed 3 girls in the morning to mold up the bread into loaves for the baking, which is done by 2 girls in the afternoon. Most of the girls do well in this department, while a few excel.

**Laundry.**—There are 5 girls detailed for the morning and the same for afternoon. The work, under an efficient laundress, has been done remarkably well, considering the drawbacks to which she and her assistants are subjected, owing to the want of facilities and conveniences in a laundry which is not sufficient for a school of this size. Plenty of soap, starch, and wringers are supplied, 6 washing machines have been added, which have helped to improve the labor, but there is only one small boiler and not sufficient room. There should be more drying conveniences, as in the winter it is almost impossible to get the clothing in proper condition for the children to wear.

**Sewing room.**—The sewing room gives a most creditable report this year, showing the

finishing of nearly 4,000 well-made garments, in addition to the usual weekly mending and repairing. The little ones have contributed their share to the gratifying results in the way of pretty carpets, which have helped to make cozy and comfortable the rooms of the larger girls. During odd moments many of the latter have accomplished much in the way of crochet work and knitting—tasteful lamp mats, worsted and lace being the work of their hands. The average attendance at sewing room is 15 or 20 girls, who make all of their own clothes, sheets, and pillow slips, and the underwear for the boys.

**Harness shop.**—This shop has an average detail of 16 boys—8 in the forenoon and 8 in the afternoon—and has produced 195 sets plow harness, 175 sets harness of a better grade, a large amount of strap work, and, besides, done considerable repairing. The money derived from the sales of harness made in this shop the past year amounted to \$4,206.40; which is a remarkably good showing, considering the fact that the leather supply was not received until November 26.

**Broom factory.**—With a detail of 11 boys each half day this shop has turned out 1,400 dozen of brooms and 112 dozen of whisk brooms, nearly all of which were shipped under contract as soon as completed. This season, as last, the boys have been taught the trade in its entirety. They planted the seed, assisted in cultivating the corn, and are now aiding in preparing the brush for the factory. This year we sell to the Government 1,292 dozen brooms and 142 dozen whisk brooms, but as we expect to make 2,000 dozen in our factory, we will have 808 dozen to dispose of at private sale. Our factory furnishes nearly all the brooms used in the Indian service.

**Tailor shop.**—The tailor shop has an average detail of 14 boys, about equally divided for the forenoon and afternoon work. The boys are taught cutting and fitting and the trade in detail. Besides making all the clothing used at the school, they have made quite a number of suits for employes and outsiders. The following articles have been made in this shop: 204 jean coats, 204 jean pants, 86 uniform coats, 86 uniform pants, 79 denim pants, and 29 duck aprons, besides all the mending and repairing for the school.

**Shoe shop.**—The shoe shop has had an average detail of 12 boys, 6 in the morning and 6 in the afternoon. Most of them have shown great ability, and some in ten months have turned out work that would grace the shelves of many of our stores. The boys have made nearly all the shoes worn at the school, besides doing the necessary mending. During the year they have made 350 pairs of shoes, and have repaired 900 pairs. The boys are taught the entire trade. They cut, fit, and make a complete shoe. Several of the boys who learned their trade at this school are now earning a living working at the same.

**Carpenter shop.**—Six boys, under the charge of a competent instructor, are detailed to perform the carpenter work. This year, in addition to doing all necessary repairing in and about the buildings, they have made 2 large benches, 28 boxes for shipping harness, 6 washtubs, 4 benches for the harness shop, devised a power to operate our Pearson harness machine, erected a blacksmith and wagon shop, put down many rods of sidewalk, and performed a great deal of other miscellaneous labor. They are taught the use of tools and the trade in general.

**Blacksmith and wagon shop.**—This shop was opened last September, and not only has done all the necessary repairing about the premises, but has built 2 forges, made quite a number of implements needed in the shop, and has completed 3 large lumber wagons. We are now making 3 spring wagons for delivery at Cheyenne River Agency. We expect to make 15 wagons during the present year. Only 2 boys are employed in this shop at the present time.

**Paint shop.**—Two boys are on this detail. They have painted a number of the buildings, and are now papering and painting the main building. The boys are instructed how to mix paints, apply the same, and to hang wall paper. Two wagons made at this school were painted and striped by this detail, and they present a fine appearance.

**School stock.**—The dairy consists of 43 milch cows, which furnish an abundance of milk to the school and produce butter enough to last the year round. Our cattle were well wintered and have done splendidly this summer. During the last year we derived 3,179 pounds net beef, 500 pounds net veal, and 17 hides from our herd of cattle. In addition to the above, our school stock consists of 12 calves, 1 colt, 16 horses, 1 mule, and 42 hogs.

**New buildings.**—Two fine large buildings are to be erected here this season, and one is now in course of construction. The girls' dormitory, a four-story brick, is located west of Morgan Hall and occupies a space 132 by 41 feet, standing east and west. When completed it will be a grand edifice. The building calculated for chapel, dining room, and kitchen is to be placed just west of the new dormitory. It also will be of brick, a 48 by 98 two-story structure, with 40 by 50 one-story ell. The chapel will be seated in the most approved style, and the building throughout finished and furnished in a suitable manner.

**Sanitary.**—The health of the pupils during the first half of the year was exceedingly good. About that time la grippe seized upon us and continued until late in the

spring. It was particularly severe upon those affected with scrofula, and also those who either had consumption fully developed or were in the first stages. One child had inflammation of the brain and died. A summary of the records for the year shows the following: Severe cases of scrofula, 11; consumption, 15; sore eyes, 38; mumps, 38; inflammation of brain, 1; chorea, 2; erysipelas, 1. Besides the above there were numerous cases that required and received treatment, but being of minor importance were not recorded. Grant Institute is situated in an extremely healthy locality. The records of this school show that only three pupils have died of acute disease during the past five years. Two of the above died of brain disease, and one died from the result, probably, of injuries received in a game of football. The tendency in this locality, both among whites and Indians, is toward recovery from all acute diseases, except such as are regarded almost certainly of a fatal character, and fortunately we have never been visited with any diseases of a malignant and contagious nature since the organization of the school.

Schools.—During the year we have had an average attendance of 196. The highest number in attendance at one time was 240. The schoolroom exercises have been the same as heretofore reported, and the course of study adopted by the office has been followed as closely as possible under the circumstances. The teachers of last year have been retained in all the departments, most of them being instructors of superior qualifications and successful experience.

Distinguished visitors.—During the summer and autumn we were favored with visits from several distinguished individuals employed in the Indian service, whose presence and influence resulted in noticeable good to our school, directly and indirectly. Hon. R. V. Belt, Assistant Commissioner of Indian Affairs, came here the 5th of July, 1890, remaining one day. He made a hurried though thorough inspection, spoke to the assembled pupils, and gave such advice and directions in regard to various matters concerning the school as to him appeared expedient. His visit was appreciated by all.

Some ten weeks subsequent, about the middle of September, Gen. T. J. Morgan Commissioner of Indian Affairs, arrived at the school in company with Mrs. Morgan. They made quite a stay. Both entered at once upon a careful inspection of this institution, which also was general and most thorough, and both made suggestions and gave counsel that thereafter proved of good advantage. One evening during his stay Commissioner Morgan addressed the citizens of the village, together with the pupils and employes, in the large dining hall of the school. He gave an able discourse in support of Indian education, and, after showing what a help the school is to Genoa, urged the people to give it all possible encouragement. Commissioner Morgan gave permission for the purchase of 20 new milch cows and 400 chickens, which have been a great help in furnishing the tables this season. He also selected the location for the new dormitory and dining hall.

In October Dr. D. Dorchester, superintendent of Indian schools, came here with his wife. They also performed their duties of inspection with thoughtful care, slighting not the smallest matters, and, departing, left most pleasant recollections in connection with their brief stay.

Extending sincere thanks to the Department for prompt consideration of business matters, and with kindly acknowledgments to the employes of this school for faithful performance of the duties assigned them,

I am, sir, your obedient servant,

W. B. BACKUS,  
*Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF STEWART INSTITUTE, CARSON, NEV.

STEWART INSTITUTE, *Carson City, Nev., September 7, 1891.*

SIR: I have the honor to transmit herewith my first annual report for this school and school farm.

On May 15, 1890, I receipted to S. S. Sears, United States Indian agent, Nevada Agency, for this school building, then just completed under contract, and at once assumed charge of the building, together with all property connected therewith, consisting of 240 acres of land, two dwelling houses, barn, root house, shed and chicken houses. During the six weeks intervening from the time I took charge until the commencement of the fiscal year 1891 my time was devoted to formulating plans for new buildings, making surveys to define our farm lines, arranging to prepare the new schoolhouse for occupancy, and submitting my plans to the Indian Office.

Having received authority to employ irregular labor to put the building in order for the reception of pupils, the first work done was to clean the floors and windows, which were besmeared with paint, varnish, putty, etc., and in many places could

only be cleaned by scraping with hoes and the use of jack planes. Had it been left to me to accept this building, the contractors would have been obliged to have done this cleaning before my acceptance. However, two men under the supervision of the carpenter and two Indian women under the direction and assistance of the matron, placed it, after three weeks labor, in very good condition.

As this building was erected during the winter months, the shrinkage was so great by the time the hot season set in that all of the windows and doors had to be reset. This done, 50 gallons of boiled oil was applied to the floors. After thoroughly drying, an additional 50 gallons of hard floor oil was applied also, all of which was well worked in by the use of paint brushes. This last oiling not only added to the durability, but also gave the floors a hard, bright, finished appearance.

Next I had a carpenter shop built, dimensions 18 by 26 feet, height 12 feet. This completed, the carpenter commenced making tables, blank case, copy-press stand, etc., for the office; and tables, closets, shelving, etc., for dining room and kitchen; and partition, shelving, etc., for linen room.

After this the old worthless roof and siding was stripped from the substantial framework of the barn, which has a frontage of 58 feet, depth 42 feet, height from center to ridge boards 32 feet. This done, new siding was placed on the barn and a new roof of redwood shingles put on.

Next a harness and tool house, 20 by 30 feet, 10 feet high, was constructed from selected lumber torn from the barn. This roof was put on with redwood shingles. This building answers well the purpose for which it was built.

Then a wagon yard, horse corral, hay yard, cow corral, and calf pens were built, which required some 60 rods in their construction.

Bids for the construction of a laundry, wood and coal shed, and storehouse, at a cost of \$5,865, being considered by the Commissioner far too expensive, the same were by him rejected, and I was authorized to construct them by employing labor by the day and the purchase of material in open market. In the construction of the same I was limited to \$2,525. This work was done within the limit of the amount allowed, to wit: Storehouse, \$789.27; dimensions, 24 by 36, height 12 feet; rustic siding, ceiled throughout, filled between rustic and ceiling with sawdust, and 6 inches of sawdust overhead; this was done to equalize the temperature. Laundry was completed at a cost of \$1,232.87; dimensions, 24 by 50 feet; height, 12 feet; sided with rustic, ceiled throughout, finished with improved stationary tubs, linen closets, and sleeping room for laundryman or laundress. This building is furnished with a furnace range for heating water for washtubs and boys' lavatory and bathrooms, which are a part of this building. Also, in connection and a part of the building are the boys' and girls' water closets, furnished with modern apparatus, including automatic flushing.

The wood shed and coal house (combined) cost \$487.13; dimensions, 24 by 36, 14 feet high; is lined with 1-inch boards; outside, of rough boards. These buildings are roofed with redwood shingles, and built on a solid stone foundation and completed in a workmanlike manner.

A contract for plumbing for the new schoolhouse and laundry was completed. Besides the requisite hot and cold water pipes, connections, closets, etc., on both floors, called for in the articles of agreement, the contract called for five ordinary sized bathtubs and two large plunge baths, sinks and wash trays in boys' and girls' lavatories, about 1,000 feet of 3-inch pipe, with five hydrants outside and three attachments inside the school building, range for kitchen, and furnace for laundry; also about 1,400 feet of 6-inch vitrified iron sewer-pipe. This contract was completed, including the pay of a competent plumber to superintend the work, at a cost of \$4,750.

A contract was also let to build a tank tower 46 feet high, with tank of 10,000 gallons capacity, housed in with rustic from pit to dome, and in connection a windmill frame with cyclone mill force pump, all and everything complete for \$2,500. This work was superintended by the school carpenter. As there are three stories in this tank tower, it affords much storage room for supplies. The construction of this mill and tower has given entire satisfaction.

A contract was also let for sinking, by boring, a 200-foot well, and so far it has given us for culinary and domestic purposes a bountiful supply of pure water; but as the contractor failed to comply with the terms of the contract, I refused to receipt for the work, and so far as I know he has received no payment thereon.

Contracts were also let for material for fencing, embracing 29,000 feet of lumber, 820 split cedar posts, 5,000 pounds barbed wire, staples, nails, etc., which were expended in building fences on this farm. The old fence on the west side of the county road was torn down and 632 rods' of new substantial fence put up, 4 feet 8 inches high, posts set 8 feet apart, with four strands of barbed wire, and a board 8 by 1½ inches placed above the wire the entire length of the fence. In addition to this material there was also furnished by contract 160 rods of five-strand wire picket fence and 340 sawed cedar posts, which were used in building a fence on both sides of the county road in front of main school building. The posts to this fence were

placed 8 feet apart, with base boards, and 2 by 4 railing on top of posts. The fence on that portion of the school farm located on the east side of the county road was repaired to answer the purpose for this season, but will require a new fence, which I propose building this coming winter.

After the construction of these buildings, then came the painting of them; the roofs were painted by Indian boy pupils, excepting about \$50 worth of work, which sum was paid to irregular white laborers who worked with the pupils and taught them to go on with the work. With the exception of the laundry building, all of the new buildings have been painted, including the roofs.

Contracts were also awarded by me and approved by the Indian Office for the 25,000 pounds net beef, 25,000 pounds of flour, 41,000 pounds of grain, 20 tons of hay, wagons and carts, 100 cords of wood, 50 tons of coal, besides harness, etc.

The front yard of the school grounds, now covered with a fine stand of lawn grass, has been made more attractive by the erection of a painted picket fence, gravel walks and carriage driveways, and an arch over the double front gates on which is painted, "Visiting day, Wednesday 9 a. m. to 12 m." I have also had planted in rows an equal distance apart 176 shade and ornamental, and 160 fruit trees, also about 20 rose bushes, of which 90 per cent of all planted have thrived. This has encouraged me to plant as many more next spring.

This school opened on December 17, 1890, with 37 pupils. On the morning of January 1, 1891, there were 91 pupils answered to their name at roll call. Our members steadily increased until we had 105 pupils in attendance. It was supposed our schoolhouse was built to accommodate 100 pupils, but I found that the 105 pupils more than crowded the dormitory capacity, consequently I was obliged to cry, "Hold, enough!" After the school had filled to this number I was visited by several headmen (Indians), who, after seeing the manner in which the children were cared for, expressed their willingness to send children from their different bands to this school. Noticeably so was a visit paid me by an intelligent Indian from Alpine County, Cal., at the head of Carson Valley, this State. He had been selected by the people of his band as a representative to this place to confer with me and to ask of me to take in 50 pupils from his vicinity. Another Indian from Esmeralda County, this State, came to me saying he would bring in 20 pupils if I would pay his expenses in collecting and bringing them here. I was obliged to refuse these children admittance until more room was provided. I believe at this time I could easily obtain 200, and possibly 300 children, had there been room to accommodate them.

About the middle of January the mumps broke out. Three pupils were taken simultaneously with the disease, which spread rapidly. I think at least 90 per cent of the pupils were taken with it. This outbreak had a tendency to reduce the number of pupils. Some ran away through fear, while the parents of others, hearing of the sickness, came to the school and insisted on their children being allowed to return to their homes with them. However, we held most of the scholars. Several were confined to their beds for a few days. This exodus reduced our daily average to 83.5, while the school was in attendance during the six and one-half months.

I believe our school was as well conducted as any in the State. Still discipline was not as rigidly enforced as I would have liked it, on account of children running away when too much restricted.

Having had considerable experience in Indian schools, I was not as much surprised at the progress made by pupils as those who visited the school, among whom were many teachers. They seemed astonished at the discipline, the intelligence, and advancement made by the children; all departed with a much better feeling toward the Indians and the service.

In conclusion, on behalf of the pupils, employés, and self, please accept thanks for the courtesies extended by your office and attachés, with the assurance that any thanks you may choose to bestow upon us for the credit we merit in advancing the efficiency of the service at this place will be cordially received.

I am, very respectfully,

W. D. C. GIBSON,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF FISK INSTITUTE, ALBUQUERQUE, N. MEX.

ALBUQUERQUE, N. MEX., *August 24, 1891.*

SIR: In submitting this my third annual report of the Indian industrial school at Albuquerque, N. Mex., I take "the flattering unctio to my soul," that greater advancement has been made in all the industrial departments, in the improvements to the buildings and grounds, in the additional comforts, and facilities for the education of Indian youth this year than in all previous years combined.

One of the prerequisites to a successful accomplishment of our aims is to make the school life attractive, to win by gentle treatment and tender care the confidence, love, and esteem of the pupils when they enter the institution. To them the school life is an entirely new existence. Their whole manner of life is entirely changed. From a life of idleness, vagrancy, poverty, and distress they enter one of industry, activity, and plenty. The change is sudden and great, yet the pupils soon adapt themselves to the changed condition of things and are reconciled to their surroundings. They are almost without exception of good disposition, are quick to learn, and easy to control. They seldom need punishment, yet if it be necessary they receive it with ready good nature. The denial of a request is sufficient punishment with many of them. They readily content themselves with their surroundings. This is only the natural result of their early habits and associations. Living only for the present, taking no heed for the morrow, "accepting the good the gods provide," without a thought beyond the one of pleasure that the present is provided for, is peculiar to this people.

The discouragements to be met with by the superintendent of an institution of this character and magnitude are numerous, the chief of which are: the jealousy of rival institutions; the machinations of Catholic priests; the malignity of incompetent employes, whom one is forced to discharge if he has the interest of the service at heart; the profane, ungentlemanly, and pernicious conduct of baneful inspectors; and the barbaric superstitions of the Indian parent. "Taking it all together the life of a superintendent is not a happy one."

The Indian Bureau expects and demands of the superintendent that his whole efforts be directed to the building of a good, honorable, and noble Christian character in each of the pupils intrusted to his charge. He is expected to keep the boys from forming bad habits, such as smoking and chewing tobacco, swearing and using spiritous liquors. Yet inspectors are sent to this school to inspect the work, report upon the morals, and to point out how the Indian work may be improved, who practice some of these habits. It would be unjust to say that all inspectors practice these improprieties, but I am sure some do. I have in mind at present but one inspector who came to the office of this school and used tobacco freely, and showed himself to be the most profane and most ungentlemanly man that has ever been at the school since I became the superintendent. I do not wish to do this inspector any injustice, but I can truthfully say that he smoked and used profane language in the presence of the pupils of this school. I have been informed that he told one of the boys that he (the boy) could smoke if he desired to do so; that it was none of the superintendent's business; asked him if he spent the superintendent's money; said it was right for him to smoke if he spent his own money.

This school has accommodations for 200 pupils. On the completion of the new building, at an expense of \$8,600, to be used as a girls' dormitory, and the completion of a large two-story school building just commenced, we can accommodate 400 pupils. It will be necessary upon an increased attendance to increase the facilities, and to enlarge the shops in the various industrial departments.

My intention is to give the various industrial departments all the assistance possible, with the hope of turning out skilled mechanics in the various trades taught. I am satisfied that a man can be more successful who thoroughly understands one trade than one who has a scattering knowledge of many. It is well known that skilled mechanics are in constant demand while the unskilled are always seeking employment.

The industries taught are carpentry, shoemaking, harness-making, tailoring, farming, house-painting, cooking and baking, laundry work, sewing, and fancy work of various kinds.

**Carpenter shop.**—In the carpenter shop 29 boys have been employed, half of whom work in the forenoon and half in the afternoon. The boys have done an immense amount of work, building a laundry, carriage house, girls' dormitory, poultry house, frame kitchen, besides a great many alterations and changes in main building, assembly hall, schoolrooms, etc. The apprentices in this department are taught theoretical as well as practical carpentry, which adds to the interest of the pupils and makes a happy combination. A system of checking the tools issued has been inaugurated with perfect success. The boy in charge can tell instantly where each tool is. The system is explained as follows, viz, each boy who works at the trade and each employe is given a number which is written on triangular-shaped checks. Six checks are used, but any number desired can be used. When a tool is issued to a carpenter boy a check with his number is hung in the place the tool occupied. Perhaps the following diagram will make the plan clearer:

W. H. Stevens ....	△ <sub>25</sub>	△ <sub>35</sub>	△ <sub>35</sub>							José Nano.....	△ <sub>8</sub>	△ <sub>8</sub>	△ <sub>8</sub>						
Harry Liston.....	△ <sub>36</sub>	△ <sub>36</sub>	△ <sub>36</sub>	△ <sub>36</sub>	△ <sub>36</sub>					Juan Lente .....	△ <sub>6</sub>	△ <sub>6</sub>	△ <sub>6</sub>	△ <sub>6</sub>	△ <sub>6</sub>				

Since adopting this plan there has not been one tool lost, as one is made personally responsible for the tools he uses. I desire some of the carpenter boys taught cabinet work to the extent of making a few of the most essential articles of household furniture. This gives variety to their work. The boys in this department have made rapid advancement in the use of the various tools and in the theoretical and practical knowledge of the trade.

The superintendent of this department is a most competent, careful, and agreeable person. He has the respect and confidence of all his apprentices. Were all the departments as well managed as this, I think this school would be second to none in the service. This department is a source of much pleasure to me.

**The shoe shop.**—The shoe shop is in charge of a competent man who thoroughly understands the trade in all its branches and has had experience in the management of Indian apprentices. He is a man who brings to his work the true missionary spirit, "a heart filled with love for his fellow-man and a deep interest in the uplifting of the Indian."

During the past year there were 16 boys working at the shoemaking trade; half worked in the forenoon and half in the afternoon, attending school the other half of the day. They manufactured shoes as follows; men's and boys' shoes, 367 pairs; women's, 114 pairs; misses', 54 pairs; children's, 88 pairs, a total of 623 pairs, besides repairing 600 pairs of boots and shoes—a most gratifying result truly. The boys in this department all like the work, and show a great advancement in their work. The shoe shop, harness shop, carpenter shop, and sewing room will have specimens of Indian industrial work on exhibition at the coming Territorial fair, which occurs in September next.

**Harness making.**—The harness shop was combined with the shoe shop until September, 1891, in charge of an employé, who taught both trades. It was evident that the two trades could not be successfully taught at the same time by one person; that one or the other must be dropped; that two positions ought to be made, and that the two trades should be taught in separate shops and by a master of each trade. This was done September 1, 1891, since which time a marked difference is observed in the progress of the apprentices to this trade. The employé having charge of this department has proven most satisfactory to me. He is a young man who thoroughly understands his trade, he has a good disposition, is industrious, patient, and thorough. The boys in his charge think highly of him, and are making rapid progress in knowledge, and are becoming skilled in manufacturing harness, etc.

The number of boys working in this department has been small on account of limited shop room, which I hope to enlarge. When the shop is enlarged I intend to increase the number of apprentices in this department, as I consider this trade a most important one to the Indian people, who seem to take more kindly to the use of harness than any other innovation. The amount of work done is given below: 12 sets of double-work harness, 1 set double carriage harness, 24 blind bridles, 13 riding bridles, 8 open bridles, 8 halters, 16 blinds for bridles, 13 curb straps, 6 pole straps, besides doing all the necessary repairing for the school. I think this and the shoe department can be made self-supporting, and shall endeavor to accomplish this end. This department I consider a decided success.

**Tailor shop.**—The tailor shop is in charge of a man who has served a regular apprenticeship, and is fully competent to teach the Indian how to measure, cut, and make men's garments. This is a favorite trade with the boys, and constant applications are made by pupils to be detailed to this trade. All the uniforms worn by the boys are made in the tailor shop, as well as many coats, pants, and vests of other material. The boys in this department show a decided progress in fabricating men's and boy's garments.

The amount of work done last year, as shown below, is very creditable to this department. Manufactured: 100 uniforms of blue kersey cloth, 45 pantaloons extra of blue kersey cloth, 1 jeans coat, 170 pairs drawers of canton flannel, 57 pairs boy's pants of jeans, 73 hickory shirts, 65 blue flannel shirts, 187 boys' undershirts (canton flannel), 30 boys' jeans vests, 22 vests of blue kersey cloth; 1 tent of 8-ounce duck.

This department is doing good work and is a very great aid to the school. The number of boys at this trade is not large, therefore their instruction is more thorough. It is my opinion that it is not a good plan to have too many apprentices at one trade, as an industrial teacher can only instruct a certain number, which will vary with different men in proportion to their ability to impart instruction and their capacity for work. I consider this department very satisfactory and of great benefit to the Indian people.

**Farming.**—This department is the most difficult to manage of any in this institution, for the reason that the soil is so thoroughly impregnated with alkali that it seems an impossibility to eliminate entirely this most undesirable and troublesome feature of farming on this reservation. Nothing will grow until the alkali is removed or neutralized. Therefore it requires to be fertilized anew each year by the application of manure and frequent irrigation with the water of the Rio Grande.

This water is said to act upon the soil in this section by washing out the alkali and depositing a sediment similar to that of the overflow of the Nile. If this be true it is certainly in a much less degree. It is a hard matter to get water just when it is needed most, as the main ditch is small and supplies numerous small farmers, some of whom are using the water at all times.

The uncertainty of getting water for irrigation at the proper time is another difficulty in the way of successful farming at this school, and prevents a rapid reclamation of the land. It is my opinion that a large irrigating pump placed near the laundry and using steam from the laundry boiler, and supplied with water by a large reservoir with walled sides to prevent the earth crumbling in and partly filling, would be the best plan for irrigating that could be devised for this school farm. The water lies near the surface and an apparently inexhaustible supply can be relied on at all times. The water could be pumped into a large reservoir already built and on ground a little higher than any other part of the farm. This reservoir has been formed for this purpose. From there water can be distributed to any part of the farm desired. This method would make us independent of others and would insure a plentiful supply of water whenever needed.

The farmer and his apprentices have worked hard and faithfully. Vegetables of every kind were planted, as were also corn, oats, and rye. The outlook for a good crop was very bright, as almost all the seed planted came up, although in some cases rather sparsely, and in the case of the rye not at all. Yet generally the prospects were very bright. I had confidently counted on making an unusually good report of the increased productiveness of this farm, when, alas! "I saw my fondest hopes decay." There came a very destructive hailstorm and entirely destroyed the melon and pumpkin vines, and almost ruined the corn, also the cabbage and other vegetables. If a half crop is gathered it will be better than I now expect. About all we will have left from the storm will be some alfalfa, some corn, and a few vegetables. Yet a larger area was cultivated this year than last. As the crop is not yet harvested I can not give the exact product, but in spite of the disastrous storm it will greatly exceed last year's crop.

**Painting.**—I have mentioned house painting as one of the industries taught here. The house-painting trade—that is to say, the method of mixing and forming various shades and colors and laying them on the woodwork of buildings both inside and out—is taught by the carpenter. He is a man who has had considerable practical experience in this business. The new building going up and the constant repairs being made have given the boys who work at this trade a great deal of practice. Their work is as well done as could be expected.

**Cooking and baking.**—Cooking and baking are taught by competent persons. Sc thoroughly has an Indian boy learned baking that I have nominated him for the position of baker for the next year. He now (with the assistance of two other boys) bakes all the bread, pies, and cakes for the pupils. The baking is not only well done, but with neatness and regularity. This department can always be relied on to do what is required of it. In the cooking department several changes have been made in the past year. I now have a woman cook who, judging from the short time she has been in the service, bids fair to make a success of this department. She is careful and thorough in her instructions and kind and gentle to those under her charge. Four girls and two boys are taught to cook ordinary dishes. They are also taught how to wait on table and such other duties as pertain to this department.

**Laundry.**—This department is in charge of a woman who has held the position for several years past and who is perfectly satisfactory to me. Since my last annual report the laundry has been moved to a distance of 300 yards from the main building, a distance sufficient to prevent the obnoxious odors arising therefrom affecting the health of the pupils. A steam laundry plant, consisting of a steam engine, a boiler, a steam heater, two washers, an extractor, one 64-inch mangle, two ironing machines, and other necessary adjuncts to a steam laundry have been added.

Eight girls and eight boys are taught this work. They do the work well; about 2,000 pieces are washed each week. This department is very satisfactory to me, for I believe it is managed exceedingly well.

**Sewing room.**—The sewing room has been one of the most successful of the industrial departments. This is due to the earnest efforts of the instructress and the increased skill of the pupils detailed to this department. The room used for a sewing room is entirely too small. I shall have a larger one when the new dormitory is occupied. The girls are taught how to make all kinds of female garments and household linen. They are also taught how to knit, to crochet, and to do other kinds of fancy work. As I write these lines there hangs on the wall before me a photograph holder, made by one of the girls of this department, which took first prize at the Territorial fair last year, and still has the blue ribbon attached to it.

The following table shows the work done: Curtains, 2; chemises, brown, 44; dresses, gingham, 66; dresses, night, 82; dresses, calico, 70; dresses of dress goods,

129; dresses, linsey, 2; dresses of blue flannel, 10; dresses of cheviot, 26; drawers, girls', 92; drawers, boys', 102; drawers of brown sheeting, 37; aprons of various kinds, 253; pillowcases, 177; jackets, girls', 44; sheets, 300; shirts, hickory, 20; shirts, blue flannel, 9; sunbonnets, 25; towels, 160; besides doing considerable repairing.

This department, and in fact all the industrial departments, have made steady advancement and are all doing good work, and are very helpful adjuncts to this school. They are a source of gratification to me, as I feel that they are carefully and properly managed, and cause me no annoyance whatever. \* \* \*

**Sanitary.**—During the year there were in the hospital at various times 104 sick, of which number one (a boy) died of typhoid fever, six were returned to the Pima Agency, the rest recovered and are now attending school. Since the laundry has been moved to a distance from the main building the sanitary condition is much better. I think it will be improved further when the new dormitory is occupied, because the pupils will not be so much crowded, and the new building is much better ventilated than the main building, which is now used as boys and girls' dormitories.

Owing to the flat nature of the country here it is almost impossible to have a system of drainage so essential to health. However, the matter of drainage has been accomplished as well as possible. The slops are carefully placed in barrels provided for the purpose and hauled to a distant part of the farm twice daily. In fact the greatest care is exercised to protect the health of pupils. Good, plain, well-cooked food is provided three times daily. Clean, well-aired beds, consisting of iron bedsteads with woven wire springs, excelsior mattresses with cotton tops, two sheets to each bed, and plenty of covering for winter is provided. The pupils are required to perform their ablutions three times daily under the supervision of an employé. They are also required to bathe thoroughly, and change all underclothing once each week under supervision. The disciplinarian supervises the boys and the assistant matron the girls. A large room has been fitted up with twelve bath tubs with hot and cold water. I will do the Indian pupils the credit of saying that in no instance to my knowledge has anyone attempted to evade the bath; on the contrary they seem to look forward to it with pleasure. During the heated term, which embraces the months of July and August, they are given an outing for three or four weeks in the mountains which lie 12 miles east of the school. The boys have their outing first. Upon their return the girls are sent in care of the matron and other employés, where they enjoy themselves to their complete enjoyment.

**Closing remarks.**—The citizens of Albuquerque are awakening to the importance of this work. They have agitated the matter of building a good road to the school so effectively that the county commissioners have ordered it done. In the course of a few weeks the new road will be finished, giving an easier, shorter, and more direct route to the city.

The prejudice against this school which was held by the citizens of Albuquerque, and was so noticeable to me upon my arrival here, seems to have entirely disappeared, and a deep interest in the welfare and success of this school has taken its place. The fact that the citizens show an interest in the school and a disposition to assist me in every honorable way to make the institution a success, where formerly a feeling of apathy existed, is very encouraging to me. It gives me renewed vigor to push the work, a feeling that I am pursuing the right course, and that I am assisting in the grand work of civilizing the Indian people who are groveling in ignorance and superstition. The full measure of success attained by this school will be seen only when these children have grown to manhood and womanhood, when they will practice the precepts instilled into their young minds. They may not practice these precepts wholly, perhaps, but to such an extent as will undoubtedly have an influence for good and a tendency to excite emulation in the uneducated and savage minds of their less fortunate people.

To the honorable Commissioner of Indian Affairs and the officers of the Indian Bureau I offer my heartfelt thanks for the ready assistance and kindly words of encouragement received from them, for without that assistance I could do nothing. Whatever measure of success has been attained by this school is largely due to them, and I hope that they may be allowed to continue the good work they have so well commenced. I feel that the right course is being pursued by the Indian Bureau, and that complete success is only a question of time.

Respectfully submitted.

WM. B. CREAGER.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF DAWES INSTITUTE, SANTA FÉ, N. MEX.

INDIAN INDUSTRIAL SCHOOL,  
*Santa Fé, N. Mex., September 15, 1891.*

SIR: I have the honor to hand you herewith report of this school for the fiscal year ending June 30, 1891:

On the 30th of June, 1890, the school building was still in the hands of the contractor. On the 3d of July, under instructions from your office, I took charge of same and completed it on the 19th of same month. When the building was completed there were no other improvements of any kind on the school farm. Water had to be hauled for domestic purposes. The sinking of a well was at once begun and an abundant supply of water was procured at a depth of 111 feet. The well was completed on the 1st of November.

The first supplies were received through the Indian Office November 5. By borrowing beds and bedding I was enabled to open school November 15 with 9 pupils. This number was increased to 93 by June 17. Of this number 42 are Pueblos, 34 Jicarilla Apaches, 11 San Carlos Apaches, and 6 Navajos.

**Securing children.**—In securing children I met with various difficulties. First, all other schools in the vicinity were in operation and had drawn children from the territory from which this school was to be filled. Second, this being a new school, it was more difficult to secure children for it than for those already established. I found this to be true especially among the Pueblos. Third, the weather during the winter was unusually severe for this climate, which rendered it almost impossible to visit those Pueblos away from the railroad. Fourth, most of the supplies were late in coming, which rendered it very inconvenient to accommodate even the limited number we had.

**Sanitary.**—The sanitary condition of the school upon the whole has been good. During the month of May an epidemic of measles broke out. Twenty-seven cases were reported by the school physician. None of the cases proved fatal, but following the disease were two cases of acute pulmonary tuberculosis among the Jicarilla Apaches. One child died at the school and the other was sent home and died soon after reaching the reservation.

**Improvements.**—During the year a frame barn and carpenter shop and brick building for bakery have been erected and the foundation laid for laundry, and steam laundry authorized. Posts have been set to fence the farm, but no wire has yet been received. About 6 acres have been plowed and planted in garden vegetables and alfalfa. Two hundred and fifty fruit trees and twenty-five shade trees and some shrubbery have been planted, most of which are growing. The amount of farming done may seem very limited, but this is even more than could be properly irrigated.

During the latter part of the year water was hauled to irrigate the trees. During the spring and early summer months there is generally plenty of water to be had from the irrigating ditches in the vicinity of the school farm, but later in the season there is no water to be procured. I am fully convinced that to make the school farm productive a supply of water must be procured from some other source than the Santa Fé River. A tubular well upon the farm is no doubt the most available source for water supply. If this can not be had, another well similar to the one already here may furnish a supply to irrigate a considerable portion of the farm by using steam pump to raise the water. A windmill would not be sufficient, owing to the irregularity of the wind.

**Industries.**—Beside the regular household work, a carpenter shop and sewing room have been in successful operation since the school was opened. The work in the carpenter shop has been greatly retarded owing to lack of tools, but a full supply has just been received. The sewing room has furnished all the clothing for the girls and mending for the boys' clothing. A tailor shop and a shoe shop were greatly needed, but owing to lack of material, tools, and funds, could not be opened.

**Literary work.**—The school was opened with one literary teacher; another was assigned to duty January 15. But few of the pupils in attendance had been in school before, hence the literary work was of a primary nature. Rapid progress was made in school work and in acquiring a knowledge of English, especially among the smaller pupils.

**Needed improvements.**—With the improvements already made and authorized to be made the present year, 170 children may be properly accommodated. In my opinion the following buildings should be erected next year: School building and assembly hall, hospital, permanent barn, and two storerooms; also two large cisterns should be constructed. These improvements would cost about \$16,000. The school could then easily accommodate 250 pupils. I would also suggest the advisability of heating the buildings with steam and lighting with electricity. It would be cleaner, safer, and in the end cheaper than by the old methods of heating by stoves and lighting by kerosene lamps.

Very respectfully,

SAMUEL M. CART,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF FORT STEVENSON SCHOOL, N. DAK.

FORT STEVENSON INDIAN TRAINING SCHOOL, N. DAK.,  
September 4, 1891.

SIR: As I assumed charge of this school the first of June last I am unable to speak of the progress made during the past year.

The former superintendent, George E. Gerowe, looked carefully after the property of all kinds belonging to the school, and the stock had more than doubled in number. Various needed improvements had been made during the years he was here that show on the part of my predecessor forethought and consideration for the comfort of the school.

The farm and stock have been under the charge of Mr. Daniel LeRoy for more than two years with the most gratifying results. The wheat, oats, barley, corn, and potatoes are as fine a crop as this latitude and soil will produce, while the garden furnishes a supply of many kinds of vegetables. Since Mr. LeRoy's taking charge the stock has increased at least 100 per cent, and to his energetic efforts and painstaking care is due in a great measure the success attained in this department of our school the work, both as regards the ability of the boys to do most kinds of farm work, and fine crops in field and garden now being gathered for food for the children and stock.

The carpenter and shoemaker shops were closed when I assumed charge and had been for some months. We now have a carpenter of experience and one well adapted to the position. No permanent shoemaker has yet been employed. The blacksmith and tin shops have been used of late years only to do the necessary tinkering and repairing.

The girls, under the general guidance of the matron, Miss Jennie M. Hull, have made an advance towards civilization that all the years of the future can never entirely overcome, no matter how unfavorable their surroundings. The sewing room has been one of the most valuable features in connection with our school, as nearly all the girls' clothing, the sheets, pillowcases, tablecloths, and towels have been made here. In addition to this the mending for the entire school is done in this department. Nearly all the work in this department is done by the girls, many of whom are quite skillful in darning and general sewing. This work has been under the direction of Mrs. Sarah M. Gerowe, who resigned August 20. Since her resignation Mrs. Daniel LeRoy has had charge, and under her skillful management it will lose none of its former usefulness.

The laundry, under Miss Alice E. Tower, is a pattern of neatness and dispatch. Here hundreds of garments are carefully washed and ironed each week. Four medium-sized boys, two each fore and afternoon, assist in running the washing machines, which helps to lighten the work of the girls in this department.

Miss Frankie Brintnell presides over the kitchen. This is the place where the hungry are fed, and here more than a ton of meat, flour, meal, and potatoes are cooked each week, besides many other articles of food, such as beans, rice, hominy, and oat meal.

Dishwashing, setting tables, scrubbing floors, and nearly all work of this character is done by the girls, with Miss Brintnell to direct them. This shows that our girls know how to work, and are able to accomplish a great deal when properly directed. A large boy is detailed to cut meat and mold bread in the kitchen; also, smaller ones to bring in wood, coal, or anything that is needed.

The food is plain but wholesome; tea and coffee are used sparingly, and the children under 10 are given nothing but milk to drink at their meals. A few of the girls, under the direction of the matron, have become quite valuable help in caring for milk and making butter.

The teachers at present number three: Dr. J. R. Finney, principal teacher; Mrs. Mary F. Burton, intermediate; and Miss Ellen M. Judd, primary. They have all had years of experience in the school room. Miss Judd comes to us highly recommended, and so far has proved herself equal to all requirements. The doctor's proper place is that of clerk, but as our principal teacher has not arrived, he is obliged to fill this position, which he does with credit, as he has had much experience in educational work.

On the first day of the school, August 31, there were 120 children in attendance, the largest number in the history of the school. Maj. Murphy has taken hold of this matter of filling up the Government school with much zeal, and it is owing in a great measure to his kind offices that the school has arrived at its present numerical standing.

Some features not new to schools of this kind, but new here, have been introduced: the court, presided over by the superintendent, where many of the graver cases of discipline are tried and where talks are given on the object to be attained by rules in the school, laws in the State, the necessity of obeying them, etc., with the hope that the pupils may be well grounded in the principles underlying civil government.

The military drill is a new feature much enjoyed by the boys. The larger ones are divided into two companies of 25 each, and are drilled twenty minutes each day. It would be hard to find a finer or more soldierly looking company of young men than the older division. We hope at no distant day to be able to uniform them.

The pupils in this school are bright and capable, and with the earnest, willing workers we have in all positions, our anticipations are bright for the future.

Believing that no system of education is complete without the education of the heart as well as the head, it is the earnest desire of the superintendent to obtain employes whose daily life is a constant example of that which is noble in man and refining and elevating in woman. Morality can not be taught by precept alone, and he whose stock in trade is only what he says should have no part in teaching the young or guiding the steps of youth. We are hopeful for the future, earnestly laboring in the present that a step may be taken in directing the youth along the road to a self-sustaining future for the red man and an honorable career for their boys and girls.

I have the honor to be, your obedient servant,

C. A. BURTON,  
*Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF FORT TOTTEN SCHOOL, N. DAK.

FORT TOTTEN, N. DAK., *June 30, 1891.*

SIR: I have the honor to hand you my first annual report of the Fort Totten industrial training school for the year ending June 30, 1891.

The Fort Totten school plant consists of the abandoned military post buildings and a Government building situated three-fourths of a mile distant, formerly a contract school under the management of the Gray Nuns of Montreal.

The school buildings at the post were erected by the War Department of the United States during the years 1868 and 1869. They are situated on the south shore of Lake Minnewaukan (Devil's Lake), a beautiful body of water 55 miles long and ranging from 3 to 12 miles in width. They are constructed of brick and are in excellent condition. I am reliably informed that their original cost was about \$200,000; and when remodeled will accommodate with ease 500 pupils. The construction is in the form of a hollow square, within which is a beautiful parade ground, ornamented with trees.

The buildings consist of a dining hall, 6 barracks, which will be useful for dormitories, a commissary, a warehouse, bakery, office building, guardhouse, and 7 sets of officers' quarters. Behind the barracks are two one story buildings, which are now used for laundry, wash rooms, and play rooms. There are also two stables, two frame warehouses, a carpenter and blacksmith shop, and a bathhouse containing fourteen tubs and a furnace for heating water, which stand back of the square on the south.

The system of waterworks is admirable, equal to any demand. The water is carried in mains, from springs in the hills to the south, into an underground reservoir, from which it is pumped by steam into an elevated tank, giving a high pressure.

The abandoned military reservation contains about 14 square miles, and taken as a whole affords every facility for farming and stock-raising. This tract should be permanently retained for school purposes.

Pending repairs at the post the Fort Totten school was opened October 27, 1890, in the Government building before mentioned, with the Gray Nuns as employes. The military post was not finally abandoned until January 5, 1891; but temporary repairs upon a portion of the buildings were begun in November, and on January 19, 1891, the buildings were finally opened for school purposes.

The division under the charge of the Gray Nuns is in a sense a preparatory department, from which pupils will be promoted to the school proper. The shops and other industrial departments for boys are confined to the latter division.

No difficulty was experienced in obtaining the attendance of most of the children of school age residing on this (Devil's Lake) reservation. During the warm spring weather some grew restless and manifested a disposition to return to camp, but success was had in holding all until the close of the term. Quite a number of the pupils were taken directly from the camps, never having attended even a day school, and it was surprising to note their aptitude in the matter of adopting civilized customs. The building used for school purposes is one of the old barracks, and its arrangement is unsuitable for the purpose and retards the progress of the work to some extent. We greatly need a new school building with modern facilities and an assembly room capable of accommodating the whole school.

Many of our pupils have attended the schools in this vicinity from five to ten years, and upon examination were found to be fair readers and good at penmanship, but very deficient in arithmetic, United States history, and other branches, being unable to reason out simple practical examples in mathematics or answer general questions regarding our country and Government. The rules of arithmetic, merely memorized, without the ability to reason and think independently, are useless, and the teachers have labored faithfully during the past year in imparting thorough practical instruction in each of the grades.

Our efforts have been aimed at training the pupils to think and not merely to remember. Pupils formerly reading in the fifth and sixth readers, who could not calculate the cost of 2½ tons of hay at \$8 per ton or exchange 30 dozen of eggs at 15 cents per dozen for coffee at 30 cents per pound, were transferred back to the second and third readers upon the basis of classification arranged in the Indian Office.

The result of the year's work in this department has been quite satisfactory. The pupils as a whole have been awakened and interested, and have made good progress in their various studies.

The industrial work has been carried on with marked success. Boys were instructed in milking and care of stock, and girls were instructed in housekeeping, caring for milk, laundry work, making butter, plain sewing, and running of sewing machines. Work in the carpenter shop, light repairs, etc., were carried on by the carpenter's detail, while much of the lathing in buildings being remodeled was done by the pupils.

Following is a statement of the acreage of the farm and garden:

	Acres.		Acres.
Oats .....	20	Parsnips .....	1
Potatoes .....	7	Cabbage .....	2
Beans .....	½	Beets .....	1
Peas .....	1½	Turnips .....	1
Carrots .....	1	Onions .....	2

The entire work has been performed by the pupils under the direction of the industrial teacher. The prospects now are excellent for an abundant yield of all products of farm and garden.

The repairs and improvements made during the year have been extensive. The military hospital has been converted into a dining hall having a seating capacity of 250; the entrance hall, dining rooms, serving room, and kitchen were wainscoted, painted, and kalsomined. Permanent ration bins, shelving and closets for dishes, carving tables with plate racks above were constructed, and a large sink with draining racks was also added, and an abandoned cistern was converted into a milk room.

Three of the large barrack buildings have been converted into dormitories, two for boys and one for girls, and will accommodate 250 pupils. A 5-foot hall was built through the center, and the rooms open from that, each room being intended to accommodate three pupils. The buildings have been plastered throughout with cement plaster. The girls' building is provided with a parlor about 40 by 40 feet, also a reading room. The boys' recreation room is directly behind their dormitory with which it is connected by an inclosed walk. These buildings are very complete now. Extensive repairs have also been made in the commissary and in the barns.

I am of the opinion that it would be advantageous to the service to heat the buildings with steam. It would materially lessen the danger from fire and during a term of years would be less expensive.

I can see no obstacle to the teaching of all industries at this school. In view of the fact that the tract of land set aside for the use of the school is so suitable for farming and stock raising, these industries will, necessarily, be very prominent in the future work of the institution. Nine-tenths of the pupils tributary to the school will follow these occupations after returning to their homes.

In closing, I wish to say that the work of the year has been largely preparatory; and we are now in condition to make the coming year a very successful one.

Extending my thanks to your office for the many favors of the past year, I have the honor to be,

Very respectfully, your obedient servant,

WM. F. CANFIELD,  
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF HAWORTH INSTITUTE, CHILOCCO, OKLA.

CHILOCCO INDUSTRIAL SCHOOL, OKLA.,  
August 25, 1891.

SIR: I have the honor to submit my second annual report, being the eighth in course of this school.

**Location.**—The 8,640 acres embraced in the school reserve were set aside for the uses of the school by executive order on July 12, 1884. After much inquiry and observation this site was selected from the vast area of available land in the Indian Territory by the first superintendent of Indian schools, Hon. James M. Haworth. The wisdom of his choice is now seen. Lying for  $4\frac{1}{4}$  miles against the thrifty farms of the Kansas line, only 4 miles from the Arkansas River, the timber-fringed Chilocco Creek passing diagonally through it with its living water for stock and gushing springs for house supply, and composed of soil unexcelled in fertility, rolling gently backward in open prairie on both sides of the creek, it offers a rare combination of natural advantages for cultivation of cereals, garden products, trees, and for raising stock. It is in the life and pressure of civilization;  $5\frac{1}{2}$  miles brings us into Arkansas City with its splendid schools, its elegant buildings, its numerous stores, banks, express, railroad, and telegraph offices; its printing rooms, factories, street cars, gas, and electric lights, showing a full exhibit of a high civilization. From our buildings eastward we see the trains on the Santa Fé for 6 miles as they roll over the prairie on their way from Kansas City to Galveston. Northeast we see the village of Cale, on the Frisco branch railroad, lying in full view against the school line, and glancing westward as far as the eye can run it is greeted by the dwellings, orchards, and improvements of the Kansas farmers. In full view, thousands of vehicles pass yearly over the Arkansas City and Guthrie and Arkansas City and Kingfisher roads. This is one of the healthiest localities in the Indian Territory. It is centrally located as to ease of travel by railroad to all of the agencies and schools in the Territory and sufficiently remote from all reservations to be quite free from tribal influence, yet near enough for ease of communication. Being in the Territory we are enabled to exert an influence on parents and forming communities of Indian farmers that will be strengthening to returned pupils and to all aspiring, by self-help, to independence.

**History.**—The present main building was erected in 1883, and school was opened on January 15, 1884, under the supervision of W. J. Hadley. The school has since passed under the care of H. J. Minthorn, W. R. Branham, T. C. Bradford, G. W. Scott, and the subscriber. Each has found his full share of difficulties. The most trying ones encountered in the early work of the school are removed by the extension of railroads nearer the agencies, and the opening up of Oklahoma.

In 1885 six cheap buildings were erected for workshops and cottages for employes; in 1886 a bakery and a cattle shed; in 1887 an ice house and a barn. A very cheap storehouse of stone was put up in 1888. In 1890 and 1891 two cottages, a hospital, a farmer's home, a granary, milk and tank house, a slaughterhouse, and a building for workshops were added.

From the opening of the school the attendance has ranged from 140 to 180 pupils.

The changes in employes have been almost constant, much to the injury of both the work and the credit of the school.

A fair garden was opened in 1884. In 1885 a farm was broken from the prairie and many miles of fence constructed, inclosing pastures, meadows, and plow land. Cattle, horses, mules, and hogs were procured. Instruction in the industries followed the erection of shops.

The three years following, the religious side of the work was maintained. The farm went to weeds; 100 heads of cattle died; all stock was poorly cared for. Buildings were neglected and some phases of the work languished. The name and fame of the school became so ill as not to be a credit to the Government.

In 1889 my predecessor sought with wise industry and commendable zeal to cleanse and repair the buildings, to reclaim the farm, improve the stock, give the school a fair name, and fill it with pupils. The task was formidable. After a few months' trial he became discouraged and disheartened, and resigned.

In 1890-'91 I have sought to maintain all departments of the work. I may be allowed to say of the year just closed that good work has been done in the school-rooms, in the shops, in the house, upon the farm. The moral, the spiritual, the literary, the industrial culture, with the health of all, has been subjected to careful inquiry and oversight. A host of friends has risen on every side to speak a good word for our school.

**The farm.**—Our farm has been well handled the past year. Our yield of wheat will be about 4,200 bushels, corn 5,000, rye 320, potatoes 2,000, hay 800 tons for use, after disposing of grass that cut 3,000 tons and the greatest abundance of pasturage all the season. We have received for grass for haying purposes, and from sale of cattle, hogs, grain and other products \$2,204.90. We raise all of our beef, hogs, meal, potatoes garden vegetables, milk and butter.

**Garden.**—Excessive rains have prevented our securing a succession of some vegetables. Of others we have had an abundance for the school all season. Our supply has included 200 bushels of roasting ears, 100 bushels of radishes, 50 bushels of cucumbers, 1,200 heads of cabbage, 20 bushels of peas, 200 bushels of onions, 100 bushels of tomatoes, 50 bushels of beets, and 100 bushels of peaches. We have growing 1,500 fruit trees, 700 grapevines, 100 rhubarb plants, and 3,000 strawberry sets.

**Stock.**—Our horses and mules have kept in good form and flesh, though they have worked steadily through all months of the year. We have 12 horses, 11 mules, and 3 ponies. We have sold 25 hogs, slaughtered what was necessary for the use of school, and increased the number on hand from 70 to 140.

Our milk herd is effective in supplying the entire school with milk and frequently with butter. We have recently added to the herd 20 fine, high-grade heifers by purchase.

Our stock herd is very fine. They were well wintered, grain fed, and started on pasture. They have known no lack of the best feed and care. The wild-eyed, long-horned Texans have mostly disappeared via the slaughterhouse or sale pen. The quality of stock and number of herd has been increased 30 per cent by breeding and purchases. We are this year supplying all of our beef from the herd. We may keep 40 cows in the milk herd and have 450, including calves, in our stock herd.

**Industries.**—The capacity of the school has not been sufficient to allow us to push all departments of our work at all seasons. Eight apprentices in the tailor shop, with their instructor, have made the boys' clothing. They have shown themselves diligent and skillful in their work, turning out well-made and well-finished suits.

The detail in the shoeshop has ranged from 8 to 12. They make and repair the shoes for the school, besides mending harness, making halters and bridles as needed. They get beyond piecework and the best boys will take the leather from the side and in a brief time will set aside well-made and fairly well-finished shoes to fit the order.

The carpenter and his boys are mostly employed on repairs, on the making of gates and fences, thus getting a practical training for neighborhood work. They have found some time for work on new buildings and make a fair showing.

The boys have done quite an amount of painting, both of inside and outside work.

The blacksmith, in charge of four apprentices, has accomplished a large amount of repairs on machinery, farm implements, and tools, besides horseshoeing and new work, giving the boys a varied, but useful line of experience and training.

The shop room and facilities for teaching the above-named trades are sufficient for our school when the attendance is doubled.

In the sewing room the girls have made their own clothing and the needed mattress covers, sheets, and pillow cases. They have done the necessary darning and repairing of clothing, have made rugs, and cut 60 pounds of carpet rags. With the teachers they have done considerable crocheting and fancy work.

With the matron and assistant matrons they have kept house, learned to make beds, scrub, mop, sweep, patch the boys' clothing, make the boys' shirts and some of their underwear.

With the cook they have done the cooking for the school, kept the dining room, cared for the milk, and made butter.

With the laundress and a detail of boys, they washed for the school and did the ironing.

**Class rooms.**—The schoolroom work has been uniform and uninterrupted through the year. Careful grading and enthusiastic application by teachers and pupils have secured good results. Commendable progress was made in each grade. The student spirit has been pervasive; a proper ambition to develop mind and character by regular mental effort and daily acquisition of knowledge has been awakened. A good sized class the coming year will finish the preparatory course of study.

While the review of the year's work, as given in this report, shows mostly an improvement in buildings, grounds, and cattle, yet the part in which I take the most interest and satisfaction is the evident gain in the home feeling, the moral condition, the literary culture, the harmony and coöperation of children and employes, with the high standard of health that has prevailed.

An active, aggressive, well attended Young Men's Christian Association has been a potent factor for good in the school.

**Buildings and improvements.**—The past year has been one of activity in the erection of new buildings and making of repairs. The main building has been largely refloored in schoolrooms, halls, stairways, and dormitories, the whole building cleansed and freshened with whitewash, paint, and paper, and supplied with clothespresses.

Two cottages for employes, a substantial stone farmer's home, a good stone slaughterhouse, a stone workshop containing eight rooms 30 by 40 feet each, an entire new system of water supply, a suitable granary, and an excellent milk-house have been added during the year. Authority for the erection of an implement building has been granted, and plans have been submitted to your office for a group of main

buildings to enlarge the accommodations and make administration more perfect and the work of the school more efficient. These are the building for girls, the school building, with the chapel, and the combination of dining room, kitchen, laundry, and power house in a third building. We are able to set aside \$65,000 from our appropriation of the current year for their erection.

Other improvements made include the erection of stock-yards, branding-pens, and feed yards to accommodate 800 head of cattle, 13½ miles of four-strand wire fence, with extra heavy posts, putting out 10,000 osage hedge plants, 750 fruit and shade trees, 3,000 strawberry sets, and 400 grape vines.

Having named the buildings erected, it is proper to say they are all substantial and suited to the purpose for which they were erected.

**Employés.**—For the first time this school has carried a company of employés through a year without any changes. The responsibility of a department of work and the credit of its success is given to each employé. They have worked with an independent zeal that merits success and with a collective harmony that insures permanence and growth in our institution life. They have been loyal to me and devoted to the interests of the school and the Indians. As the credit of the year's work belongs largely to my employés, I may speak of it more fully. Every girl that entered the school during the year remained to the close, and nearly every boy. A delightful feeling of contentment and home life has been maintained. The building has been kept clean, the hours of work and school have been observed; the moral and religious tone of the place has been good; improvement has been noticeable in every phase of our work. The health of employés and pupils has been above the average. The returns from farm and garden have been satisfactory for a rainy season. Our stock of every kind has done well. Our shops have kept pace with the needs of the school. Our relations to agencies and pupils' parents have been pleasant. We are cheered by the kindly good will of the best people in the State near by us.

**Pupils.**—All of the pupils are from Oklahoma and Indian Territory. A considerable per cent are orphans or children of a large admixture of white blood. More full-bloods were added during the past year. I think it would be well for the school to bring some pupils from the north and west.

I add a table showing the tribes, sex, and attendance of pupils for 1890 and 1891:

Tribes.	Male.	Female.	Total.
Tonkawa .....	4	1	5
Pawnee .....	39	17	56
Shawnee .....	20	12	32
Apache .....	2	1	3
Caddo .....	13	7	20
Delaware .....	10	3	13
Ottawa .....	3	.....	3
Cheyenne .....	1	.....	1
Kiowa .....	5	.....	5
Sac and Fox .....	6	13	19
Otoe .....	9	1	10
Quapaw .....	1	2	3
Iroquois .....	2	.....	2
Potawatomie .....	2	5	7
Wyandotte .....	.....	2	2
Arapaho .....	.....	3	3
Sioux .....	.....	1	1
Miami .....	.....	1	1
Peoria .....	.....	1	1
Wichita .....	3	.....	3
Ponca .....	1	4	5
Kaw .....	1	.....	1
Iowa .....	2	.....	2
Comanche .....	1	.....	1
Osage .....	1	.....	1
Kickapoo .....	1	.....	1
Enrollment .....	127	75	202
Average attendance .....	102.45	61.48	163.93

The contentment, the hope, the earnest labor, the intelligent interest of the pupils in their future welfare, all have proved valuable aids in the work of the year.

**Our needs and the future.**—Whatever may be done to break up reservations, allot lands to the Indians and scatter those educated among the whites, there will certainly be left a large number on their allotted lands through Oklahoma and Indian Territory who will be quite dependent upon the Government for protection and aid in farming and stock-raising, as well as for the education of their children. A non-

reservation school should not undertake the work of the Indian agents and the employes and schools of the tribes. Yet there is a common work in which there should be a full understanding and close cooperation. Some of the best advanced pupils should be sent to Chilocco. They should there see and learn what is necessary to aid them in making a living on their lands. We should equip and manage this school to this end. Adopting the suggestions of the honorable Commissioner of Indian Affairs in office letter of June 24, 1891, I would outline as follows:

(1) Make here such clothing and shoes, with repairing of the same, as is necessary for the needs of the school.

(2) Repair all harness, farm implements, wagons, tools, and machinery possible, shoe horses, and take up new work only as necessary.

(3) Raise all the different grains and grasses possible to this soil and climate.

(4) Raise a good garden of all vegetables.

(5) Grow a large variety of fruits.

(6) Develop a nursery.

(7) Keep as many kinds of stock as practicable.

(8) Keep a good milk herd.

(9) Keep honey bees in paying quantities.

(10) Keep land and water fowls of all profitable kinds.

(11) Open up small farms for training married young couples in self-dependence, toward self-support, under a farmer and visiting matron, hoping to prepare them for earning a subsistence on their claims after a course of three years of such schooling. In a word, adapting our mechanical industries to affording facilities for training only to the few who have special aptness or genius for each trade, and thereby supplying the necessities of the school in shoes, clothing, and repairs, while we utilize our unequalled facilities for training both boys and girls in the use of all natural advantages of soil, seasons, and productions, so that when toil and their land are united they will procure a living from field, garden, orchard, and pasture.

**Remarks.**—In opening the upper spring for new water supply we found an abundance of good, pure water, slightly "hard." We arranged an adequate reservoir and put in a 2-inch pipe to connect the pump with a 1,099-barrel tank, which stands in height above the chimneys of all the buildings. In digging a well at the farmer's home we were surprised when 12 feet down to find a 2½-foot vein of putty of a very good quality, and at 20 feet an unfailling supply of "soft water."

I have opened on the farm a stone quarry, from which any quantity of excellent building stone can be secured. We have used from it the past year in buildings over 1,000 cords of rubble, broken ashlar, and range stone. We get a light gray and a blue limestone. The latter we have used for sills, caps, and trimmings in the buildings. The nearness of the quarry, water led by a hose to mortar beds, and two good railroad depots within 2 miles, give us building facilities that enable us to erect at lowest rates the most substantial stone buildings.

Several of our large boys have gone home during the year and selected the land for their future homes. They work and observe with a definiteness of purpose not to be easily attained under other circumstances. Allotting agents are working with tribes that represent one-half of our attendance. Our whole school feels the pressure of passing events. These children know they are going to lands of their own, and not to reservations and an issue house. They are wide-awake, intelligent, industrious, progressive youths. They are showing the "staying" qualities that are not credited to the Indian by public opinion. Several whose time was up and were not needed at home to put up wheat and hay have remained here of choice to help harvest during vacation. Others have helped put up hay at home and returned here to work the remainder of their vacation. The influence and feeling of the girls is with the boys in the purpose to make land valuable. They all have caught an inspiration for habits of industry from the knowledge that open prairies, as seen in the "Strip" on one side of us, may be made productive farms, as seen in the school and along the Kansas line on the other side of us. Their land is valuable when plowed, mowed, or grazed. Their future subsistence must come from the soil. They learn to speak English, to write, compute numbers and quantity, count money, to get skill at handicraft from the trades, to cook, to can and to dry fruit, to store vegetables, to raise calves and pigs, all with reference to future use in securing a subsistence, if not a competence, from a land allotment or homestead.

I have authority to open a nursery, employ a suitable experienced foreman, and prepare to supply the future needs of the school and of the pupils in their homes with nursery stock.

An event of the year was a visit to the school of the honorable Commissioner of Indian Affairs, accompanied by his most estimable wife. I think necessary business with the office has been more quickly and understandingly done since. I am sure the effect of the visit upon employes and pupils and the entire work of the school continues yet, and has been most cheering in toil, consoling in difficulties, and inspiring when discouragements thicken.

In closing, I desire to express my thanks for the courteous treatment and prompt action of your office in the transaction of business.

Respectfully submitted.

BENJAMIN S. COPPOCK,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF HARRISON INSTITUTE, CHEMAWA, OREGON.

CHEMAWA, MARION COUNTY, OREGON,  
*August 20, 1891.*

SIR: I have the honor to forward to you my annual report of Harrison Institute, formerly Salem Indian Industrial School.

The year just closed was a year of more than ordinary progress for this institution. We have had enrolled during the year 250 students and our average attendance has been 228.

The advancing of the school grade making our school course now to consume not less than eight years, has placed our graduation scroll beyond the ability of any in the school, and therefore we had no so-called graduates. Our closing exercises were of great note to the school. The interest taken therein by visitors was very marked.

Our mechanical display was of a very superior quality, all the industrial departments being well represented. This display of work seems to be a great incentive, and they vie with each other for the best, and the work that was the product of competitive efforts would do credit to the best shops of the county. I have tried to build up the mechanical departments, claiming they would at least qualify those taking interest therein for the better taking care of themselves.

In our carpenter shop the boys, 12 in number, have found ample opportunity to get some idea of the trade, and, with some, it was a success, yet it is true that not all who attempt to learn trades are a success. By these carpenter boys there has been built our carpenter shop, 30 by 60; partly built an addition to boys' dormitory of 30 by 42, three stories high; 50 rods good board fence; besides a number of articles constructed in the shop.

The blacksmith and wagon shop has employed 12 boys, and, besides all horse shoeing, wagon repairing, and various other mending done, they have built by themselves, directed by the superintendent of that department, an addition to the shop 30 by 40, 1 hack, 6 farm wagons, with two others well on the way. Our shop, enlarged as it was the past year, is proving itself too small for the demands upon us. We are endeavoring to make the best wagons we can, that we may find a market for them.

I think it would be well if the department would take what we can make for distribution on agencies in this part of the country.

Our shoe shop is a very important part of our work. We are making all shoes demanded by our school, which is a very considerable thing, and this department greatly reimburses the Government for their outlay. There have been 12 boys at work in the shop, and the following is the work they have done: 329 pairs of boots and shoes for boys, 203 pairs of shoes for girls, and 231 pairs mended during the year.

The tailor shop, like the shoe shop, is a necessity, and is a paying institution. Four boys and 6 girls have been at work in the department and the result is as follows: 212 coats, 222 pairs of pants, 225 shirts, 196 pairs of drawers, besides mending all the boys' clothes, which consumed thirty days of the entire force in the shop. I realize that this department is not only training many for this kind of work, but it is meeting our demand for clothing, which is a great advantage and very much more satisfactory, as many of our boys are positively unwilling to wear the misfits that seem to be supplied the Indian schools in general.

In our engineering and plumbing department not so much opportunity is offered for the boys to take lessons therein. It is a particular trade, the care of machinery so essential to our needs; and not many, in fact the fewest boys, have an aptness for this kind of work. We have added to our machinery an 8-horse power engine, a steam laundry washer, and added various pipes that were deemed necessary to do the work. By the constructions now going up we will be under the necessity of rearranging our steam and water pipe system.

It appears to have been the design in the construction of the present system to provide for safety in case of fire, but it is very evident that the present system is exceedingly defective. I desire to so rearrange and lay mains of sufficient size that shall warrant me in the belief that a moderate conflagration could be suppressed. What we need for this is larger mains, with plugs and hose of sufficient size to be

useful. This work is of such a nature that a novice in the business could not master it, and I hope the present incumbent in the position is master of the situation. I trust my requests for pipe and hose to make this security will not, by your honor, be considered unnecessary nor excessive. Of this part of the work I shall speak again farther on.

In the sewing room all girls are educated to do their own dressmaking, and some who design to make it the work of the future with them are given special time and instruction. We make all clothing for the girls. Some of the girls have a desire for dresses out of better material than the Government furnishes, and so out of their own savings they purchase this additional dress material. Many of the girls are very proficient in making thread lace, and I feel free to furnish them the thread for this work.

**Buildings.**—By authority from the Honorable Commissioner, contracts have been awarded for new buildings which were very much needed, in order that the school might progress according to the wishes of the Department and the demands of the Indian education. In our boys' department we were overcrowded, having to put in the dormitory 140 when the design was only 100. I am happy to say that though this crowding was very inconvenient and unpleasant, yet, because of diligence and care, no bad sanitary effects were apparent. The buildings let under contract, and which are rapidly undergoing construction, are: a superintendent's residence; an apartment house for employes, capable of accommodating comfortably at least 12; a hospital that is an honor and credit to the Department; an addition to the girls' dormitory, greatly needed; and an addition to the school building. I feel assured in saying that the Commissioner, in granting the construction of these buildings, has done a most creditable work, an honor to his judgment and an inestimable benefit to the Indian. When these works are completed, along with what is designed to be done by the school carpenter and his helpers, for which construction material has been authorized and provided, we will have an educational center here of which the Indian Department may truly be proud.

**Health.**—The health of the school has been unusually good during the past year, and I am convinced will continue to grow better as we succeed in getting well arranged in our system of sewage and sanitary provisions. No longer can the Indian say, "Children all die at Chemawa." They really had no right to say it before, but this shadow of reason therefor is about gone now. We shall be provided with accommodations for 300 when our buildings are completed, and I am trusting I shall be able to bring the number up to that standard.

This brings me to the question of obtaining children for the school and to consider some of the difficulties attending the work. A prominent fact with the Indian is his tribal relations. Any invasion of this, to him, sacred domain is resented with undue energy. To allow children to go away for even the highest possible good is contrary to his feelings. If they are to be educated he wants it done at home, and the home education is almost worthless. Old habits remain. Association with old Indians is extremely antagonistic to education on a civilized basis, and civilization is scarcely a factor in their idea of the work. When in some places for twenty years or more schools have been in nominal progress, and yet but seldom is an Indian found who can read or write and the English language is positively ignored, it becomes evident that system of education is a failure. Associations are powerful, more so than books, and when a child is taken from Indian associations and taken under civilizing influences and elevating associations there springs the hope that when educated he will be something besides an Indian.

There is no particular surprise in the fact that a reservation school teacher is jealous of his standing in the educational work, and that to send from his school his advanced boys and girls will lower the grade and character of his work, and may give him a bad standard when inspectors should come. It is admitted that the only hope of success lies in the fact of segregation from old associations, localities, and habits, and must be done for a term of years. It is a matter of astonishment to find the unreasonable demands made on the Indian school policy by the criticising public. A public that practically knows nothing of the work, its struggles, and its difficulties, claims to sit in judgment and pronounce the whole system a failure because all are not, in the space of a very few years, turned out full and complete American citizens, with all modern evidences of civilization. I can not refrain from quoting from the report of Capt. Pratt of Carlisle, for year 1890, when he says:

Pandering to the tribe and its socialisms, as most of our Government and mission plans do, is the principal reason why the Indians have not advanced more, and are not now advancing as rapidly as they ought.

My experience and observations have led me to the following conclusions:

The nation should have supreme control of the entire system, as our common schools are under State control. As church and State are separate in our nation, so should the church and Indian school system be separate, giving the Indian the highest moral culture aside from all dogmatisms.

The large part of the education should be done away from reservations, and away from tribal associations and the influence of the older people.

The children should be kept away from reservations and tribal socialisms for a sufficiently long time that habits may become to a degree fixed in the Indian life. It must also be regarded that at least as long a term is necessary to reasonably educate an Indian boy as a white boy, and no one ever thinks of educating a white child under 8 or 10 years, and that too at full days in school. Old Indians should be prohibited from interfering with the education of the children.

With the law which the late Congress passed regarding compulsory education, put in force under proper restrictions, there will be a disposition to realize that this education is a national business rather than mere play at doing something which the Indian could submit to or not as might suit his uncultured ideas.

All over this coast there is a growing realization that this work means something, and if a patience can possess the critics of the day they will see the upward movement of the Indian toward the goal of honored citizenship. Contact with good white people is what is mighty in lifting them. I am happy to report that while I have not yet the full outing system at work yet I have a number of boys and girls at work on farm and in white homes during our vacation and am much pleased with the fact that the satisfaction given by most of them is a matter of surprise. I feel confident that ere long I shall have the system in good working order.

I feel it my fortune to be able to say that though the year past has been one of the severest toil and anxiety on my part, subject to the severest and unwarranted criticism, I can record a success of which I am not ashamed, and which I feel is only the foundation of still greater success that may attend the work.

Permit me to sincerely thank your honor for the readiness with which my requests have been granted and the favors shown me.

With the favors of the Department continued and the assistance I am led to expect I shall hope to make the coming year still more successful.

G. M. IRWIN,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF PAWNEE SCHOOL, OKL.

PAWNEE AGENCY, OKLA., *August 25, 1891.*

SIR: I have the honor to submit this my first annual report of the Pawnee industrial school.

On the 2d day of September, 1890, I took charge of this school as its superintendent. It was then under the immediate supervision of United States Indian Agent D. J. M. Wood, and remained so until the 10th of November, 1890, when I receipted to Agent Wood for all school property, since which time it has been a bonded school.

On taking charge of this school, I found unmistakable evidences of dissensions having existed in the school during its past sessions—dissensions which had materially affected the advancement of the school and had left matters in a somewhat chaotic and unsettled condition. To restore peace, order, and brotherly love among school employes was our first duty, and, though strange it may seem, it was not a great task. To gain the confidence of agent, clerk, and agency employes was our second duty, and while it seemed dubious at first, yet we have the satisfaction of believing that we have succeeded fairly well. The very best feeling has prevailed during the past year between agency and school employes, with an apparent desire on the part of each set of employes to aid and supplement the work of the other.

In making this my first annual report I am unable to give any statistics in comparison, owing to the fact that there is not in this office a vestige of any reports that have ever been made of this school.

**School attendance.**—There has been an average attendance during the past school year of 95, about equally divided between the sexes. This attendance has been kept up without any great effort, and it could have been increased if the capacity of the school was greater.

**Schoolroom work.**—The work of the schoolroom during the past year has been of a very satisfactory character, taking into consideration the many inconveniences under which teachers have to labor. Grades have been as closely adhered to as is possible in a school where such vast differences exist. Several have been promoted from lower to higher grades at close of session, though the idea of promotion is not a stimulus for advancement as is the case in white schools.

Teachers have taken great pains in teaching the idea of time in all movements, in singing exercises and all movements to and from recitations. Gymnastic or calisthenic exercises have occupied a prominent place in all programmes, and I firmly be-

lieve that no other class of exercises have had so great an influence for good as these. This calisthenic work has not been done in a desultory and haphazard manner; but, on the contrary, has been taken up systematically with a view to develop the child physically, and give him grace and ease in movement, elements lacking in the average camp-Indian child. Much of the good order and discipline which has prevailed throughout the school is attributable to the fact that teachers have learned that restlessness, disorder, and mischief (characteristic of the average Indian school) may be avoided by turning the pent-up forces which cause these conditions into channels whereby the pupil will get pleasure and the school profit thereby.

The elements of industrial and design drawing have received considerable attention at the hands of teachers, and their efforts have not been in vain, as many of the children show decided advancement and natural aptitude for this study.

From morning until night the great battle of teaching the Indian youth to use and comprehend the English language goes merrily on. Pawnee children when taken into the school at an early age readily learn to use the English, but when once outside the school influence they have a strong aversion to using it.

Vocal music has received considerable attention from teachers and others, and the children evince a decided liking for all singing exercises. The elements of vocal music are being taught; while voice culture is attempted in all exercises. This last branch is not attended with any great degree of success, owing to the peculiar guttural characteristic of the Pawnee dialect.

**Industrial work.**—During the past year boys have been taught the following industrial pursuits: Farming, care of stock, working in laundry and kitchen, sweeping in dormitories and schoolrooms, preparing wood for use, repairing building and fences, etc. Under the supervision of industrial teacher and farmer the boys of the school have assisted in planting the following crops: 10 acres in garden; 35 acres in corn; 35 acres in oats; 15 acres in millet; 5 acres in potatoes. They have also prepared for use in cook and schoolroom stoves 150 cords of wood 4 feet long. The year having been a favorable one the yield in crops is large. The yield in garden has been very good and during the months of May and June school children had all they could use of the following garden vegetables: Onions, radishes, beets, pease, beans, squashes, lettuce, potatoes, tomatoes, sweet corn and melons. During the fall months there will be an abundant supply of potatoes, cabbage and other vegetables for use of school children.

**Repairs and improvements.**—During the year there has been a general cleaning up in and around the school buildings. Several floors have been repaired; walks have been laid to outhouses; cellars cleaned and whitewashed; a drain 400 feet long has been laid to conduct the waste water away from the laundry; 500 rods of fence have been built around the school farm, and many rods of fence repaired around the farm and garden. A new building for commissary and shops is now under construction, and when completed it will tend to relieve the crowded condition that exists at this school. During the fall or winter the school capacity should be increased so as to accommodate the children not now in school. Propositions of this nature have already been submitted to the Indian Department for consideration.

**Health of school.**—Generally the health of school children has been fair, taking into consideration the many diseases inherited by these Indian children. In the early fall a siege of sore eyes lasted about six weeks, and in the late winter a six-weeks' siege of pneumonia completed the general sickness.

The sanitary condition of schoolrooms and buildings in general has been closely watched, and no little credit is due the agency physician, Dr. G. H. Phillips, for his suggestions and advice in improving the hygienic conditions of school and surroundings. The physician sees nearly every child from three to five times a day, and by studying their habits and knowing their natures he has been able to counteract to quite an extent the many scrofulous, syphilitic, and pulmonary diseases that lurk in the blood of these children, which are sending many of them to early graves.

The hospital facilities have been very poor during the past year; but with the hope of having more room added at an early date, we expect better facilities for the coming year.

The addition of a nurse to the corps of employes gives sanction to the belief that more systematic attention can be given to the sick children hereafter, besides relieving the other employes from a very burdensome task in which they have participated without murmuring.

Many are the needs of this school and few are its conveniences, but trusting that the same liberality that has been shown by the Indian Department during the past year may continue for the coming one, we hope to greatly improve the surroundings.

Very respectfully submitted.

T. W. CONWAY.  
*Superintendent.*

## REPORT OF CARLISLE SCHOOL, PA.

INDIAN INDUSTRIAL SCHOOL,  
Carlisle, Pa., September 1, 1891.

SIR: I come to you with this my twelfth annual report for this school, with nothing abated of its life-long purpose, which has been, as you know, to make the Indians a component part of the grand structure of civilization and nationality which we have erected on this continent. We are now, as we always have been, equally at war with the savagery and ignorance of the Indian and with those systems that spread a thin glamor of civilization over him, hold him *en masse*, separate and apart from the national life, and then fasten him as a festering parasite upon our national treasury and impose him upon our charity and civilization with no sympathy or purpose trained into him to be other than a parasite.

The following table shows our population for the year:

## Population.

Tribes.	Connected with school at date of last report.		New pupils received.		Total during year.	Returned to agencies.		Died.		Remaining at school.			Absent in families and on farms.	
	M.	F.	M.	F.		M.	F.	M.	F.	M.	F.	Total	M.	F.
Alaskan	1		3		4	1				3		3	1

Total	474	295	129	86	984	123	66	9	1	471	314	785	411	247

It will be seen that we had an increase over last year of total under care during the year of 34. The average number under care during the year was 754; an increase over last year's average of 90. Our total cost to the Government for all support, buildings, and improvements, also all transportation, both of pupils and sup-

plies, was \$111,893.81. Our income from donations was \$4,020, which, added to our Government cost, made \$115,913.81; \$5,500 of this was expended in the erection, repair, and improvement of building and \$10,146.81 for transportation of all kinds. These make the sum of \$15,646.81, which, deducted from \$111,893.81, total expense to Government, leaves \$96,247, which is the basis we should stand on in the comparisons of cost with other schools. By our system the Government has had 754 of its Indian youth in school for one year at a total cost of \$111,893.81, including all transportation, both of supplies and pupils and all improvements, instead of costing \$125,918 as it would in the other 167 schools, or \$131,950 as it would in the 175 schools, and in addition in both these classes the Government having to pay for all transportation of supplies and pupils and also improvements.

These results are reached in part through placing a portion of our pupils out in families and in the public schools, which we have so long practiced and urged as the best civilizer and educator for all Indian youth. There are many good reasons why this system should prevail. Among the most important are:

First. That in no other way can the differences between the races be so well and so entirely settled and the best there is in the Indian be brought into use to forward his development into a capable, civilized citizen;

Second. It is a system that can be promptly and sufficiently expanded to encompass all the Indian youth of the country;

Third. Without considering these far greater advantages of association and the opportunities of learning civilization by experience and contact, secured by our method, it is much less expensive to transfer the Indian youth to the east and work them into the public schools than it is to transport supplies, etc., to them at the west.

Eastern schools may claim especial credit for planting in the Indian mind ideas of citizenship and individuality, and for securing that public interest for them which has brought about such vastly increased educational help.

Our outing system brings our students into actual personal and commercial relations with the better class of industrious people of our race, and thus begets within the students common-sense ideas of individuality, independence, self-support, and citizenship. It grows to be more and more the most important feature of our school. During the year we had out, for longer or shorter periods, 413 boys and 249 girls, most of these during vacation, but we kept an average of about 200 out during the winter attending public schools. I again urge the great advantage of this system and the importance of its general adoption until the whole body of Indian youth shall thus come directly in contact with the intelligence, industries, and civilization of the nation.

While the demand for our students has greatly increased, the general fruits of the outing system have correspondingly increased.

The total earnings by farm labor during the year amounted to, boys, \$13,165.36; girls, \$3,036.67; making a total of \$16,202.03, of which they expended \$9,814.66, and had remaining to their credit June 30, 1891, \$6,387.37. We paid to them for labor at the school during the year \$4,064.27, which made their aggregate earnings \$20,266.30.

Every boy and girl is encouraged to save, and regular bank accounts are kept, each one having a bank book. The total number of depositors at the end of the year was 723. The total amount to their credit was \$10,430.

The debt on the gymnasium (\$5,000), which has hung over us for three years, and which Congress has refused to liquidate (though the Senate in 1889 did grant the amount, but the conference committee refused, and the House in 1890 did give it, but the conference committee again refused), has been assumed by the pupils of the school, and almost \$4,000 has been contributed. I have no doubt the balance will be raised in the near future. But for this contribution their credit balance would be above \$14,000.

Students out from us are mostly with farmers, and receive pay according to their ability, as other farm helps. Many of course are somewhat inefficient because of their first experiences. Others are small—some so small that we are glad to get them places for the cost of their keep, and they are glad to go on such terms.

During the month of July the wages received by the boys were as follows: one received \$20 per month; five received \$18; one, \$17; two, \$16; thirty, \$15; twelve, \$14; one, \$13.50; fifteen, \$13; six, \$12.50; fifty-five, \$12; six, \$11; eighty-two, \$10; one, \$9.50; twenty-two, \$9; thirty-three, \$8; thirty, \$7; two, \$6.50; thirty-three, \$6; twenty-three, \$5; and forty-seven received a less sum than \$5 per month. Of the girls, two received \$10 per month; one, \$9; one, \$8.50; two, \$8; four, \$7.50; three, \$7; two, \$6.75; two, \$6.50; four, \$6.25; thirty-four, \$6; three, \$5.75; ten, \$5.50; two, \$5.25; thirty-one, \$5; and one hundred received various sums less than \$5 per month. In all these cases the students received their board and washing, and a very considerable number of them were additionally rewarded with presents and various excursions and trips to the seashore, to the cities, picnics, etc.

A close comparison of the salaries paid other laborers shows that there is no difference between the salaries paid for Indian labor and the salaries paid laborers of other races in the same neighborhoods.

By reference to the table of population, it will be seen that the Apaches, Sioux, Cheyennes, Arapahoes, Assinaboines, Crows, Osages, Piegans, and others of the supposed most uncivilized tribes have furnished their full quota in the outing system. Our arrangements with all who take our students provide that on the dissatisfaction of the student or the patron the student returns to the school. The number so returned during the year was twenty, or 3 $\frac{1}{2}$  per cent of the whole. Students are only sent out upon their own request after a full knowledge of the purposes, hardships, and benefits, and almost universally those who once go out in this manner one year beg to go out the next and every year after while they are at the school.

The principal blanks used in connection with the outing system are sent herewith as part of this report.

The mechanical and other industries of the school have been continued on the lines heretofore fully represented in my annual reports, and which have proved by our experience most advantageous. We have first supplied our own wants in clothing, including shoes, and in articles of furniture, and the equipment of school rooms, quarters, and farms, and then have furnished the Indian service with quantities of harness, tinware, and spring wagons. Through these demands we have been enabled to give instruction to 231 apprentices in the different mechanical branches during the year, not including special instruction given to girls in their particular lines of need. We have found it not specially advantageous to make great effort to fill large contracts for the Department, for the reason that when we undertake such contracts it interferes with our outing system, and compels us to narrow the opportunities of our students and hold them together as a mass of Indians, while the outing system enlarges their experience, gives them courage to meet and compete with civilization, and undermines the wall of separation which divides the white and Indian races.

The training in our shops and on our farms has had its rewards for quite a considerable number of students. Young men have obtained employment among the whites and in other schools in mechanical and in agricultural lines, and some have been specially enlisted in the Army as company mechanics.

Our school farm has been greatly benefited by the commodious barn, 120 by 65 feet, just completed with funds given by Congress, giving us ample accommodations for a large increase in our herd of cows. In building it we have put up three silos capable of holding 400 tons of ensilage, which we propose to feed hereafter. Another addition to the farm equipment has been an incubator and brood house, which has been successful in giving us a large increase of poultry.

The early spring was unfavorable on account of drought, but the plentiful rains of summer have pushed forward the crops, and the outlook at this writing is good for a large supply of vegetables and all farm and garden products.

The schoolroom departments have been continued quite on the same lines as last year. The school work covers nine grades, beginning with nothing and carrying up to graduation at about the grammar grade of the public schools. I have always felt that purely Indian schools should stop at this, and that any higher education required for especially bright pupils should be obtained in the public and other schools of the country; and indeed our experience constantly confirms the opinion that it would be far better if Indian youth were transferred to the public schools of the country as rapidly as they have learned sufficient English and application to enable them to enter such schools successfully. We graduated 10, the exercises occurring on June 3 last. About half of the graduating class aspire to higher education, and I have made arrangements for them in other schools. There is no race objection to Indian pupils in any of the public or higher schools of the country, so far as I have found. I am frequently invited by college presidents to send our graduates to them, and that they are welcomed into the public schools the 200 so out in the schools of this and adjoining States last winter fully attests. Instruction in the English language forms a most important feature of our school work always.

Last year we gave some special attention to instruction in mechanical drawing with excellent results, and about 20 pupils who showed special aptitude in drawing were formed into an art class and received one lesson per week from the art teacher of Metzger Institute. The results in copying from casts and other objects were gratifying.

In all the departments sufficiently advanced, all pupils were instructed in primary bookkeeping. The accounts were made personal, so far as possible, so that they might learn to look after their own affairs.

During the months of March and April our whole school work was materially interrupted by an epidemic of measles, which required the breaking up of several sections of the school for weeks and the detailing of teachers as nurses. The gymnasium and the chapel were both turned into hospitals for the accommodation of these

cases. The teachers cheerfully performed these arduous duties, and the careful attention of the sick students received from doctor and nurses relieved us from any of the fatal or bad results often following such attacks on the reservations.

The normal department of the school was continued as outlined in last year's report and 8 of the advanced pupils received special training as teachers therein. Several of these developed a capacity which will warrant me in recommending them for positions in schools anywhere, in the near future.

It has seemed best that the two higher classes of the school be partially relieved from mechanical and other industrial instruction and be sent to school all day instead of a half day school and half day work, as heretofore: I have, therefore, planned to adopt this method on trial the ensuing year.

Carlisle, in common with the majority of Indian schools, has always been Christian in its teaching and influence. This feature of the school has become more prominent as the scholars have advanced in intelligence and appreciation of their Christian surroundings. A regular Sabbath preaching service attended by all the students has been maintained from the beginning, in which at times preachers from all denominations, except Roman Catholics, have officiated, and Roman Catholics have been offered the opportunity but declined to use it. These services have always been supplemented by a Sunday evening prayer meeting attended by all but the youngest class of students; a Thursday evening prayer meeting especially for all church members, and a regularly organized Sunday school for the girls and such boys, as by reason of not understanding English or on account of being too young, do not go to the town Sunday school. This Sunday school is officered and taught by the teachers and other interested employes and advanced students, representing almost every denomination, including Catholics. Its statistics for the year are as follows: Average attendance, 238; number of teachers, 20; amount of collection, \$79.37. The collections have been ample to furnish all the scholars with suitable Sunday school papers, besides forming the habit of giving according to their ability.

Most of the large boys regularly attend the several Sunday schools in town, and the Catholic students, of both sexes, go to their own town Sunday school, and the relations of the students to the several churches of the town of Carlisle continue to be most helpful to the students.

Several years ago the boys voluntarily organized a Young Men's Christian Association, and became a part of the general State and College Association, to which they regularly send delegates. Their relations with these State organizations, and with the local societies of Dickinson College and the town of Carlisle, are most fraternal and have been of the greatest advantage to themselves. The average membership of the association has been about 60. They believe in their society and work for its advancement among the other students.

The girls have three circles of "King's Daughters," numbering in all about 60, and are equally zealous in their labors among the girls. They manufactured many little articles of bric-a-brac, and held a fair among the students last year at which they raised \$60, which, together with other sums raised in various ways, enabled them to cultivate a missionary spirit of giving. Some of their money was donated to a needed school of which they heard in Tokyo, Japan. The most of it was given to those of their own race who were wounded in the Dakota campaign of last winter. I do not speak of this special work of our school in any spirit of ostentation, nor do I wish to assume that these features are special to Carlisle, for I have abundant information that most of the other Government schools are just as successfully engaged in the same kind of work.

Very respectfully,

Your obedient servant,

R. H. PRATT,

*Captain Tenth Cavalry, Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## BLANKS USED IN OUTING SYSTEM AT CARLISLE SCHOOL.

BLANK SENT TO THOSE APPLICANTS FOR HELP WHO ARE UNKNOWN TO US.

INDIAN INDUSTRIAL SCHOOL,  
Carlisle, Pa., \_\_\_\_\_, 189 .

Our object in placing pupils in families is to advance them in English and the customs of civilized life. We send out as many as we can spare towards the end of the school term, then visit them before our school opens in September, and if everything is satisfactory and persons wish to keep them, arrange for them to remain one or two years.

Pupils remaining out over winter must attend school at least four months continuously, and their labor out of school hours must pay their keep.

They are paid, as other persons, according to ability: Girls from 50 cents to \$2 per week; boys from \$5 to \$15 per month. Wages can be arranged after a two weeks' trial and advanced as deserved. I must be kept informed of the wages fixed upon and any changes thereafter.

R. H. PRATT,  
Capt. and Supt.

Please answer the following questions, tear off at this line, and return to me.

P. O. \_\_\_\_\_,

Date \_\_\_\_\_.

INQUIRY SENT TO OLD PATRONS OR TO PERSONS WELL KNOWN TO US FOR INFORMATION ABOUT NEW APPLICANTS.

INDIAN INDUSTRIAL SCHOOL,  
Carlisle, Pa., \_\_\_\_\_, 189 .

DEAR SIR: Please oblige me by giving the information asked below, and return this slip to me in the inclosed envelope. Any information you give will be treated confidentially.

Are you acquainted with \_\_\_\_\_?  
Does he use whisky or tobacco?  
Is he a man of good habits?  
What class of help does employ?

Is he kind to his employés?  
Does he pay promptly?  
Who compose his family?  
Of what religious society is he a member, if of any?

Very truly yours,

R. H. PRATT,  
Captain and Superintendent.

## REGULATIONS TO GOVERN PERSONS IN CHARGE OF OUT STUDENTS.

[Copy furnished to each patron and pupil.]

1. Do not allow pupils the free use of money. Advise and assist in all purchases of clothing and other necessaries, which charge up at the time. Give pupil spending money occasionally if asked for it, but if bad use is made of it withhold it and notify me. After two weeks trial talk with pupil and correspond with me about wages, but what is customary for like service in your vicinity should determine the matter. When returning to the school give enough money for transportation and send balance to me in check, in favor of pupil.
2. Pupils must attend Sabbath School and church regularly where such privileges are accessible.
3. Absence without your permission, or loafing evenings and Sundays, must not be allowed.
4. Pupils visiting their companions must not be encouraged to make a practice of staying for meals.
5. Patrons or others are not to hire pupils who have been sent to their neighbors without my consent, nor should students be encouraged to change places.
6. Except authorized by me, students are not to return nor be returned to the school before the period for which they engaged expires.
7. Pupils are not to use tobacco or spirituous liquors in any form. This or any other offense against good order must be reported to me at the time.
8. When out for the winter, pupils are to attend school continuously at least four months, working out of school hours for board and washing.
9. Pupils must bathe at least twice a week.
10. Encourage pupil to read and study during the off hours, even at busy seasons, and give some assistance.
11. Reports must be sent in promptly the last day of each calendar month, even if pupil has been with patron only a few days.

R. H. PRATT,  
Captain and Superintendent.INDIAN INDUSTRIAL SCHOOL,  
Carlisle, Pa.

MONTHLY REPORT BY PATRON.

\_\_\_\_\_, \_\_\_\_\_, 189 .

Capt. R. H. PRATT,  
Superintendent Indian Industrial School, Carlisle, Pa.:

The following is the report of \_\_\_\_\_, student from your school in my employ, during the month of \_\_\_\_\_:

Pupil was received \_\_\_\_\_, 189 .  
Conduct, \_\_\_\_\_.  
Does pupil use tobacco or spirituous liquors in any form? \_\_\_\_\_.  
Habits, \_\_\_\_\_.  
Does pupil bathe as often as our rules require? \_\_\_\_\_.  
Health, \_\_\_\_\_.  
Kind of work, \_\_\_\_\_.  
Ability and industry, \_\_\_\_\_.

Number of days at school during month, \_\_\_\_\_.  
Balance due pupil from last month, \$\_\_\_\_\_.  
Wages for this month, \$\_\_\_\_\_.  
Amount of money given to or expended for pupil during month, \$\_\_\_\_\_.  
Whole amount of pupil's money in my hands now, \$\_\_\_\_\_.  
What was bought with money given pupil and spent for him during month? \_\_\_\_\_.

The above account agrees with the one kept by me.

\_\_\_\_\_,  
Pupil.

Remarks:

Respectfully,

\_\_\_\_\_,  
In charge of pupil.

NOTE.—It is important that all the above questions be answered correctly and fully, and especially important that accounts be correctly stated, in order that our records at the school may be complete. Please use pen and ink in making out report.

VISITING AGENT'S REPORT.

Report of \_\_\_\_\_, student of Carlisle Indian Industrial School, who went \_\_\_\_\_, 1890, to live with \_\_\_\_\_, of \_\_\_\_\_ County, State of \_\_\_\_\_. Railroad station \_\_\_\_\_:

Health, \_\_\_\_\_.  
Conduct and habits, \_\_\_\_\_.  
Cleanliness, \_\_\_\_\_.  
Ability, \_\_\_\_\_.  
Economy, \_\_\_\_\_.  
Number of months at school, \_\_\_\_\_.  
Grade or quality of school, \_\_\_\_\_.

Name and address of teacher, \_\_\_\_\_.  
Attends what church and Sabbath school? \_\_\_\_\_.  
Wages, \$\_\_\_\_\_. Amount due pupil, \$\_\_\_\_\_.  
Are careful accounts kept by both patron and pupil? \_\_\_\_\_.  
When to return? \_\_\_\_\_.

NOTE.—Any general statement or wishes of patron or pupil, together with agent's estimate of place, people, and student.

\_\_\_\_\_,  
Visiting Agent.

\_\_\_\_\_, 1890.

INDIAN INDUSTRIAL SCHOOL, CARLISLE, PA.

DEAR FRIEND: We require all students to write to their homes once a month. When at the school we see that such letters are written and sent. There is much complaint from parents that students out from the school do not write.

Hereafter all patrons will require pupils under their care to write home letters at the end of the month and inclose such letters to me, with their monthly reports, to be forwarded by me to their parents. Record will be kept and patrons notified of omissions.

Respectfully,

R. H. PRATT,  
Captain and Superintendent.

THE OUTING SYSTEM AT CARLISLE.

A paper read at the Mohonk Indian Conference, October 8, 1891, by Capt. R. H. Pratt, U. S. A., Superintendent of the Carlisle, Pa., Indian School.

My theme is "A way out," or what we at Carlisle would call the "outing system." The Indians are walled off from participating in our civilization by their savagery and ignorance, aided by the reservation and other systems we have adopted for and forced upon them. Their opportunities to see and hear and know are so limited, that

they are not to be blamed if they make little progress in the arts of civilization. This feature of their case struck me at once when I came in contact with them as an officer in the Army in 1867, and I have ever since urged foreign emigrant privileges for them, and that our civilization should absorb them and not they absorb our civilization and remain separate tribes and people.

How can a man become a sailor if he is never permitted to go to sea? Why expect a boy raised in exclusively agricultural surroundings to become anything but an agriculturist? If the Indians cannot participate in the privileges and benefits of our civilization they are not to be blamed for not adopting it. If the youth are raised and continued in the surroundings of their tribes and savagery we should find no fault with them for remaining tribes and savages.

The beginning of my experience in outing Indians, that is, in getting them away from their reservations, was in the spring of 1875, when I was sent by the War Department with prisoners to Florida, and the distress to them of that beginning equaled that caused by the prospect of certain death.

We had chased and fought a good part of the Cheyennes, Kiowas, Comanches, and some Arapahoos up and down through the western part of the Indian Territory from July, 1874, to April, 1875, and had captured many hundreds of them, who were held prisoners at Fort Sill and at the Cheyenne Agency. On the recommendation of General Sheridan, the Government determined to send the bad leaders to prison in Florida. Seventy-four were placed in irons, that is, iron rings connected by a short chain were riveted on their ankles and many of them were handcuffed also. One Cheyenne woman, named Mochi, was thus chained. They were shipped to the railroad in Army wagons, ten in a wagon. A heavy chain fastened to a strong staple in the front of each wagon bed was passed between the legs and over the shackle chain, and they were made to sit down five on a side. The other end of the chain was fastened to the rear of the wagon bed with a staple and padlock so that it was impossible for any of them to get out except they were loosened by the guard.

As we moved away from Fort Sill crowds of their relatives and friends covered the high points as near as they were permitted to and women wailed and gashed themselves with knives. Two companies of infantry and two of cavalry protected the train, marching with loaded guns in front and rear and on the sides. At night the prisoners were taken out and long chains were padlocked to the wheels of the wagons and the prisoners strung on these so they could sleep on the ground between the wagons. Guards with loaded guns marched up and down each side of each string of prisoners. When we reached the railroad they were loaded into cars, which most of them had never seen before. When the cars began to move rapidly many of the Indians covered their heads with blankets from fear. We stopped nine days at Fort Leavenworth, waiting the orders of the War Department. Gray Beard, the principal chief of the Cheyennes, in the nighttime, attempted to commit suicide by hanging himself with a piece of blanket he had torn off and fastened to the grate in the window and around his neck, and keeping his feet off the floor by lifting them up. He was saved by the waking of his old friend, Minimic.

Vast crowds of people were gathered at every stopping place on our way as we passed on through St. Louis, Indianapolis, Louisville, Nashville, Chattanooga, Atlanta, and Jacksonville, to the old Spanish fort at St. Augustine, Fla. Above Nashville, Lean Bear, one of the principal Cheyenne chiefs, attempted to commit suicide by stabbing himself in the neck and breast with a small penknife, making eight wounds. He was pronounced dead by a surgeon on the train, and I left the lieutenant and 3 men at Nashville to bury the body, but after we left Nashville he revived and five days after we reached St. Augustine he rejoined the party. He had, however, made up his mind to die, and steadfastly refused food and water until death came.

Just as we reached Florida, passing through the pine woods at 2 o'clock in the morning, Gray Beard, who had tried to commit suicide at Leavenworth, secured a whole seat for himself, managed to elude the notice of the guards standing in each end of the car and to jump out of the window when the train was going 25 miles an hour. It was reported to me at once. I pulled the bell rope and stopped the train. The conductor came and backed the train until we found where he had struck the ground. After searching for some time and failing to find him I detailed a portion of the guard to remain and secure him and had just got aboard the train with the rest of the guard when Gray Beard came out from under palmetto bushes in rear of the train and started to run so rapidly, that the guard, who saw him thought he had gotten his shackles off, cried out, "Here he is," and instantly fired, the bullet passing through Gray Beard's body. We lifted him on the rear car and he died in an hour.

San Marco had been fitted up as a prison, so that it was simply a great pen, so walled up with boards inside as to make it impossible for them to get out or even up onto the terreplein, 20 feet above the floor of the court. A strong guard, with loaded guns, marched to and fro on the terreplein, and the Indians' sole outing place was in the court, below where they could only look up and see the sky.

By this time the heart of the officer in charge was as sad and heavy as the hearts of his prisoners. The people were constantly anxious to see the Indians, but it was thought best to only allow them opportunities a few hours two days in the week, when they came in crowds as to an animal show. My orders from the War Department directed me to take charge of the prisoners and see that their proper wants were supplied. I reasoned that their proper wants included all the gains, morally, physically, intellectually, and industrially, that could be made for them while undergoing this banishment. Against the protest of the commanding officer at St. Augustine I assumed that I was entirely responsible, and that it was my business to determine what to do and how to do it.

I accordingly removed the chains, then reduced and finally dismissed the guard, and organized the young Indians as a company, placed them on guard, and during two years and a half there was no violation of my trust. I took down and removed that portion of the fort that had been constructed to keep them in the court, and built a house on the terreplein, where they could live and get the fresh sea air and look out upon the town, country, and ocean. I undertook the profession of school teacher first myself, then aided by my interpreter and Mrs. Pratt, and finally by some of the good ladies of St. Augustine—Miss Mather, Miss Perit, Mrs. King Gibbs, and Mrs. Couper Gibbs, also Mrs. Carruthers of Tarrytown, N. Y., and others, with a session of one and a half to two hours daily.

I removed the soldier cook and appointed Indians to do the cooking; built an oven, got a baker to train an Indian to bake bread; required all the policing, chopping of wood, carrying of water, etc., to be done regularly and systematically, so that each Indian had some work to do each day. I issued Army uniforms to them. About half of them, not being cautioned, cut off the legs of the trousers to use for leggings, throwing away the upper part. To these I again gave new trousers, admonished them, and had no more trouble. After some weeks I insisted on the men cutting their hair, and this was a sore trial, but as I wore my hair short, a little argument and sarcasm secured assent. Then paint was abolished, and there was regular bathing in the sea.

Mr. Ballard, a curiosity dealer, gave them 6,000 sea beans to polish at 10 cents apiece. After a while we went out on the beach and searched for miles, and found thousands of sea beans, which they polished and sold for themselves. Industry and commercial intercourse, together with a little schooling, kept their minds and bodies occupied and comparative contentment grew. After a while, when they began to understand, they attended the different churches of the town. We became great friends, and as they learned, their desire for a higher life grew. I bought and built boats, taught some of them how to sail and row; and they took visitors to the beach and up and down the coast and thus made other gains.

Later on I began sending them out individually to work. Miss Mather and Miss Perit first took one to look after their horse and cow, do errands, keep the yard clean, etc. Every morning and evening he went from the fort down through the town to their home and attended to his duties. From great fear, which was on all the people when they arrived, they, by their industry and good conduct, became favorites in the town, until at last there was scarcely any person opposed to the Indians, and they found jobs picking oranges, on the railroad helping to handle baggage, going to and from Toccoi, in the saw mill handling logs and lumber, grubbing land, etc. I need not attempt to tell you all that occurred.

Three years wore away and they were released. They all said, "Give us our women and children; we would rather live here than go back to the reservations where there are many Indians as bad or worse than we were." Their proposition was submitted to the Government, but the opposition of a narrow-minded Indian agent led the Government to deny their request. Then 22 young men said, "We would rather stay East a few years longer and go to school than go home now." To this the Government said, "The money we have for school purposes is to be used for the youth on the reservations." My desire and the desire of their teachers to help these young men who wished to stay led us to go begging, and among the good people who visited St. Augustine we found those who would undertake the expenses of this one and that one until the whole 22 were provided for. Bishop Whipple undertook the expenses of five; Mrs. Burnham, then of Syracuse, N. Y., took four, and sent them up into central New York, near Utica, into the family of the Rev. Mr. Wickes, an Episcopal clergyman, who is here in the audience; Mrs. Carruthers took one to her home at Tarrytown; Mrs. Larocque, of New York City, paid for two, and others one each until all were provided for. Seventeen went to Hampton, and thus was engrafted Hampton's noted Indian branch. All the others returned to their tribes in the Territory.

Mrs. Pratt and I went to Dakota and brought 50 more, both boys and girls, to Hampton. I was detailed to stay there "until they were accustomed to their new mode of life and interested in educational pursuits." I urged Gen. Armstrong to get the Indians out, away from the school among our own people. He sent me to Berkshire, Mass., where, with the help of Mr. Hyde, of Lee, we planted a vacation colony of the

"Florida boys," as we called them among the farmers, one here and one there, and so that work began and grew and has continued in Berkshire and elsewhere.

In the fall of 1879 Carlisle Indian School was begun. In the spring of 1880 we did a deal of writing and talking, and succeeded in placing 16 boys and girls among the farmers in Pennsylvania, for vacation only. The people were afraid of the Indians and the Indians were afraid of the people, and more than half of these first Carlisle outings were failures, some after a few days, others after two or three weeks; but we did not stop. Next year we more than doubled the number and kept a few out during the winter in public schools. The next year and every year thereafter the growth of the system was rapid, until during the fiscal year which closed June 30, last, we showed an outing list numbering 662, most of them during vacation; 413 were boys and 249 girls. More than 200 of these remained out during the winter, living in families, generally treated as their own children and attending public schools with the youth of our own race; a few in our higher schools and colleges; and all at no cost to the Government.

I have insisted that Indians should be treated like other people, and should receive pay in proportion to their labor. During vacation our boys and girls, "lazy, good-for-nothing Indians," as they are called, instead of idling away their time as so many youth of our own race under like circumstances do, are working hard and earning money for themselves. Their total earnings the past year were \$20,266.30, \$4,064.27 of which was earned by labor performed at the school, and \$16,202.03 outside of the school. Testimonials by the hundred from their employers as to their good ability and character form part of the permanent records of Carlisle, and of the 662 out last year only 20, or  $3\frac{1}{2}$  per cent, were failures. Of 768 pupils over 700 have bank accounts, aggregating a credit of over \$13,000.

The outing system is a means of acquiring the English language and what goes with it far quicker and more perfectly than it can be gained in any school, for the reason that all talking is with English-speaking people, and being along the lines of civilized life and its needs, innumerable other important things are learned at the same time, and they are compelled to think in English. The outing system breaks down their old prejudices against the whites, their superstition and savagery, because, not being surrounded by them, all such qualities that may have grown up within them in their tribes fall into "innocuous desuetude." No plan that I know of will end the prejudices of the white race more rapidly and thoroughly. The whites learn that Indians can become useful men, and that they have the same qualities as other men. Seeing their industry, their skill and good conduct, they come to respect them. Not many boys or girls who have been at the Carlisle school three years or more, and have had the privilege of this outing system, but have made warm friends among the whites, with whom they keep up a correspondence after they return to the school, and in many cases after they return to their tribes, where, so far in their history, the inevitable generally consigns them.

The outing system broadens the whole Indian mind among the tribes, for the boys and girls so out correspond with father and mother and other friends at home and the thoughts of those who do not get the privilege of leaving are led away from the reservation. When the youth write home that they are kindly treated and of the many privileges and opportunities they have to learn and earn, that they have been down to the ocean, or to Philadelphia, New York, or even it may be to Lake Mohonk, the thought of the father and mother and the other friends who get this information is led into different channels; and slowly but surely the walls that surround the pen in which those at home are placed are lowered; and I look for the time to soon come when they will themselves break away from their hindrances and become free men and free women.

In all these years I have learned more and more to look upon our treatment of the Indians as being unjust and unchristian in its reservation methods, and to esteem the insidious plans we are constantly inaugurating to preserve the autonomy of the tribes as being worst of all, even worse than the wars and massacres that we have perpetrated upon them. Wars and massacres violently destroy life and they expect and understand that; but the reservations and the system of keeping them out and away from our civilization and our national life destroy hope, and beget a despair which brings recklessness and greater death, which they do not understand and are not able to provide against.

The solution of the Indian problem hinges upon the destruction of the present systems and in the devising of means that will disintegrate their tribes and bring them into association with the best of civilization. Partial destruction of past systems and the settling on them of others with the same trend will not accomplish the purpose. Lands in severalty, unless the distribution of the land is properly managed, will only band, bind, and confirm the tribal power and serve to continue the hindering of their civilization, absorption, and citizenship. If it is inevitable that they must occupy lands in severalty and not be allowed to get away and become individuals, then the distribution of their lands should be in alternate sections with white men;

that is, there should be an Indian and a white man and an Indian and a white man, or, better still, two or three white men between each two Indians. Purely Indian schools, especially tribal Indian schools, not supplemented by actual contest with the brain and muscle of the other youth of the land will not bring them into possession of the courage and ability necessary for competition with us as a useful and component part of the inhabitants of this pushing, growing country.

### REPORT OF PIERRE SCHOOL, S. DAK.

PIERRE, S. DAK., Oct. —, 1889.

DEAR SIR: In compliance with your instructions of April 3, 1891, I herewith submit my first annual report of the Pierre Industrial School.

This school is located within the limits of the city of Pierre, S. Dak., 1 mile east of East Pierre depot. Twenty acres of land were donated at this point by the citizens of Pierre for the site of the school; also 160 acres for a farm, situated  $3\frac{1}{2}$  miles north of the school. This last tract of land, owing to its distance from the school, the circuitous road through the hills necessarily traveled to reach it, and the general uncertainty heretofore attending all farming operations in this region of light rainfall, is as yet unimproved.

Work commenced on the school grounds in the fall of 1889, when the main school building, a two-story brick structure, costing \$24,615, was erected.

March 8, 1891, I took charge of the premises. The school at this time consisted of a bare building furnished with nothing but a steam heating apparatus. In April a clerk, farmer, and carpenter reported for duty, and as soon as the necessary authorities could be obtained stock and tools were purchased, and the work of getting the school in readiness for use commenced. Ditches were filled, the grounds graded, walks and drives laid out and graveled, trees were planted, 8 acres of ground broken for garden; the land was fenced and cross-fenced; a two-story frame stable and two-story frame laundry were erected. Water mains were laid 4,715 feet to connect the school with the city water supply; a complete system of plumbing was placed in the school building and laundry, carrying hot and cold water to the different rooms where needed; a sewer was laid 3980 feet to the Missouri River; and wardrobes, tables, screen doors, and windows were manufactured.

Vexatious delay occurred. From July 1 to October 16 the school was entirely without funds. Owing to the failure of the appropriation bills to pass, credit was refused the school unless the bills were guaranteed, and necessary supplies did not arrive until December. In February teachers and other employes reported for duty and the school was opened.

The half-breeds were prompt to avail themselves of the opportunities offered for their children, but to the Indians the school was new; they required time to discuss it and become acquainted with its merits. After the usual amount of "talk" and visiting, the confidence of the Indians was obtained, pupils were furnished, and the school was filled; 51 girls and 30 boys were enrolled, which was as many as the school could accommodate without crowding.

The results of the first year's school work were highly satisfactory. The general health of the pupils was good, only one serious case of illness and no deaths having occurred. Excellent progress was made in the schoolrooms, the course of study being adhered to as closely as possible, though the delay in the arrival of books and other school supplies prevented a strict grading at the beginning.

The girls made noticeable advancement in the various housewifely industries, all that were old enough working one-half day in the different departments in regular order. Several of the girls learned to make their own dresses, cutting, fitting, and doing every part of the work from first to last. Twenty-one different girls learned to make excellent bread, while all the older ones acquired considerable skill in cooking meat and vegetables. It is quite evident that many of the younger women are very anxious to learn the housekeeping secrets of their white sisters, a number having applied for admission to the school for this reason, several of whom were married women with families.

The boys were instructed in the care of stock, gardening, and carpentry, to which I will add this year blacksmithing, and as soon as possible harness and shoemaking and the manufacture and repairing of wagons. Several of the pupils refused to go home with their parents for vacation, although permission was given them, while a number of others went at their parents' command, but very reluctantly and with many and tearful protests.

**New buildings.**—During the quarter just ended frame buildings have been erected here as follows: One large two-story cow stable, one tool house, carpenter and blacksmith shop, granary, piggens, and poultry house. These buildings are all well made and very neat in appearance. Brick additions have been made to the school building, which afford us another large dining room, an assembly room, two large dormitories, and five employes' rooms. In addition to this, work is now going forward on a second addition to the school building, providing for two more schoolrooms and a large dormitory; also a large brick hospital, brick boiler house, frame warehouse, and frame hose house. These buildings will double the capacity of the school, besides adding greatly to its general convenience. Contracts have been let for lumber and an assortment of hardware to be used in constructing tables, wardrobes, screen doors, etc. This will furnish employment for the carpenter and a large number of boys for the present fiscal year, and affords an excellent opportunity for giving that instruction in the use of tools so much needed by these Indian youths. After watching their first clumsy attempts at using a saw or square, one ceases to wonder at the rude character of their huts and the utter absence of such ordinary conveniences as every white man considers himself competent to make for the use of his family.

**Securing pupils.**—The work of securing pupils for this school was most laborious. The school being located some distance from the reservation, children could be taken only with the consent of their parents, and as no power but persuasion and argument could be used with these parents, their consent was often refused, especially in the first days of the school.

The Indian agents furnished interpreters and such aid as they could to obtain pupils who were not enrolled in their camp or boarding schools; but as each agency has its boarding school, and as the Sioux Reservation is well supplied with camp schools, really this was our chief difficulty. Often we were compelled to leave children who were anxious to attend the Pierre school because they were enrolled in a camp school and the agent would not consent to their being removed. In some instances the agent had our sympathy, as we understood that he was required to keep his own schools full; but it made our work of securing pupils extremely difficult. Nearly every Indian camp had its school. A policeman was stationed there, whose business it was to see that every child of school age was enrolled and in attendance. This compelled us to travel over the reservation, collecting such scattered pupils as for various reasons were not attending any school. Occasionally a camp school could be found whose attendance exceeded its accommodations. In such instances the aid of the agent and teacher was cheerfully given, and a few hours' work would see us on our return with loaded wagons; but, unhappily, such instances were rare exceptions. Sometimes all the pupils in a school would have gone with me gladly if the consent of the agent and teacher could have been obtained, but this would have left an empty school house and a teacher without an occupation, and could not be permitted.

I am trying to make such arrangements with the agents for the present fiscal year as will allow me to draw pupils from localities where they can be spared, and prevent such competition in future.

**Manufactures.**—In the four and one-half months school has been in session there have been manufactured in the sewing room 51 aprons, 6 window curtains, 126 dresses, 68 pillowcases, 110 sheets, 46 skirts, 22 underwaists, and 70 suits underclothing.

**Religious exercises.**—The pupils attending this school represent several religions denominations, about two-thirds being Protestants and the remainder Catholics. Opportunity is given these pupils to attend their own churches in the city each Sabbath morning. In the afternoon suitable exercises, consisting of singing and nonsectarian reading and instruction, are held at the school, which all are required to attend.

**Finally.**—Surrounded as this school is by the various branches of the Dakota Nation, situated in the natural home of the Indian, and starting at a time when the younger members of the Sioux tribes seem to be awakening to the necessity of education, it promises to perform, under careful management, a great work among the adjacent bands and to be a chief factor in promoting that civilization that alone can save the Indian race from extinction.

Respectfully,

CROSBY G. DAVIS,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE,  
Hampton, Va., July 1, 1891.

SIR: I have the honor to present the following account of the work of this institution for the past year for the Indians of our country, beginning with a general statement in regard to the work for both races under instruction here.

Let me state that in the thirteen years since Indians and negroes have been mingled in this school there has been no serious trouble between them. There is much mutual respect and good feeling. The situation is in some respects a delicate one, but it has developed much noble, manly feeling. Both races are broader and better for it.

In this the twenty-third year of the school it holds its attendance, reached two years ago, of 650 student boarders, representing twenty States and eight foreign countries. The great majority are negroes. The Whittier primary school, with 300 neighborhood children, makes the total on our grounds this year about 950. One hundred and thirty-two are Indians.

In the administrative, academic, industrial, business, and hospital departments there are 80 employed as officers, teachers, managers, foremen, clerks, and nurses.

*Intensive* rather than *extensive* development has been the plan. In class work and shop work there has been marked gain; more, I think, than in any other one year of the school's history. Never was the school more ready for scrutiny than to-day on the score of efficiency or economy.

Much attention has been given to the correlation of studies, by which better results are gained and time saved.

It was felt that under the act of Congress approved August 30, 1890, for the benefit of the various State agricultural colleges, by which this institution receives one-third of Virginia's share (the State's share being \$15,000 a year, to increase by \$1,000 annually till it shall be \$25,000), there should be more thorough instruction in scientific agriculture and science generally, for which the new science building provides excellent facilities. Accordingly Mr. J. T. Hatch, graduate of Orono Agricultural College, Maine, with one year's special study at Harvard College, Massachusetts, was engaged, and since January has taught the principles of agriculture and horticulture.

The industrial departments may be classed as follows:

(1) Household work required for over 700 boarders (students and teachers), including general cleaning, dishwashing and laundry work by girls, and cooking, waiting, and janitor's work in ten buildings by boys; students (chiefly girls) earned last year .....	\$25, 138. 85
(2) Farmwork; students' (boys) earnings last year .....	8, 430. 18
(3) Mechanical work, sawmill work, carpentering and working machinery, blacksmithing, wheelwrighting, painting, shoemaking, harness-making, tinning, knitting-machine work, work in machine-shop, and on steam, gas, and water plant, printing, tailoring, sewing, and dress-making (girls in last four only); students' earnings last year were ....	21, 776. 17
Total .....	55, 345. 20

The earnings of the Indian students who are distributed among the labor departments, are not included in this statement. The negroes depend wholly on their earnings. The Indians, being boarded and clothed by the Government, are paid according to the value of their work; half is given to expend as they choose (under advice) and the other half kept as a reserve or "tool" fund till they shall go home.

Instruction has to be considered as much as production. The shop is for the boy rather than the boy for the shop. It would be economy to select and retain skilled workmen, but the skillful graduate must go out among his people where he is needed and give place to a "green" hand, who perhaps, worth from 50 cents to 75 cents a day on entering, may be trained to command at graduation from \$1 to \$2.50 per day as a laborer or mechanic. The skill that has carried him through school will carry him through life. Character is the best outcome of the labor system. That makes it worth many times over its cost. It is not cheap, but it pays. Intelligent industry is the foe of immorality. More than anything else it will help make good citizens and good Christians of our negroes and Indians.

Training the head and the heart creates a wholesome discontent: training the hand gives the power to satisfy that discontent; without that power he may go from bad to worse. Like his brother in black, the Indian needs the spur of discontent and the capacity through industrial training to better himself.

Agriculture and stock-raising must be the chief occupations of the negro and In-

dian races; stock to the former means meat enough for home use; to the latter it means herds on his wide ranges, to sell as well as to satisfy his hunger.

Our improved laboratory facilities, frequent practical lectures with illustrations, and the addition to our agricultural staff of two trained men, graduates of high-grade agricultural and mechanical colleges, will, I hope, make our future work for the farming interest better than it has been. Even our girl graduates as school teachers have been and can be most useful to the ignorant farmer, by giving the simple advice they know how to give; by circulating agricultural tracts for children to read to their parents.

There has been a great improvement in our mechanical department this year. It comes from the liberality of Mr. C. P. Huntington, who in 1878 established a steam sawmill, capacity 9,000 feet a day, also providing wood-working machinery, which was last year outgrown and in part worn out. The addition by him since last June of a sawmill extension at one end of the "works," cutting capacity 25,000 feet of lumber daily, and of a large two-story annex (125 by 40 feet) for workshops at the other end, with a new and greatly improved outfit of machinery, employing in all 63 boys, at a cost of \$23,000, with other improvements, has given this school, I think, the most complete single industrial plant of its kind in any institution in the land.

Besides these advantages for manufacturing first-class lumber, for which there is a good market (not without competition in this rapidly growing section), the effect of improved and rapidly working machinery on the boys is excellent. The mere drudgery of handling logs is now done by a "steam canter," which relieves 5 men, who find use for their quickness of eye and of hand in selecting, sawing, hauling, and preparing for market—a valuable skill—the products of machinery such as is found in all the best sawmills. The boys used to drive the machinery, and took their own time; now the machinery drives the boys, they move quickly, delays are dangerous, and the education of it is wonderful. Machinery is fast going into the South, and the negro should be ready for it. Even if it sometimes uses him up (he occasionally uses it up) he can afford the risk. It will some day help the Indian to compete with the white man. One of the Onondaga tribe has gone from this sawmill to run the steam engine of the Sweet Manufacturing Company in Syracuse, N. Y.

The bird's-eye view of the Indian work seems naturally to resolve itself into three lines—the material we are working upon, the aims we are working for, and the appliances we are working with.

As the Western schools steadily gain in excellence, and the plan grows in favor of sending the cream of these schools to the East, the natural result is a class of pupils more and more advanced in studies and in the ways of civilization. For some time to come, however, it is probable there will be each year a few young men who have had no advantages in their early days, and who shrink now from entering the primary classes of little children in the agency school, who yet eagerly grasp the chance of coming to an eastern school, where they can form a class by themselves, and where they can learn a trade. Such are often our most earnest and interesting scholars, and those who have a strong influence for good when they return home. We began the year with 57 in the normal school, more than ever before; 77 in the Indian classes; and 1 in the night school, the latter an Onondaga Indian from New York, working his own way through the course. Only 3 have left since October 1, one of these having been with us five years, another four. There have been no deaths during the year. We have now on our rolls 132—46 girls and 86 boys. The following tribes have been represented this year:

Sioux .....	67	Cheyenne .....	1
Omaha .....	4	Sac and Fox....	3
Winnebago .....	5	Pottawattomie .....	6
Piegan .....	1	Oneida .....	37
Shawnee .....	2	Oneida, N. Y .....	1
Seneca .....	2	Onondaga, N. Y .....	1
Wyandotte.....	1	Cherokee, N. C.....	1
Otoe .....	2	Penobscot, Me .....	1

Four girls have spent the winter at the North.

The Indian classes proper have taken up the usual elementary studies with but little change in methods or text-books. Perhaps these classes have never been better graded or made more thorough and satisfactory progress than the past year. Having, as a rule, so fair a knowledge of simple English, they have been able to grasp new ideas more readily, and have not only been remarkably earnest and faithful in the evening study hour, but have shown more quickness and responsiveness in the class room. A glance at the language work of each division will give some idea of its grade.

The lowest, or fourth, division is the most difficult to handle; not so much because of the peculiar fact and ingenuity always required for beginners, as because this class consists, in part, of the unfortunates of several years, who have been stranded on the difficulties of our mother tongue. Here, as in all the divisions, a strong effort is made, in teaching English sentences, to put into them something of itself worth remembering. So these boys and girls in learning to talk about the things they see every day about them—paper, glass, coal, etc.—have also learned what they are made of. In connection with paper, they were greatly interested in one or two experiments showing how cloth is bleached. As the teacher looks back to the beginning of the term she can see progress sure, though slow.

The third division, which, so far as the boys are concerned, is really the class of newcomers, is one of the brightest classes in the school. The reading teacher is surprised at the quickness of their memories; the arithmetic teacher at the ease with which they master numbers, weights and measures, and the first principles of fractions. Some elementary science work has been given them for language; the lessons on the formation of the soil, after being explained and illustrated as simply as possible, being put on the board in the form of questions and answers, thus giving practice in the use of verbs and interrogative forms. These are copied and memorized in study hour.

The second division, though not so quick as the third, is very painstaking, and their written work excels in neatness and correctness. They have taken the same science lessons as the third, but in addition have had geography, which gives constant drill in English. Their teacher reports that they have studied about the vegetable and animal life of the earth (making their own illustrations on the board, to the delight of themselves and their frequent visitors), about its different races; comparing savage with civilized peoples—always a question of interest to an Indian class—and the voyages to America of European discoverers. They have been more ready than the corresponding class of last year to accept on faith wonderful stories of moving ice rivers, flaming mountains, and the movement of the earth among the heavenly bodies. Map drawing and sand molding have also been taken up.

In the first division we find greater facility of expression both in speaking and in writing. This is an intelligent, responsive class, and though many of its members are full Indians, is more like a class of white children. Natural history has furnished many of their language lessons; stuffed specimens being placed before them to talk about. They have also had much practice in reproducing stories and anecdotes. In their reading period the teacher has made a careful study of the Dawes bill, and given these future citizens some idea of Congress, the passing of bills, voting, etc. Their instruction in geography has awakened much interest in the story of the earth as a planet and the successive changes by which it was fitted to be the home of man; the thought of a common parentage of the human race being a great surprise. Atmosphere, winds, clouds, and currents have been pleasant topics of study; while trips to Alaska, Greenland, and South America have been much enjoyed.

The highest class in the Indian school is the all-day advanced class. Here one is struck with the extent of the vocabulary of some of the pupils; the readiness with which they define words and their correct use of them in sentences. Their reading teacher has given them good drill in this. English comes to them on all sides—in science, history, geography; yes arithmetic, too, as they make up their own problems in buying and selling or in fractions, sometimes illustrating them with very creditable drawings; or as they explain the examples in analyses found in Sheldon's arithmetic, which they use preparatory to entering the junior class. It has been an easy task to interest them in the stories and heroes of United States history. Pictures, maps, and the molding-board have been brought into play to make these more clear to them; the maneuvers of a battlefield, for instance, assuming quite a definite shape when illustrated on the sand table with little flags, to represent the opposing armies. In geography they have been over much the same ground as the first division, "going deeper, however, into cause and effect, and learning to judge from surface, drainage, latitude, and climate what might and would be the productions and occupations of a country." They will go over this course more fully in their junior year, but it is very valuable as subject-matter for thought and expression. They have used a Primer of Physiology and Hygiene by Smith, and have now taken up natural history. An invasion of ants in one of their class rooms, which they diligently studied with a set of microscopes, furnished a topic for interesting letters sent to the donor of the microscopes.

They have received some elementary instruction in every day's business; business-letter writing; different ways of sending money, as post-office orders, postal notes, express orders, etc., having actual blanks to fill out. Some knowledge of banking business has also been given them, including checks and notes, which they made out and the holder indorsed and drew the money; likewise of taxes and fire and life insurance. In their language class proper they have taken up different

kinds of sentences and use of capitals and marks of punctuation. But besides the mechanics of language, they have reproduced stories, committed short poems to memory and rewritten them, talked and studied about plant life or some scientific experiment, and then put what they could recall in writing.

In the Normal School there have been 57 Indians distributed through the various classes, as follows: 8 seniors, 16 middlers, 22 juniors, 11 intermediates. This is the greatest number of Indians that we have ever had at one time in the Normal School.

A graduate from this school is prepared to teach any common school. In his senior year he has completed his arithmetic and taken bookkeeping. Has had instruction in economics and civil government—made more real by debates and mock congresses—literature, composition, ancient history, physics, outline study of man, and practice teaching.

The seniors have had the privilege of keeping their evening study hour in the library. Having access to the valuable books of reference has taught them the best way to study and freed them from the narrowing results of confining themselves to their text books alone. Two classes have had lessons in free-hand drawing, and, at the opening of the morning school, once a week, instruction in reading music by Holt's method has been given. The girls have had calisthenic exercises in the gymnasium, in which they have shown a good degree of proficiency; their quickness in imitation standing them in good stead. The Indian band has flourished and a number of girls play on the piano or organ.

To cultivate and refine the social tastes of the Indian is no unimportant part of our work for them. The contrast between the new and the old is, perhaps, nowhere more striking than here. The newly-arrived maiden, bereft of the friendly shelter of her shawl, peers out from retired nooks in the big hall at Winona, or gazes down stately from the landing of the stairway at the festivities below. When Saturday night brings over the braves for a social gathering, and if, perchance, she has been invited by a friend to sit with him at a concert or other entertainment in Virginia Hall, she may need to be pushed forward almost by main force when he appears to escort her upstairs. A half surreptitious interview in some shadowy corner may be quite to her liking, but to come forward with modest self-possession and quiet dignity, and bear her share in the entertainment of guests, whether white or Indian, seems utterly beyond her. It is done, however, and very gracefully, by our advanced girls.

A similar contrast in bearing appears among the boys. On one side we see the senior or middler, wearing his straps or chevron as an officer of the battalion, composedly offering his arm to a girl friend, and leading a long line of couples through an intricate march; or when introduced to a distinguished visitor from abroad, answering questions courteously and intelligently. On the other hand is seen the raw recruit, stuck fast to the wall and looking hopelessly stolid and reserved when accosted by a stranger.

This social training begins in the Indian dining-room, where boys and girls sit together on opposite sides of the long dining-table. Here, too, he learns the principle of waiting upon the girls first, and discovers if one is left standing he must be prompt in finding her a chair. Newcomers are silent as to their sensations, but it must be a revelation to some of them to note how readily the girls assume their part in the various literary and musical entertainments at Winona and elsewhere. On one of the Saturday evenings there, a cobweb party was introduced very successfully, while the work evening, shortly before Christmas, when boys as well as girls lent a helping hand in preparing candy bags, etc., for Western boxes, was one of especial interest. The home life at the wigwam has moved on as usual, and the pleasant, cheery sitting-room has been a favorite resort for the boys in their leisure hours, to look at pictures or read the daily papers, or talk over with their ever interested house-mother the plans and projects of their boy life, or seek counsel and help over its hard places.

The average Indian man does not know the meaning of the word home in its best sense, and he will remain in ignorance until he is enlightened by the trained women of his household. An Indian chief said to us lately, "I don't even know my house was dirty; but my child sees and she makes everything nice and clean." To make the Indian girl in the highest degree helpful in solving the problem of civilization is the one object kept steadily in view.

In "Winona Lodge," the home of the Indian girls, each is carefully taught to do for herself the various kinds of work that fall to the lot of the ordinary housekeeper. Each girl must keep her own room in good order and submit it to frequent inspection. She is encouraged to beautify it in simple ways, and some of the rooms are very pretty indeed. The spotless halls, staircases, and assembly rooms testify to the proficiency she gains in sweeping, dusting, and scrubbing. In the neat and pleasant laundry each washes, starches, and irons all her own clothes, and the neatly-arranged piles of garments carried upstairs for inspection every week are looked upon with pardonable pride by the busy workers.

One of the chiefs while here was shown about the laundry by his niece, herself a new arrival. He was much interested in all he saw, and presently pulled out a large and grimy handkerchief, saying, "You can't make that clean." The girl took it with a laugh, and quickly washed, ironed, and returned it, the chief watching the whole operation with the interest of a child, and receiving his handkerchief with great satisfaction.

In the sewing rooms the girls have cut and made all their own underclothes, and have stocked a good-sized closet with garments for incoming pupils; they have made the bedding and curtains for Winona and base-ball knickerbockers for the Indian boys. In their "tens" they have dressed dolls and helped prepare Christmas boxes for the reservations. They have done their own mending and kept their clothes in better order than ever before; most of them have cut and made their own dresses. The same natural gifts which produced from the mothers and grandmothers such exquisite work with beads, feathers, and porcupine quills, manifests itself in the daughters in tasteful and well-made dresses, and dainty bits of needlework.

While these girls are supported by Government, it is thought well that they should have a little money for small personal expenses, that they may know its value, and how to use it in the best ways. A small sum is therefore paid them for the care of teacher's rooms, for sewing done on their workdays, etc. This money is being more and more wisely spent, and the training in careful expenditure is worth far more than the mere purchasing power of the amounts earned. The Indian girl is not different from her white sister in her appreciation of a pretty hat or an extra dress earned by her own industry.

Since these girls board in the regular boarding department of the school, their training in cooking must chiefly be given in the well-conducted cooking-classes. But as in these classes every needful appliance is provided, while very few such conveniences can be had by the Indian girl in her home, a new experiment has this year been tried. One of the Indian cottage kitchens was fitted up with only such things as were absolutely necessary. The school supplied milk, flour, and fuel, and the girls were allowed fifty cents per week, out of which four suppers must be provided sufficient for the three girls whose turn it was to cook. Their leader, and on one evening in the week, some officer or teacher, was invited by the girls to supper. How to get the greatest variety out of this small allowance was an interesting problem; but the girls have made muffins, rolls, biscuit, and white bread, have cooked eggs and potatoes in various ways, and made hash, codfish balls, and various other simple dishes. Account books have been carefully kept, in which every item was noted with its price. The meals were served in the little cottage sitting-room, and lessons were given in fire-making, table-setting, dish-washing, care of pots and pans, presiding at table, etc. The girls have greatly enjoyed this little bit of independent housekeeping, and the lessons learned cannot fail to be of great benefit to them.

Life on the reservation presents so many difficulties almost unknown to the eastern housekeeper, that a valuable part of the Indian girls' training is that received in the technical shop. Simple lessons in carpentering have been given each week to twenty-five Indian girls in classes of five each. They have learned how to use the saw, hammer, and plane, the bevel, square, rule, etc., and have turned out creditable boxes, book-shelves, tables, screen-frames, picture-frames, brackets, etc. They are also taught to cover and paint furniture, and to set a square of glass. Indian girls show great natural aptitude for the use of tools.

The girls sent away to work for a time in Northern homes have brought back excellent reports; and one girl employed in our tailoring department has become so proficient that she is likely to be very useful among her own people.

A boy who shows aptitude for any special trade has every chance and encouragement to become proficient in it. The trades taught are: all branches of woodworking as found in the large mill, carpentry and building, including lessons in planning and drafting, wheelwrighting, blacksmithing, engineering, tinning, shoe and harness making, tailoring, painting, printing, and farming. For those for whom an all-round training seems best, a technical course is provided, and the use of all the different tools connected with the simple making or mending of house, school, or farm belongings is taught and practiced.

The task of dealing with minor offences and breaches of military order has been greatly simplified by the adoption of stated penalties for stated offences; and these penalties have, in every case, been set by the officers' court, composed of twelve or fourteen of the cadet officers, and constituted according to the regulations of the U. S. Army. The effect of this system has been most beneficial, and the number of absences and other irregularities which would naturally come within its scope have been reduced during the past winter more than 50 per cent. The records of the officers' court show for the current year only sixteen cases (two of which resulted in acquittal) as against forty-two cases tried during the school year of 1889-'90. In addition to this court, the Indian boys, who live in a separate dormitory, annually

elect from their number, by the Australian ballot system, a council of five, who have general charge of the "wigwam," and try such cases as may be referred to them. These two institutions serve to emphasize the principle of self-government, on which, as far as practicable, the entire department of discipline is managed; and, as was noted in the last report, their decisions are received in a "spirit of deference and ready acquiescence."

A change this year is the enrollment of all the Indian boys in a cadet company by themselves. This was done, after some deliberation, at their own request, and has worked well in many ways. It has materially improved the appearance and efficiency of the battalion, and has, by reason of the additional responsibility thus thrown upon cadet officers, tended directly toward a higher morale among the occupants of the wigwam.

The more serious offenses have been chiefly noticeable by their absence. Trouble has always been caused, to a greater or less degree, by the use of liquor among the Indians, and by personal difficulties between the students, but during the past year there have been fewer cases recorded under each head than ever before.

The dormitories are under the charge of ten janitors, appointed from the students, who make daily inspection of the rooms in their care, and report to the commandant every morning. They are also inspected throughout the week by certain teachers, and on Sunday morning a formal and military inspection of each room is made by a school officer. At this inspection, the occupants of each room are required to be present in cap and uniform.

Cadet students are required to wear the uniform cap on all occasions when not at work, and leaving the school grounds without it is accounted a serious offense. This affords a safeguard against one of the commonest difficulties in dealing with young men at school, as it marks them as students of the institute, and the laws of the State of Virginia especially forbid the sale of liquor to such.

The military organization to which reference has been incidentally made above is above all others the most potent factor in solving the problems of law and order which confront the officers of the school, and is not only repressive, but directly and actively educative as well. It enforces promptness, accuracy, and obedience, and goes further than any other influence could do to instill into the minds of students what both Indian and negro sadly lack—a knowledge of the value of time. The students are enrolled in a battalion composed of six full companies, three of these combining the members of the night school and the other three those of the normal and Indian schools. A full complement of staff and company officers are chosen from their number, and appointed, as far as possible, on the ground of fitness only. The idea is enforced that the lowest corporal is in direct line of promotion to the command of his company, and that all that is required to insure him that promotion is faithfulness to his duty whether in or out of the ranks. The battalion is under the general command of the ranking captain; but each of the six captains is appointed in rotation to act as instructor for one week. As such he commands the battalion at inspection and drill, and reports to the commandant on the general condition of the companies.

The regular military exercises are the inspection held on the morning of each school day immediately before morning prayers; the formation of the battalion in column of companies for the march to the dining hall; the battalion drill on Wednesdays, after school, under the direction of an officer of the U. S. Army; and the drill of each company in charge of its captain on one other afternoon of the week. On Sunday afternoons the entire battalion is formed in line in front of the church and formally inspected before marching in to the service.

Besides the religious training the Indians receive with their schoolmates, there are some services especially for them. The Indian Sunday school is one of the most helpful of these, for here they are graded according to their knowledge of English, and as each teacher prepares her own written questions, or whatever her exercise may be, the lesson can be suited to the capacities of each class. More preparatory study, I think, has been done by the scholars themselves this year than ever before, and they have taken up the gospel of St. John with much interest. The beginners from Dakota are taught in their own language by a teacher who understands it well, and who has had also, for some weeks, a Saturday morning class in Bible study for those expecting to work as catechists or Bible teachers on their return home. Some of the boys have formed a Christian Brotherhood; others, under the leadership of two of their teachers, have taken up a plan, by which the habit of noting all the kind, brave actions they see is encouraged. A prayer meeting in their native tongue has been held Sunday morning by some of the Sioux boys, a part of the year; and on Tuesday afternoon, girls of different tribes have conducted one by themselves at Winona, in English. Their Lend a Hand Circles have taught them to think of others, and not a little useful work has been accomplished by them. The school is un-denominational; its object is the training of Christian workers who shall teach their people how to live.

The endeavor is made at Hampton to prepare them to help their people in their homes, in their farms as well as in their schoolrooms, and in their churches. Sunday school, temperance work, sewing-schools, labor from house to house, instruction in agriculture and cooking, in the saving of money, in the care of children; all these are considered a part of the work of the Hampton teacher. Large numbers of our graduates have accepted this broad view of what they ought to strive to accomplish, and they have, in some cases, completely transformed the character of the population among whom they have labored.

Seven-eighths of the students this year have been professing Christians. In the case of most of them, their lips and lives have borne witness to the gospel they professed. A large number have come into the Christian life since coming to the school. A number of the Indians have been confirmed in St. John's Church in Hampton.

Sunday is one of the busiest days in the week. The services commence with the morning prayer meeting, which is conducted by one of the students. The subjects and leaders are chosen by a committee consisting of teachers and pupils. The attendance is voluntary, but a large part of the school is usually present. Boats and wagons are in waiting at the close of the service to convey the workers to the more distant of the outlying stations for missionary labor. Roman Catholic Indians are expected to attend mass, and the priest has access to them at all times. At 11 o'clock the Episcopal Indians go to church in the town of Hampton, the others have a service at Winona which is something between a Sunday School and a family-talk. The school service in the large church follows close upon the afternoon Sunday school before mentioned. The evening service is varied by different speakers from abroad or by individual experiences of those who have been out to teach or work. Prayer meetings during the week are inspiring and helpful, the attendance being large and voluntary.

The average standard of health has been high during the year. The boys when sick are all cared for in King's Chapel Hospital, where the moral as well as the physical advantages are vastly better than the best that could be given to a sick boy in his own room. Several cases of severe illness have terminated in convalescence. No death has occurred either among colored or Indian pupils. Eleven Indians, in regular attendance at school, have been under treatment for phthisis. In every case the benefit of the treatment has been great. But two of the eleven cases are to be sent home on account of health. One of these has been at school two years, and was unsound on arrival. At the present date he looks well, even robust, but could not safely go through the ordeal of another school year. The other case has been in school but one year, is able to attend school, but owing to his family history and other considerations is obliged to return home.

While it is true that the Indian is often a discouraging patient from the fact of his total want of knowledge of the most simple rules of hygiene, and often also from his constitutional tendency to scrofula, yet experience proves that much can be done for even serious cases. The manner in which the ignorance of some of the less enlightened Indians may bar the way to convalescence is apparent from an incident in one case. A girl, on being questioned about an aggravated cough, replied that it was worse when her feet were wet, and as her shoes were too small she was soaking them to make them larger.

With the exception of the grip, no epidemic has visited the school. The grip made its appearance, as an epidemic, in the last week of March, and for four weeks caused much sickness. One hundred and eighty-nine cases in all were so ill as to be confined to bed, the far greater number for only a few days. About the usual proportion of cases were serious. The disease made far less havoc than last year among the students. No serious relapses or sequela have occurred. The health of the school is now excellent.

To teach the Indians self-help and helpfulness to others is Hampton's constant aim. The test of its success lies in the record of its returned students.

Whatever the theory of what is best for an Indian to do, the fact remains that, for the present, most of them return home, and certainly this fact has its bright side in the critical transition state of the race. Miss Fletcher told us not long since that in her difficult task of allotting lands, returned students were among her best helpers. The value of an enlightened, progressive element, whether trained at the West or East, has been abundantly proved during the late troubles in Dakota, when the educated Christian Indians withstood the wave of fanaticism and hostility that might otherwise have swept those reserves. We know the odds against these children are often heavy; that the temptations of an idle, aimless agency life are strong. For this very reason when they do go home we long to give them all the uplift possible of inspiration and sympathy.

Time and education are changing many things, and now instead of the ever-present longing for time to pass, as in the old days, very little is heard now about the home-going, and much more about what must be accomplished first. For several reasons both girls and boys have voluntarily remained over their time, some several years,

in order to go out into the world better prepared to accomplish something. The unreasoning home cry will naturally cease as education advances, and more young people will find homes and work where they can do just as much good as though they returned to their own particular families. As with us, not all are cut out for missionaries, and many find just as useful a sphere in a bold push for themselves. Hampton's advice, to "Put your life where it will do the most good," has had many followers, and, though the majority of the more intelligent young people—those best qualified to judge—believe that their greatest usefulness lies among the people of their own race, yet there are circumstances attending individual cases which make another choice best.

Richard Powless felt, after a year at home teaching, that he could do better at his trade, and is now earning a good living at the University Press, Cambridge, Mass., and improving his mind by reading and study during the evenings. In a few months he will be joined by another Hampton boy, and have a companion in work and study. Charles Doxon returned home, looked over the field, and decided that his trade was his work in life, and soon found for himself employment as engineer in a large manufactory in Syracuse, N. Y. The same is true of Chapman Skenandoah in Schenectady. Another young man realizes that he is not yet strong enough to resist the downward influence of his home life, and manfully and sensibly chooses to remain in the North until he feels sure of himself. Others are staying in the East preparing themselves better for work they hope to do sometime at home. Like the Rev. Chas. Cook, Dr. Chas. Eastman, Dr. Susan La Flesche, and others who have had flattering opportunities to remain in the East, they seem to feel that the greater their advantages the greater becomes their responsibility to use them for the good of their own race and therefore the good of the country to which we all belong. The feeling seems to be more of the race tie than of the tribal, and we find individuals choosing to go among other tribes, believing that they can do better work among strangers than among their own particular people, especially at first.

There is a growing disposition among the reservation Indians to scatter out, and we are encouraged by seeing young men, and women too, starting out for themselves in a very manly way. The average Indian can not yet, and it is a question which only time can decide if he ever can, compete with the white man in labor that demands long continued exertion of physical strength. The undeveloped muscles and the predisposition to pulmonary diseases make competition with the sturdy foreign laborer a physical impossibility. Those who have worked most with the full-blooded Indians seem to agree in this, that so far as absolute skill and faithfulness are required the Indian is all that he need be, but with his lack of physical endurance he also lacks a sense of responsibility—both natural outcomes of the reservation system under which the last two generations were born and bred.

In spite of all this, we find that every agency shop has more applicants than it can possibly supply with work, and agents complain that the Indians demand too much in that way, not realizing their own deficiency in all that is required by the trades.

As farmers, there has been much to discourage, but very little to encourage the Indian in the very arduous labor that opening up a farm on the prairie demands. The more progressive have made a start expecting the help promised in exchange for land, but the working horses, the farm implements, and other things have so far not been given. This, added to total loss of crops from lack of rain for two or three successive years, has had an effect hard to overcome, especially when the lazy majority stand by and jeeringly remind the plodder, "I told you so. That's what you get by trying to be a white man!"

It is therefore necessary for a farmer to have some other source of income, some employment for his winter months. The slender resources of the agency have been drawn upon to their fullest extent. More shops and new industries are demanded and should be supplied. Mills where Indians can work their corn and wheat; shops where decent shoes can be made to replace the Government contract brogans; tailor shops where men and women can make clothes to replace the issue suits provided by contract, many of which are no great credit to civilized dress and work. Boys and girls learn, or more often, partly learn, some trade at the schools, and could, by doing the work and earning a living from it, supply the demand for better things which is growing every year. Miss Howard, at Crow Creek, takes advantage of this and keeps her girls and women constantly employed in making garments for the Indians, who are glad to buy them at fair prices. One boy has recently started a tailor shop at his agency, and we await the result with interest.

At present the returned students are regularly employed as follows:

Regular teachers.....	10
Regular school employes.....	13
Attending other schools.....	25
Studying for professions.....	2
Catechists of the Episcopal church.....	11

Presbyterian missionaries .....	2
Agency physician, 1; interpreters, 3; clerk, 1 .....	5
Agency police, 2; farmers, 2; herders, 3 .....	7
Agency stables in charge .....	2
Agency millers, 1; harness-makers, 2 .....	3
Agency carpenters .....	26
Agency wheelwrights and blacksmiths .....	8
United States infantry .....	1
United States scouts and interpreters, 4; drivers, 1 .....	5
County surveyor, 1; assessors, 2 .....	3
Government surveyor .....	1
Clerks in stores .....	11
Running stores of their own .....	3
Running shops of their own .....	2
Supporting themselves in the East: Printer, 1; engineers, 2; farmer, 1 .....	4
Traveling with shows .....	3
Logging .....	3
Farms under cultivation .....	101
Cattle ranches of considerable size .....	5
Girls well married and in good homes .....	44

In eighteen of these homes both husband and wife have been Hampton students.

A visit to the homes of these returned students impresses one more than anything else with the practical value of an all-round sort of education and training. The demand for better things created in the schools West and East calls for a supply not easily obtained on an Indian reservation, and calls out individual resource in interesting and sometimes very amusing ways.

The school's influence is seen, too, in the relation of man and woman in the work and intercourse of the family: The little courtesies which before seemed unnecessary and awkward, but are now natural and helpful; the family prayers, the reverent grace at table; and more than all, the better bringing up of the children, the wiser care of their bodies as well as of their minds and morals. The father and mother love, so strong in every Indian, furnishes, when guided by intelligence, one of the most hopeful signs of Indian progress. These parents can never allow their children to grow up in the unwholesome and neglected condition that represented their childhood, and already we find Hampton's grandchildren well on the way to heights their parents could never attain.

At every agency where a number of students from Eastern and other schools have come together, societies for mutual benefit have sprung up. The Young Men's Christian Association, various missionary, temperance, sewing, agricultural, debating, literary, musical, and base ball organizations have an influence toward broadening these young people, and giving scope for surplus energy, besides attracting and influencing the less progressive Indians. The missionaries and better class of agents encourage these things and we find them increasing everywhere. The young people learn different forms of amusements at the schools, and these are gradually taking the place of Indian forms of time-killing that seem more objectionable to us than those of our own invention.

The vast work of the churches and missionaries is too well understood to need repetition, only as we must emphasize the fact that without them the work of education could not possibly be the success that it is. It is they who prepare the minds and hearts of the parents and children for it, and more than all it is they who watch over, guard, and guide them on their return. Everyone knows the value of a wise and friendly hand in some new and trying experience, and this is where much lasting good is being done, not only by so-called missionaries, but by many agents and their wives and other interested men and women on the reservations. Few schools can now point to any bright light and say, "He is a product of our training." Too many hands have had a share in the work; and that is the way it should be. In Indian training, as in mission work everywhere, the school that gives an all-round drill is the stronghold and hope of the Christian teacher. Without the mission boarding school, mission work is weak. This work has had much to do with the good record our students have made.

On the record which we keep and change from year to year we grade these returned students according to the record they make and the influence they exert, whether excellent, good, fair, poor, or bad, and in this way make a very just estimate of their real value.

The excellent are either those who have had exceptional advantages and use them faithfully, or those who by great earnestness and pluck have won an equally wide and telling influence for good.

The good, the great majority, are those who are doing their best and exerting a decidedly good influence, even though it may not be very wide. They must marry

legally, be honest, industrious, and temperate, and live a life which we can point to as an example for others to follow and improve upon.

The fair are the sick and unfortunate, those who have had few advantages and from whom no better could be expected.

The poor are those who have not done as well as they should; have married after the Indian custom while knowing better; have fallen from weakness rather than from vice, and some who are recovering themselves after more serious falls.

The bad are those who have done wrong while knowing better, yet, with one exception, those from whom no better was expected. Four on this list have recently left Carlisle with bad records (three were expelled and one ran away). Of this number three were brothers and all very nearly white. It may be of interest to state also that but one on this bad list is a full-blooded Indian, and he and two half bloods on the same list, are traveling with a show.

Excellent .....	72
Good .....	149
Fair .....	62
<hr/>	
Satisfactory .....	283
Poor .....	23
Bad .....	12
<hr/>	
Disappointing .....	35
<hr/>	
Total .....	318

Summing all this up we find but 35 who are not using, to a fair degree of advantage, the things they have been taught. Surely, this is a good showing.

Papers recently sent to all agents, and to others best qualified to judge of the character and influence of these students, have verified our own statements and given them additional force. These were sent since the recent troubles in the Dakotas, from which States most of our Indians come; and yet, instead of lessening the number on our good list, it has added to it. The one boy who did take part was never on the good list and is, of course, now classed on the bad list. As a gentleman writing about him says:

His circumstances were most trying. He was son-in-law of Sitting Bull and made his home with him. He became his private secretary, interpreter, and general informant. Instead of opening the old man's eyes to his folly, he seems to have lent himself a ready tool to the crafty savage.

The Rev. W. J. Cleveland, who has been "traveling up and down through the Sioux Reservation" for three months since the excitement, trying to get at the "bottom facts" of the trouble, writes March 30:

I heard no complaints of bad behavior on the part of Hampton students, except in the one case.\* They were, as a rule, employed in school, mission, Government, or other work, as they could find openings, but the opportunities furnished them all around are pitifully meager. I think in nearly all cases they make a brave struggle to keep themselves up to the standard acquired at Hampton, and to raise their people up toward it. My investigation was specially with reference to the late war. I found but one Hampton student who had gotten mixed up at all in the ghost-dance craze and kindred evils. The rest seem to have all firmly stood their ground and tried faithfully to convince their people of the untruth, danger, and evil of the craze.

Maj. McLaughlin, for many years a most devoted agent at Standing Rock, from which 92 of our students have come, writes, March 24:

I have the honor to state that all the returned Hampton students remained loyal to the Government and firm friends of law and order throughout the excitement, except Andrew Fox, who is naturally a worthless fellow, Sitting Bull's secretary, and consequently one of his supporters. All the other returned students at the agency are doing very well.

Rev. G. W. Reed, of several years' experience among the Indians at Standing Rock, writes, March 18:

The longer I remain in this Indian country the less reason I have to find fault with returned Hampton students. When they are married and make their own homes there are none neater to be found. Even when they come home and live with their parents the effect upon the home is soon seen. Washing day comes oftener. Clean hands and faces become less of a curiosity in these homes. The boys introduce articles of furniture of their own make, the girls in many ways make the homes more attractive.

We often expect too much of them. We forget that they are about like other boys and girls who have had only five years of life under good influences. They don't find much to encourage them in their new life when they come back here on the reservation. There is every temptation to be idle where most people are idlers. Not every Hampton boy wants to be a farmer in Dakota after the experience of the last five years. There are a few positions at the agency, but these are not very desirable. I often wonder that they stand so well, when I think how scattered they are, often only one

\* The same as others have noted.

in a large camp. Their conduct here during the late Indian trouble was admirable. I know of only one who had any sympathy with the "Messiah craze." They had a marked influence, which kept their parents out of it.

The Hampton boys share with the rest of the people in the curse of the "ration system." It takes away nearly every incentive to an industrious life. You have no need to be ashamed of your boys. You hear from them now. You will hear from them in the future. They are bound to be a blessing to their people. God speed you in your grand work.

These letters, and the testimony of many others more individual in their character, all go to show how manfully these young people have stood under temptation such as we can hardly appreciate; how neither disease nor famine, slaughter nor broken faith, injustice nor false Christs have been able to turn them from the truth as they have seen and known it.

Had the most enthusiastic friend of Indian education been consulted as to the proper time for applying the test, he would have hesitated long before confessing that the time had yet come for, its application; but all unsought and unheralded it did come, performed its work and passed on, and the testimony of observers from both civil and religious standpoints each confirm the fact that these young people have stood most manfully by their colors, and placed beyond question the policy of sound education.

Higher education.—In connection with the subject of returned students came the very important one of higher education for the few who are seen fitted for it, and who have good prospects of success in some particular profession or business. No Indian school now can pretend to give more than a common-school education, and yet with Indians as with white people, there are always some who want more and are willing to work for it. The Government has sometimes made an allowance for such Indians, and given a wise and much-appreciated lift. The \$167 per annum (or rather three-fourths of that sum for nine months of the year) is at best only a help, and a great deal more must be raised in some other way, generally by working out a year, and then receiving some help from friends.

The first of our students to try the experiment was Susan La Flesche, who, helped by the Connecticut Indian Association, was enabled to go through the Woman's Medical College in Philadelphia without loss of time, graduating in two years, and then, after passing a most satisfactory examination, was admitted into the hospital, where she had the benefit of practice as a physician. Her career since she finished her studies has been most successful. She has been two years agency physician at Omaha, lives at the school, does a great deal in the homes, and, as those who know her say, works far beyond her strength. Her broadening education has fitted her for another work at home which was unlooked for, but nevertheless very important, the advising and instructing of the men on civil and political questions, which arise constantly in connection with their new duties as citizens and individual owners of their land.

The young men of course who have had this advantage of a broader education can do much more in this way than can a woman. The two young men Thomas Miles and Walter Battice, who have had this advanced training, are now influential members of a large tribal council, acting as secretary and treasurer, and in recent negotiations concerning the sale of land were able to understand and advise, as they could not have been had their education been less generous.

Annie Dawson, because her education was begun at an early age, graduated from here when she was too young to take the responsible position of teacher, and needed more time and more training. This she got at the Framingham (Mass.) Normal School in two years, and was then prepared to take a better position, and was independent of outside aid, and as capable of earning her own living and making her own way through the world as a white teacher would be. She has been for a year doing very satisfactory work at the Santee Normal Training School in Nebraska, where she is highly spoken of.

Josephine Barnaby, as a nurse trained in New Haven, has done a very brave and noble work among the Sioux at Standing Rock, and later among her own people at Omaha. One year's work such as she has been doing for three years would more than repay all ever spent on her education.

Henry Lyman, a Sioux, now in the law school at Yale, gives promise of success in this line. The dean of the faculty after his first year there, wrote:

The faculty of Yale law school have found Henry Lyman studious, thoughtful, conscientiously faithful in attendance upon the school exercises, uniformly correct in deportment, respected and self-respecting, and quite up to the average of his class in intelligence.

There seems to have been no change of opinion since.

John Bruyier, a Sioux, had for years "wanted to be a doctor," and after he had finished his course here decided that it was best for him to study medicine. Not being prepared in English as well as some others, he has wisely taken a course in a preparatory school in Meriden, and has now decided that one year is not enough and wants another. Three or four students will go to other schools after graduat-

ing here this year. They are young and bright and know what they need and want, and give excellent promise of future usefulness.

A full and complete statement will be made in response to a resolution of the United States Senate calling for information as to the facts and results of educating Indians at this and like schools, to be presented at the next session of Congress. Such investigation can not fail to do good.

Miss C. N. Folsom, in charge of Indian graduates department, and the commandant, Mr. C. W. Freeland, will make special trips to the western reservations during the summer and fall, and report upon the locations, occupations, character, and influence of Indians who have since 1878 returned from this school to their homes in the West.

Very respectfully, your obedient servant,

S. C. ARMSTRONG, *Principal.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SCHOOL AT SAN CARLOS AGENCY, ARIZ.

SAN CARLOS AGENCY, ARIZ., July 15, 1891.

SIR: I have the honor to submit my first annual report of the Apache Indian boarding school, as follows. As I was discharging the duties of industrial teacher prior to assuming those of superintendent and giving my undivided attention to my own department, my report must necessarily be short and based principally on my observations since assuming the duties of my present position on May 8 last.

Historical.—From November 23, 1889, till January 23, 1890, the school was left under my care, and I immediately set to work to increase the enrollment. I had some difficulty in doing justice to the industrial work of the school, nursing several cases of la grippe, and attending to the enrollment all at the same time. This was all the more difficult because an effort was made to enroll girls. It was successful, and we are indebted to Miss Ghielin, who was matron then, for the first female pupils ever enrolled. The enrollment of girls was continued from time to time until the present time.

The unfriendly feeling entertained by the parents toward the school and its employes is now almost, if not quite, a thing of the past.

#### Statistics.

	Male.	Female.	Total.
Number of pupils that can be properly and healthfully accommodated in the school	50	25	75
Number crowded into school at one time	56	40	96
Total number enrolled during year	98	58	156
Number transferred during year ending June 30, 1891, Santa Fé	5	-----	5
Number transferred during year ending June 30, 1891, Grand Junction	34	18	50
Number between ages of 6 and 18	56	40	90
Average age of pupils enrolled during the year	10	8½	* 9.3
Average age of pupils enrolled at present	9	7.5	* 8.87

\* General average of age.

Sanitary.—With the crowded condition of the school and the lack of conveniences, we would predict a great many cases of sickness and weak lungs; but the pupils, on the contrary, have been quite healthy, as the following table shows. The following table shows the number of cases of sickness and cause:

Cause of sickness.	Cases.			Deaths.		
	Male.	Female.	Total.	Male.	Female.	Total.
Syphilis	7	6	13	2	-----	2
Consumption	1	1	2	1	-----	1
Pneumonia	1	-----	1	-----	-----	-----
Unknown disease of brain	-----	1	1	-----	1	1
Total number of cases during year	9	8	17	3	1	4

All of the above cases except those of consumption and pneumonia are due to existing evils of the reservation, that are beyond my jurisdiction and not due to any mismanagement of the school employes.

The one death from consumption is, I believe, due to confinement of a child whose lungs were not strong in the beginning.

The cases of syphilis, I firmly believe, can be traced to the colored soldiers of the post. Dr. Pangburn, former agency physician, who came with the Mojave and the Yuma Indians when they were brought here about seventeen years ago, told me that the disease was unknown among the Indians then, but made its appearance soon after the colored soldiers came. The Mojave and the Yuma In-

dians being more indifferent to moral restraint than the other tribes of the reservation, this dread disease has made greater havoc in their ranks. All of the cases, except two, in the school were Mojave and Yuma.

So long as our surroundings remain as at present and so long as the children come in contact with the immoral element of the reservation by visiting their camps, for which there seems to be a single remedy, just that long we can not feel secure and beyond the reach of this, the greatest hindrance to civilization at this place. We can only hope to buy partial immunity at the price of eternal vigilance.

The dormitories are overcrowded and poorly ventilated. We are in need of larger dormitories, built on a very different plan. When the present buildings were erected the Indians were unfriendly to the school, and buildings that could be used either as a school or a fort were well enough; but now there is little or no danger of attack, and I think that new structures should be built in accordance with the most modern principles of cooling and ventilation. When I think of forty or even twenty-five children sleeping in a room only about three times as large as the ones occupied by one (or at most two) white persons, I wonder that there is not more sickness.

When the children visit their camps they become affected with a mild form of sore eyes, that so far has only been an annoyance and not at all serious, as the pupils soon recover entirely and are none the worse for a rest of two or three days. There seems to be no way of preventing this malady; it comes to all alike, runs its course, and departs as quietly as it came.

I have relieved the overcrowded dormitories by allowing a part of the pupils to go home on vacation for a few days, and when they return some of the others are permitted to go in their stead. In this way I have thinned their ranks to about one-half of their regular attendance.

Industrial.—During April, May, and June of 1890 I taught the pupils under my care to plant and cultivate the school garden, which then consisted of 1½ acres of land lying near the bank of the Gila River. It had been fertilized and irrigated during the previous year, and we soon had the entire field covered with growing vegetables of various kinds. Cabbages seemed to grow best and the pupils relished them, so we devoted most of our garden to this crop. When July came we had 11,000 cabbages growing nicely, but in the latter part of July a flood came and washed away our dams, and spoiled our ditches; most of our garden was lost. We saved some of the cabbages, that weighed 19½ pounds, which convinces me that they will grow here under favorable circumstances. Potatoes, onions, beets, radishes, and melons were a success, but the breaking of the dam practically ended gardening for the year.

As soon as the rainy season was over, we set to work to repair the damage. From October till February we (the pupils and myself) cleaned three-fourths of a mile of ditch 12 feet wide and 6 feet deep. Besides this we grubbed out roots and enlarged our garden to 30 acres instead of 12. We completed our work about the middle of February, and on Monday of the following week plowed a part of the land with the intention of planting it next day. When morning came our entire field was covered with water, and before the end of the week all the results of our labors of the past year were simply wiped out of existence.

We then set to work to cultivate higher ground, and now have a garden of about 2 acres, irrigated by a pump with only a 2-inch pipe. This at first promised to be successful, but as the dry season approached the well failed and we had scarcely enough water to supply our needs at the school and the agency. The garden will be almost a failure again from this cause.

The trees furnished by the Department were planted promptly on arrival, and 90 per cent of them are living and growing.

The Indian boys of the school have worked hard and willingly, and have borne up better under our misfortunes than white people generally do. They have assisted in making repairs and building fences, and all other work usually connected with farming, and many have shown great aptitude for the work; others take more readily to schoolroom work, just as white boys do. In short, human nature is pretty much the same throughout the land.

Work in the schoolroom.—I have examined the work done in the schoolrooms, and have visited each teacher frequently while at her work, and I am fully convinced that a better corps of teachers would be difficult to find. The three ladies now employed are energetic, patient, and industrious, and under their instruction the pupils have made decided progress. Under the present system adopted by the teachers they have readily acquired an English vocabulary, and will soon learn to speak very good English.

Household duties.—Under the watchful care of the matron and the seamstress (now nominated for the position of teacher) the girls have learned to care for their own dormitories, do the work of the dining room and kitchen, as well as to make more than half of their own clothing, besides bed clothing, curtains, towels, etc., used in common by the pupils. Some of them sew very neatly, too.

Employés in general.—The employés of the school, so far as I am competent to judge, are perhaps as well fitted for the positions they hold as any that could be found. They are energetic, industrious, and faithful, and above all they cheerfully and willingly respond to every call for extra duty on any and all occasions.

Needs of the school.—First of all we need more dormitory room. Although I have had every child in the school examined by the agency physician, to whom we are indebted for much valuable assistance that we have not had heretofore, and I have carefully weeded out all pupils that are not strong and healthy from the new pupils recently taken from the camps, and have retained only those known to be robust and most likely to bear the strain of close application to school work and confinement, yet I have been obliged to turn away a great number whom I knew to be eligible and consequently should be in school. All of our buildings are out of repair, but some of them are not worth repairing, and should, I think, be replaced by new ones.

Our stable room is quite inadequate. Ten cows, two horses, and two mules noted for kicking are quite too many animals to have in the corral under present circumstances.

The system of water supply now promises soon to be completed, and needs merely to be mentioned in this report.

We need a new barn and a better system of irrigation.

If we can get better buildings and more of them I believe we would have little difficulty in putting half of the Indian children of school age in school.

Very respectfully,

EDW'D JERREY,  
Superintendent and Principal Teacher.

COMMISSIONER OF INDIAN AFFAIRS,  
(Through office of agent.)

**INDIAN LEGISLATION PASSED DURING THE SECOND SESSION OF THE  
FIFTY-FIRST CONGRESS.\***

January 12, 1891. CHAP. 65.—An act for the relief of the Mission Indians in the State of California.

26 Stat., p. 712. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That immediately after the passage of this act the Secretary of the Interior shall appoint three disinterested persons as commissioners to arrange a just and satisfactory settlement of the Mission Indians residing in the State of California, upon reservations which shall be secured to them as hereinafter provided.

Mission Indians, Cal. Settlement upon reservations. Appointment of commissioner. Duties of commissioners. Selection of reservations. Appraisal of improvements. Removals from confirmed private grants. Surveyor and assistants. Report. Issue of reservation trust-patents in common. Terms of trust. *Post*, p. 713. Provisos. Existing valid rights. Lieu-lands to accepting settlers. Settlers' rights.

SEC. 2. That it shall be the duty of said commissioners to select a reservation for each band or village of the Mission Indians residing within said State, which reservation shall include, as far as practicable, the lands and villages which have been in the actual occupation and possession of said Indians, and which shall be sufficient in extent to meet their just requirements, which selection shall be valid when approved by the President and Secretary of the Interior. They shall also appraise the value of the improvements belonging to any person to whom valid existing rights have attached under the public-land laws of the United States, or to the assignee of such person, where such improvements are situated within the limits of any reservation selected and defined by said commissioners subject in each case to the approval of the Secretary of the Interior. In cases where the Indians are in occupation of lands within the limits of confirmed private grants, the commissioners shall determine and define the boundaries of such lands, and shall ascertain whether there are vacant public lands in the vicinity to which they may be removed. And the said commission is hereby authorized to employ a competent surveyor and the necessary assistants.

SEC. 3. That the commissioners, upon the completion of their duties, shall report the result to the Secretary of the Interior, who, if no valid objection exists, shall cause a patent to issue for each of the reservations selected by the commission and approved by him in favor of each band or village of Indians occupying any such reservation, which patents shall be of the legal effect, and declare that the United States does and will hold the land thus patented, subject to the provisions of section four of this act, for the period of twenty-five years, in trust, for the sole use and benefit of the band or village to which it is issued, and that at the expiration of said period the United States will convey the same or the remaining portion not previously patented in severalty by patent to said band or village, discharged of said trust, and free of all charge or incumbrance whatsoever: *Provided*, That no patent shall embrace any tract or tracts to which existing valid rights have attached in favor of any person under any of the United States laws providing for the disposition of the public domain, unless such person shall acquire in and accept the appraisal provided for in the preceding section in all respects and shall thereafter, upon demand and payment of said appraised value, execute a release of all title and claim thereto; and a separate patent, in similar form, may be issued for any such tract or tracts, at any time thereafter. Any such person shall be permitted to exercise the same right to take land under the public-land laws of the United States as though he had not

\*This does not include items of appropriations for the Indian service unless they involve new legislation.

made settlement on the lands embraced in said reservation; and a separate patent, in similar form, may be issued for any tract or tracts at any time after the appraised value of the improvements thereon shall have been paid: *And provided further*, That in case any land shall be selected under this act to which any railroad company is or shall hereafter be entitled to receive a patent, such railroad company shall, upon releasing all claim and title thereto, and on the approval of the President and Secretary of the Interior, be allowed to select an equal quantity of other land of like value in lieu thereof, at such place as the Secretary of the Interior shall determine: *And provided further*, That said patents declaring such lands to be held in trust as aforesaid shall be retained and kept in the Interior Department, and certified copies of the same shall be forwarded to and kept at the agency by the agent having charge of the Indians for whom such lands are to be held in trust, and said copies shall be open to inspection at such agency.

Lien-lands to accepting railroads.

Custody of trust-patents. Copies.

SEC. 4. That whenever any of the Indians residing upon any reservation patented under the provisions of this act shall, in the opinion of the Secretary of the Interior, be so advanced in civilization as to be capable of owning and managing land in severalty, the Secretary of the Interior may cause allotments to be made to such Indians, out of the land of such reservation, in quantity as follows: To each head of a family not more than six hundred and forty acres nor less than one hundred and sixty acres of pasture or grazing land, and in addition thereto not exceeding twenty acres, as he shall deem for the best interest of the allottee, of arable land in some suitable locality; to each single person over twenty-one years of age not less than eighty nor more than six hundred and forty acres of pasture or grazing land and not exceeding ten acres of such arable land.

Allotments in severalty.

Head of family.

Single person.

SEC. 5. That upon the approval of the allotments provided for in the preceding section by the Secretary of the Interior he shall cause patents to issue therefor in the name of the allottees, which shall be of the legal effect and declare that the United States does and will hold the land thus allotted for the period of twenty-five years, in trust for the sole use and benefit of the Indian to whom such allotment shall have been made, or, in case of his decease, of his heirs according to the laws of the State of California, and that at the expiration of said period the United States will convey the same by patent to the said Indian, or his heirs as aforesaid, in fee, discharged of said trust and free of all charge or incumbrance whatsoever. And if any conveyance shall be made of the lands set apart and allotted as herein provided, or any contract made touching the same, before the expiration of the time above mentioned, such conveyance or contract shall be absolutely null and void: *Provided*, That these patents, when issued, shall override the patent authorized to be issued to the band or village as aforesaid, and shall separate the individual allotment from the lands held in common, which proviso shall be incorporated in each of the village patents.

Patents to allottees.

In trust.

In fee.

Prior conveyances, etc., void.

Proviso.

Power of severalty patents.

SEC. 6. That in cases where the lands occupied by any band or village of Indians are wholly or in part within the limits of any confirmed private grant or grants, it shall be the duty of the Attorney-General of the United States, upon request of the Secretary of the Interior, through special counsel or otherwise, to defend such Indians in the rights secured to them in the original grants from the Mexican Government, and in an act for the government and protection of Indians passed by the legislature of the State of California April twenty-second, eighteen hundred and fifty, or to bring any suit, in the name of the United States, in the Circuit Court of the United States for California, that may be found necessary to the full protection of the legal or equitable rights of any Indian or tribe of Indians in any of such lands.

Rights of Indians on Mexican land grants.

Attorney-General to defend, etc.

SEC. 7. That each of the commissioners authorized to be appointed by the first section of this act shall be paid at the rate of eight dollars per day for the time he is actually and necessarily employed in the discharge of his duties, and necessary traveling ex-

Compensation of commissioners.

Appropriation. penses; and for the payment of the same, and of the expenses of surveying, the sum of ten thousand dollars, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated.

Rights of way across reservations, prior to patent. Secretary of Interior may grant. For water pipes, etc. Conditions. SEC. 8. That previous to the issuance of a patent for any reservation as provided in section three of this act the Secretary of the Interior may authorize any citizen of the United States, firm, or corporation to construct a flume, ditch, canal, pipe, or other appliances for the conveyance of water over, across, or through such reservation for agricultural, manufacturing, or other purposes, upon condition that the Indians owning or occupying such reservation or reservations shall, at all times during such ownership or occupation, be supplied with sufficient quantity of water for irrigating and domestic purposes upon such terms as shall be prescribed in writing by the Secretary of the Interior, and upon such other terms as he may prescribe, and may grant a right of way for rail or other roads through such reservation: *Provided*, That any individual, firm, or corporation desiring such privilege shall first give bond to the United States, in such sum as may be required by the Secretary of the Interior, with good and sufficient sureties, for the performance of such conditions and stipulations as said Secretary may require as a condition precedent to the granting of such authority: *And provided further*, That this act shall not authorize the Secretary of the Interior to grant a right of way to any railroad company through any reservation for a longer distance than ten miles. And any patent issued for any reservation upon which such privilege has been granted, or for any allotment therein, shall be subject to such privilege, right of way, or easement. Subsequent to the issuance of any tribal patent, or of any individual trust patent as provided in section five of this act, any citizen of the United States, firm, or corporation may contract with the tribe, band, or individual for whose use and benefit any lands are held in trust by the United States, for the right to construct a flume, ditch, canal, pipe, or other appliances for the conveyance of water over, across, or through such lands, which contract shall not be valid unless approved by the Secretary of the Interior under such conditions as he may see fit to impose.

For railroads, etc. *Provided*. Conditional bonds, etc. Limit of distance. Rights of way, after issue of patents. Subject to approval of Secretary of Interior.

Approved January 12, 1891.

January 19, 1891. CHAP. 77.—An act to enable the Secretary of the Interior to carry out, in part the provisions of "An act to divide a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations and to secure the relinquishment of the Indian title to the remainder, and for other purposes," approved March second, eighteen hundred and eighty-nine, and making appropriations for the same and for other purposes.

26 Stat., p. 720.

Preamble.

Whereas in accordance with section twenty-eight of the act of March second, eighteen hundred and eighty-nine, entitled "An act to divide a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations and to secure the relinquishment of the Indian title to the remainder, and for other purposes" (public one hundred and forty-eight), the President of the United States has made known, by proclamation, that satisfactory proof has been presented to him that the consent of the different bands of the said Sioux Nation of Indians to the said act has been obtained in the manner and form required by the said twelfth article of the treaty of April twenty-ninth, eighteen hundred and sixty-eight: Therefore,

Sioux Indian Reservation, Dak., appropriations, etc.

In me ditately available.

Vol. 25, pp. 888-899.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the following sums, or so much thereof as may be necessary, be, and the same are hereby, appropriated, out of any moneys in the Treasury not otherwise appropriated, to be immediately available to enable the Secretary of the Interior to comply with and carry out certain provisions of the act of Congress approved March second, eighteen hundred and eighty-nine (public one hundred and forty-eight, Statutes twenty-five, page eight hundred and eighty-eight), and for other purposes:

For the erection of day and industrial schools, providing furniture and other necessary articles, and pay of teachers, in accordance with article seven of the treaty of April twenty-ninth, eighteen hundred and sixty-eight, which said article of treaty is continued in force for twenty years by section seventeen of the above-mentioned act of March second, eighteen hundred and eighty-nine: *Provided*, That as fast as school facilities are furnished the Secretary of the Interior is hereby authorized and required to compel all children between the ages of six and sixteen to attend the schools on the reservation at least nine months in the year, except such as may be attending school elsewhere, one hundred and fifty thousand dollars.

Schools, etc.  
Vol. 15, pp. 637, 638.  
Vol. 25, pp. 894, 895.  
*Proviso.*  
Compulsory attendance.

For the erection of fifteen school buildings, provided for in article twenty of the above-mentioned act of March second, eighteen hundred and eighty-nine, fifteen thousand dollars.

Schoolhouses.  
Vol. 25, p. 896.

To enable the Secretary of the Interior to pay to such individual Indians of the Standing Rock and Cheyenne River Agencies as he shall ascertain to have been deprived by the authority of the United States of ponies in the year eighteen hundred and seventy-six, at the rate of forty dollars for each pony: *Provided*, That the sum paid to each individual Indian under this provision shall be taken and accepted by such Indian in full compensation for all loss sustained by such Indian in consequence of the taking from him of ponies as aforesaid: *And provided further*, That if any Indian entitled to such compensation shall have deceased the sum to which such Indian would be entitled shall be paid to his heirs at law, according to the laws of the State of Dakota, two hundred thousand dollars.

Payment for ponies to Indians of Standing Rock and Cheyenne River Agencies.  
*Provisos.*  
To be accepted in full.

To enable the Secretary of the Interior to purchase for the Sioux Nation of Indians additional beef required for issue, the rations having been reduced on account of reduced appropriation for the fiscal year ending June thirtieth, eighteen hundred and ninety, one hundred thousand dollars.

Heirs at law.  
Sioux Nation  
Additional beef rations.

To enable the Secretary of the Interior to purchase lands for such of the Santee Sioux Indians in Nebraska as have been unable to take lands in severalty on their reservations in Nebraska by reason of the restoration of the unallotted lands to the public domain, thirty-two thousand dollars.

Santee Sioux in Nebraska.  
Purchase of lieu severalty lands.

SEC. 2. That the funds appropriated by this act shall not be liable to be covered into the Treasury, but shall remain on said books until used and expended for the purposes for which they have been appropriated.

Continuing appropriations.

SEC. 3. That the principal of the permanent fund provided for under section seventeen of the said act of March second, eighteen hundred and eighty-nine, dividing a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations, and for other purposes, shall be divided in proportion to the number of Indians entitled to receive rations and annuities upon the separate reservations created by the above act, or residing and belonging thereupon at the time the said act took effect, and the Secretary of the Treasury shall carry the amount of principal of said permanent fund belonging to the Indians of each of the diminished reservations to the credit of the Indians of each of the said diminished reservations, separate and distinct from each other, and the principal as well as the interest of each of said funds shall be expended for the purposes specified in said article seventeen of the above-mentioned act, only for the use and benefit of the said Indians so entitled to receive rations and annuities upon each of the said separate diminished reservations or so residing and belonging thereupon.

Proportionate division of permanent fund.  
Vol. 25, p. 895.

SEC. 4. That the Secretary of War be, and he is hereby, authorized and directed when making purchases for the military posts or service on or near Indian reservations to purchase in open market, from the Indians as far as practicable, at fair and reasonable rates, not to exceed the market prices in the localities, any cattle, grain, hay, fuel, or other produce or merchandise they may have for sale and which may be required for the military service.

Separate diminished reservation accounts.  
Expenditures limited.

Purchases for military posts near reservations to be made from Indians.

Appointment of commissioners to fix compensation to the Indians, etc.

Damages to individuals of confederated tribes.

Ascertainment, etc., of compensation and damages.

Supplying vacancies.

Compensation of commissioners.

Proviso.

Prior consent of Indians to be obtained.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the right of way is hereby granted, as hereinafter set forth, to the Umatilla Irrigation Company, a corporation organized and existing under the laws of the State of Oregon, for the construction and maintenance of a water ditch or canal for irrigation purposes from any convenient point on the Umatilla Indian Reservation, in Umatilla County, State of Oregon, near the headwaters of the Umatilla River, across said reservation to Wild Horse Creek, its northwestern boundary, at any convenient point, with the right to divert the waters of said Umatilla River and tributary streams from their beds, and for such purpose to construct and maintain reservoirs, dams, flumes, ditches, and such other structures and devices as may be necessary for storing, conveying, and distributing water at such points as such company may desire to use the same. The rights herein granted are upon express condition that, during their continuance, the grantees or their assigns shall furnish all occupants of lands of said reservation, so situated as to be capable of irrigation from any ditches constructed by them hereunder, with water sufficient for purposes of agricultural and domestic uses and irrigation under such rules and regulations and on such terms as the Secretary of the Interior shall prescribe; and shall not divert or diminish the volume of water in said streams or exhaust either of them, so far as to impair vested rights, or to hinder, or prevent the occupants of lands on said reservation the full enjoyment of said streams either for power, irrigation, or domestic purposes.

SEC. 2. That the right of way hereby granted to said company shall be fifty feet in width on each side of the center line of said ditch or canal, together with ground adjacent to such right of way for dams, reservoirs, and distributing ditches, not exceeding ten acres in the aggregate for every ten miles of said ditch or canal; and said company shall also have the right to enter upon lands adjacent to the line of said ditch or canal and to take therefrom material, stone, earth, and timber necessary for the construction of said ditch or canal.

SEC. 3. That whereas E. J. Summerville, J. P. Bushee, and J. B. Eddy have been appointed by the Secretary of the Interior as Commissioners to appraise the lands of said reservation for the purpose of carrying into effect the provisions of the act of Congress entitled "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation, in the State of Oregon, and granting patents therefor, and for other purposes," approved March third, eighteen hundred and eighty-five, and are now acting as such Commissioners, they are hereby appointed Commissioners to fix the amount of compensation to be paid the Indians for such right of way and other grounds, estimating the same by the smallest legal subdivisions in accordance with the public surveys; and also to ascertain and fix the amount of compensation to be made individual members of the confederated tribes of Umatilla, Walla Walla, and Cayuse Indians for damages sustained by them by reason of said ditch or canal crossing lands now inclosed or improved by them; and said compensation and damages shall be ascertained and adjusted, and all surveys made pursuant to such regulations as the Secretary of the Interior shall prescribe, and shall be subject to his approval. In case of the inability or refusal of said Commissioners, or any of them, to act, the Secretary of the Interior shall by appointment supply the vacancy or vacancies so caused. The compensation of said Commissioners shall be the same as that now received for the services rendered by them under their aforesaid appointment, and shall be paid by said company: *Provided*, That the consent of the Indians to said diversion of water, compensation, and right of way shall be obtained by said irrigation company in such manner as the Secretary of the Interior shall prescribe before any right under this act shall accrue to said company.

SEC. 4. That said company shall not assign, or transfer, or mortgage its right of way for any purpose whatever until said canal shall be completed; except, however, that the company may mortgage said franchise for the purpose of raising money to construct and build said canal: *And provided further*, That the right herein granted shall be lost and forfeited by said company unless the canal is constructed across said reservation within three years from the passage of this act.

No mortgage, etc., until completion, save for construction purposes.  
*Proviso.*  
 Completion.

SEC. 5. That the right of immediate entry upon the lands of said reservation for the purpose of making surveys of the line of the ditch or canal of said company is hereby granted, but no right of any kind in or to any part of the right of way or other grounds above mentioned shall vest in said company until plats thereof, made upon actual survey for the definite location of said ditch or canal, including the points for dams, reservoirs, and distributing ditches, with the amount of ground requisite for such purposes, shall be filed with the Secretary of the Interior, and until the compensation for said lands and for the services of said Commissioners has been fixed and paid.

Immediate entry for surveys.  
 Limitation.

Plats to be filed with Secretary of Interior.

Pre-payment for lands and commissioners' services.

Vol. 23, p. 341.

SEC. 6. That whereas under the provisions of the act of Congress above mentioned the lands of said reservation are soon to be allotted to the Indians belonging thereto in severalty, the Secretary of the Interior shall hold the moneys paid to him by said company for right of way and other grounds, as above provided, until such allotment in severalty shall have been perfected, and thereupon he shall pay over to the Indians to whom shall be allotted the lands traversed by said ditch or canal the amount of compensation assessed by the Commissioners as properly appertaining to the tract of land to each Indian allotted. Payments for improved or inclosed lands held by Indians prior to such allotment and damaged by the construction of said ditch or canal shall be made to the several Indians affected thereby immediately upon the appraisalment of said Commissioners being made, and vouchers for such payments, attested by the agent in charge of the reservation, shall be filed by said company with the Secretary of the Interior at the time of filing its plat of location of said ditch or canal.

Secretary of the Interior to distribute moneys received for right of way, etc., to certain Indian allottees

Payments for damages to certain other Indian landholders.

Vouchers to be filed.

SEC. 7. That any failure in the performance of the conditions prescribed in this act shall be taken and deemed to work a forfeiture of the rights herein granted, without any act of Congress or judgment of court declaring the same.

Forfeiture.

SEC. 8. That the right to alter, amend, or repeal this act is hereby reserved.

Amendment.

Approved, February 10, 1891.

CHAP. 165.—An act to ratify and confirm agreements with the Sac and Fox Nation of Indians, and the Iowa tribe of Indians, of Oklahoma Territory, and to make appropriations for carrying out the same.

February 13, 1891.

26 Stats., p. 749

Preamble.

Whereas David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, duly appointed commissioners on the part of the United States, did on the twelfth day of June, eighteen hundred and ninety, conclude an agreement with the Sac and Fox Nation of Indians, occupying a reservation in the Territory of Oklahoma, formerly a part of the Indian Territory, which said agreement is in words and figures as follows, to wit:

Articles of Agreement with the Sac and Fox Nation of Indians, Oklahoma Territory, June 12, 1890.

Articles of Agreement made and entered into at the seat of Government of the Sac and Fox Nation in the Indian Territory on the twelfth day of June eighteen hundred and ninety, by and between David H. Jerome, Alfred M. Wilson and Warren G. Sayre, Commissioners on the part of the United States, appointed for the purpose and the Sac and Fox Nation, witnesseth:

ARTICLE I. Cession to the United States of certain lands in Indian Territory by Sac and Fox Nation.  
 Description.

ARTICLE I. The said the Sac and Fox Nation hereby cedes, conveys, transfers, surrenders and forever relinquishes to the United States of America, all their title, claim or interest, of every kind or character, in and to the following described tract of land or country, in the Indian Territory, to-wit: Beginning at a point on the left bank of the North fork of the Canadian River, where the West

boundary line of the Creek Reservation crosses the same; thence North with said West boundary line to the right bank of the Cimarron River; thence up the said Cimarron River along the right bank thereof to a point on said right bank of said river, where the Section line between Sections Nineteen and Twenty (20) of Township Eighteen (18) North, of Range (4) East of the Indian Meridian strikes the same; thence South on the Section line between Sections Nineteen (19) and Twenty (20) Twenty nine (29) and Thirty (30) Thirty-one (31) and Thirty-two (32), of said Township Eighteen (18), and between Sections Five (5) and Six (6), Seven (7) and Eight (8) Seventeen (17) and Eighteen (18) Nineteen (19) and Twenty (20) Twenty-nine (29) and Thirty (30) Thirty-one (31) and Thirty-two (32), of Townships Seventeen (17), Sixteen (16) Fifteen (15), Fourteen (14) North, and between Sections Five (5) and Six (6) Seven (7) and Eight (8) and Sections Seventeen (17) and Eighteen (18) of Township Thirteen (13) North, all in range Four (4) East of the Indian Meridian, to the Southeast corner of Section Eighteen (18) in said Township Thirteen (13); thence West on the Section line between Sections Eighteen (18) and Nineteen (19), to the Range line between Ranges Three (3) and Four (4), East of said Indian Meridian, thence South on said Range line to a point on the left bank of the North Fork of the Canadian River, where the said Range line strikes the said river; thence down the said North fork of the Canadian River, along the left bank thereof to the place of beginning:

Cession of other lands.

Also the tract of land situated in Township Ten (10) North of Range Four (4) East of said Indian Meridian, North of the North fork of the Canadian River, (not within the limits of the tract of country above-described), and bounded as follows:

Description.

Beginning at the point on the left bank of the North Fork of the Canadian River where the Range line between the Ranges Three (3) and Four (4) East strikes the said river; thence up said river along the left bank thereof to a point on said left bank where the said Range Line again intersects said river; thence South on said Range Line to a point on the left bank of said River where said Range line again intersects said River; thence down said river along the left bank thereof to the place of beginning—and all other land or country in Indian Territory, in which said Sac and Fox Nation has or claims any title, claim or interest.

Provisos.

Agency quarter section excepted from cession.

*Provided however* the quarter section of land on which is now located the Sac and Fox Agency shall not pass to the United States by this cession, conveyance, transfer, surrender and relinquishment, but shall remain the property of said Sac and Fox Nation, to the full extent that it is now the property of said Nation—subject only to the rights of the United States therein, by reason of said Agency being located thereon, and subject to the rights, legal and equitable, of those persons that are now legally located thereon. And it is agreed that the National Council of the said Sac and Fox Nation shall have the right at any time, subject to the approval of the Secretary of the Interior for the time being, to sell and convey said quarter section of land, or any part thereof, saving in such conveyance the rights of the United States and of persons legally located thereon—for the benefit of said Sac and Fox Nation, but shall not

Existing rights.

be subject to be taken by any citizen of the Sac and Fox Nation, in allotment, nor subject to homestead entry under any law of the United States. And the section of land now designated and set

Sacs and Foxes may sell Agency quarter section.

Exempted from allotment and homestead entry.

School and farm section.

apart near the Sac and Fox Agency, for a school and farm, shall not be subject either to allotment to an Indian or to homestead entry under the laws of the United States—but shall remain as it now is and kept for school and farming purposes, so long as said Sac and

Release of exemption.

Fox Nation shall so use the same.—*Provided however*, that at the time allotments are being taken, as hereinafter provided for, the National Council of said Sac and Fox Nation may release from the operation of this part of the agreement one or more quarters of said school section of land and such part or parts so released, shall thereby become subject to allotment hereunder, or to homestead entry. And for each quarter of said school section so released, the said National Council shall have the right to select anywhere in said

School and lieu lands.

Reservation another quarter section of land, except in Section Sixteen (16) and Section Thirty-six (36) of any Congressional Township—to be held as said school section is provided herein to be held,—so long as said Sac and Fox Nation shall use the same for school purposes or for farming purposes in connection with this said school.

ARTICLE II. In consideration of the cession, conveyance, transfer, surrender and relinquishment by said Sac and Fox Nation of all of their title, claim and interest, of every kind and character in and to the lands described in the preceding Article, the United States of America hereby agrees with said Sac and Fox Nation that each and every citizen thereof over the age of Eighteen (18) years shall have the right to select for himself one fourth of a section of land in one body, in a square form, to conform in boundaries to the legal surveys, anywhere in the tract of country hereinbefore described, except in Sections Sixteen (16) and Thirty-six (36) in each Congressional Township and said one quarter section of land where said Agency is located and said school section or other lands selected in lieu thereof.

The father of any child, or if the father be dead, the mother, shall have the right to select for each of his or her children, under Eighteen (18) years of age, one quarter section of land, in one body, in a square form, under the same restrictions, only as above provided for citizens over the age of Eighteen (18) years. If there shall be a child under Eighteen (18) years of age, and having neither father nor mother, then the agent for the time being, at said Sac and Fox Agency, shall select for such child the same amount of land, under the same restrictions and limitations, as are above provided for other children.

ARTICLE III. It is further agreed that when the allotments to the citizens of the Sac and Fox Nation are made, the Secretary of the Interior shall cause patents to issue therefor in the name of the allottees which patent shall be of the legal effect and declare that Eighty (80) acres of land to be designated and described by the allottee, his or her agent as above provided, at the time the allotment is being made, shall be held in trust by the United States of America, for the period of Twenty-five years, for the sole use and benefit of the allottee, or his or her heirs, according to the laws of the State or Territory where the land is located; and that the other Eighty (80) acres shall be so held in trust by the United States of America for the period of five (5) years, or if the President of the United States will consent, for fifteen (15) years for like use and benefit; and that at the expiration of the said periods respectively the United States will convey the same by patent to said allottee, or his or her heirs as aforesaid, in fee, discharged of said trust and free from all incumbrances; *Provided*, that in no case shall a patent in fee be issued to a person who is an orphan at time allotment is made and un-married, until he or she shall have arrived at the age of Twenty-one (21) Years or shall marry. In order that the question of the age of any orphan allottee as aforesaid shall not be subject to future inquiry, it is agreed that the age of each orphan allottee, under the age of Twenty-one (21) years shall be fixed and ascertained by the person making the allotment and reported by him to the Department of the Interior and such report of the age of any allottee shall be held and deemed conclusive in carrying out this agreement.

ARTICLE IV. As a further and only additional consideration for the cession, conveyance, transfer, surrender and relinquishment of all title, claim and interest in and to the tract of land described in Article I hereof, the United States agrees to pay the Sac and Fox Nation, the Sum of Four Hundred and Eighty-five Thousand \$(485,000) Dollars: *Provided*, the entire number of allotments hereunder shall not exceed Five Hundred and Twenty eight (528) and should the allotments exceed in number Five Hundred and Twenty eight (528) then there shall be deducted from said sum of Four Hundred and Eighty-five Thousand \$(485,000) Dollars, the sum of Two Hundred (\$200) Dollars for each allotment in excess of said number.

ARTICLE II.  
Consideration.

Rights of Sac  
and Foxes to select  
lands in  
severalty.

Size, shape,  
etc.

Location.

Limitations.

ARTICLE III.  
Patents for al-  
lotments.

In trust.

In fee.  
*Proviso*.

Orphan allot-  
tees.

ARTICLE IV.  
Additional  
consideration.

Money pay-  
ment.

*Proviso*.

Limitation of  
allotments.  
Deductions  
for excess.

Distribution of money. Said sum of Four Hundred and Eighty-five Thousand (\$485,000) Dollars shall be paid as follows: Three Hundred Thousand Dollars thereof shall be retained in the Treasury of the United States to the credit of the said Sac and Fox Nation, and bear interest at the rate of five per centum (5 %) per annum—which interest shall become due and payable on the first day of March in each year.

Retained in Treasury. Interest. To be paid out by Agent. Five thousand (\$5,000) Dollars thereof shall be paid to the United States Indian Agent at the Sac and Fox Agency, to be paid out and expended by him under the direction and authority of the National Council of the Sac and Fox Nation.

Percapita distribution of residue. The residue of said sum of Four Hundred and Eighty-five Thousand Dollars shall be paid out in currency to the citizens of the said Sac and Fox Nation, per capita, at the Sac and Fox Agency in the Indian Territory, within three months after the ratification of this agreement by Congress, as follows: Each person over the age of Twenty-one years shall receive and receipt for his or her share thereof; each person that is married shall receive and receipt for his or her share thereof whether Twenty-one years of age or not.

The United States Indian Agent at the Sac and Fox Agency shall retain and pay out the share thereof, belonging to any insane or imbecile citizen of said Nation, for his or her sole use and benefit, either for necessary support or for the improvement of his or her land; the share thereof belonging to orphan children under Twenty-one years of age and un-married, shall be retained in the Treasury of the United States, until he or she shall marry or become Twenty-one years of age, when he or she shall be entitled to receive and receipt for the same at said Sac and Fox Agency, free of charge; or if the National Council shall at any time deem any orphan child capable of taking proper care of his or her money, said Council may make an order to that effect, upon which order being made the United States Indian Agent at said Sac and Fox Agency shall make requisition for such persons money, which at the ensuing annuity payment shall be paid to such person. It is the purpose and intention and agreement that no part of this fund shall ever pass under the control of any guardian appointed by or acting under any State or Territorial authority.

#### Limitations.

It is further agreed that no part of said sum of Four Hundred and Eighty-five Thousand Dollars shall be applied in payment of any claim preferred against said Sac and Fox Nation, alleged to have accrued prior to the ratification of this agreement.

ARTICLE V.  
Allotting agents and assistants.

ARTICLE V. It is further agreed that the Department of the Interior, shall, as soon as practicable, after the ratification of this agreement by the Congress of the United States, send to said Sac and Fox Agency a competent corps of allotting agents and necessary assistants, to make, survey, designate and describe, the allotments herein provided for—who shall give a notice in writing to the principal Chief of the Sac and Fox Nation, that they are prepared and ready to proceed in making such allotments—and said Sacs and Foxes shall then have four months from the time of giving such notice to complete the taking of their allotments, and if, at the end of such period of four months, it shall be ascertained that any of the citizens of said nation, have failed or refused to take their said allotments, then, the United States Indian Agent, for the time being, at said Sac and Fox Agency, shall make selections for such persons, which shall have the same effect, as if such persons had made such selections for themselves. It is further agreed that as soon as such allotments are so made, and approved by the Department of the Interior, and the provisional patents herein-before provided for are issued, then the residue of said tract of country, shall, as far as said Sac and Fox Nation is concerned, become public lands of the United States, and under such restrictions as may be imposed by law, be subject to white settlement.

Allotment procedure.

Notice.  
Agent to make selections in certain cases.

Residue of lands, after allotments, to be open to white settlement.

ARTICLE VI.  
Preferred rights of owners of improvements.

ARTICLE VI. It is further agreed that whenever any citizen of said Sac and Fox Nation shall have made and owns valuable improvements on any lands in said reservation, he or she shall have the preference over any other citizen of said Nation to take his or her allotments so as to embrace said improvements, provided they

shall be limited as herein-before provided as to boundaries and area.

ARTICLE VII. It is further agreed that the beneficiaries of this agreement shall be limited to those persons whose names are now on the roll as Sacs and Foxes at the said Sac and Fox Agency; and those that may be born to them, and entitled by the laws and customs of said Sac and Fox Nation to go upon said roll before said allotments are made; and those that may be adopted into said Nation according to law by the National Council, before said allotments are made.

ARTICLE VII.  
Limitation of beneficiaries.

ARTICLE VIII. This agreement shall be in force and have effect from and after its ratification by the National Council of the Sac and Fox Nation and the Congress of the United States.

ARTICLE VIII.  
Operation.

In witness whereof the said David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, Commissioners on the part of the United States, have hereunto set their hands the day and year aforesaid, and the principal Chief and the First Assistant Principal Chief of the said Sac and Fox Nation have hereunto set their hand and the Seal of said Nation the day and year aforesaid.

And the Secretary of said Sac and Fox Nation now attests the same.

[SEAL.]

DAVID H. JEROME.

Principal Chief.  
MOSES KEOKUK, His x mark.  
First Ass't Prin. Chief.

Attest:  
WALTER BATTICE,  
Secretary of Sac & Fox Nation.

Attestation.

And,  
Whereas David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, duly appointed commissioners on the part of the United States, did, on the twentieth day of May eighteen hundred and ninety, conclude an agreement with the Iowa tribe of Indians residing on the Iowa Reservation, in the Territory of Oklahoma, formerly part of the Indian Territory, which said agreement is in words and figures as follows, to wit:

Preamble

"Articles of agreement made and entered into on the twentieth day of May, in the year of our Lord, eighteen hundred and ninety, at the Iowa Village in what is known as the Iowa Reservation, in the Indian Territory, by David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, Commissioners on the part of the United States, appointed for the purpose, and the Iowa tribe of Indians residing on said Reservation.

Articles of agreement with the Iowa tribe of Indians, Oklahoma Ter., May 20, 1890.

ARTICLE I.

ARTICLE I.

The said Iowa Tribe of Indians, residing and having their homes thereon, upon the conditions hereinafter expressed, do hereby surrender and relinquish to the United States all their right, title, claim and interest in and to and over the following described tract of country in the Indian Territory, namely:

Relinquishment, etc., to the United States, of lands in Indian Territory, by the Iowa tribe of Indians.  
Description.

Beginning at the point where the Deep Fork of the Canadian River intersects the west boundary of the Sac and Fox Reservation; thence north along said west boundary to the south bank of the Cimarron River; thence up said Cimarron River to the Indian Meridian; thence south along said Indian Meridian to the Deep Fork of the Canadian River; thence down said Deep Fork to the place of beginning," set apart for the permanent use and occupation of the Iowa and such other Indians as the Secretary of the Interior may see fit to locate thereon, by Executive Order made and dated the fifteenth day of August, in the year of our Lord eighteen hundred and eighty-three.

## ARTICLE II.

Land to be allotted in severalty to every Indian of the Iowa tribe.

Location.

Preferred rights of owners of improvements.

Selection of allotments.

Each and every member of said Iowa Tribe of Indians shall be entitled to select and locate upon said Reservation or tract of Country eighty acres of land which shall be allotted to such Indian in severalty. No other restriction as to locality shall be placed upon such selections than that they shall be so located as to conform to the Congressional survey or subdivision of said tract of country, and any Indian having improvements may have the preference over any other Indian in and to the tract of land containing such improvements so far as they are within a legal subdivision not exceeding in area the quantity of land that he is entitled to select and locate.

Each member of said tribe of Indians over the age of eighteen years, shall select his or her land, and the father, or if he be dead the mother, shall select the land herein provided for, for each of his or her children who may be under the age of eighteen years, and if both father and mother of a child under eighteen years of age shall be dead, then the nearest of kin, over eighteen years of age and an Iowa Indian, shall select and locate his or her land—or if such person shall be without kindred as aforesaid, then the Commissioner of Indian Affairs, or some one by him authorized, shall select and locate the land of such child.

## ARTICLE II.

## ARTICLE III.

Special allotment agents to be appointed.

Notice of procedure, etc.

Failure to select.

Residue of reservation to become public land.

That the allotments provided for in this Act shall be made at the cost of the United States by special agents appointed by the President for such purpose, under such rules and regulations as the Secretary of the Interior may from time to time prescribe, and within sixty days after such special agent or agents shall appear upon said reservation and give notice to the acting and recognized chief of said Iowa Tribe of Indians, that he is ready to make such allotments; and if any one entitled to an allotment hereunder shall fail to make his or her selection within said period of sixty days, then such special agent shall proceed at once to make such selection for such person or persons—which shall have the same effect as if made by the person so entitled; and when all of said allotments are made and approved, then the residue of said reservation, except as hereinafter stated, shall, as far as said Iowa Indians are concerned, become public land of the United States.

## ARTICLE III.

## ARTICLE IV.

Patents of allotment.

In trust.

In fee.

Prior conveyances, etc., void.

Allotments, etc., non-taxable, etc., for certain period.

## ARTICLE IV.

Upon the approval of the allotments provided for herein by the Secretary of the Interior, he shall cause patents to issue therefor in the name of the allottees, which patents shall be of the legal effect and declare that the United States does and will hold the land thus allotted for the period of twenty-five years in trust for the sole use and benefit of the Indian to whom such allotment shall have been made, or in case of his or her decease, of his or her heirs or devisees according to the laws of the state or territory where such land is located, and that at the expiration of said period, the United States will convey the same by patent to said Indian or his heirs or devisees as aforesaid in fee, discharged of said trust and free of all incumbrance whatsoever.

And if any conveyance shall be made of the lands set apart and allotted, as herein provided, or any contract made touching the same, before the expiration of the time above mentioned such conveyance or contract shall be absolutely null and void.

And during said period of twenty-five years said lands, so allotted and the improvements thereon shall not be subject to taxation for any purpose by any State or Territory or any municipal subdivision thereof nor subject to be seized upon any execution or other mesne or final process issued out of any court of any State or Territory, and shall never be subject to be seized or sold upon any execution or other mesne or final process issued out of any court of any State

## INDIAN AFFAIRS.

or Territory upon any judgment rendered upon any debt or liability incurred, the consideration of which, immediate or remote passed prior to the expiration of said period of twenty-five years. And the law of descent and partition in force in the State or Territory where such lands are situated shall apply thereto.

### ARTICLE V.

There shall be excepted from the operation of this agreement a tract of land, not exceeding ten acres in a square form, including the church and school house and grave-yard at or near the Iowa village, and ten acres of land shall belong to said Iowa tribe of Indians in common so long as they shall use the same for religious, educational, and burial purposes for their said Tribe—but whenever they shall cease to use the same for such purposes for their Tribe, said tract of land shall belong to the United States.

### ARTICLE V.

Church, school house, and grave-yard lands excepted from allotment, etc.

### ARTICLE VI.

When all the allotments are made as aforesaid, the United States, under the direction of the Commissioner of Indian Affairs will expend for said Iowa tribe of Indians described herein as beneficiaries of this agreement for improving their said land, for building houses, providing for said Indians breeding animals, agriculture implements, and seeds, the sum of Twenty-four thousand dollars—*provided*, that said sum shall be paid out as nearly equally per capita as may be, the father, or, if he be dead, the mother, to act for their children under the age of eighteen years—and the Commissioner of Indian Affairs in his own discretion to act for orphan children under the age of eighteen years.

### ARTICLE VI.

Expenditure for houses, animals, seeds, etc., after allotment.

*Proviso.*  
Per capita distribution.

### ARTICLE VII.

As a further and only additional consideration for such surrender and relinquishment of title, claim, right and interest, as aforesaid, the United States will pay to said Iowa Indians, the beneficiaries of this agreement, per capita, Three Thousand and Six Hundred Dollars per annum, payable semi-annually, for the first five years after this agreement shall take effect; Three Thousand Dollars per annum payable semi-annually, for the second five years after this agreement shall take effect; Two thousand and Four Hundred Dollars per annum payable semi-annually for the third five years after this agreement shall take effect; One Thousand Eight Hundred Dollars per annum payable semi-annually, for the fourth five years after this agreement shall take effect, and one Thousand Two Hundred Dollars per annum, payable semi-annually, for the fifth five years after the agreement shall take effect. In all such payments each person over the age of eighteen years shall receive and receipt for his or her share, and the father, or, if he be dead, the mother, of any person entitled, who is under the age of eighteen years, shall receive and receipt for his or her share; and when both father and mother of such person be dead, the person, if an Iowa Indian, with whom such person makes his home, shall receive and receipt for such persons shares; otherwise, it shall be paid to the Indian Agent of the said Iowa Indians for the use of such orphan.

### ARTICLE VII.

Additional consideration to Iowa Indians.  
Annuities.  
First five years.  
Second five years.  
Third five years.  
Fourth five years.  
Fifth five years.  
Receipts.

### ARTICLE VIII.

It is hereby expressly agreed and understood that nothing herein contained shall in any manner affect any other claim not mentioned herein that said Iowa Tribe of Indians have against the United States; nor shall this agreement in any manner affect any interest that said tribe or its members may have in any reservation of land outside of the Indian Territory, nor shall this agreement in any manner affect any annuities or payments, principal or interest due, to said tribe or its members by existing laws or treaties with the United States.

### ARTICLE VIII.

All other existing rights, etc., of Iowas, reserved.

THE SECRETARY OF THE INTERIOR.

ARTICLE IX.

Chief William Tohee and Maggie, his wife.

William Tohee, the chief of the Iowas, is incurably blind and helpless, and has a wife, Maggie Tohee, an Iowa Woman, but by whom William has no child. William is not only helpless but requires and receives the constant care and attention of Maggie, so that neither can give attention to matters of business or labor, or devote their time or energy to procuring a living. Therefore it is mutually agreed in addition to the provisions hereinbefore made for the Iowas, including said William and Maggie, that the United States will pay out to or for the use of said William, under the direction of the Commissioner of Indian Affairs, the sum of Three Hundred and Fifty Dollars. Because of the relation between the said William and Maggie and the care that he requires of her, and that she bestows upon him, it is agreed that the patents to them creating the trust in the United States for them for the period of twenty-five years, shall further recite and provide that in event of the death of either said William or Maggie during said period of twenty-five years—then the possession and use of the lands allotted to both shall be in the survivor and patents for the land allotted to both shall issue to the survivor, discharged of the said trust at the expiration of the said twenty-five years, provided said parties shall be living together as man and wife until the death of either.

Additional provisions.

ARTICLE X.

ARTICLE X.

Operation.

This agreement shall be in force from and after its approval by the Congress of the United States.

In witness whereof, we have hereunto set our hands and seals the day and the year first above written.

DAVID H. JEROME,  
A. M. WILSON,  
WARREN G. SAYRE,

Commissioners on the part of the United States.

Jefferson White Cloud, his x mark; Kirwan Murray, Victor Dupee, Eliza Heelbolte, Eva White, William Tohee, chief, his x mark; Maggie Tohee, her x mark; Charles Tohee, Emma Tohee, David Tohee, Garrie Squirrel, Susan Squirrel, her x mark; Abrookanie, his x mark; Mary White Cloud, her x mark; Nellie Green, her x mark; Albert Ely, his x mark; Julia Ely, her x mark; Naw-a-tawmy, her x mark; Moses, his x mark; Lucinda R. Moses, her x mark; Willie Dole; Tom Dorian, his x mark; Catharin Dorian, her x mark; Mary Squirrel, her x mark; Widow Tohee, her x mark; Mary Tohee, her x mark; Ellen White Cloud, her x mark; Mary Murray, her x mark; Kis-tom-ie, her x mark; Big Ear, his x mark; Theresa Big Ear, her x mark; Julia Washington, her x mark; Anna Rubedeau, her x mark; Josie Dole, her x mark.

SUPPLEMENTAL ARTICLES.

SUPPLEMENTAL ARTICLES.

ARTICLE XI.

ARTICLE XI.

The President may extend the trust period for allotments of Iowas.

It is now further agreed by the Commission, on the part of the United States, at the special instance and request of Chief Tohee, that if the Iowas at the expiration of said term of twenty-five years, during which the United States shall hold the allotments in trust for them shall represent to the President that they desire said trust continued, then the President may, in his discretion, extend said period, during which said lands are so held in trust for any period not exceeding five years.

Limit of extension.

ARTICLE XII.

ARTICLE XII.

It is further agreed that when said allotments are being made, the Chief of the Iowas may select an additional ten acres in a square form for the use of said tribe in said reservation, conforming in boundaries to the legal subdivisions of land therein, which shall be held by said tribe in common but when abandoned by said tribe shall become the property of the United States.

An additional ten-acre square may be held in common, etc.

DAVID H. JEROME,  
A. M. WILSON,  
WARREN G. SAYRE,  
Commissioners.

I, Kirwan Murray, do hereby certify that I am the official interpreter chosen by the Iowa tribe of Indians; that I am a member of said tribe; that I interpreted to said Indians the nature and terms and words of the contract to which this is appended, made and entered into by and between David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, Commissioners on the part of the United States, and the Iowa Indians, residing on their reservation, in the Indian Territory, at the Iowa Village, on the twentieth day of May, in the year of our Lord eighteen hundred and ninety; that said contract was by me fully explained to said Indians and they made to understand the same before it was signed by them; and I further certify that I was personally present when each and every person's name was signed thereto, and witnessed the same and that those whose signatures appear to said contract appended the same thereto understandingly, and where signed by mark or otherwise I attest the same.

Certification

Given under my hand at the Iowa Village this May twenty-eighth, eighteen hundred and ninety.

KIRWAN MURRAY.

Therefore,

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That said agreements be, and the same are hereby, accepted, ratified, and confirmed.

Ratification, etc. of agreements with Sacs and Foxes, and Iowas, of Indian Territory.

SEC. 2. That for the purpose of making the allotments provided for in the said agreement, with the Sac and Fox Nation of Indians including the pay and expenses of the necessary special agents, not exceeding three in number, hereby authorized to be appointed by the President for the purpose, and the necessary resurveys, there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the sum of six thousand dollars, or so much thereof as may be necessary.

Appropriations for carrying out agreement with Sac and Fox Nation. Special agents for allotment, etc. Pay, etc. Resurveys.

SEC. 3. That for the purpose of making the compensation provided for in said agreement the sum of four hundred and eighty-five thousand dollars be, and the same hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, of which the sum of three hundred thousand dollars shall be retained in the Treasury of the United States, to the credit of the said Sac and Fox Nation, and bear interest at the rate of five per centum per annum, which shall become due and payable on the first day of March in each year, and the remainder shall be disbursed or applied as provided in said agreement.

Compensation.

SEC. 4. That for the purpose of making the allotments provided for in said agreement with the Iowa tribe of Indians, including the pay and expenses of special agents appointed by the President for the purpose, and the necessary surveys, there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the sum of one thousand dollars, or so much thereof as may be necessary.

Retained in Treasury.

Interest.

Application of remainder.

Allotments to Iowas.

Special agents, etc. Pay, etc.

SEC. 5. That for the purpose of carrying out the terms and provisions of articles six, seven, and nine of said agreement with the Iowa tribe of Indians there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the following sums, to wit:

Appropriations for Iowas

For animals, seeds, et For this amount, to be expended under the direction of the Commissioner of Indian Affairs, for said Iowa tribe of Indians as provided in article six of said agreement, twenty-four thousand dollars.

For annuities. For the payment of the first five annual installments, first series, payable semi-annually as provided in article seven, three thousand six hundred dollars.

For Chief William Tohee. For this amount, to enable the Commissioner of Indian Affairs to carry out the provision of article nine, for the benefit of William Tohee, chief of the Iowas, three hundred and fifty dollars.

Determination of descent. SEC. 6. That for the purpose of determining the descent of land to the heirs of any deceased Indian, under the provisions of article four of said agreement with the Iowa tribe of Indians or under any law or treaty authorizing the issuance of a patent to an Indian or his heirs, according to the laws of the State or Territory where such land is located, whenever any man and woman, either of whom is in whole or in part of Indian blood, shall have cohabited together as husband and wife according to the custom and manner of Indian life, the issue of such cohabitation shall be, for the purpose aforesaid, taken and deemed to be the legitimate issue of persons so living together, and every child of Indian blood, in whole or in part, otherwise illegitimate shall for such purpose be taken and deemed to be the legitimate issue of the father of such child.

Opened lands for actual settlers, only, under homestead laws. R. S., sec. 2301, p. 421, excepted. *Proviso.* SEC. 7. That whenever any of the lands acquired by the agreements in this act ratified and confirmed, shall by operation of law or proclamation of the President of the United States, be open to settlement, they shall be disposed of to actual settlers only, under the provisions of the homestead laws, except section twenty-three hundred and one, which shall not apply: *Provided*, however, that each settler, under and in accordance with the provisions of said homestead laws, shall, before receiving a patent for his homestead, pay to the United States for the land so taken by him, in addition to the fees provided by law, the sum of one dollar and twenty-five cents for each acre thereof, and such person, having complied with all the laws relating to such homestead settlement, may at his option receive a patent therefor at the expiration of twelve months from date of settlement upon said homestead and any person otherwise qualified who has attempted to but for any cause failed to secure a title in fee to a homestead under existing law, or who made entry under what is known as the commuted provision of the homestead law, shall be qualified to make a homestead entry upon any of said lands.

Pre-payment of additional price by settler. Issue of patent. Certain persons falling under existing law, may enter homestead under this. SEC. 8. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of one hundred thousand dollars to be paid to the Sac and Fox band of Indians now resident in Iowa, in full of all claims of every name and nature which said Indians now have upon the property included in the foregoing agreement of the Sac and Fox Indians in the Indian Territory or upon the United States, for the moneys arising therefrom, said sum to be paid to said Sac and Fox Indians of Iowa by the Secretary of the Interior, per capita, or in such other manner as said Indians shall direct, upon the execution by them, to his satisfaction, of a release as herein required.

Sac and Fox Indians in Iowa. Appropriation to pay all claims.

Per capita payment. Release

Approved, February 13, 1891.

February 16, 1891. CHAP. 240.—An act for the construction and completion of suitable school buildings for Indian industrial schools in Wisconsin and other States.

26 Stats., p. 764.

Establishment of Indian schools in Wisconsin, Michigan, and Minnesota. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior be, and is hereby, authorized and directed to cause one Indian industrial or training school to be established in each of the States of Wisconsin, Michigan, and Minnesota, at a cost not exceeding thirty thousand dollars for each school, said schools to be as near as practicable moulded on the plan of the Indian school at

Cost for each school.

Carlisle, Pennsylvania: *Provided, however,* That no such school shall be established on any Indian reservation whereon Indians are located under an agent.

SEC. 2. That the Secretary of the Interior may select any part or portion of the non-mineral public domain of the United States in either of said States, which he may deem necessary and suitable, not exceeding six hundred and forty acres, and may, by appropriate order in that behalf made and recorded in the General Land Office, perpetually withdraw such land from sale and entry and dedicate the same to use as a site for such industrial or training school: and if such portion of the public domain is not found available or suitably located, then the Secretary of the Interior may secure title by purchase, condemnation, or otherwise of a tract of land not less than two hundred acres for each of said schools, and upon the site thus selected, acquired, or purchased the Secretary of the Interior shall cause to be erected such buildings and improvements as may in his judgment be best adapted to the purpose in view: *Provided,* That the site for said buildings in the various States shall be as follows:

- In Minnesota, on the Pipestone Reservation;
- In Michigan, in the county of Isabella;
- In Wisconsin, near some railroad from which all the reservations may be conveniently reached.

SEC. 3. That the sum of seventy-five thousand dollars be, and the same is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretary of the Interior for the purchase of necessary ground and the erection thereon of buildings, and for such other purposes as he may deem proper in the execution of the provisions of this act, to establish in each of such States a school for the industrial and general education of Indian youth, and at the places in said States herein designated or which may hereafter be designated by the Secretary of the Interior in conformity with the provisions of this act.

Approved, February 16, 1891.

*Proviso.*  
Limitation,  
  
Secretary of Interior may select, etc., land for schools.  
  
Limit.  
Withdrawal from entry, etc.  
  
Condemnation, etc., if necessary.  
  
Buildings, etc.  
*Proviso.*  
Sites.  
  
In Minnesota  
In Michigan.  
In Wisconsin.

CHAP. 249.—An act to amend act authorizing Choctaw Coal and Railway Company to construct road through Indian Territory.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the provisions of an act approved February eighteenth, eighteen hundred and eighty-eight, authorizing the Choctaw Coal and Railway Company to construct and operate a railway through the Indian Territory, and for other purposes, shall be extended for a period of two years, from February eighteenth, eighteen hundred and ninety-two, so that said company shall have until February eighteenth, eighteen hundred and ninety-four, to build its railway, under the provisions of said act and the act amendatory thereof, approved February thirteenth, eighteen hundred and eighty-nine.

Approved, February 21, 1891.

Appropriation.  
  
Purposes, etc.

CHAP. 238.—An act to authorize the Kansas and Arkansas Valley Railway to construct and operate additional lines of railway through the Indian Territory, and for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Kansas and Arkansas Valley Railway, a corporation created under and by virtue of the laws of the State of Arkansas, having been heretofore by act of Congress, approved June first, anno Domini eighteen hundred and eighty-six, authorized and empowered to construct and operate a line of railway from the eastern boundary line of said Territory at or near Fort Smith to the northern boundary line of said Territory, with the right to construct and operate a branch line through said Territory to Coffeyville, in the State of Kansas, be,

Kansas and Arkansas Valley Railway may construct, etc., additional lines of railway, etc., through the Indian Territory, etc.  
Vol. 24, p. 73.

- and the said Kansas and Arkansas Valley Railway is hereby, invested and empowered with the right of locating, constructing, owning, equipping, operating, using, and maintaining, in addition to the lines in said hereinbefore-recited act specified, the following lines of railway through the Indian Territory, together with a telegraph and telephone line, namely: A line beginning at the most suitable point on the present main line of said railway at or near Wagoner, in the Indian Territory, and thence running in a westerly and northwesterly direction by the most feasible and practicable route, passing through or near the town of Guthrie, in the Oklahoma country, and through or near Fort Supply military reservation to a point on the western boundary line of the Indian Territory. Also an additional or branch line, running from the most suitable point on the line last above described, in a southwesterly direction, and passing through or near Oklahoma City, and through or near Fort Reno military reservation, to a point on the western boundary line of the Indian Territory south of the point where the Canadian River crosses said boundary line; also a line commencing at the most practicable point on the main line at or near Fort Gibson, and running thence in a southwesterly direction through the Cherokee, Creek, Choctaw, and Chickasaw countries, either or all of them, to a point on the southern boundary line of the Indian Territory, with the right to construct, use, and maintain such tracks, turn-outs, and sidings as said company may deem it to its interest to construct along and upon the right of way and depot grounds herein provided for.
- Location of one additional railway line, etc.**
- Of another.**
- Of another.**
- Sidings, etc.**
- Right of way.** SEC. 2. That said corporation is authorized to take and use for all purposes of a railway, and for no other purpose, a right of way one hundred feet in width through said Indian Territory for said additional lines, and to take and use a strip of land two hundred feet in width, with a length of three thousand feet, in addition to the right of way, for stations, for every ten miles of road, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the road-bed, not exceeding one hundred feet in width on each side of said right of way, or as much thereof as may be included in said cut or fill: *Provided*, That no more than said addition of land shall be taken for any one station: *Provided further*, That no part of the lands herein authorized to be taken shall be leased or sold by the company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railroad, telegraph, and telephone lines; and when any portion thereof shall cease to be so used such portion shall revert to the nation or tribe of Indians from which the same shall have been taken.
- Stations.**
- Provisos.**
- Limitation.**
- Lands not to be leased or sold by company.**
- Reversion.**
- Damages.** SEC. 3. That before said railway shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of any of the Indian nations or tribes through which it may be constructed full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway. In case of failure to make amicable settlement with any occupant such compensation shall be determined by the appraisal of three disinterested referees, to be appointed one (who shall act as chairman) by the President, one by the chief of the nation to which said occupant belongs, and one by said railroad company, who, before entering upon the duties of their appointment, shall take and subscribe, before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member, after due notice. And upon the failure of either party to make such appointment within thirty days after the appointment made by the President the vacancy shall be filled by the district judge of the court held at Fort Smith, Arkansas, upon the application of the other party. The chairman of said board shall appoint the time
- Appraisal.**
- Appointment of referees.**
- Oath.**
- Substitution upon failure to appoint.**
- Hearings.**

and place for all hearings within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of any case submitted to them under this act, with mileage at five cents per mile. Witnesses shall receive the usual fees allowed by the courts of said nations. Costs, including compensation of the referees, shall be made a part of the award, and be paid by such railroad company. In case the referees cannot agree, then any two of them are authorized to make the award. Either party being dissatisfied with the findings of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to the district court held at Fort Smith, Arkansas, which court shall have jurisdiction to hear and determine the subject-matter of said petition according to the laws of the said State provided for determining the damage when property is taken for railroad purposes. If upon the hearing of said appeal the judgment of the court shall be for a larger sum than the award of the referees the cost of said appeal shall be adjudged against the railway company. If the judgment of the court shall be for the same sum as the award of the referees, then the costs shall be adjudged against the appellant. If the judgment of the court shall be for a smaller sum than the award of the referees, then the costs shall be adjudged against the party claiming damages. When proceedings have been commenced in court the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of the railroad.

SEC. 4. That said railroad company shall not charge the inhabitants of said Territory a greater rate of freight than the rate authorized by the laws of the State of Arkansas for services or transportation of the same kind: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway and messages on said telegraph and telephone lines until a State government or governments shall exist in said Territory within the limits of which said railway, or a part thereof, shall be located; and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights within their respective limits by said railway; but Congress expressly reserves the right to fix and regulate at all times the cost of such transportation by said railway or said company whenever such transportation shall extend from one State into another, or shall extend into more than one State: *Provided, however*, That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And provided further*, That said railway company shall carry the mail at such prices as Congress may by law provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation and also shall carry the property and troops of the United States at such rates as Congress may provide.

SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said lines may be located, the sum of fifty dollars, in addition to compensation provided for in this act for property taken and damages done to individual occupants by the construction of the railway, for each mile of railway that it may construct in said Territory, said payments to be made in installments of five hundred dollars as each ten miles of road is graded: *Provided*, That if the general council of either of the nations or tribes through whose lands said railway may be located shall, within four months after the filing of maps of definite location as set forth in section six of this act, dissent from the allowance hereinbefore provided for, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this act shall be determined as provided in section three for the determination of the compensation to be paid to

Compensation of referees.

*Ante*, p. 784.

- the individual occupant of lands, with the right of appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further*, That the amount awarded or adjudged to be paid by said railway company for said dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the foregoing provision.
- Award to be in lieu of compensation.** Said company shall also pay, so long as said Territory is owned and occupied by the Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in the said Territory. The money paid to the Secretary of the Interior under the provisions of this act shall be apportioned by him, in accordance with the laws and treaties now in force among the different nations and tribes, according to the number of miles of railway that may be constructed by said railway company through their lands: *Provided*, That Congress shall have the right, so long as said lands are occupied and possessed by said nations and tribes, to impose such additional taxes upon said railroad as it may deem just and proper for their benefit; and any Territory or State hereafter formed through which said railway shall have been established may exercise the like power as to such part of said railway as may lie within its limits. Said railway company shall have the right to survey and locate its railway immediately after the passage of this act.
- Annual rental.** SEC. 6. That said company shall cause maps showing the route of its located lines through said Territory to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chief of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portion of said railway company's located line is filed as herein provided for said company shall commence grading said located line within six months thereafter, or such location shall be void; and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before construction of any such section shall be begun.
- Right of taxation reserved.** SEC. 7. That the officers, servants, and employees of said company necessary to the construction and management of said road shall be allowed to reside, while so engaged, upon such right of way, but subject to the provisions of the Indian intercourse laws, and such rules and regulations as may be established by the Secretary of the Interior in accordance with said intercourse laws.
- Survey and location of railway.** SEC. 8. That the United States circuit and district courts for the western district of Arkansas, and such other courts as may be authorized by Congress, shall have, without reference to the amount in controversy, concurrent jurisdiction over all controversies arising between said Kansas and Arkansas Valley Railway and the nations and tribes through whose territory said railway shall be constructed. Said courts shall have like jurisdiction, without reference to the amount in controversy, over all controversies arising between the inhabitants of said nations or tribes and said railway company; and the civil jurisdiction of said courts is hereby extended within the limits of said Indian Territory, without distinction as to citizenship of the parties, so far as may be necessary, to carry out the provisions of this act.
- Maps to be filed with Secretary of Interior and chiefs.** SEC. 9. That said railway company shall build at least one hundred miles of its said additional lines of railway in said Territory within three years after the passage of this act, or the rights herein granted shall be forfeited as to that portion not built; that said railroad company shall construct and maintain continually all road and highway crossings and necessary bridges over said railway wherever said roads and highways do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.
- Proviso.** SEC. 10. That the said Kansas and Arkansas Valley Railway shall accept this right of way upon the express condition, binding upon itself, its successors and assigns, that they will neither aid, advise,
- Grading to commence within six months of filing map, etc.**
- Employees may reside on right of way.**
- Jurisdiction of circuit and district courts for western district of Arkansas etc., in controversies.**
- At least 100 miles to be built within three years or rights forfeited.**
- Condition of acceptance.**

nor assist in any effort looking towards the changing or extinguishing the present tenure of the Indians in their land, and will not attempt to secure from the Indian nations any further grant of land, or its occupancy, than is hereinbefore provided: *Provided*, That any violation of the condition mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this act.

*Proviso.*  
Violation, etc.

SEC. 11. That all mortgages executed by said railway company conveying any portion of its railroad, with its franchises, that may be constructed in said Indian Territory shall be recorded in the Department of the Interior, and the record thereof shall be evidence and notice of their execution, and shall convey all rights and property of said company as therein expressed.

Record of mortgages, etc.

SEC. 12. That Congress may at any time amend, add to, alter, or repeal this act.

Amendment, etc.

SEC. 13. That the right of way herein and hereby granted shall not be assigned or transferred in any form whatever prior to the construction and completion of the road except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

Not assignable before completion except for aid in construction.

Approved, February 24, 1891.

CHAP. 383.—An act to amend and further extend the benefits of the act approved February eighth, eighteen hundred and eighty-seven, entitled "An act to provide for the allotment of land in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States over the Indians, and for other purposes."

Feb. 23, 1891.  
26 Stats., p. 794.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That section one of the act entitled "An act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes," approved February eighth, eighteen hundred and eighty-seven, be, and the same is hereby, amended so as to read as follows:

Allotment of land in severalty to Indians on Indian reservations, etc.

Vol. 24, p. 388, amended.

"SEC. 1. That in all cases where any tribe or band of Indians has been, or shall hereafter be, located upon any reservation created for their use, either by treaty stipulation or by virtue of an Act of Congress or Executive order setting apart the same for their use, the President of the United States be, and he hereby is, authorized, whenever in his opinion any reservation, or any part thereof, of such Indians is advantageous for agricultural or grazing purposes, to cause said reservation, or any part thereof, to be surveyed, or resurveyed, if necessary, and to allot to each Indian located thereon one-eighth of a section of land: *Provided*, That in case there is not sufficient land in any of said reservations to allot lands to each individual in quantity as above provided the land in such reservation or reservations shall be allotted to each individual pro rata, as near as may be, according to legal subdivisions: *Provided further*, That where the treaty or act of Congress setting apart such reservation provides for the allotment of lands in severalty to certain classes in quantity in excess of that herein provided the President, in making allotments upon such reservation, shall allot the land to each individual Indian of said classes belonging thereon in quantity as specified in such treaty or act, and to other Indians belonging thereon in quantity as herein provided: *Provided further*, That where existing agreements or laws provide for allotments in accordance with the provisions of said act of February eighth, eighteen hundred and eighty-seven, or in quantities substantially as therein provided, allotments may be made in quantity as specified in this act, with the consent of the Indians, expressed in such manner as the President, in his discretion, may require: *And provided further*, That when the lands allotted, or any legal subdivision thereof, are only valuable for grazing purposes, such lands shall be allotted in double quantities."

To each located Indian one-eighth of a section.

*Provisos.*

Allotment pro rata, if lands insufficient, as per legal subdivisions.

Allotment by treaty or act, not reduced.

To other Indians.

Under existing agreements or laws.

Vol. 24, p. 388.

Double allotments of lands fit for grazing only.

Existing allotments in certain cases to be augmented.

SEC. 2 That where allotments have been made in whole or in part upon any reservation under the provisions of said act of February eighth, eighteen hundred and eighty-seven, and the quantity of land in such reservation is sufficient to give each member of the tribe eighty acres, such allotments shall be revised and equalized under the provisions of this act: *Provided*, That no allotment heretofore approved by the Secretary of the Interior shall be reduced in quantity.

No existing approved allotment to be reduced.

SEC. 3. That whenever it shall be made to appear to the Secretary of the Interior that, by reason of age or other disability, any allottee under the provisions of said act, or any other act or treaty can not personally and with benefit to himself occupy or improve his allotment or any part thereof the same may be leased upon such terms, regulations and conditions as shall be prescribed by such Secretary, for a term not exceeding three years for farming or grazing, or ten years for mining purposes: *Provided*, That where lands are occupied by Indians who have bought and paid for the same, and which lands are not needed for farming or agricultural purposes, and are not desired for individual allotments, the same may be leased by authority of the Council speaking for such Indians, for a period not to exceed five years for grazing, or ten years for mining purposes in such quantities and upon such terms and conditions as the agent in charge of such reservation may recommend, subject to the approval of the Secretary of the Interior.

Leases by Secretary of Interior, of existing allotments where allottee disabled from occupancy, etc.

Terms, etc.

*Proviso.*

Leases, by Indian agent, of certain lands occupied by Indian purchasers.

Terms, etc.

SEC. 4. That where any Indian entitled to allotment under existing laws shall make settlement upon any surveyed or unsurveyed lands of the United States not otherwise appropriated, he or she shall be entitled, upon application to the local land office for the district in which the lands are located, to have the same allotted to him or her and to his or her children, in quantities and manner as provided in the foregoing section of this amending act for Indians residing upon reservations; and when such settlement is made upon unsurveyed lands the grant to such Indians shall be adjusted upon the survey of the lands so as to conform thereto; and patents shall be issued to them for such lands in the manner and with the restrictions provided in the act to which this is an amendment. And the fees to which the officers of such local land office would have been entitled had such lands been entered under the general laws for the disposition of the public lands shall be paid to them from any moneys in the Treasury of the United States not otherwise appropriated, upon a statement of an account in their behalf for such fees by the Commissioner of the General Land Office, and a certification of such account to the Secretary of the Treasury by the Secretary of the Interior.

Certain Indians may make selection of public lands.

Patents to issue.

Vol 24, p. 389. Fees to be paid from the Treasury.

Determination of descent, etc.

Vol. 24, p. 389.

SEC. 5. That for the purpose of determining the descent of land to the heirs of any deceased Indian under the provisions of the fifth section of said act, whenever any male and female Indian shall have co-habited together as husband and wife according to the custom and manner of Indian life the issue of such co-habitation shall be, for the purpose aforesaid, taken and deemed to be the legitimate issue of the Indians so living together, and every Indian child, otherwise illegitimate, shall for such purpose be taken and deemed to be the legitimate issue of the father of such child: *Provided*, That the provisions of this act shall not be held or construed as to apply to the lands commonly called and known as the "Cherokee Outlet": *And provided further*, That no allotment of lands shall be made or annuities of money paid to any of the Sac and Fox of the Missouri Indians who were not enrolled as members of said tribe on January first, eighteen hundred and ninety; but this shall not be held to impair or otherwise affect the rights or equities of any person whose claim to membership in said tribe is now pending and being investigated.

*Provisos.*

"Cherokee Outlet" lands excepted.

Certain Sacs and Foxes excepted.

Pending rights, etc., unimpaired.

Approved, February 28, 1891.

CHAP. 384.—An act to amend sections twenty-two hundred and seventy-five and twenty-two hundred and seventy-six of the Revised Statutes of the United States providing for the selection of lands for educational purposes in lieu of those appropriated for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That sections twenty-two hundred and seventy-five and twenty-two hundred and seventy-six of the Revised Statutes of the United State be amended to read as follows:

"SEC. 2275. Where settlements with a view to pre-emption or homestead have been, or shall hereafter be made, before the survey of the lands in the field, which are found to have been made on sections sixteen or thirty-six, those sections shall be subject to the claims of such settlers; and if such sections, or either of them, have been or shall be granted, reserved, or pledged for the use of schools or colleges in the State or Territory in which they lie, other lands of equal acreage are hereby appropriated and granted, and may be selected by said State or Territory, in lieu of such as may be thus taken by pre-emption or homestead settlers. And other lands of equal acreage are also hereby appropriated and granted, and may be selected by said State or Territory where sections sixteen or thirty-six are mineral land, or are included within any Indian, military, or other reservation, or are otherwise disposed of by the United States: *Provided*, Where any State is entitled to said sections sixteen and thirty-six, or where said sections are reserved to any Territory, notwithstanding the same may be mineral land or embraced within a military, Indian, or other reservation, the selection of such lands in lieu thereof by said State or Territory shall be a waiver of its right to said sections. And other lands of equal acreage are also hereby appropriated and granted, and may be selected by said State or Territory to compensate deficiencies for school purposes, where sections sixteen or thirty-six are fractional in quantity, or where one or both are wanting by reason of the township being fractional, or from any natural cause whatever." And it shall be the duty of the Secretary of the Interior, without awaiting the extension of the public surveys, to ascertain and determine, by protraction or otherwise, the number of townships that will be included within such Indian, military, or other reservations, and thereupon the State or Territory shall be entitled to select indemnity lands to the extent of two sections for each of said townships, in lieu of sections sixteen and thirty-six therein; but such selections may not be made within the boundaries of said reservations: *Provided, however*, That nothing herein contained shall prevent any State or Territory from awaiting the extinguishment of any such military, Indian, or other reservation and the restoration of the lands therein embraced to the public domain and then taking the sections sixteen and thirty-six in place therein; but nothing in this proviso shall be construed as conferring any right not now existing.

"SEC. 2276. That the lands appropriated by the preceding section shall be selected from any unappropriated, surveyed public lands, not mineral in character, within the State or Territory where such losses or deficiencies of school sections occur; and where the selections are to compensate for deficiencies of school lands in fractional townships, such selections shall be made in accordance with the following principles of adjustment, to wit: For each township, or fractional township, containing a greater quantity of land than three-quarters of an entire township, one section; for a fractional township, containing a greater quantity of land than one-half, and not more than three-quarters of a township, three quarters of a section; for a fractional township, containing a greater quantity of land than one quarter, and not more than one half of a township, one-half section; and for a fractional township containing a greater quantity of land than one entire section, and not more than one-quarter of a township one-quarter section of land: *Provided*, That the States or Territories which are, or shall be entitled to both the sixteenth and thirty-sixth sections in place, shall have the right

February 28, 1891.

26 Stat., p. 796.  
Public lands.  
Homestead settlement on, and selections to supply deficiencies in, school lands.

R. S. sec. 2275, p. 417, amended.

Settlements, before survey, on sections 16 or 36, subject to settlers' claims.  
Lieu lands, where school lands thus taken.

Where school lands are otherwise disposed of.

*Provisos.*

Waiver of right to school lands by selecting lieu lands.

Fractional deficiencies of school lands, etc.

Secretary of Interior to ascertain townships included in certain reservations.

Limitation, Awaiting restoration of reservations to public domain, for school sections.

Existing rights.

R. S., sec. 2276, p. 417, amended.

Principles governing selections to supply deficiencies of school sections and in fractional townships.

*Provisos.*

Double lieu lands.

to select double the amounts named, to compensate for deficiencies of school land in fractional townships."

Approved, February 28, 1891.

March 3, 1891. CHAP. 517.—An act to establish circuit courts of appeals and to define and regulate in certain cases the jurisdiction of the courts of the United States, and 28 Stat., p. 826. for other purposes.

United States courts.  
Additional circuit judges to be appointed.  
Qualifications, etc.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be appointed by the President of the United States, by and with the advice and consent of the Senate, in each circuit an additional circuit judge, who shall have the same qualifications, and shall have the same power and jurisdiction therein that the circuit judges of the United States, within their respective circuits, now have under existing laws, and who shall be entitled to the same compensation as the circuit judges of the United States in their respective circuits now have.

(p. 829.)

\* \* \* \* \*

Appeals, etc., from Indian Territory Court

SEC. 13. Appeals and writs of error may be taken and prosecuted from the decisions of the United States court in the Indian Territory to the Supreme Court of the United States, or to the circuit court of appeals in the eighth circuit, in the same manner and under the same regulations as from the circuit or district courts of the United States, under this act.

\* \* \* \* \*

Approved, March 3, 1891.

March 3, 1891. CHAP. 535.—An act to authorize the Fort Gibson, Tahlequah and Great North eastern Railway Company to construct and operate a railway through the Indian Territory, and for other purposes.

Fort Gibson, Tahlequah and Great Northern Railway Company may build railway, etc., line in Indian Territory.  
Location.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Fort Gibson, Tahlequah and Great Northeastern Railway Company, a corporation created under and by virtue of the laws of the State of Arkansas, be, and the same is hereby, invested and empowered with the right of locating, constructing, equipping, operating, using, and maintaining a railway, telegraph, and telephone line through the Indian Territory, beginning at the town of Rogers, in Benton County, Arkansas, and running thence in a westerly direction by way of Bentonville, Benton County, Arkansas, to the eastern boundary of the Cherokee Nation, Indian Territory, at or near mile post twenty-two; thence by way of Tahlequah, Cherokee Nation, to Fort Gibson, in said Territory, with the right to construct and maintain such tracks, turnouts, and sidings as said company may deem it to its interests to construct along and upon said right of way and depot grounds herein provided for.

Width.

SEC. 2. That said corporation is authorized to take and use for all purposes of a railway, and for no other purpose, a right of way one hundred feet in width through said Indian Territory for said line of its railway, and to take and use a strip of land two hundred feet in width, with a length of three thousand feet, in addition to right of way, for stations for every ten miles of road, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the road-bed not exceeding one hundred feet in width on each side of said right of way, or as much thereof as may be included in said cut or fill: *Provided,* That no more than said addition of land shall be taken for any one station: *Provided, further,* That no part of the lands herein authorized to be taken shall be leased or sold by the company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railroad, telegraph and telephone

Stations.  
Cuts, etc.

Provisions.  
Limitation.  
Lands not to be sold, etc.

lines; and when any portion thereof shall cease to be so used such portion shall revert to the nation or tribe of Indians from which the same shall have been taken.

SEC. 3. That before said railway shall be constructed through any lands held by individual occupants according to the laws, custom, and usages of any of the Indian nations or tribes through which it may be constructed, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisal of three disinterested referees, to be appointed one (who shall act as chairman) by the President, one by the chief of the nation to which said occupant belongs, and one by said railroad company, who, before entering upon the duties of their appointment, shall take and subscribe, before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior, within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member, after due notice. And upon the failure of either party to make such appointment within thirty after the appointment made by the President, the vacancy shall be filled by the district judge of the court held at Muscogee, Indian Territory, upon the application of the other party. The chairman of said board shall appoint the time and place for all hearings, within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of any case submitted to them under this act, with mileage at five cents per mile. Witnesses shall receive the usual fees allowed by the courts of said nations. Costs, including compensation of the referees, shall be made a part of the award, and not be paid by such railroad company. In case the referees can not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to the district court held at Muscogee, Indian Territory, which court shall have jurisdiction to hear and determine the subject matter of said petition, according to the laws of the said State provided for determining the damage when property is taken for railroad purposes. If upon the hearing of said appeal the judgment of the court shall be for a larger sum than the award of the referees, the cost of said appeal shall be adjudged against the railway company. If the judgment of the court shall be for the same sum as the award of the referees, then the costs shall be adjudged against the appellant. If the judgment of the court shall be for a smaller sum than the award of the referees, then the costs shall be adjudged against the party claiming damages. When proceedings have been commenced in court, the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of the railroad.

SEC. 4. That said railroad company shall not charge the inhabitants of said Territory a greater rate of freight than the rate authorized by the laws of the State of Arkansas for services or transportation of the same kind: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway and messages on said telegraph and telephone lines until a State government or governments shall exist in said Territory within the limits of which said railway, or a part thereof, shall be located; and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights within their respective limits by said railway; but Congress expressly reserves the right to fix and regulate

Regulation.

- at all times the cost of such transportation by said railway or said company whenever such transportation shall extend from one State into another, or shall extend into more than one State: *Provided, however,* That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And provided further,* That said railway company shall carry the mail at such prices as Congress may by law provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation, and said railway company shall transport troops and property of the United States free of charge.
- Maximum.**
- Mails.**
- Additional compensation to tribes.**
- Provisos.**
- Appeal by general councils.**
- Award to be in lieu of compensation.**
- Annual rental.**
- Taxation.**
- Maps to be filed.**
- Proviso.**
- Grading to begin on filing maps.**
- Employees to reside on right of way.**
- SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said line may be located, the sum of fifty dollars, in addition to compensation provided for in this act for property taken and damages done to individual occupants by the construction of the railway, for each mile of railway that it may construct in said Territory, said payments to be made in installments of five hundred dollars as each ten miles of road is graded: *Provided,* That if the general council of either of the nations or tribes through whose lands said railway may be located shall, within four months after the filing of maps of definite location, as set forth in section six of this act, dissent from the allowance hereinbefore provided for, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of lands, with the right of appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further,* That the amount awarded or adjudged to be paid by said railway company for said dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the foregoing provision. Said company shall also pay, so long as said Territory is owned and occupied by the Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in the said Territory. The money paid to the Secretary of the Interior under the provisions of this act shall be apportioned by him, in accordance with the laws and treaties now in force, among the different nations and tribes, according to the number of miles of railway that may be constructed by said railway company through their lands: *Provided,* That Congress shall have the right, so long as said lands are occupied and possessed by said nations and tribes, to impose such additional taxes upon said railroad as it may deem just and proper for their benefit; and any Territory or State hereafter formed through which said railway shall have been established may exercise the like power as to such part of said railway as may lie within its limits. Said railway company shall have the right to survey and locate its railway immediately after the passage of this act.
- SEC. 6. That said company shall cause maps showing the route of its located lines through said Territory to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chief of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided,* That when a map showing any portion of said railway company's located line is filed as herein provided for, said company shall commence grading said located line within six months thereafter or such location shall be void; and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before construction of any such section shall be begun.
- SEC. 7. That the officers, servants, and employees of said company, necessary to the construction and management of said road, shall be allowed to reside, while so engaged, upon such right of way, but subject to the provisions of the Indian intercourse laws

and such rules and regulations as may be established by the Secretary of the Interior in accordance with said intercourse laws.

SEC. 8. That the United States circuit and district courts for the western district of Arkansas and such other courts as may be authorized by Congress, shall have, without reference to the amount in controversy, concurrent jurisdiction over all controversies arising between Fort Gibson, Tahlequah and Great Northeastern Railway Company and the nations and tribes through whose territory said railway shall be constructed. Said courts shall have like jurisdiction, without reference to the amount in controversy, over all controversies arising between the inhabitants of said nations or tribes and said railway company; and the civil jurisdiction of said courts is hereby extended within the limits of said Indian Territory, without distinction as to citizenship of the parties, so far as may be necessary to carry out the provisions of this act.

Litigation.

SEC. 9. That said railway company shall build at least fifty miles of its railway in said Territory within three years after the passage of this act, or the rights herein granted shall be forfeited as to that portion not built; that said railroad company shall construct and maintain continually all road and highway crossings and necessary bridges over said railway wherever said roads and highways do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.

Commencement and completion.

Crossings.

SEC. 10. That the said Fort Gibson, Tahlequah and Great Northeastern Railway Company shall accept this right of way upon the express condition, binding upon itself, its successors and assigns, that they will neither aid, advise, or assist in any effort looking towards the changing or extinguishing the present tenure of the Indians in their land, and will not attempt to secure from the Indian nations any further grant of land, or its occupancy, than is hereinbefore provided: *Provided*, That any violation of the condition mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this act.

Condition of acceptance.

*Proviso.*  
Violation to forfeit.

SEC. 11. That all mortgages executed by said railway company conveying any portion of its railroad, with its franchises, that may be constructed in said Indian Territory shall be recorded in the Department of the Interior, and the record thereof shall be evidence and notice of their execution, and shall convey all rights and property of said company as therein expressed.

Record of mortgages.

SEC. 12. That Congress may at any time amend, add to, alter, or repeal this act.

Amendment, etc.

SEC. 13. That the right of way herein and hereby granted shall not be assigned or transferred in any form whatever prior to the construction and completion of the road, except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

Right not assignable except in aid of construction.

Approved, March 3, 1891.

CHAP. 538.—An act to provide for the adjudication and payment of claims arising from Indian depredations.

March 3, 1891.

28 Stats., p. 851.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That in addition to the jurisdiction which now is, or may hereafter be, conferred upon the Court of Claims, said Court shall have and possess jurisdiction and authority to inquire into and finally adjudicate, in the manner provided in this act, all claims of the following classes, namely:

Indian depredation claims.  
Courts of Claims to adjudicate.

First. All claims for property of citizens of the United States taken or destroyed by Indians belonging to any band, tribe, or nation, in amity with the United States, without just cause or provocation on the part of the owner or agent in charge, and not returned or paid for.

Property taken by friendly Indians.

Second. Such jurisdiction shall also extend to all cases which have been examined and allowed by the Interior Department and also to such cases as were authorized to be examined under the act of Congress making appropriations for the current and contingent expenses

Examined claims.

Vol. 23, p. 376.

of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes for the year ending June thirtieth, eighteen hundred and eighty-six, and for other purposes, approved March third, eighteen hundred and eighty-five, and under subsequent acts, subject however, to the limitations hereinafter provided.

Offsets and counter claims.

Third. All just offsets and counter claims to any claim of either of the preceding classes which may be before such court for determination.

Limitations waived.

SECTION 2. That all questions of limitations as to time and manner of presenting claims are hereby waived, and no claim shall be excluded from the jurisdiction of the court because not heretofore presented to the Secretary of the Interior or other officer or department of the Government: *Provided*, That no claim accruing prior to July first, eighteen hundred and sixty-five, shall be considered by the court unless the claim shall be allowed or has been or is pending, prior to the passage of this act, before the Secretary of the Interior or the Congress of the United States, or before any superintendent, agent, sub-agent or commissioner, authorized under any act of Congress to enquire into such claims; but no case shall be considered pending unless evidence has been presented therein: *And provided further*, That all claims existing at the time of the taking effect of this act shall be presented to the court by petition, as hereinafter provided, within three years after the passage hereof, or shall be thereafter forever barred: *And provided further*, That no suit or proceeding shall be allowed under this act for any deprecation which shall be committed after the passage thereof.

Provisos. Claims not to be considered.

To be presented in three years.

Future deprecations not included.

Petition, etc.

SECTION 3. That all claims shall be presented to the court by petition setting forth in ordinary and concise language, without unnecessary repetition, the facts upon which such claims are based, the persons, classes of persons, tribe or tribes, or band of Indians by whom the alleged illegal acts were committed, as near as may be, the property lost or destroyed, and the value thereof, and any other facts connected with the transactions and material to the proper adjudication of the case involved. The petition shall be verified by the affidavit of the claimant, his agent, administrator, or attorney, and shall be filed with the clerk of said court. It shall set forth the full name and residence of the claimant, the damages sought to be recovered, praying the court for a judgment upon the facts and the law.

Service of petition. Attorney-General to defend.

SECTION 4. The service of the petition shall be made upon the Attorney-General of the United States in such manner as may be provided by the rules or orders of said court. It shall be the duty of the Attorney-General of the United States to appear and defend the interests of the Government and of the Indians in the suit, and within sixty days after the service of the petition upon him, unless the time shall be extended by order of the court made in the case, to file a plea, answer or demurrer on the part of the Government and the Indians, and to file a notice of any counter-claim, set-off, claim of damages, demand, or defense whatsoever of the Government or of the Indians in the premises: *Provided*, That should the Attorney-General neglect or refuse to file the plea, answer, demurrer, or defense as required, the claimant may proceed with the case under such rules as the court may adopt in the premises; but the claimant shall not have judgment for his claim, or for any part thereof, unless he shall establish the same by proof satisfactory to the court; *Provided*, That any Indian or Indians interested in the proceedings may appear and defend, by an attorney employed by such Indian or Indians with the approval of the Commissioner of Indian Affairs, if he or they shall choose so to do.

Provisos. Proceedings on failure of Attorney-General to defend.

Special attorney for Indians.

Evidence.

In considering the merits of claims presented to the court, any testimony, affidavits, reports of special agents or other officers, and such other papers as are now on file in the departments or in the courts, relating to any such claims, shall be considered by the court as competent evidence and such weight given thereto as in its judgment is right and proper: *Provided*, That all unpaid claims which have heretofore been examined, approved, and allowed by the Secretary of the Interior, or under his direction, in pursuance of the act of Congress making appropriations for the current and

Provisos. Examined claims to have priority. Vol. 23, p. 376.

contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes, for the year ending June thirtieth, eighteen hundred and eighty-six, and for other purposes, approved March third, eighteen hundred and eighty-five, and subsequent Indian appropriation acts, shall have priority of consideration by such court, and judgments for the amounts therein found due shall be rendered, unless either the claimant or the United States shall elect to re-open the case and try the same before the court, in which event the testimony in the case given by the witnesses and the documentary evidence, including reports of Department agents therein, may be read as depositions and proofs: *Provided*, That the party electing to re-open the case shall assume the burden of proof.

Re-opening cases.

Burden of proof.

SECTION 5. That the said court, shall make rules and regulations for taking testimony in the causes herein provided for, by deposition or otherwise, and such testimony shall be taken in the county where the witness resides, when the same can be conveniently done, and no person shall be excluded as a witness because he is party to or interested in said suit, and any claimant or party in interest may be examined as a witness on the part of the Government; that the court shall determine in each case the value of the property taken or destroyed at the time and place of the loss or destruction, and, if possible, the tribe of Indians or other persons by whom the wrong was committed, and shall render judgment in favor of the claimant or claimants against the United States, and against the tribe of Indians committing the wrong, when such can be identified.

Rules for taking testimony, etc.

SEC. 6. That the amount of any judgment so rendered against any tribe of Indians shall be charged against the tribe by which, or by members of which, the court shall find that the depredation was committed, and shall be deducted and paid in the following manner: First, from annuities due said tribe from the United States; second, if no annuities are due or available, then from any other funds due said tribe from the United States, arising from the sale of their lands or otherwise; third, if no such funds are due or available, then from any appropriation for the benefit of said tribe, other than appropriations for their current and necessary support, subsistence and education; and, fourth, if no such annuity, fund, or appropriation is due or available, then the amount of the judgment shall be paid from the Treasury of the United States: *Provided*, That any amount so paid from the Treasury of the United States shall remain a charge against such tribe, and shall be deducted from any annuity, fund or appropriation hereinbefore designated which may hereafter become due from the United States to such tribe.

Judgment to be charged against tribe.

Mode of payment.

*Proviso.*

Payments from Treasury.

SEC. 7. That all judgments of said courts shall be a final determination of the causes decided and of the rights and obligations of the parties thereto, and shall not thereafter be questioned unless a new trial or rehearing shall be granted by said court, or the judgment reversed or modified upon appeal as hereafter provided.

Judgments final.

Appeal.

SEC. 8. That immediately after the beginning of each session of Congress the Attorney-General of the United States shall transmit to the Congress of the United States a list of all final judgments rendered in pursuance of this act, in favor of claimants and against the United States, and not paid as hereinbefore provided, which shall thereupon be appropriated for in the proper appropriation bill.

List of judgments to be sent to Congress.

SEC. 9. That all sales, transfers, or assignments of any such claims heretofore or hereafter made, except such as have occurred in the due administration of decedents' estates, and all contracts heretofore made for fees and allowances to claimants' attorneys, are hereby declared void, and all warrants issued by the Secretary of the Treasury, in payment of such judgments, shall be made payable and delivered only to the claimant or his lawful heirs, executors or administrators or transferee under administrative proceedings, except so much thereof as shall be allowed the claimant's attorneys by the court for prosecuting said claim, which may be paid direct to such attorneys, and the allowances to the claimant's attorneys shall be regulated and fixed by the court at the time of rendering judgment in each case and entered of record as part of the findings thereof;

Sales, attorneys' contracts, etc., declared void.

Warrants payable to claimant, etc.

Allowance to attorneys.

**Maximum.** but in no case shall the allowance exceed fifteen per cent of the judgment recovered, except in case of claims of less amount than five hundred dollars, or where unusual services have been rendered or expenses incurred by the claimant's attorney, in which case not to exceed twenty per cent of such judgment shall be allowed by the court.

**Appeal.** SEC. 10. That the claimant, or the United States, or the tribe of Indians, or other party thereto interested in any proceeding brought under the provisions of this act, shall have the same rights of appeal as are or may be reserved in the Statutes of the United States in other cases, and upon the conditions and limitations therein contained. The mode of procedure in claiming and perfecting an appeal shall conform, in all respects, as near as may be, to the statutes and rules of court governing appeals in other cases.

All papers, etc., to be furnished the court.

SEC. 11. That all papers, reports, evidence, records and proceedings now on file or of record in any of the departments, or the office of the Secretary of the Senate, or the office of the Clerk of the House of Representatives, or certified copies of the same, relating to any claims authorized to be prosecuted under this act, shall be furnished to the court upon its order, or at the request of the Attorney-General.

Additional assistant Attorney-General to be appointed.

SEC. 12. To facilitate the speedy disposition of the cases herein provided for, in said Court of Claims, there shall be appointed, in the manner prescribed by law for the appointment of Assistant Attorney-Generals, one additional Assistant Attorney-General of the United States, who shall receive a salary of twenty-five hundred dollars per annum.

Investigation under present laws to cease. Balances to be covered in.

SEC. 13. That the investigation and examinations, under the provisions of the acts of Congress heretofore in force, of Indian depre- dation claims, shall cease upon the taking effect of this act, and the unexpended balance of the appropriation therefor shall be covered into the Treasury, except so much thereof as may be necessary for disposing of the unfinished business pertaining to the claims now under investigation in the Interior Department, pending the transfer of said claims and business to the Court or courts herein provided for, and for making such transfers and a record of the same, and for the proper care and custody of the papers and records relating thereto.

Quorum.  
Jurisdiction.

CHAP. 539.—An act to establish a court of private land claims, and to provide for the settlement of private land claims in certain States and Territories.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be, and hereby is, established a court to be called the court of private land claims, to consist of a chief justice and four associate justices, who shall be, when appointed, citizens and residents of some of the States of the United States, to be appointed by the President, by and with the advice and consent of the Senate, to hold their offices for the term expiring on the thirty-first day of December, anno Domini eighteen hundred and ninety-five; any three of whom shall constitute a quorum. Said court shall have and exercise jurisdiction in the hearing and decision of private land claims according to the provisions of this act.

P. 860.  
Limitations.

SEC. 13. That all the foregoing proceedings and rights shall be conducted and decided subject to the following provisions as well as to the other provisions of this act, namely:

No claim allowed unless title lawfully and regularly derived, etc.

First. No claim shall be allowed that shall not appear to be upon a title lawfully and regularly derived from the Government of Spain or Mexico, or from any of the States of the Republic of Mexico having lawful authority to make grants of land, and one that if not then complete and perfect at the date of the acquisition of the territory by the United States, the claimant would have had a lawful right to make perfect had the territory not been acquired by the United States, and that the United States are bound, upon

the principles of public law, or by the provisions of the treaty of cession, to respect and permit to become complete and perfect if the same was not at said date already complete and perfect.

Second. No claim shall be allowed that shall interfere with or overthrow any just and unextinguished Indian title or right to any land or place. No claim allowed interfering with Indian title, etc.

 ton, and Wahpe- Indians, of Devils Lake Reservation, in the State of North Dakota,  
 ton bands. for sixty-four thousand acres of land (being at the rate of one dollar  
 and twenty-five cents per acre) to which they are justly entitled  
 under treaty of February nineteenth, eighteen hundred and sixty-  
 seven (Fifteenth Statutes, five hundred and five) but which were  
 not included within their reservation boundaries, surveyed in eight-  
 teen hundred and seventy-five, this amount to be expended under  
 the direction of the Secretary of the Interior in the purchase of  
 stock and agricultural implements, and in promoting the comfort  
 and improvement of said Indians, eighty thousand dollars, to be im-  
 mediately available.

Miami Town That the Secretary of the Interior be, and is hereby, authorized  
 Company. in his discretion to sell to the Miami Town Company, a corporation  
 created under the laws of the State of Kansas, for and on behalf of  
 the Ottawa tribe of Indians, the north half of the southeast quarter  
 of section twenty-five township twenty-eight north, range twenty-  
 two east; also the southeast quarter of the southeast quarter of said  
 section; also lots five, six, seven, eight, nine, and ten in said section;  
 also the northeast quarter of the southwest quarter of section thirty,  
 township twenty-eight north, range twenty-three east; also lots  
 eight, nine, ten, and eleven, in said section; also lots one, two, and  
 three, in said section thirty-one township twenty-eight north, range  
 twenty-three east; also lots one, two, and three, in section thirty-  
 six, township twenty-eight north, range twenty-two east, situated  
 in the Indian Territory, and containing five hundred and fifty-seven  
 and ninety-five one-hundredths acres, more or less.

Price. That said lands shall be sold to said company at not less than ten  
 dollars per acre, and the proceeds of such sale shall be paid over  
 Proceeds. under the direction of the Secretary of the Interior, to the Ottawa  
 Indians per capita, as per request of said Indians now on file in the  
 Department of the Interior.

Plat, etc. That the said Miami Town Company shall, within ninety days  
 from the approval of this act, file in the General Land Office a plat  
 of said land, showing the same to have been surveyed and divided  
 into lots, blocks, streets, and alleys; and immediately upon filing of  
 said map, and the payment of the said sum of ten dollars per acre,  
 the Secretary of the Interior shall cause a patent to be issued to  
 said company for the several tracts herein described.

Creeks. This amount to be paid per capita to one hundred and twenty-  
 nine citizens of the Creek Nation of Indians, under the direction of  
 Payment of the Secretary of the Interior, who have removed themselves from  
 expense of re- the State of Alabama to the Creek Nation in the Indian Territory,  
 moval, etc. and subsisted themselves for one year, in accordance with the

twelfth article of the treaty with the Creek Nation, proclaimed April fourth, eighteen hundred and thirty-two, seven thousand and ninety-five dollars, to be immediately available.

Vol. 7, p. 367.

SEC. 8. The following agreement, made by David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, Commissioners on the part of the United States, with the Citizen Band of Pottawatomie Indians in Oklahoma on the twenty-fifth day of June, eighteen hundred and ninety, and now on file in the Department of the Interior, and signed by said commissioners on behalf of the United States, and by Alexander P. Peltier, Joseph Moose, Stephen Neg-a-hu-quit, John B. Hambago and Alexander Rhodd, Business Committee, and John L. Young and others, on behalf of the said Citizen Band of Pottawatomie Indians, is hereby accepted, ratified and confirmed, to wit:

(p. 1016.)  
Agreement  
with Citizen  
Band, Pottawa-  
tomie Indians,  
Oklahoma, rati-  
fied.

"Articles of agreement made and entered into at Shawnee Town, in the Indian Territory, on the twenty-fifth day of June, eighteen hundred and ninety, by and between David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, Commissioners on the part of the United States, and the Citizen Band of Pottawatomie Indians, in the Indian Territory.

ARTICLE I.

ARTICLE I.

The Citizen Band of Pottawatomie Indians of the Indian Territory, in consideration of the fulfillment of the promises hereinafter made, hereby cede, relinquish, and forever and absolutely surrender to the United States all their claim, title and interest of every kind and character in and to the following described tract of country in the Indian Territory—according to Morrill's survey, under contract of September third, eighteen hundred and seventy-two—to wit: Beginning at a point on the right bank of the north fork of the Canadian River, in section twenty-one, of township eleven north, range five east, where the western boundary line of the Seminole Reservation strikes said river; thence south with said boundary line to the left bank of the Canadian River; thence up said river along the left bank thereof, to a point on said left bank, in the northeast quarter of section thirty-six, township six north, range one west, thirty-nine chains and eighty-two links (by the meanders of the river west), from the point where the Indian meridian intersects said river, or thirty-eight chains and fifty-two links due west from said Indian meridian; thence north as run by O. T. Morrill, under his contract of September third, eighteen hundred and seventy-two, to a point on the right bank of the north fork of the Canadian River; thence down said river, along the right bank thereof, to the place of beginning, comprising the following, viz:

Lands ceded

Description.

Fractional township five north, ranges one, two, three, four, and five east, north of the Canadian River. Fractional township six north, ranges one, three, four, and five east, north of the Canadian River. Township six north, range two east.

Townships seven, eight, and nine, ranges one, two, three, and four east. Fractional townships seven, eight, and nine north, range five east.

Townships ten and eleven north, range one east. Fractional township ten north, ranges two, three, and four east, south of the north fork of the Canadian River. Fractional township ten north, range five east. Fractional township eleven north, ranges two, three, four, and five east, south of the north fork of the Canadian River. Fractional township twelve north, ranges one and two east, south of North Fork of the Canadian River.

Also that portion of sections one, twelve, thirteen, twenty-four, and twenty-five, and section thirty-six, north of the Canadian River in township six north, range one west, lying east of the western boundary line of the said Pottawatomie Reservation as shown by the Morrill survey, and that portions of sections one, twelve, thirteen, twenty-four, twenty-five, and thirty-six, in townships seven, eight, nine, ten, and eleven north, range one west, lying east of the western boundary line aforesaid, and that portion of sections one and twelve south of the north fork of the Canadian River, and sections thirteen, twenty-four, twenty-five, and thirty-six, in township twelve north, range one west, lying east of the western boundary line aforesaid, containing an area of five hundred and seventy-five thousand eight hundred and seventy and forty-two one hundredths, acres of land.

School sections, etc.

Limit.

Sacred Heart Mission.

Whereas certain allotments of land have been heretofore made, and are now being made to members of said Citizen Band of Pottawatomie Indians, according to instructions from the Department of the Interior at Washington, under the act of Congress entitled, "An act to provide for the allotment of lands, in severalty, to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes," approved February eighth, eighteen hundred and eighty-seven, and according to said instructions other allotments are to be made, it is further agreed that all such allotments so made shall be confirmed—all in process of being made shall be completed and confirmed, and all to be made shall be made under the same rules and regulations, as to persons, location and area, as those heretofore made, and when made shall be confirmed. When said allotments shall be so confirmed, and approved by the Secretary of the Interior, the title in each allottee shall be evidenced and protected in every particular, in the same manner and to the extent provided for in the above-mentioned act of Congress: *Provided*, That in allotments to be hereafter made, no person shall have the right to select his or her allotment in section sixteen and thirty-six in any Congressional township—nor upon any land heretofore set apart in said tract of country for any use by the United States, or for school, school farm, or religious purposes—nor shall said sections sixteen and thirty-six be subject to homestead entry but shall be kept and used for school purposes; nor shall any lands set apart for any use of the United States, or for school, school farm, or religious purposes, be subject to homestead entry—but shall be held by the United States for such purposes, so long as the United States shall see fit to use them: *And provided further*, That all such allotments shall be taken on or before February eighth, eighteen hundred and ninety-one, when any right to allotment, in any one, shall be deemed waived and forever cease to exist.

And it is specially agreed that the south half of section seven and the north half of section eighteen in township six north, range five east, heretofore set apart by a written agreement between said Citizen Band of Pottawatomie Indians and certain Catholic Fathers, for religious, school, and farm purposes, shall not be subject to allotment or homestead entry, but shall be held by the United States for the Sacred Heart Mission, the name under which said association of fathers are conducting the church, school, and farm on said land.

And in any lawful manner, to be provided by Congress, shall be conveyed to said Fathers for the uses above expressed.

ARTICLE III.

ARTICLE III.

It is further agreed that the number entitled to take and who shall take allotments, including those who have already taken allotments, is fourteen hundred. Number of allottees.

But if it shall be ascertained that a greater number than fourteen hundred shall be entitled to and shall take allotments hereunder, then there shall be deducted from the sum hereinafter agreed, to be paid to said Pottawatomie Indians the sum of one dollar for each acre of land allotted to those in excess of said number.

ARTICLE IV.

ARTICLE IV.

It is further agreed, as a further and only additional consideration for such relinquishment of all title, claim, and interest of every kind and character in an to said lands, that the United States will pay to said Citizen Band of Pottawatomie Indians, in said tract of country, within four months after this agreement shall have been ratified by Congress, the sum of one hundred and sixty thousand dollars for making homes and other improvements on the said allotments. And if it shall be ascertained that said Citizen Band of Pottawatomie Indians did purchase and pay the United States for the tract of country above described in accordance with the provisions of a treaty between the United States and said Citizen Band of Pottawatomie Indians, proclaimed August seven, eighteen hundred and sixty-eight, and that the United States did retain and yet retains and shall continue to retain of said Indians' funds the sum of one hundred and nineteen thousand seven hundred and ninety dollars and seventy-five cents on account of such purchase, then the United States agrees to pay to said Citizen Band of Pottawatomie Indians the additional sum of one hundred and nineteen thousand seven hundred and ninety dollars and seventy-five cents. Payment to tribe for lands relinquished.

All payments of money herein provided for shall be made per capita to said Indians. Repayment for lands purchased.

ARTICLE V.

ARTICLE V.

This agreement shall have effect after it shall have been ratified by the Congress of the United States. Effect.

In witness whereof, the day and year first above written; the said David H. Jerome, Alfred M. Wilson and Warren G. Sayre, have hereunto set their hands for and on behalf of the United States, and Alexander B. Peltier, Joseph Moose, John Anderson, Stephen Negahriquet, John B. Pambogo, Alexander Rhodd and Davis Hardin, the Business Committee of said Citizen Band of Pottawatomie Indians authorized by law and custom and by General Council now and here present and in session, so to do have hereunto set their hands and the adult male members of said Band present representing in their families the number set opposite their names, respectively have hereunto set their hands. Signatures.

SEC. 9. The following agreement entered into on behalf of the United States with the Absentee Shawnee Indians, on the twenty-sixth day of June, eighteen hundred and ninety, and signed by said Commissioners on the part of the United States, and by White Turkey, Chief, and five others, on the part of said Absentee Shawnee Indians, is also hereby accepted, ratified and confirmed, to wit: Agreement with Absentee Shawnee Indians ratified.

"Articles of agreement made and entered into at Shawnee Town in the Indian Territory, on the twenty-sixth day of June, eighteen hundred and ninety, by and between David H. Jerome, Warren G. Sayre and Alfred M. Wilson, Commissioners on the part of the United States and the Absentee Shawnees residing on what is commonly known as the Pottawatomie Reservation in the Indian Territory, represented by their Chiefs and head men or Counselors whose names are hereto subscribed.

## ARTICLE I.

Lands ceded  
in Indian Terri-  
tory.

Description.

The Absentee Shawnee Indians of the Indian Territory in consideration of the fulfillment of the promises hereinafter made, hereby cede, relinquish and surrender, forever and absolutely, to the United States, all their claim, title and interest of every kind and character in and to the following described tract of country in the Indian Territory, according to Morrill's survey, under contract of September third, eighteen hundred and seventy-two—to-wit: 'Beginning at a point on the right bank of the north fork of the Canadian River, in section twenty-one, of township eleven north, range five east, where the western boundary line of the Seminole Reservation strikes said river; thence south with said boundary line to the left bank of the Canadian River; thence up said river, along the left bank thereof, to a point on said left bank in the northeast quarter of section thirty-six, township six north, range one west, thirty-nine chains and eighty-two links (by the meanders of the river west) from the point where the Indian meridian intersects said river, or thirty-eight chains and fifty-two links due west from said Indian meridian; thence north as run by O. T. Morrill, under his contract of September third, eighteen hundred and seventy-two, to a point on the right bank of the north fork of the Canadian River; thence down said river, along the right bank thereof, to place of beginning, comprising the following, viz:

Fractional township five north, ranges one, two, three, four, and five east, north of Canadian River. Fractional township six north, ranges one, three, four, and five east, north of the Canadian River. Township six north, range two east.

Townships seven, eight, and nine, ranges one, two, three, and four east. Fractional townships seven, eight, and nine north, range five east.

Townships ten and eleven north, range one east. Fractional township ten north, ranges two, three and four east, south of the north fork of the Canadian River. Fractional township ten north, range five east. Fractional township eleven north, ranges two, three, four, and five east, south of the north fork of the Canadian River. Fractional township twelve north, ranges one and two east, south of the north fork of the Canadian River.

Also that portion of sections one, twelve, thirteen, twenty-four, and twenty-five, and section thirty-six, north of the Canadian River in township six north, range one west, lying east of the western boundary line of the said Pottawatomie Reservation as shown by the Morrill survey, and that portion of sections one, twelve, thirteen, twenty-four, twenty-five, and thirty-six; in townships seven, eight, nine, ten, and eleven north, range one west, lying east of the western boundary line aforesaid, and that portion of sections one and twelve south of the north fork of the Canadian River, and sections thirteen, twenty-four, twenty-five, and thirty-six in township twelve north, range one west, lying east of the western boundary line aforesaid containing an area of five hundred and seventy-five thousand eight hundred and seventy and forty-two one-hundredths acres of land.'

## ARTICLE II.

Confirmation  
of allotments.

Vol. 24, p. 338.

## ARTICLE II.

Whereas certain allotments of land have been heretofore made, and are now being made to said Absentee Shawnees according to instructions from the Department of the Interior, at Washington, under Act of Congress entitled, 'An Act to provide for the allotment of lands, in severalty, to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians and for other purposes,' approved February 8, 1887, and according to said instructions other allotments are to be made, it is further agreed that all such allotments so made shall be confirmed—all in process of being made shall be completed and confirmed, and all to be made shall be made under the same rules and regulations, as to persons, locations and area,

as those heretofore made, and when made shall be confirmed. When said allotments shall be so confirmed and approved by the Secretary of the Interior, the title in each allottee shall be evidenced and protected in every particular, in the same manner and to the extent provided for in the above-mentioned Act of Congress. *Provided*, that in all allotments to be hereafter made, no person shall have the right to select his or her allotment in sections sixteen (16) and thirty-six (36) in any Congressional township—nor upon any land heretofore set apart in said tract of country for any use by the United States, or for school, school farm or religious purposes—nor shall said sections sixteen (16) and thirty-six (36) be subject to homestead entry, but shall be kept and used for school purposes; nor shall any lands set apart for any use of the United States, or for school, school farm or religious purposes, be subject to homestead entry—but shall be held by the United States for such purposes, so long as the United States shall see fit to so use them; and *provided further*, that all such allotments shall be taken on or before January 1st, 1891, after which time and up to February 8, 1891, the allotting agent then on said reservation shall make allotments to those Absentee Shawnees resident in said tract of country, who have failed or refused to take their allotments as aforesaid, and such allotments so made by such allotting agent shall have the same force and effect as if the selections were made by the Indians in person. After said date of February 8th, 1891, any right to allotment hereunder or by Act of Congress, shall be deemed waived and forever cease to exist.

*Provisos.*

School sections, etc.

Limit for taking allotments

ARTICLE III.

ARTICLE III.

It is further agreed that the number who are entitled to take allotments and who shall take allotments, including those who have already taken allotments, is six hundred and fifty (650). But if it shall be ascertained that a greater number than six hundred and fifty (650) shall be entitled to and shall take allotments hereunder, then there shall be deducted from the sum hereinafter agreed to be paid so said Absentee Shawnees, the sum of one (1) dollar for each acre of land allotted to those in excess of said number.

Number of allottees.

ARTICLE IV.

ARTICLE IV.

It is further agreed, as a further and only additional consideration for such relinquishment of all title, claim and interest of every kind and character, in and to said lands, that the United States will pay to said Absentee Shawnees in said tract of country, as soon as may be after this agreement shall have been ratified by Congress, and under the direction of the Commissioner of Indian Affairs, the sum of sixty-five thousand (\$65,000.00) dollars for making homes and other improvements on their said allotments. All payments of money herein provided for shall be made per capita to said Absentee Shawnees according to the list of all those to whom allotments shall be hereunder made, and the wives of allottees.

Payment to Indians for homes, etc.

Per capita payments.

ARTICLE V.

ARTICLE V.

□ This agreement shall have effect after it shall have been ratified by the Congress of the United States.

Effect.

In witness whereof, the day and year first above written, the said David H. Jerome, Alfred M. Wilson and Warren G. Sayre have hereunto set their hands for and on behalf of the United States, and Chief White Turkey, Charley Starr, Elephant, Thomas Rock, William Little-axe and Jim Bullfrog, Head Men of the Absentee Shawnees and Counselors of White Turkey, have hereunto set their hands on behalf of the Absentee Shawnee Indians.

Signatures.

SEC. 10. That for the purpose of making the compensation to the said Indians, provided in said respective agreements with the Citizens Band of Pottawatomie Indians and the Absentee Shawnee Indians the sum of two hundred and twenty-five thousand dollars, or

Compensation to Citizen Pottawatomie and Absentee Shawnees.

so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available.

Extension of time for selections by Citizen Pottawatomies.

*Proviso.*

Limit.

Court of Claims to determine claim of Pottawatomies for land purchased.

Suit between Citizen and Prairie bands.

Style of suit, etc.

Records, etc.

Agreement with Cheyennes and Arapahoes ratified.

SEC. 11. That any of said Citizen Pottawatomie Indians who have not yet selected allotments may make such selections anywhere within the thirty-mile square tract of land in said agreement described, not already selected or occupied in quantities as therein provided, *And provided further*, That such selections may be made at any time within thirty day after the approval of this act, and not thereafter.

SEC. 12. That full jurisdiction is hereby conferred upon the Court of Claims, subject to an appeal to the Supreme Court of the United States as in other cases, to hear and determine the question as to whether or not the said Citizen Band of Pottawatomie Indians did purchase and pay the United States for the tract of country in said above agreement described in accordance with the provisions of a treaty between the United States and the Pottawatomie Indians of Kansas, and proclaimed August seventh, eighteen hundred and sixty-eight; and whether or not the United States did retain and yet retains the sum of one hundred and seventeen thousand seven hundred and ninety dollars and seventy-five cents on account of said purchase, or otherwise, and to hear and determine all questions between said Citizen Band of Pottawatomie Indians and the United States, or between said Citizen Indians and the Prairie band of Pottawatomie Indians in Kansas relative to the credits and accounts of said Indians under the various treaties with the United States. The exercise of such jurisdiction shall not be barred by any lapse of time heretofore, nor shall the rights of said Indians be in any way impaired by any ruling or determination upon such question heretofore made. Suit may be instituted in said Court of Claims at any time within twelve months after the approval of this act, but not later, on behalf of said Citizen Band, the style of such suit to be "The Citizen Band of Pottawatomie Indians of Oklahoma Territory against the United States," said suit to have preference upon the trial dockets of said Court. If it shall be found and determined that the said sum of one hundred and nineteen thousand seven hundred and ninety dollars and seventy-five cents, or any part thereof, or any sum, has been and is yet retained by the United States to which said Indians have a legal or equitable right or title, then the amount so found to be due shall be paid to said Citizen Band of Pottawatomie Indians out of any money in the Treasury not otherwise appropriated, less the fees for the services of the attorney or attorneys of said Citizen Band, in accordance with duly executed and approved contracts therefore, which amount shall be deducted and paid to said attorney or attorneys. That the Secretary of the Interior and the Secretary of the Treasury shall transmit to said Court of Claims, upon its request, certified copies of all records, documents, and papers that relate in any way to the accounts of said Indians under the various treaties with said tribe, and shall furnish such excerpts and statements and accounts regarding the same as may be called for during the progress of said suit and in said suits all claims against the United States on behalf of either of said bands of Indians, or on behalf of one band against the other shall be tried and determined and judgment rendered as shall be found just and right.

SEC. 13. The following agreement entered into by the Commissioners named below on the part of the United States, and the Cheyenne and Arapahoe Tribes of Indians on the ——— day of October, eighteen hundred and ninety, and now on file in the Interior Department, signed by the said Commissioners on the part of the United States, and by Left Hand, his mark, and five hundred and sixty-four others, on the part of the said Indians, is hereby accepted, ratified and confirmed, to wit:

"Articles of agreement made and entered into at Darlington, in the Indian Territory, on the ——— day of October, A. D. eighteen hundred and ninety, by and between David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, commissioners on the part of the

United States, and the Cheyenne and Arapahoe tribes of Indians, in the Indian Territory.

ARTICLE I.

ARTICLE I.

"The said Cheyenne and Arapahoe tribes of Indians hereby cede, convey, transfer, relinquish, and surrender forever and absolutely, without any reservation whatever, express or implied, all their claim, title, and interest of every kind and character, in and to the lands embraced in the following described tract of country in the Indian Territory, to wit: A tract of country west of the ninety-sixth degree of west longitude, bounded by the Arkansas River on the east, the thirty-seventh parallel of north latitude (being the southern boundary line of the State of Kansas) on the north, and the Cimarron or Red Fork of the Arkansas River on the west and south.

Lands ceded absolutely.

Description.

ARTICLE II.

ARTICLE II.

"Subject to the allotment of land in severalty to the individual members of the Cheyenne and Arapahoe tribes of Indians, as hereinafter provided for and subject to the conditions hereinafter imposed, for the considerations hereinafter mentioned the said Cheyenne and Arapahoe Indians hereby cede, convey, transfer, relinquish, and surrender forever and absolutely, without any reservation whatever, express or implied, all their claim, title and interest, of every kind and character, in and to the lands embraced in the following described tract of country in the Indian Territory, to-wit:

Lands ceded subject to allotment.

Commencing at a point where the Washita River crosses the ninety eighth degree of west longitude, as surveyed in the years eighteen hundred and fifty-eight and eighteen hundred and seventy-one; thence north on a line with said ninety-eighth degree to the point where it is crossed by the Red Fork of the Arkansas (sometimes called the Cimarron River); thence up said river, in the middle of the main channel thereof, to the north boundary of the country ceded to the United States by the treaty of June fourteenth, eighteen hundred and sixty six, with the Creek nation of Indians; thence west on said north boundary and the north boundary of the country ceded to the United States by the treaty of March twenty first, eighteen hundred and sixty six, with the Seminole Indians, to the one hundredth degree of west longitude; thence south on the line of said one hundredth degree to the point where it strikes the North Fork of the Red River; thence down said North Fork of the Red River to a point where it strikes the north line of the Kiowa and Comanche Reservation; thence east along said boundary to a point where it strikes the Washita River; thence down said Washita River, in the middle of the main channel thereof, to the place of beginning; and all other lands or tracts of country in the Indian Territory to which they have or may set up or allege any right, title, interest or claim whatsoever.

Description.

ARTICLE III.

ARTICLE III.

Out of the lands ceded, conveyed, transferred, relinquished, and surrendered by Article II hereof, and in part consideration for the cession of lands named in the preceding article, it is agreed by the United States that each member of the said Cheyenne and Arapahoe tribes of Indians over the age of eighteen years shall have the right to select for himself or herself one hundred and sixty acres of land, to be held and owned in severalty, to conform to legal surveys in boundary; and that the father, or, if he be dead, the mother, if members of either of said tribes of Indians, shall have a right to select a like amount of land for each of his or her children under the age of eighteen years; and that the Commissioner of Indian Affairs, or some one by him appointed for the purpose, shall select a like amount of land for each orphan child belonging to either of said tribes under the age of eighteen years.

Selections in severalty by Indians.

## ARTICLE IV.

Classification  
of land.  
Selections.

"It is further agreed that the land in said reservation shall be classed as bottom land and grazing land; and, in making selection of lands to be allotted in severalty as aforesaid, each and every Indian herein provided for shall be required to take at least one-half in area, of his or her allotments, of grazing land. It is hereby further expressly agreed that no person shall have the right to make his or her selection of land in any part of said reservation that is now used or occupied for military, agency, school, school-farm, religious, or other public uses, or in sections sixteen and thirty-six in each Congressional township, except in cases where any Cheyenne or Arapahoe Indian has heretofore made improvements upon and now uses and occupies a part of said sections sixteen and thirty-six such Indian may make his or her selection within the boundaries so prescribed so as to include his or her improvements, or in that part thereof now occupied and claimed by the Wichita and affiliated bands of Indians described as follows, viz: Commencing at a point in the middle of the main channel of the Washita River, where the ninety-eighth meridian of west longitude crosses the same, thence up the middle of the main channel of the said river to the line of ninety-eight degrees forty minutes west longitude, thence up said line of ninety-eight degrees forty minutes due north to the middle of the main channel of the main Canadian River, thence down the middle of the main Canadian River to where it crosses the ninety-eighth meridian; thence due south to the place of beginning.

School, etc.,  
sections

Selections on  
lands now occu-  
pled.

"It is further agreed that wherever in said reservation any Indian, entitled to take lands in severalty hereunder, has made improvements and now uses and occupies the land embracing such improvements, such Indian shall have the undisputed right to make his or her selection within the area above provided for allotments so as to include his or her said improvements.

School, etc.,  
sections.

"It is further agreed that sections sixteen and thirty-six in each Congressional township in said reservation shall not become subject to homestead entry, but shall be held by the United States and finally sold for public school purposes. It is hereby further agreed that wherever in said reservation any religious society or other organization is now occupying any portion of said reservation for religious or educational work among the Indian the land so occupied may be allotted and confirmed to such society or organization; not, however, to exceed one hundred and sixty acres of land to any one society or organization so long as the same shall be so occupied and used, and such land shall not be subject to homestead entry.

## ARTICLE V.

## "ARTICLE V.

Time for se-  
lections.

"All allotments hereunder shall be selected within ninety days from the ratification of this agreement by the Congress of the United States, provided the Secretary of the Interior, in his discretion, may extend the time for making such selection, and should any Indian entitled to allotments hereunder fail or refuse to make his or her selection of land in that time, then the allotting agent in charge of the work of making such allotments shall, within the next thirty days after said time, make allotments to such Indians, which shall have the same force and effect as if the selection were made by the Indian.

## ARTICLE VI.

## "ARTICLE VI.

Trust titles  
for allottees.

When said allotments of land shall have been selected and taken as aforesaid, and approved by the Secretary of the Interior, the titles thereto shall be held in trust for the allottees, respectively, for the period of twenty-five years, in the manner and to the extent provided for in the act of Congress entitled 'An act to provide for the allotment of land in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other pur-

poses, approved February eighth, eighteen hundred and eighty-seven; and at the expiration of said period of twenty-five years the titles thereto shall be conveyed in fee simple to the allottees, or their heirs, free from all incumbrances.

"ARTICLE VII.

ARTICLE VII.

"As a further and only additional consideration for the cession of territory and relinquishment of title, claim, and interest in and to lands as aforesaid the United States agrees to pay to the Cheyenne and Arapahoe tribes of Indians one million and five hundred thousand dollars as follows: Two hundred and fifty thousand dollars in cash, to be distributed per capita among the members of said tribes within sixty days after this agreement shall be ratified by the Congress of the United States; two hundred and fifty thousand to be paid out for said Indians under the direction of the Secretary of the Interior, and the remaining one million dollars to be retained in the Treasury of the United States placed to the credit of the said Indians, and, while so retained, to draw five per centum interest per annum, to be paid to said Indians per capita annually.

Payment for lands ceded.

Distribution.

Annuities.

Nothing herein contained shall be held to affect in anyway any annuities due said Indians under existing laws, agreements, or treaties.

"ARTICLE VIII.

ARTICLE VIII.

"It is further agreed that wherever in said reservation any member of either of said tribes has in pursuance of any laws or under any rules or regulations of the Interior Department, taken an allotment, such an allotment, at the option of the allottee, shall be confirmed and governed by all the conditions attached to allotments taken under this agreement.

Confirmation of allotments.

"ARTICLE IX.

ARTICLE IX.

"This agreement shall have effect whenever it shall be ratified by the Congress of the United States.

Effect.

"In witness whereof the said Commissioners on the part of the United States have hereunto set their hands; and the undersigned members of said tribes, for themselves and their tribes, set their hands the day and year first above written.

SEC. 16. That whenever any of the lands acquired by either of the three foregoing agreements respecting lands in the Indian or Oklahoma Territory shall by operation of law or proclamation of the President of the United States be open to settlement they shall be disposed of to actual settlers only, under the provisions of the homestead and town site laws (except section twenty-three hundred and one of the Revised Statutes of the United States which shall not apply): *Provided, however,* That each settler, on said lands shall before making a final proof and receiving a certificate of entry, pay to the United States for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry, the sum of one dollar and fifty cents per acre, one-half of which shall be paid within two years; But the rights of honorably discharged Union soldiers and sailors as defined and described in Sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States shall not be abridged except as to the sum to be paid as aforesaid, and all the lands in Oklahoma are hereby declared to be agricultural lands, and proof of their non-mineral character shall not be required as a condition precedent to final entry.

SEC. 17. That before any lands in Oklahoma are open to settlement it shall be the duty of the Secretary of the Interior to divide the same into counties which shall contain as near as possible not less than nine hundred square miles in each county. In establishing said county line the Secretary is hereby authorized to extend the lines of the counties already located so as to make the area of said counties equal, as near as may be, to the area of the counties provided for in this act. At the first election for county officers the people of each county may vote for a name for each county, and the name which receives the greatest number of votes shall be the name of such county: *Provided, further,* That as soon as the county lines are designated by the Secretary, he shall reserve not to exceed one-half section of land in each county to be located near the center of

said county, for county seat purposes to be entered under sections twenty-three hundred and eighty-seven and twenty-three and eighty-eight of the Revised Statutes: *Provided*, That in addition to the jurisdiction granted to the probate courts and the judges thereof in Oklahoma Territory by Legislative enactments which enactments are hereby ratified, the Probate Judges of said Territory are hereby granted such jurisdiction in town site matters and under such regulations as are provided by the laws of the State of Kansas.

Lease of school lands

SEC. 19. The following agreement entered into on the part of the United States by John V. Wright, Jared W. Daniels and Henry W. Andrews, Commissioners with the Cœur d'Alene Indians in Idaho Territory signed on the part of said Indians by Chief Andrew Seltice, and others which bears daté March twenty-sixth, eighteen hundred and eighty-seven, and now on file in the Interior Department, is hereby accepted, ratified, and confirmed and is in the following words, to-wit:

Agreement with Cœur d'Alene Indians ratified.

AGREEMENT WITH CŒUR D'ALENE.

Agreement

This agreement made pursuant to an item in the act of Congress entitled "An act making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the year ending June thirtieth, eighteen hundred and eighty-seven, and for other purposes," approved May fifteenth, eighteen hundred and eighty-six, by John V. Wright, Jared W. Daniels, and Henry W. Andrews, duly appointed commissioners on the part of the United States and the Cœur d'Alene tribe of Indians now residing on the Cœur d'Alene Reservation, in the Territory of Idaho, by their chiefs, headmen, and other male adults, whose names are hereunto subscribed, they being duly authorized to act in the premises, witnesseth:

Post p. 1630

ARTICLE 1.

ARTICLE 1

Whereas said Cœur d'Alene Indians were formerly possessed of a large and valuable tract of land lying in the Territories of Washington, Idaho, and Montana, and whereas said Indians have never ceded the same to the United States, but the same, with the exception of the present Cœur d'Alene Reservation, is held by the United States and settlers and owners deriving title from the United States, and whereas said Indians have received no compensation for said land from the United States: Therefore,

Preamble

ARTICLE 2.

ARTICLE 2.

For the consideration hereinafter stated the said Cœur d'Alene Indians hereby cede, grant, relinquish and quitclaim to the United States all right, title, and claim which they now have, or ever had, to all lands in said Territories and elsewhere, except the portion of land within the boundaries of their present reservation in the Territory of Idaho, known as the Cœur d'Alene Reservation.

Lands ceded.

ARTICLE 3.

ARTICLE 3.

The said Cœur d'Alene Indians agree and consent that the Upper and Middle bands of Spokane Indians residing in and around Spokane Falls, in the Territory of Washington, may be removed to the Cœur d'Alene Reservation and settled thereon in permanent homes on the terms and conditions contained in an agreement made and entered into by and between John V. Wright, Jared W. Daniels, and Henry W. Andrews, commissioners on the part of the United

Consent to settlement of Spokanes.

States and said Spokane Indians, concluded on the fifteenth day of March, eighteen hundred and eighty-seven, at Spokane Falls, in the Territory of Washington.

## ARTICLE 4.

Consent to settlement of Calespels and other Indians.

And it is further agreed that the tribe or band of Indians known as Calespels, now residing in the Calespel Valley, Washington Territory, and any other bands of non-reservation Indians now belonging to the Colville Indian Agency, may be removed to the Cœur d'Alene Reservation by the United States, on such terms as may be mutually agreed on by the United States and any such tribes or bands.

## ARTICLE 4.

## ARTICLE 5.

Cœur d'Alene Reservation to remain Indian land.

In consideration of the foregoing cession and agreements, it is agreed that the Cœur d'Alene Reservation shall be held forever as Indian land and as homes for the Cœur d'Alene Indians, now residing on said reservation, and the Spokane or other Indians who may be removed to said reservation under this agreement, and their posterity: and no part of said reservation shall ever be sold, occupied, open to white settlement, or otherwise disposed of without the consent of the Indians residing on said reservation.

## ARTICLE 5.

## ARTICLE 6.

Payment to Cœur d'Alenes.

Distribution.

Mill.

Articles.

And it is further agreed that the United States will expend for the benefit of said Cœur d'Alene Indians the sum of one hundred and fifty thousand dollars, to be expended under the direction of the Secretary of the Interior, as follows: For the first year, thirty thousand dollars, and for each succeeding year for fifteen years, eight thousand dollars. As soon as possible after the ratification of this agreement by Congress, there shall be erected on said reservation a saw and grist mill, to be operated by steam, and an engineer and miller employed, the expenses of building said mill and paying the engineer and miller to be paid out of the funds herein provided. The remaining portion of said thirty thousand dollars, if any, and the other annual payments shall be expended in the purchase of such useful and necessary articles as shall best promote the progress, comfort, improvement, education, and civilization of said Cœur d'Alene Indians, parties hereto.

## ARTICLE 6.

## ARTICLE 7.

Cash payments instead of articles.

It is further agreed that if it shall appear to the satisfaction of the Secretary of the Interior that in any year in which payments are to be made as herein provided said Cœur d'Alene Indians are supplied with such useful and necessary articles and do not need the same, and that they will judiciously use the money, then said payment shall be made to them in cash.

## ARTICLE 7.

## ARTICLE 8.

Balances.

It is further agreed that any money which shall not be used in the purchase of such necessary articles or paid over, as provided in article seven, shall be placed in the Treasury of the United States to the credit of the said Cœur d'Alene Indians, parties hereto, and expended for their benefit, or paid over to them, as provided in the foregoing articles.

## ARTICLE 8.

## ARTICLE 9.

Selection of articles.

It is further agreed that in the purchase for distribution of said articles for the benefit of said Indians the wishes of said Indians shall be consulted as to what useful articles they may need, or whether they need any at all, and their wishes shall govern as far as it is just and proper.

## ARTICLE 9.

ARTICLE 10.

ARTICLE 10.

It is further agreed that in the employment of engineers, millers, mechanics, and laborers of every kind, preference shall be given in all cases to Indians, parties hereto, qualified to perform the work and labor, and it shall be the duty of all millers, engineers, and mechanics to teach all Indians placed under their charge their trades and vocations.

Employment of Indians.

ARTICLE 11.

ARTICLE 11.

It is further agreed that in addition to the amount heretofore provided for the benefit of said Cœur d'Alene Indians the United States, at its own expense, will furnish and employ for the benefit of said Indians on said reservation a competent physician, medicines, a blacksmith, and carpenter.

Physician, blacksmith and carpenter.

ARTICLE 12.

ARTICLE 12.

In order to protect the morals and property of the Indians, parties hereto, no female of the Cœur d'Alene tribe shall be allowed to marry any white man unless, before said marriage is solemnized, said white man shall give such evidence of his character for morality and industry as shall satisfy the agent in charge, the minister in charge, and the chief of the tribe that he is a fit person to reside among the Indians; and it is further agreed that Stephen E. Liberty, Joseph Peavy, Patrick Nixon, and Julien Boutelier, white men who have married Indian women and with their families reside on the Cœur d'Alene Reservation, are permitted to remain thereon, they being subject, however, to all laws, rules, and regulations of the Commissioner of Indian Affairs applicable to Indian reservations.

Marriages with white men

ARTICLE 13.

ARTICLE 13.

It is further agreed and understood that in consideration of the amount expended in buildings and other improvements on said Cœur d'Alene Reservation for religious and educational purposes by the De Smet Mission, and valuable services in the education and moral training of children on said reservation, and in consideration that the Indians, parties hereto, have donated for said purposes one section of land on which is situated the boys' school, one section on which is situated the girls' school, and one section of timbered land for use of the schools, that said De Smet Mission and its successors may continue to hold and use said three sections of land and the buildings and improvements thereon so long as the same shall be used by said De Smet Mission and its successors for religious and educational purposes.

Lands for De-Smet Mission.

ARTICLE 14.

ARTICLE 14.

This agreement shall not be binding on either party until ratified by Congress.

Effect.

In testimony whereof the said John V. Wright, Jared W. Daniels, and Henry W. Andrews, on the part of the United States, and chiefs, headmen, and other adult Indians, on the part of the Indians, parties hereto, have hereunto set their hands and affixed their seals.

Signatures.

SEC. 20. That the following agreement entered into with the said Cœur d'Alene Indians by Benjamin Simpson, John H. Shupe, and Napoleon B. Humphrey, Commissioners on the part of the United States, signed by said Commissioners and by said Andrew Seltice, Chief, and others, on the part of said Indians, which agree-

Agreement with Cœur d'Alenes ratified.

ment bears date September ninth, eighteen hundred and eighty-nine, and is now on file in the Interior Department, is hereby accepted, ratified, and confirmed, and is in the following words, to wit:

## Agreement.

## AGREEMENT.

Vol. 25, p. 1002.

This agreement, made pursuant to an item of an Act of Congress, namely; Section 4 of the Indian appropriation act, approved March two, eighteen hundred and eighty-nine, (25 Stat., 1002), by Benjamin Simpson, John H. Shupe, and Napoleon B. Humphrey, duly appointed commissioners on the part of the United States, parties of the first part, and the Cœur d'Alene tribe of Indians, now residing on the Cœur d'Alene Reservation in the Territory of Idaho, by their chiefs, headmen, and other male adults whose names are hereunto subscribed, parties of the second part witnesseth:

## ARTICLE 1.

## ARTICLE 1.

Lands on reservation ceded.

For the consideration hereinafter named the said Cœur d'Alene Indians hereby cede, grant, relinquish, and quitclaim to the United States, all the right, title, and claim which they now have, or ever had, to the following-described portion of their reservation, to wit:

Description.

Beginning at the northeast corner of the said reservation, thence running along the north boundary line north sixty-seven degrees twenty-nine minutes west to the head of the Spokane River; thence down the Spokane River to the northwest boundary corner of the said reservation; thence south along the Washington Territory line twelve miles; thence due east to the west shore of the Cœur d'Alene Lake; thence southerly along the west shore of said lake to a point due west of the mouth of the Cœur d'Alene River where it empties into the said lake; thence in a due east line until it intersects with the eastern boundary line of the said reservation; thence northerly along the said east boundary line to the place of beginning.

## ARTICLE 2.

## ARTICLE 2.

Money payment.

And it is further agreed, in consideration of the above, that the United States will pay to the said Cœur d'Alene tribe of Indians the sum of five hundred thousand dollars, the same to be paid to the said Cœur d'Alene tribe of Indians upon the completion of all the provisions of this agreement.

## ARTICLE 3.

## ARTICLE 3.

To be paid pro-rata.

It is further agreed that the payment of money aforesaid shall be made to the said tribe of Indians pro rata or share and share alike for each and every member of the said tribe as recognized by said tribe now living on said reservation.

## ARTICLE 4.

## ARTICLE 4.

Dependent on ratification of former agreement.

It is further agreed and understood that this agreement shall not be binding on either party until the former agreement now existing between the United States by the duly-appointed commissioners and the said Cœur d'Alene tribe of Indians, bearing date March twenty-sixth, eighteen hundred and eighty-seven, shall be duly ratified by Congress; and in the event of the ratification of the aforesaid agreement of March twenty-sixth, eighteen hundred and eighty-seven, then this agreement to be and remain in full force and effect but not binding on either party until ratified by Congress. In witness whereof the said Benjamin Simpson, John H. Shupe, and Napoleon B. Humphrey, on the part of the United States, and the chiefs, headmen, and other adult male Indians, on the part of the Indians, parties hereto, have hereunto set their hands and affixed their seals.

Ante, p. 1027.

Signatures.

Done at De Smet Mission, on the Cœur d'Alene Reservation, in the Territory of Idaho, this the 9th day of September, in the year of our Lord one thousand eight hundred and eighty-nine.

SEC. 21. That for the purpose of carrying into effect the provisions of said two agreements with said Cœur d'Alene Indians there are hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, in the manner and for the purpose as hereinafter specifically stated the following sums, to wit: For the first installment of one hundred and fifty thousand dollars, as provided for in article six of the first of said agreements, thirty thousand dollars, to be expended for the building and erection on said Cœur d'Alene Indian Reservation of a saw and grist mill, to be operated by steam, and for the payment of the wages of the engineer and miller to be employed in said mill, respectively, the remaining portion of said thirty thousand dollars, if any, to be expended in the purchase of such useful and necessary articles as shall best promote the progress, comfort, improvement, education, and civilization of said Cœur d'Alene Indians, all of said articles to be purchased, and said engineer and miller to be employed as near as may be in strict conformity with articles nine and ten of the first of said agreements. And for the purpose of meeting the requirements of articles two and three of the second agreement aforesaid the sum of five hundred thousand dollars is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be paid by the United States to the said Cœur d'Alene tribe of Indians upon their compliance with all the provisions of the said second agreement hereinbefore recited, the same to be paid to the said tribe of Indians pro rata, or share and share alike, for each and every member of the said tribe as recognized by said tribe now living on said reservation.

SECTION 22. That all lands so sold and released to the United States, as recited or described in both of said agreements, and not heretofore granted or reserved from entry or location shall, on the passage of this act, be restored to the public domain, and shall be disposed of by the United States to actual settlers only, under the provisions of the homestead law, except section twenty-three hundred and one of the Revised Statutes of the United States, which shall not apply, and under the law relative to town sites or to locators or purchasers under the mineral laws of the United States: *Provided*, That each settler or purchaser under and in accordance with the provisions of said homestead act, shall pay to the United States, for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry, the sum of one dollar and fifty cents per acre, one-half of which shall be paid within two years; but the rights of honorably discharged Union soldiers and sailors, as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States shall not be abridged, except as to the said sum to be paid as aforesaid: *Provided further*, That the Secretary of the Interior shall cause to be surveyed for and patented to Frederick Post, upon his making final proof of all thereof before the register and receiver of the proper United States land office, and to the satisfaction of the Commissioner of the General Land Office and Secretary of the Interior, and paying therefor two dollars and fifty cents per acre and the cost of making such survey of such portion of said reservation as is recited in the agreement in word and figures as follows, to wit:

"Know all men by these presents that I, Andrew Seltice chief of the Cœur d'Alene Indians, did on the first day of June, A. D. eighteen hundred and seventy-one, with the consent of my people, when the country on both sides of the Spokane River belonged to me and my people, for a valuable consideration sell to Frederick Post the place now known as Post Falls, in Kootenai County, Idaho, to improve and use the same (water-power); said sale included all three of the river channels and islands, with enough land on the north and south shores for water-power and improvements; and have always protected the said Frederick Post, for eighteen years, in the rights there and then conveyed, and he has always done right with me and my people. We, the chiefs of the Cœur d'Alenes, have signed articles of agreement with the Government to sell the

Agreement  
with Indians at  
Fort Berthold  
Agency.

SEC. 23. The following agreement, entered into on behalf of the United States, by John V. Wright, Jared W. Daniels, and Charles F. Larrabee, Commissioners, on December fourteenth, eighteen hundred and eighty-six, with the Indians of the Fort Berthold Agency, North Dakota, and now on file in the Interior Department, signed by said Commissioners on the part of the United States and by Pa-des-a-hish and others on the part of the Gros Ventres; and by Wo-ka-se and others for the Mandans and Kun-nukh-to-wite and others on the part of the Arickarees, and is in the following words, to wit:

Agreement.

"This agreement made pursuant to an item in the act of Congress entitled "An act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes for the year ending June thirtieth, eighteen hundred and eighty-seven, and for other purposes," approved May fifteenth, eighteen hundred and eighty-six, by John V. Wright, Jared W. Daniels, and Charles F. Larrabee, duly appointed commissioners on the part of the United States, and the Arickaree, Gros Ventre, and Mandan tribes of Indians, now residing on the Fort Berthold Reservation, in the Territory of Dakota, by the chiefs, head-men, and principal men, embracing a majority of all the adult male members of said tribes, Witnesseth that whereas it is the policy of the Government to reduce to proper size existing reservations when entirely out of proportion to the number of Indians existing thereon, with the consent of the Indians, and upon just and fair terms; and whereas the Indians of the several tribes, parties hereto, have vastly more land in their present reservation than they need or will ever make use of, and are desirous of disposing of a portion thereof in order to obtain the means necessary to enable them to become wholly self-supporting by the cultivation of the soil and other pursuits of husbandry:

Preamble.

Therefore, it is hereby agreed and covenanted by the parties to this instrument, as follows:

ARTICLE I.

ARTICLE I.

Lands ceded.

The Arickaree, Gros Ventre, and Mandan tribes of Indians, parties hereto, hereby cede, sell, and relinquish to the United States all their right, title, and interest in and to all that portion of the Fort Berthold Reservation as laid down upon the official map of the Territory of Dakota; published by the General Land Office in the year eighteen hundred and eighty-five, lying north of the forty-eighth parallel of north latitude, and also all that portion lying west of a north and south line six miles west of the most westerly point of the big bend of the Missouri River, south of the forty-eighth parallel of north latitude.

Description.

ARTICLE II.

ARTICLE II

Annual ex-  
penditure for  
Indians.

In consideration of the foregoing cession and relinquishment the United States shall advance and expend, under the direction of the

Secretary of the Interior, the sum of eighty thousand dollars (\$80,000), annually, for the period of ten (10) years from and after the ratification of this agreement, for such purposes and in such manner as shall best promote the civilization and well-being of said Indians, and as hereinafter provided.

ARTICLE III.

It is further agreed that the Secretary of the Interior shall cause the lands embraced within the diminished reservation, or such portion thereof as may be necessary, to be surveyed and, either through the agent, or such other person as he may designate, allot the same in severalty to the Indians of the several tribes, parties hereto, in quantity as follows:

- To each head of a family, one hundred and sixty acres.
- To each single person over eighteen years of age, eighty acres.
- To each orphan child under eighteen years of age, eighty acres.
- To each other person under eighteen years of age, forty acres.

*Provided*, That all allotments made under the provisions of this agreement shall be selected by the Indians, heads of families selecting for their minor children, and the agent shall select for each orphan child, and in such manner as to embrace the improvements of the Indians making the selections, if they so desire.

ARTICLE IV.

That upon the approval of the allotments provided for in the foregoing article by the Secretary of the Interior, he shall cause patents to issue therefor, in the name of the allottees, which patents shall be of the legal effect and declare that the United States does and will hold the land thus allotted, for the period of twenty-five years in trust for the sole use and benefit of the Indian to whom such allotment shall have been made, or, in case of his decease, of his heirs, according to the laws of the Territory of Dakota, and that at the expiration of said period the United States will convey the same by patent to said Indian or his heirs as aforesaid in fee, discharged of said trust and free of all charge or incumbrance whatsoever. And if any conveyance shall be made of the lands set apart and allotted as herein provided, or any contract made touching the same before the expiration of the time above mentioned, such conveyance or contract shall be absolutely null and void.

*Provided*, That the laws of descent and partition in force in said Territory shall apply thereto after the first patents therefor have been executed and delivered.

ARTICLE V.

That upon the completion of said allotments and the patenting of the lands to said allottees, each and every member of said tribes to whom allotments have been made shall have the benefit of and be subject to the laws of the Territory of Dakota in all offenses the penalty of which is death or imprisonment in the penitentiary; and said Territory shall not pass or enforce any law denying any such Indian the equal protection of the law.

ARTICLE VI.

That the residue of lands within said diminished reservation, after all allotments have been made as provided in Article III of this agreement, shall be held by the United States for the period of twenty-five (25) years, in trust, for the sole use and benefit of said tribes of Indians, and at the expiration of said period the United States will convey the same by patent to said tribes in common, in fee, discharged of said trust and free of all charge or incumbrances whatever: *Provided*, That from the residue of said lands thus held in trust allotments shall be made and patented to each child of said tribes who may be born prior to the expiration of the time during

## ARTICLE VII.

## ARTICLE VII.

New build- It is further agreed that the sum of twelve thousand dollars  
ings, etc. (\$12,000), or so much thereof as may be necessary, of the first installment of eighty thousand dollars provided for in Article II of this agreement, shall be expended in the removal of the agency buildings and property to a more suitable locality, in needed repairs, and in the erection of such new buildings as may be required: *Provided*, That in the opinion of the Secretary of the Interior the removal of the agency from its present site is desirable. And the balance of said installment, and each subsequent annual installment, shall be expended, except as hereinafter provided, in the purchase of goods, provisions, agricultural and mechanical implements, in providing employees, in the education of Indian children, procuring medicine and medical attendance, in the care and support of the aged, sick, and infirm, and helpless orphans of said Indians, and in any other respect to promote their civilization, comfort, and improvement; and the wishes of said Indians shall be consulted, and govern, so far as practicable, in the expenditure of said money. And in the employment of farmers, artisans, and laborers preference shall in all cases be given to the Indians residing on the reservation who are properly qualified for such positions.

*Provisos.*

Purchase of In order to assist the Indians in settling upon their individual  
goods, etc. allotments, and encourage them in their efforts at self-support, it is further agreed that each family and male Indian over eighteen years of age, when he shall in good faith commence the cultivation of his individual allotment with the intention of residing permanently thereon, shall be assisted in the erection of a comfortable house, and be provided with one cook-stove, one yoke of work oxen, one breaking plow, one stirring plow, one cow, one wagon, one axe, one hoe, one spade, one hand-rake, one scythe, and one pitch-fork; or, in lieu of any of said articles, such other useful and proper articles as they may require, in the discretion of the Commissioner of Indian Affairs, the cost thereof to be paid out of the funds advanced as per Article II of this agreement: *Provided further*, That whenever in the opinion of the President the annual installment of eighty thousand dollars provided for in the first article of this agreement shall be found to be in excess of the amount required to be expended in any one year in carrying out the provisions of this agreement so much thereof as may be in excess of such requirement shall be placed to the credit of said Indians in the Treasury of the United States and expended in continuing the benefits herein provided for when said annual installments shall have expired.

Employment of Indians.

Assistance to Indians for self-support.

Disposal of surplus of installments.

## ARTICLE VIII.

## ARTICLE VIII.

Subsistence. Hereafter no subsistence shall be furnished any adult male Indian (the aged, sick, and infirm excepted) who does not endeavor by honest labor to support himself, nor to children between the ages of eight and fifteen years (the sick and infirm excepted), unless such children shall regularly attend school.

## ARTICLE IX.

## ARTICLE IX.

Survey of boundaries. The outboundaries of the diminished reservation shall be surveyed and marked in a plain and substantial manner, the cost thereof to be paid out of the first annual installment provided for in Article II of this agreement.

ARTICLE X.

ARTICLE X.

This agreement shall not be binding on either party until ratified by Congress.

Effect.

Dated and signed in open council at Fort Berthold Agency, in the Territory of Dakota, December fourteenth, eighteen hundred and eighty-six;"

Be, and the same is hereby, accepted, ratified, and confirmed except as to article six thereof, which is modified and changed on the part of the United States so as to read as follows: "That the residue of lands within said diminished reservation, after all allotments have been made as provided in article three of this agreement, shall be held by the said tribes of Indians as a reservation;" and as so modified said agreement is accepted and confirmed: *Provided*, That this act shall take effect only upon the acceptance of the modification and changes made by the United States as to article six of the said agreement by the said tribes of Indians in manner and form as said agreement was assented to, which said acceptance and consent shall be made known by proclamation by the President of the United States upon satisfactory proof presented to him that the said acceptance and consent have been obtained in such manner and form.

SEC. 26. That the following agreement entered into on behalf of the United States by Eliphalet Whittlesey, D. W. Diggs, and Charles A. Maxwell, commissioners on the part of the United States, on the twelfth day of December, eighteen hundred and eighty-nine, with the Sisseton and Wahpeton bands of Dakota or Sioux Indians now on file in the Department of the Interior, signed by said commissioners for the United States, and for said Indians by Simon Ananangmari and others, is hereby accepted, ratified, and confirmed, and is in the following words, to wit:

Agreement with Sisseton and Wahpeton Sioux Indians ratified.

"Whereas, by section five of the act of Congress entitled 'An act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and Territories over the Indians, and for other purposes,' approved February eighth, eighteen hundred and eighty-seven, it is provided 'That at any time after lands have been allotted to all the Indian of any tribe, as herein provided, or sooner, if in the opinion of the President it shall be for the best interests of said tribe, it shall be lawful for the Secretary of the Interior to negotiate with such Indian tribe for the purchase and release by the said tribe, in conformity with the treaty or statute under which such reservation is held, of such portions of its reservations not allotted as such tribe shall from time to time, consent to sell, on such terms and conditions as shall be considered just and equitable between the United States and said tribe of Indians, which purchase shall not be complete until ratified by Congress; and the form and manner of executing such release shall also be prescribed by Congress.

Preamble.

Vol. 24, p. 389.

Vol. 15, p. 506. Whereas the Sisseton and Wahpeton bands of Dakota or Sioux Indians are desirous of disposing of a portion of the land set apart and reserved to them by the third article of the treaty of February nineteenth, eighteen hundred and sixty-seven, between them and the United States, and situated partly in the State of North Dakota and partly in the State of South Dakota:

Agreement. Now, therefore, this agreement made and entered into in pursuance of the provisions of the Act of Congress approved February eighth, eighteen hundred and eighty-seven, aforesaid, at the Sisseton Agency, South Dakota, on this the twelfth day of December, eighteen hundred and eighty-nine, by and between Eliphalet Whittlesey, D. W. Diggs, and Charles A. Maxwell, on the part of the United States, duly authorized and empowered thereto, and the chiefs, head-men, and male adult members of the Sisseton and Wahpeton bands of Dakota or Sioux Indians, witnesseth:

## ARTICLE I.

## ARTICLE I.

Lands ceded. The Sisseton and Wahpeton bands of Dakota or Sioux Indians hereby cede, sell, relinquish, and convey to the United States all their claim, right, title, and interest in and to all the unallotted lands within the limits of the reservation set apart to said bands of Indians as aforesaid remaining after the allotments and additional allotments provided for in article four of this agreement shall have been made.

## ARTICLE II.

## ARTICLE II.

Payment for lands. In consideration for the lands ceded, sold, relinquished, and conveyed as aforesaid, the United States stipulates and agrees to pay to the Sisseton and Wahpeton bands of Dakota or Sioux Indians, parties hereto, the sum of two dollars and fifty cents per acre for each and every acre thereof, and it is agreed by the parties hereto that the sum so to be paid shall be held in the Treasury of the United States for the sole use and benefit of the said bands of Indians; and the same, with interest thereon at three per centum per annum, shall be at all times subject to appropriation by Congress for the education and civilization of the said bands of Indians, or members thereof, as provided in section five of an act of Congress, approved February eighth, eighteen hundred and eighty-seven, and entitled "An act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and Territories over the Indians, and for other purposes." *Provided*, That any religious society or other organization now occupying, under proper authority, for religious or educational work among the Indians, any of the land in this agreement ceded, sold, relinquished, and conveyed shall have the right, for two years from the date of the ratification of this instrument, within which to purchase the lands so occupied at a price to be fixed by the Congress of the United States: *Provided further*. That the cession, sale, relinquishment, and conveyance of the lands described in article one of this agreement shall not take effect and be in force until the sum of three hundred and forty-two thousand seven hundred and seventy-eight dollars and thirty-seven cents, together with the sum of eighteen thousand and four hundred dollars, shall have been paid to said bands of Indians, as set forth and stipulated in article third of this agreement.

To be held in trust. Vol. 24, p. 389. *Provisos*. Lands for religious, etc., uses. Payment to be made before cession.

## ARTICLE III.

## ARTICLE III.

Repayment to Indians. The United States stipulates and agrees to pay to the Sisseton and Wahpeton bands of Dakota or Sioux Indians, parties hereto, per capita, the sum of three hundred and forty-two thousand seven hundred and seventy-eight dollars and thirty-seven cents, being the amount found to be due certain members of said bands of Indians who served in the armies of the United States against their own people, when at war with the United States, and their families

and descendants, under the provisions of the fourth article of the treaty of July twenty-third, eighteen hundred and fifty-one, and of which they have been wrongfully and unjustly deprived by the operation of the provisions of an act of Congress approved February sixteenth, eighteen hundred and sixty-three, and entitled "An act for the relief of persons for damages sustained by reason of depredation, and injuries by certain bands of Sioux Indians"; said sum being at the rate of eighteen thousand four hundred dollars per annum from July first, eighteen hundred and sixty-two, to July first, eighteen hundred and eighty-eight less their pro rata share of the sum of six hundred and sixteen thousand and eighty-six dollars and fifty-two cents, heretofore appropriated for the benefit of said Sisseton and Wahpeton bands of Dakota or Sioux Indians, as set forth in report numbered nineteen hundred and fifty-three, of the House of Representatives, Fiftieth Congress, first session.

Vol. 10, p. 949.

Vol. 12, p. 652.

The United States further agrees to pay to said bands of Indians, per capita, the sum of eighteen thousand and four hundred dollars annually from the first day of July, eighteen hundred and eighty-eight, to the first day of July, nineteen hundred and one, the latter date being the period at which the annuities to said bands of Indians were to cease, under the terms of the fourth article of the treaty of July twenty-third, eighteen hundred and fifty-one, aforesaid; and it is hereby further stipulated and agreed that the aforesaid sum of three hundred and forty-two thousand seven hundred and seventy-eight dollars and thirty seven cents, together with the sum of eighteen thousand and four hundred dollars, due the first day of July, eighteen hundred and eighty-nine, shall become immediately available upon the ratification of this agreement.

Additional payment.

Vol. 10, p. 949.

ARTICLE IV.

ARTICLE IV.

It is further stipulated and agreed that there shall be allotted to each individual member of the bands of Indians, parties hereto, a sufficient quantity, which, with the lands heretofore allotted, shall make in each case one hundred and sixty acres, and in case no allotment has been made to any individual member of said bands, then an allotment of one hundred and sixty acres shall be made to such individual, the object of this article being to equalize the allotments among the members of said bands, so that each individual, including married women, shall have one hundred and sixty acres of land; and patents shall issue for the lands allotted in pursuance of the provisions of this article, upon the same terms and conditions and limitations as is provided in section five of the act of Congress, approved February eighth, eighteen hundred and eighty-seven, heretofore referred to.

Allotments in severalty.

Vol. 24, p. 389.

ARTICLE V.

ARTICLE V.

The agreement concluded with the said Sisseton and Wahpeton bands of Dakota or Sioux Indians, on the eighth day of December, eighteen hundred and eighty-four, granting a right of way through their reservation for the Chicago, Milwaukee and Saint Paul Railway, is hereby accepted, ratified and confirmed.

Right of way to Chicago, Milwaukee and Saint Paul Railway.

ARTICLE VI.

ARTICLE VI.

This agreement shall not take effect and be in force until ratified by the Congress of the United States.

Effect.

In witness whereof we have hereunto set our hands and seals the day and year above written.

SEC. 27. That for the purpose of carrying out the terms and provisions of said agreement there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated the sum of two million two hundred and three thousand dollars, of which amount the sum of five hundred and three thousand two hundred dollars shall be immediately available, and the same, or so much thereof as may be necessary, shall be paid as follows, to wit: To the Sisseton and Wahpeton Indians, parties to this agreement, the sum of three hundred and seventy-six thousand five hundred and seventy-eight dollars and thirty-seven cents, said amount to be distributed per capita. To the scouts and soldiers of the Sisseton, Wahpeton, Medawakanton, and Wapakoota bands of Sioux Indians, who were enrolled and entered into the military service of the United States and served in suppressing what is known as the "Sioux outbreak of eighteen hundred and sixty-two;" or those who were enrolled and served in the armies of the United States in the war of the rebellion, and to the members of their families and descendants, now living, of such scouts and soldiers as are dead, who are not included in the foregoing class, as parties to said agreement, the sum of one hundred and twenty-six thousand six hundred and twenty dollars, said amount to be distributed per capita; and the said sum of five hundred and three thousand and two hundred dollars or so much thereof as may be necessary, when paid to the said Sisseton, Wahpeton, Medowakanton, and Wahpakoota bands of Sioux Indians, their families and descendants, designated in this act, shall be deemed a full settlement of all claims they may have for unpaid annuities, under any and all treaties or acts of Congress up to the thirtieth day of June, eighteen hundred and ninety; *Provided however*, That all contracts or agreements between said Indians or any of them, and agents, attorneys, or other persons for the payment of any part of this appropriation for or on account of fees or compensation to said agents, attorneys or other persons, unless the same have been made, as provided by law, and are yet in force and have been approved by the Department of the Interior, or have been made by and between citizens of the United States are hereby declared null and void, and in such cases the Secretary of the Interior shall cause all moneys herein appropriated to be paid directly to the said Indians and shall pay no portion of the same, to their said agents or attorneys. And in no event shall a sum exceeding ten per cent. be paid to any agent or attorney, and the balance, after deducting the said five hundred and three thousand two hundred dollars, to wit, the sum of one million six hundred and ninety-nine thousand eight hundred dollars, or so much thereof as may be necessary, to pay for lands by said agreement ceded, sold, relinquished, and conveyed at the rate of two dollars and fifty cents per acre, shall be placed in the Treasury of the United States, to the credit of said Sisseton and Wahpeton bands of Dakota or Sioux Indians (parties to said agreement), and the same, with interest thereof at five per centum per annum, shall be at all times subject to appropriation by Congress or to application by order of the President for the education and civilization of said bands of Indians or members thereof.

SEC. 28. That any religious society or other organization now occupying under proper authority any of the lands by said agreement ceded, sold, relinquished, and conveyed shall have the right for a period of two years from the date hereof, within which to purchase the lands so occupied not exceeding one hundred and sixty acres in any one tract at the price paid therefor by the United States under said agreement.

SEC. 29. That in order to further carry out the provisions of said agreement and of this act, the Secretary of the Interior is authorized and directed, as soon as practicable, to cause the additional allotment provided for in said agreement to be made in the manner and form as provided in an act entitled "An act to provide for the allotments of lands in severalty to Indians on the various reserva-

tions, and to extend the protection of the laws of the United States and Territories over the Indians, and for other purposes," and as provided in any existing amendments of said act, approved February eighth, eighteen hundred and eighty-seven, and to pay the sums hereinbefore made immediately available, first to the parties to said agreement, or their proper representatives, and to appoint suitable officers for such purposes who shall furnish bonds usual in such cases, and whose compensation and expenses shall be paid out of said available funds as the Secretary of the Interior shall direct, and whose lawful acts, when approved by him, shall be final and conclusive.

Allotment agents.

SEC. 30. That the lands by said agreement ceded, sold, relinquished, and conveyed to the United States shall immediately, upon the payment to the parties entitled thereto of their share of the funds made immediately available by this act, and upon the completion of the allotments as provided for in said agreement, be subject only to entry and settlement under the homestead and town-site laws of the United States, excepting the sixteenth and thirty-sixth sections of said lands, which shall be reserved for common school purposes, and be subject to the laws of the State wherein located: *Provided*, That patents shall not issue until the settler or entryman shall have paid to the United States the sum of two dollars and fifty cents per acre for the land taken up by such homesteader, and this title to the lands so entered shall remain in the United States until said money is duly paid by such entryman or his legal representatives, or his widow, who shall have the right to pay the money and complete the entry of her deceased husband in her own name, and shall receive a patent for the same.

Lands ceded, open only to homestead and town-site entry.

School lands.

*Provido*.  
Additional payment.

SEC. 31. The following agreement entered into by J. Clifford Richardson, Charles M. Dole, and Rockwell J. Flint, commissioners on the part of the United States, and Carl Leider and others on behalf of the Crow Indians, on the eighth day of December, eighteen hundred and ninety, with the Crow tribe of Indians, in Montana, which said agreement is hereby accepted, ratified, and confirmed, and is now on file in the Department of the Interior and is in the words and figures as follows, to wit:

Agreement with Crow Indians, Montana, ratified.

We, the undersigned, adult male Indians of the Crow tribe now residing on the Crow Indian Reservation, in the State of Montana, do this eighth day of December A. D. eighteen hundred and ninety, hereby agree to dispose of and sell to the Government of the United States, for certain considerations hereinafter mentioned, all that portion of the Crow Indian Reservation, in the State of Montana, lying west and south of the following lines, to wit:

Agreement.

Lands sold.

Beginning in the mid-channel of the Yellowstone River, at a point which is the northwest corner of section Number thirty-six, township Number two north, of range twenty-seven east, of the principal meridian of Montana, thence running in a southwesterly direction, following the top of the natural divide between the waters flowing into the Yellowstone and Clarke's Fork Rivers upon the west and those flowing into Pryor Creek and West Pryor Creek on the east, to the base of West Pryor Mountain. Thence due south and up the north slope of said Pryor Mountain on a true meridian line to a point fifteen miles due north from the established line between Montana and Wyoming; thence in a due easterly course on a parallel of latitude to a point where it intersects the mid-channel of the Big Horn River, thence following up the mid-channel of said river to a point where it crosses the Montana and Wyoming State line.

Description.

That in consideration of the cession of territory herein made by us as individual Indians and heads of families of the Crow tribe to the Government of the United States, the said Government of the United States, in addition to the annuities and sums for provisions and clothing stipulated and provided for in existing treaties and laws, hereby agrees to pay the sum of nine hundred and forty-six thousand dollars lawful money of the United States, in the manner hereinafter described.

Consideration.

- Amount to be used for irrigation. First. That of the above-named sum there is hereby appropriated and set apart two hundred thousand dollars to be expended under the direction of the Secretary of the Interior in the building of dams, canals, ditches, and laterals for the purposes of irrigation in the valleys of the Big Horn and the Little Big Horn Rivers and on Pryor Creek and such other streams as the Secretary of the Interior may deem proper: *Provided*, That not to exceed fifty thousand dollars shall be expended annually in performing this work: *And provided further*, That the superintendent in charge of said works shall, in the employment of laborers, be required to give preference to such Indians of the Crow tribe as are competent and willing to work at the average wages paid to common laborers for the same kind of work, and the labor so employed shall be paid in cash.
- Proviso.*
- Annual expenditure. Irrigating fund. That the sum of seventy-five thousand dollars is hereby appropriated and set apart as an irrigating fund, to be expended under the direction of the Secretary of the Interior for the maintenance and management of the system of irrigation provided for in this agreement.
- Employment of Indians. Grist mills. Third. That the sum of twenty-five thousand dollars, or so much thereof as may be necessary, is hereby appropriated and set apart, to be expended under the direction of the Secretary of the Interior, for the construction of three grist mills, to be located, one on Pryor Creek, one on the Big Horn, and one on the Little Big Horn River at such points as the Indian agent may deem convenient and practicable and at such times as the needs of the Indians may require.
- Sub-depot. Fourth. That the sum of twenty thousand dollars is hereby appropriated and set apart to be expended in the construction and maintenance of a sub-Indian depot, to be located on Pryor Creek, provided that the Secretary of the Interior shall deem it advisable to establish such depot on the reservation; otherwise the amount herein appropriated shall, at the expiration of two years from the date of this agreement, be placed in the fund provided for by section nine (9) of this agreement.
- Schoolhouses. Fifth. That the sum of five thousand dollars, or so much thereof as may be necessary, is hereby appropriated to be expended under the direction of the Secretary of the Interior in the building of schoolhouses at such points on the reservation and at such times as the Indians may require, and upon the recommendation of the Indian agent.
- Repairing houses, etc. Sixth. That the sum of ten thousand dollars is hereby appropriated and set aside as a fund to be expended under the direction of the Secretary of the Interior in repairing and improving the houses of the Indians now erected on the reservation, and to make them as far as possible warm and comfortable dwellings.
- Blacksmith shops. Seventh. That the sum of three thousand dollars, or so much thereof as may be necessary, is hereby appropriated for the construction and equipment of three blacksmith shops, to be located at such places upon the reservation, and to be built at such times as the Indian agent may recommend, subject to the approval of the Secretary of the Interior.
- annuity fund. Eighth. That the sum of five hundred and fifty-two thousand dollars is hereby appropriated and set aside as an annuity fund, to be distributed as follows: Each Indian of the Crow tribe, male and female, shall receive an annual annuity of twelve dollars in cash for the period of twenty years from the date of this agreement. Said annuity to be paid semi-annually in accordance with such rules and regulations as the Secretary of the Interior may prescribe.
- Distribution. Purchase of cattle. Ninth. That the sum of forty-six thousand dollars is hereby appropriated and set aside, to be expended by the Indian agent, under the direction of the Secretary of the Interior, in the purchase of cattle from time to time as may be deemed advisable; the cattle so purchased to form a herd to be held in common by the Crow tribe. All cattle sold from said herd shall be paid for in cash, and the net proceeds of such sale shall constitute a fund to be known as the Crow herd fund. When said fund shall exceed the sum of fifteen thousand dollars, it shall be the duty of the Indian agent, and he is
- Herd fund.

hereby required, to apportion to each Indian entitled to the annual annuity provided for in section eighth the sum of five dollars, to be paid in cash under such rules and regulations as the Secretary of the Interior may prescribe.

Tenth. That when each object for which a specific appropriation has been made in this agreement shall have been fully carried out and completed, then the balance remaining of such appropriation shall constitute a fund to be expended for the benefit of the Crow tribe in such manner as the Secretary of the Interior may determine.

Eleventh. That all lands upon that portion of the reservation to be herein ceded which, prior to the date of this agreement, have been allotted in severalty to Indians of the Crow tribe shall be retained and enjoyed by them: *Provided, however,* That such Indians shall have the right at any time within three years to surrender his or her allotment, and select a new allotment within the retained reservation upon the same terms and conditions as were prescribed in selecting the first allotment.

*It is further provided,* That every Indian who shall surrender an allotment within the time specified, that has improvements upon it, shall have like improvements made for him upon the new allotment, and for this purpose the sum of five thousand dollars, or so much of it as may be necessary, is hereby appropriated and set apart.

Twelfth. It is further provided, in accordance with provisions of Article VI of the treaty of May seventh, Anno Domini eighteen hundred and sixty-eight, that this cession of lands shall not be construed to deprive without his or her consent, any individual Indian of the Crow tribe of his or her right to any tract of land selected by him or her in conformity with said treaty, or as provided by the agreement approved by Congress April eleven, Anno Domini eighteen hundred and eighty-two; and it is further provided that in ratifying this agreement the Congress of the United States shall cause all such lands to be surveyed and certificates duly issued for the same to said Indians, as provided in the treaty of May seventh, eighteen hundred and sixty-eight, before said ceded portion of the reservation shall be opened for settlement.

Thirteenth. It is a condition of this agreement that it shall not be binding upon either party until ratified by the Congress of the United States, and when so ratified that said cession of lands so acquired by the United States shall not be opened for settlement until the boundary lines set forth and described in this agreement have been surveyed and definitely marked by suitable permanent monuments, erected every half mile, wherever practicable, along the entire length of said boundary line.

Fourteenth. That the sum of five thousand dollars, or so much thereof as may be necessary, is hereby appropriated and set apart to pay the expenses of twelve Crow chiefs and one interpreter to visit the President of the United States at Washington, to consult with him for the benefit of the Crow tribe, at such time as the President may determine, within one year from the date of this agreement.

Fifteenth. That all existing provisions of the treaty of May seventh Anno Domini eighteen hundred and sixty-eight, and the agreement approved by act of Congress dated April eleventh, eighteen hundred and eighty-two, shall continue in force.

Done at Crow Agency, Montana, this eighth day of December, A. D. eighteen hundred and ninety.

SEC. 33. That the sum of seven thousand five hundred dollars, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the survey of the boundary line between the Crow Reservation and the lands ceded by said agreement, as stipulated in section fourteen thereof, and for the survey of lands selected by members of the Crow tribe of Indians under the provisions of article six of the treaty between the United States and the Crow Indians, concluded May seventh, eighteen hundred and sixty-eight, or under the provisions of the act approved April eleventh, eighteen hundred and eighty-two, entitled "An act to accept and ratify the agreement submitted by the Crow Indians of Montana for the sale of a portion of their reservation in said Territory, and for other purposes, and to make the necessary appropriations for carrying out the same." And certificates shall be issued for such selections under said article, as required by section twelve of the foregoing agreement.

SEC. 34. That whenever any of the lands acquired by the agreement with said Crow Indians hereby ratified and confirmed shall by operation of law or the proclamation of the President of the United States be open to settlement, they shall, except mineral lands, be disposed of to actual settlers only, under the provisions of the homestead laws, except section twenty-three hundred and one of the Revised Statutes, which shall not apply; *Provided, however,* That each settler, under and in accordance with the provisions of said homestead laws, shall, before receiving a patent for his homestead, pay to the United States for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry the sum of one dollar and fifty cents for each acre thereof one half of which shall be paid within two years; and any person otherwise qualified who has attempted to, but for any cause failed to secure a title in fee to a homestead under existing law, or who made entry under what is known as the commuted provision of the homestead law, shall be qualified to make a homestead entry upon any of said lands in conformity with the provisions of this section. That any person who may be entitled to the privilege of selecting land in severalty under the provisions of article six of the treaty of May seventh, eighteen hundred and sixty-eight, with the Crow Indians, and which provisions were continued in force by the agreement with said Indians ratified and confirmed by the act of Congress, approved April eleventh, eighteen hundred and eighty-two, or any other act or treaty, shall have the right for a period of sixty days to make such selections in any part of the territory by said agreement ceded, and such locations are hereby confirmed: *Provided, further,* That all white persons who located upon said Crow Reservation by reason of an erroneous survey of the boundary and were afterwards allowed to file upon their location in the United States Land Office, shall have thirty days in which to renew their filings, and their locations are hereby confirmed, and that in all cases where claims were located under the mining laws of the United States, and such location was made prior to December first eighteen hundred and ninety, by a locator qualified therefor who believed that he or she was so locating on lands outside the Crow Indian Reservation, such locator shall be allowed thirty days within which to re-locate the said mining claims so theretofore located by them, within the limits of the ceded portion of said Crow Indian Reservation, and upon such re-location such proceedings shall be had as are conformable to law and in accordance with the provisions of this act.

SEC. 35. That whenever under and by reason of the provisions herein contained, ratifying and confirming agreements with any Indian tribe, the right is reserved to any religious society or organization to purchase lands the subject of such agreement, the price and time and terms of payment thereof may be fixed by the Secretary of the Interior, but not less than that at which the other lands subject to said agreement are sold for.

SEC. 36. That the school lands reserved in the Territory of Oklahoma by this and former acts of Congress, may be leased for a pe-

riod not exceeding three years for the benefit of the school fund of said Territory by the governor thereof, under regulations to be prescribed by the Secretary of the Interior.

SEC. 37. That before any lands in Oklahoma are open to settlement it shall be the duty of the Secretary of the Interior to divide the same into counties which shall contain as near as possible not less than seven hundred square miles in each county. In establishing said county line the Secretary is hereby authorized to extend the lines of the counties already located so as to make the area of said counties equal, as near as may be, to the area of the counties provided for in this act. At the first election for county officers the people of each county may vote for a name for each county, and the name which receives the greatest number of votes shall be the name of such county: *Provided further*, That as soon as the county lines are designated by the Secretary he shall reserve not to exceed one-half section of land in each county, to be located near the center of said county, for county seat purposes, to be entered under sections twenty-three hundred and eighty-seven and twenty-three hundred and eighty-eight of the Revised Statutes.

Division of Oklahoma lands into counties.

Naming counties.

*Proviso.*

County seats reserved.

SEC. 38. No provision for settlement on or sale of the lands in the various agreements hereinbefore mentioned shall apply to sections sixteen and thirty-six thereon, which land in the States are hereby granted to the State in which they are situated, for the support of the common schools of such State under the limitations prescribed by law, and such sections in the Territories of the United States are reserved from occupancy, entry, or sale, under any land law of the United States; but this provision shall not apply to mineral land which may be disposed of under the laws applicable thereto.

Sections 16 and 36 reserved for schools, etc.

Mineral lands.

Approved, March 3, 1891.

CHAP. 556.—An act granting to the Missoula and Northern Railroad Company the right of way through the Flathead Indian Reservation, in the State of Montana.

March 3, 1891.

26 Stats., p. 1091.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the right of way is hereby granted, as hereinafter set forth, to the Missoula and Northern Railroad Company, a corporation organized and existing under the laws of the State of Montana, for the construction, operation, and maintenance of its railroad through the lands set apart for the use of the Flathead Indians, commonly known as the Flathead Indian Reservation, said railroad line beginning at a point at or near the mouth of Jocko River, on the Northern Pacific Railroad, in the county of Missoula, State of Montana, and running thence by the most practicable route to the northern line of the said State of Montana, and more particularly described, as far as extending through said Indian reservation, as beginning at or near the aforesaid mouth of Jocko River, and running thence in a northerly direction to the southerly end of Flathead Lake, and thence by the most practicable route, either to the east or west of said lake in a northerly direction to the said northern boundary of Montana.

Missoula and Northern Railroad Company granted right of way through Flathead Indian Reservation, Mont.

Location.

SEC. 2. That the right of way hereby granted to said railroad company shall be seventy-five feet in width on each side of the central line of said railroad as aforesaid, and said company shall also have the right to take from lands adjacent to the line of said road material, stone, earth, and timber necessary for the construction thereof; also ground adjacent to said right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, not to exceed in amount three hundred feet in width and three thousand feet in length for each station, to the extent of one station for each ten miles of said road.

Width.

Stations, etc.

SEC. 3. That it shall be the duty of the Secretary of the Interior to agree with the Flathead and Confederated tribes on the compensation to be paid them for such right of way, and the time and manner for the payment thereof, but no right of way of any kind shall vest in said railroad company in or to any part of the right of way or station grounds herein provided for until plats thereof,

Compensation

made upon actual survey for the definite location of such road, and including the points for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, shall be filed with and approved by the Secretary of the Interior, which approval shall be made in writing and be open for the inspection of any party interested therein, and until the compensation agreed on has been paid; and the surveys, construction, and operation of such railroad shall be conducted with due regard for the rights of the Indians and in accordance with such rules and regulations as the Secretary of the Interior may make to carry out the provisions of this act: *Provided*, That the right of way herein granted shall be lost and forfeited by said company unless the road is constructed and in running order through said reservation within three years from the passage of this act: *Provided further*, That when said railroad shall have been constructed to the south end of said Flathead Lake said company may establish a temporary terminal station on the shore of said lake, on grounds not exceeding three thousand feet square, and, pending completion of said railroad, may utilize the waters of said Flathead Lake for transportation purposes.

Annette Islands reserved for Metlakahtla Indians.

\* \* \* \* \*

**SEC. 15.** That until otherwise provided by law the body of lands known as Annette Islands, situated in Alexander Archipelago in Southeastern Alaska, on the north side of Dixon's entrance, be, and the same is hereby, set apart as a reservation for the use of the Metlakahtla Indians, and those people known as Metlakahtlans who have recently emigrated from British Columbia to Alaska, and such other Alaskan natives as may join them, to be held and used by them in common, under such rules and regulations, and subject to such restrictions, as may be prescribed from time to time by the Secretary of the Interior.

(p. 1102.)

Disposal of land of Dakota Central Railroad Company.

Vol. 25, p. 893.

For town sites,

\* \* \* \* \*

**SEC. 22.** That the section of land reserved for the benefit of the Dakota Central Railroad Company on the west bank of the Missouri River, at the mouth of Bad River, as provided by section sixteen of "An act to divide a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations and to secure the relinquishment of the Indian title to the remainder and for other purposes," approved March second, eighteen hundred and eighty-nine, shall be subject to entry under the town-site law only.

SEC. 23. That in all cases where second entries of land on the Osage Indian trust and diminished reserve lands in Kansas, to which at the time there were no adverse claims, have been made and the law complied with as to residence and improvement, said entries be, and the same are hereby, confirmed, and in all cases where persons were actual settlers and residing upon their claims upon said Osage Indian trust and diminished reserve lands in the State of Kansas on the ninth day of May, eighteen hundred and seventy-two, and who have made subsequent preëmption entries either upon public or upon said Osage Indian trust and diminished reserve lands, upon which there were no legal prior adverse claims at the time, and the law complied with as to settlement, said subsequent entries be, and the same are hereby, confirmed.

Entries on  
Osage lands  
confirmed.

SEC. 24. That the President of the United States may, from time to time, set apart and reserve, in any State or Territory having public land bearing forests, in any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations, and the President shall, by public proclamation, declare the establishment of such reservations and the limits thereof.

Forest reser-  
vations.

BY THE PRESIDENT OF THE UNITED STATES OF  
AMERICA.

## A PROCLAMATION.

October 23, 1890.

Preamble.  
Vol. 22, p. 35.

Whereas, it is provided in the Act of Congress, entitled "An act to extend the Northern boundary of the State of Nebraska," approved March twenty-eighth, eighteen hundred and eighty-two, "That the northern boundary of the State of Nebraska shall be, and hereby is, subject to the provisions hereinafter contained, extended so as to include all that portion of the Territory of Dakota lying south of the forty-third parallel of north latitude and east of the Keyapaha River and west of the main channel of the Missouri River; and when the Indian title to the lands thus described shall be extinguished, the jurisdiction over said lands shall be, and hereby is, ceded to the State of Nebraska, and subject to all the conditions and limitations provided in the act of Congress admitting Nebraska into the Union, and the northern boundary of the State shall be extended to said forty-third parallel as fully and effectually as if said lands had been included in the boundaries of said State at the time of its admission to the Union; reserving to the United States the original right of soil in said lands and of disposing of the same: *Provided*, That this act, so far as jurisdiction is concerned, shall not take effect until the President shall, by proclamation, declare that the Indian title to said lands has been extinguished, nor shall it take effect until the State of Nebraska shall have assented to the provisions of this act; and if the State of Nebraska shall not by an act of its legislature consent to the provisions of this act within two years next after the passage hereof, this act shall cease and be of no effect:" and

Vol. 25, p. 892.

Whereas, by section thirteen of the act entitled "An act to divide a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations and to secure the relinquishment of the Indian title to the remainder, and for other purposes," approved March second, eighteen hundred and eighty-nine, it is provided that "When the allotments to the Ponca tribe of Indians and to such other Indians as allotments are provided for by this act shall have been made upon that portion of said reservation which is described in the act entitled 'An act to extend the northern boundary of the State of Nebraska,' approved March twenty-eighth, eighteen hundred and eighty-two, the President shall, in pursuance of said act, declare that the Indian title is extinguished to all lands described in said act not so allotted hereunder, and thereupon all of said land not so allotted and included in said act of March twenty-eighth, eighteen hundred and eighty-two, shall be open to settlement as provided in this act: *Provided*, That the allotments to Ponca and other Indians authorized by this act to be made upon the land described in the said act entitled 'An act to extend the northern boundary of the State of Nebraska,' shall be made within six months from the time this act shall take effect;" and

Whereas, the State of Nebraska, by an act of its legislature, approved May twenty-third, eighteen hundred and eighty-two, entitled "An act declaring the assent of the State of Nebraska to an act of Congress of the United States, entitled 'An act to extend the

northern boundary of the State of Nebraska, approved March 28, 1832," assented to and accepted the provisions of said act of Congress, approved March twenty-eighth, eighteen hundred and eighty-two; and

Whereas, allotments have been made to the Ponca tribe of Indians, under and in accordance with the provisions of said section thirteen, of the act of March second, eighteen hundred and eighty-nine, and no other Indians having selected or applied for allotments upon that portion of the reservation of the Sioux Nation of Indians described in the act of March twenty-eighth, eighteen hundred and eighty-two, aforesaid, and the six months limit of time within which said allotments were authorized to be made having expired on the tenth day of August, eighteen hundred and ninety;

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested by the act (section thirteen) of March second, eighteen hundred and eighty-nine, aforesaid, and in pursuance of the act of March twenty-eighth, eighteen hundred and eighty-two, aforesaid, do hereby declare that the Indian title is extinguished to all lands described in said act of March twenty-eighth, eighteen hundred and eighty-two, not allotted to the Ponca tribe of Indians as aforesaid and shown upon a schedule, in duplicate, of allotments made and certified jointly, by George P. Litchfield, U. S. Special Agent, and James E. Helms, U. S. Indian Agent, July thirty-first, eighteen hundred and ninety, and approved by the Acting Commissioner of Indian Affairs, October fourteenth, eighteen hundred and ninety, and by the Acting Secretary of the Interior, October twenty-second, eighteen hundred and ninety, one copy of which schedule of allotments is now on file in the Office of the Commissioner of Indian Affairs and the other in the Office of the Commissioner of the General Land Office, Department of the Interior.

Be it known, however, that there is hereby reserved from entry or settlement, that tract of land now occupied by the Agency and school buildings of the old Ponca Agency, to wit: The south half of the south-east quarter of section twenty-six and the south half of the south-west quarter of section twenty-five, all in township thirty-two north, range seven west of the sixth principal meridian.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this twenty third (23d) day of October, in the year of our Lord one thousand eight hundred and ninety, and of the Independence of the United States the one hundred and fifteenth.

BENJ. HARRISON.

By the President:

ALVEY A. ADEE,  
*Acting Secretary of State.*

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

### A PROCLAMATION.

Whereas, Pursuant to an act of Congress, approved May fifteenth, eighteen hundred and eighty-six, entitled "An act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various tribes for the year ending June thirtieth, eighteen hundred and eighty-seven, and for other purposes," an agreement was entered into on the fourteenth day of December, eighteen hundred and eighty-six, by John V. Wright, Jared W. Daniels, and Charles F. Larrabee, commissioners on the part of the United States, and the Arickaree, Gros Ventre, and Mandan tribes of Indians, residing on the Fort Berthold reservation, in the then Territory of Dakota, now State of North Dakota, embracing a majority of all the male adult members of said tribes; and

Whereas, By an act of Congress, approved March third, eighteen

hundred and ninety-one, entitled "An act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes for the year ending June thirtieth, eighteen hundred and ninety-two, and for other purposes," the aforesaid agreement of December fourteenth, eighteen hundred and eighty-six, was accepted, ratified, and confirmed, except as to article six thereof, which was modified and changed on the part of the United States so as to read as follows:

"That the residue of lands within said diminished reservation, after all allotments have been made as provided in article three of this agreement, shall be held by the said tribes of Indians as a reservation;" and

Whereas, It is provided in said last above-mentioned act "that this act shall take effect only upon the acceptance of the modification and changes made by the United States as to article six of the said agreement by the said tribes of Indians in manner and form as said agreement was assented to, which said acceptance and consent shall be made known by proclamation by the President of the United States, upon satisfactory proof presented to him that the said acceptance and consent have been obtained in such manner and form;" and

Whereas, Satisfactory proof has been presented to me that the acceptance of, and consent to, the provisions of the act last named by the different bands of Indians residing on said reservation, have been obtained in manner and form as said agreement of December fourteenth, eighteen hundred and eighty-six, was assented to:

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested, do hereby make known and proclaim the acceptance of, and consent to, the modification and changes made by the United States as to Article six of said agreement, by said tribe of Indians as required by the act, and said act is hereby declared to be in full force and effect, subject to all provisions, conditions, limitations, and restrictions therein contained.

All persons will take notice of the provisions of said act, and of the conditions and restrictions therein contained, and be governed accordingly.

I furthermore notify all persons to particularly observe that a certain portion of the said Fort Berthold reservation not ceded and relinquished by said agreement, is reserved for allotment to, and also as a reservation for, the said tribes of Indians; and all persons are, therefore, hereby warned not to go upon any of the lands so reserved, for any purpose or with any intent whatsoever, as no settlement or other right can be secured upon said lands, and all persons found unlawfully thereon will be dealt with as trespassers and intruders; and I hereby declare all the lands sold, ceded, and relinquished to the United States under said agreement, namely:

"All that portion of the Fort Berthold reservation, as laid down upon the official map of the" (then) "Territory of Dakota, published by the General Land Office in the year eighteen hundred and eighty-five, lying north of the forty-eighth parallel of north latitude, and also all that portion lying west of a north and south line six miles west of the most westerly point of the big bend of the Missouri River, south of the forty-eighth parallel of north latitude," open to settlement, and subject to disposal as provided in section twenty-five of the act of March third, eighteen hundred and ninety-one aforesaid. (26 Stats., p. 1035.)

In witness thereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this twentieth (20th) day of May, in the year of our Lord one thousand eight hundred and ninety-one, and of the independence of the United States the one hundred and fifteenth.

By the President:

*Acting Secretary of State.*

BENJ. HARRISON.

BY THE PRESIDENT OF THE UNITED STATES OF  
AMERICA:

## A PROCLAMATION:

Whereas, by a written agreement, made on the twelfth day of June, eighteen hundred and ninety, the Sac and Fox Nation of Indians, in the Territory of Oklahoma, ceded and conveyed to the United States of America all title or interest of said Indians in and to the lands particularly described in Article I of the agreement, except the quarter section of land on which the Sac and Fox Agency is located: and provided that the section of land now designated and set apart near the Sac and Fox Agency for a school and farm shall not be subject either to allotment or to homestead entry; that every citizen of said Nation shall have an allotment of land, in quantity as therein stated, to be selected within the tract of country so ceded, except in sections sixteen (16) and thirty-six (36) in each Congressional township, and except the Agency quarter section and section set apart for school and farm, as above mentioned, or other lands selected in lieu thereof; that when the allotments to the citizens of the Sac and Fox Nation are made, the Secretary of the Interior shall cause trust patents to issue therefor in the name of the allottees, and that as soon as such allotments are so made, and approved by the Department of the Interior, and the patents provided for issued, then the residue of said tract of country shall, as far as said Sac and Fox Nation is concerned, become public lands of the United States, and under such restrictions as may be imposed by law, be subject to white settlement; and

Whereas, by a certain other agreement with the Iowa tribe of Indians residing on the Iowa Reservation, in said Territory, made on the twentieth day of May, eighteen hundred and ninety, said tribe surrendered and relinquished to the United States all their title and interest in and to the lands of said Indians in said Territory, and particularly described in Article I of said agreement; and provided that each and every member of said tribe shall have an allotment of eighty acres of land upon said reservation, and upon the approval of such allotments by the Secretary of the Interior, that trust patents shall be issued therefor, and that there shall be excepted from the operation of said agreement, a tract of land, not exceeding ten acres in a square form, including the church and school house and grave-yard at or near the Iowa village, which shall belong to said Iowa tribe of Indians in common, subject to the conditions and limitations in said agreement expressed; that the chief of the Iowas may select an additional ten acres in a square form for the use of said tribe in said reservation, conforming in boundaries to the legal subdivisions of land therein, which shall be held by said tribe in common, subject to the conditions and limitations as expressed in relation thereto; and

Whereas, it is provided in the act of Congress approved February thirteenth, eighteen hundred and ninety-one (26 Stats. pp. 758, 759), section 7, accepting, ratifying, and confirming said agreements with the Sac and Fox Nation of Indians and the Iowa tribe of Indians, "That whenever any of the lands acquired by the agreements in this act ratified and confirmed, shall by operation of law or proclamation of the President of the United States, be open to settlement, they shall be disposed of to actual settlers only, under the provisions of the homestead laws, except section twenty-three hundred and one, which shall not apply: *Provided, however,* that each settler, under and in accordance with the provisions of said homestead laws, shall, before receiving a patent for his homestead, pay to the United States for the land so taken by him, in addition to the fees provided by law, the sum of one dollar and twenty-five cents for each acre thereof, and such person having complied with all the laws relating to such homestead settlement, may at his option receive a patent therefor at the expiration of twelve months from date of settlement upon said homestead, and any person otherwise qualified who has attempted to but for any cause failed to

secure a title in fee to a homestead under existing law, or who made entry under what is known as the commuted provision of the homestead law, shall be qualified to make a homestead entry upon any of said lands;" and

Whereas, by a certain other agreement with the Citizen Band of Pottawatomie Indians, in said Territory, made on the twenty-fifth day of June, eighteen hundred and ninety, the said band of Indians ceded and absolutely surrendered to the United States all their title and interest in and to the lands in said Territory, and particularly described in Article I of said agreement, and provided that all allotments of land theretofore made, or then being made or to be made to members of said Citizen Band of Pottawatomie Indians under the provisions of the general allotment act approved February eighth, eighteen hundred and eighty-seven, shall be confirmed; that in all allotments to be thereafter made no person shall have the right to select his or her allotment in sections sixteen and thirty-six in any Congressional township; nor upon any land heretofore set apart in said tract of country for any use by the United States, or for schools, school-farm, or religious purposes; nor shall said sections sixteen and thirty-six be subject to homestead entry, but shall be kept and used for school purposes; nor shall any lands set apart for any use of the United States, or for school, school-farm, or religious purposes, be subject to homestead entry, but shall be held by the United States for such purposes, so long as the United States shall see fit to use them; and further, that the south half of section seven, and the north half of section eighteen, in township six north, range five east, theretofore set apart by a written agreement between said band of Indians and certain Catholic Fathers, for religious, school, and farm purposes, shall not be subject to allotment or homestead entry, but shall be held by the United States for the Sacred Heart Mission, the name under which said association of Fathers are conducting the church, school, and farm on said lands; and

Whereas, by a certain agreement with the Absentee Shawnee Indians, in said Territory, made on the twenty-sixth day of June, eighteen hundred and ninety, said last-named Indians ceded, relinquished, and surrendered, to the United States, all their title and interest in and to the lands in said territory, and particularly described in Article I of said agreement, provided that all allotments of land theretofore made, or then being made or to be made to said Absentee Shawnees under the provisions of the general allotment act approved February eighth, eighteen hundred and eighty-seven, shall be confirmed; that in all allotments to be thereafter made, no person shall have the right to select his or her allotment in sections sixteen and thirty-six in any Congressional township; nor in any land heretofore set apart in said tract of country for any use by the United States, or for school, school-farm, or religious purposes; nor shall said sections sixteen and thirty-six be subject to homestead entry, but shall be held by the United States for such purposes so long as the United States shall see fit to use them; and

Whereas, it is provided in the Act of Congress, accepting, ratifying, and confirming said agreements with the Citizen Band of Pottawatomie Indians and the Absentee Shawnee Indians, approved March third, eighteen hundred and ninety-one (26 Stats. pp. 989 to 1044), section 16, "That whenever any of the lands acquired by either of the \* \* \* foregoing agreements respecting lands in the Indian or Oklahoma Territory shall by operation of law or proclamation of the President of the United States be open to settlement they shall be disposed of to actual settlers only, under the provisions of the homestead and townsite laws (except section twenty-three hundred and one of the Revised States [Statutes] of the United States, which shall not apply): *Provided, however,* that each settler on said lands shall before making a final proof and receiving a certificate of entry, pay to the United States for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry, the sum of one dollar and fifty cents per acre, one-half of which shall be paid within two years; but the rights of honorably discharged Union

soldiers and sailors as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States shall not be abridged except as to the sum to be paid as aforesaid, and all the lands in Oklahoma are hereby declared to be agricultural lands, and proof of their non-mineral character shall not be required as a condition precedent to final entry;" and

Whereas, allotments of land in severalty to said Sac and Fox Nation, said Iowa tribe, said Citizen Band of Pottawatomies, and said Absentee Shawnee Indians have been made and approved, and provisional patents issued therefor, in accordance with law and the provisions of the before-mentioned agreements with them respectively, and an additional ten acres of land has been selected for the use of said Iowa tribe to be held by said tribe in common, in accordance with the provisions of supplemental article XII of the agreement with them; and

Whereas, the lands acquired by the four several agreements hereinbefore mentioned have been divided into counties, by the Secretary of the Interior as required by said last-mentioned act of Congress before the same shall be open to settlement, and lands have been reserved for county-seat purposes, as therein required;

Whereas, it is provided by act of Congress for temporary government of Oklahoma, approved May 2, 1890, that there shall be reserved public highways four rods wide between each section of land in said Territory, the section lines being the centers of said highways, but no deduction shall be made from cash payments from each quarter section by reason thereof; and

Whereas, all the terms, conditions, and considerations required by said several agreements made respectively with said tribes of Indians hereinbefore mentioned, and of the laws relating thereto, precedent to opening said several tracts of land to settlement, have been as I hereby declare, provided for, paid, and complied with:

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested by the Statutes hereinbefore mentioned, also an act of Congress entitled "An act making appropriations for the current and contingent expenses of the Indian Department, and fulfilling treaty stipulations with various Indian tribes for the year ending June thirtieth, eighteen hundred and ninety, and for other purposes," approved March second, eighteen hundred and eighty-nine, and by other the laws of the United States, and by said several agreements, do hereby declare and make known that all of the lands acquired from the Sac and Fox Nation of Indians, the Iowa tribe of Indians, the Citizen Band of Pottawatomie Indians, and the Absentee Shawnee Indians, by the four several agreements aforesaid, saving and excepting the lands allotted to the Indians as in said agreements provided, or otherwise reserved in pursuance of the provisions of said agreements and the said acts of Congress ratifying the same, and other, the laws relating thereto, will, at and after the hour of twelve o'clock, noon (central standard time), the day of this the present month of September, and not before, be opened to settlement, under the terms of and subject to all the conditions, limitations, reservations, and restrictions contained in said agreements, the Statutes above specified, and the laws of the United States applicable thereto.

The lands to be so opened to settlement are for greater convenience particularly described in the accompanying schedule, entitled "Schedule of lands within the Sac and Fox, Iowa, Pottawatomie (and Absentee Shawnee) Reservations, in Oklahoma Territory, opened to settlement by proclamation of the President dated September 18, 1891," and which schedule is made a part hereof.

Each entry shall be in square form as nearly as practicable, and no other lands in the Territory of Oklahoma are opened to settlement under this proclamation or the agreements ratifying the same.

Notice, moreover, is hereby given that it is by law enacted that until said lands are opened to settlement by proclamation no person shall be permitted to enter upon and occupy the same, and no person violating this provision shall be permitted to enter any of said

lands, or acquire any right thereto, the officers of the United States will be required to enforce this provision.

And further notice is hereby given that it has been duly ordered that the lands in the Territory of Oklahoma mentioned and included in this Proclamation be, and the same are attached to the eastern and Oklahoma land districts in said Territory, severally, as follows:

1. All that portion of the Territory of Oklahoma, commencing at the southwest corner of township 14 north of range 1, east; thence east on range line between ranges 13 and 14 to the west boundary of the Creek country; thence north on said boundary line to the middle of main channel of the Cimarron River; thence up the Cimarron River, following the main channel thereof to the Indian Meridian; thence south on said meridian line to the place of beginning is attached to the eastern land district in Oklahoma Territory, the office of which is now located at Guthrie.

2. All that portion of said Territory commencing at the northwest corner of township 13 north, range 1 east; thence south on Indian Meridian to the north fork of the Canadian River; thence west up said river to the west boundary of the Pottawatomie Indian Reservation, according to Morrill's survey; thence south following the line as run by O. T. Morrill under his contract of September 3, 1872, to the middle of the main channel of the Canadian River; thence east down the main channel of said river to the west boundary of the Seminole Indian Reservation; thence north with said west boundary to the north fork of the Canadian River; thence east down said north fork to the west boundary of the Creek Nation; thence north with said west boundary to its intersection with the line between townships 13 and 14 north of the Indian base; thence west on town line between townships 13 and 14 north to the place of beginning is attached to the Oklahoma land district in said Territory, the office of which is now located at Oklahoma City.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this eighteenth day of September, in the year of our Lord one thousand eight hundred and ninety-one, and of the Independence of the United States the one hundred and sixteenth.

By the President:

WILLIAM F. WHARTON,  
*Acting Secretary of State.*

## ACT OF THE STATE OF NORTH CAROLINA, RELATIVE TO THE EASTERN BAND OF CHEROKEE INDIANS.

[See laws of North Carolina, p. 889.]

AN ACT incorporating the Eastern Band of Cherokee Indians and for other purposes.

SECTION 1. That the North Carolina or Eastern Cherokee Indians, resident and domiciled in the counties of Jackson, Swain, Graham and Cherokee, be and the same are hereby created and constituted a body politic and corporate under the name, style and title of the Eastern Band of Cherokee Indians, with all the rights, franchises, privileges and powers incident and belonging to corporations under the laws of the State of N. C.

SECTION 2. That the Eastern Band of Cherokee Indians by that name and style be and they are hereby authorized and empowered to sue and plead in law or in equity in all courts of the land touching and concerning all the property of whatever nature, held in common by the said North Carolina, or Eastern Cherokee Indians, in the said counties and that the said Eastern Band of Cherokee Indians by that name and style can and may be sued and impleaded in all the courts of the land touching and concerning the said property held as aforesaid in the said counties.

SECTION 3. That in all cases where the State of North Carolina has heretofore issued to any person or persons for any of the land held as aforesaid, by the said Eastern Cherokee Indians and under whom the said Indians claim title as also all deeds made by the Commissioners of the State for what is known as Cherokee land to any person or persons for any of the land held as aforesaid in said counties by said Eastern Cherokee Indians and under whom the said Eastern Cherokee Indians claim title, such grants and deeds are hereby declared valid as against the State.

Ratified 11th March, 1889.

---

LAWS OF IOWA, EXTRA SESSION, 1856.

[Chap. 30—Indians.]

AN ACT permitting certain Indians to reside within the State.

SECTION 1. *Be it enacted by the General Assembly of the State of Iowa*, That the consent of the State is hereby given that the Indians now residing in Tama County, known as a portion of the Sacs and Foxes, be permitted to remain and reside in said State, and that the Governor be requested to inform the Secretary of War thereof, and urge on said Department the propriety of paying said Indians their proportion of the annuities due or to become due to said tribe of Sac and Fox Indians.

SEC. 2. That the sheriff of said county shall, as soon as a copy of this law is filed in the office of the county court, proceed to take the census of said Indians now residing there, giving their names and sex, which said list shall be filed and recorded in said office; the persons whose names are included in said list shall have the privileges granted under this act, but none others shall be considered as embraced within the provisions of said act.

SEC. 3. This act shall take effect from and after its publication in the Iowa Capital Reporter and Iowa City Republican, published at Iowa City.

Approved, July 15, 1856.

I certify that the foregoing act was published in the Iowa Capital Reporter July 30, and in the Iowa City Republican July 23, 1856.

GEO. W. McCLEARY,  
*Secretary of State.*

---

EXECUTIVE ORDERS RELATING TO INDIAN RESERVATIONS ISSUED SINCE FEBRUARY 19, 1889.

CALIFORNIA.

EXECUTIVE MANSION, *October 16th, 1891.*

It is hereby ordered that the limits of the Hoopa Valley Reservation in the state of California, a reservation duly set apart for Indian purposes, as one of the Indian reservations authorized to be set apart, in said State, by Act of Congress approved April 8, 1864, (13 Stats. 39), be and the same are hereby extended so as to include a tract of country one mile in width on each side of the Klamath River, and extending from the present limits of the said Hoopa Valley reservation to the Pacific Ocean; *Provided, however*, That any tract or tracts included within the above described boundaries to which valid rights have attached under the laws of the United States are hereby excluded from the reservation as hereby extended.

BENJ. HARRISON.

## ORDER OF SECRETARY OF THE INTERIOR, DECEMBER 4, 1888, DEFINING BOUNDARIES OF UMATILLA RESERVATION, OREGON.

Whereas by the act of March 3, 1885 (23 Stat. 340), entitled "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation, in the State of Oregon, and granting patents therefor, and for other purposes," it is provided that "before any allotments are made, a Commission of three disinterested persons to be appointed by the President shall go upon said reservation and ascertain as near as may be the number of Indians who will remain on said reservation, and who shall be entitled to take lands in severalty thereon, and the amount of land required to make the allotments; and thereupon said Commission shall determine and set apart so much of said reservation as shall be necessary to supply agricultural lands for allotments in severalty, together with sufficient pasture and timber lands for their use, and six hundred and forty acres for an industrial farm and school, not exceeding one hundred and twenty thousand acres in the aggregate for all purposes; and the same shall be in as compact a form as possible. Said Commission shall report to the Secretary of the Interior the number and classes of persons entitled to allotments, as near as they may be able to, the metes and bounds of the tract by them selected for said Indians, and designate the particular tract selected for an industrial farm and school; and if the same shall be approved by the Secretary of the Interior, the said tract shall thereafter constitute the reservation for said Indians, and within which the allotments herein provided for shall be made;" and

Whereas in pursuance of this provision of law, a Commission was appointed by the President on August 13, 1887, which Commission proceeded under instructions to the said Umatilla Reservation, secured the consent of the Indians to the provisions of the law, took the required census of the Indians, and selected a tract for a diminished reservation containing in the aggregate 119,364 acres, of which, according to the census of the Indians on the reservation and the provisions of the law for making allotments, 74,800 acres were required for allotment to the Indians for agricultural purposes; and

Whereas upon surveying said lands, it was found and reported that the diminished reservation so selected by the commission and reported to the Department contained about 10,000 acres less of agricultural lands than was required to make allotments to the Indians as provided in the law; whereupon it became necessary to appoint a second Commission, to readjust the boundaries for the diminished reservation, so as to bring within their limits a sufficient quantity of agricultural land to meet the requirements of the law, which second Commission, appointed by the President on December 22, 1887, made its report, describing the metes and bounds of the tract of land selected and defined by it, which, upon examination of said report and the map accompanying it, was found to be a tract of land so irregular in its shape and outline, as would make it difficult for the Indians living upon it and the white settlers occupying lands adjoining it on the outside to know certainly and exactly the location of the boundaries of the diminished reservation; and in said report it is stated by the Commission that it was not able to include as much timber land as was thought to be necessary within the diminished reservation, without exceeding the limit of its area as fixed by the law, and that while the Indians are some better satisfied with the tract as selected and defined by it for the diminished reservation than they were with the tract selected and defined by the former Commission, there remained considerable dissatisfaction because certain mountain and timber lands lying in the eastern part of the existing reservation were not included within the boundaries of the tract selected for the diminished reservation; and,

Whereas in view of the facts as thus shown, it was deemed necessary by the Department to submit the matter to Congress and

to request that the act of March 3, 1885, be so amended as to authorize and empower the Secretary of the Interior to select, prescribe and define a tract of land for the diminished reservation which will contain a sufficient quantity of land to meet the needs and desires of the Indians and be in such regular shape in outline as that its boundaries may be certainly known; and

Whereas it is provided in the eighth section of the act of October 17, 1888 (Public No. 320), amending the act entitled "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation in the State of Oregon, and granting patents therefor, and for other purposes, approved March 3, 1885" (23 Stat., 341), that "the Secretary of the Interior shall set apart such further quantity of land of the existing Umatilla Reservation, in addition to the one hundred and twenty thousand acres thereof, required by said act to be selected, designated, and reserved for the uses and purposes of said Indians, as therein provided, as shall enable him to fix, define, and establish the metes and bounds of said reserved tract in a satisfactory manner, and to include therein such portions as he may deem advisable of certain lands in the eastern part of the reservation, which the Indians desire shall be reserved for them; and the said Secretary is authorized by order to establish such diminished reservation accordingly; and in all other respects said act shall continue and remain in force."

Now, therefore, it is hereby ordered, that so much of the existing Umatilla Indian Reservation in the State of Oregon, as lies within the following-described metes and bounds, is hereby declared to be, and is, established as the diminished reservation required by the act of March 3, 1885, as amended by the act of October 17, 1888, to be selected and set apart to constitute the reservation for the confederated bands of Cayuse, Walla Walla, and Umatilla Indians for the purposes specified in the said act of March 3, 1885:

Beginning at the quarter-section corner of the west boundary of section 6, township 2 north, range 33 east; thence south on the township line to the southwest corner of section 31, township 1 north, range 33 east; thence west on the base line to the northwest corner of township 1 south, range 33 east; thence south on the township line to the southwest corner of section 6, township 1 south, range 33 east; thence east on said section line between sections 6 and 7, 5 and 8, 4 and 9, 3 and 10, 2 and 11, 1 and 12, to the southeast corner of section 1, township 1 south, range 33 east; thence north on the range line to the northeast corner of said township 1 south, range 33 east, on the base line; thence west on the base line to the southeast corner of township 1 north, range 33 east; thence north on the township line to the southwest corner of section 7, township 1 north, range 34 east; thence east on the section lines between sections 7 and 18, 8 and 17, 9 and 16, 10 and 15, 11 and 14, 12 and 13, township 1 north, range 34 east, and sections 7 and 18, 8 and 17, 9 and 16, 10 and 15, 11 and 14, township 1 north, range 35 east, to the present east boundary of the original Umatilla Reservation; thence north 20 degrees east along said boundary to the headwaters of the south fork of Wild Horse Creek or the northeast corner of the original Umatilla Reservation; thence down the middle of Wild Horse Creek to the point where said creek is intersected by the north line of section 32, township 4 north, range 35 east; thence west on a line between sections 29 and 32, 30 and 31, of township 4 north, range 35 east, and between sections 25 and 36 of township 4 north, range 34 east, to the northwest corner of section 36, township 4 north, range 34 east; thence south on the west boundary of said section 36 to the southwest corner thereof; thence west on the township line to the northwest corner of section 2, township 3 north, range 34 east; thence south on the west boundary of said section 2 to the southwest corner thereof; thence west on the section line to the quarter-section corner between sections 3 and 10 of said township 3 north, range 34 east; thence south through the middle of section 10 to the quarter-section corner on the south boundary thereof; thence west on the line between sections 10 and 15 and 9 and 16 to the northwest corner of section 16; thence south on the section line between sections 16 and 17, 20 and 21, to the quarter-section

corner on the line between sections 20 and 21; thence west to the center of section 20; thence south to the quarter-section corner on the line between sections 20 and 29; thence west on the section line between sections 20 and 29, 19 and 30, to the northwest corner of section 30, in said township 3 north, range 34 east; thence south on the range line to the northwest corner of section 31 of said township; thence west between sections 25 and 36 of township 3 north, range 33 east, to the northwest corner of section 36; thence south on the section line to the southwest corner of section 36, township 3 north, range 33 east; thence west on the township line to the northwest corner of section 5, township 2 north, range 33 east; thence south between sections 5 and 6 to the quarter-section corner between sections 5 and 6; thence west through the middle of section 6 to the place of beginning.

WM. F. VILAS,  
*Secretary.*

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
*December 4, 1888.*

\* Weekly salary of teacher.

† One schoolhouse consumed by fire last winter.

## TRUST FUNDS AND TRUST LANDS.

The following statements show the transactions in the Indian trust funds and trust lands during the year ending October 31, 1891.

Statements A, B, C, D, E, and F show in detail the various stocks, funds in the Treasury to the credit of various tribes, and collections of interest. A statement is also given showing the condition of nominal State stocks enumerated in Table C.

A consolidated statement is given of all interest collected, and a statement of interest appropriated by Congress on nonpaying State stocks for the fiscal year ending June 30, 1891.

A statement also will be found showing the transactions arising on account of moneys derived from the sales of Indian lands, all being sufficiently in detail to enable a proper understanding of the subject.

*A.—List of names of Indian tribes for whom stock is held in trust by the Secretary of the Interior (Treasurer of the United States custodian), showing the amount standing to the credit of each tribe, the annual interest, the date of the treaty or law under which the investment was made, and the amount of abstracted bonds for which Congress has made no appropriation, and the annual interest on the same.*

Tribe.	Treaty or act.	Statutes at Large		Amount of stock.	Annual interest.	Amount of abstracted bonds.	Annual interest.
		Vol.	Page.				
Cherokee national fund.	Dec. 29, 1835	7	478	\$534,638.56	\$30,958.31	\$68,000.00	\$4,080.00
Cherokee school fund	Feb. 27, 1819	7	195	62,854.28	3,841.26	15,000.00	900.00
	Dec. 29, 1835	7	498				
Cherokee orphan fund	Dec. 29, 1835	7	478	22,223.26	1,333.40	-----	-----
	Feb. 14, 1873	17	462				
	Oct. 20, 1872	7	381

a In one or two deliveries, as the Indian agent may require.

b Monthly delivery.

c Quarterly deliveries.

d Two deliveries to be made from July 1 to November 1, 1891. One delivery in November sufficient to last until May 1, 1892; then one delivery in May or June sufficient to complete contract, making four deliveries in all. My cattle are well bred up and were raised adjoining the San Carlos reservation, where they are now ranging.

e As required from July 1 to October 1, then sufficient to last until May 1; during May and June as required.

f As required to October 1, then sufficient until May 1, then May and June as required. All beef to be from Colorado native cattle.

g Monthly deliveries. All beef to be from Colorado native cattle.

h Weekly deliveries, and in quantities to suit the Department, at Pine River, Colo., or in case of removal to Blue Mountains, Utah, at their agency there. Beef raised in Colorado.

i Provided the specifications mean for a delivery in July and a second delivery in September or October, and no delivery thereafter, but if this specification means weekly deliveries, then the price here bid is \$3.25.

j Monthly deliveries as required.

k Deliveries as required to October 1, then sufficient to last to May, and in May and June as required.

l Deliveries weekly as the service may require, or in four deliveries, as required, from July 1 to October 20, 1891. All cattle raised and wintered north of the south line of Kansas.

m Weekly deliveries.

n Monthly, or from July 1 to November 1, delivered in from two to four bunches, as may be called upon.

awards were made on comparison of samples which accompanied bids.]

a Delivered as required by Department. If delivered as required till last of November, then monthly deliveries till May 1, then as required till June 30, the price will be reduced 10 cents per 100 pounds.

b As required by the Department.

c Monthly.

d As required to October 1; then sufficient to last until May 1. During May and June as required.

e As required to October 1; then the balance, including increase.

\* The eight bids for delivery are made with the understanding that the bid accepted must be for all cattle according to specifications.

f As required from July 1 to October 1; then sufficient to last until May 1; during May and June as required. Born and raised within radius of 200 miles from proposed place of delivery, and are all graded stock of Durham shorthorn blood. (1,000,000 only.)

g As required from July 1 to October 1; then sufficient to last until May 1; during May and June as required. Variety known as Texas cattle, that have been at least 12 months in succession prior to July 1 next north of the south line of Kansas. (1,000,000 only.)

† All cattle having been at least 12 months in succession prior to July 1 next north of the south line of Kansas.

k Deliveries to fill requirements from July 1 to May 1, and no more than two deliveries between July 1 and October 1, and only one delivery between October 1 and 25. If any deliveries are required in May and June, 1892 (not exceeding two in these months), 57 cents additional.

l At one delivery. No delivery to be taken later than October 10, 1891. Strictly northern raised beef cattle, from high grade Hereford and shorthorn stock.

m At two or more deliveries. No delivery to be taken later than October 10, 1891. Strictly northern raised beef cattle, from high grade Hereford and shorthorn stock.

n Deliveries as required to October 1; final full delivery to be made October 1, including any increase.

o Natives, and raised from well-bred cattle in Wyoming and Montana.

p As required to October 1, 1891; then sufficient to last until May 1, 1892; during May and June, 1892, as required. Not over 1,000,000 pounds during May and June, 1892. Will not deliver May and June, 1892, unless I am awarded the whole contract. Spayed heifers, not to exceed 1,500,000 pounds, to be considered as steers.

q Monthly deliveries. Hay fed during winter. Deliveries from December, 1891, to July, 1892, not subject to 25 per cent. increase. Spayed heifers, not to exceed 1,500,000 pounds, to be considered as steers.

r As called for until September 25, 1891; then all of balance one delivery.

s One delivery, September 20, 1891.

t Or as much further quantity as may be desired. To be delivered from June 30, 1891, to September 30, 1891. All northern raised cattle, and no southern cattle south of Kansas.

‡ "Only."

q 1,000,000 pounds "only." Delivery as required to October 1; then sufficient to last to May 1; during May and June as required. Cattle will have been at least 12 months in succession, prior to July 1 next, north of south line of Kansas.

<sup>6</sup> Privilege of grazing cattle on any part of the reservation and cutting hay to protect cattle for monthly deliveries. If monthly delivery is taken, then 60 days' notice to be given if 25 per cent. increase is taken. Bidder's option all or none, including Rosebud or Pine Ridge with this agency. Cattle according to specifications.

<sup>r</sup> As required till October; then balance, including increase, if any.

<sup>s</sup> Monthly deliveries for July, August, and September.

<sup>t</sup> Monthly deliveries for October, November, and December; <sup>2</sup> or if cattle for October, November, and December are taken at one delivery in October; and <sup>3</sup> for January, February, March, April, May, and June.

<sup>u</sup> As required to September 25, 1891; then balance one delivery. To be Montana, Utah, Idaho, or Wyoming cattle.

<sup>v</sup> As required to October, 1891; then the entire amount to June 30, 1892, with all increase added. If 25 per cent. called for, 60 days' notice required. Cattle raised north of south line of Kansas.

<sup>w</sup> Or as much further quantity as may be desired. Cattle bred and raised in Nebraska, Dakota, Idaho, Wyoming, or Montana, and no southern cattle south of Kansas. To be delivered from June 30, 1891, to September 30, 1891.

<sup>x</sup> Utah raised, and never out of the Territory.

<sup>y</sup> All the cattle for this contract were bred and raised in Uintah County, Utah, and will be delivered at such times and in quantities as demanded, from July, 1891, and for the 12 months following.

<sup>z</sup> Cattle raised in Colorado, Utah, and Wyoming, and to be delivered as required. I have the privilege of holding cattle necessary to fill this contract on either of said reservations free of charge. Native American cattle.

<sup>5</sup> If proposal is accepted and I given the option of putting in a portion of native high grade spayed Wyoming heifers to class as steers, I will accept 5 per cent. less the prices stated, or \$2.37, \$2.61, and \$3.08<sup>2</sup>. To be delivered at my option during September, October, or November, 1891. Will deliver as fast as required for slaughter after September 1. All high grade native Wyoming cattle.

<sup>6</sup> Weekly deliveries to October 1, 1891; and

<sup>7</sup> About October 15, 1891, the balance of contract to be delivered; and

<sup>8</sup> For all additional beef furnished after October, 1891, up to June, 1892, which may be called for; or,

<sup>9</sup> I will deliver the same cattle, the entire amount of the contract (1,160,000), October 1 to 15, 1891.

Cattle to be wintered at least 12 months in succession prior to July 1, 1891, north of the south line of Kansas.

\* If the Commissioner desires, the salt intended for the Kiowa Agency will be delivered at Mineo, Ind. T., the present terminus of the Rock Island Railroad, at same price for 100 pounds, thus delivering the same 15 miles nearer than Darlington to the Kiowa Agency, or it will be delivered to Darlington, Okla.

† H. C. Slavens offers 1,500 pounds, no price stated.

SALT (COARSE)—Continued.

awards were made on comparison of samples which accompanied bids.]

**REPORT**  
**OF THE**  
**BOARD OF INDIAN COMMISSIONERS.**

---

WASHINGTON, D. C., *February 2, 1892.*

SIR: As required by the act of May 17, 1882, the Board of Indian Commissioners respectfully submit their twenty-third annual report.

The only change in the personnel of the board during the year 1891 has been the resignation of Mr. John Charlton, who has accepted another position in the Indian service, and the appointment of Elbert B. Monroe to fill the vacancy.

At the date of our last report the unhappy and disastrous trouble among the Sioux Indians was about coming to an end, but we had not sufficient reliable data for forming any conclusions as to the cause of the disturbance. From careful investigations since it has become clear that many causes contributed to the outbreak—causes of such a nature that such serious results could not have been foreseen. They are fully set forth in the comprehensive report of the Commissioner of Indian Affairs. One very gratifying truth has been settled, that education and Christian training make Indians peaceable and loyal. The testimony of Mr. T. W. Blackburn, the late superintendent of Indian education, who made a careful investigation in March last, as well as that of Rev. John P. Williamson, the veteran missionary among the Sioux, and of other competent witnesses, is that the educated and Christian Indians almost without exception remained firm in their loyalty to the Government, and did much to bring about the final settlement of the trouble.

**INSPECTION OF INDIAN SUPPLIES.**

The Board met at the warehouse in New York on the 5th of May to consult with the Commissioner of Indian Affairs and to assist him in opening bids for Indian supplies and in awarding contracts. The number of bids opened and publicly read was 422. The samples of goods offered were carefully inspected, and the contracts awarded from day to day until June 4, one or more members of the Board being constantly present, and during the summer and autumn visiting the warehouse from time to time to witness the delivery of the goods, and the packing and shipping of them to the several agencies. Under the energetic superintendence of Mr. L. L. Robbins the tedious work of assorting, packing, and shipping 33,872 packages, weighing 5,023,327 pounds, was finished at an earlier date than usual, and the goods were

delivered at the agencies before winter weather had closed the channels of transportation. The articles purchased were, in general, of excellent quality, and from many sources we have information that they have given entire satisfaction.

The clothing purchased is better than that furnished heretofore, but not so good in quality as we could wish. It is, however, the best that can be bought with the money appropriated by Congress for that purpose. With, for example, \$125,000 available to furnish to every Sioux Indian a suit of clothing, as the treaty with those Indians requires, it is manifest that 30,000 people can not have the very best clothing. The complaints which sometimes are made on this score can be met and remedied only by larger appropriations.

The supplies for the Pacific coast were purchased in San Francisco, bids being opened and contracts awarded July 8. Two members of the Board, Messrs. Charlton and Jacobs, were designated to assist in that work.

#### INSPECTION OF AGENCIES AND SCHOOLS.

During the year 1891 we have visited and inspected the following agencies: Eastern Cherokee, N. C.; New York; Omaha and Santee, Nebr.; Sisseton and Yankton, S. Dak.; White Earth, Minn.; Devils Lake and Fort Berthold, N. Dak.; and Forts Peck and Belknap, Mont.

Reports of these visits and inspections, which are transmitted herewith, indicate steady progress towards the end which all friends of Indians hope to attain—their complete civilization and absorption with the body politic as American citizens.

#### EDUCATION.

In the work of education a material advance has been made during the last year. Under the wise and energetic management of the Commissioner and his able assistant, the superintendent of Indian schools, the system of instruction has been more thoroughly organized, new training schools have been established, buildings have been improved, and appliances for industrial training have been largely increased. Provision has also been made by the appointment of district superintendents for more frequent and careful inspection of all the schools. We hope to see added a series of teachers' institutes, where all the teachers of the several districts may meet for consultation and discussion and mutual instruction. One such teachers' convention has just been held at Haskell Institute, near Lawrence, Kans.

The following official tables exhibit the attendance of Indian pupils in school for several years past:

*Indian school attendance from 1882 to 1891, both years inclusive.*

Year.	Boarding schools.		Day schools.		Totals.	
	Number.	Average attendance.	Number.	Average attendance.	Number.	Average attendance.
1882.....	71	2,755	54	1,311	125	4,066

Industrial boarding, specially appropriated for...	564	512	779	988	1,309	486	478	721	837	1,163
Total .....	4,371	5,039	6,124	6,178	6,477	3,348	3,958	4,596	4,808	5,169
Aggregate .....	14,333	15,212	15,784	16,377	17,926	10,520	11,420	11,552	12,232	13,568
Increase .....					1,549					1,336

From these tables it will be seen that the total enrollment in schools of all classes and grades had reached, at the end of June, nearly 18,000, an increase of 1,549 over the previous year, and that the average attendance was 13,568, an increase of 1,336.

The appropriations for school purposes for the year ending June 30, 1891, were \$1,842,770, and for the current year the amount appropriated is \$2,291,650. We may, therefore, hope for as large an increase in attendance as during the past year. And, if Congress will continue to enlarge the means for education in the same ratio for three years more, we may hope to see nearly all the Indian children of school age provided for in the Government schools. It seems to us that it would be wise statesmanship, and wise economy to increase at once the appropriation to the three millions asked for by the Commissioner. He could then, without much delay, furnish the facilities for a common-school education to all Indian children. Then, under the rules and regulations authorized by law recently, and formulated, the Commissioner will be able to secure the attendance of all children of suitable age in the schools established and maintained by the Government for their benefit. And then it would be easy to put an end to the complications involved in the contract system. The religious societies could transfer to the Indian Bureau such schools as they have not the means to support, and those which they wish to retain could be built up into permanent institutions for the training of advanced pupils for teaching and other professional careers. Then, too, such societies could devote more means and force to direct missionary work. And never has been such work more needed than now. In this transition period, when the Indians are beset with difficulties and perplexed by the new duties and responsibilities of citizenship, they sorely need all the moral and Christian instruction that the churches of all denominations can give. And no part of our people, or of any people, presents a more hopeful field for earnest missionary work.

THE MOHONK CONFERENCE.

Our annual conference at Mohonk Lake, in October, was attended by a larger number than usual of the friends of Indian progress and civilization. The action of the President and the Secretary of the Interior in extending the civil-service classification to a portion of the Indian service, was heartily approved, and the further extension of the

principles and spirit of the reform, so as to effect a permanent tenure of office in the service, was recommended. Other topics discussed were the "Outlook for Contract Schools," the "Removal of the Southern Utes" against which a strong protest was adopted, and "The Legal and Political Status of the Indians" as affected by the general allotment act, and other recent legislation. The topic last named is thoroughly discussed by the Commissioner in his late report. It is a matter of great interest, and we venture to add a few suggestions with regard to it.

#### LEGAL STATUS OF INDIANS.

Among the questions which have elicited considerable discussion recently, has been that of the expediency of providing a special system of courts of law for the Indians on the reservations until they shall have accepted severalty and become citizens. There is a pardonable hesitation felt by jurists and legislators to engraft on the judiciary system any costly and cumbersome addition to meet a temporary state of things, and also the prejudice of conservatism opposed to *any* important change in so serious a matter. And yet the fact remains that law is needed for the reservation Indians, and that the effort to civilize them makes some provision imperative. Partly through the inaccessibility of courts, and partly through insufficient legislation, to cover all cases in which improving Indians may fairly demand the justice which law alone can give, they are suffering a practical denial of that justice in many instances; and, inasmuch as the present state of things may last a long time, it seems a matter of simple right to grant them some further benefit of law. We are, therefore, gratified to find this subject claiming the attention of Congress.

The so-called courts of Indian offenses have served a good purpose, although, as has been observed, they are more in the nature of courts-martial than civil courts, and practically register the decrees of the Indian agent. This makes the agency too much of an autocracy properly to train the Indians in a civilized administration of justice.

It has been wisely suggested, however, that these quasi courts might be made real courts presided over by justices having some knowledge of the law, and receiving a fair compensation for their services, an Indian jury trying the facts. These courts should be provided on all the reservations.

A system of court commissioners, related to the present United States courts, has been suggested for the graver causes, and with a right of appeal to the United States courts. This plan has met with favor, and if some well-conditioned system shall be devised, not too complicated, and so conditioned as to melt away of itself when the Indians become citizens, it seems to us it would be wise legislation.

A subsidiary result of no small value would be the introduction this would give the Indians to the use of courts of law, thus educating them in the legal customs of a civilized people.

#### SURVEYS AND IRRIGATION.

Another matter which should have immediate attention by Congress is an accurate survey of the Indian reservations and the irrigation of the arid lands. Without surveys and a distinct marking of boundary lines troubles will constantly arise between the Indians and white settlers about them and among Indians themselves. Cattle men are often quite willing to let their herds graze upon Indian lands, and it is impossible to prosecute and punish them for trespass unless the bounds of the reservations are clearly defined.

On the subject of irrigation we heartily concur in all that Commissioner Morgan recommends and urges. Its importance can not well be overstated. If we expect Indians to become farmers and self-supporting, the condition of those located on arid lands in several Western States and Territories must not be overlooked. To place them on their allotments and furnish them with a full outfit of farming implements is a waste of effort and money until there is added the one thing that is required to make their lands productive. We are glad to observe that in the agreement with the Crow Indians of Montana for the sale of a portion of their lands, provision has been made for the expenditure of a portion of the proceeds of the sale to render the lands retained and allotted productive by a thorough system of irrigation. The same stipulation can be made in other agreements where the conditions of the country require it. And where means can not, in this way, be provided, we hope and urge that Congress may make liberal appropriations for this purpose for all reservations where irrigation is necessary to successful farming.

#### ALLOTMENTS AND PATENTS.

The work of allotting lands in severalty to Indians and securing to them separate homesteads has been continued, and we see no reason to doubt the wisdom of the policy. During the year 2,104 patents have been issued and 2,330 allotments have been approved and the issuance of patents directed. Already more than 16,000 Indians have become citizens of the United States, and about 4,000 more, by taking allotments, are soon to become citizens. Adding the 7,610 in Oklahoma who have received allotments under agreements ratified by the last Congress, we have a total of 27,610 Indian American citizens, subject to the same laws and entitled to the same privileges as other citizens; and they have surrendered to the United States about 23,000,000 acres, which have become a part of the public domain and open for settlement and improvement. In their new position, not a little perplexing and bewildering, the Indians will still need kindly supervision and all the safeguards that law and humanity and instruction can throw around them. One thing especially needed to give full success to the allotment policy, which we have before urged, and to which, we see, with much satisfaction, the President has called attention in his late message, is provision for public improvements in the counties where Indians hold a large part of the lands. They have white neighbors, and the number will increase rapidly, as the unallotted lands are sold. Indian homesteads are inalienable and untaxable for twenty-five years. The white settlers must pay all the taxes for the support of schools and for all public uses. In such circumstances it will hardly be possible to maintain a kindly feeling between the races. The Indian will be regarded as a burden and his children will not be welcomed into the public schools. Relief from such evils can be given by withholding from the proceeds of lands purchased from Indians, or by direct appropriation, of sufficient funds to pay the Indian pro rata share of the taxes, according to the value of the lands held by them. This would elevate the Indian to equality with his white neighbor and remove the hindrance to progress and development which seems now involved in the inalienable feature of the allotment policy.

#### THE NEW YORK INDIANS.

In the evolution of the Indian problem the relation of the New York Indians has attracted much attention within the past few years. It

seems to us that one common solution applies to all the Indians in this country; that is, that as rapidly as they are able to accept civilization all distinctions between them and the other citizens of our common country should be swept away; and that it is already safe to apply this solution to a large percentage of the Indian population. This is very true of the New York Indians, who have been literally surrounded by the best civilization for the better part of a century, and had as full an opportunity as is likely to occur to any tribe of absorbing their environment. If they have gained nothing by so long an apprenticeship there is little to be expected of other tribes in the twenty-five years allotted to them.

A recent visit to the New York tribes by one of our Board has given the impression that they are very fairly prepared for full citizenship. Their situation is a peculiar one, and although the legislation required to erase the distinctions between them and the surrounding whites is chiefly a matter for the State, a portion of whose territory they occupy, some of it may also devolve on the General Government. The fee to a large part of the Seneca lands being apparently owned by the Ogden Land Company, and the United States having guaranteed a right of occupancy to the Indians, a clear title to the land does not rest in either, and can not, without the consent of the other. If, however, the United States can purchase the somewhat unavailable fee of the Ogden Land Company at a reasonable price, the Indians can then be given an unclouded title and their lands be distributed to them individually. There appears to be a disposition on the part of the State of New York to take the steps necessary to de-Indianize these tribes if this obstacle is removed by the United States Government; and we would respectfully urge the expediency of the passage of such an act by Congress as would so far facilitate the result desired.

#### LEGISLATION.

The legislation by Congress at its last session relating to Indian affairs is of great importance, and has given special satisfaction to all the friends of Indian civilization and progress. Bills for the relief of the Mission Indians of Southern California, and of the Round Valley Indians, in northern California, which we have been urging for several years, were enacted, and commissions appointed to adjust the difficulties which have long existed among those Indians. Several agreements, some of which had long remained unratified, were ratified and their provisions carried out by the last Congress, securing for settlement large tracts of land which had hitherto been lying waste, and giving to the Indians fair compensation therefor, which provides for them the means of subsistence and improvement for many years to come.

The legislation which appears to us now of urgent importance is:

First. Provision for extending and increasing the facilities for education.

Second. Provision for the survey of Indian reservations.

Third. Ample provision for the irrigation of arid lands occupied by Indians.

## APPENDIX.

---

### REPORT OF THE PURCHASING COMMITTEE.

SIR: The purchasing committee of the Board of Indian Commissioners submit their annual report for the year of 1891, as follows:

Sealed proposals for the annuity goods, supplies, and transportation for the Indian service were opened and publicly read on the 5th day of May, in compliance with the advertisement from the Indian Bureau at Washington, at the New York warehouse for Indian supplies, No. 65 and 67 Wooster street, New York City, in the presence of the Hon. T. J. Morgan, Commissioner of Indian Affairs, Gen. Cyrus Bussey, Hon. Assistant Secretary of the Interior representing the Hon. Secretary of the Interior, and several members of the Board of Indian Commissioners.

Four hundred and twenty-two bids were received and opened, from which one hundred and eighty-two contracts were made after a very careful examination of the large quantity of samples submitted, the examination being made by the Hon. Commissioner of Indian Affairs, Gen. Cyrus Bussey, and several members of your committee, assisted by the following gentlemen, who were appointed inspectors to examine the articles when delivered, and to see that they were equal in every respect to the samples from which awards were made: Thomas Walsh, for dry goods; Hermann Wischmann, for groceries; Charles E. Teale, for clothing and school supplies; Edwin Maynard, for hats and caps; E. L. Cooper, for agricultural implements, hardware, etc., and for goods to be delivered in the West; John Peyser, for harness and leather; R. B. Currier, for boots and shoes; J. A. Bronson, for hardware delivery; C. G. Moeller, for flour, and R. G. Eccles, for medicines.

A number of articles in dry goods were rejected by the inspector as not being equal to the samples from which the awards were made, but these were afterward replaced by goods fully equal to the samples or accepted at a reduction. The delivery of coffee was especially unsatisfactory in not being up to sample, and only after repeated rejections of the delivery by the inspector did the Department obtain goods fully up to sample and equal in every respect.

The work of the New York warehouse has this year been by far the largest of any year of its existence. The superintendent reports having received and inspected and shipped during the six months from July 1 to December 31, inclusive, 33,872 packages, weighing 5,023,327 pounds.

WILLIAM H. LYON,

*Chairman Purchasing Committee, Board of Indian Commissioners.*

HON. MERRILL E. GATES,

*Chairman Board of Indian Commissioners.*

---

### REPORT OF E. WHITTLESEY.

WASHINGTON, D. C., May 1, 1891.

SIR: Having recently visited the Eastern Cherokee Indians in North Carolina, I have the honor to report that I found them in a condition of comfort, living very much as their white neighbors live in the mountain district, supporting themselves by farming and stock-raising. The chief drawback to their prosperity is the unsettled title to their lands, which, for a long time, has been in litigation. Until Congress shall act upon this matter it will be impossible for those

Indians to become owners of individual homesteads and hold the position of citizens, for which they are qualified.

I found at Cherokee an excellent contract school, managed by the Friends of Indiana. The principal, Mr. H. W. Spray, his wife, the matron, three lady teachers, the cook, seamstress, and physician, all seem to be faithful and earnest. They have gained the confidence of the people and the devoted love of their pupils. The school impresses me as preëminently a home school. The pupils regard their teachers as friends, and look up to Mr. and Mrs. Spray as to a father and mother. They are well taught, comfortably clad, and well fed; and when sick are tenderly cared for by Mrs. Spray, as if her own children.

Unfortunately some dissension has arisen between the managers and the principal respecting finances, which threatens the removal of Mr. Spray and his corps of efficient helpers. Such a change I should deprecate as a great calamity to the school, and I trust the difficulties may be amicably settled and the work of education go on with increasing prosperity and usefulness.

The agent, Mr. Blythe, appears to be an upright, efficient man. But so soon as the land title is settled and the lands divided into separate holdings there will be no need of the supervision of an Indian agent in North Carolina.

Very respectfully,

E. WHITTLESEY,  
*Secretary.*

Hon. MERRILL E. GATES,  
*Chairman.*

---

#### REPORT OF HON. JOSEPH I. JACOBS.

DAKOTA CITY, NEBR., *June 25, 1891.*

I left Ann Arbor on the morning of June 23 and came direct to Dakota City, where Mr. Robert H. Ashley, agent for Omaha and Winnebago agencies, met me after driving through a severe storm for 20 miles. The storm was so terrific that we did not undertake the journey to the agency, but remained here all night. It has been raining for several days, making the roads almost impassible.

I did not go to headquarters, but passed through Omaha and Winnebago agencies quite extensively. I made many inquiries in the city and also of Mr. Ashley, who I think is very much interested in the Indians, besides doing his duty as an agent; he has been in this neighborhood for over thirty years and understands these two tribes thoroughly.

Mr. Ashley and Mr. Ward (teacher in the industrial school) and others gave me the following information: In regard to the Omahas, I learn that from their large annuity they have erected this year from thirty to forty houses. Their crops are all in and the prospects are good for a large yield. They have a large increase of acreage this year over last. The Government mission schools are doing fairly well at Omaha Reservation. In regard to the Winnebagos, they are doing much better this year than ever before. This seems to be the general impression. They have in between eight and nine hundred acres of wheat and have planted their old ground with corn, beans, and potatoes. They have this season broken up and sowed with flax about 700 acres, and are still at work breaking. Some fifteen or sixteen Indians who had never worked before are now doing well.

Upon the whole the prospects are good for these two tribes. I agree with the board in their recommendation to President Harrison, that in cases where we have good agents they should be retained in office. In these two tribes the population is about 2,400. There is no complaint about supplies.

*Santee Agency, Nebr., June 26, 1891.*—I arrived here on the 25th of June, and was kindly cared for by Dr. A. L. Riggs (principal of the Santee Normal Training School) and his family. Mr. A. L. Riggs seems to be very much interested in his work, and is a good man I believe.

Everything on the agency is looking well. The boys' Sunday clothing is not so good as it should be. The shawls for the girls are entirely too light and small. The boys' pants are too small around the waist in proportion to the length. The artesian well is used in the roller process for making flour (called by them short roller process); also for sewerage, water closet, bathing, and drinking purposes at the schools. At the time the estimate was made for the well, \$500 was put into the hands of the agent, but was not sufficient to carry out the original plan. They still need \$1,500 to carry out the plan, not including sewerage. I would

recommend very strongly that this sum be allowed the agency. It will be a grand thing in sanitary and other ways.

*Yankton Agency, S. Dak., June 29, 1891.*—I left Santee Agency June 29, at 6:30, and drove over 30 miles to this agency. I found a great many Indians in from the reservations, this being "issuing day." The Indians all seem to be content and happy. Mr. Foster, the agent, seems to be the right man in the right place. I believe him to be very energetic and honest. The schools are just closing. I passed through the buildings and can report everything in first-class order. The shops, which I inspected very closely, ought to be thoroughly repaired or rebuilt. They are used for wagon, harness, and shoemaking.

Complaints are made of the boys' clothing at this agency. The boys' and girls' shoes are bad also.

Dr. Brown, in charge of the drug store, complains about lack in quantity of medicines, and said that the sponges are very poor.

They need an artesian well; it would be a great help and saving to the Government. In regard to farming machinery, they have only eight good reapers and 2,300 acres of wheat and oats to cut. They need better machines and farming implements. The Indians complain of their horses not being large enough to break the ground. It seems as though good oxen would be just the thing for that purpose. On the whole they seem to be quite well satisfied. There are about fifty houses to be built for the Indians this year.

I arrived at San Francisco, July 6. I was at the opening of the bids July 8, 1891, and assisted Assistant Commissioner R. V. Belt for one week in awarding contracts.

I wish I could do Mr. Belt justice in a word of praise for his painstaking in every detail of the work assigned him at San Francisco. He is thorough and honest and very capable.

If the supplies when delivered turn out as good as the samples, the Government will have no cause to complain of their purchases at San Francisco.

JOSEPH T. JACOBS.

---

#### REPORT OF HON. JOHN CHARLTON.

SIR: In compliance with your request I have visited the principal Indian reservations along the line of and contiguous to the Great Northern railroad, en route to San Francisco to assist in opening the bids for Indian supplies for the Pacific coast.

##### WHITE EARTH.

The White Earth Reservation covers about thirty-two townships of land, which, for the most part is well adapted for agricultural purposes were the seasons propitious, but for two years or more, owing to the drought, the crops planted have amounted to but very little, and had not the Indians found employment in getting out timber during the winter months, the amount produced on their little farms would not have sufficed for their support. The wild rice found growing on the margin of many of the large streams has for years been utilized as food by the Indians living in this section of the country, and the destitution incident to the shortage of cultivated cereals has often been much mitigated by an ample supply of this wholesome food.

Through the energetic action of Maj. Shuler most of the agency buildings which were fast crumbling to pieces have been repaired and put in a condition to last for several years. His own residence, originally built of logs, and subsequently weather-boarded, and lathed and plastered inside, is showing many signs of decay, and its use as a residence can not be much longer thought of. The location of the buildings on a hill, from which a magnificent view of the surrounding country is obtained, speaks volumes for the good judgment of those who first placed them there.

A visit to the Government school-house, built on a beautiful spot about one-half mile north of the agency, showed a structure in the usual shape of the letter H, and arranged internally as that style of building usually is, the dormitories being in the third story and the egress therefrom being by a long winding staircase, which was wholly inadequate as a means of escape in case of fire. Maj. Shuler, appreciating the situation, caused three more openings to be made, and

now the children have a fair chance for their lives. Exteriorly the building was in good condition, needing only a coat or two of paint to render its appearance as good as new; but I regret to say that with the exception of one or two rooms its interior was gloomy and forbidding.

Mr. Hume, who has occupied the position of superintendent for over nine years, and who I believe is one of the best men for that position I have ever known, has done and is doing all that any one man can do to improve the condition of things over which he has supervision; but when by reason of a lack of teachers he is compelled to take the place of one daily in the school room, and devote six hours of each day to teaching, it is easy to see that many things are liable to get awry and out of joint. By way of recreation, he employs all the spare time he can command and a number of the larger boys on 7 acres of a garden, in which are grown enough vegetables to supply the entire school of about 130 scholars and a sufficient surplus to afford the milch cows daily rations of roots during the long and severe winters.

Miss Jackson, the principal of the junior department of the school, has frequently more than fifty scholars under her charge. Thirty children are as many as any teacher can do justice to, and for the number of scholars in this school, the number of teachers is too few by at least two—one to relieve the superintendent, and one to assist in the primary department. I am glad to know that, notwithstanding all the drawbacks and difficulties under which the work is done, the results are fully equal to schools much more advantageously situated.

The inadequacy of the dormitories and dining room connected with the school building, to accommodate the children, has demonstrated the necessity for a building that should not be less than 30 by 60 feet, which can be attached to the main building in the form of a wing. This building should be two stories, the lower to be used as a dining room and the upper for a dormitory, the present quarters being much too small for these purposes. It is proposed to devote sufficient space in the new dormitory for two rooms which shall be set apart for hospital use, there being nothing of the kind on the reservation.

A want that needs to be supplied with the least possible delay is a supply of water on the school premises. Every drop of that fluid, except that used in the laundry, is now hauled by an ox team, managed by a detail of four Indian boys, from a lake more than a half mile distant from the school. This service—perhaps drudgery would be the better word—must be performed daily, and at all seasons, and the labor and inconvenience connected therewith are very great. A drilled well with a windmill and a large tank would cost a few hundred dollars, but the investment would pay handsomely.

A gristmill run in connection with the sawmill now in operation at Wild Rice River will be needed at an early day, when the Indians on this reservation shall have received their lands in severalty and commenced the cultivation of wheat, for which the land is admirably adapted. By having a mill of their own they will be saved the trouble and expense of hauling their grain to Detroit City, which is 22 miles distant from the agency, and much farther than that from many of the farms.

The Chippewa Indians, of which there are now over 6,000 and soon will be 9,000 on this reservation, are practically self-supporting, dress in citizen's clothes, and nearly all speak and understand the English language, and, as a rule, exhibit a degree of intelligence far above any body of Indians of the same number that I have seen. They are anxious to receive their lands in severalty, and as soon as the commissioners now engaged in adjusting boundaries can make the allotments, the people are ready to accept them and commence on the work of home-making and citizenship.

I devoted a portion of the last day of my stay to a visit to the girls' school of the Sisters of St. Benedict, located nearly 2 miles from the agency. The superintendent of this school is Father Aloysius, a German by birth, but a gentleman who seems to have made many friends by his broad liberality and genial manners. The school was not in session at the time of my visit, but I was assured by the superintendent that excellent work was being done by the Sisters. The building which was the gift of the Drexel sisters was built of cream colored brick made on the premises, and the appointments throughout, with scarcely an exception, were excellent and gave evidence of being well managed. There is ample land around the school for industrial purposes, but only a small portion of it was under cultivation. The girls were taught, in addition to their usual studies, housekeeping in all its branches, plain and fancy sewing, and whatever else may be useful to them in after life.

## DEVIL'S LAKE.

On the 23d of June I arrived at Devil's Lake Agency, which is within a few rods of Fort Totten, on Devil's Lake Reservation. On calling at the residence of the agent, Maj. Waugh, I learned that as he was absent on business connected with the agency, any information concerning matters there would have to be obtained from other sources.

Fort Totten has recently been transferred from the War to the Interior Department, and by that set apart for an Indian industrial and training school, and which, with its advantages and possibilities, under competent management, can not fail of being the equal of any similar institution west of the Mississippi River. The present superintendent, Mr. Canfield, has occupied that position only a few months, but from what I observed of his methods of doing business while visiting the school I think he gives promise of making a most efficient officer. In securing the cooperation of Mr. Potter, whom I met in the Carlisle Indian school more than six years ago, and again in the Arapahoe Indian school at Darlington last winter, he has been most fortunate. With this gentleman in charge of the advanced department of the school, and the intermediate and primary classes under the supervision of the accomplished lady teachers I saw there, failure to make the school a success would hardly seem possible.

In a visit to the Government boarding school, under the supervision of Sister Page, I found the general management to be excellent and the condition of the several buildings far above the average. The rooms throughout were scrupulously clean and orderly, and the educational work done by the teachers equal to that in the best schools in other sections that I have visited. The only objectionable feature that obtruded itself while I was there was the defective system, or rather want of system, of sewerage, which every puff of wind from its vicinity revealed to you.

An inspection of the dormitories revealed large, well-ventilated rooms, the beds and everything connected with them being models of neatness and order. So, too, were the school rooms, dining rooms, kitchens, pantries, etc. The number of pupils in this school in regular attendance is about one hundred.

The buildings at Fort Totten are all constructed of brick, neatly painted, and are in excellent condition. The dormitories for the boys are on the ground floor, on each side of a long hall of ample width and admirably arranged to afford good ventilation. The girls' rooms are up one flight of stairs, similarly arranged, but in addition open on a balcony or piazza that extends the entire length of the buildings which form one side of the parade ground, the superintendent, teachers, and other employes occupying those on the other sides. These buildings all front on a fine parade ground or campus, and being located on an elevation, command one of the finest views in the country. Connected with the school is a large tract of fine land which the large boys take care of and from which an abundant crop of vegetables is gathered, the land being cultivated in the most thorough manner under the direction of the industrial teacher.

Among many reforms suggested, Mr. Canfield has introduced one that is worthy of notice, and which is calculated to be productive of much good. It is that of setting apart one afternoon of each month for a reunion of the Indian boys and girls on the campus, where, under the eyes of their teachers, they can mingle freely together and engage in every form of amusement that it is proper for white children to indulge in. Ball-playing, "jumping the rope," games of dice, checkers, and many others afford a scene that no one can fail to enjoy. After two hours of play refreshments are served and partaken of with a relish by all.

Another pleasing feature, and one that the boys take to with enthusiasm, is the suggestion that each one shall exert himself to save a portion of his earnings for the purchase of brass instruments for a band. Already a handsome amount has been accumulated towards this object, and doubtless the band will be an interesting factor in the near future. The money earned by the boys is obtained from necessary alterations and the painting of the school buildings, all of which was executed as well as if done by white mechanics.

Devils Lake Reservation embraces over 166,000 acres of as fine land for grazing and agricultural purposes as can be found in any country, being well watered and having on it sufficient timber to afford the necessary shelter for stock and fuel. Sheep-raising, for which North Dakota is becoming famous, could not fail to be remunerative here, and horses and cattle would, I think, prove to be profitable. Brought up from time immemorial to regard any kind of labor with aversion, as the Sioux Indians on this reservation have been, it will necessarily require years of training to make them successful agriculturists, or even to eke

out a living from the soil; but while this is so, they can in the interval not only sustain life, but acquire property by engaging in grazing. Soon after my arrival I met Judge Joseph R. Gray, special allotting agent for this reservation, who has succeeded in allotting nearly 63,000 acres of land without so much as a murmur from the allottee. The land in excess of that needed by the Indians on this reservation amounts to more than 100,000 acres, and if it was thrown open for early settlement by Government at the price the Indians are paid for it, I venture to say that it would be occupied in a very short time, and doubt not it would be a decided benefit to whites and Indians alike. Large reservations, such as we find in the Indian Territory, the Dakotas, and Montana, mean simply wildernesses, vast stretches of solitude, from which the white man is excluded, and which the Indians can not utilize. The abolition of reservations, large or small, at an early day, will do more for civilization than the present system can accomplish in a hundred years.

#### FORT BERTHOLD.

The number of Indians on this reservation is about eleven hundred, composed of Gros Ventres, Mandans, and Rees, and as they are ration Indians the greater portion of them live contiguous to the agency and thus avoid unnecessary long journeys going for their supplies. Ration day occurring during our visit, we had an excellent opportunity of seeing the style of Indians in the great Northwest, and so far as we are able to judge they have made as much progress toward civilization as any of the "wild" Indians we have seen elsewhere. Their isolation from all civilizing influences is, we are fully persuaded, one of their greatest misfortunes, and unless there is something more than land to tempt the cupidity of the white man, it would seem as if they must live apart for many years to come. The quality of the soil on the prairies of North Dakota is, as a whole, good, and in many places excellent, but when it is found that owing to the scarcity of seasonable rains those vast plains are only fit for pasturage one year in three on an average, it is apparent that no man who can get away from them will remain, a large number of settlers having abandoned their claims within a few years.

At the time of our visit Maj. J. S. Murphy was agent, and from him we gathered the information that the Indians under his charge were, with few exceptions, willing to take their land in severalty just so soon as it could be allotted. The land that ought to be divided among them is some 25 miles further up the river and consists of rich bottom land, which in places is about 8 miles wide, and almost as level as a meadow, and well wooded. Here it has been proposed to remove the Indians, where they can have ample facilities to acquire the art of farming. The uplands being admirably adapted for grazing purposes whenever sufficient rain falls to bring the grass, it is the intention of Agent Murphy to ask for enough sheep to divide up into three bands of 800 each and put two trusted Indian boys in charge of each band. Corralls will be provided and sheds erected at convenient points for the storage of hay for their use during the winter.

Under the old chief "Crow-flies-high," and whose band is known as the Knife River Gros Ventres, there are said to be about 240 Indians who, for some absurd reason, refused to place themselves under the care of an agent, or to accept anything from the Government. They are nomadic in their habits, peaceable, and subsist as best they may by hunting, fishing, and gathering buffalo bones, which are carried for shipment to Minot and other railroad points. The agent has made repeated attempts to induce them to live on the reservation the same as the other Indians under his charge, but with but little success until last week, when four of the band agreed to come. This movement is but the beginning of the end, and the major is confident that in a short time he will get every family of the younger people, whose children will have the opportunity of attending the Government school at Fort Stevenson.

The only educational institute at the agency is a mission school under the auspices of the American Missionary Association, which has been carrying on an educational and evangelistic work among these Indians for the last fifteen years. The educational work is prosecuted at the Mission Home, a Government building used as a school, and in which there are forty-one pupils, girls and boys. The teaching force consists of Mr. C. L. Hall, superintendent and missionary, and seven assistants, in various capacities. The instruction is in the primary branches, in history, geography, grammar, music, and drawing. The boys are taught farming and the use of carpenters' tools, the girls dairy work, dress-making, and household work.

The buildings, five in number, occupied by the school, are in good order, and the arrangement of the school room, dormitories, dining room, and kitchen ex-

cellent, and all are kept in good condition. In the barr<sup>o</sup> there is room for twenty head of cattle and two teams of horses.

Six of the more advanced pupils are at the Santee Industrial School, and among those who have returned are a preacher, printer, clerk in a grocery store, and one the wife of a minister, while many others are doing well, and all are professed Christians. The missionary work extends 60 miles along the Missouri River. At two of the out stations are log houses built by funds contributed by D. L. Moody, who also pays the salary of the native preacher, G. H. Bassett.

The church membership is forty-six, seventeen having united on confession of faith during 1890 and nineteen in 1891. Eighty-two children are enrolled in Sunday school. Taken as a whole the field is promising, progress has been made, and the devoted men and women who are giving their lives and best energies to the work have great reason to be thankful.

The Government school at Fort Stevenson, 17 miles down the river, occupies the buildings formerly used by the officers and men who garrisoned that post in former years, but which has not been used for military purposes since 1884, and was at that time transferred to the Interior Department. It is now utilized as an industrial Indian school, with an average attendance of one hundred and ten scholars, whose achievements in education are astonishing considering how short their remove from a wild state has been. The present superintendent, Mr. C. C. Burton, who has occupied that position only since the 1st of June and who has not of course been able to accomplish much in the brief period of one month, impresses you as a quiet gentleman who means to make his influence for good felt in every department of the work over which he presides. His principal teacher is a gentleman of very superior attainments as an educator, and the lady teachers of the intermediate and primary department are thoroughly accomplished instructors. In this school during the exercises of a Sunday afternoon we heard some of the finest singing by superb natural voices among the Indian children we have ever heard.

The older boys of the school, under the supervision of their industrial teacher, had planted 45 acres in wheat, 35 in oats, 12 in barley, 15 in corn, 12 in potatoes, and 6 acres in garden vegetables. These crops, owing to the copious rainfalls, looked exceedingly fine, and gave unmistakable evidence of the capabilities of the soil were the atmospheric conditions at all propitious. Connected with the farm were 150 head of cattle, 7 horses, 200 head of sheep, and 16 head of swine, and as the pasture range was practically unlimited and safe from hurtful wild animals, one can imagine no reason why this stock might not multiply itself many times in a few years. The hay, about 300 tons, to feed the stock during the winter, would all be gathered by the industrial teacher and his boys within a short distance of the school.

It would afford us great pleasure to speak in commendation of the buildings at Fort Stevenson which have, doubtless, served a useful purpose to shelter soldiers in, but are very far from being what they ought to be for even Indian children. The dormitories for both girls and boys are miserably ventilated and poorly lighted. In fact the buildings seem to be in the condition in which they were left seven years ago, and, of course, unsuitable in nearly every way for school purposes. Situated as they are on the edge of a bluff 30 or more feet above the bottom lands of the river, there are splendid facilities for drainage, and yet there is no drainage to speak of. Two or three cesspools—always a menace to health—are located just outside of the walls of some of the buildings, and if the children are so fortunate to escape an epidemic of typhoid fever or kindred diseases, it will simply be cause for astonishment and thankfulness. The whole area on which the buildings stand should be plowed over, and the ground graded towards the bluff so that there would be no chance for pools of standing water, and but little for engendering malaria.

#### FORT PECK.

The above-named reservation, containing 1,700,000 acres, is situated in the northeastern portion of Montana, on the line of the Great Northern Railroad, and between the Big Muddy River on the east and Milk River and Porcupine Creek on the west, and extending north of the Missouri River between 40 and 50 miles. The agency buildings, consisting of the residence of the agent and physician, the offices, warehouse, blacksmith and carpenter shops, etc., at Poplar Creek, are built on a high bluff or mesa from which a fine view of the country is obtained, and for healthful and sanitary considerations could not have been better placed.

The number of Indians on this reservation is about eighteen hundred, eleven

hundred of whom are Yankton Sioux, and the balance Assiniboines, who, chiefly, center around the subagency at Wolf Point. The great majority of these Indians wear citizens' clothes, and are rapidly discarding the "tepee" for warmer and more comfortable houses, and were the climatic conditions favorable, there could not be the slightest doubt of their being able to support themselves by agriculture or stock or both. The hot, dry winds that prevail during the summer months over a wide area of this country render agricultural pursuits exceedingly precarious, and the same may be said of such grazing lands as are remote from streams or which occupy an elevated position. Notwithstanding the many discouraging circumstances under which these people labor, a steady advance is being made and their physical and financial condition is gradually but surely improving. More than 500 houses have been built on the reservation, and the Indians are the owners of about 600 head of horses, 500 head of cattle, 300 head of sheep, and between seven and eight hundred domestic fowls. Added to the above about 500,000 pounds of freight have been hauled by them for traders and the Government, 2,000 cords of wood for the military post and others, and \$10,000 worth of buffalo bones have been gathered and sold.

The number of children of school age is over 300, and of these there is an average attendance of 151, enrolled 250. The three buildings used for school purposes, one of which was built last year at a cost of \$10,000, are located about one-quarter of a mile north of the agency and are well adapted for the purpose designed. The superintendent, Mr. L. J. Baker, seems to be a thoroughly practical man and well fitted to fill the position he occupies with credit to himself and profit to the children. Subordinate to him are a principal teacher, two assistants, and an industrial teacher, together with the matron and assistant, seamstress and assistant, laundress and assistant, cook, etc. From what we saw we were entirely satisfied that the scholars were doing most excellent work, making rapid progress, and that their teachers had no reason for discouragement with such material to work on. The boys and girls in attendance looked bright and intelligent, and intellectually would compare favorably with any others we have seen. The agent, Maj. C. R. A. Scoby, who we believe to be one of the most efficient in the service, does everything in his power to aid and encourage the superintendent and teachers in their work, and we are glad to say that an usual harmony exists among all the attachés of the reservation.

Forty acres of land have been set apart for the school grounds, 27 of which are under cultivation. Last July there were 12 acres planted in vegetables and 4 in corn, and as there were copious rains throughout the season reasonable expectations were entertained of a bountiful crop.

The Presbyterian denomination has mission property both at the agency and subagency; but an Indian boy, a graduate of the Santee school, is the only missionary at either place. Prayer meetings are held every Wednesday evening at the schoolhouse, and a Sunday school, in which most efficient work is done, is held in the same place every Sunday.

Both here and at the subagency the barbarous and revolting practice of slaughtering cattle by shooting them on the prairies, as they formerly shot the buffalo, is done away with, and at both places are slaughterhouses, where animals are killed, and the beef handled as carefully as it is anywhere. An object lesson of this description should be invaluable to the Indian.

At this agency or on the reservation the opportunities for procuring intoxicants are very limited, and, as a consequence, no crimes other than those of a trivial nature have been committed. The health of these people has been invariably good, with the exception of a few who are afflicted with chronic diseases, for which there is no remedy, but one death having occurred in the school during the last year.

The taking of their land in severalty is a subject in which these Indians do not seem to have much interest. Doubtless, if the scheme was fully explained and the benefits clearly set forth, there would be no objections on the part of Indians so intelligent as these appear to be. Of course, it is a question of only a short time when assent to the proposition will be universal.

#### FORT BELKNAP.

Four miles south of Harlem Station, on the Great Northern Railroad, is the newly-located agency of the Fort Belknap reservation, on which are about seventeen hundred Indians, Assiniboines and Gros Ventres. Maj. A. O. Simons is the gentleman in charge, and as he was unavoidably absent at the time of our visit, our opportunity of seeing and conversing with him was limited to a few minutes

as we were leaving while the train remained at the station. Through the courtesy of his clerk and the agency physician, we were enabled to examine into and investigate matters to our entire satisfaction.

The agency having been removed a year previous from old Fort Belknap, to the new site—a short distance south of Milk River, everything, of course, in the shape of buildings was new, cleanly, and attractive, and from a distance, owing to their elevated position, presented a handsome appearance. Two new school buildings, of brick, two stories each, one 60x72 feet, and one 25x40, with capacity for accommodating 150 scholars, had been erected about half a mile from the agent's residence, and would be completed in time for the use of the scholars by the 1st of September. We made an exhaustive examination of the whole establishment, and we deem them the pleasantest, most complete, and intelligently designed buildings we have ever seen for Indian school purposes. The school rooms, dining room, and dormitories are most admirably arranged with a view to comfort, convenience, and health, and the ventilation of the latter is so perfect as to leave, in this respect, nothing to be desired.

The idea of erecting two buildings instead of one large one is most commendable, and speaks well for the genius of the architect. Here the dormitories of the boys and girls are far apart, and there can be no possible communication between them unless through the grossest carelessness. It is the same with the school rooms, play grounds, etc. The architectural appearance of the buildings is very fine, and gives evidence throughout both of design and workmanship of no mean order.

While the location of the agency buildings and the school can hardly be improved, yet unless some way is devised to procure pure water for drinking and domestic purposes, the people of the agency and the school children must necessarily be subject to great inconvenience. Water is now hauled from a gushing spring that finds its way to the surface at the foot of Snake Butte, 7 miles away, and has to be brought by team twice a week to supply the needs of the attachés. This suffices for the families, but what will be necessary when the school becomes filled with children?

Milk River derives its name from the milky appearance of the water, and as the color is caused by alkali, it is not only unfit for drinking purposes, but few except Indians care to bathe in its muddy depths. Two plans have been suggested to introduce good, wholesome water. One is to convey that of the spring in a ditch to the agency where it could be housed in cisterns, and the other is to construct large cisterns for the storage of rain water. The subsoil of this region is so impregnated with alkali that wells are out of the question, and the cost of prospecting for artesian water is too great to be indulged in by ordinary individuals.

Visiting the agency at a time when both teachers and scholars were enjoying their vacation, we had no opportunity of learning how proficient the children were in their studies, but from the fact that they belonged to the Gros Ventre and Assiniboine nations, it was an easy matter to conclude that intellectually they were the equals of those of the same tribes at Forts Peck and Stevenson. A great incentive to study and improvement would, doubtless, be given by the new school when a hundred or more children should be gathered within its walls.

Milk River is a stream over 150 miles long, but in no place is it wide or deep, and the vegetation nourished by it is of the most limited description; but nature, as if to make up for apparent shortcomings, has buried beneath the surface of the prairies of North Dakota and Montana vast beds of lignite, which is made to do excellent service in the absence of wood or coal. This material crops out of the south bank of the above-named river, in the immediate vicinity of the agency, in a vein about 4 feet thick, and remarkably free from foreign substances, and furnishes all the fuel needed in that vicinity. The precaution to keep it as much as possible from the action of the atmosphere is necessary, as its tendency is to go into dust or powder.

While intercourse with white people is very desirable and offers the Indian many advantages, it, on the other hand, brings with it such evils and misfortunes as they would never have known in their primitive condition. Directly across the river from the agency, unprincipled white men, who are willing to profit by the destruction of both body and soul, have opened places for the sale of intoxicating liquors, and although severe laws are enacted against and heavy penalties inflicted on the man who will give or sell liquor to Indians; although Agent Simons and all his police force use every precaution in their power to stop it, yet the law is constantly evaded, and those of the Indians who have con-

tracted the habit of using intoxicants are becoming miserable sots and plague-spots on the face of nature.

It is some mitigation of this painful state of things to know that the number of Indians who have contracted the habit of drinking whisky is insignificant in comparison with those who do not use it, and let us hope that through moral and intellectual influences, the younger generation will learn to abhor and avoid that terrible curse which has come upon too many of their people.

Respectfully,

JOHN CHARLTON.

To Hon. MERRILL E. GATES,  
*Chairman.*

---

### REPORT ON NEW YORK INDIANS.

DEAR SIR: On the 21st of April I left Philadelphia for a tour of inspection of the New York reservations, except the Shinnecock and St. Regis, the conditions on which are essentially different from those on the others. I may visit them at a future time, but the Shinnecock tribe are said to be only nominally Indians, and really more negro than Indian, and the St. Regis are remote from the rest—are on the border, being one-half in Canada, and, if I am correctly informed, occupy their land, which is owned by the State, only on sufferance. The Oneida Reservation has been broken up, and the tribe scattered. My investigations were principally aimed at deciding in my own mind what was the truth between the conflicting allegations of the past three years regarding these Indians, and what the proper solution of their anomalous condition in the midst of the advanced civilization of New York State. I found it difficult to get information from any source before starting as to the precise location of these reservations and the best way to see them, and, partly to see Judge Draper, State superintendent of education, and others familiar with the New York Indians, partly to learn what legislation touching this subject was pending at the capital, and partly to endeavor to secure a map of the reservations said to be in the possession of a gentleman in Troy, I went by the way of Albany. Superintendent Draper courteously accorded me a long interview and gave me valuable information. The map was not to be found, but I obtained access to certain old maps in the State department, and got a pretty clear idea of the location and conformation of the reservations. At the time I was in Albany the Whipple bill, the much-modified outcome of the famous investigation two years ago, had just passed the assembly. It was not reached in the senate at the time of adjournment.

The first band visited was the Onondaga. These Indians occupy a rectangular tract of 7,300 acres, lying due south of Syracuse, and extending north and south about  $4\frac{1}{2}$  miles, with a width of some 3 miles. Its nearest point is about 5 miles from the center of Syracuse, and is almost exactly in the middle of Onondaga County. It is not on any railroad, and is reached by carriage from Syracuse, though a horse car runs about half the distance to the north line of the reservation. As you approach the latter the ground, which had been nearly level, becomes broken, and falls into a picturesque valley, rising again over the sides of surrounding hills. From these the large timber has been cut, but they are not brought much under cultivation. I had been told that you would know at once when the line of the reservation was passed by the violent contrast between its condition and that of the adjoining land. This was hyperbole. It was difficult, at least thus early in the season, to discover the line. The ground on the hill-sides was rough and rocky. A large quarry of Syracuse limestone was being worked by white lessees near the northern border and dressed into an excellent building stone. In the valley there were beautiful green fields, some of them very well tilled. Much plowing had been done, some smoothing with harrows, and one Indian was so far advanced as to be engaged in sowing his crop. Daniel La Forte, the principal chief, was at the plow when I found him, and conversed affably, but did not conceal his aversion to Christian modes of worship, to education, and all progress. He had at one time attended Bishop Huntington's church, and gave as his reasons for leaving it that he "did not find satisfaction" in that form of worship. He objected to the term "pagan" applied to such as himself, who cling to the old Indian ways, and said they also worshiped God like the Christians, and had a preacher to inculcate right conduct. William

C. Bryant, esq., of Buffalo, a gentleman of wide acquaintance with the Indian chiefs, afterwards told me their religion was much like Unitarianism, by which I suppose he meant that they worship the one Great Spirit in common with Christians, but not a Triune God.

They meet on Sundays in the council house, which is a long white building, well painted, and externally of neat appearance. One Indian acknowledged, in reply to a leading question, that some of them worship the sun and stars; yet I am not certain of the accuracy of this. Without much doubt religious dances are held, such as the green-corn dance; and the sacrifice of the white dog is practiced to some extent, and it has been alleged that certain objectionable rites have been performed which represented the sacredness of maternity.

A casual visit, however, reveals none of these things; and while the marriage rite, as solemnized under State laws, is woefully disregarded and the marriage tie frequently, if not even commonly, violated, the community is quiet and orderly, and few infractions of the peace by crimes against either person or property occur. This is partly due to the stringent laws against selling liquor to Indians (recently, however, ignored as to the New York Indians by a United States decision), and partly, perhaps, to the spiritless condition to which their present treatment has reduced them. The Methodist minister's wife lamented that the men did not use violence when their wives were carried off by other men, instancing, among others, the case of a neighbor, a leading Indian, whose daughter, a nice civilized-looking girl of 16, was keeping house for him, and who was grieving because his wife had recently gone to live with her deceased sister's husband. Such cases were time and again brought to my notice, not only there but also among the Senecas.

I was agreeably surprised at the excellent character of many of the houses, which were often neatly painted and tasteful in appearance. The barns and out-buildings were not badly kept; the fences were worthy of many a white settlement; the horses and cattle fairly good. It was not easy to ascertain how much of the ground under cultivation was tilled by Indians. I was, however, told, and I incline to think it true, that but little of it was, the larger part being leased to whites. Upon this and a number of other facts the forthcoming census may throw much light.

The Indians on the Onondaga Reservation were well dressed, most of them tidy and cleanly in appearance, and those with whom we talked intelligent in conversation. A woman was planting peonies and laying out garden beds in front of her house, with the aid of one or two young men. Upon engaging in conversation with her she was found to speak English fluently and very intelligently and correctly, and showed much shrewdness and good sense. Her husband had been dead four years, and she had a son at the Hampton Institute. A daughter and grandchildren were living with her. She had a good house and a parlor furnished as well as the average white farmer's, with a melodeon and other indications of taste and refinement.

There are about 500 Indians on this reservation, of whom 390 are Onondagas and the remainder fragments of the broken tribes. The pagans are here in the ascendancy, and Daniel La Forte, an uncompromising pagan, is head chief. There are 26 chiefs, and if a vacancy occur by death the clan or gens to which he belongs nominates a successor to the council of the Six Nations, which meets at one of the six reservations and confirms the appointment. The last council sat at St. Regis. Their government is unrepresentative, and the chiefs control affairs and are manifestly interested in maintaining the present order of things. The people have no say. The chiefs control expenditure of common funds derived from rental of tribal land through the State agent, presenting bills to him for funeral expenses, care of poor, and traveling expenses to Albany or Washington to antagonize legislation which they suppose threatens tribal sovereignty, paganism, and chieftainship.

The latter outlay was a heavy drain on their income the past year, as was also the employment of an attorney to defend their cause at Albany. As a law on the statute book of the State is claimed to empower the governor to spend \$1,500 per annum to employ attorneys for the Indians, they hope to be recouped this latter outlay. The State agent resides at Syracuse and receives \$200 per annum salary. He leases a portion of their land for stone quarries and for farming, and applies the proceeds as requested by the chiefs. The Indians buy and sell the land among themselves as if they owned it, but can not deed it to whites. One of them told me he had bought 100 acres at \$10 per acre. He was perfectly aware that he did not own the fee, and that his tenure and improvements were in uncertain possession. The Indians, however, respect each other's title, and the agent keeps a

record of these transfers and thinks ownership should be recognized in case of partition of the reservation in severalty. They pass no deeds in such cases, but bills of sale as of chattels.

The United States Government pays the Onondagas and those Indians living with them on the reservation, under a treaty obligation, 11 yards of unbleached cotton cloth annually per capita. The State pays them \$4 or \$5 annually per capita, and 150 bushels of salt or its equivalent in money to the tribe forever, these annuities representing the price of certain salt lands purchased of them.

I visited the school while in session. There were 44 children on the rolls, and an average attendance, I was told, of about one-half. School is held thirty-six weeks in the year, in three terms. In the first two of this year 56 and 49 pupils, respectively, were enrolled. The teacher was an old man, sickly looking, timid, without faith in his scholars, out of heart, and, even making every allowance for the peculiarities of Indian children and the difficulty in teaching them, I would suppose was incompetent. The pupils were bright and smart looking, but stubbornly silent in presence of a stranger, and the teacher had no power to draw them out. There is no compulsory education, and no police to enforce it if there were.

The Onondagas hold their land by treaty in common as a tribe, with no power to sell or alienate to whites.

From Onondaga I went to the Tonawanda Reservation, which most resembles it in backwardness to accept European civilization. It is reached via Akron, in Erie County, which is 24 miles northeast of Buffalo, on the West Shore Railroad. The reservation comprises 7,547.73 acres, lying north and south in a rectangular plot, like that at Onondaga. At the time of my visit Mr. Timothy Jackson was United States agent for the New York tribes, and resided at Akron, but that day turned over his office to his successor, the editor of the leading (Republican) newspaper at Salamanca. The Tonawanda Reservation lies partly in Erie and partly in Genesee County, and is about 5 miles in length. A carriage is necessary to reach it, either from Akron or from Alabama, a small station farther east. Much the same state of things is found here as at Onondaga. The land is, very little of it, cultivated by the Indians, but is leased to white persons, who farm it.

Edward Poodry, leading chief, and, like Chief La Forte, of French descent (who says he does not know how much land he owns, but it is supposed 500 or 600 acres), denounces the admission of white men on the reservation. As I passed near his house a white man was energetically plowing with six double teams in one field. The example thus set is a good one, but Poodry thinks the facility with which the Indians get money by rental prevents them from working. Eckerson, the county school superintendent, is of the same opinion. Erastus Printup, another chief, claims to farm 70 acres. His daughter, Mr. Eckerson said, was well educated at Genesee, and was a good girl until she returned to the reservation, when she became like all the rest. It was the testimony of Mrs. Fancher, of the Methodist Mission at Onondaga, that all the young girls were bad, but as they grew older they often settled down and became good women. Mr. Eckerson thinks they ought to be kept away from the reservation.

The land here is good, and the Indians abundantly capable. Gen. Parker, ex-Commissioner of Indian Affairs, is one of the tribe, and two of his brothers live here yet. But the Indians are idle, and it is hard to see how they get enough means to subsist. Something is wrong with the system, the conditions, under which they live. There are 3 churches here, a Methodist, a Baptist, and a Presbyterian, but no resident minister, no regular pastoral work, and a sad need of a devoted resident pastor in families, both Christian and pagan.

There are 3 schools, with a roll altogether of 66 pupils, and an average attendance of about one-half that number, as given to me by the county superintendent. But it is very hard to get good teachers, because they have no good society and stubborn material to educate, and the schools are poor in consequence.

Agent Jackson thinks the band has retrograded greatly in the last ten or fifteen years. The last vote resulted 70 pagan to 40 Christian ballots. Of the 21 chiefs, 14 are pagan and 7 Christian. The pagan portion of the settlement looks much worse than the Christian; indeed, there are a few very good Christian houses and farms. Poodry says that it is a religious doctrine of the pagans that it is "wicked to work." It is easy to see from the complexion of the council of chiefs, which is a petty oligarchy, whence the deteriorating influences proceed. If a chief dies his successor is chosen by his clan, which follows the mother and not the father, and the council of the Six Nations ratifies or solemnizes the choice. Of course, the ruling influences are favorable to conservation of the "powers that be" and of the old order.

I have said they will not work. There is a little basket-making, but no other trades, and although Akron is an active and growing place, with large cement works, the Indians prefer idleness to labor. The Tonawanda land is held by the State controller in trust. The Indians sell the land to each other, as at Onondaga, but they understand perfectly that they can give no real title, and, in case of distribution, Poodry thinks their ownerships would not be recognized. It is a fair question whether legislation should not recognize them, for the owners are those who have earned this relation by industry. The Indian titles are recorded by the clerk of their council.

The Tonawandas are a branch of the Seneca tribe and receive as Senecas an annuity of about \$4.20 per capita, besides the 11 yards of cloth from the National Government. They also receive about \$8 more apiece on account of a special treaty by which the United States recognizes an indebtedness to the tribe of some \$80,000 for the purchase of their lands in Kansas. The State annuity is about \$4 per head. In my opinion all of these annuities had better be capitalized and distributed.

The Tuscarora Reservation, also in rectangular form or nearly so, its length of about 4 miles being from east to west and its width from north to south, contains 6,249 acres. It is about 7 miles northeast of Niagara Falls, and is reached most conveniently by carriage from that point or Suspension Bridge. The road was rough when I took it, and lay for about 4 miles from the falls along Niagara River, commanding magnificent views of the cañon towards its outlet into Lake Ontario.

The condition of the reservation is decidedly better than of the other two. I sought to discover the cause, which is not perfectly manifest. It is a noticeable coincidence, however, that the tribes which were friendly to the American cause at the time of the Revolution are the most advanced and prosperous now. And to this historic fact may perhaps be ascribed the difference in their progress, for the hostile sentiments cherished during several years of war are not easy to remove from the implacable and immobile Indian character, and may truly have rendered these Indians averse to accepting the manners, customs, and religion of their former enemies. Be that as it may, there are said to be no pagans among the Tuscaroras, all professing the Christian religion. Much is no doubt due to the good influence of some of their chiefs, men like John Mount Pleasant and Daniel Printup. The former died about four years ago, and his widow, Caroline, sister of Gen. Eli Parker, lives very comfortably on the western edge of the reservation, and maintains the dignity of her husband's head chieftaincy. I stopped at her house and she invited Printup to a talk with me, and set an excellent lunch for us; but before eating, the chief reverently offered prayer in the Tuscarora language, the only word which I could recognize being the name of Christ. Frank Mount Pleasant, brother of John, is the minister, and Printup one of the deacons, of the Baptist Church. The former lives in a substantial house of pointed stone, with squared stone corners. There is one other place of worship, and there are two schools, with an enrollment of about forty scholars. One of these is taught by a young Indian woman, and shows an average attendance of something like 75 per cent. The Indians here farm most of their own land, about 3,000 acres, I was informed, of the 4,700 under cultivation; 1,500 acres being leased (by widows and others) to white farmers. They open their weekly council meetings with prayer, and hold frequent temperance meetings in the council house. I understand that the marriage relation is pretty well observed by them.

Farming is their principal industry; there is no village; they are all scattered on farms. The plantations look well, and produce fair crops of wheat, corn, oats, and potatoes. They also have good peach and apple orchards, Daniel Printup owning 15 acres in apples alone. On the afternoon of my visit another of their chiefs, George Williams, had four double teams at work in one field. One man has a stock farm, where he raises trotting horses.

The women make the Indian bead and basket work found for sale at Niagara Village.

It may be noted as one probable reason of their industry that they have no pauperizing annuities, none but the 11 yards of cotton cloth.

They also own, as a tribe, the most of their land by actual purchase or gift, the exception being 664 acres of Seneca lands, which are subject to the Ogden Land Company's claim. There would seem to be light on the questions we seek to solve, to be found in these several particulars of difference between the Tuscaroras and the other tribes, accompanied by the signs of greater prosperity and order among the former.

It is nevertheless true that they also cling with tenacity to their tribal government, isolation from the whites, and communal tenure of the land. They argue that if their land is distributed in severalty they will at once have to pay taxes, whereas now they do not; that it is the only home they have, etc.; and thus resist, with much national prejudice and race feeling, but little logic, that complete absorption into the citizenship about them, which, if there be anything in civilization, is destined greatly to inure to their individual benefit.

Passing hence to the Cattaraugus Reservation we revert to some of the unfavorable conditions visible at Onondaga and Tonawanda. The reservation occupies a strip of land extending along the Cattaraugus Creek, from its mouth at Lake Erie, to a line near Gowanda, and consists of 21,680 acres. It is reached from Buffalo by rail, either to Gowanda or Lawton (whence there is a stage line running to or near the orphan asylum), or via Angola, on the Lake Shore Railroad. A team may be hired either at Angola or Gowanda for a drive of about 7 miles south from Angola, through the village of Brant, or west from Gowanda, to the Thomas Orphan Asylum, which is a kind of center. J. H. Van Valkenburg and his wife, the superintendent and matron of the institution, are genial, hearty, and successful people, and insisted on my staying over night, entertaining me very hospitably, and giving an opportunity of seeing much of their well-managed institution and learning many things about the people among whom they are laboring. They have over one hundred Indian boys and girls, mostly orphans, boarding at the orphan school or asylum. A farm of 100 acres, well tilled, with fine stock, Hambletonian horses, Holstein cattle, and selected breeds of hogs, affords an object lesson in good husbandry for the surrounding Indians, and judging from the appearance of some of their farms it is not without effect, even on hard-shell pagans. The attainments of these children in school are in striking contrast to those seen on the previous reserves, and show conclusively what they are capable of under good teachers and in well-supported schools. Undoubtedly the leaven of such an institution as this would be excellent among all the other groups of Indian in the State. At Tonawanda there has been a positive effort to start one, which has failed. It ought, by all means, to be pushed to successful operation.

So far as I saw the individual Indians at Cattaraugus they seemed bright and intelligent, but, from accounts, their open disregard of the marriage tie is deplorable, numerous instances having been related to me of bigamy, polygamy, concubinage, and whimsical change of wives. I do not believe Judge Draper's statements are much overdrawn on this point.

Two of the pupils at this school, one of them deceased at the time of my visit, both fine-looking and smart girls, were daughters of a young girl, herself only 13 years old when the first was born, and 14 $\frac{1}{2}$  at the birth of the second.

As regards industry, the testimony as to these Indians is not of the best. The reservation lies along a beautiful broad valley; much of it very level, alluvial land, bounded by high, picturesque bluffs and hills. It is good land, and there are some very respectable and creditable farms on it, tilled by Indians. It is estimated, however, that a very small part of it, about one-sixth, is under cultivation. And yet the complaint of the Indians is that if their land is distributed, there will not be enough to go around. There are two white settlements on the reservation, the village of Irving, near the lake, and Versailles, near its southern border. I did not hear of these being cause of much trouble, as in the case of those on the Allegany Reservation.

There is an active and earnest resident Presbyterian missionary here, Rev. Mr. Runciman, and also a Methodist, Rev. Mr. Crow, who has to use an interpreter, or, as he humorously styled him, an "interrupter."

Superintendent Van Valkenburg, though not a clergyman, conducts religious services at the orphan school. Interested as he has been in the work, he is beginning to be discouraged at the slow progress these stolid people make toward the white standard of civilization. Rev. F. M. Trippe, the missionary of the Buffalo presbytery, either takes more hopeful views, or expects less, and is more charitable in his estimate of the Indians. As with the observer of the chameleon, they "both are right and both are wrong." There is not, perhaps, one of the statements of Judge Draper, so vehemently attacked by the Buffalo presbytery, that has not much of truth in it. If he also gave credit for the good points in the Indian character, it would present a picture substantially correct of the present condition of these Indians.

And yet, after all, as the presbytery alleges, their state does not differ so very much from that of some white settlements, and many of their vices are copied. Jealousies and factional quarrels among the Indians are common, and it is al-

leged that bribery and corruption are quite as bad with them as in white communities, the members of their councils being open to it, and therefore vulnerable to white intrigue. In the Pagan part of the Cattaraugus tract, called Newtown, toward Gowanda, which looks poor and little cultivated, I even heard accounts of dangerously bad Indians, which were very unusual on any of these reservations. I have no doubt that liquor was at the bottom of it, Gowanda being a large and growing place, close to the edge of the Indian land.

On the following morning, driven by my host to Gowanda, I took train south to Salamanca, the heart of the Allegany Reservation, and here conversed with Mr. Ferrin, the new United States Indian agent, who is proprietor of the *Salamanca Republican*, with Judge Vreeland, a prominent lawyer and district judge: with Rev. F. M. Trippe, who courteously entertained me and drove me in his carriage to Jemisontown, a good sample of the Indian villages, and with a number of the Indians. I also visited the Indian boarding school at Tunessassa, 13 miles south of Salamanca, at Quaker Bridge, on the Oil City Railroad.

The all-absorbing question here is the land question, which has assumed large proportions from the fact that several important white settlements have sprung up on the Indian lands; and it is this question that dominates the Indian problem in the New York legislature, owing to a not unfounded apprehension that Anglo-Saxon cupidity may prove too much for the red man's power to resist.

The reservation covers 30,469 acres, and lies half a mile, more or less, on each side of the Allegany River for an extent of 35 miles. Its location along the river bottom has invited main lines of railroad throughout its length, and white settlement, which bids fair to be populous.

Not only Salamanca, a busy, thriving, growing young city of 5,000 souls, and a sort of railroad center on a limited scale, but Red House, Cold Springs, and other villages are on the reservation, and the complications of the land title are daily increasing in embarrassment. Moreover, a profane and drinking population of railroad and lumber employes surrounds the Indians and keeps the level of their civilization low, adding this to all the other discouraging factors of their situation.

Notwithstanding these facts the Indians here are tolerably prosperous, thanks to the valuable efforts of the Friends at the Tunessassa school, and of other good people, such as Mr. Trippe; possibly, also, in part to the elements of wealth in their land. Intellectually and materially they are apparently gaining, and there are some excellent and thriving Christians among them; and although paganism preponderates, as on most of the reservations, they are here said to desire an education for their children, without any exceptions, which is prophetic of good. The Tunessassa school, outside of the reservation near its southern border, is a boarding school, where about 40 Indian boys and girls receive a good education, and its influence is perceptibly felt in the Indian community. The boys are taught farming and a little carpentering, surveying, and bookkeeping. Myron Silverheels, one of the leading Indians, pleads that the Friends should give them instruction in more of the industries, arguing that they can not all live by farming on 15 or 20 acres apiece, rocks and woods included. I am not sure but in this he is right, and that more of the useful trades might be taught at the school with very great advantage.

I found here, as elsewhere, a certain dread of land distribution and tribal disruption; but there appeared to be a rising sentiment in favor of them, or at least a growing conviction that they are coming, and that it is best to be prepared for them, and a dawning recognition of the value of law and severalty ownership. The pressure of the land question at Salamanca for settlement would have forced the issue had not Congress, at its last session, passed a law providing for the leasing of the occupied lands at that settlement for ninety-nine years. About 5 square miles of the Indian ground is here leased for nominal rents to white settlers and speculators, and has immensely enhanced in value, being now probably worth millions of dollars. Solid city blocks are leased for a few dollars a year ground rent. The occupants treat this land precisely as if they owned it in fee, buying and selling it, and passing quit-claim deeds without a pretense of a title. Their previous leases would have expired in 1892, and a feeling of intense anxiety prevailed till the passage of the recent law, which has set the matter at rest for the present without providing a final solution.

The rentals under the ninety-nine years' lease are to be fixed by mutual agreement, appeal to be taken, if lessors and lessees can not agree, first, to arbitrators, thence to the county court, and it may be to the United States courts, before final judgment is reached. Unless bribery of the head men prevails there is likely to be long litigation, for the Indians are contentious and stout in asserting and maintaining their rights.

I have thus briefly described what, it must be admitted, was a hasty tour of these reservations. It was not undertaken with a view to accumulating any mass of detailed information, but rather to enable the writer more correctly to estimate the volume of circumstantial testimony on recent record, and to generalize right conclusions, first, as to the statements of Superintendent Draper and their contradiction by the Buffalo Presbytery, and then as to the controverted deductions and recommendations of the legislative committee. The abundant testimony taken and published by this committee supports, in the main, Judge Draper's assertions. His language was rather strong in some cases, yet it was essentially true. It may be truthfully stated (1) That schools are not generally encouraged by these Indians. (2) That there is an indisposition to work and to cultivate their own land. (3) That their tribal organizations are a positive disadvantage to them in the way of improvement. (4) That the marriage tie is loosely regarded. (5) That they are inadequately amenable to law, civil and criminal. (6) That the English language is seldom or never spoken among themselves. (7) That what is known as paganism, a species of barbarous Monotheism, prevails, and is likely to, so long as the Indians are isolated as they are now. (8) That the reign of chiefs does not favor civilization or progress.

The question then is, is civilization an advantage or disadvantage? And in a civilized community it is not necessary to discuss this. Does their present condition before the law favor civilization or effectually prevent it or obstruct it? To this query the above statements of facts are perhaps a sufficient answer. In the midst of an enlightened commonwealth for over a hundred years, and with all the civilizing influences that have been brought to bear upon them, their present state is yet that described in the above eight statements. I wish, then, in a few words, to urge the conclusions to which I am forced by my observations of the situation. Premising that—

(1) The recognition of independent nationalities in the midst of our American nationality is absurd and untenable.

(2) The New York Indians are entirely capable of civilization, as much so as the population around them, more so than the negroes, to whom we have given citizenship in far greater numbers. They are quite shrewd and abundantly able to take care of themselves, without any peculiar provisions or immunities, and are practically the same in capacity and characteristics, saving certain peculiarities of disposition, as white people.

(3) Anglo-Saxons, coddled and pauperized as they are with annuities, would also be shiftless. Excluded from a wholesome public opinion they would be quite as objectionable in their practices. Isolated, ostracized, and looked down upon, they would likewise be without ambition.

(4) The fault, then, lies not in these people, but in their conditions, which must be changed, and if there is any lesson in the history of the Caucasian and the Anglo-Saxon, they should be placed under precisely the same conditions as those under which the latter race has flourished.

Looking carefully and dispassionately at the recommendations of the legislative committee, I am reduced to the conclusion that they were wise recommendations, are to-day very nearly what the situation requires, and should be favorably acted on by the legislature at its next session.

The question arises, why then were these recommendations opposed by many well meaning friends of the Indians?

For this there are several reasons. In the first place, strong opposition comes to all such propositions from the Indian chiefs, partly because they adhere to their race customs with an inflexibility characteristic of Indians; partly because their power and prominence as chiefs are at stake; partly because they are great litigants, and usually have some scheme for recovering millions from the National Treasury as tribes, and citizenship by tribal extinction would put an end to that; and partly that they now enjoy immunity from land taxation, and severalty would render them liable to taxes, like their white neighbors. The chiefs are those with whom the friends of the Indian, seeking his welfare, naturally come in contact, and, without care, the chief's views of the situation unduly color theirs. On the other hand, the farmers and taxpayers around a reservation have an apprehension that if the reservations are broken up a lot of lazy and shiftless paupers will become a county charge and increase their county taxes. And, lastly, the fact that this movement seemed to emanate from Salamanca gave the impression that it was really a scheme to gain possession of the Indian lands on the part of white speculators and land-grabbers.

What was really the motive of those who originated the proposed bill I know not. It would be well if any new attempt thus to benefit the Indians were in the

hands of disinterested promoters, with only the general good, and that of the Indian, at heart. But the fact remains that the welfare of the Indian demands that he should now be placed on the plane of those around him, with all the privileges and liabilities of citizenship and law. He will not in all cases sink to the lowest level. One of these very Indians, a Tonawanda, has been in one of the highest places in the land, and is now an honored citizen of New York.

The conclusions of the legislative committee are embodied in four recommendations, which I here quote from the text of their report. They are:

- (1) "That a compulsory attendance school law be enacted.
- (2) "That the legislature request the General Government to take action to extinguish the claim of the Ogden Company to the lands of the Senecas, and that portion of the Tuscaroras' covered by it.
- (3) "That the lands of the several reservations be allotted in severalty among the several members of the tribes, with suitable restrictions as to alienation to whites, and protection from judgments and other debts; but such division not to go into effect as to lands affected by the Ogden Company's claim until that claim be removed. This allotment in severalty ought not to be limited to a division of the possession of the land, but should comprise a radical uprooting of the whole tribal system, giving to each individual absolute ownership of his share of the land in fee.
- (4) "The repeal of all existing laws relating to the Indians of the State, excepting those prohibiting sale of liquors to them and intrusion upon their lands, the extension of the laws of the State over them, and their absorption into citizenship."

In my opinion, it can not reasonably be objected to these propositions that they are inimical to the Indians' interest. The only important objection I have to them is to be found in the provisions which make any distinction whatever between them and the white race. If they are forbidden to sell liquor, white people should be too; if their land is to be inalienable, then white people's land should be; if they are to be protected from judgments and debts, many whites might claim a like protection; if compulsory attendance of school is desirable for them, it is not less so for their white neighbors.

But the recommendations are sound and right on the main and essential points. The Ogden Land Company's claim should be extinguished, all their lands should be parceled out in severalty, and special laws for Indians should be repealed.

There has been much discussion whether the fee ownership resides in the Ogden Company, subject to the Indian right of occupancy, or in the Indian tribe, subject to the claim of the Ogden Land Company. But it matters little. The land company can do nothing with their right of preëmption, even if it carries with it the fee, if the Indians remain forever in possession. It therefore behooves the land company to sell out this highly uncertain interest and convert it into money; and this is the only promising solution of the knotty question. I am inclined to think, with Judge Vreeland, that the fee will be found to be in the Ogden Land Company, who derive their title from the State of Massachusetts. The whole history of the numerous transfers and transmigrations through which these tribal lands have passed is recited at length in the report of the legislative committee, and its perusal leads to the above opinion.

The removal of this Ogden claim by its purchase by the United States Government would seem to be a necessary preliminary to a title which could be deeded to the Indians severally without a cloud.

It is greatly to be desired that this important step, and the subsequent conversion of these tribes into American citizens, may speedily be accomplished.

I remain very truly, yours,  
PHILADELPHIA, June 9, 1891.

PHILIP C. GARRETT.

Hon. MERRILL E. GATES,  
President Board of Indian Commissioners.

## REPORT OF RELIGIOUS SOCIETIES.

The expenditures by religious societies during the last year for Indian missions and education (not including special gifts to Carlisle, Hampton, and other schools), are as follows:

American Missionary Association (Congregational) .....	\$38,420.28
Baptist Home Mission Society .....	16,678.27
Baptist Mission Society, Southern .....	
Bureau of Catholic Missions .....	
Friends, Baltimore, Yearly Meeting .....	125.13
Friends (Orthodox) .....	
Mennonite Mission Board .....	10,784.03
Methodist Episcopal Missionary Society .....	14,255.00
Methodist Episcopal Missionary Society, South .....	26,360.92
Moravian Missions .....	9,735.84
Presbyterian Foreign Mission Board .....	19,820.34
Presbyterian Home Mission Board .....	150,310.05
Presbyterian Southern Mission Board .....	6,805.00
Protestant Episcopal Missionary Society .....	42,082.74
Unitarian Mission Board .....	9,896.56
Women's National Indian Association .....	

## AMERICAN MISSIONARY ASSOCIATION.

## INDIAN MISSIONS.

The opening of our work in Alaska is an interesting story of missionary self-denial, courage, constancy, and success. Our missionaries there are now in charge of a school of three hundred pupils, and are bringing Christian light and education into the depths of barbarism and paganism, and have carried forward their work in a spirit of consecration, singular good judgment, and tact in dealing with savages who more than once were at the point of destroying them.

We have received urgent appeals to extend our work to the powerful tribe of the Navajoes. There are also calls for work in behalf of the Apaches. If our means should warrant it and the way should be opened, we may be able during the coming year to do some service among these wilder tribes of the far West.

The S'kokomish mission in Washington has gone quietly on under the efficient conduct of Rev. Myron Eells.

The Fort Berthold mission reports that seventeen Indians were on confession of faith added to church membership last year. There are now five preaching places, where about two hundred attend service each week. The three Sunday schools have nearly two hundred pupils. The hostile spirit has grown much less among the people, children are especially receptive, and a wide field is open among the Dakotas, Mandans, Rees, and Crows. Our missionary urges strongly that we improve our present opportunity to establish a mission among the three thousand Crows.

Of the nearly five thousand Indians on the Standing Rock Reservation, it is fair to presume that we are reaching, more or less directly, six hundred people. The Indian is continually on the move. For eight months of the year he spends most of his time on the road between his village and the agency, where he gets rations every two weeks. During the larger part of the year we must catch him *in transitu*. A chapel at the agency must open its doors to him when he is at the agency for rations. During the four winter months most of the work must be done in the camps or villages, though the disturbance last winter gave opportunity at the central station for largely attended daily services. Many of the people are now ready to hear the gospel as never before. When Rev. T. L. Riggs led a party at the risk of their lives to Sitting Bull's village sixteen days after the fight and buried the bodies of the slain Indians, a profound impression was made on the hearts of their surviving friends and relatives. Their grateful feeling remains, and has opened many a home to our missionary work through all that region.

Sometimes as many as four hundred have been present at the Sunday morning service at the central station. The Sunday services at the outstations have been well attended. The hospital is no small part of our mission equipment. A record of five hundred dispensing patients in three months incites us to push this part of our work. The outlook is not dark. The establishing of a subagency on Grand River and one at the mouth of the Cannon Ball will keep the people at home and increase the usefulness of our outstations. There has been inspiration in our large congregations, but hand-to-hand work in the villages is the more effective. The Government has now made ample provision in the number of schoolhouses for the teaching of the children, but the teaching of the older people is still a part of our mission work.

The confusing and disorganizing influence of "the war" of last winter has seriously broken into our mission work and accentuates its present needs. No lesson of respect and obedience for law was learned by these Indians. Even the survivors of Wounded Knee now talk and act as if they were the victors. To the savage mind, they seem to have gained pretty much all they asked. This state of things must be encountered with increased missionary effort. Never was the demand more imperative upon us for this. Inasmuch as the abodes of so many are broken up, and they are wandering restlessly about, we must follow them and get hold of them with the only power which can bring permanent concord and well-being.

On the Cheyenne River Reservation the outstation work, although carried on with constant zeal and efficiency, has not been satisfactory. The past year has accomplished but little, and much of that which had been gathered together has been scattered. Possibly this is the way the Master chooses to work. On Bad River the church organized last year has grown in numbers and spirit, and there are encouraging indications along the Moreau River. The Cherry Creek station is full of hope and promise, but the other six Cheyenne River stations have gone to pieces. At Oahe nine were received on confession into the church at the last communion. The Oahe school reports a smaller number of pupils at its opening this fall.

The Indian troubles of last year had a very bad effect on Rosebud Indians. Two thousand left their houses and spent the winter in seditions and revellings. About half of these have returned. But their houses were plundered and destroyed. Families were broken up, deeds of violence and robbery were committed, with an occasional murder. No punishment has been inflicted on any one. The result can easily be seen. It has produced a class of people who are acquainted with war and bloodshed. A year ago our young men had never known of these things, except from tales of their parents. Even those who were at home and were peaceful and loyal are in a disturbed and restless condition. They feel that they have received no reward for their loyalty. The old villages and houses are broken up and the Indians are just floating around. In the work of the Rosebud Mission only one of our stations has been in operation during the year. The year has been one of clinging to a sinking ship, holding on, hoping that help will come.

Our normal training school at Santee has reached the age of 21 years. These 21 years are years of growth and experience, and the results are full of significance. Instruction and training have been given to nearly a thousand pupils. These are scattered from the Mississippi River to the Rocky Mountains, and from Kansas to the Queen's dominions. Their influence is already felt among all of these interior northern tribes, as pastors of the native churches, as missionary teachers, and as leaders of their people. But the call for them is greater than the supply, and the new opportunities for missionary work painfully increase the demands upon the school. It emphasizes manual training not chiefly for economic reasons, but for intellectual and moral discipline, and its pupils are made self-reliant and ready. It is a great thing that these pupils go out among their yet heathen countrymen, telling the "good news" in the language in which they were born. The preëminence of this school is as a Bible school. The English and the Dakota Bibles lie side by side on its desks. This year a small text-book in the Dakota language, entitled "The Days of Jesus"—Jesus Taanpeter—has been issued by the school press. From small beginnings this school has increased in buildings and teachers, until it has now a valuable plant and a corps of teachers (including both industrial and academic) of 23, with a yearly roll of 175 pupils. We are just establishing a department for teaching cooking and nursing, the first hundred dollars for which was given by a surgeon in the Army, and we hope soon to have a hospital all complete. Other wants are pressing that will soon become absolute necessities. For however much the Government may do in general Indian education, it will not educate our native preachers and missionaries. This the churches must do. This the missionary field demands.

## BAPTIST HOME MISSION SOCIETY.

## THE INDIANS.

In the Indian Territory 9 white and 12 native missionaries have been under appointment. Three of these have labored chiefly among the whites; and 4 among the colored people. Most of the missionaries to the Indians have been among the Cherokees; one to the Delawares—Rev. S. H. Mitchell, who went to this field last fall; one to the Sacs and Foxes; one to the Wichitas and Caddoes; and one to the Ottawas.

To the Indians of Round Valley Reservation, in Northern California, Rev. J. F. Merriam was appointed last fall; his wife also having been appointed by the Women's Baptist Home Mission Society.

It is in contemplation to establish a mission among the Kiowas and Comanches, in the Indian Territory, this season. Much more should be done speedily by American Baptists for these too long neglected pagans in our own land.

Substantial progress has been made during the year. Rev. A. J. Essex has served most of the year as general missionary for the Territory. The society has urgent appeals for missionaries to neglected points in the Creek and Choctaw nations, which have hitherto been regarded as a part of the field of the Southern Baptist Convention. It will become the duty of the society to enter these fields soon rather than see great opportunities pass from us. Indeed, it would be a decided benefit in many ways if the entire work in the eastern half of the Territory could be brought under the efficient management of one organization, which, in cooperation with the Territorial convention, should unify and wisely direct the missionary operations therein.

## REV. A. J. ESSEX, MUSCOGEE, GENERAL MISSIONARY.

This district is a difficult one, means of transportation are scarce and churches are far apart. The work proper began in September, 1890. Since that time a beautiful meetinghouse has been built in Muscogee, that will seat 300 people, with baptistry and robing rooms. The general missionary has secured in subscriptions on the field about \$1,300. The house will soon be occupied. Through the energy of the pastor, money has been secured for a good parsonage, which is now under contract. The citizens and brethren have given something more than \$325 of this. The church here is growing steadily. A church has been organized at Choska, 20 miles northwest of Muscogee, and a pastor secured to preach a part of the time. Preliminary arrangements have been made for a church at Eufaula. It will be organized in April, and is much needed. A series of meetings was held early in winter with the Zion Church, which resulted in several conversions and in raising some \$50 by that body, and by a little aid from the society, their meetinghouse has been finished. Webber's Falls has also received attention from the general missionary, and stated services with a good Sunday school have been reestablished in that field. The greatest need of this whole field is more intelligent missionary preachers who will organize the churches for work that will finally make them self-sustaining, and also to go into new fields that are continually opening out in this rapidly-changing country. About \$60 has been collected also by the general missionary for the society's work.

## FRIENDS.

The standing committee on Indian Affairs has, during the past year, felt an added weight of responsibility in connection with the labors of our Society on behalf of our red brethren. And although the few avenues of usefulness that we can enter upon seem difficult to keep open and our opportunities for profitable labor are constantly lessening, yet the slight footing that we hold on this more than ever philanthropic work it is important for us to maintain.

We have been enabled to continue our cordial relations with the Indian Department of the Government through the Commissioner of Indian Affairs, and our connection with the work of improving the moral and temporal condition of the women and children is fully recognized. We have had a number of interviews with the Commissioner and others in authority at the Indian Office in Washington, and whilst we have at all times been accorded a respectful hearing,

It is evident that the potency of our voice in the selection of Indian agents, is now overwhelmed by considerations of a purely political character. This has been the tendency of affairs for some years, and is entirely consistent with the spoils system of distributing the offices that has heretofore obtained in the Indian Department.

A movement to request the President to extend civil-service rules so as to include appointments in the Indian Department was organized last winter, and we threw our influence strongly in favor of the effort. Petitions to this effect were circulated amongst Friends and others extensively and forwarded to President Harrison. The effort was partially successful, as the President issued an order that all the minor offices in the Department be thereafter brought under the provisions of the civil-service law. This is a step in the right direction, but it is important that another be taken by the further extension of civil-service rules so as to include all appointments under the Commissioner of Indian Affairs.

We are glad to recognize the fact that in the Indian policy of the Government there has been an evolution which must have been in the right direction, since it culminates in measures that must appear to all true friends of the Indians as wise and beneficent. A condensed statement of the present policy of the Government is made by Commissioner Morgan in the following language:

"That of rendering the American Indians Indian Americans, endowing them with citizenship, conferring upon them in their own individual right the title to their homes, treating them as men and women, throwing upon them the burdens as well as the privileges of citizens, and of giving to their children that kind of training that will fit them for their duties and their privileges. The one fact that needs to be emphasized is the necessity of permanence in this work."

To this we would add that, when they are settled upon their farms as independent families and are established in their own homes, of imparting to the women of each household a knowledge of housekeeping and homemaking, and of stimulating in them a desire to elevate their standard of domestic life.

Now, if in the appointment of officers who are to be intrusted with the duty of carrying into effect these eminently correct theories proper influences might have weight to the end that capable and honest men be thus engaged, the advancement of the Indians towards the goal that has been set for them would be rapid.

In Second month last a meeting in the interests of the cause of Indian elevation, etc., and under the auspices of this committee, was held at Park Avenue Meeting House, and was largely attended. It was addressed by Dr. Daniel Dorchester, superintendent of education amongst the Indians, Commissioner Morgan, and Gen. Whittlesey, Secretary of the Board of Indian Commissioners.

A delegation from our committee attended the annual conference of religious and philanthropic bodies, with the members of the Board of Indian Commissioners, held in Washington in First month last. We made a brief report of our connection with the work, and were interested and profited by the experiences that were laid before the meeting.

During the past year our field matron at the Santee Agency, Marie L. H. Steer, has been faithfully at work, and reports frequently received from her indicate that she is, on the whole, encouraged with the progress she has made. It is greatly to be regretted, however, that the agent who succeeded Charles Hill last year, has evinced an open hostility to the work she is engaged in, and has, as far as he was able, interrupted its progress and counteracted its effects. This attitude of the agent has entirely prevented any cordial relations between the field matron and himself, and will, if persisted in, and he is allowed to remain in charge of the agency, ultimately drive her from this field of usefulness, wherein she has patiently and conscientiously labored for the past two years. We have asked for an investigation of the affairs of the Santee Agency, as we have reason to believe that if an examination is honestly and thoroughly made the agent will not be allowed to retain his position. We have the promise that an inspector will be detailed for this work at an early day.

During the summer the Commissioner called upon us to nominate another woman for field matron, and offered to assign her to any reservation we might select. After careful deliberation, and upon ascertaining that Philadelphia Friends proposed to supply the necessary equipment and outfit, we recommended Miss L. H. Douglas, of Nebraska, for appointment, and asked that she be assigned to the Ponca Agency in South Dakota. She was promptly appointed and assigned as requested; the equipment was supplied by Philadelphia Yearly Meeting, and she is now busily at work among the Poncas. A brief report of her

experience and progress has been received and is inserted here as a part of our report:

“ NIOBRARA, NEBR., *September 29, 1891.*

“ DEAR FRIENDS: The work of the field matron among the Poncas has opened pleasantly. There is certainly no lack of work to do among them. The question is, how to get at it in a way to make it profitable and bring about the needed change in their condition. Every one knows it would require no little tact to enter a white woman's house and intimate to her: ‘ You should black your stove and sweep your floor, wash your windows and scrub your table.’ How do Indian women take such advice? Some of them have lived five years in houses where never a drop of water, except by accident, has fallen upon the floor. Piles of rags and dirty pillows upon which they sleep, old moccasins, bags of wheat, dishes, clean and otherwise, and all other kinds of incongruous articles fill the corners of the two rooms. It is hard to know where to begin, especially as there is neither cupboard nor closet in which to stow things away. Worst of all, there is no wish for better things. But this is not a fair picture of the whole tribe. This is the lowest stratum. In the next above they have a table and a few dishes in a cupboard, a rude bedstead and some soiled bed clothing, and so step by step until we come to some comfortable houses, with children clean and well-cared for, and all things in fairly good order. There are but few of these, and it has taken two generations of discipline, living in white families, and in most cases an admixture of white blood, to bring this about.

“ The older women, like Standing Bear's wife, seem almost hopeless cases, but some of the younger women are willing to learn, and the girls who have been away to school have some knowledge of the scrubbing brush and broom, if they can only have the pride and ambition to use them. I have been gratified so far in being well received. In two or three cases have been asked to come again and teach them to cook and put up fruit, etc. The great discouraging feature of the work is their want of order, method, or persistency in anything, and in making no plans for the future.

“ Perhaps it will come in time. They are but grown-up children. To get up at a regular time every morning, to get their meals at a specified time every day, to make bread or anything in preparation for a time to come not actually present, to wash and iron regularly, all these duties which pertain to good house-keeping seem to them most unpleasant and unnecessary. Character and habits are closely joined. I believe to teach a child to do ever so small a task at a regular hour every day for a year would be a discipline which would tell on his character for life.

“ My sewing class promises to be a great success. The first day I was preparing for it I said to Mrs. Smith (the wife of the missionary): ‘ I have work enough for only eight. Do you suppose I shall have more?’ She replied: ‘ You will not have eight, or half of eight.’ But I did have just that number, and the next week sixteen. It gives me a fine opportunity to get acquainted with them. It is good for them to get out one day from home, make themselves and the children they bring with them reasonably clean, get a lesson in sewing, and have some garment to take home as payment for the effort.

“ Mrs. Smith warns me that complaints will soon be coming in that one gets more than another; for, again, they are but children; but I can only keep things as well balanced as I know how and hope for the best. It is not their gratitude I am working for, except so far as the cultivation of a grateful spirit is for their good. But there is need of the wisdom of a serpent and the harmlessness of a dove; above all of the love that hopes all things and endures all things. Without this I might ride over these prairies through heat and dust, wind and storm for years, and it would be time and labor thrown away—it would profit me nothing. Your help and sympathy I do not need to ask for; I know you will give them freely.

“ Yours, most sincerely,

“ L. H. DOUGLAS.”

The Commissioner in his estimates for the ensuing year has made provision for ten field matrons and an outfit for each one of them. If this effort of the Indian Department to extend the advantages of domestic instruction amongst Indian women is successful and qualified persons can be found to enter the field, it must have marked and immediate effect upon the domestic life of those who can be reached. We will exert our influence on the Congressional committees to obtain favorable action on this estimate and sincerely hope they may be made to see the necessity for it.

The committee on Indian affairs of New York Yearly Meeting has extended the hand of fellowship to us in our work, and has materially assisted us in accomplishing what we have. Further substantial aid and friendly counsel are now offered by that committee, and it is a comfort and source of strength to feel that Friends of New York stand ready to assist us at all times in this benevolent work.

We continue to send papers to the Santee Indians, and have reason to believe that they are appreciated.

It has been our custom to send a box of presents for the Ponca children at Christmas time, and a letter has been received from Mrs. John E. Smith, wife of the subagent there, asking that we continue to do so, and expressing on behalf of the children the great pleasure that is afforded them by these little evidences of interest and care from far-distant friends.

We desire to continue our watchfulness of proposed legislation by Congress as affecting the Indians, and will use our influence to secure that which seems in our judgment most likely to tend to their welfare.

The report of the treasurer of the yearly meeting shows that interest on the Indian fund during the year as collected and paid over by the finance committee is \$251.10, which, with the balance on hand Tenth month, 1890, \$343.36, makes a total of \$594.46. The expenditures have been \$125.13, leaving a balance on hand of \$469.33.

The committee was united in requesting of the yearly meeting the appointment of Martha S. Townsend to fill a vacancy caused by the removal by death of one of our number, Anna T. Janney.

Signed by direction of the committee.

JOS. J. JANNEY,  
*Clerk.*

BALTIMORE, *Tenth month 23, 1891.*

---

#### FRIENDS (ORTHODOX).

Probably no part of the evangelizing labors of the Society of Friends is more fruitful in results than that among the Indians. There has been during the year a net increase of ninety-one members; one hundred and eleven more First-day meetings were held than the year before, and the average attendance at these and the Mid-week meetings has increased. The cooperation of the Government officials and employes with our Friends in the field in their efforts to promote the kingdom of Christ has been generous and cordial. Government allotments of land for church and school uses have been made to the executive committee, as follows: In the Quapaw Agency, at Wyandotte Station, 8 acres; at Modoc Station, 4 acres; at Otiawa Station, 20 acres; at the Seneca Reserve, central part, 40 acres; at the southern part, 2 acres; at the northern part, Sycamore Valley, 2 acres.

The Government boarding schools for Indian children on the Wyandotte and Quapaw reservations are conducted by Christian men who are doing excellent service. Through the kindness of the superintendent of the Government school for the Shawnees, the children at that school have regularly attended the Friends' Bible school and meeting. While the society no longer has any official relation to the Government, L. J. Miles has been continued in charge of the Osage Agency, Benjamin S. Coppock as superintendent of the Chillico industrial training school in the Indian Territory, and a Friend has been appointed an Indian trader, a position in which much influence for good can be exerted.

#### MEETINGS.

There are three monthly meetings, Grand Rivér, Blue Jacket, and Shawneetown. These have eight preparative meetings and fifteen established meetings for worship. Beside the latter, meetings are held at eight other places, or twenty-three in all. The membership now numbers 666, of whom 388 are Indians and 278 are whites, a gain of 38 Indians and 53 white members. It should be borne in mind that the Indians are much influenced by the white people who reside among them, and that it is the settled policy of the committee to seek the conversion to practical Christianity of the white residents of the Territory.

## SCHOOLS.

*The Moiloc school*, under the skillful teaching of Arizona Jackson, has done well. All the children of the band that should be in the school have been enrolled, and the attendance has been good. The school has been assisted by funds sent by the committee.

*The Blue Jacket school* has been attended by all the Indian children of the neighborhood, 10 in number, without cost to the parents. The committee paid \$100 towards the expenses of the school.

*The Skiatook school* has been taught very satisfactorily by Eva Watson, assisted the latter part of the year by Olive Chamberlain. There have been enrolled 35 Indian and 51 white pupils. Twenty-three Indian children and 16 white children have boarded in the Mission Home, paying therefor \$1.50 a week. Six Indian orphan girls have been supported in the school by the Philadelphia Indian Aid Society. John M. Watson has added a kitchen and dining room with sleeping rooms over them to the Mission Home, at a cost of \$422.88 from his own funds. The institution is giving an education not in the school room only, but in the country around, in morals and religion.

The schoolroom has had a second room added to it.

*The Iowa school*.—This school has been conducted by Lina B. Lunt, who is supported by New England Friends. Four pupils have boarded with John F. Mardock and wife. As lands allotted to this people they have been so scattered here that 8 pupils have been boarded at the Mission Home.

*Mexican Kickapoo school*.—Elizabeth Test has built a small house near the Shawneetown Mission, where she has boarded and taught 6 pupils. Netta Hawthorn has been assisting her. The children are in school about four hours daily, and have done well. The school is a great triumph of Christian love and zeal.

*White's Institute*.—This delightful training school is near Wabash, Ind., on a fine farm of 760 acres. The whole place, grounds and buildings are in good condition. The boys' home has been enlarged, and a veranda built around it. A new and commodious house of brick has been built, with schoolrooms on the first story and a good meeting room, etc., on the second story, at a cost of \$5,050. Natural gas has been introduced for heating and lighting the building, the piping having been done by the boys under the direction of their industrial teacher. Oliver and Martha Bales are superintendent and matron, and Marcus Pearson principal of the school. The total number of pupils has been 92, the average attendance 71, nearly equally divided between boys and girls. There were 325 acres of crops growing, and 260 in pasture, fully stocked with horses, a herd of 25 fine cows, 100 sheep, 200 lambs, swine, poultry, and bees. The boys repair shoes and harness, use the carpenter shop, paint the buildings, keep the lawns in beautiful order, etc. "There is nothing," writes O. H. Bales, "we observe with greater pleasure than the improvement of the girls in womanly grace and virtue from year to year, and their constant training in household duties." They are engaged in all forms of housekeeping and dairy work, in canning fruit and the care of flowers and of poultry. Congress appropriated \$10,020 for 60 pupils at the institute. The Philadelphia Friends' Indian Aid Society gave \$1,055 for 6 pupils, and Lewis Hiatt, of Whatcom, Wash., \$100 for 1 pupil. Two good teachers assist Marcus Pearson and success attends them. "There seems to have been a steady growth on the part of many of our boys and girls, during the year in their Christian experience," writes M. Pearson, "though some have fallen away chiefly through violent temper. Many have anxiously inquired how they might become better Christians."

The Eastern Cherokee schools in North Carolina have been continued under the care of Western Yearly Meeting. The four day schools have had a rather smaller attendance than the previous year, because of sickness and high waters. But the schools have done well as a whole. The boarding school has had 80 pupils, 40 boys and 40 girls. Many of the children are giving gratifying evidences of an advancement in the conduct and knowledge of civilized life, and in a preparation for citizenship.

Friends of Kansas Yearly Meeting have on Douglas Island, Alaska, two buildings, a mission home, and one for schools and meetings. Silas and Anna Moon have had charge of the home, Charles H. Edwards of the school. Charles H. Edwards also conducts a night school for the white miners. On First day a Bible school and two meetings are held, and are well attended. The girls have done the housework, canned berries, and have done washing and ironing for the miners, for which the latter pay well. The boys provide fuel for the family, which, in a climate where it rains three hundred and twenty days out of three

hundred and sixty-five, is no small task, and have also packed fish for the winter's supply. A small garden has been tried with some success in raising turnips, cabbage, and potatoes. The children are taught to be Christians, they take part in the morning Bible reading, and on retiring use some simple devout prayers. There is no cause to doubt that the mission is doing much good. An additional building to accommodate more pupils is to be erected during this summer.

The Friends of Philadelphia continue their boarding school at Tunesassa, N. Y., with 45 pupils, 20 boys and 25 girls. An increasing evidence appears in the homes and lives of former pupils that the training they have received has been followed by good results.

JAMES E. RHOADS,  
*Chairman.*

---

### ANNUAL REPORT OF THE MENNONITE MISSION BOARD, 1891.

In writing out a report of our work done among the Indians during the past year, we can state but little different from that contained in our reports of previous years.

As our school year begins with the 1st of July and ends with the 30th of June, this report necessarily embraces the time from July 1, 1890, to June 30, 1891. In our last annual report we alluded to the loss which our work sustained through the death of one of our missionaries, Rev. D. B. Hirschler, at Cantonment. This occurred in the early part of the past school year, and, as our board was not able at the time to find any one who was able and willing to take our deceased brother's place, our work at Cantonment necessarily suffered for the greater part of the year for want of a requisite force of workers. Brother A. S. Voth, the teacher there, did all that could be expected of one man to do, but the work was too great for him or any other individual person to perform. Finally the board succeeded in sending another man there to assist Brother Voth in his labors.

Our work has been, as before, principally among the children and young Indians attending our boarding schools at Darlington and Cantonment. Both schools were well filled with pupils during the greater part of the year, and in the whole those attending made good progress in their studies. As to the educational part of our work we therefore have no reason to feel discouraged. Our teachers report the children as well-behaved, obedient, and industrious, some of them having made remarkable progress, considering the comparatively short time they have been at school. One discouraging feature, however, was the fact that several of our better and more advanced pupils were, by their parents and friends, without any just cause, taken away from our schools and put into other schools, or were allowed to stay in camp without attending any school. Although their places were afterwards filled by others, yet our teachers did not like to lose those upon whom they had spent so much labor and who had given so fair promises for the future.

The moral deportment of our young Indians was in general good, and our mission workers had but very little trouble with them while they were at school. It is encouraging to see how the Christian religion and Christian teaching has a benign influence on the morals of these people. Although as yet but few of them have formally accepted Christ and his religion, yet Christian training and Christian influence is not without effect upon them. A great change has taken place among this people during the past decade. This change is most perceptible among those who have attended our mission boarding schools. Here the principles of morality are implanted into their young and yet tender hearts, and although it does seem at times as if all the good impressions which they had received were obliterated by the evil influences and baneful surroundings with which they are environed when away from school, yet experience teaches us that the impressions received and the lessons learned are not wholly lost and forgotten. They will have a bearing upon the future lives of these Indians, and no doubt many a seed, now apparently lying dormant, will in the future sprout and bring forth fruit.

As faith in Christ our Redeemer and the teachings of His gospel form the basis of all true morality and civilization, our aim has been, and still is, to bring the Indians to a saving knowledge of Christ by teaching them the word of God.

Hence, in connection with the different branches of a common-school education, the Bible and Bible history form a principal part of our everyday instruction. And it is encouraging to perceive how quickly the Indian children grasp the truths of the Bible and remember the lessons thus taught them. Besides the religious instruction given in our everyday teaching, Sunday schools, prayer-meetings and preaching services are regularly held. These religious teachings have not been wholly in vain. The gospel of Christ shows its power unto salvation also among these people. The soil is a comparatively hard one, but it is not wholly unproductive. We earnestly desire to see more fruit of our labors than we have thus far been permitted to see, but we are not discouraged and are willing to labor on, trusting that the Lord in His time will give the increase.

One serious drawback both to education and missionary work during the past year was the exceedingly unsettled and excited condition of the Indians. This was partly due to the well-known "Messiah craze," and partly to the fact that the Government agents were there allotting them their lands in severalty and paying them part of the money allowed them by the Government. The consequence was that the Indians were the greater part of the time moving around, attending their "ghost dances," seeing after their land, and waiting to receive their money and spending it after they had received it. This materially interfered with both school and mission work. Very little could be done with them while they were in this excited and unsettled state. They were less willing to send their children to school and would not listen to anything apart from that which, for the time, was occupying their minds. This condition of affairs also had a very deleterious effect upon some of the young Indians who had been attending our schools and who had become professed Christians. They, too, were drawn away by the excitement, so as in part to indulge in the foolish and heathenish practices of their people. They were apparently too weak to withstand the strong pressure brought upon them, and they yielded and fell back.

The more settled the Indians will be the more educational, civilizing, and Christianizing work can be done among them. Hence we hope for a greater and better success and for more abiding fruit from our work after these Indians have settled on their lands; when the Government will withhold them their rations, will cease to treat and to feed them as paupers, and will oblige them to work for their own sustenance. The idleness of camp life is the great curse of the Indians. Let this be broken up and a great step in the melioration of their condition is made. All educational and spiritual teaching will miss its full benign object as long as the young Indian is not wholly separated from the pernicious influences of camp life. Hence we are persuaded to believe that, under the existent circumstances, it is better for the young Indians if he can be persuaded to go away from his people to some distant school where he is surrounded by a Christian atmosphere, and there be educated, than to teach him at home, where he is all the time more or less under the influence of those living in camp and doing next to nothing. This, too, will be different after the Indians have adopted a different mode of living. But for the present this seems to be the better plan—a plan which will not miss its good results, providing the young Indian can be induced to stay away a sufficient length of time.

Rev. H. R. Voth, who lives at Darlington, is the superintendent of our work in the Indian Territory. He has been connected with the work there almost from its beginning. For the last few years he has been the general superintendent. His health is, however, broken down, and our board has given him a six months' rest.

Mr. J. H. Schmid has charge of the school and station at Darlington. Through his indefatigable energy and his prolonged experience with the Indians he has become a very successful teacher of Indian children. He had different ones to assist him in the schoolroom during the year. Our station at Cantonment stands at present under the supervision of P. Mouttet, formerly connected with our work at Darlington. Mr. A. S. Voth is the very efficient teacher at Cantonment. During a part of the year he had a young Indian girl, one of our former students, to assist him. She did quite well, but, to our sorrow, that dreaded disease—which has already robbed us of a number of our most promising young Indians—consumption, seized her, and, after a brief illness, she died. Her spirit has flown to that God whom she had learned to know and to trust, and her body lies slumbering in the grave upon the mission cemetery at Cantonment. She, as we trust, is one of the sheaves garnered from our mission.

The new station at the Washita River, started a little over a year ago, stands under the supervision of Rev. J. J. Kliever, formerly connected with our work at Cantonment. Rev. Kliever is an earnest worker, who has the good of the

Indians at heart. He does all in his power to better their condition. In establishing this station our idea was to start a day school. In this we have not been successful thus far. An attempt was made, but the Indians were not willing to send their children. It appears as if the time for a day school among these Indians had not yet come. In this particular, too, there will undoubtedly be a change after the Indians have become more settled. As they come to see the necessity of a better education and the advantages derived therefrom, as they must see it after they are obliged to care for themselves, they will also be more ready to embrace the opportunities offered them and send their children to school.

The contract school at Halstead, Kans., with Rev. C. Krehbiel, superintendent, is doing a good work. It had upward of 30 pupils the year round. All made good progress in their studies under the able teaching of Mr. H. L. Weiss. Here, as at our mission schools in the Territory, the pupils are required daily to do some manual labor outside of the schoolroom, under the supervision of an industrial teacher. Some of the larger boys and girls have proved themselves very proficient workers.

Besides the pupils attending the schools already mentioned, our board is sustaining two young Indians, a young man and a young woman, who are attending a boarding school for white people at Halstead, Kans., with the view of preparing them as teachers for their people. They are both doing well, keeping up in their classes with their white classmates. If they keep well and are spared to finish their education they will make efficient teachers, and may prove a blessing to their people. They are both decided Christians and lead an exemplary moral life.

The total expenses of our work during the past year amounted to \$10,784.03. Of this sum the school at Halstead cost us \$4,344.71. The remainder, \$6,439.32, with the exception of \$450.14 expended for incidentals, was expended upon the work in Indian Territory. Toward the support of the contract school at Halstead we received from the United States Government \$2,905.43. The balance, together with the other amounts necessary, were contributed by the church. Besides this much clothing, bedding, provisions, etc., was furnished and forwarded by churches, local mission and aid societies, and individual persons. Our treasury has never been overloaded, but thus far the Lord has at all times mercifully provided us with the amount of money necessary to carry on the work intrusted to our care. Our work has all along been a modest one, but we trust it has not been without a blessing for the poor, benighted, abused, and downtrodden Indian. When others are doing a great deal more for these people, we, too, would contribute our mite, that they may be brought to see the intellectual and spiritual light prepared for them by their Creator.

In looking back upon the past year we find much to be thankful for, and we would acknowledge our gratitude toward Him in whose service we stand and by whom we are permitted to do the work which is pleasing in His sight. We would thank Him for His blessings in the past and trust Him for His blessings in the future.

A. B. SHELLY, *Secretary.*

DECEMBER 28, 1891.

## METHODIST EPISCOPAL CHURCH.

### INDIAN MISSIONS.

The work for 1891 is the same as reported by the Board of Indian Commissioners for 1890, with the addition of the mission to the Navajos in Arizona and New Mexico. During the year this mission has been opened and a residence for the superintendent has been erected at Fort Defiance. The whole amount expended upon the mission is about \$5,000. The superintendent, Rev. F. A. Riggin, reports favorably, and is sanguine of success. He has had consultations with their leading chiefs, and they express great satisfaction at his presence, and assure him of their interest in his work.

Our expenditures for Indian missions in the several States and Territories have been during the year as follows:

New York.....	\$2,304
Washington.....	1,414
Michigan.....	1,240
Wisconsin.....	297
Navajos, Arizona and New Mexico.....	5,000
<b>Total.....</b>	<b>10,255</b>

We have provided for the opening of missionary work during the year 1892 at La Pointe Agency, Minn., to the Ukiaks in California, and the Klamaths in Oregon. We have also erected a church for the Oneida Indians near Appleton, Wis., at a cost of about \$4,000.

During 1892 we hope to erect a church which shall also possess school facilities for the Navajos. Upon the whole, the work done during the year has been more encouraging than for a number of years past. We hope for still greater success in the future.

## METHODIST EPISCOPAL CHURCH (SOUTH).

### INDIAN MISSION CONFERENCE.

#### EDUCATION.

The following reports indicate the condition of our educational work in this field:

*Harrell International Institute.*—Harrell Institute during the past year has been more prosperous than in any year of its history. At the late meeting of the Mission Board at the General Conference, a change was made in the school from the Woman's Board back to the General Board of Missions, and Rev. T. F. Brewer remained as president. The tenth annual term opened September 2, with 8 teachers. Up to date there are 161 students enrolled. This result has been reached without any special effort to secure students from abroad. As the president reports, the reason for not making a strong appeal for students is the limits of the capacity of the building. By all means we think the building should be enlarged to meet the rapidly growing patronage of boarding students, the number of which could be doubled or more than doubled the coming year if the building were enlarged. We would heartily commend this institution to our people as in every way worthy of their patronage.

*Pierce Institute.*—The last session of Pierce Institute opened September 3, 1889, and closed May 24, 1890.

With the exception of the first two months the school was under the supervision of Rev. Frank Naylor.

The enrollment during the session, 88; the average attendance, 43.

The present session opened September 1, 1890, with Prof. A. R. Boone principal. Seventy pupils have been enrolled to date. The present attendance is 66. The outlook for the present session is encouraging. Pierce Institute is the property of this conference. We commend this school to our people and the public generally.

*Oklahoma district high school.*—At the last session of the Oklahoma district conference a proposition was submitted by said conference to the town of Norman looking to the erection of a suitable building for the establishment of a permanent high school. The proposition was accepted by the town, they agreeing upon their part to furnish 10 acres of ground adorned with shrubbery and ornamental trees, and to furnish a house on said ground to cost at least \$10,000. The church agreed to furnish the building with suitable furniture and a competent corps of teachers. The school opened temporarily in our church at Norman September 18, 1890, under the efficient supervision of Rev. J. T. Fariss and a competent corps of teachers. Sixty pupils have been enrolled to date. We heartily commend this school to the public generally, and would urge upon the people of Norman the great importance of the speedy erection of the promised building.

*Galloway College.*—We take pleasure in sincerely recommending this institution to the fostering care of the conference. We are committed to this enterprise by formal action and self-interest, the highest and best interests of young men of our church. We would therefore most respectfully request the presiding bishop to appoint an aggressive agent to collect, at as little expense as possible, the outstanding indebtedness, and also that the bishop provide for the payment of the salary of the principal to the amount of \$500. Also that the name be changed to Galloway Institute.

#### CHEROKEE DISTRICT.

Rev. M. A. Clark, presiding elder of the Cherokee district, sends the following report from his charge:

"The Cherokee district embraces all of the Cherokee Nation lying north of the

Arkansas River, except a narrow strip lying along the Arkansas and Kansas Valley Railroad from Fort Gibson to Van Buren.

"There are fourteen charges in this district: two stations and twelve circuits. One of these, Vinita, is self-supporting. Two of the charges, Paw Paw and Spring Brook, are wholly among the 'full-bloods,' and are served by 'full-blood' preachers.

"Since the last annual report four churches have been completed which were in process of erection at that time. Two are now being erected. Two parsonages have been built, and one is in process of erection. Many congregations yet worship in schoolhouses that are altogether unsuited for the purpose. Only last Sunday I held a quarterly meeting in a schoolhouse that did not hold over two-thirds of the people in attendance. Others no doubt stayed away because they knew such would be the condition. I am glad to state that our church is waking up to the importance of building houses of our own that will meet the demands.

"Assessments for the support of the ministry are larger and have been paid more punctually this year than ever before in the existence of this district. It is gratifying to know that the members of the Methodist Church are opening their eyes to the duty and privilege of supporting their pastors. The Scriptures on this subject have been unfolded to them by presiding elders and pastors. There has been a marked improvement. In the near future other charges will join the self-supporting list.

"The full-blood work is not in as good condition as it should be. I am sorry to state that they have been neglected, and we have lost in membership among them. One cause is the difficulty and expense of getting interpreters. The church has failed to produce men capable, spiritually and intellectually, of interpreting the word. We are making a greater effort this year to reach this class. At the last session of our conference Bishop Hendrix urged each preacher in charge of a work, wherever he could get a congregation of full-bloods, to get an interpreter and preach to them. I am glad to state that this is being carried out to a certain extent. I have a regularly employed interpreter this year for the first time since on the district. I am making an effort to have our discipline translated into the Cherokee language, with some prospect of success. We intend to hold several camp-meetings among these people this year."

#### ARDMORE DISTRICT.

Rev. J. N. Moore, of the Ardmore district, writes:

"The Ardmore district was formed about eighteen months ago by taking a portion of the Paul's Valley district and one circuit from the Choctaw district, forming a new district of eleven charges. At the last conference three new charges were formed, making thirteen in all. This district is about 100 by 50 miles, extending over an area of 5,000 square miles, lying in the southwest part of the Chickasaw Nation. The country is new; there are not many churches; we have to preach mostly in schoolhouses. There are but four Methodist churches in the district. We have ten parsonages, three of these having been built this year, and some valuable improvements made to some of the old ones.

"Spiritually the district is on rising ground. We are planning and laboring for a large ingathering this summer and fall. The Sunday-school cause is doing well, considering the circumstances. It is impossible to succeed at this point until we have more houses of our own."

#### M'ALESTER DISTRICT.

Rev. M. A. Smith, who has charge of this district, writes:

"This district is doing well under the circumstances. We are having good meetings at every point, and the work is prospering spiritually, but financially we are having hard times, owing to the failure of crops. I have urged the collection of necessary money, and am sure the preachers are making every effort to raise it. The district stands sorely in need of help. Notwithstanding these difficulties the district is increasing in numbers, and we have built a district parsonage at Atoka. We have also built a very neat church."

#### OKLAHOMA DISTRICT.

Rev. A. J. Worley, in charge of this district, writes:

"Our church is growing moderately. We would grow very fast if we could build church houses. We will likely need three more preachers on this district.

As long as we have to preach in dwellings, and occasionally a schoolhouse, it will take more men to cover the field than if we had churches. The Board of Church Extension can do but little toward meeting the real demand of this region. We have the best preachers, and we are doing more work than any other denomination, but they are building two churches to our one.

#### THE WILD TRIBES.

Rev. J. J. Methvin, our missionary among the wild tribes in the western part of the Indian Territory, in the following report presents the condition and wants of that new and interesting field:

As the time for an annual report from this field has come, I want again to represent the needs of the work and show what has been done, and what, with proper reinforcements, can be done. Within the bounds of this territory of the wild tribes there is a population of at least 10,000, most of whom are as veritable heathen, with a worship as crude, as can be found in the heathen world. More than a dozen tribes of Indians are represented on these reservations, all speaking different tongues or dialects. The Comanches, numbering 1,600, are located in the south and southwestern part of the reservation, both east and west of Fort Sill. We do sorely need a man located at Fort Sill. That is the headquarters for the Comanches. There they congregate in mass every two weeks to receive their supplies from the Government. The Kiowas and Apaches are located principally along the Washita River, east and west of the agency, at Anadarko. They together number about 1,700. My own work personally has been principally among them. I need another man here to aid in this work among these two tribes and another to open work among the affiliated tribes north of the river. Still another man is needed among the Cheyennes and Arapahoes, 40 miles north of here. For nearly four years we have been calling for these reinforcements, and notwithstanding \$1,250 was secured at our last annual conference for the support of two additional men among the wild tribes, we have not the reinforcements yet. "Hope deferred maketh the heart sick."

Since our last annual report we have not made the progress that we could hope for under other circumstances. Our difficulties have been increased by the strange so-called "Messianic craze" that has been deluding these people for the past twelve months. That delusion has been dispelled now by the truthful report of a young Kiowa, Ah-pee-ah-tone, who was sent by his tribe to the Northwest to investigate the whole matter. He returned recently and reported the new Messiah a fraud, and Sitting Bull, the apostle of this new Messiah, he denounced as an impostor. (This is the Arapahoe Sitting Bull, and seems to be the successor to the Sioux Sitting Bull who was killed.) While a few of the Indians continue their demonstrations yet the majority are satisfied with Ah-pee-ah-tone's report and are perhaps better prepared now to listen to our teachings. Notwithstanding this mad craze among the Indians, for the past three months our congregations have been constantly on the increase until our house will scarcely accommodate those that come and we shall have to enlarge or build another house. There is a greater interest manifest, more stirring of conscience by the preaching of the Word, a more intense attention. I have made application to the board of church extension for the money to build a church here. It may be, however, that the mission board will have to come to our help in the emergency. This being the agency for all these tribes, and where they often assemble in mass, we should have a house large enough to accommodate a considerable audience. As it is we have only a room 20 by 35 feet, a sort of church annex to the parsonage, in which to accommodate our congregation. I believe there is better prospect of triumph in this field than ever before if we do our duty. We are beset on every hand by difficulties—Indian superstition, infidelity of whites, Romanism, Mormonism, degrading influences of bad whites, the governmental management—but still God is in the work and in his providence overrules and will continue to overrule till Indians and men everywhere with universal acclaim shall hail Him king of kings and Lord of lords. In answer to our call for a Mexican preacher, Rev. Y. Y. Mercado was sent last spring from the Mexican border conference to do work among the Mexican population here. He has been doing good work since he came and in addition to the Mexican members we already had, four more of the most substantial Mexicans have united with us. Others are waiting to be received. Brother Mercado has recently been sent to make his headquarters on Little Washita, 20 miles southeast of here, where during the past year we have built a new church and which is located central to the Mexican population and convenient also to the Comanches,

among whom also he is to do work. Last June the district conference for this district was held here, at which much interest was manifested by both the Mexicans and Indians. During that meeting fourteen applied for church membership, more than \$400 was contributed to church enterprises, and a quickened impulse given to our work. Reverses came when the Messianic craze maddened the Indians, but now in spite of that and all the other hinderances I think we are getting back our own with usury. And so the work will go on, but let me close this report by saying we must have reinforcements in this work among the wild tribes.

While the patronage of the school here belonging to the woman's board on account of the Messianic craze has not been as full as we had wished, yet it has been doing most efficient work, and if properly nurtured will in the near future be an instrument of much usefulness here.

## MORAVIAN.

With regard to the Alaska Mission the following have been the main events of the year:

Capt. Pratt, of Carlisle, having kindly consented to admit to the school in his charge the Eskimo boys, George and David, whom Sister Bachman had brought with her when returning from Bethel, they were taken thither by the president of the society in September, after having visited Nazareth, Lititz, and Lancaster. The cost of their education at Carlisle has been largely borne by private subscriptions. During the winter the health of George became precarious, and Brother and Sister Bachman kindly received him into their own home. Dr. Estes, of St. Lukes Hospital, South Bethlehem, was so good as to interest himself in the case, and pronounced it catarrh resulting from the influenza. The trouble succumbed to his skillful treatment, and in May the vice-president of the society took the lad back to Carlisle. The reports of David have been favorable, as regards both health and attainments.

On June 5, after having visited the Ramona Mission in California, Brother Bachman left San Francisco in the *St. Paul*, for an official visitation of Bethel and Carmel, accompanied by the good wishes and prayers of the society. Letters received recently announce his safe arrival and welcome by Brother Weber, at the mouth of the Kuskokwim.

The annual report for Bethel shows a gratifying evidences of constant progress, though the school had to be closed in February owing to the scarcity of food for the natives. Especially noteworthy was the conversion and public confession and profession of faith of the "Mountain Boy," a former leader of the opposition to the gospel, who has since become a faithful Christian worker. Christmas was observed on the part of the native members by acts of liberality to their poorer countrymen. The establishment of Christian family life has largely engaged the attention of the missionaries. The giving up of heathen practices on the part of whole villages is a hopeful sign. The influenza wrought sad havoc amongst the natives, and Brother Kilbuck appeals for the volunteering of some one qualified to serve as a medical missionary. The statistics for the year ending May 30, 1891, give 26 communicants, with a total membership of 58. The school had 25 pupils, 9 of whom were classed as Moravian, and 16 non-Moravian.

The report of Carmel states that the persistent opposition of the Greek priest and of the trader continued to hinder successful missionary work and reduced the attendance at the school to an average of 9, all being boarders. A member of Frank Leslie's Alaskan expedition spent the winter with our missionaries here. Brother Wolff was privileged to pay a visit of 18 days' duration to the missionaries at Bethel, proceeding by dog sleighs in February, and being twenty-four days on the way thither.

The time of both Brother Kilbuck and Brother Wolff was largely given to the work of the eleventh census, the provincial elders' conference having consented to their accepting appointments as special enumerators.

With regard to Alaska the following yet remains to be noted:

On June 11, at a special meeting the board considered a proposal from Dr. Harris, the head of the Department of Education at Washington, urging the commencement of a school at Togiak, and promising a contribution of \$1,000 from Government, if the board could guarantee to enter into a contract for the establishment of the school before June 30 of the present year. After it had been established, further aid would be granted on terms similar to those governing the grants to the schools at Bethel and Carmel. After earnest consideration of the proposal, the following resolution was unanimously adopted: "That while

acknowledging the kindness of the Commissioner of Education in seeking to place the sum of \$1,000 within our reach, although intending in all likelihood to found a third station before long, we are not now in a position to honestly enter into a contract with Government to this effect, especially in view of the official visitation by Brother Bachman now in progress."

At the time of Brother Bachman's visitation the Potrero Mission was in a favorable condition. The agent of the Government is on good terms with Brother Weinland and our Indians, and shows them much kindness. The mission property is in excellent order and the spiritual work of an encouraging nature, with opportunities for wider usefulness opening up throughout the reservation in connection with the work of the Woman's Indian Auxiliary Association. In May, Sister Mary Marsch, of Hopedale, one of five volunteers who answered a call for help, was appointed to assist at this station and duly arrived at her destination, being heartily welcomed by Brother and Sister Weinland.

The statistics sent by Brother Weinland recently give 15 communicants and 11 baptized children, with a total of 33 in church connection. Brother John Morongo, the interpreter, is his efficient helper. The Sunday-school has a total of 37 scholars and 3 teachers.

J. TAYLOR HAMILTON, *Secretary.*

## PRESBYTERIAN FOREIGN MISSION BOARD.

### MISSIONS AMONG THE INDIANS.

#### DAKOTA MISSION.

The history of the past year has shown most conclusively the power of Christian missions amongst the Indians in preserving the public peace. The excitement of the ghost dance and the horrors of war have prevailed exactly in inverse ratio to the efforts which have been made to Christianize the tribes. The agencies and the camps where mission schools and mission chapels are things almost unknown, or are as yet comparatively strange and novel features of the scene, have been the localities where fanaticism, revolt, and bloodshed have prevailed, while among those tribes of the Sioux where our missions have been longest established, the Indians have stood like a rock, unmoved amidst the prevailing excitement and war. And even at those stations where but a minority of the Indians had been brought under missionary influence, the emissaries of the wilder tribes tried in vain to light the fires of fanaticism. The general statement is most instructive—that of the 1,100 Presbyterian communicants among the Sioux, only 1 man, and he from Pine Ridge, the very centre of the whirlwind, was to be found among the hostiles during the past year, and only 1 joined the ghost dances. Among the Indians grouped around the Yankton Agency, where the missionary influence has been long at work under the direction of our veteran, Rev. John P. Williamson, every attempt to start the ghost dance utterly failed. Some of the heathen Indians from this point visited the dances elsewhere and came home under not a little excitement, but the public sentiment organized around the groups of Christian Indians was too strong for them. They saw it futile to attempt to kindle the excitements of superstition and war among their neighbors. The 600 Christians gathered in the churches absolutely controlled public sentiment.

At Lower Brulé Agency, another of our mission stations, there were many wild restless spirits, and the ghost dance obtained quite a headway for a little time, but no hostilities whatever were even attempted, and the ghost dance itself was stopped without serious trouble. The 50 Presbyterians, and a still larger number of Episcopalians found there, stood like an immovable wall.

As for the Indians at Flandreau, they were interested in the Messiah craze only as other Christians throughout the country were. Or, if more deeply concerned, it was because several members of their church were actually away among the heathen Indians, teaching and restraining them. One of the elders of the church had just gone to teach in Sitting Bull's camp a few weeks before the tragic death of that chief.

Even at Pine Ridge itself, the station most recently established, and where there were but thirteen communicants, and they not yet organized into a church, the entire band, with one exception, were loyal and were even active in preserv-

ing law and order. One man only was swept away by the wild excitements around them, and neither bribes nor threats could drag them to the hostile camps.

## THE PRESENT STATE OF THE MISSION.

There are now to be found among the Dakota Indians, in the stations of the Board of Foreign Missions, 3 ordained missionaries, 3 single ladies acting as missionaries, 4 ordained native preachers, and 13 native assistants and teachers; the churches number 10, with 518 communicants, 73 having been added to the churches during the past year; 287 children have been in the mission schools. It will be seen, therefore, that the year, notwithstanding all the disadvantages under which the missionaries have labored, has been one of most encouraging progress.

Mr. Williamson writes from the Yankton Agency:

"The attendance on our church not only holds its own, but still increases. We purchased last month two dozen chairs to fill up the aisles, and still we had to send out and bring in others. At our communion the first Sabbath of the new year, three entire families stood up and were all baptized in the name of the triune God. We noted it as rather a pleasant fact that in one of these families where there were three children, two were twin boys, named by their parents Peter and Paul.

"There has been little change in our native laborers, who have been the principal means of gathering in these converts, and who still minister to them. By the appropriation of \$500 from the board, added to a little over \$100 raised by the Indians themselves, we had the pleasure last fall of erecting a beautiful chapel for Cedar Church, and that little community of believers is greatly strengthened. This is the only building erected on my field this year.

"As to the Flandreau field, I reported a year ago that the scattering of that community seemed imminent on account of their relation to the Sioux treaty. I am happy to report that through the zealous efforts of Rev. John Eastman (their intelligent and practical pastor) arrangements have now been made by which the Indians will not only remain at Flandreau, but will be in much better condition as regards their lands than for a number of years past. A number of Indians who had left that locality are returning, so that the prospect there has been very much improved.

"At Lower Brulé Agency the Indians are still left in uncertainty as to their permanent location, but provision has been made by Congress for the appointment of a Commission, who it is hoped will soon settle the matter. Our people there who have been so long without a house of worship must then be aided in building a church."

The work at Poplar Creek, in Montana, was under the care of the Rev. Mr. Williamson most of the year, but last September Rev. E. J. Lindsey and his wife took charge of the station, and the whole outlook is more hopeful at that point than it has been for a long time. Mrs. Lindsey, a granddaughter of that pioneer of all Christian missions among the Sioux, Rev. John Williamson, M. D., was for many years a teacher at our mission station at Yankton Agency, and her knowledge of the Dakota language and lifelong familiarity with the Indians have made her an invaluable helpmeet for her husband in their mission field in Montana.

There remains to notice only the station of Pine Ridge itself, which has been the scene of Indian war during so much of the past year. The general turmoil, of course, seriously interfered with all mission work. Mr. Sterling writes:

"While our members have not generally been affected, our fair-sized congregations at the different camps became very much reduced during the excitement of the summer, and during the time of the active hostilities services were almost entirely suspended. The various centers of our mission's work proved the very centers of conflict and of bloodshed. Pine Ridge, Porcupine Creek, White Clay, and Wounded Knee, which were all familiar names on the lips of our missionary laborers, being the very stations where they were conducting their schools and Christian services, passed from the records of missions into the annals of war."

So far as mission property is concerned, we are thankful to say that but one of our chapels, that at White Clay, was destroyed. Wounded Knee chapel, although on the battleground itself, was untouched, while all other buildings in the vicinity were more or less injured. Our buildings on Porcupine Creek were also uninjured. "This place," says Mr. Sterling, "seems to have been the dividing line between the work of destruction and God's work of restraining power. All the missionaries were kept safe and were not generally frightened during the hostilities. The blessed assurance that 'the angel of the Lord encampeth

round about them that fear Him, and delivereth them,' was our strength and comfort.

"It is hard to predict the future of our work; indeed the first question is, whether or not the war is really ended." Mr. Sterling proceeds to say that future quiet, in his judgment, depends upon the faithfulness with which the new pledges made to the Indians are kept, and the firmness of control which is maintained over the insubordinate. He also points out the necessity of giving the Indians some employment. Amongst a mass of ignorant idlers every excitement, every wild suggestion, finds a fruitful soil. He is convinced also that the ghost dances should be prohibited, and not less rigidly the Omaha and other dances known among the Indians. He states it, however, as his conviction that the "surest, the most complete cure for all such disturbances as this year has witnessed, is the earnest prosecution of Protestant mission work. There is no more conspicuous lesson from this year's experiences than the civilizing power which goes with the preaching of the gospel to these people." Mr. Sterling, as well as Mr. Williamson, points out the palpable contrast between the conduct of the heathen Indians during this excitement, and that of those who had become Christians or had come under Christian influences, and he entertains the highest hope of reward for the labors of Christian missions among these tribes. He writes: "The loyalty and Christian character of some of our Indians have shone out with greater brightness than before. Only one of them united with the hostiles." He declares that there is no more absurd conclusion drawn from the difficulties of this past year than classing all the Indians as "Red Devils," and asserting that it is useless to try to do anything for them. "I have no hesitation," he writes, "in saying that one who knows the history of past mission work among this people, and who is patient, and will adapt himself to the methods required for continued labor here, can not pursue this work without being full of the brightest hopes." He speaks especially of their expectations from the promising young men whom God is raising up from the native church, mentioning three of these youth who are now pursuing a thorough course of study for the Christian ministry, and two others who are looking forward to the same work.

The native missionaries at Pine Ridge have all done faithful service throughout the year. Miss Dickson and Miss McCreight, who have been stationed at Wounded Knee, did not desert the mission even in its darkest hours of danger and fear, when strong men were seeking safety for their families and for themselves. They patiently continued in the work during peace and war, faithfully warning the evil-disposed, cheering and strengthening the weak, and assisting in tender ministrations to the sick and wounded.

We regret very much to say that the Rev. Mr. Sterling feels compelled, for reasons beyond his control, to withdraw from mission work among the Indians, and has recently accepted a call to a church.

#### NEZ PERCÉ MISSION.

The only missionaries directly employed by the board in the Nez Percé mission are Miss Sue L. McBeth, residing at Mount Idaho, and Miss Kate McBeth, at Lapwai, though Rev. G. L. Deffenbaugh, of Cœur d'Alene City, formerly a missionary of the board, continues to render important service in connection with the Indian work, and especially as acting treasurer of the mission.

Of the native ministers employed, three, namely, Rev. Messrs. Wheeler, Lindsley, and Pond, are installed pastors. Rev. Messrs. Lawyer, Whitman, Williams, and Hayes are stated supplies. Rev. Messrs. Hines, Parsons, and Montieith are without charge.

Two stations of the Nez Percé mission, Lapwai and Kamiah, were established before the massacre of Dr. and Mrs. Whitman and others in 1847, and shared the disturbance which that sad event caused in the mission work among the Nez Percés. Lapwai was established in 1836, and Kamiah in 1838. Something had been done, also, at Wellpinit in 1837. The other stations—North Fork, Meadow Creek, Umatilla, and Spokane River—have been founded since 1880.

The work of Miss Sue L. McBeth is directed, as heretofore, to the education of young men for the ministry and for the eldership in the churches. Each department is important, as the churches could not prosper without the support of a native eldership. All the work accomplished under the direction of the board is carried on in the vernacular language. The Misses McBeth have great familiarity with it, and undoubtedly get nearer to the people in sympathy and in effective influence from the fact that they employ it exclusively. The pastors and supplies all preach to their congregations in their native tongue. Valuable as the agencies are that are acquainting the Indians with the English, the language

of their country, there are still peculiar advantages which attend that direct work in the Indian language, which alone gains real access to the adult portions of the Indian communities. The Indians love their language, and it is only in their own tongue that any race of men can best be taught to worship God.

In the theological training school of Miss S. L. McBeth 6 students have been under instruction much of the time. Miss McBeth also has a class of 6 native women. In this department she is assisted by Mrs. C. Shearer, a resident of Mount Idaho. Miss Kate McBeth's school at Lapwai has numbered 9 pupils, but in addition to this she has carried on various labors in the families of the Indians round about Fort Lapwai, at the same time devoting herself to the work of the Sabbath school. She has succeeded in arousing a good deal of interest among the young people at Fort Lapwai, and has organized a Christian Endeavor Society.

The removal of the Government school from the north of Lapwai Creek to Fort Lapwai has seemed to render it desirable to remove the church to the latter place, as the young connected with the Government school constitute a large and interesting portion of the congregation, and also an excellent field for Sabbath school and missionary work. There are, however, some obstacles in the way of procuring a proper site at the new location. Efforts are being made to this end, but nothing has as yet been consummated.

The total membership of the seven churches is 796. During the year 43 have been received into communion and fellowship. In the Sabbath school are 234 pupils. For religious purposes \$672.26 have been contributed. This certainly is an exhibit worthy of imitation by the church at large. Considering the poverty of this people, the average of their contributions is certainly high. It amounts to about 84½ cents per member. This seems the more creditable when we consider that the year 1890 was one of great drought, and many of the Indians had great difficulty in gaining the bare necessities of life.

The past year has been signalized by valuable services rendered to the Nez Percés and to the mission by Miss Alice Fletcher, agent of the Government for the distribution of land in severalty to the Nez Percé Indians. She has been instrumental in securing valuable allotments of land for two or three of the most important churches, and is still using her influence for the permanent establishment of the Lapwai church in a more available situation. Miss Fletcher having spent several of the summer months at these various stations and having become thoroughly acquainted with the work, its methods, and its results, has rendered a kindly service to our faithful missionaries in commending them to the fuller confidence and sympathy of the Christian women interested in the Woman's North Pacific Presbyterian Board of Missions. Through the personal gifts of different individuals provision has been made for the removal of the Lapwai church edifice to a new and more available site, if such site can be secured, and for the erection of small houses for Miss McBeth and for the native preacher at Fort Lapwai. The Kamiah church edifice was repainted and otherwise improved during the year, through the generous gift of a friend in Pittsburg, Pa.

Altogether, the outlook of the mission among the Nez Percés is most favorable.

#### SENECA MISSION.

On the Alleghany Reservation Rev. Messrs. Trippe and Hall have held regular services in the Indian churches. Though there have not been large accessions to the churches, yet 30 have been received during the year, and there has been a gain of 21 over all losses by death or otherwise. The total membership reported for the churches under Mr. Trippe's care, namely, those of the Alleghany, Tonawanda, and Tuscarora Reservations, is 226. There are five church organizations and four church buildings. Contributions for the year have amounted to \$412. One native preacher is engaged upon salary, and four are laboring gratuitously.

The Indians have been relieved during the last year from anxieties caused by a fear of hostile legislation at Albany, but there are some reasons to believe that efforts may be renewed to secure possession of their lands, or at least those which are considered most valuable. There is continued reason why the friends of the Indians in the State of New York should cultivate and diffuse an enlightened and friendly sentiment in regard to these people whose heritage we have received and now occupy, and should pray that all schemes designed to dispossess them of their homes may be thwarted. There is probably as good a degree of receptiveness to the truths of the Gospel among these people as in the average of white congregations in the State. From year to year goodly numbers are gathered into the communion of the church, and there is every reason for in-

creased interest in the temporal and spiritual welfare of these wards of the State, to whom so great a debt of gratitude is due.

At Tonawanda Reservation, Rev. John McMaster has preached in the Indian church once in two weeks and has found a good attendance and a fair degree of receptiveness to the truth. The Tonawanda Indians have been greatly distracted during the year by the contest between the two rival parties, the Christians on the one hand and the pagans on the other, in the appointment of chief and officers of the tribe. The matter has been finally placed in the hands of a referee, whose decision has been rendered in favor of the Christian party, as those who had legally elected their officers. It is a question whether the Indian nature is favorable to an entire and peaceful acquiescence in such a decision.

On the Alleghany Reservation at Jamisontown Rev. William Hall, who has passed the limit of four score years, has preached every Sabbath but one during the year, driving some distance for the purpose. "Faithful unto the end" has been his motto. He had leave of absence during the year to visit a daughter in California, but before the visit could be made she had passed to her heavenly rest, and the disappointed father remained at home.

Mr. Trippe, in his report, speaks of a new center of influence having been opened at Cold Spring on the Alleghany Reservation. The people have shown a disposition to attend upon the preaching of the Word.

From Rev. George Runciman we have received the following report:

"During the present year we have held five regular services every Sabbath, and many through the week, sometimes as many as five on a single day. The result of all these meetings is a deep, spiritual interest and the coming forward of 43 persons who have united with the church on profession of their faith in Christ. These have all made a clear confession before men. God has richly blessed us, yet we feel that our influence is not as wide-reaching as it ought to be. We have only worked two centers, one around the church and the other around No. 1 schoolhouse. We have on our roll of attendance at church 141 persons. Our membership is 110. We have added during the year 43; dismissed 7 by death, and 12 by letter. Our attendance at the schoolhouse has been 66, so that we reach 207 persons. We have given to the Foreign Mission Board \$22, to Sabbath-school work \$7, and to our own Sabbath school for papers and lesson-leaves \$36.12. The great majority of those who have been received are young people. If these prove faithful there is a rich blessing in store for the reservation.

The coöperation of Mr. and Mrs. Valkenburgh, the superintendents of the Thomas Orphan Asylum, has been continued. They have been a very great help to Mr. Runciman in his work, and the pupils of the asylum, about 100 in number, have formed an interesting portion of the congregation and the Sabbath school.

Two or three different points on the reservation have been occupied with religious services in addition to the regular work in the commodious church edifice provided for the Cattaraugus church. The schools which are maintained for the benefit of the different reservations of the Senecas have remained under the direction of the State, by whose provision they are wholly supported. Satisfactory work seems to have been done by the teachers in these schools. Although it is not of a directly religious character, it has maintained a high moral tone, and harmonious relations have existed between the teachers and the missionaries. Mr. Trippe mentions one Christian woman of Indian blood employed by the State as a teacher, whose religious labor and influence have been very marked.

But for the dangers of hostile legislation, designed to deprive the Indians of their vested rights, the outlook of the New York Indian tribes would be auspicious. Considering the entire work of the Seneca Mission, while there have been many discouragements there is much also to encourage, and the total number received into communion of the churches is considerably above the average of the Presbyterian Church at large.

## PRESBYTERIAN SOUTHERN MISSION BOARD.

E. WHITTLESEY, Esq.:

Yours asking for 2 copies of our last Indian report is at hand. I regret that I have no printed copies to spare.

Our last annual report for year ending March 31, 1891, to the General Assembly, Presbyterian Church, United States (Southern), showed:

"(1) That we had charge of the Armstrong Orphan Male Academy, Choctaw Nation; 56 orphan boys; 1 principal; his wife, matron; 2 assistant teachers; expenditure by us, \$2,100.

"(2) One lady missionary; also a teacher, among the Alabama Indians, Polk County, Tex.; expenditure, \$100.

"(3) We had 8 ministers, besides the principal of Armstrong, as missionaries to Choctaws and Chickasaws; expenditure, \$4,605; our total expenditure, \$6,805.

"(4) Presbyterian communicants, whites and Indians, 637.

"Yours truly,

"J. N. CRAIG,  
"Secretary."

## PROTESTANT EPISCOPAL MISSIONARY SOCIETY.

## WORK AMONG THE INDIANS.

The quality of our church work among the Indians was subjected to a severe test during the uprising among the Sioux in South Dakota in the early part of the year. Our mission was almost in a state of siege for months, while the hostile demonstrations were going on in their vicinity, yet the bishop and his coworkers stood at their posts and carried on the work without intermission, and the Christian Indians were unfaltering in their faith and manifested their Christian love in works of charity to those who were wounded in battle. The Indians at Pine Ridge did not forget during their own trials the heathen in far-off lands, but sent to our treasury a gift for foreign missions. The Chippewas in Minnesota, the historical enemy of the Sioux, remembered them and sent alms to their brethren in the Christian faith.

The work in South Dakota has had another trial in parting with the bishop for several months. Bishop Hare, obeying the call of the church, went to Japan in March to administer the work there for a period. Returning at the end of six months, he met a convocation at Rosebud Agency, where 1,500 Indians were gathered. The offerings of the women amounted at that time to \$800, and those of the young men to \$170, gifts for various works, and among them for missions in China and Japan. Much work among the Indians is in dioceses which, unhappily, are not required to report in detail to the board. That portion which is under Bishop Hare is treated in this report.

## NIOBRARA DEANERY.

The year has been one of extraordinary trial. A religious delusion, known as "The ghost dance," took possession of a large number of the heathen Indians at a time when discontent at the disappearance of the old Indian ways, sadness of heart caused by the remarkable prevalence of disease and death, and a sense of wrong produced by delay in the fulfillment of the promises of the Government, accompanied by hunger in some localities, made these heathen Indians peculiarly impressionable. The Christian Indians, on the whole, maintained their stand with praiseworthy patience and fortitude; but the dancers reached a state of exaltation approaching frenzy. Restraint only increased their madness. They were well armed and donned a sacred shirt of talismanic power. Insubordination broke out on several occasions. The authority of the agent and of the native police was overthrown. The civilized Indians were intimidated. Alarm spread everywhere. No one knew what was coming. The military were summoned to the agencies. Their appearance did not dampen zeal, but fanned the flames, and the craze was not arrested until the sanguinary results of the encounter on Wounded Knee Creek forcibly dispelled the illusion and dashed the hopes of the leaders.

While these disturbances have, of course, made the year one of special trial for the Indian mission, they have made its merits shine the brighter. The mission-

aries, foreign or native, were able to keep at their posts, except a few native helpers, who were compelled to move from exposed points by Government authority. Our boarding schools, even those in charge of women only, and even those schools nearest the points of greatest excitement and most exposed to its influence, kept on their usual round of domestic industries and school-room work, and were felt to be centers of order, confidence, and peace. And, while a number of Indians nominally Christian, undoubtedly gave way to the seduction of "the dance," the record of the Christian Indian as a whole has been very honorable. It was they who really bore the brunt of the heathen onslaught, and they stood it with a patience and hope worthy of the highest praise.

#### BOARDING SCHOOLS.

Notwithstanding the disturbances which affected a large part of the Indian country, and the alarm which prevailed throughout it, the attendance at the boarding schools was larger than ever before. A confidence was maintained among the parents of the pupils and among the pupils themselves, which no alarming reports nor military proceedings near by could overthrow; and, though "all out doors" is home to an Indian child, none of the pupils decamped or were decoyed or withdrawn. In some of the schools the return of the pupils after vacation was marked by some irregularity, which indeed can hardly be avoided, but setting this aside the average attendance has been as follows:

St. Paul's school .....	46
St. Mary's school .....	50
St. John's school .....	48
Hope school .....	43
St. Elizabeth's school .....	27

This attendance is far in excess of the scholarships maintained, and I earnestly trust that friends may be raised up to provide for the children who as yet have not found friends to support them. I hope, too, that those friends who have been wont to send boxes to the schools will still continue their labor of love.

The Indian women still show devoted attachment to their work as helpers. The report of the general secretary for the Niobrara Deanery shows that thirty-three branches reported to her, and that the aggregate of their contributions was \$722.40.

WILLIAM H. HARE,  
*Missionary Bishop of South Dakota.*

#### UNITARIAN MISSION BOARD.

The Montana industrial school for Crow Indians has averaged during the greater part of the last year from 52 to 55 pupils, about equally divided between boys and girls. More than usual attention has been given to manual training. The great increase in the rainfall during the past summer over that of previous years has enabled us to secure much better results in farming. Between five and six hundred bushels, many tons of root crops, and a large amount of hay have been harvested. Besides, during the summer substantial improvements in the way of re-flooding our buildings, sheathing the walls and ceilings have been carried out at a cost of over \$700. Rev. William W. Locke, of Boston, a man of thorough technical training, whom we sent out to superintend this work, reports that he found our pupils his sole helpers, thoroughly handy, industrious, and obedient to orders. The labor they performed under his direction and instruction gave them much valuable experience. At the same time the girls in the school receive a daily training in sewing, chamber and general housework, and in preparing food for cooking, while alternating such employment with a regular elementary instruction in the ordinary branches of common education. An evening school for all the pupils is maintained, in which the constant purpose is kept in view of imparting general information, practicing singing, and inculcating social, national, and religious obligation.

Some encouraging signs are showing themselves of a disposition on the part of the adult Indians to aid the efforts of the school in behalf of their children, by drawing from the agency articles of clothing, etc., that will be of use to their children, instead of looking out for themselves alone. Every effort will be made to stimulate this spirit.

FRANCIS TIFFANY.

PROCEEDINGS OF THE BOARD OF INDIAN COMMISSIONERS AT  
LAKE MOHONK CONFERENCE.

FIRST SESSION.

WEDNESDAY, October 7, 1891.

The ninth annual conference on Indian affairs was held, through the hospitality of Mr. A. K. Smiley, at the Lake Mohonk Hotel, Ulster County, N. Y., October 7, 8, 9, 1891.

The conference was called to order by Mr. A. K. Smiley, at 10 a. m., after prayer by Rev. R. S. MacArthur, D. D.

Mr. Smiley thanked the members for their attendance. He had sent out invitations to 450 persons, 163 of whom had responded and were all present, or would be during the week. He expressed his desire that the spirit of the conference should be right. While the largest opportunity would be allowed in the expression of opinion, he hoped that they would arrive at some harmonious conclusion. The influence of the conference depended on the unity of action. Last year, said Mr. Smiley, we were favored in having as president one who ably took the place of him whom we so much loved and honored. We have always had as president here the chairman of our Board of Indian Commissioners. Dr. Gates is the chairman of that Board; and, as he presided last year, I will nominate him as chairman of this conference. Mr. Smiley then put the vote, and Dr. M. E. Gates, president of Amherst College, was unanimously elected president of the Mohonk Conference.

ADDRESS OF PRESIDENT GATES.

Ladies and gentlemen, friends of the Indian: If I were to ask you, as I assume the duties of the trust which you impose on me, the customary question, "What is the pleasure of the meeting?" you would answer as one voice, "Our pleasure is the immediate and full preparation of all Indians for the duties and privileges of Christian citizenship in the United States." That, it seems to me, is the point in this reform at which we have now arrived—substantial unanimity in the conviction that there must be immediate preparation (even if it be preparation through some necessary failures and mistakes)—an immediate preparation of the Indians for citizenship in the United States.

NO MORE "WARS" WITH INDIANS.

As we look over the events of the last year, there are two facts that seem to me to be sources of especial encouragement. You may be surprised that the chief event from which I draw encouragement, as we look back upon it, is the outbreak in Dakota. The history of that event shows that it was managed as nothing of the kind has ever been managed in the history of this land. The time for any talk about a war between the Indians and the United States has forever passed. Hereafter we may deal with the Indians as rioters or murderers, if we must, by the forms of law. We may deal with the red men who are murderers and rioters by the same forms of law which we use in dealing with white men. The time has come when the United States Government is no longer to allow itself as a great power, on the one side, to declare war against a tribe of Indians as a foreign power, on the other side. The time for that method of dealing with Indians has forever passed. We can hereafter deal with them as they should be dealt with, not with each tribe as a little *imperium in imperio*, but with Indians as men and women dwelling upon our soil, subject to and supervised by the central Government, where they are not yet intrusted to the States, and to be governed by law. I think that the Dakota disaster shows that we shall not need to have taught us again the lesson of the difference between savagery and civilization. As we watched the progress of the dances that begar these disorders, as the reports of eye-witnesses came to us, we saw the evidences of that peculiar narrowness in the field of vision that must attend upon savagery. We saw, when the passionate,

superstitious sense that they had been wronged took possession of these men, it shut out everything else. We saw that for one brought up in the atmosphere of Christian civilization to enter the consciousness of the savage at such a time is almost as impossible as it is for us to get behind the great, blue, limpid eyes of the ox as he chews his cud in the pasture, and know how the world looks to him.

There is a tendency in the savage mind to dwell on one idea, especially on the thought of wrong that has been done to him, until this idea dominates the whole being in a way that we, who are open to higher ideas, can not understand. If we have a little piece of ice to deal with, we say that artificial means may be used to melt it off and get it out of the way; but when we meet such great masses of snow and ice as the blizzard left about our houses a few years ago, we say, "It is of no use; we must let the sun do this work!" So, when we see the latent power of resistance in savagery, the latent power for evil so easily kindled into action, we feel that there is but one hope: this mass of savagery must be broken up and dissolved. Light and heat must be got into it. It has become a profound conviction that the only way to deal with the Indian question, the way to solve it, is by the education, the Christianization, of the whole race. In that war in Dakota—if you call it a war—the heroes were not the young braves who were anxious to take scalps, nor the men of our own regular Army, not Gen. Miles, nor his assistants, thankfully as we recognize the wisdom of their strategic movements and their wise decisions to prevent bloodshed by firm delay in attack. The heroes, after all, were Dr. Eastman and his wife, Mrs. Elaine Goodale Eastman, as they cared for the wounded, and the Christian Indian men and women who held faithfully to their principles and to their convictions of duty through that period of intense excitement. It is these actors in that drama that we need to honor.

#### "STANDING ARMY"—SCHOOL-TEACHERS!

Therefore it seems to me that there are two points which we want to keep constantly before us during this conference. First, the time for fighting the Indian tribes is passed. There may be Indian riots to be quelled; let us have no more Indian "wars." We do not believe in a standing army, but it should be an army of Christian school-teachers. That is the army that is going to win the victory. We are going to conquer barbarism, but we are going to do it by getting at the barbarians one by one. We are going to do it by that conquest of the individual man, woman, and child which leads to the truest civilization. We are going to conquer the Indians by a standing army of school-teachers, armed with ideas, winning victories by industrial training and by the gospel of love and the gospel of work.

The supreme question is the question of education. Napoleon said, "The only victories worth winning, the only victories of which we need never be ashamed, are those won over the domain of ignorance by the dissemination of ideas." Wonderful testimony from a man who knew the victories of force, who talked of "cannon's meat," as he called for the husbands and brothers of the French women. He summed up the experience of his life in that saying: "The only victories worth winning are those won over ignorance," by the progress of ideas.

#### A COMPREHENSIVE POLICY OF EDUCATION.

How are these victories to be won? What reason have we to hope for more substantial progress now than past years have seen? We have often said, as we have met here, "If we only had something like a comprehensive, far-seeing, progressive policy of education, an adequate system of schools for these Indian people! We now have such a system; and it is directed, I believe, by a wise, a clear-headed Christian man, who has the courage of his convictions, who does not fear to express them everywhere, who is showing marked qualifications for his work, and is developing that power of patience and forbearance which is so essential in dealing with the working out in administration of a great moral question, when you come face to face with legislative and executive delays. He is getting a wonderful development from experience along these lines, as any man must who works through our "circumlocution office." We can speak of our gratification that such a man is in this position, and our hope that there may be a permanent carrying out of a firm policy. We have before had superintendents and commissioners who were men of broad views and comprehensive plans; but, when they were well started in carrying out their plans, too often they have been put out of office, in the interest of spoilsmen, and all the good that had been accomplished has disappeared. All their attempted reforms have fallen into ruins like a toy

castle built of cards, until (excepting Gen. Whittlesey and Gen. Fisk, neither of whom I ever yet heard express a sentiment or a thought that was not full of high courage in this reform) there was hardly any other man of experience in our work who has not at times felt that it was useless to struggle, and that, if we held on in the work, we did so as a work of stern duty, and not with high hope or ground for encouragement.

#### CIVIL-SERVICE REFORM IN THE INDIAN SERVICE.

Under these circumstances, we have repeatedly petitioned the Executive and Congress to give us civil-service reform rules in the Indian Bureau. You will remember a conference here some years since, when that was earnestly debated, and a special commission went to Washington to urge it on the President. Every administration has promised much, but we have not seen anything actually accomplished until quite recently, when there centered at Washington requests from many sources. At the close of the last meeting of the Indian Commissioners at Washington, in January last, at a conference with President Harrison, he expressed to us his sincere desire to do the right thing in this matter, and his purpose to act soon. We have now the beginning of reform in the service, and a promise for permanence for good men and good measures. In this there is great cause for hope. Our superintendents of schools, teachers, matrons, and physicians, since October 1, come under the classified civil service. The examinations provided show how completely wise regulations may disprove the assertion that civil-service reform means a school-boy examination which calls only for quickness of wit in answering conundrums in geography and arithmetic. The whole reform has begun hopefully. Less than a week ago these rules went into effect.

#### "EMBARRASSMENT OF RICHES" IN THE NUMBER OF SPEAKERS HERE.

In these two things—a broad, comprehensive system of schools, and application of civil-service rules to the appointments—I see a larger hope than ever before. We may enter on our conference with this larger hope throwing its light over our deliberations.

We have before us such a body as it is a delight to preside over. The only trouble is the embarrassment felt by the man who knows a good deal about electricity, when he stands in a room full of Leyden jars, fully charged, and wonders how he can safely unload the jars and conduct to use the electricity stored there. There are so many accomplished speakers here, charged with enthusiasm and high ideas, that, with our limits of time and space, I shall have to claim your kind indulgence if all have not an opportunity to speak.

#### THE SPEECH THAT "STRIKES IN."

We want first to hear what has been done this year from one who stands at the center, Gen. Whittlesey. Then we hope to hear from workers in the field. Are we not driven more and more to the conclusion that the inductive method is the best method in dealing with this intricate question—to get our facts first, and then to discuss the principles discernible when facts are compared? There are workers here whom we know, and who have had it suggested to them that they should speak. There are others who are not known to us all, but whose work our Master knows. Do not hesitate to let it be known that you have a message for us; and, if you are one of the happy mortals who know how to put a message into five minutes or ten, we shall be doubly glad to get the message. But there will be some whom we can not hear. The finest things I have ever heard in these conferences have been said in speeches that "struck in," the first year, because they did not get themselves delivered. The speakers came again, and did not get rid of the speech that second time. And again it "struck in," until the single, central idea dominated the speaker day and night; and the third time we got it, and it was red hot! We want some of those speeches to-day. I think I see before me men who have gone away from earlier conferences feeling almost wronged because time failed for their intended speeches. We want the essence of these undelivered speeches to-day.

#### THE WORK DONE BY WOMEN.

It has been said that no reform has ever been carried to a successful issue in our country without the aid of noble-hearted women and of Christian ministers. It grows upon me profoundly, from year to year, the sense of what our sisters

and wives, our daughters and mothers have accomplished since they took up this matter of Indian reform. This is essentially a philanthropic and Christian reform. Whatever may be our views, our slight differences of view or differences that may seem to us profound, we all gather here believing that the Lord of the world is the Lord Jesus Christ; believing that ever since God himself became incarnate, for a man to see God truly, he must learn to see something of God in his fellow-man, and to work for his fellow-men. We come in the spirit of service.

#### CHRISTIAN EDUCATION.

What do we ask for the Indians? We want an unsectarian but a Christian education. We want to see Indians—I say it with reverent love—we want to see Indian men and women not held aloof from Christian life by a strange tongue, but lifted into our American civilization, and into a strong Christian life as American citizens, through the medium of our own language. Thank God for his redeeming power made known in strange tongues! But we do want to see Christian Indians—all Indians—speaking the English language, and clothed with the educating responsibilities of American citizenship. I am impressed with the fact that there is no safe way to civilize the Indian except by letting him make some blunders. When we first met at these conferences, many came in that spirit of sentimental romance which has too long obscured our views of the needs of the Indian. There was much talk then about broken treaties, and about God's curse for their breaking; and the record is a shameful one. But it is not possible that 181,000 miles of territory, more than all the New England and the Middle States, a territory almost as large as France or Spain, shall be forever kept out of civilization. It is too much to ask that the teeming life of America shall be shut out of this great territory in order that the Indian may remain a savage and roam over it. The Indians have never had a proper tenure of that soil, such a tenure as leads to their full occupancy of it or to their self-support in other ways than through hunting. We have come out of the spirit of romantic sentiment and have substituted the honest sentiment that the Indian must learn to walk by walking. But we must give him law on the reservations and off the reservations. We must remember the true doctrine that the law is a schoolmaster, even for Christianization. We will take the law as a schoolmaster that shall lead the Indian from the lodge to the gospel. Regarding carefully their treaty rights in their essence, paying into their educational funds a fair equivalent for the land we have assigned them, we will help the Indians to walk on into Christian manhood and citizenship in the United States. That our deliberations may tend to this end, I ask your cordial coöperation.

On motion of P. C. Garrett, Mr. Joshua Davis, Mrs. Isabel C. Barrows, and Miss Ellen H. Bailey were elected secretaries.

On motion of Dr. M. E. Strieby, Mr. Frank Wood, of Boston, was elected treasurer.

On motion of Gen. E. Whittlesey, it was voted that a business committee of twelve be appointed by the chair. The committee was appointed as follows: Dr. William H. Ward, Mrs. Amelia S. Quinton, Dr. M. E. Strieby, Mr. Philip C. Garrett, Mrs. Clinton B. Fisk, Mr. Frank Wood, Mr. Herbert Welsh, Miss Kate Foote, Dr. Charles L. Thompson, Mrs. Isabel C. Barrows, Dr. R. S. MacArthur, and Mr. A. K. Smiley.

The opening address was "The Survey of the Year's Work," by Gen. E. Whittlesey, of Washington.

#### SURVEY OF THE YEAR'S WORK.

[By Gen. E. Whittlesey.]

Our meetings are always so crowded with interesting matter that I must not occupy much time. I will therefore confine myself to some bare facts, and leave unsaid what I do not know about Indian matters.

The year since we last met has been a year of very substantial and gratifying progress. It will take but a few moments to show this. It has been signalized by very important legislation—more important than anything previous, except during the year 1887, when the general allotment bill was passed.

One act of legislation during the past year amended that general allotment bill in some important particulars—equalizing allotments and declaring the rights of inheritance of Indian children.

Another measure of great importance was the bill for the relief of the Mission Indians of California; and still another, a bill for the relief of the Round Valley

Indians in California. Both measures had been carried through the Senate again and again by our honored friend, Senator Dawes; but last year it was carried through the House by the efforts of the chairman of the Committee on Indian Affairs, Mr. B. M. Perkins. Those measures have now become laws, and commissions have been appointed under them for the examination of all questions that have been in dispute for years, and for the survey of the various reservations occupied by those Indians, and the allotment of their lands. They also bring before the United States courts all questions of title that may come up with regard to the rights of the Mission and Round Valley Indians.

The Indian appropriation bill passed last winter makes appropriation for the fiscal year 1892, which began the first day of July, 1891. It contains ratifications of agreements with Indians, some of which have been lying unacted upon for several years. The agreement with the Pottawatomies of Oklahoma, with the absentee Shawnees, with the Sac and Fox, the Cheyennes and Arrapahoes, the Cœur d'Aléne of Idaho, the Fort Berthold Indians of North Dakota, the Sissetons of South Dakota, and the Crows in Montana—all these have been ratified by Congress, and appropriations made for carrying them out involving several millions of dollars, a small part of which only is paid in cash. Where cash payments have been provided it has been to carry out old, previously-made treaties with the United States. Certainly that was the case with the Sissetons. There was a treaty made with them in 1851, just forty years ago, by which the United States bound itself to pay to these Indians certain money per capita. That was suspended on account of the outbreak in Minnesota in 1862—the whole of it—the innocent suffering with the guilty. The agreement with the Sissetons provided that those annuities should be restored to the Sissetons, on the ground that they had remained loyal and firm friends of the whites during that terrible time. By these ratifications all the agreements are completed that have been made and which were remaining unratified until the last Congress, excepting one with the Southern Utes, which many of us hope will remain pigeon-holed for a good many years to come.

The allotment of lands has been going on during the past year with increasing success. The number of patents issued is 2,104. Allotments have been made and approved and patents ordered to 2,830 in addition. Allotments have been made, examined at the Indian Office, and are ready for approval by the Secretary of the Interior to the number of 1,520. Allotments have been received at the Indian Office, but not yet taken up for examination, to the number of 314 during the past year. I may say that, looking back during the years since the allotment bill was passed in 1887, a large number of Indians have become citizens of the United States. That bill made at once 10,122 Indians full citizens of the United States, because, under the provisions of previous acts, they had received allotments and patents to land. It also made citizens of 3,072 who had been previously freed from tribal relations, and had taken on the habits of civilized life. So that under the provision of that bill we have now at least 16,000 citizens of the United States who were not citizens before, and there are some 4,000 others besides those of the Indian Territory waiting the completion of the work who will, within another year, become citizens.

Now, the effect of this work of allotment has been, as you know, to bring up many perplexing questions to answer, many difficult problems to solve, regarding rights, justice, authority, and jurisdiction; and it has thrown upon the Indian Office a vast amount of labor in addition to what it had to perform in the regular routine of its work, and has given to our honored and able Commissioner a work to do which no one previously holding that office has had to do. There is, therefore, an urgent demand for a large increase of force to help him to meet the present needs of his position. The effect, also, of this allotment, has been to reduce the areas of Indian reservations. Two years ago there were, counting all the little Mission Indian reservations in Southern California as one, and all the Pueblos in New Mexico as one, 138 reservations, comprising 104,314,349 acres of land. During the year 1890 these reservations were reduced to the amount of 12,000,000 acres, and during 1891 they have been reduced 8,000,000 more. I quote round numbers only. So something over 20,000,000 acres have been cut off from reservations and added to the public domain, and these have been, or are soon to be, thrown open to the settlement of whites.

In education very substantial progress has been made during the past year. In the first place, the appropriations made by the last Congress for the current fiscal year, which began July 1, 1891, and extends to the end of June, 1892, for education are \$2,216,650—an increase over the present year of 20 per cent. Of this amount \$601,000 are allowed for the support of contract schools. The rest

is expended for the support of Indian schools of all grades. Since the administration of our present Commissioner five new industrial schools have been organized and are in operation, and five more are under way and will be organized in the present fiscal year. The total enrolment of the schools now of all grades, including mission schools, is 17,926; that is, about one-half the school population. This is an increase over the previous year of 1,549. The average attendance has been 13,568, an increase over the previous year of 1,336. One hundred Indians are now attending public schools under a special arrangement, by which the schools receive \$10 per annum for their tuition.

I intended to say a word about another matter which indicates substantial progress, and that is the extension of civil-service rules into part of the Indian service, but it has been sufficiently alluded to by our chairman. These brief statements speak for themselves. No comments of mine can add to their interest or value. They certainly show that the year has been full of work, and indicate marked progress; and they furnish us a hopeful outlook for the future.

Mr. Wheelock, an Indian from the Carlisle Indian industrial school, was asked to speak. The following is an abstract of his remarks:

Mr. WHEELOCK. There is one point upon which I can not agree with your president.

President GATES. We welcome debate.

Mr. WHEELOCK. He tells us that we have a farseeing policy. I do not question that, but I question whether it is a complete policy. It is like making a dog house with a big door for the big dog, and then shutting the door, and making a little hole, and then having to squeeze the dog to go into that hole. It seems to me that is exactly what we are doing with the Indian. The United States Government claims to have facilities for educating all its people, that it has a wide door through which its subjects can pass, to become citizens of this Republic. Then, I ask, why does it not let the Indian come in at that door? Why does it close that, and make a smaller hole and expect the Indian to squeeze through that? That is what we are doing when we establish Indian schools. That is what we are doing when we try to educate the Indian by putting him aside and treating him as a special being. That method will never succeed. If the Indian is squeezed through that little hole, some of his limbs will be left out. If we want the Indian to be a good citizen, we want him to have the use of all his limbs. The United States Government does not want educated Indians, but it wants educated citizens. If the Indian boy starts out and stops at the day school, the benefit that the United States gets from that Indian does not amount to much. But if he goes through the day school, through the boarding school, through Carlisle or Hampton, and then becomes a citizen of the United States, the solution of the Indian question, so far as that man is concerned, has been effected. That is what we want—to have the Indian become an individual. We must teach him to have a conscience which will respond to the voice of duty and responsibility. We must teach him the first principles of this free Government. We must teach him that, in order to be a good citizen of this Republic, he must know the power that lies in the elective franchise, he must know how to think, he must know how to make his ballot think. In order to do that, the Indian must be taught beside the white man who knows what it is, who has patriotism and devotion to his country, and who knows how to act in a free republic. We must put him by the side of the white schoolboy. We must put him into the public school. You find the solution of the Indian problem only when you condescend to have your children with the children of the red man educated together and trying their mettle together.

A paper was then read by Charles Francis Meserve, superintendent of the Haskell Institute, Lawrence, Kans., entitled "The present status of higher education for the Indian."

#### THE PRESENT STATUS OF HIGHER EDUCATION FOR THE INDIAN.

[By Charles Francis Meserve.]

It may seem presumptuous to those of you who have been a long time in the work, and have borne the burden and heat of the day, that a late comer and comparative novice, who has seen only two years in the service, should dare to address this conference on the above subject. It is, however, one of grave importance and deep significance; and, although much has been said upon it, there is still great need of public enlightenment. I realize full well that not only you, but the intelligent, philanthropic Christian people of this broad land are my

auditors. And, further, since our genial and generous host, only a jot of whose geniality is in his name, has bidden me to this wedding feast, where the contracting parties, on the one hand, are warm-hearted Christian philanthropy, and, on the other, a not fully awakened public sentiment, how could I come without having on the wedding garment of preparation, lest I be cast into outer darkness, amid wailing and gnashing of teeth such as we experience when conscience-smitten because duty is undone and opportunity neglected?

The term "higher," as applied to Indian education, is used only in a comparative sense, to designate the training that is given in the large industrial schools. It is not, in reality, proper to designate it even as high; for these schools in their literary departments have seldom attempted anything in advance of the studies of the highest grade of a well-organized city grammar school. Scarcely any of these institutions have been in existence long enough to prepare pupils for graduation. The public schools of Springfield, Mass., are equal to the best in the land. The course of study from the time of entering the primary until leaving the grammar school covers nine years, and if Harvard or Smith is the goal of youthful ambition, four years additional in the high school are required. From the time Carl and Alice leave the nursery until they proudly learn that Harvard and Smith have received them without conditions, thirteen long years have elapsed. They have been guided during these years by skillful, interested, and in many instances highly educated and cultured teachers, whose every effort has been supplemented and seconded by counsel, encouragement, admonition, and every proper incentive that could be suggested by a mother's love and a father's pride.

Not one of these industrial schools has been in operation for thirteen years, and only one of them has sent out a graduating class; and yet, now and then, we read in the public press what miserable failures the graduates of Carlisle University and Haskell College prove to be; that these institutions are anything but successful, and that the money spent for their maintenance is worse than wasted, because the so-called graduates are sent back out of harmony with the reservation life, discontented, and unwilling to resume their former modes of living. Would you think it just to pass unfavorable judgment upon the baker's loaf, when you insisted upon his taking it out of the oven before it was half done? These statements have been made so frequently and are repeated with such persistence that it is but just for those who stand in responsible positions as heads of these institutions to state facts as they exist. Pupils are received at these training schools for a period no longer than five years. It is true they can enter for a second term, though, as a matter of fact, the majority do not. They come to us, even the older and larger, as a rule, attaching slight importance to virtue, chastity, honor, truthfulness, and abstinence from the use of narcotics and alcoholic stimulants. The majority of those who now come can read and write, yet in five years we are expected to turn them out well educated and fitted to support themselves. Is not the demand absurd upon the face of it?

That the average Indian boy and girl can master, with comparative ease and readiness, the rudiments of an English education, including the speaking of English well, and also acquiring considerable skill in all the mechanical arts, has been proven beyond a shadow of a doubt. If there are to-day any doubters, their doubts can readily be removed by visiting any of these schools where the cultivation of the mental powers and the training of the hand, the ear, and the eye are all carried on harmoniously and simultaneously. In comparing the Indian with the white child in his school life, it must also be borne in mind that in the industrial schools only half of the day is given to work of a literary nature, the other half being devoted to various mechanical pursuits, such as farming, gardening, shoemaking, harness-making, and many others.

The problem that is presented to the superintendent of a large Government industrial training school is how to get his pupils, what to do with them after he has them, what will become of them after they have gone out from under his control, and the estimate that the public places upon his work. There is little difficulty in retaining Indian pupils after they have once been enrolled in the schools and become accustomed to the necessary restraint and the routine that the performance of daily duties invariably calls for. Although the contrast between their former and school life is very marked, yet, after they have passed through a period of homesickness such as white children are accustomed to when they leave home, they fall readily into the new ways, the new life, and the new methods. Let us see for a moment what this means to them—frequently an entire change in wearing apparel, living conditions of an entirely different and sanitary nature, regularity in meals, in sleep, in exercise, and in work, and

learning to speak and write in a foreign tongue. The complaint was formerly made that you could not educate Indians. Since it has been clearly shown that they can be educated, the nature of the attack has been changed. When we go out after Indian pupils, various objections are met with. There is very frequently an unwillingness on the part of the Indians themselves to their children going away from home, and this in very many instances is fostered by the whites themselves on the reservation. A missionary once said to me, "If I could have all of the children at home, instead of their being sent away, I could do something with these people." But, after conversing with him and finding out what the hindrances to his work were and what his plans were, it seemed to me that everything he was doing was tending to keep them Indians. Sometimes opposition is experienced on the part of teachers themselves in Government schools, who say, "These training schools wish to take away our older and brighter children, and leave us only the younger and less advanced." This is true; the training schools do wish to receive the older and brighter children. What estimate would we put upon the headmaster of Exeter, or of the Boston Latin School, if he were to say to Harvard or Yale, "You want to take from us the older and brighter of our young men?" It is just what is expected. It is just what ought to be done, and in this lies the greater encouragement to the schools of a lower grade from which the brighter and more advanced pupils come.

The remark is also made in this connection that these larger schools, at a distance, not only receive our brighter and older pupils, but that they claim the credit for all that has been done for them, while, as a matter of fact, these pupils were started upon their education in the reservation schools, and some were there for several years. Far be it from me to detract one iota from the reservation schools. I say most emphatically that those who manage the larger schools could not do their work, were it not for the intelligent, earnest, and self-sacrificing efforts of the teachers of the reservation schools; and let me, once for all, disclaim any intent or desire for the training schools to take to themselves a greater share of credit for their work than belongs to them. The fact is that the schools of all the various grades are important and essential factors of the system, and one can not do without the other. It is sometimes urged by parents against the training schools that, in sending their children so far, their health is injured because of a change of climate; and there are white people who encourage them in this. I never yet have heard of white parents in Portland or San Francisco or Denver objecting to sending their sons and daughters to Harvard and Yale, to Smith and Wellesley, because it would be injurious from a standpoint of health. You can scarcely go into any nook or corner of our broad land without finding people permanently living there who were raised hundreds of miles distant. The objection to Carlisle and Haskell on the score of health because of remoteness from home is untenable even from the Indian's standpoint. He is migratory by nature, having lived, at various times, hundreds of miles from his present reservation. The habitat of the American Indian is no more permanent than that of the American white man or the American Negro.

A careful examination of facts shows that the health condition of pupils in the training schools is far superior to that in the Indian's home life. The fact is the Indians die in much larger numbers on their reservations than they do in the training schools, or, for that matter, in the reservation schools. During the prevalence of the grippe the last two years, at Haskell and Carlisle there were five hundred or more cases, not one of which proved fatal. In one Indian tribe in the Indian Territory that numbered 897 by the actual enrollment on January 1, there were, during the following three months, nearly fifty deaths. This was at the time when the epidemic was raging in the schools, where no death occurred from this cause. The Indian, as a rule, is tenacious in clinging to his habits and his associations, and he desires nothing more than to let alone in his barbarism and degradation; and there are enough whites, some of poor blood, and others of more sentiment than sense, who come in contact with him to encourage him in opposing all of these influences that are going to elevate his children, if not himself. Even with quite intelligent Indians, distrust of whites is a very important obstacle in the way of educating the children. Not long since I endeavored to persuade a half-breed mother that it would be for the interest of her daughter to take a course at Haskell. I saw that, if she was not sent away to school, she would soon be married, and become the ordinary camp Indian girl, though now bright, attractive, and anxious to go away. I used my power of persuasion to the best of my ability, and, after laboring for a long time, the mother replied, "You white folks do make me tired. My father was a white man. He suddenly died. He was possessed of a large amount of land; and, through the trickery

and dishonesty of white people, we never realized from it one penny. That land was in Nebraska. Not long ago I went there, and on the property that was my father's, and that by right, is his children's, is now spread out a large town." These were her last words. I could tell by the look of indignation and injustice on her intelligent face that she had this additional thought in her mind, "And if the whites dispossess us of our property, do they also wish to dispossess me of my daughter?" Nothing but fair, square, plain dealing, with all promises lived up to and all pledges kept, can cause the Indians to have confidence in the whites.

The question is often asked, What becomes of these boys and girls after they have completed their course at these Indian schools? Nearly all go back to their former homes; and, as a rule, they refuse to adopt their former habits and former ways of living. In many instances they are compelled to, for the reason that there is no other course open to them. A week's visit on any important Indian reservation will enable you soon to pick out those who have been away to school, and you will see there still remains the benefit of the training received. They are more industrious, and, as a rule, are the ones that occupy the more prominent positions, such as interpreters and assistants in various capacities at the agencies. They are also more willing to work and desirous of engaging in farming operations. On a recent visit to a reservation that for some years had been friendly to education, I found there were 1,200 acres of land sown to winter wheat—a much larger number than ever before—and the Indians were planning to make the number still larger in the year to come.

A word more with reference to the Indian boys and girls after they return home. A year ago I had the opportunity of attending a pipe-dance among two well-known tribes. Among the large number engaged in this dance there was only one who had ever been away to an Indian school. There were several graduates and former students of Haskell and Carlisle there at the dance, but only one participated. This was to me a very encouraging sign, for only a few years ago these young men would have been only too eager to have distinguished themselves in this way. One of the young men present, a graduate of a training school, had recently married a graduate of another training school. I was very anxious to find out something in regard to their home life.

It is my aim to teach the Indian young men that, when they have become married and have homes of their own, they should not treat their wives as their fathers did, but rather as the best white people treat their wives. When I asked him if he cut the wood and did the other hard work, he, remembering former instruction, said that he did all such work himself. I was not satisfied with his reply and asked the young Indian wife. She said that she cut the wood, carried it in, attended to the fire, and did various other things that he had just informed me that he did. I told her that I was sorry for her lot in life, and that such work ought not to be done by her; and she, with tears in her eyes, said: "Won't you tell him so? Won't you go and talk with him?" This was another very encouraging sign; for camp girls submit to these things as a matter of course, without any complaint, never thinking that there can be anything better for them. If you think, however, this is true of Indians alone, quietly make inquiry of white wives, and your high opinion of white men may possibly receive a sudden shock.

Although there are discouragements and obstacles to be overcome as in all kinds of work, yet there are many signs of encouragement, and the future is full of hope.

Said a Mohave chief to me some months ago, after spending several days in visiting Haskell Institute: "The Mohaves have had no school. Mohaves must have school. I go Washington and tell Great Father Mohaves must have school. Indians can learn like white children. Make wagons, talk and write English, made shoes, make everything." This same chief was very much interested in our brass band. He had never seen a band before, or heard the music of one. It was the one thing above all others that interested him. When he went away he came in the usual formal Indian way to shake hands with me and bid me good-bye; and this was his speech: "Haskell good. Haskell good all around. Hookarow [for that was his name] sad; yes, Hookarow sad. Hookarow wish he young again. If Hookarow young, Hookarow go to Haskell, get education, stay all the time, learn to play on the band."

A few years ago a distinguished visitor from a Northern State stood in the presence of a large colored school in Atlanta. Near the close of his address he said to them; "I am going North in a few days. What message shall I carry to your friends there?" A bright little negro boy rose and said, "Tell um we're risin', sur." On the 16th of last May I was called to Boston by the death of my ather. Before leaving Haskell, I told the pupils that I was going East, and that

I should doubtless meet many people who would make inquiry concerning their progress in school and the various trades, and I said, "What message shall I carry them?" An earnest Christian young man, a Comanche, rose and said, "Tell them we have the same God, the same Bible, and the same church." This young man was very much interested in the Young Men's Christian Association, and doubtless had this in mind when he used the word "church."

We find that Indian boys and girls, like white boys and girls, have their ambition awakened to further advancements. Not long ago one of the boys came to me and said, "Next year I want to study algebra." I replied that we had never had a class in algebra, and wondered why he wished to take up this branch of mathematics. He said: "I have been scratching my head and thinking about this a good deal. I understand now how you can multiply figures together; but I do not understand how you can multiply letters, and I think I should very much like to know."

Some weeks ago I was on a steamer with a company of Indian pupils en route to Haskell Institute. We were sailing down one of the many beautiful bays that branch from Lake Michigan. Quite a number of the parents and relatives were with the pupils to accompany them for a couple of hours. Just before leaving the steamer, they all gathered together on the bow of the boat, got out their hymn-books, and sang several hymns in their native tongue, and closed by singing in English "Sweet By and By," and other familiar hymns. An elderly gentleman, who, I afterwards learned, was a superannuated Methodist clergyman, seemed greatly interested in the singing. I asked him if he knew these Indians; and he said that, although now beyond the period, of active service, he had worked among them as a missionary for nearly thirty years. "Thirty years ago," he continued, "I came among this people. They were then living in bark houses and wearing blankets. To-day they all live in comfortable houses, nearly all are Christians, regularly attend church, and are anxious to have their children educated. This has been accomplished in thirty years. It rejoices my heart to see their children go away where they can obtain an education and a trade, and thus be prepared to compete with other races in the battle of life." The contrast was indeed marked. Only thirty years ago, degradation and ignorance; to-day, civilization and education. Surely, the weakest spirit in the Indian work ought to take courage from even one experience like this.

Recently one who is interested in Indian education said to me, "I hope you will ask for very little for Haskell Institute for the coming year, for we want to do all we can for the reservation schools." It seems to me that this remark is based upon the misapprehension of not merely the importance but the necessity for the higher education of Indian youth. It is the history of education the world over that the elementary schools do not thrive unless there is a class of higher educational institutions of a high grade. There are States, cities, and towns that are prominent for their educational standing; and in all of these you will find that colleges, technical and normal schools, and high schools are strenuously maintained, and are recognized as incentives in keeping up the lower schools to a proper standing. Go with me to a community where the public schools are poor, and there you will find a poor high school, if you find any at all. This principle has long been recognized. As early as 1636 the general court of Massachusetts Bay voted £400 for a school or college. This was the beginning of Harvard College. Two years later regular instruction began. It would be, indeed, a fatal mistake to think that the cause of Indian education could be advanced by taking from one grade or kind of work and adding to another. Both the higher and the elementary are indispensable, and the results desired can not be achieved if either suffers.

While the cause of Indian education has made rapid progress since the first appropriation of \$20,000 was made, in 1877, there is yet room for still greater progress. There are yethundreds—yea, thousands—of Indian children in degradation and barbarism, who have no education, even of the most rudimentary nature. The only way that these children can be brought into school is by compulsion. It is with Indians just as it is among whites. You will find in those States where compulsory laws for education are in force that opposition is always met with from the more ignorant people. Opposition of the same character is met with on the part of the Indians. If the Indians are to be civilized, elevated, and made self-sustaining as citizens of this country, their children, as soon as they arrive at school age, should be put in school, and the strong arm of the law should be invoked if necessary.

The work of educating, elevating, and civilizing the Indian demands that the educational and agency departments should be placed upon a plane of impartial

civil service; and it is an occasion for profound satisfaction that President Harrison has already taken action in this direction. This is a work that can not be accomplished if left to the whim, caprice, and political partisanship of the spoils system. Indian education, like all other education, demands that there should be in charge of it those who understand its underlying principles, and who are willing to give it self-sacrificing devotion. Frequent changes, when competent persons are occupying positions that they are willing to continue in, can work harm, and only harm. A work of such a peculiarly trying nature as that of conducting Indian schools, and of managing agency affairs, especially demands that there should be no changes except for cause. This will never be accomplished until the people rise in their might and say that this work shall be managed in accordance with those principles which are necessary in carrying on any private business, or any educational institution like Harvard or Yale, or the well-managed public schools of any city, town, or village. No parent ever thinks of asking to what political party the teacher of his child in the village school, the seminary, the normal school, or the college belongs. Is the teacher of good moral character, competent for the work, and one from whom good influences continually emanate? These are the questions asked. Frequent changes, not only of policy but of employés in the Indian work, both in the school and in the agency work, made solely for political reasons, as a rule result only in harm. Next to competency nothing is more important in Indian work than a reasonably permanent tenure of office. President Eliot has been at the head of Harvard University for twenty-one successive years. During these years I might almost say there have been twenty-one Commissioners of Indian Affairs.

How unreasonable to suppose that good results can be obtained when there have been such frequent changes in heads of departments, and, consequently, policies of action! The Commissioner of Indian Affairs, whoever may hold that office, ought to be beyond the reach of the spoils system. The head of a great work like this should be selected for a special business and educational fitness for the position, and then should be retained in the position, so that there might be ample time to formulate a policy and to superintend the carrying out of this policy in all of its various ramifications. A prominent worker in the Indian cause in Canada informed me during the past summer that the reason that they had had so little trouble with the Canadian Indians was that they had a reasonable civil service. It was expected that, when an official was selected as Indian agent, he would remain, if he showed proper fitness for the position, for a long term of years, and everything in relation to his office was of such a nature as to make it desirable for him to remain. While there should be a reasonable certainty as to tenure of office, it must be understood that there are no *sine-cures* in the Indian service, but rather that every position is a *cum-cure*.

It is my firm belief that the Indian question never will be solved until the Indian, like any other man, is placed upon his feet, stops receiving the bounty of the Government, and is compelled to take care of himself, like any other man. There is nothing that will sooner degrade a white man than to live in idleness, continually receiving and never giving. Indians need to be taught the divine truth that it is more blessed to give than receive. Let the United States Government allot him a reasonable amount of land, assist him with various farming implements, and aid him in building himself a house and barn, educate his children, give him a fair chance, make him a citizen in fact as well as in name, and then, with the parting injunction, "Root, hog, or die," leave him to his own exertions, like any other man.

Miss Hattie Longwolf, an Indian from the Carlisle School, was invited to speak. The following is an abstract from Miss Longwolf's speech:

"In the fall of 1887 I was brought with other Sioux boys and girls to Captain Pratt's school. I came from my home in the tent, in my wild dress. Little did I think I had come to spend many years getting knowledge. I was much displeased with my new home and surroundings, and was cross to think I had to leave my people and begin a new life. The night was dark. The stars must have shone, but I did not notice them. People say you can never make anything out of a red man, but I can testify that we have been lifted out of our ignorance. I did not want to wear citizens' clothes, I thought I might be well enough pleased to stay if I were only permitted to wear my blanket and speak my own native tongue. But our blankets and moccasins were taken away, and shoes were given to us. I thought I could never stand in the shoes. They were like roller skates to a beginner. It was a very hard task to learn English, but I found that, if I did not at first succeed, I must try, try again. I gave up many times learning it; then I would always begin again. We represent forty-eight different tribes

at the Carlisle school. None of us will ever regret our school-days there. We have been taught to use our hands as well as our minds; and the girls can sew and do laundry work and cook, and the boys learn different trades. We have three circles of King's Daughters. We have our meetings on Sundays, and on week-days we sew and make little things to sell, and with the money we get in this way we help the poor."

President GATES. I never saw that little silver cross (that always appeals to me when I see it over a sister's heart) where I felt that it was more truly emblematic of what the Master himself, who dealt with such infinite tenderness with womanhood, and whose last message from the cross was for the care of his own mother, would have it symbolize. As Miss Longwolf wears it, it speaks of the kind of teaching our Indian brothers and sisters must have before they can come into our Christian civilization.

Mr. A. K. Smiley, chairman of the commission to visit the Mission Indians in California, was asked to speak with reference to work there.

Mr. A. K. SMILEY. There are in Southern California about 3,000 Mission Indians, so called from their relation to the early Catholic missions, established in the early part of the last century. A bold range of mountains extends for a hundred miles in a northerly course, from the Mexican border to Mount San Bernardino, dividing the richer and more inhabitable lands on the Pacific coast from the dreary Colorado desert on the east. These Mission Indians are mainly located in little bands in the small valleys at the base of these mountains, and some of them in valleys and mesas at an elevation of more than six thousand feet. Quite a number of them live in the forbidding Colorado desert, lying between the Colorado River and the above-named mountains. There are about forty separate villages of these Indians, the largest of which contains less than two hundred persons. Under Mexican rule these Indians chiefly lived on fertile lands near the coast, and had, in most cases, a good possessory title to the lands they occupied, from which they have been driven by the rapacity of the whites. Some benevolent people called the attention of the United States Government to the necessity of early action to prevent the pauperization and extermination of the whole race, and in 1873 and 1874 two separate special agents were sent out to inquire into their necessities and to devise some plan for their relief. The result of their investigations was the establishment of nine reservations by Executive order. In 1883 Mrs. Helen Hunt Jackson and Abbott Kinney, esq., made an exhaustive report on the condition and needs of the Mission Indians; and some one—I suppose Mrs. Jackson, though I do not certainly know—drew up a bill.

Senator DAWES. Yes, she drew it up herself. She gave it to me.

Mr. SMILEY. I am glad to know its origin. It was an admirable one. That bill passed the Senate through the instrumentality of our honored friend, Senator Dawes, three times, but failed in the House. On the 12th of January, 1891, the bill of Mrs. Jackson, with some modifications, became a law. I was living at the time in Redlands, Cal., overwhelmed with work—building roads, grading grounds, planting orange and fruit trees, and getting ready to build a larger house, and was not aware of the passage of the bill. In the midst of my pressing work I received a telegram from Mr. Noble, Secretary of the Interior, asking me if I would serve on the Mission Indian Commission if appointed, to which I consented, supposing the Commission had reference to the settlement of some vexed questions at Banning that I had been laboring to have adjusted. When the bill arrived with instructions, I found there was nearly a year's work. However, I concluded to hold on to the work, fearing that some one might take my place, should I resign, who would fail to carry out the benevolent intent of the law. When the other members of the Commission, Prof. C. C. Painter and Judge J. B. Moore of the superior court of Michigan, arrived, we began the work assigned us. We are expected to select reservations for all the various bands or villages of Indians, which selection, when approved by the President and Secretary, will be patented to the band or village, and made inalienable for twenty-five years. When, in the judgment of the Secretary, the Indians of any band are capable of managing their lands in severalty, the land previously patented to the band will be divided, and individual patents issued, inalienable as before. Judge Moore and I, in company with Mr. Lewis, the law adviser of the Mission Indians, took an extensive tour through Southern California, visiting the greater part of the villages of Indians, holding councils with them, inquiring into their needs, learning about intruders, ascertaining the amount of valuable land occupied by Indians, ascertaining the boundaries of land, etc. The Indians are deeply interested in our work. They, as a rule, want more land than

can possibly be obtained for them at this late day, when nearly all good land is secured to whites; and their desires, as is natural, outrun their actual needs. The story of their expulsion from their homes, and the numerous wrongs inflicted upon them, was very touching. We hope by the 1st of February to finish the principal part of our work. It is impossible to please all the Indians, as they, as a rule, want more land than they can use profitably. We shall endeavor to secure a home for all, trying not to pauperize them, but giving them a chance to go to work and earn their living under the protection of law, hoping they may in time become valuable citizens of the State.

Miss Kate Foote was then asked to speak on the same subject.

Miss FOOTE. The first teaching that the Indian needs is that he has got to work and earn his own living; and the white man has got to learn that he must respect the rights of the Indian. The people of California look upon all persons who insist that the Indian has rights as Eastern sentimentalists. You have heard from what Mr. Smiley has said that he does not take the sentimental view with the Indian, nor with the white man, either.

Mrs. A. S. QUINTON. I have just visited the Mission Indians, and should like to speak of what I saw if there were time. I first went to the Government school at Coahuilla, where Mrs. Salsberry is teacher, and saw there, as in other schools, a clear solution of the educational Indian question. The teachers were competent, earnest, and Christian, and were doing their work in a true missionary spirit. And they were not only teachers, friends, and advisers of the pupils, but of the people as well, having special influence and success in temperance work. There had been a great change in this matter at Coahuilla; for, though a feast had been in progress for some days, there had been little drinking, and the Indians were quiet, and glad to see new friends, and seemed eager to hear of new work and new ideas. They were deeply interested in the new commission, and seemed to feel that they should really get their lands. They had too large ideas of the amount needed, though one can not reasonably sympathize with the gentleman who thought 5 acres enough for any Indian family. If an alfalfa patch for keeping a pony and a cow, a garden, orchard, and enough to earn a suit of clothing and a little pin money, to say nothing of bread, are granted, 5 acres will not suffice. We visited the homes and saw the people in them, and found them more civilized and comfortable than we had expected; while the maps and drawings of the children showed good work and ambitions. The captain of the village was a man of pleasant face, and seemed to have aspirations for himself and for his people. The houses were of adobe, and some in a tumble-down state. A great deal of moral instruction is needed. There is much gambling among them. This vice is hard to eradicate, and especially so from the fact that many whites among them are given to it. Mrs. Salsberry is doing all that she can for the people; and a new industrial teacher has now been appointed, who is doing good work among the women and girls.

We visited Agua Caliente and its hot sulphur springs, and saw that these are coveted by white men. Some of these would gladly open a sanitarium there, and have tried to get possession of the land. A hospital for the Indians should be built at that point, though it need not be an expensive building. These Indians would use a hospital, and there is kind feeling between them and the teachers and our own workers among the Mission Indians. We attended one of their councils, and heard them discuss the land question, and the case of white intruders among them, very intelligently. They did not look savage nor speak like savages, but were calm, and, as our chairman prefers, gave facts and let others draw the conclusions. The Indian women gladly heard of our work and asked questions, and with emphasis asked for another interview, which was promised them. There is here an excellent opening for the work of a Government field matron, who could have a motherly eye over the region, and supplement in many ways the work that is going on for Indian help. Among others we saw a woman more than a hundred years old; and the pathetic interview impressed us greatly with the need of a home where the old, who have no surviving kindred, may find shelter, food, and care. The civilization of the Indians has not yet reached the point of providing for these. There was a closing festival at this school, a most interesting occasion, and one provided for by the teacher, Mrs. Babbitt. One could see the discouragements of the work, and also that the teacher is, and must be, its Christian heroine.

We visited Pechanga, and met the teacher of the Temeculas in the holiday of the school, in the pretty cañon a mile or two beyond. The picnic was in progress, though its feast was over, when word came that the new schoolhouse which they had occupied through the year was burned to the ground. It

was also the home of the teacher, Mrs. Platt; and her furniture, supplies, books, pictures, and all the little treasures which a woman's heart loves to gather were destroyed, leaving her not even a change of raiment. Yet she led the festival to its close, and was the smiling central figure in its photograph, and bravely kept her composure till, running over the list of losses, she said, "I shall never see the pictures of my husband and children again." Then a little sob escaped. But she soon rallied, and bore herself as though no disaster had befallen her. It was feared that this loss would close the school, but Agent Rust assured all that it would be continued. It was a privilege, indeed, to promise effort for restoring some, at least, of the clothing burned, and to remind the teacher that she and her work had many friends.

Other schools were visited, and at Rincon, La Jolla, Saboba, and Potrero good work has been done in the Government schools. The trip of seven and a half months, from Florida to California, Washington, and Colorado, gave the pleasure of organizing thirty new societies and bands of helpers for our association—thirteen of these were in California—besides opening the way for several new missions and beginning work for and in three new stations. Scores of public meetings were addressed, and much interest in our work was expressed and large aid was pledged for it.

President GATES. When our ancestors, the wise Teutonic savages, held their councils, they used to call in the wise women for suggestions, and then after they had heard the words of the wise women, they appropriated their wise plans, and forthwith announced what they as men were going to do. I am inclined to think that we can get some good suggestions in that way. I do not believe this suggestion about a hospital at Agua Calientes going to be dropped. Is there not some one here who will see that such a much-needed and inexpensive hospital is established?

Rev. J. J. Gravatt, of Hampton, was the next speaker. The following is an abstract of his remarks:

Mr. GRAVATT. I am here on account of my interest in the Indian cause. The oldest church now in use in this country is at Hampton. The first Indian child baptized in this country was baptized in that parish. After all these years, after all the Indians have been driven away, they are now being brought back to learn Christian civilization there. Fourteen years ago, when word came to Hampton that Indians were to be received there, I was asked to take part in that mission, and what I have done in connection with it has been one of the sweetest parts of my pastoral work. In public I instruct them, and tell them to come to me if they want to become communicants in the church and surrender themselves to Christian life. They come of their own accord. I do not have to urge upon them the claim of Christian living. Some of the most touching experiences have come to me from these boys and girls who have come to me to seek the truth. There are at Hampton now one hundred and forty Indians. We are trying to teach hand and heart as well as the head there. We are working on the line that Mr. Meserve has marked out. In summer some of the boys go to Massachusetts for work. Several graduates are getting large pay as assistants in important positions in Boston, having learned their trades at Hampton; and at the agencies in the West there are those who have gone out and are doing good work. Within the last fourteen years I have made several visits to the West to bring pupils East. I find the majority of those in the field who have been with us are doing very well. As compared with the graduates of other schools, I think the balance is on the side of the Indian.

Something has been said about the trouble in Dakota. The only young man who was engaged in that trouble, who had been in the Eastern schools, was a youth who had spent a few weeks at Hampton. He had married Sitting Bull's daughter, and went with him into the trouble. One of the best records of modern times was the behavior of the Christian Indians during that trouble. The work at the West and the work at the East are one. We get a better class than ever before for the Eastern schools. They have been at school before, either at the day schools or the boarding schools of the West. The teachers and missionaries are in hearty sympathy with the work done here, and are sending those to us who can take a better and higher training than can be given there. I want to bear testimony to the hard, earnest work done by the missionaries on the different reservations. If it were not for what they accomplish, we could not do our work as well as we do. As to health, for two years we have not had a death at Hampton among the Indians. I do not believe you could find one hundred and forty pupils in the West on any reservation where there had not been one death in two years. We passed through the epidemic of the grip with no death

and no serious results. We look forward to far better and higher results than we have yet attained.

Mr. Herbert Welsh, a Sioux Indian of the Hampton school, was invited to speak. The following is an abstract of his remarks:

Mr. WELSH. Once there was a boy, not quite 10 years old, who used to like to ride ponies, to go hunting, and to run with the dogs. When he was 15 years old he went to a school for one year. Then for six years he was doing nothing. In the seventh year he went to school again. When he gets through his schooling he wants to go back and help his people in any way he can. Who is this boy? Here he is, standing before you. I want to say something about the work that is carried on at Hampton by Gen. Armstrong and the good women. They believe and trust in God, and that is the reason they like to do the work they are doing. Their school is improving all the time, and everybody ought to try to make it better. I will tell you what I think about the future. If I go home I shall tell people what a good thing it is to go to school and learn. I think they can make good and useful men out of those Indians who are growing up. It is now over two hundred and eighty-four years since you white people came across the ocean to this continent. You found these poor, ignorant people here. Some of the first white settlers tried to help the Indians. Those who did good to the Indians were successful in all their doings. We are thankful to all people who have helped us. Some of my people are trying to climb the ladder of civilization and Christianity; but, as you all know, that is extremely difficult. I belong to the Sioux tribe, Standing Rock Agency, North Dakota. It is five years since I became a Christian. I went to the school at Yankton, under the charge of Bishop Hare; but it is only three years since I began to learn the English language. I want to be a missionary among my people.

President GATES. The interest of the conference will not be less in this young man if you understand that he is the son of Little Foot, and that Sitting Bull was his uncle. You see the new spirit that has come in.

Lieut. W. W. Wotherspoon was asked to speak of the Apaches in his care.

#### THE APACHE PRISONERS OF WAR.

[By Lieut. W. W. Wotherspoon.]

You have heard much this morning about good Indians. I can only speak of the bad ones. I am in charge of Geronimo's band of Apaches. This band for years kept the southern border of Arizona and New Mexico in a frenzy of fright. The very name of Geronimo was feared. After years and years of campaigning and hunting over the mountains, these people were surrendered to Gen. Miles. They were carried to St. Augustine, Fla. Some were sent to Fort Pickens. Here they were left in the casemates until their health was destroyed, and many were dying of nostalgia and consumption. The seeds of the latter disease had probably been planted right at that sanitarium. Later they were moved to Mount Vernon Barracks in Alabama. This post had been long used as a health resort for the United States troops stationed along the Gulf Coast in years of yellow-fever epidemics; but they made little progress towards civilization.

I was sent for by the Secretary of War in May, 1890, and asked if I would take charge of these people. He said a number of methods had been tried, but with no great success. He now wanted to try business methods. When I reached Mount Vernon, June, 1890, I found the people in a deplorable state. They had been promised this and that, and had lived upon the hope of getting away until their hearts were sick. They thought at one time that they were to go to the mountains of North Carolina, at another to the West, and again to their old reservations. I knew there was no hope of any such change. I therefore stopped all council talk, conversation, and discussion of this subject, and told them their business in life was to work, and work like white men; that when they worked they would get something for it; they would earn money. I told them that what money they earned they could spend as they wished—foolishly if they wanted to, wisely if they followed advice. Many of them were hired out, some cutting cord wood, others working on roads and farms, some cutting saw logs. They made considerable money; and, though much of this money was spent foolishly, the change was very marked. They were becoming cheerful and bright.

During the summer the death-rate has been very high. They have been dying at the rate of ten, twelve, and fifteen a month. They had had no surgeon detailed for their special care, and there can be little doubt that the high death-rate was due in some measure to the general dependency and absence of this

special care. In time I was furnished with a doctor. Under his care and the brighter outlook the death-rate soon fell to only one or two per month; and consumption, which had been making such ravages, has almost disappeared.

The people about Mount Vernon said it was useless to try to make these Indians work; that they might have the endurance to go upon forays and expeditions, but that they would never settle down to hard work. However, I employed them in cutting wood and on other work. They made houses and learned the rudiments of carpentry. At first I had to use such tools as we could borrow or make. Later I bought them tools. In the use of these they soon showed considerable skill. This summer they have completed the building of a village for themselves, consisting of eighty houses. The village is laid off in regular streets with a plaza in the centre. The houses are of frame, with flooring, shingle roofs, etc. Each house has two rooms, a chimney with an open fireplace in one room, and a flue for a cooking stove in the other. All these houses they have built entirely themselves. They have had no other assistance than that of a foreman, who directed them in the laying out of the sills and in such work as only a skilled carpenter could do. Thus they have learned the use of hammers, adzes, and saws. They are now building barracks for the Indian soldiers. This building is 224 feet long and 24 feet wide. They are building this under the supervision of the same foreman. Two or three of the Indians became so skillful in the use of carpenter tools that they could earn two and three dollars a day. They were hired out to a man to work with white and negro carpenters, but the whites and negroes struck because they would not work with the Indians. I asked this person to let me supply the places of the strikers with Indians—that they could do the work. He consented, and the Indians completed the work. This is a creditable showing for a people who were not thought capable of settling down to hard work.

The question of Indian education has been the prominent subject of discussion this morning. I am simply a soldier. My business has been in campaigns against these and other Indians for years. I have, however, my views upon the subject. I am convinced that there is a system of education applicable to the older people as well as a system for the young. Such a system must precede their becoming citizens or useful members of society. The training of the mind, as applied to the children and young people, can not with advantage be applied to those more advanced in years. To them is left only the training of the hand, with such mental training as they are capable of. The education of the more mature Indians must therefore be to work—with the tools of the mechanic if he can, with those of the laborer if he is only so far capable. Teach them that labor is honorable, and that there is nothing they can not do. I have laid it down as a principle with my people that there is nothing they can not do, and have found it to their advantage. Teach them thus, and you will raise them to be self-respecting and self-sustaining men. Eventually, you will raise and fit them to be the citizens that we must make them.

Some reference has been made to the Indians as soldiers. I have the honor to command the largest Indian company in the United States service. There are seventy-eight Indians in the company. Four of them are noncommissioned officers. Two of these noncommissioned officers are graduates of Carlisle, having been under Capt. Pratt. The other two are such wild, red-eyed Apaches as chased the United States cavalry over the plains a few years ago. The two men who came from Carlisle are doing splendid work. The two wild Apaches are as noble specimens of the Indian race as I have ever seen. They give all their commands in English, and are in every way catching up with the boys from Carlisle. I think in time they will be as good. The company is being organized into five groups, each group to be under the instruction of a white sergeant, and all to be under the supervision of another officer of the company and myself. A large percentage of the men have learned to read and write. Many can now sign the muster rolls as well as the majority of white recruits. They will all go to school twice each week, and I hope will eventually learn to read and write and keep their accounts. I think the Apache is about the most intelligent of our Indians. Geronimo, that great terror, is now acting as justice of the peace in the Indian village. I debated this question of law among the Indians for a long time in my own mind. I had taken hold of this work totally unprepared for such a thing. My duty had been to serve against the Indians rather than for them; but, the more I thought of it, the more I was convinced that an Indian should understand something about the laws of the country, not only that he might not violate them, but that he should understand his own rights under those laws. After a great deal of care I decided to make Geronimo my justice of the peace, and I find that

his decisions are eminently wise, acute, and to the point. He has an excellent influence over the other Indians, and more than fulfills my expectations. I may say that, among other duties, he has to see that the old ladies keep their houses clean.

Question (by a Delegate). Can any of these enlisted men hope to become commissioned officers?

Lieut. WOTHERSPOON. Yes, any enlisted man who has been a noncommissioned officer for a certain time, and who can pass the prescribed examination.

Among other things I wanted to teach the Indians was music. I had heard that an Indian could not become a bugler. I have now two young buglers who are among the best buglers in the Army. They sound all the calls, and play all the marches and quicksteps. After the Indian soldier has cut his long hair and is well dressed, he is a very fine-looking person. He looks much more respectable than the average citizen of Alabama in our parts, and is really as intelligent.

President GATES. Are you a Southern man, Lieut. Wotherspoon?

Lieut. WOTHERSPOON. Yes, I am. I was speaking, however, of the "Caogens" (supposed to be a contraction of Arcadians), who live only in the forests of Alabama, Louisiana, and a part of Georgia. I think there is no doubt that the system of enlisting Indians as soldiers for the Regular Army will be a most beneficial thing, not only to the United States, but to the Indians themselves; but, to make it a benefit to either, the Indian must be kept away from bar-rooms and canteens. I have given orders that under no circumstances shall my men go near drinking saloons or the canteen; and I have not had a case of drunkenness or partial intoxication, neither have I had a case of insubordination, an act of disobedience, or a breach of discipline in five months. My men are handsome, well set up, obedient, and perfectly reliable soldiers. What! you may ask, do you put arms into the hands of the bloodthirsty savages? Yes, they have guns and they have cartridges, and no evil results have followed. It has been said that the enlistment of Indians as regular soldiers is not a success. In connection with this, a point of great interest to me has been the question of how to suppress the sale of liquor to these people. I have said that I believe the system of enlistment can only be beneficial when the Indian is kept away from saloons and canteens. When I took these people in charge, it was the most common thing for the Indians to be drunk or semidrunken. They would injure their wives and beat their children and fight with each other. They were not worse than the negroes or whites, but just like them when suffering from the same complaint. I undertook to stop this sale of liquor, and came North to look into the law and to consult with Captain Pratt. I found there was a law that would help me. The law says that any man who sells liquor to any Indian in the Indian country shall be punished. The Supreme Court has decided that any country is Indian country where Indians are held under an agent or superintendent appointed by the President, hence I am an agent or superintendent and the Apaches are in the Indian country. The most prominent white people about Mount Vernon were dealers in liquor. I warned them that I would have them arrested if they did not cease their sales to Indians. They did not pay any attention. So I had them all arrested, brought before the United States grand jury, and eventually before Judge Tolman in the United States district court. Every point of law was in my favor, and they were sent to prison for three months in the heat of the Alabama summer, at an expense, with fines and costs, to their purses of about a thousand dollars each. They assure me now that they are reformed men, and that never again will they sell whisky to Indians.

There is another point about the law and the Indian—about the Indian understanding his rights under the law. Two months ago thirty-eight Indians were sent to me from Fort Wingate, N. Mex., as prisoners of war. The newspapers said they were terrible creatures, that the agents could not manage them, etc. They came to me, and a more mild-mannered and worse-dressed lot of people I never saw. After a few days' rest they were put to work cutting logs to build themselves houses. One day I asked one of them what he had been sent to Mount Vernon for. He said he had not the faintest idea. How true this may be I do not know, but the point is that he claims that there was no form of law in his case. He was not told who were the witnesses against him nor confronted with any witnesses. He claims that he only knows that he was taken away from his home and people, put in the guardhouse at Fort Wingate, and then brought to Mount Vernon. This may have been a military necessity—I do not know; but is it right, as this man claims was done in his case, to try any man in this country without giving him a hearing?

I suppose you all know that the status of the Apaches is unique in our country

at this time. This is the only tribe that is now exclusively under the control of the War Department. I should like to bespeak your patience that that Department may carry out the schemes it hopes to follow.

President GATES. What a clear-cut and soldierly presentation of facts that was! Lieut. Wotherspoon ought never to be allowed to get out of relations with the Indians. It reminds me of the most stimulating talk I ever heard on the Indians, by Gen. Milroy, at the first conference I ever attended. Just as he got that splendid system of administration of law for Indians, in which he took the chief man and made him feel the responsibility and put him at the head, he got word that his place was wanted by a local Senator for a friend, and he was put out, and the whole thing went backward, and slipped away until there is nothing left but a tradition. We must have civil service regulations in the Indian service.

Mr. A. K. SMILEY. We once held a council with Geronimo, and I was greatly impressed with the power of the man. Lieut. Brown told me that he is the ablest man he ever met of any color. Geronimo had charge of the Sunday-school down there, and he made a good Sunday school superintendent.

Adjourned at 1 p. m.

## SECOND SESSION.

WEDNESDAY NIGHT, *October 7.*

The conference was called to order at 8 o'clock, the president in the chair. The report of the law committee was called for.

Mr. PHILIP C. GARRETT. I can hardly say that I am prepared to make a report from the law committee. My colleagues, Prof. Thayer and Mr. Austin Abbott, have not agreed upon any report. I shall, therefore, only introduce the subject of the legal status of the Indian, that it may be discussed by those who shall follow me. I wish, however, first to submit extracts from letters from these two gentlemen. Prof. J. B. Thayer writes as follows concerning the substance of a bill which they propose: "I doubt if anything can be devised which is much simpler and will cover the objective ground. But I will heartily agree to referring all questions of that sort to any proper body. What we want is something that will accomplish the object named. We will not quarrel with anybody about the details."

Mr. Austin Abbott writes: "It appears to me that we should frame three bills—one on the rights of Indians as citizens and the law applicable to them, one on the local Indian courts, leaving the clauses as to establishment of a system of circuits to form a third bill—and press them altogether. This is a general indication only, for I have not the bill with me. The most important matter of all is the subjection to legal administration of the Indian funds, and consequent regulation of agencies; but this I do not think we can accomplish without first making progress with the others."

Mr. Garrett then read the following paper:

### THE LEGAL STATUS OF THE INDIAN.

[By Philip C. Garrett.]

The law committee have not been together as a committee since the last conference, and have not, as a committee, come to any new conclusions. It may safely be said that a majority of them, if not all of them, are as fully convinced as ever of the need of legislative action to provide law and courts for the Indians on the reservations.

The subject hangs fire, in the absence of any counter-proposition, free from the alleged objections to the bill drafted by Prof. Thayer, and modified by your committee, as then constituted, after consultation with various legal authorities and with the law committee of the Indian Rights Association. They would welcome modification, curtailment, elimination, substitution, anything that will effect the purpose, even if it comes short of what seems to them to be needed. To take no step, because Congress does not see the way to take a long step, is not the only alternative. We are giving the Indians education, they are becoming more and more civilized, yet are left without the one great distinguishing characteristic of civilized communities, respect and obedience to law, because they are deprived of the law to respect and obey. That is withheld from them. Continual illustrations arise of the necessity of some provision. The

Commissioner urges it, in his report just published. The country awaits with growing impatience the needed legislation.

It seems to us that the powers of courts of Indian offenses might be enlarged, defined by law, and the courts in some way definitely legalized by act of Congress, not simply recognized by tacit inference from appropriations for their support; that the duties of United States courts might reasonably be extended on the reservations, either by enabling them to delegate their powers in certain cases to court commissioners or providing for sessions of the court itself at points on the reservations; and finally, that appeals to the Supreme Court might be granted, and there would then be provision for civilized justice to the Indians, which practically there is not now. As for details, these should be such as are essential to justice and no more, and may safely be left, perhaps, to development in the progressive stages of legislation. But, whatever bill is enacted, it should not be a crude bill, because, even if its operation is somewhat temporary, it is to last during a transition which will be prolonged, perhaps, over fifty years.

We submit herewith the answers received to the five questions sent out last year. They are too voluminous to read at length. Of those tabulated, fifty-two in number, twenty-six—exactly half—were from Indian agents, and the remainder from teachers and others in the Indian service, with very few exceptions. There are five answers received since, of which three are from agents. If there are any official prejudices on the part of the agents in favor of the existing order or otherwise, these should be taken into the account. To the first four questions we give simply the affirmative and negative replies here, and some of these have to be inferred from the context. From six respondents there is no information, and from others none on some points, which will account for the vacancies in the number of the answers in these cases. To the first question, "Is there practically a different law for the Indian from that for the white man, in the field with which you are familiar?" ten answer yes, and thirty-six no. Of the agents, four answer yes, and twenty-four no. To the second inquiry, whether the court of Indian offenses affords reasonably convenient and fair justice to the Indian, twenty-two answer yes, and seven no. Of the agents, fifteen answered yes, and two no. To the third query, whether the distance of the United States courts from any considerable Indian settlement involves a denial of justice, there are fifteen affirmative and twenty-four negative replies; and to the fourth, whether Indians having land in severalty have adequate remedy in cases of trespass, fourteen affirmative and ten negative. It will be observed that the conclusions of the agents are the same as those of the other classes of respondents and in larger majority. The answers are not so unanimous as one could wish, especially to the last two, which are perhaps less important in their bearing on our conclusions than the first two. As to the latter, the great preponderance of opinion is (1) that, practically, there is not a different law for the Indian from the white man's; and (2) that the courts of Indian offenses afford a reasonably good chance for justice. The meaning of answers to the first probably is that the Indian has as good or as fair treatment at the hands of the law (such law as there is) as the white race; for the respondents are not most of them very accurate and discriminating in these matters, if we may judge from their letters.

If so, the answer to the first question is tantamount to that to the second. There is, then, a slender basis, at least, for law in these Indian courts, which have the further merit of educating the Indians in the rudiments of a knowledge of courts of law, as conducted in civilized countries. And of this I will speak again after referring to the answers to the fifth query, "What, if any, further provisions of law do you desire to suggest as necessary to secure equal justice between Indians and between whites and Indians?" From this we do not derive as nutritious a crop of ideas as we might hope.

One suggests "alfalfa seed" and "iron fences," another that we "civilize the white man," another "education." Eight of the agents think there is law enough; six of them have no suggestion to make; one says there are no changes practicable. Eleven of them, however, and ten others make suggestions. A number of these, like the three cited above, are somewhat irrelevant, while others are indicative of legislation which might prove of value. One sums his suggestions up in the proposition that we should make citizens of them; a second, that the whole reservation system and the Indian Department should be abolished; a third, that they should be given the same law as the whites; a fourth, that the Dawes bill should be so amended as to allow Indians to sell timber on lands patented to them; a fifth, that there should be some provision for divorce between Indians, fixing the grounds for it. Then one thinks there should be no change till the Indians know more, but that capital offenses should be turned

over to the sheriff to be tried in the district court of the county where the reservation is. Another proposes a United States magistrates' court, sitting every three months. And other propositions are that the law should compel trials for murder to be held within a given time (which would perhaps would be a good thing everywhere); that cases should be tried regardless of the cost to the Government; that the Government, and not counties, should pay all the expenses of trial; that penalties provided for Indians should be the same as the State law provides for whites; that Indians should enjoy all the rights of white men; that they should be naturalized and made citizens; that they should be put under the white man's law, except as to land; that Indians should be made competent witnesses; that all tribal laws should be abolished; that the Government should pay the cost of trial of all who commit crimes against Indians; that the respondent has found the appointment of a United States deputy marshal and a United States commissioner at points near the settlements beneficial; that United States commissioners should be given the jurisdiction of a justice of the peace; that the powers of the courts of Indian offenses should be better defined by law; to establish courts of justices of the peace to try minor offenses; that the courts of Indian offenses should be recognized as courts of justices of the peace, and that the Indians be given special United States attorneys to defend them.

Here is abundance of suggestion, much of it raw and made by those who know little of law themselves, some of it of local application and from interested motives, but conveying the impression that many workers in the field are sensible, no less than those who view the subject from a distance, and even from theoretical standpoints, of a crying need for some means of obtaining justice on the reservations, more searching and effectual than the present exiguous provisions. I am not prepared to advocate, either for myself or on behalf of the law committee, legislation to remedy all the defects that may exist among the Indians, any more than all those that exist in the rest of the country. The question put in the Red Man recently, "Who are the savages?" is, perhaps, pertinent in this particular. Is it the comparatively orderly community among which lady missionaries and teachers live in peace and safety? or is it the white men who flay negroes alive, hang them to the nearest tree, or shoot them down in swamps without even knowing that their victim is the guilty party? There are terrible evils elsewhere than among the Indians that need legislation. But that is no reason why we should not legislate courts for the Indians at once. The committee, then, think that what is known as the Thayer bill practically represents what is needed. If the eminent legislators who have considered it see insurmountable practical objections to it in its present form, my own opinion is that the defects should be remedied and the draft modified. Why not first pass a law, and that immediately, declaring the Indians entitled to all the protections, privileges, and immunities of law provided for other residents not citizens of the United States? That much they are surely entitled to, nor do I find any authorities who regard such a step as impracticable or unconstitutional.

Then let the courts of Indian offences be improved, as educators of the Indian, if nothing more. But they are worth more. We have heard the testimony of Lieut. Wotherspoon to the merits of Geronimo as a justice of the peace. The Commissioner's reports bear further evidence. In his report for 1890 he uses this language: "The services rendered by the court are of such value in promoting good order and good morals in the community, as well as in familiarizing Indians with the customs, practices, and ideas which they will hereafter meet in white communities, that courts ought to be established for nearly every agency." Why not, then, enlarge their powers, increase the compensation of the judges, provide for their instruction in the law, and add to the list of offenses over which they are now given jurisdiction?

The further provisions for giving the Indians law I will leave to be discussed by the able lawyer who is to follow me. I would suggest, however, that the former draft be submitted to Justice Strong for his suggestion of such modifications as may make it acceptable to the Senate, or that a new draft be made by some member of the Senate committee, accomplishing the purpose sought, if it can be done, by a simple process or in a shorter bill.

If Senator Dawes were not here to speak for himself, I would refer more at length to legislation suggested by him, modifying the policy hitherto pursued towards the Indians, allowing, for instance, the leasing of part of the Indians' land to white men, who shall, in part compensation, break up the Indians' land contiguous to their leased land; also allowing Dakotas, to whom grazing lands have been allotted, to exchange them for farming lands on the public domain. But the Senator is here to speak for himself.

After all, is there not deeper cutting necessary before these scattered remnants of a former sovereignty attain their full manhood? Legislation is approaching it. The decisions of the Supreme Court are nearing it. Mr. Hornblower, in his recent interesting address before the Bar Association, says: "In United States vs. Kagama (118 U. S., 475) it was held that, while the Government of the United States has recognized in the Indian tribes heretofore a state of semi-independence and pupilage, it has the right, instead of controlling them by treaties, to govern them by acts of Congress, because they are within the geographical limits of the United States, and are necessarily subject to the laws," etc. And again: "The court has even gone so far as to hold that Congress can provide for naturalizing any of the Indians." And: "The right of Congress to regulate the legal status of the Indian having been thus so fully and clearly enunciated by the court of last resort, the question is pertinent whether the time has not arrived for Congress to take such steps as will put an end, at once and forever, to any such rights of independence or quasi-independence as will justify any tribe or so-called nation in levying war against the United States." That is, to put an end to the tribes, at once and forever, as one may freely construe it, and declare that henceforth all Indians are simply residents of the United States, and must obey the laws or be subject to the penalties like all other residents. Do the treaties stand in the way—the old existing treaties, which provide that certain sums are to be paid to the tribe forever? But what would happen if the tribe, through the delay of wise legislation, became extinct? Forever would then come to a sudden end for them. Suppose a man left a thousand dollars to his favorite horse, to be paid to him annually forever. Would his executor be abused for violation of his trust for stopping his payment when the horse died? But capitalize your annuities and then you do the Indians some justice, while you comply with the terms of your bond. Then you give them the benefit of the treaty, truly; whereas, if the tribe died, it would cease to bind the United States, and the Indians would forever lose the benefit. When the white man first set foot upon this soil it was natural to recognize the nations which occupied it as nations *de facto*. That day has long since passed, and civilization spread from sea to sea. Civilization is better than barbarism; and we offer it, on equal terms, to our brother, the red man, who then becomes again once more the possessor of the soil, being joint owner with us from Passamaquoddy Bay to the Pacific and the Gulf. Let us entreat him to come back to his own.

At the close of his paper Mr. Garrett stated that Mr. F. J. Stimson, who had been mainly instrumental in drafting the Thayer bill, had come from Boston, to present a paper on that subject. Mr. Stimson then read the following paper:

#### LAW FOR THE INDIAN.

[By F. J. Stimson.]

Law seems to many a barren subject; it is as the dry bones of civilized life—lacking in human interest, though the framework of all society. We are apt, with all our interest in the flesh and blood, in the beauty, intelligence, goodness of the result, in our care for the personality, to forget the skeleton on which the body politic, as well as the body personal, must depend. But without these "dry bones" no body can grow straight and strong. Now, the Indian body politic yet has no such skeleton—no framework; and we lawyers feel that before you get his limbs strong or his brain active, or give his body and brain the civic duties of a man—before you fill him out to citizenship—you must have his spine straight.

You know how briefly his present condition in this respect may be stated—that, as a general principle, he has no law, nor courts, nor even recognition as a human being. The courts tell us on the one hand:

"The Indians do not constitute a foreign state, so as to claim the right to sue in the Supreme Court of the United States; and yet, in the management of their internal concerns, they are dependent on no power. They punish offenses under their own laws, and in so doing they are responsible to no earthly tribunal." They make war, and are not punished; they may (now) acquire property, and are not protected in it; yet they are still termed "wards of the nation." Like all wards, they may not make contracts; while, on the other hand, we are rapidly pressing upon these wards their inheritance—pressing it upon them without training in the duties or knowledge of the rights of citizenship, or the skill and habit of protecting their inheritance when they have got it, without giving

them any courts—the civilized instruments of such protection—if they had the necessary knowledge. Now, it is true there is a difference of opinion as to the legal rights of the Indian when we give him this inheritance; but in all earnestness, I do not know which view is the worst for this unfortunate "heir." By the one view—which, I am bound to say, is held by most lawyers—the Indian, as he gets his 160 acres of land, is living on a kind of Tom Tiddler's ground—in a place which is not yet a civil state, but has ceased to belong to the reservation, with neither municipal law nor courts.

By the other view, he has suddenly changed his sovereignty to a remote State government, which has not given and will not give him its courts and laws, though in theory entitled to them. This latter, I believe, is the view entertained by the Indian Bureau. But you will note two things: first, that no amount of opinion or custom in an executive branch of government will of course stand against the first word of a decision of a United States court; second, that the very fact of this difference of view shows in what a fundamental state of wretched confusion and uncertainty this basic question of Indian civilization remains, and we are suffering it still to remain, by inaction on these points of law and courts.

And, if the second view be the correct one, the last state of our Indian is worse than his first. For we are informed that the States usually deny their courts to the Indians. As he pays no taxes, they will not give him even their justice. He can not enforce witnesses to attend, nor pay for civic process, nor get fair juries. And, finally, we know too well that the people of the States or Territories surrounding the reservation have commonly been the Indian's worst friends, most unfair judges, and most corrupt masters.

Furthermore, remember, we have all the vast majority of reservations which are not thrown open, and have no law nor courts, in either view. Now, as to the statement so often made, that the reservation is gone, that the system is vanished, and therefore we need no longer send our "heir" to school, for he has already got his estate. The number of allotments in four and a half years, under the severalty act, has been 12,752. At that rate, Prof. Thayer tells me, from thirty to sixty years will be required to wind up the Indian problem and make the last "ward of the nation" a citizen. Is that too short a time to consider? And, if it were, and thirty years hence were only ten, shall we not try in those ten years to train the ward against the so rapidly approaching time of his majority? We want laws and courts, not only to protect the Indian when he has become a citizen, but to train him how to be a citizen.

We can not longer postpone this question. We must begin to train Indians still on reservations to citizenship, and we must provide protection for the Indians on those that are being thrown open. The severalty act gave the Indian his heritage. It went three-fourths of the way. But we must go the last quarter, too. We must train him for it, and protect him in it when he has got it. The cry for action is going up outside this conference, all over the land.

If Congress does not act, somebody will, and may do it wrongly. The wrong authorities may assume jurisdiction if they have it not. I read in the Boston Herald of September 28 this year that a judge in Oklahoma has just taken jurisdiction, under habeas corpus, of an Indian boy placed in the Government Indian school, and ordered him removed from the school and restored to his father. I read from the Herald:

"Judge Greene of the district court of the Territory of Oklahoma, in his opinion, took the ground that the right of a parent to the custody of his children belonged to the Indian as well as to the white man.

"Commissioner Morgan says that it is contrary to the tendency of all recent Indian legislation, inasmuch as it fails to recognize the true status of an Indian, which is that of a ward of the nation. \* \* \* He believes that Congress should enact a law explicitly defining the status of Indians, and will make a recommendation to this effect in his next annual report."

And at a late meeting of the American Bar Association, after an earnest and unanimous discussion, it was resolved—

"That it is the opinion of the convention that the United States should furnish, at the earliest possible moment, courts and a system of law for the Indians."

And Messrs. H. H. Hitchcock, of St. Louis, William B. Hornblower, of New York, and Prof. James B. Thayer, of Massachusetts, were appointed a committee to urge the matter before Congress and the President. In the discussion of that resolution—I wish I had time to reproduce all that was said—lawyers from all parts of the country, representing every shade of opinion as to the Indian question, in general, agreed on the point that the first thing necessary to prepare the Indians for their duties as landholders and citizens was to give them some

law and impartial courts. Mr. Hornblower read a paper on "The Legal Status of the Indian." in which he said: "Let us enact laws suitable for the present situation, and place the legal status of the Indian upon a rational and practical basis."

Mr. Thayer called attention to that decision at South Dakota which acquainted the Indians with their exemption from punishment in killing officers of the United States Army. They ought to be disabused of this idea. The Indians ought to be protected in their just rights, however. There were no courts in the reservations, and only seven crimes were recognized as among themselves. It was now clearly declared that the United States has full power of government over the Indians, whether in the reservations or in the States. The conclusion of Mr. Hornblower was sound—that the United States establish a system of law and of courts in their reservations. The Indians had no redress but war. If they had courts, they would resort to them.

John B. Sanborn, of Minnesota, said if the Government would establish courts and give Indians the same rights in them as white men it would go far toward solving the Indian question.

Judge Peabody, of New York, and Alfred Russell, of Michigan, spoke in favor of the resolution. D. S. Troy, of Alabama, said that a few Indians still remained in the Everglades of Florida, who continued to hold their slaves. The chief of these Indians held that the slaves in his kingdom had never been freed because no special law as regarded the Indians had been passed.

Judge John F. Dillon, of New York, closing the debate, said, whatever might be the state of savagery in our Indian, he was a man. He had dwindled away until he was a mere remnant. It was the sacred duty of the Federal Government to protect the Indian. It was his misfortune that, in any dispute involving the right of the Indian, there was no tribunal to which he could bring his complaint. Indian outbreaks were the result of nonperformance of treaty stipulations. The resolution could be safely passed.

Two most valuable articles, to which I earnestly commend the attention of this conference, have been written by Prof. Thayer, in the October and November numbers of the Atlantic Monthly.

You remember that the Thayer bill failed of immediate acceptance because its provisions were thought too complex. The difficulty arises from the vast extent of the territory to which the bill applies. It was thought impossible to get along with less than thirty or forty courts for the reservations. A bill creating, say, forty minor judges—at an annual expense of some hundred thousand dollars, the whole of whose provisions, counting courts, law, and municipal government, are contained in a law the length of about three pages of the Revised Statutes—would not seem unduly long and complex, especially when you consider that it concerns the perpetual welfare of 300,000 people, for whom many millions of public money are now spent annually. Many suggestions have been made, and other and simpler bills prepared, but none other both comprehensive and satisfactory has yet been found. For instance, Mr. Austin Abbott and myself thought at first the subject might well be divided. Take, for example, this one of several drafts for bills prepared by me:

"1. All Indians not citizens of the United States, whether residing on or off a reservation, are hereby declared entitled to the full protection and exemptions secured by the Constitution of the United States to persons other than such citizens; and especially they shall be entitled to the equal protection of the law, they may sue and be sued in all courts, and shall have full power to make contracts, and engage in any trade or business: *Provided, however,* That such reasonable restraint as is necessary to the maintenance of the reservation system is not forbidden, nor shall this section work a repeal by implication of any laws which may be necessary to such reasonable restraint; and in particular it shall not, except as expressly provided, work a repeal of the following enumerated acts or any part thereof, namely: The act of February eighth, eighteen hundred and eighty-seven, entitled "An act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes."

SEC. 2. *Law extended over reservations.*—The laws, both civil and criminal, existing at the time of the passage of this act or hereafter made, of the State or Territory in which any Indian reservation is situated, are hereby extended over every such reservation, so far as said laws are applicable, and not inconsistent herewith or relating to subjects herein provided for. And the laws, both civil and criminal, existing at such time or hereafter made of the State of Kansas, are hereby extended over any Indian reservations situated in the Indian

Territory, except as hereinafter specially excepted: and any person, Indian agent, officer of the United States, court or tribunal, undertaking to administer law or impose restraint upon Indians, or to settle disputes on questions of property, or contract or tort between Indians and white persons, shall be governed by said law of such State or Territory. But the President of the United States may, at any time within six months from the passage of this act, or within six months after a certification by the court commissioners of any such laws as prejudicial or inapplicable, by his veto of which proclamation shall be duly made, forbid the application to any such reservation of any such laws which he may deem prejudicial to the welfare of the Indians to be affected by the same, provided that this section shall not be construed to repeal section 9 of the act of March 2, 1885.

Surely no one, in or out of Washington, will say that this simple bill is not proper, just, and wholly necessary; but the difficulty is that, if we so provide law without courts, it may open the door to State and Territory interference, or, rather, denial of justice. And, remembering our own history—the Star Chamber Court of England and the bill of rights—we well know that no law and no courts are almost better than a denial of justice, which would forever disgust the Indians with the very institution of civil justice itself. But I hope this conference will give the matter its earnest thought, and end by agreeing with us of the American Bar Association that some bill should be passed by the next Congress, which shall, first, declare definitely what the civil status of the reservation Indian is; second, define and extend some system of law on both classes of reservations, whether in process of allotment in severalty or still in tribal ownership; and, lastly, give him some simple system of courts protected by the National Government, in which he can trust, and by which he will be trained to enjoy and protect his coming heritage and his rights as a citizen. Let us at least go as far as to say: Resolved, that the Indian is legally a human being; resolved, that he should enjoy the laws of the land common to human beings; and, resolved, that he should have just courts to enforce it.

#### DISCUSSION.

Senator H. L. Dawes was invited to open the discussion on the subject of law for the Indians.

Senator DAWES. I am drafted into this service. I not only did not come here for the purpose of discussing this question, but I came with the firm resolve that I would not discuss it. Nothing has grieved me more than to be compelled to differ, as I do, upon the wisdom and the necessity of the measures indicated in the paper just read, with those of my fellow-citizens favoring these measures, who are just as earnest and just as honest, and far more able than I am, to devise proper measures in reference to the conduct of Indian affairs. But I have learned whatever I know in reference to what is best for the Indian in the field, and not in the closet. Serious responsibilities have been imposed on me with reference to Indians these late years; and I have been out to see where he lives and how he lives, and I have drawn such conclusions as I could from my observations and from experience as to what is best for the Indian to-day. I was exceedingly gratified when Prof. Thayer, who has made this subject such a thorough study, procured from the American Bar Association a committee, of which he is chairman, to present his views to Congress.

I sincerely hope that this conference will join with him, and appoint the ablest committee they can select who will present to Congress the plans and methods which they think are not only wise, but absolutely necessary. And if, in the judgment of Congress, these methods are wise and necessary, I do hope and pray that they may become the law of the land, and bring what good they can to the Indian, or that those who believe in the wisdom of this measure shall be convinced that it is impracticable and impossible. At any rate, an end will come to debate on this subject, and our minds can be carried to practical work. If Congress is convinced that it is a possibility and desirable, then I will take hold with what little energy and ability I may have to see to it that it gathers all the fruits that its friends claim it is capable of producing.

I have been quite astounded however, to hear it said that the Indian is without law. It is a mistake, a sore mistake. Gen. Whittlesey told you a little while ago that on the 8th of February, 1887, ten thousand Indians rose into the condition of the citizens of the United States, "clothed with all the rights, privileges, and immunities, and subject to all the obligations of citizens of the United States," and that since then fifteen thousand more have walked through that gate into the status of citizenship.

This was by a law of Congress which is charged with having left the Indian without law. Congress could hardly have been derelict, so far as this class of Indians is concerned, had it stopped there. For citizenship carries with it all the rights, all the protection, that you and I enjoy. But Congress went further, and declared expressly that "these Indians are citizens of the United States, and are entitled to all the rights, privileges, and immunities of citizens." And then, to make it doubly sure, Congress repeated in the same statute "that, upon completion of said allotments and the patenting of the lands to said allottees, each and every member of the respective bands or tribes of Indians to whom allotments have been made shall have the benefit of and be subject to the laws, both civil and criminal, of the State or Territory in which they may reside; and no Territory shall pass or enforce any laws denying any such Indian within its jurisdiction the equal protection of the law."

Is there anybody capable of putting language into a statue that will add to that? Every Indian in the United States has that door open to him to-day, and, if there is a friend of the Indian within the borders of the United States that can frame language stronger than that, let him bring it to Congress, and Congress will put in into the law. Probably one-third of all the Indians we have to deal with come under this broad shield of law. The number is increasing daily. The whole effort of the Government, all benevolent effort, is aimed at preparing the remainder for this citizenship, and consequent protection of the law. More than \$2,000,000 was appropriated last year for that purpose. The remaining two-thirds—the reservation Indians—are decreasing in the same ratio. The whole system under which they are held is fast crumbling away. There are many among us who are for abolishing it at once.

But let us see what provision of law is made for the reservation Indian while he still remains the ward of the nation, and on his reservation. First, how is he treated criminally?

In 1885, by the ninth section of the Indian appropriation act, Congress made provisions for the punishment of certain crimes by Indians, as follows:

That immediately upon and after the date of the passage of this act, all Indians committing against the person or property of another Indian or other person any of the following crimes—namely, murder, manslaughter, rape, assault with intent to kill, arson, burglary, and larceny—within any Territory of the United States, and either within or without an Indian reservation, shall be subject therefor to the laws of such Territory relating to said crime, and shall be tried therefor in the same courts and in the same manner, and shall be subject to the same penalties, as are all other persons charged with the commission of said crimes, respectively; and all such Indians committing any of the above crimes against the person or property of another Indian or other person within the boundaries of any State of the United States, and within the limits of any Indian reservation, shall be subject to the same laws, tried in the same courts, and in the same manner, and subject to the same penalties as are all other persons committing any of the above crimes within the exclusive jurisdiction of the United States.

As to these crimes, therefore, is it in the power of any one to make language any stronger? Does that not put the Indian on an absolutely level plane with the white man? If a United States court is such a heavenly tribunal that it is Paradise to get into it, the opportunity is before him. Outrageous decisions have been quoted to-night from judges in Oklahoma and Sitka. But you would not get out of the difficulty by multiplying your judges. An Indian was acquitted of the murder of Lieut. Casey during the late outbreak at Pine Ridge, because the court thought it was a condition of war, and the remedy proposed is the creation of another court. The crimes referred to in this law are enumerated crimes. Why do not we say all crimes? What are the crimes that are left? Simply assault and battery, chicken stealing, malicious mischief, and that kind of thing. Why didn't we put those in? Because we were told that the United States marshal would go around the different reservations and pick up every Indian who had assaulted another Indian, and take him off a hundred or two miles to a United States court at the expense of twenty or thirty or forty dollars, and then, when he was discharged, let him go back as best he could. We therefore concluded that it was not wise to make it universal in its application.

For these petty crimes the court of Indian offenses was constituted. That is, a court that has no place in law, being constituted on the recommendation of the Commissioner of Indian Affairs, and governed by rules made by him. Nevertheless, it has worked well. In the Indian Commissioner's Report of last year it is shown how useful it is. It is commended by the agents. I noticed that you

were pleased when that clear-headed, conscientious, and able military officer this forenoon told you that Geronimo even had made a good judge. If that is so, I think you could trust three of the best Indians that you could find, selected by the agent and approved by the Department, to pass upon these little offenses, if you could trust Geronimo. I will read a few extracts from this report. I want to show you that the Indian Bureau and the Department of Justice have not left the Indian without law; that there has come up from the Indian reservation no instance of injustice done to the Indian, such as we read every day in the report of the different courts of the United States and such as have been cited to-night. No such reports have reached our ears from the courts of Indian offenses. The rights of the Indian have been substantially protected. It is in a rude way, it is true; yet substantial justice has been done, and the Indian has been taught to apply the law himself.

The Indian police system is about two years older than this court of Indian offenses; and, connected with that court, it has come to be the bulwark of the Government in the administration of justice and in the preservation of order on the reservation. When the committee last year asked Congress for an appropriation for the Indian police, I read from this report what was said about the police; and a Senator, who had up to that time been hostile to the whole policy of the Government in relation to the reservations, expressed his astonishment at this testimony, and he said, "Whatever you want for that Indian police force, ask, and you shall have it; we will vote it." The effect of putting this responsibility on the Indian has been to lift him higher than any process except the severalty law has done. It is my belief that no white police in any city in the United States has been more faithful to its duties than the Indian police on the reservations. That is the testimony of all who have had anything to do with the Indians. Hear this from the report of Standing Rock Agency as to the court of Indian offenses, by Major James McLaughlin:

"The court of Indian offenses holds biweekly sessions at the agency of two days each, where all Indians committing offenses are brought for trial; and the valuable aid rendered by this court can not be too highly commended. Eighty-three cases were heard and adjudicated by this court during the past year, and all the decisions have been intelligently and impartially rendered upon the evidence adduced. In every instance the decision of the court has been sustained by public sentiment, and not a single appeal to higher authority was asked. The three judges of the court are John Grass, head chief of the Blackfeet Sioux band; Chief Gall of the Hukpapa band, leader of the progressive element of the late hostile Sioux, and Standing Soldier of the Lower Yanktonais, all of whom are full-blooded Indians, eminent among and respected by their people."

W. D. Myers, agent, reports of the court of Indian offenses of the Kiowa, Comanche, and Wichita Agency, as follows:

"At the time I assumed charge of this agency I found established a court of Indian offenses, consisting of three judges, which places were filled by three of the most prominent chiefs on the reservation, namely, Lone Wolf, principal chief of the Kiowas, Quannah Parker, chief of the Comanches, and Towaconie Jim, chief of the Wichita and affiliated bands. Early in October last Lone Wolf, acceding to the wishes of his tribe, resigned, and I immediately appointed his brother, Chaddle-Kaung-Ky, to fill the vacancy. I find this court of great benefit in punishing the Indians for offenses committed. Their decisions are generally fair and always impartial, and are accepted with good grace by the Indians."

It is not a perfect court. It can be improved, but it can have no place under the law. The moment the law takes it up all the judges have got to be appointed under the Constitution of the United States, nominated by the President and confirmed by the Senate. This is a temporary court, created to meet a temporary necessity, but practically of just as much use as if all these poor fellows were taken into the United States court.

The suggestion that you must make United States courts alone for the Indians on the reservations has this trouble. You can not establish a United States court in any State in this Union except such as are fixed by the Constitution; and, so far as civil causes are concerned, the Constitution of the United States provides that nobody shall sue in a United States court except citizens of different States. You can not clothe a United States court in a State with power to try a civil case unless the parties are citizens of different States; and therefore you can not apply this system to an Indian before he becomes a citizen, and you can not make a United States court that any citizen can bring another citizen into unless they live in different States. They must go into the State courts. As to their right to be tried criminally, valuable as that right must be, by a United

States court, the only crime that could be committed in States out there against the United States would be a crime against the revenue laws and crimes of that kind.

All the Indian reservations in all the States under the Constitution of the United States have got to come under the State courts. Now, every one of the Territories of the United States, except three, have become States. There are left the Indians of Arizona, Utah, and New Mexico. So long as they are Territories you can make for them just such courts as the United States pleases for the trial of anybody in those Territories. That is true. The United States has made those courts. They have clothed every Indian who becomes a citizen with every possible right that a citizen can have. And we have provided also as to the crimes enumerated that, whether he becomes a citizen or not, he shall be subject to the law and be tried in the same court in the Territories or in the States that the white man shall be. Now, why should you say that the Indian is without law? Do we want a law passed that will permit any Indian to make any contract he pleases, and then go into a court and enforce it? Until a reservation Indian can make his own contracts, he has no occasion for a court to enforce contracts.

A DELEGATE. Suppose one of the Indians on a reservation should take possession of a house and refuse to give it up. What right has he?

Senator DAWES. On the reservation he is under the laws of the United States, and the agent is clothed by the statute with the duty to take care of him and protect him. The possession of all the property on a reservation is in the United States, and the United States has the power to put one Indian in and another Indian out. It has been found by forty years' experience that you must have somebody clothed with power to take care of the Indians so long as you have the reservation system. Peace has been preserved on the reservations ever since this system existed.

The theory upon which these arguments for new courts for the Indians are made is correct enough as far as it goes. One may sit down in his library and take the Indian from the day our fathers landed at Plymouth, and follow him step by step all the way through our relations with him during the colonial period, and under the Constitution up to the year 1871, and he will come out pretty much where these arguments do. But the difficulty is that the effect of the statute of 1871, forbidding the treating them hereafter as independent nations, and of subsequent statutes, is entirely ignored in this reasoning. From that date the status of the Indian in this country has been entirely changed.

The statutes have taken him out of his old relations to the Government, the people, and the laws, and have from that time, except as to past obligations, treated him as an individual to be governed by law. By the statute of 1871 he ceased to be treated with as an independent tribe or nation, by the crimes act of 1885 he was put under the criminal laws of the land, by the severalty act he was provided with a homestead and made a citizen with all the attributes of citizenship, and by the amendment of that law the past winter marriage and legitimacy and the descent of his property are made the same with the Indian as with the white man. It will not do to say, therefore, that the Indian is without law. In my judgment, he does not need more laws or more courts, but more preparation for the new position into which the law he already has has placed him. If logic or law could make him a self-supporting citizen, the solution of the problem would be easy. But patience and persistency in the work of preparation, are, in my opinion, more needed than either logic or law.

If, however, it is possible for this law committee to give him any guaranty that he has not got, nobody will hail such a law like the Committee on Indian Affairs of the Senate, nobody like those in the field who know the Indian and know the practical difficulties that come up every day that law can not meet. They will hail any achievement that will give him any additional right, but I am surprised when I hear learned men say that either the Indian who has become a citizen or the Indian who has not become a citizen is without law in this land. He has got, in my judgment, all the law that is practicable. So far as I am concerned, I feel that another duty is pressing upon me and another kind of work is calling loudly upon the friends of the Indian. The day of work is fast passing away. The chance to make a self-supporting citizen of him is growing less and less every hour. He is being despoiled of his inheritance, he is being surrounded by all manner of devices that human ingenuity and human greed and human avarice can invent. There is no time for me to go into my library to elaborate an untried experiment of this kind. If others can accomplish it, I give them my hearty Godspeed. I hope they will find me as earnest a coöper-

ator as any they can find the moment they can convince Congress that this is practicable or possible, and I beg of them not to delay another four years. I beg of them before the first month of this Congress shall have passed to present their measure in the ablest way they can and take the judgment of Congress upon it. I shall be satisfied if they will be.

Hon. WILLIAM STRONG. If I were wise I should probably follow the old maxim, which says, if you have nothing to say, you had better say it and sit down. There are, however, two or three things which I will mention briefly that may be of some interest. Senator Dawes, in his very able address, says what I entirely concur in: that the Indians, under the allotment act, have been made citizens of the United States, and those who have taken up lands have all the rights of the white citizens of the State in which they live, are subject to the same laws, and have all the privileges granted by the general law which any white citizen has. And there is one matter connected with this which is perhaps worthy of consideration, when we are considering the status of the Indian. What have Indian agents to do with those Indians to whom allotments have been made, who have become citizens of the States? and what right has an agent to interfere with a citizen of the State? Can he direct or control in any manner the use of the allotted land and the allottee?

Senator DAWES. No more than he can of your house.

Justice STRONG. Senator Dawes says very properly that Indian agents can control this land no more than they can control my house. Indians in States to whom allotments have been made are under the control, in regard to the use of their property, and in regard to their rights of every description, of the laws and officers of the State.

There are agents now among the Indians to whom lands have been allotted who do interfere. Within a year some Indians have waited upon me at Washington to whom allotments had been made, who said that the agent would not permit them to do this or that thing on their property. If they had timber land, the agent would not allow them to cut any timber except what was necessary for building a house. They were not allowed to cut any timber and sell it to get farming utensils, even when the land was all timber land.

Another said: "I have an allotment on which I am endeavoring to raise grain, but there is no mill within twenty miles. A man wants to build a mill on my property. The agent will not let me allow him to build a mill, even if he pays rent for the privilege."

I had supposed that such control was impossible after the allotment of land to the Indians. I supposed it was understood that when the allotments were made the work of the Indian agent in that region was done. I agree this may be unfortunate in some particulars. If the Indian is left to himself he may make no use of his property, or such use as would bring him a little money, which he will spend in whisky. If the agent had some control, he might be made to make more valuable use of his property and become a self-sustaining citizen; but I do not see that that is possible under the allotment law.

I say nothing on the subject of extending the laws of the State or the Territory over Indian reservations not within a State. Mr. Dawes has thoroughly discussed the subject of criminal law. The time may come when it will be necessary to extend civil law, but I do not know that it is necessary at present, or advisable. I want to say something, however, with reference to the recent decision upon compulsory attendance of children at schools in Indian reservations. I have seen an abstract of a decision made by Judge Green. I endeavored to get his opinion in full, but there was no written one I was informed. The case was this: An Indian boy, with the written consent of his father, had been put into the school. He was indentured, if I may use the expression, to the teacher for education in the school. The father became dissatisfied, and wanted to take his son out of school. The teacher would not release him. The Indian father sued out a writ of habeas corpus to have the possession of his son restored to him, and the judge decided that the Government had no right to compel the father to send his child to school or to allow the child to be put into the school. Consequently, the fact that he had been indentured by his father was held to be of no importance whatever, and, therefore, the court could interfere between the teacher who had custody of the child, take the child from the teacher's charge, and return him to the father. This decision rested solely on the ground that the Government had no right to interfere between the father and the child and compel attendance of the child at a school. I dissent *in toto* from the decision of that judge. It is thoroughly untenable. The government of a State has a right to compel attendance at school; and the Government of the United States holds the same

authority, as guardian of the Indian, to compel the attendance of Indian children. I believe if such decisions as Judge Green's are correct, the statutory provisions for compulsory attendance will be of little avail.

On motion of Dr. W. H. Ward, it was voted that speakers in discussion should be allowed but five minutes each.

Mr. MESERVE. As reference has been made to the decision of Judge Green, I wish that we might hear from Superintendent B. S. Koppock.

Mr. KOPPOCK. The Indian to whom reference has been made, a full-blooded Indian, gave his son to Dr. W. H. Winslow, the principal teacher of the school, and entered him for three years. The boy came and behaved well. He was allowed to go home and see his sick grandfather, and returned to the school. The 1st of July the father came for the boy for vacation. I told him I was willing the son should go home for a vacation, but I expected all the Indians who took their children to sign a written contract to return them on Saturday, the 29th of August, without any trouble to me or to the agent, or any expense to the Government. I had a large number of contracts signed in this way; and this contract was signed by this Indian, Abraham Lincoln. He understood it. His boy signed it, and he did also. His tribe has an attorney, and this man wrote afterwards to know whether the boy was regularly entered, and whether I should expect him to return. I said I should; that the solicitor for the school was in the neighborhood, and I should expect him early in the week. The next thing I heard was that the attorney of Logan County had called at the school and asked to see me. I was very busy and failed to see him. I did not know his business at the time. A writ was then served on me and on Dr. Winslow, and the next day the doctor went to court. The trial was peculiar. It took five days to get through with that little case. There was no evidence to sustain any charges. The boy spoke good English and wrote his own name. He said he was treated well. The attorney of the tribe admitted that the father had put the boy into the school for three years, and that the time was not up. How the decision came to be made that was made I can not understand.

President GATES, Did not the boy want to be in school?

Mr. KOPPOCK. Yes. After the decision was made, I called on the supervisor of education, and urged that he should go down and get everything connected with this matter in writing. The case was in the hands of the United States district attorney. The judge was the judge of Logan County. We are not in that county; we are on the Cherokee Strip. A courteous letter was written to the judge, asking for his decision in writing. It has not come, and that is where the case rests. What will become of it I do not know. It is a matter of great interest. If by such means children can be taken from school, the schools must be disbanded. I do not know how many children I shall find when I go home.

Rev. CHARLES W. SHELTON. In talking with Maj. McLaughlin in regard to the helpfulness of the Indian police, I asked him how he felt as to putting the Indians under the care of the courts along the borders of the reservations. He said that ten years ago he would not have dared to do it, but that to-day he would trust any Indian on his reservation in any court. He said they would be treated just as honestly and fairly and impartially as any white man in the same court. I asked him whether the decisions of the Indians in the courts for Indian offenses were usually just? He said, "I have sometimes questioned whether I should make the sentences quite so heavy for the crimes." When an Indian is brought into one of these courts and sentenced, his whole pride has gone. There is no need of the guard-house. Until the sentence is worked out, he has such a contempt for himself that he does not want to be with anyone else. I have asked every Indian agent I have seen for the last five years whether their Indian police are thoroughly armed. "Yes," has been the reply; "they are armed with heavy army revolvers." These Indians are often from 50 to 70 miles from any agent. I have asked agents whether they have known of the Indian policemen making unwise raids on the reservations. "Never," has been the reply. I have asked, "Did you ever know an Indian policeman to make an unwise use of his arms?" And the reply has always been, "No, never."

Mr. A. K. SMILEY. Wherever I have been, I have asked with regard to these Indian courts. And I have got only one uniform answer, that the Indian trial is a very fair trial; and I am satisfied that the administration of justice in the hands of Indians is vastly better than in any part of New York.

A DELEGATE. City or State?

Mr. SMILEY. Both. I have never seen justice better administered than there. Near San Bernardino there are about 13 or 14 Indian families, making a band. We collected them to give them their land. They are safe from the white men

there. We collected them in council and asked them to be by themselves, and we found out all about their administration of justice. We asked them in regard to a young man who we understood had been whipped by the chief, and we asked what the crime was for which he had been whipped. They said the man had not been kind to his wife. He had abused her, and they brought him before all the men of this band, and the chief gave him a good, sound whipping. We, not thinking that the man was present, asked where he lived; and they replied, "There he is," pointing him out. He was the biggest man of the whole twenty-five, and the chief was a little fellow; but the man had submitted to his punishment.

Mr. F. J. STIMSON. I should like first to correct Mr. Dawes in one matter. The proposed bill does not allow Indians to make *any* contracts. On the contrary, it expressly excepts all contracts from which Indians are now restrained by the reservation system.

Next, as to the other objection, the proposition of law that the other reservations in the States are not subject to the control of the Government of the United States; this is too vast to be debated here. I can only say that, until to-night, it has not been, at least for the last ten years, seriously questioned by any lawyer.

This decision of 1885, to which reference has been made, is the United States vs. Kegama (118 U. S., 375).

The Supreme Court held here that the United States had full power to legislate for Indians on a reservation within a State. The only one possible exception is in Colorado, where certain jurisdiction over reservations was conceded to the State in the enabling act under which Colorado was admitted to the Union. But, as there are hardly any Indians there, it is not important.

The answer to the third and last criticism of these views of your law committee—namely, that the Indians on all the reservations to which the severalty act is applied are United States citizens—is that, if this is merely an empty term, it will not do them much good if there is nothing of the fabric of civilization around them. And no one pretends to say that these courts shall exist on the reservations in the States after the Indians have got all their lands and have become citizens and the reservation becomes part of the State. These are to be temporary courts, a stop-gap to train the Indians until all the reservations are thrown open. The moment the Indian becomes a citizen he becomes a citizen under the law, not of the State, but of the United States, so that the United States has still power to say under what law or court he shall live. The State, on the other hand, will refuse its courts, and, in fact, have constantly done so, as we hear from Mr. Cornelius, even in so civilized a State as Wisconsin; for the Indians on the reservations pay no taxes, hence the nearest county authorities refuse them court protection or process of any kind. Our object is to have courts on the reservations until they are all open. It has been estimated that it may be sixty years before they are all thrown open. I have the authority of Commissioner Morgan in stating that the number of allotments under the severalty act in four and one-half years in 12,752. As allotments are made to men, women, and children in some cases, it is fair to estimate that we may contemplate at least one hundred thousand allotments in all. At the present rate, therefore, it will take thirty-six years. It is during these years that we think they might be wisely given courts.

There were those very Indians in southern California, for instance, whom we heard of this morning as despoiled of their land because they were not trained to protect their legal rights, and because State courts could not be trusted to do justice to them.

This is the condition: that we may have numbers of Indians United States citizens, and yet they may be in a place where there is no law. Without the establishment of courts it means very little to say that these Indians are United States citizens.

As to the act of 1885, that is the act that we always have cited to us in answer to the suggestion that anything should be done for the civilization of the Indian—this act which provides that they may be tried for these seven high crimes. But you do not civilize a people by giving them the right to be tried for murder, arson, rape, and burglary. That is not civilization. All the civil side is left out. How does the present system work, even in criminal matters? The Indians have to go to United States courts, and they sometimes have to go hundreds of miles. One of our objects proposed is to bring the courts nearer to them. The result now is that Indians often conceal crimes rather than be at

such expense and trouble, leaving their families and their vocations for months at a time.

Then there is another civil side, and that is a very important thing, the training in civilization, in knowledge of municipal affairs. On these reservations there is no county division, no civil machinery of courts, even if they would take jurisdiction, which they will not, because the Indians pay no taxes. It is the civil side of law that is valuable for civilization. At present there is nothing but these Indian agents' courts. I am delighted to hear about them. I know they are very good. But they are police courts with very minor jurisdiction, looking after chicken-stealing and such things, as has been said to-night. When they come to the test of trying cases involving property and large sums of money, where great financial interests are involved, are the judges, those Western cad, or the agents who appoint the judges, going to stand the strain? It is against all human history to suppose they can.

We have very wisely given the Indian property. The act of 1887 is the greatest step ever taken or that ever will be taken for the advancement of the Indian. He can now accumulate property. He certainly can and will get land. We have a pressure brought in from all the land-grabbers for these reservations to be thrown open, that they may buy at cheap prices the land left after allotment; and now, at the very time when they most need training and protection and all that the usage of courts can give them, we propose to throw them neck and crop into a sort of Tom Tiddler's ground—a place where they will be at the mercy of the land-grabber, and with no civilized courts—out of the nation, and not yet in the State. It seems to me there is a very large gap in the present law. I am glad that by going several hundreds of miles certain Indians can be tried for murder and manslaughter and these five other crimes, but there is no court in which they can bring important civil causes. They have no civil machinery. The registry of land titles is very defective. There is no probate court. Family relations are indeterminate. Wills may not be proved, heirs can not be determined. Unless this process of allotting land is to go on much more rapidly than it has, unless all the reservations are to be thrown open within three years instead of thirty, something of this sort should be done.

President GATES. When there are differences of opinion among the warmest friends of the Indian, it becomes a matter of great importance that we look carefully and thoughtfully at the facts and the testimony. I am sure we shall all agree that it is important for us to find out exactly what has been done by legislation. One of the many bright women of this conference has suggested that it would be wise if we had a central bureau of information, by which the successive steps of legislation might be immediately reported to all the associations of women that have been formed in the interest of the Indian—associations which have done so much for the cause. I can not help urging all those who want to keep in touch with our Indian work that they should keep informed of these changes in legislation. Some of the ladies may deem it wise to organize such a bureau of information.

It is exceedingly important, when statements are made with reference to the legal status of the Indian, that those statements should be made in accordance with the facts of legislation as it now is, not as it was several years ago. As to the efficacy of Indian courts and the question whether Indians are being fitted for citizenship by the courts of Indian offenses, I was greatly impressed with the fact that the majority of agents in the reports just read seemed to feel that there was substantially "the same law" for Indians and for whites. I have had some years of experience in watching Indian affairs and in efforts for the Indians at Washington and at these conferences, while I know very little personally of the work in the field. Yet I have felt a growing conviction that the less special legislation we have for Indians and the sooner we pull them out of the reservation and destroy and break up the reservation, give up the rations, and send the Indians out into the world to learn to walk by their own stumbling efforts, with an occasional helping hand extended to them, the better it will be for them. I do not want to be misunderstood.

I made a remark at our meeting last year (and I "said it sarcastically," as Artemus Ward used to explain) that, "whenever the public should become willing to let the Commissioner starve a few Indians in the experiment, we could put an end to the ration system and its pauperizing tendencies. Three ladies came to me, and told me that the good opinion they were kind enough to say they had formerly had of me was gone, because I "had advocated starvation"! And they said it seriously! I do think it would be well to take for the use of the nation the land the Indians do not use, but to do it in equity. Let agreements be made with

the Indians. Let the funds accruing from the sale be held in trust for their education. Do not let these funds be distributed, so much to each person. Let the trust funds be used so long as they are specially needed for educational purposes, and then let the balance, when no longer needed, be covered into the Treasury. Do not let the funds become booty to be quarrelled over by shrewd lawyers, who wish to have them divided among the Indians. Let the Indians have good land, and as much of it as they can use; and, after that, the only possible way is to let them learn by their own blunders. Respectable white settlers should be encouraged, by especially good terms, to take farms among them. And, as fast as we can, let us put the Indian children into the regular public schools of the country, and let us open the regular courts to Indians, and make these courts easy of access for their protection.

I have been driven to the conviction that we can afford to let the Indians get along for a time with a little less perfect organization in their courts rather than build up an elaborate system of courts especially for them. I do not believe it is going to take sixty or fifty or even ten years to break up the reservations. I think they are going to be carved up within five years. Ten years from now I do not believe we shall have any surplus Indian land left to talk about in these conferences. Those Indians who can help themselves, can "get on," will do so with such help as we can give them. The others, who will not and can not support themselves after a fair opportunity is given them, will have to take their chances in the poorhouses of the country, under our regular poor laws, I very much fear. Certainly, to perpetuate the reservations and the separate life for the Indian people is not to fit them for American citizenship or for self-support in civilized life.

Mr. PIERCE of Connecticut. If these Indians become citizens, with all the rights of citizens, they are entitled to their money. The Government has no right to take my money, and it should have no right to take others'.

Senator DAWES. You would better educate the Indian.

Justice STRONG. When allotments are made they are generally made in a body. That is, a large part is cut off from a reservation, and a large number of Indians, say five hundred or a thousand, are allotted together or in near neighborhood to each other, and they become citizens of the State in which their lands are. They are free from taxation for twenty-five years; they are to be under the custody of the State government. The Government of the United States has no right to establish schools, build schoolhouses, appoint teachers and pay them there, and yet the Government of the State that is called upon to do it can not get any revenue from the taxation of the lands. These allotted lands may fill up an entire county. Of course there will be indisposition on the part of the State to build schoolhouses and pay school teachers for such an Indian county, where there is no revenue from the Indians. Some provision must be made for that by Congress. The State must be relieved from the burden of establishing schools, laying out roads, building schoolhouses, and paying teachers, or else either there will be no schools or they will be very inferior, and there may be no roads laid out. There must be some provision made by Congress by which some equivalent shall be given for the exemption of all the allotted lands from taxation. That can well be made out of the proceeds of the remainder of the reservation. I think that this conference ought to speak on that subject before it adjourns.

---

### THIRD SESSION.

THURSDAY MORNING, *October 8.*

The conference was called to order by the president after prayer by Rev. C. L. Thompson, D. D., of New York.

Permission was given to Rev. W. S. Hubbell, D. D., to speak on behalf of the New York State Indians.

Dr. HUBBELL. I listened with the greatest interest to the discussion last evening. I was rejoiced to hear Judge Strong make the statement that in his opinion it is not wise to extend the civil law over the reservations at present. I rejoiced at the statement of good resulting from the courts of the Indians, because among the Indians of New York there is something resembling this, known as the "peace-makers' court." It is the intention of those influencing legislation at Albany to abolish this. I notice in the *North American Review* E. L. Godkin

says: "The capacity of the State for interfering with people profitably has not grown in anything like the ratio as the popular intelligence"; and, although he does not refer to Indian affairs, I think the principle holds good in that. I wish the Indians of New York could be let alone by legislation at Albany for the present. I wish it might be for the benefit of the Indians if it is to occur at all. It should not at least imperil their interests. The superintendent of the census of the Indians east of the Mississippi, Gen. Carrington, said, a year ago, of the bill of last year which Gov. Hill refused to sign, that it could not have been drawn by a lawyer for the reason that there were insuperable legal objections to the carrying of it out. The conditions of the six nations are peculiar. Of their 88,000 acres of land, 53,000 are said to be subject to the Ogden Land Company, which antedates the Federal Constitution. Had that bill been carried into effect it would have given 53,000 acres of land to the Ogden Land Company and made the Indians homeless. Such things have made the Indians feel that legislation is not in their interest.

On the Alleghany Reservation there are large tracts of choice land, at least 3,700 acres, settled by white men, who do not expect to go away, who aim and expect to have that land in fee. The entire town of Salamanca has two miles of streets occupied by people who have leased the land. On the Cornplanter Reservation they have experimented with land in severalty for twenty years. They had a thousand acres of land given to them. I do not know what has become of it. It includes now about 600 or 700 acres. It was divided in 1871 by the Friends. One man has 400 acres which he cultivates, and that is about all that is cultivated. The allotment of land is not a success under these conditions. But if the Indian had been allowed to sell to the white men, there would be no land to cultivate at present. I could wish that legislation on these points might cease. What the Indians need is Christian education, and I do hope that within the next ten years all the Indians will be able to take their places as white men, and will have some of their land left to live upon. If all the reservations were to be divided to-day among the Indians of New York, there would be less than 15 acres to a man. Were all the land of the Alleghany Reservation to be divided, it would be less than 7 acres to a man. What Indian can live on a farm of 7 acres? They need Christian education and industrial education, which shall not limit them to being farmers. It strikes me as cruel that the Indian should be compelled to do that which we do not ask for white men, that they should be compelled to till the land instead of following other occupations. It would be a good thing if Capt. Pratt could make room for more Indians there. He has some forty of the youth from Tuscarora, and more would be glad to go.

A word concerning the report of Mr. Garrett on the New York State Indians, which has been presented here in pamphlet form. It is a marvelous reduction from the report of eight years ago.

Dr. Hubbell closed by reading a telegram from Gen. Carrington, saying the census report would confirm the conviction that enforced immediate severalty for the Indians of New York would only confuse the New York Indian problem, without honor to the whites or justice to the Indians.

President GATES. The report by Mr. Garrett, which has been referred to, is one which he made to the Board of Indian Commissioners. Mr. Garrett visited the New York State Indians, and reported facts as he found them.

Judge DRAPER. I am sorry this matter has come up again. It is not here again by my consent. I am told that Dr. Hubbell has solicited the opportunity to present it again, and that it was reluctantly granted by the business committee.

The CHAIRMAN. That statement is hardly justified, is it?

Judge DRAPER. Very well, I must then appeal to Dr. Ward, chairman of that committee, to state whether it is or not.

Dr. WARD. I will say that Dr. Hubbell solicited the opportunity to present the matter, but will not say that it was reluctantly granted.

Judge DRAPER. That is sufficient. From the statements of several members of the committee I thought I was justified in saying that the committee was reluctant. For obvious reasons we will not ask each member of the committee to fully explain. It is shown that the opportunity to open up the matter was solicited. That is all I wanted to establish. The responsibility is not with me. If Dr. Hubbell's peculiar views must be presented again, they must be answered again.

Briefly let me state the facts. There are seven Indian reservations in this State. They are not improving morally. The situation is very bad indeed. The report of Mr. Garrett clearly establishes that fact. Dr. Hubbell says, "Let them

alone." Are they to be let alone? The devil only asks to be let alone. Four years ago I came into this conference for the first time. I was asked to say something concerning the New York reservations because I was officially charged with the duty of maintaining schools there. I stated what I knew. It was the truth to the best of my knowledge. Bishop Huntington was here. He had had much experience, gained through mission work among these Indians, and was chairman of a committee having special reference to them. He presented a report setting forth in caustic language the circumstances which prevail upon the reservations. I arose, and asked if the language was not a little strong, and at my suggestion it was tempered somewhat. It was then adopted, and went to the country. I knew that the statements were true, and that I could stand by language emanating from Bishop Huntington and adopted by the conference, and that I could advocate the remedy adopted by the conference. I waited some time, and then adopted the language, almost word for word, and used it in my annual report. Directly I was severely assailed by the Buffalo Presbytery. There is no time now to discuss issues of fact in detail. So I accept the statement of facts as presented by Mr. Garrett after an investigation on behalf of the United States Board of Indian Commissioners. What does Mr. Garrett say?

"The abundant testimony taken and published by this committee supports, in the main, Judge Draper's assertions. His language was rather strong in some cases, yet it was essentially true."

I take it that a State officer attempting to call public attention in a great State to a public evil is entitled to state the facts strongly, if he states them truly. I had indeed supposed he would be entitled to credit for it. Mr. Garrett states the facts more in detail, and he states them moderately, for he is an optimist with a sunny nature and he makes the best of everything. He says: It may be truthfully stated: (1) That schools are not generally encouraged by these Indians; (2) that there is an indisposition to work and to cultivate their own land; (3) that their tribal organizations are a positive disadvantage to them in the way of improvement; (4) that the marriage tie is loosely regarded; (5) that they are inadequately amenable to law, civil and criminal; (6) that the English language is seldom or never spoken among themselves; (7) that what is known as paganism, a species of barbarous monotheism, prevails, and is likely to so long as the Indians are isolated, as they are now; (8) that the reign of chiefs does not favor civilization or progress."

There is one statement of Dr. Hubbell which needs particular attention. He, and those who think with him, have not hesitated to attribute some improper motive to those who have favored the Mohonk plan of abolishing the reservation system and distributing these Indian lands in severalty. This morning he speaks of a claim known as the Ogden Land Company Claim, and insists that, if our plan is carried out, it would make this alleged claim valid, and so the Indians would be robbed of all that belongs to them. The fact is that the legislative committee, which exhaustively investigated this whole matter, made special report of this particular matter, and recommended that no legislative action should be taken touching the distribution of these lands in severalty until this claim was settled. I have not the original legislative report here; but Mr. Garrett has copied extracts from it in his report, and I read from that. The second and third recommendations of the legislative committee are as follows:

"(2) That the legislature request the General Government to take action to extinguish the claim of the Ogden Company to the lands of the Senecas and that portion of the Tuscaroras covered by it.

"(3) That the lands of the several reservations be allotted in severalty among the several members of the tribes, with suitable restrictions as to alienation to whites, and protection from judgments and other debts, but such division not to go into effect as to lands affected by the Ogden Company's claim until that claim be removed."

Dr. HUBBELL. That may be in the report, but not in the bill.

Judge DRAPER. I am surprised at that statement. I think it is an error. I have not a copy of the bill here; but I am sure that, if that provision was not in it I should have heard of it before now.\*

The situation upon these reservations is worse than upon the western reservations in many respects. There is no police force, and no check upon crime. It is very doubtful if the criminal laws of the State apply to this territory. They certainly are not enforced. The number of people is slowly increasing. Illiteracy is growing. Some will be quick to ask why this is so, when the State

\*See statement of Judge Draper in reference to this matter near close of morning session.

maintains schools there. It is because the leaders of the tribes are opposed to schools, and we have no authority to compel attendance.

Now, I have a single word in conclusion. I can not understand what makes Presbyterian ministers so contentious. We have all agreed here upon a general policy concerning Indian reservations. I have been trying to carry out that policy. I have had something to do toward securing legislation to effect it. An element crowds its way in here, and at every opportunity says: "We want the New York reservations let alone. We want it quiet at Albany." Do you sustain what we have been doing, or do you listen to this opposing voice? I have no interest in the matter which is not your interest. My business in life is not likely to be confined to Indian reservations. My official duties bring me only into incidental contact with this matter. Except as I supposed you were behind me, I have done and will do nothing about this matter. Some things ought to be considered settled. If we in New York have been doing as you would do, say so, and say it in such a way that the public will have no doubt about it. If not, say that, and it is more than likely that there will be no radical legislation touching the New York Indian reservations for some time to come.

The CHAIRMAN. I think I ought to inquire whether Superintendent Draper is not a Presbyterian?

Judge DRAPER. In a modest way I am an unworthy elder in the Presbyterian Church.

Capt. PRATT. I have just hired at Carlisle a man to take charge of our trucking and farming who in the past two years has rented 5 acres of land close to the town, at \$20 an acre. He has a wife and three children, and a house, and he gets his living out of this amount of land. When I was in Tucson I saw two Chinamen who rented 4 acres of land and paid \$1.50 for it. They planted it with vegetables, and appeared to be making a pretty good subsistence.

A paper was then read by Capt. R. H. Pratt, superintendent of the Indian Industrial School, Carlisle, Pa.

#### THE WAY OUT.

[By Capt. R. H. Pratt.]

My theme is "A Way Out," or what we at Carlisle call the "outing system." The Indians are walled off from participating in our civilization by their savagery and ignorance, aided by the reservation and other systems we have adopted for and forced upon them. Their opportunities to see and hear and know are so limited that they are not to be blamed if they make little progress in the arts of civilization. This feature of their case struck me at once when I came in contact with them as an officer in the Army, in 1867; and I have ever since urged foreign emigrant privileges for them, and that our civilization should absorb them, and not they adopt our civilization and continue separate tribes and peoples.

How can a man become a sailor if he is never permitted to go to sea? Why expect a boy raised in exclusively agricultural surroundings to become anything but an agriculturist? If the Indians can not participate in the privileges and benefits of our civilization, they are not to be blamed for not adopting it. If the youth are raised and continued in the surroundings of their tribes and savagery, we should find no fault with them for remaining tribes and savages.

The beginning of my experiences in outing Indians—that is, in getting them away from their reservations—was in the spring of 1875, when I was sent by the War Department with prisoners to Florida, and the distress to them of that beginning equaled that caused by the presence of certain death. We had chased and fought a good part of the Cheyennes, Kiowas, Comanches, and some Arapahoes up and down through the western part of the Indian Territory from July, 1874, to April, 1875, and had captured many hundreds of them, who were held prisoners at Fort Sill and at the Cheyenne Agency. On the recommendation of Gen. Sheridan, the Government determined to send the bad leaders to prison in Florida. Seventy-four were placed in irons; that is, iron rings connected by a short chain were riveted on their ankles, and many of them were handcuffed also. One Cheyenne woman, named Mochi, was thus chained. They were shipped to the railroad in army wagons, ten in a wagon. A heavy chain fastened to a strong staple in the front of each wagon-bed was passed between the legs and over the shackle chain, and they were made to sit down, five on a side. The other end of the chain was fastened to the rear of the wagon-bed with a staple and padlock, so that it was impossible for any of them to get out except they were loosened by the guard. As we moved away from Fort Sill, crowds of their rela-

tives and friends covered the high points as near as they were permitted to, and women wailed and gashed themselves with knives. Two companies of infantry and two of cavalry protected the train, marching with loaded guns in front and in rear and on the sides.

At night the prisoners were taken out and long chains were padlocked to the wheels of the wagons and the prisoners strung on these, so they could sleep on the ground between the wagons. Guards with loaded guns marched up and down each side of each string of prisoners. When we reached the railroad they were loaded into cars, which most of them had never seen before. When the cars began to move rapidly many of the Indians covered their heads with their blankets from fear. We stopped nine days at Fort Leavenworth, awaiting the orders of the War Department. Gray Beard, the principal chief of the Cheyennes, in the night-time attempted to commit suicide by hanging himself with a piece of blanket he had torn off and fastened to the grate in the window and around his neck, and keeping his feet off the floor by lifting them up. He was saved by the waking of his old friend, Minimic. Vast crowds of people were gathered at every stopping-place on our way as we passed on through St. Louis, Indianapolis, Louisville, Nashville, Chattanooga, Atlanta, and Jacksonville, to the old Spanish Fort at St. Augustine, Fla.

Above Nashville, Lean Bear, one of the principal Cheyenne chiefs, attempted to commit suicide by stabbing himself in the neck and breast with a small penknife, making eight wounds. He was pronounced dead by a surgeon on the train, and I left the lieutenant and three men at Nashville to bury the body; but after we left Nashville he revived, and five days after we reached St. Augustine he rejoined the party. He had, however, made up his mind to die, and steadily refused food and water until death came. Just as we reached Florida, passing through the pine woods at 2 o'clock in the morning, Gray Beard, who had tried to commit suicide at Leavenworth, secured a whole seat for himself, managed to elude the attention of the guards standing in each end of the car, and to jump out of the window when the train was going at 25 miles an hour. It was reported to me at once, and I pulled the bell-rope and stopped the train. The conductor came, and backed the train until we found where he had struck the ground. After searching for him for some time and failing to find him, I detailed a portion of the guard to remain and secure him, and had just got aboard the train with the rest of the guard when Gray Beard came out from under palmetto bushes near the train, and started to run so rapidly that the guard who saw him thought he had gotten his shackles off, and cried out, "Here he is," and instantly fired, the bullet passing through Gray Beard's bowels. We lifted him on the rear car, and he died in an hour. San Marco had been fitted up as a prison, so that it was simply a great pen, so walled up with boards inside as to make it impossible for them to get out, or even up onto the terreplein, 20 feet above the floor of the court. A strong guard with loaded guns marched to and fro on the terreplein; and the Indians' sole outing-place was in the court below, where they could only look up and see the sky. By this time the heart of the officer in charge was as sad and heavy as the hearts of his prisoners. The people were constantly anxious to see the Indians, but it was thought best to allow them opportunities only a few hours two days in the week, when they came in crowds, as to an animal show.

My orders from the War Department directed me to take charge of the prisoners and see that their proper wants were supplied. I reasoned that their proper wants included all the gains, morally, physically, intellectually, and industrially that could be made for them while undergoing this banishment. Against the protest of the commanding officer at St. Augustine, I assumed that I was entirely responsible, and that it was my business to determine what to do and how to do it. I accordingly removed the chains, then reduced and finally dismissed the guard, and organized the young Indians as a company, placed them on guard, and during two years and a half there was not a single violation of my trust. I took down and removed that portion of the fort that had been constructed to keep them in the court, and built a house on the terreplein, where they could live and get the fresh sea air and look out upon the town, country, and ocean. I undertook the profession of school-teacher, first myself, then aided by my interpreter and Mrs. Pratt, and, finally, by some of the good ladies of St. Augustine—Miss Mather, Miss Perit, Mrs. King Gibbs, and Mrs. Cooper Gibbs, also Mrs. Carruthers, of Tarrytown, N. Y., and others, with a session of one and a half to two hours daily. I removed the soldier cook and appointed Indians to do the cooking, built an oven, got a baker to train an Indian to bake bread, required all the policing, chopping of wood, carrying of water, etc., to be done regularly and

systematically, so that each Indian had some work to do each day. I issued army uniforms to them. About half of them, not being cautioned, cut off the legs of the trousers to use for leggings, throwing away the upper part. To these I again gave new trousers, admonished them, and had no more trouble.

After some weeks I insisted on the men cutting their hair, and this was a sore trial; but as I wore my hair short, a little argument and sarcasm secured assent. Then paint was abolished, and there was regular bathing in the sea. Mr. Ballard, a curiosity dealer, gave them 6,000 sea beans to polish at 10 cents apiece. After a while we went out on the beach and searched for miles and found thousands of sea beans, which they polished and sold for themselves. Industry and commercial intercourse, together with a little schooling, kept their minds and bodies occupied, and comparative contentment grew. After they began to understand English, they attended the different churches of the town. I trusted them and they trusted me. We became great friends; and as they learned, their desire for a higher and better life grew. I bought and built boats, taught some of them how to sail and row; and they took visitors to the beach and up and down the coast, and thus made other gains. Later on I began sending them out individually to work. Miss Mather and Miss Perit first took one to look after their horse and cow, do errands, keep the yard clean, etc. Every morning and evening he went from the fort down through the town to their home and attended to his duties.

From great fear, which was upon all the people when they arrived, they, by their industry and good conduct, became favorites in the town, until at last there was scarcely any person opposed to the Indians; and they found many jobs—picking oranges, on the railroad helping to handle baggage, going to and from Tocol, in the sawmill handling logs and lumber, grubbing land, etc. I need not attempt to tell you all that occurred. Three years wore away, and they were released. They all said: "Give us our women and children. We would rather stay here than go back to our reservations, where there are so many Indians as bad or worse than we were." Their proposition was submitted to the Government, but the opposition of a narrow-minded Indian agent led the Government to deny their request. Then twenty-two young men said, "We would rather stay East a few years longer and go to school than to go home now." To this the Government said, "The money we have for school purposes is to be used for the youth on the reservations."

My desire and the desire of their teachers to help these young men who wished to stay led us to go begging, and among the good people who visited St. Augustine we found those who would undertake the expenses of this one and that one until the whole twenty-two were provided for. Bishop Whipple undertook the expenses of five; Mrs. Burnham, then of Syracuse, N. Y., took four and sent them up into Central New York, near Utica, into the family of Rev. Mr. Wickes, an Episcopal clergyman, who is here in the audience; Mrs. Carruthers took one to her home at Tarrytown; Mrs. Larocque, of New York City, paid for two; and others one each, until all were provided for. Seventeen went to Hampton, and thus was engrafted Hampton's noted Indian branch. All the others returned to their tribes in the Territory. I urged Gen. Armstrong to get the Indians out, away from the school among our own people. He sent me to Berkshire, Mass., where, with the help of Mr. Hyde, of Lee, we planted a vacation colony of the "Florida boys," as we called them, among the farmers, one here and one there; and so that work began and grew, and has been continued in Berkshire and elsewhere. Mrs. Pratt and I went to Dakota, and took to Hampton fifty more, both boys and girls. Rev. C. L. Hall, who is here to-day, gave us our first party, some of them from his own school. I was detailed to stay at Hampton for a time.

In the fall of 1879 Carlisle Indian school was born. In the spring of 1880 we did a deal of writing and talking, and succeeded in placing sixteen boys and girls among the farmers in Pennsylvania, for vacation only. The people were afraid of the Indians, and the Indians were afraid of the people; and more than half of these first Carlisle outings were failures—some after a few days, others after two or three weeks. But we did not stop. Next year we more than doubled the number, and kept a few out during the winter in public schools. The next year, and every year thereafter, the growth of the system was rapid, until, during the fiscal year which closed June 30 last we showed an outing list numbering six hundred and sixty-two, most of them during vacation. Four hundred and thirteen of these were boys and two hundred and forty-nine girls. More than two hundred of these remained out during the winter, living in families, generally

treated as their own children and attending public schools with the youth of our own race.

We have insisted that Indians should be treated like other people, and should receive pay in proportion to their labor; and during vacation our boys and girls, "lazy, good-for-nothing Indians," as they are called, instead of idling away their time, as so many youth of our own race do under like circumstances, are working hard and earning money for themselves. Their total earnings the past year were \$20,266.30, \$4,064.27 of which was earned by labor performed at the school, and \$16,202.03 outside of the school. Testimonials from their employers as to their good ability and character, by the hundred, form part of the permanent records at Carlisle; and of the six hundred and sixty-two out last year, only twenty or 3½ per cent were failures.

The outing system is a means of acquiring the English language and what goes with it far quicker and more perfectly than it can be gained in any school, for the reason that all their talking is with English-speaking people; and, being along the lines of civilized life and its needs innumerable, other important things are learned at the same time, and they are compelled to think in English. The outing system breaks down their old prejudices against the whites, superstition, and savagery, because, not being surrounded by them, all such qualities that may have grown up within them in their tribes fall into "innocuous desuetude."

No plan that I know of ends the prejudice of the white race more rapidly and thoroughly. The whites learn that Indians can become useful men, and that they have the same qualities as other men. Seeing their industry, their skill, and good conduct, they come to respect them. Not many boys or girls who have been at the Carlisle school three years or more, and have had the privilege of this outing system, but have warm friends among the whites, with whom they keep up a correspondence after their return to the school, and in many cases after they return to their tribes, where, so far in their history, the inevitable generally consigns them. The outing system broadens the whole Indian mind at home among the tribes; for the boys and girls so out correspond with father and mother and other friends at home, and the thoughts of those who do not get the privilege of leaving the reservation are led away from the reservation. When the youth write home that they are kindly treated, and of the many privileges and opportunities they have to learn and earn, that they have been down to the ocean, or to Philadelphia, New York, or even, it may be, to Lake Mohonk, the thought of the father and mother, and the other friends who get this information, is led into different channels; and, slowly but surely, the walls that surround the pen in which those at home are placed are lowered, and I look for the time to soon come when they will themselves break away from their hindrances and become free men and free women.

In all these years I have learned more and more to look upon our treatment of the Indians as being unjust and unchristian in its reservation methods, and to esteem the insidious plans we are constantly inaugurating to preserve the autonomy of the tribes as being the worst of all, even worse than the wars and the massacres that we have perpetrated upon them. Wars and massacres destroy life, and they expect and understand that; but reservations and the systems of keeping them out and away from our civilization and our national life destroy hope, and beget a despair which brings recklessness and greater death which they do not understand.

The solution of the Indian problem hinges upon the destruction of the present systems and in the devising of means that will disintegrate the tribes and bring them into association with the best of our civilization. Partial destruction of past systems and the settling on them of others with the same trend will not accomplish the purpose. Lands in severalty, unless the distribution of the land is properly managed, will only band, bind, and confirm the tribal power, and serve to continue the hindering of their civilization, absorption, citizenship. If it is inevitable that they must occupy lands in severalty and not be allowed to get away and become individuals, then the distribution of their lands should be in alternate sections with the white man; that is, there should be an Indian and a white man and an Indian and a white man or, better still, two or three white men between each two Indians. Purely Indian schools, especially tribal Indian schools, not supplemented by actual contest with the brain and muscle of the other youth of the land, will not bring them into possession of the courage and ability necessary for competition with us as a useful and component part of the inhabitants of this pushing, growing country.

## DISCUSSION.

Gen. EATON. I should like to have some one inform us who purchases the lands of the reservations that are not allotted in severalty? Is there any provision for carrying out the idea of having whites and Indians in alternate sections?

Senator DAWES. In all of the agreements that were ratified it was provided that the land purchased should be open to the homestead settlers, who were to pay for it the sum of \$1.25 an acre, except in the Sisseton Reservation, where they were to pay \$2.50. The proceeds are to be a fund, which, in each particular case, had its stipulations and limitations, some very good and some very bad.

Mr. TATE. After twenty years' missionary experiences among the Indians of British America, I feel a little out of place in giving those experiences here. I have crossed the line before, both into Alaska and into Washington. In that region the white people have come in and settled alongside the Indians. There were no lines drawn for Indian reservations. The white people came in and settled before there was a survey of the country made. When the Indians saw that the land was being taken up, the Government said to them, "We will make no reservations," but they gave from 25 to 50 acres to each Indian family. On this basis the white people and the Indians were settled together. Now, after thirty years, we find our Indians civilized. They go out to work with the white people, and get the same wages. I went into a farmhouse the other day, and asked what kind of laborers they employed. "White men, Chinamen, and Indians," they replied. "Which are the best?" I asked. "The Indians, every time." They do their work without complaining, they are taking positions not only in the fields, but in the workshops. They are good mechanics. They prove themselves a success wherever they go.

I have been spending some days at the Carlisle school because we ourselves are organizing an industrial school. I am sure it will be a great success. "The Way Out" is to civilize and Christianize and make these Indians citizens of equal standing with the white people. The Presbyterians and Methodists are doing good work of this kind in Alaska. I have seen a good deal of Mr. Duncan's work, but I can not agree with him altogether in his methods. He likes to get the Indians off by themselves, away from white people and the heathen. It seems to me better not to separate the Indians in this way. I know of the noble work Mr. Duncan has done, but I can not help feeling that contact with Christian, white civilization is better for the people. Mr. Duncan will not live forever, and then there is only one Mr. Duncan. What will become of the Indians if he dies? Is a question that is often asked. It has been replied that the United States Government will take care of them in that case. Undoubtedly the United States Government will do its utmost; but I would like to see a better way out of the difficulty for the Alaska Indians than that policy.

You have read of the cruelties of white people in dealing with Indian prisoners. They have cruelties enough among themselves. A young man came to me from Wrangel, and told me he wanted me to write a letter to Washington for him. He said his mother had been murdered by the Indian doctors, and he wanted a stop put to that kind of thing. He said there was a chief dying in the village, and the medicine man came and practiced his rites day after day until the man was dying. The medicine man said there was no hope for this chief unless a woman, who had the secret of his disease, should divulge it. This woman was the young Indian's mother. They tied her up, and cut one of those terrible canes called the "devil's walking stick," a blow from which poisons the skin, and flogged her day after day until she succumbed to the torment. It was no wonder he said she had been murdered. Such things have come to an end on the frontier, but in the far-off regions of the interior such cruelties are still practiced. In regard to this problem of the way out, I trust your efforts will reach to Alaska. We want to see every effort made to lift this people up, because they are capable of making good men and women. Schools should be established everywhere until the Indians are made good citizens of the United States.

President GATES. We are always very glad to welcome workers from the field. It is to those who are giving their lives with such self-sacrifice that we always bow. Many of us believe that Mr. Duncan will live forever. When we find earnest workers who differ radically in methods, we are not to be troubled. Each is doing good in his own way.

Rev. C. L. HALL, of Fort Berthold. I found my way seventeen years ago to Dakota; and I was glad to welcome Capt. Pratt most heartily when he came for his first pupils, and helped him with all my heart. He and others have been doing the work by getting the Indians out. In the missionary spirit, I have been

going in, and working from the inside; and those of us who are working from the inside will meet those working from the outside, and we will make a tunnel through.

The other day a forked pole of cottonwood, about a foot through, on which an old buffalo hide had been tied, which had stood there useless for six years, fell down. Six years ago a great booth of leaves and branches was built about it, and the sun dance was performed; and men swung themselves about this pole by setons in their flesh until the flesh pulled out. But through lack of use, the pole has loosened and fallen down. Somebody came to me and said, "Your schoolboys pushed that over the other night." I have no doubt it was so, because schoolboys in Dakota are very much the same as schoolboys in civilized countries. But it was true in a moral and spiritual sense that my schoolboys, and girls, too—for the girls are better than the boys—had pushed over these heathen customs. For the might of those little hands and the might of the prayers of those young hearts might well push over these wicked ways, and bring civilization and Christianity. These boys and girls have never seen the outside of the reservation; but they have seen what the disciples saw hundreds of years ago—they have seen Jesus. It may be a good thing to see a grand civilization and wonders of steam and electricity, but it is a better thing to see the Master; for then they will become a power and overthrow heathenism.

Gen. O. O. HOWARD. I have long known of the extraordinary transformation from darkness to light of the Indians under Mr. Duncan. When Mr. Duncan was asked how he accomplished it, without stopping to formulate an answer, he said, "I learned the language first, then I went over among those Indians and planted the word of God in their midst, and you behold the result." I have seen something of the work at Fort Simpson, and have heard the Indians recite the Scriptures there; and I could not help thinking, while our brother was speaking of his own work, how this primary education of the heart had preceded this civilization, and made it possible. These Indians are, many of them, superior to many of the white men around them in morals, and equal to them in work.

The reservation system in the past was a necessity. It was a protection against the greed of the white men; but I welcome such schools as those at Hampton and Carlisle, where we can send these young men out from the reservations among civilized people. I also welcome the faithful, earnest, steady, Christian work of the reservations. Sometimes we get very crass ideas about Indians. We must remember that they are savages, that they have murdered women and children, and have been guilty of the most terrible outrages, and that those who want to do right are obliged to put forth all their energy.

Mr. KOPPOCK. Capt. Pratt's plan leads to great difficulties. All that he says and does I like, and I wish there were ten times as much of that work; but I do not see how it can be practically carried out.

Capt. PRATT. The point I make is that the old method does not bring the Indians into relations with the white people. I do not care how you go about it. Buffalo Bill does it one way, and Carlisle will do it in another way. You may get an Indian into civilization by a great many different roads; but you ought to pull them in, to let them learn to stand alone and be men. The little children we have to take care of. There are less than 250,000 Indians. There are many cities in this country with a much larger population than that. We work here with all our might and main to keep them Indians, to keep them separate. We can pull in 600,000 Americans, and distribute them: and they are mostly old fellows—hard old fellows, too. Some of them go into jails, some into poorhouses. They learn by what they have to go through. Let the Indian go through the same course, and place him where he can use the powers God has given him. You expect him to till the land; but what if he is too far from a market? I would blow the reservations to pieces. I would not give the Indian an acre of land. When he strikes bottom, he will get up. I never owned an acre of land, and I never expect to own one.

Mr. KOPPOCK. This is not a matter of pleasantry to me. I mean business. Suppose I mention the Cheyennes and the Arapahoes. There are a great many old people among them. The children are under the control of the grandmother. How can we get the children from these people if their father, mother, and grandmother are unwilling? I want to know how you are going to get the Indians out among the white people? They foreigners want to come. The Indian does not want to go. They want to get as far as possible from the white people. I want to know practically how you are going to break up the reservations. You can divide up the land; but what is going to become of good, intelligent Indians, who can not speak English, who know nothing of business, and who would not know how to guide a plow if they had one.

President GATES. A brilliant French woman, who sat at dinner next a philosopher, said to him, with a charming, persuasive tone: "They tell me that you have invented a new theory of the universe. Tell it to me in a word." If we could get the solution of this Indian problem in a word, we should be happy. Perhaps Mr. Lyon, chairman of the purchasing committee of Indian supplies, will give us some hint.

Mr. LYON. Having served so many years in the Indian work, what I know about the system I could not tell in five minutes. I do not think even Gen. Armstrong could get old Indians to learn much after they are 40 years old.

VOICES. Oh, yes, yes!

Mr. LYON. Well, I do not think they would be good scholars. Suppose we have land in severalty, and you give the Indians plows and everything of the kind, they do not know how to use them. There are good teachers for the schools, but very few to teach farming. The Indian needs to be taught how to use a plow and a shovel and an ax. He can not get a living off the land without this instruction. The only solution of that difficulty is to get farmers for instructors.

Dr. STRIEBY. There seems to be a disposition to disparage the work that we have begun. I want to ask Capt. Pratt whether he would break up what is going on now, and, if he would, how will he accomplish the thing that is to be done.

Capt. PRATT. I answered that question last January, at the annual meeting of the Board of Indian Commissioners.

Mr. MESERVE. As superintendent of the largest Indian school east of the Rocky Mountains, I do not feel that Capt. Pratt disparages our work in the least. We are endeavoring to find out the best lines that he has worked on, and to follow out those lines. I was much interested in Capt. Pratt's paper, and I hope all the speakers will confine themselves to what he has said as to the importance of the outing system. Two years ago I was appointed superintendent of the Haskell Indian School. Almost the first thing Gen. Morgan said to me was, "Go down and see Pratt, and go out with him and see the pupils under the outing system;" and, as Capt. Pratt well knows, I went through various parts of Pennsylvania and New Jersey, right into the families where the Indian boys and girls were. I saw how they lived and were treated. They sat at the same table with the father and mother and children of the family, and were treated just as well. I have done something of this myself. I have had since last March at least ten pupils on the outing system for a longer or shorter period of time. The day before I came here I received a letter from a gentleman in Butler County, Kans., who said: "Your boys down here are doing more to solve the Indian problem than all the other things in the country. The political people here of all kinds are agreed on this one thing, that these boys and girls are faithful and good workers."

One of our Sioux boys was working with a Farmers' Alliance man. I said, "How is the Sioux boy getting on?" "Come with me," he said. I went into a field of 500 acres of wheat. They were cutting it with a binder, and the white man and Brockway Bean Shield were putting the wheat up. I saw at once that Brockway Bean Shield was doing more than half the work, and the white man was playing it on him. Said I to the doctor, "What are you paying that white man?" "Fifteen dollars a month," he answered. When the Sioux boy went to this man, the agreement was that he should pay him whatever he was worth, as it was an experiment. "Now," I said, "what are you going to pay the boy?" "You see," said he, "he works along with the white man, he goes to work early, and besides that takes care of the stable and works after supper; and I shall pay him just the same as I do the man." So there is an Indian getting the same pay as a white man, \$15 a month. One of our Cheyenne boys is working by the day in a harness shop, and is receiving a dollar and a half a day. From my two years' experience I have not seen any influence that is tending so strongly to remove prejudice against the Indians as this outing system. I am trying to find places where my boys and girls can go out and be like sons and daughters in the families. I want the Indian boy and girl to have just as good a chance to get out of the reservation as I had to get out of the little New England village and do my lifework.

Gen. EATON. Our attention is directed to an exceedingly important point. About \$70,000 is expended to assist in giving agricultural instruction to the Indians. I believe in that. It is no new idea. But I want to suggest that this is not done in the best way. This \$70,000 is largely wasted. We have in this country no doctors of farming. The farmer here has been opposed to "book" farming. They have been slow to accept the influence of scientific instruction.

Look at the French people! They are a logical people. What do they do? They have their colleges of agriculture, and the young men are trained in that department thoroughly. They are sent abroad to study the best methods. Then the best men from these colleges are selected as assistant farmers; and they are sent out among the poor farmers, where the soil is poor and the men are ignorant, and they guide these poor farmers in the methods of doing the best things. This \$70,000 appropriated by Congress could receive such emphasis from this conference as to induce the authorities to send to every place where there is to be an assistant farmer a man competent and fit in character and qualifications to do this work, and you would revolutionize the business in a very few years.

Dr. HARDING. Suppose an Indian takes up his land in severalty right in the middle of the reservation, and some squatter comes in and disputes his right and gets possession, how can that Indian in the middle of the reservation, with no civilization around him, get that man out?

President GATES. We generally give those hard conundrums to Senator Dawes.

Senator DAWES. The man who takes up his land in severalty has his title given him by the United States, which covenants with him to hold it for him—a covenant that can not be broken except with the consent of both parties. The United States holds this land exclusively for their use, and it is just as much the duty of the United States to maintain the Indian in that possession as it is for the President of the United States to obey his oath of office. The attorney of the United States has sworn to execute all of the laws in the courts of the United States. He has an assistant in every State and Territory; and, if they have more than they can do, the United States laws have authorized them to employ additional aid.

President GATES. What would be the natural and simple method of procedure?

Senator DAWES. The Indian should go to the first United States officer that he can reach. There are a dozen of them in every State, but the best man is the district attorney. The method of administering the laws of the United States is a system, and it has ramifications everywhere. There are often cases where men fail because of the length and breadth of the land, and the interest involved; but they are exceptions. A man who is unfortunate enough to take up land in severalty in the middle of the reservation is like the poor pioneer who locates on a quarter section away from every one else. The time will come when civilization with all its interests, the church, the schoolhouse, the business office, will come to him; but, if he ventures to go out a hundred or two hundred miles from civilization, he must be patient, and must bear with the incidents of hardship that come to the pioneer.

President GATES. Would he naturally apply to his agent to protect him as the proper officer?

Senator DAWES. The agent is no longer his agent, but it is the duty of the agent to see that the interest of every Indian is promoted whenever it can be. He is not fit to be an agent unless he does this.

Hon. J. H. OBERLY. I confess that, after listening to all that has been said, I am somewhat in doubt as to what the legal status of the Indian is. The act of 1885 has two clauses, one applying to Indians on reservations in Territories, the other applying to Indians on reservations in States. The Territories are passing away rapidly. The State has absolute authority over every acre of land except that which is reserved by authority of the United States for military, Indian, or other national purposes. Suppose that under the operation of the act of severalty an Indian were to take his 160 acres of land in the middle of a reservation in a State. Now, I know that if a white man were to enter upon and take possession of the Indian's allotment, the Indian might appeal to the authority of the United States, and the United States, being the trustee of the Indian, might oust the intruder; but this would have to be done by some legal process, for it must not be forgotten that the moment an Indian takes land in severalty on a reservation, that moment that portion of the reservation, that particular 160 acres of it, passes out of the reservation, and becomes the property of a citizen, the property of its Indian owner.

It is no longer under the authority of the United States Government. The authority of the Indian agent over it no longer exists. No longer does the authority of any officer of the United States exist over it. Suppose now a white man should enter that land and commit some crime, say one of the seven crimes that have been mentioned, against the Indian owner's person or the person of any of his family. What would be the Indian's remedy? What could he do?

Into what court of that State could he go, demanding justice? Is it not possible that, while in the letter of the law you have given to the Indian land-owner in severalty the legal status of the white man, you have taken him, as a matter of fact, out of the protection of the General Government, and have not placed him securely under the protection of the State government?

Senator DAWES. I want to ask this Western man if he never knew of a pioneer going so far as to be outside of a county organization, and making his home and waiting until the State included him in the county? That is always happening. Pioneers are always waiting for county lines to be established, and until that time the general law of the State attaches him for all civil and criminal purposes to the adjacent county. That is the law of the United States in the States. There will always be pioneers until there are enough people together to make a county. Then the State will embrace them in a new county and establish a court for them; but until that is done, as I have said, the general law says, for all civil and criminal purposes, they are attached to the adjacent county.

Mr. OBERLY. But this is not attached to any county, being in the midst of the reservation.

Senator DAWES. It may not adjoin it, but it is attached to the nearest county, notwithstanding. There is no trouble about this. I am surprised that a Western man should ever find any trouble in the application of the law. To an Eastern man like me there might be trouble. They are adding new counties every year, excepting Illinois, which is quite full.

Mr. FRANK WOOD, of Boston. For the past fifteen years, as well as I could, I have studied this Indian question, looking at it from a business man's standpoint. Fourteen years ago some of us who were interested in the welfare of the Indian came to the conclusion that not much could be accomplished till the reservation system had been done away with. We formed an association whose name indicates its purpose, the Boston Indian Citizenship Committee. The law giving severalty in land and citizenship for the Indian has since been passed. It is certain that the severalty law is not enough. I can not undertake to say what is the best way to give the Indians a system of law, but it has not been settled by the Supreme Court of the United States in the case of *United States vs. Kagama* that the United States can legislate for the Indians through Congress. I believe that a great, civilized, and Christian people can remedy any wrongs that exist in this country when they will set about it.

The Congress of the United States can legislate for and enact laws to control and protect these people, and do it properly, and thus give them the right start toward Christianity and civilization. I do not know whether the so-called Thayer bill is the right bill; although about two years' time were given to frame it, and it has been approved by some of the best lawyers in the country. If not the best, give us something better. I agree with Senator Dawes that this question is surrounded with the greatest difficulties. Judge Lowell, who approved the Thayer bill, has said that it was almost impossible to draw a bill that would protect these people in their rights. I am sure that the difficulties can be overcome, and that our honored friend Senator Dawes will join with us to help us do this thing. We must have law as the basis of all progress, either educational or industrial. Everything encouraging that has been reported here by Capt. Pratt and Lieut. Wotherspoon has been done in this way. First they gave their Indians law, and then gave them work. The United States sent Lieut. Wotherspoon twice to the Apaches as an agent of civilization. The first time it sent him with a musket in his hand, and Geronimo chased him all over the Southwest. The Government sent him again on a peaceful mission of civilization and Christianization; and now Geronimo is a justice of the peace enforcing law and order in his court at Mount Vernon, Ala.

The benefit of law to the individual depends on his relation to it. It both punishes and protects. It does not civilize a man to give him a chance to be hung for murder, or to be punished for any of the seven crimes enumerated in the act partially extending the criminal law over the reservations, especially when the nearest court is from one to four hundred miles away, and it will involve loss of time, trouble, and expense to attend the trial. It is well known that crime is continually covered up on the reservations, because witnesses do not dare to tell of it. They do not want to be carried into another State, hundreds of miles from home, and locked up for months; and they do not tell of the crimes they see committed. It does not pay. And we would not be willing to testify if we were in their places. We want to bring law to these people. We want their property, their persons, their rights protected by the common law of the land, that protects us. We want them to feel that they are surrounded by the peaceful but power-

ful influence of law that protects all civilized society. What security would we feel to-day if the law was not our protector, even in this beautiful spot? I have heard over and over again from the field that the Indians feel that the great need is law to protect them, and without it they have no encouragement to accumulate property or make any real progress. I have received a letter touching this point since coming here from Dr. Eastman. I will read a part of it:

"Since I came out among the Ogalallas, I am strongly convinced of the need of established law and courts among the Indian tribes, especially these here. At present there is not much order among them. My close observation convinces me that these people are doing pretty much as they please as regards their morals. The policemen inform me again and again that the people are falling away very much since the late trouble. Some of the most progressive among the policemen say that the police force is a farce without law. I sincerely hope that the so-called Thayer bill will have some attention yet. Schools are very good, but can not be fully appreciated and utilized until some order and law is established within the reservation. I hear again and again the expressions from the Indians, 'I can not accumulate any property, for there is no law to protect it.' I say, give them more work here at home, and law and courts to protect their persons and property."

Since our meeting last night, when favorable opinions from Indian agents on agents' Indian courts were quoted as furnishing a substitute for law, I have looked up some more disinterested opinions on the necessity of law. I thought that asking an agent's opinion of an agent's court was a good deal like asking a fox what he thought of poultry. The Indians' court is appointed by the Indians' agent. It administers no code. The will of the agent is its only law, and through this court the agent has his chief power. He can at will alter or set aside the decisions or remove the judges. I never heard of a decision contrary to the wishes of the agent.

The Indian judges are not fools. They know well enough that, if their decisions do not suit the agents, others would get their places, and they would lose the positions that give them importance in the tribe. The decisions are also invariably in favor of the relatives of the judges. How would we like to have our lives and property subjected to the decisions of such courts?

All the most careful students of the Indian question agree that without law little or no permanent progress can be made.

In 1876, Indian Commissioner J. Q. Smith, one of the best commissioners we have ever had, said:

"Year after year we expend millions for these people in the faint hope that without law we can civilize them. That hope is a long disappointment, and year after year we repeat the folly of the past. That the benevolent efforts of the Government have proved so largely fruitless is, in my judgment, due more to its failure to make these people amenable to our laws than to any other cause or to all other causes combined. I believe it to be the duty of Congress at once to extend over Indian reservations the jurisdiction of the United States courts, and to declare that each Indian in the United States shall occupy the same relation to the law that a white man does. This suggestion is the most important I have to make."

In 1878 the Indian Commissioner, in his annual report, quotes the Nez Percé Chief Joseph, one of the greatest men this country has produced, as saying:

"The greatest want of the Indians is a system of law by which controversies between Indians and Indians and Indians and white men can be settled without appealing to physical force. Indians understand the operation of laws; and, if there were any statutes, the Indians would be perfectly content to place themselves in the hands of a proper tribunal, and would not take the righting of their own wrongs into their own hands, or retaliate, as they do now."

In 1879 Gen. Miles in the North American Review quotes Chief Joseph's words, "The greatest want of the Indians is a system of law," etc.; and added, "Do we need a savage to inform us of the necessity that has existed for a century?"

Gen. Crook has always held that the extension of law to the reservations was essential and preliminary to Indian progress and civilization.

In 1887 Bishop Hare says: "The accursed condition of things on Indian reservations is an outrage upon the one Lawgiver. It is a disgrace to our land. It should make every man who sits in the national halls of legislation blush. And wish well to the Indian as we may, and do for him what we will, the efforts of civil agents, teachers, and missionaries, are like the struggles of drowning men weighted with lead, as long as, by the absence of law, Indian society is left without a base."

Rev. A. T. RIGGS. I can give my personal testimony about the Indian police courts. I believe them to be entirely inadequate. While the Indian has a sentiment of justice, he has no idea of *general justice*. His name for "different" and "enemy" is the same word. The idea of justice is not increasing. The point that Mr. Wood has made is correct. The court shows only the mind of the agent. It is doing some good work. It helps the agent. But it would be much better for the interests of civilization that it should be taken wholly out of the agent's power forever. He ought not to have any judicial functions at all. It becomes a school of despotism, if the agent is too independent. The Indians are naturally democratic; but the agency trains them away from democracy, and does not fit them for independent republicans.

Mr. P. C. GARRETT. I wish to offer a resolution looking to the appointment of a special committee as a practical step. A bill has been submitted by Messrs. Thayer and Abbott for the assumption by the United States of the municipal taxes in allotted lands. It should be the duty of this committee to see if this or any legislation is desirable and practicable. I move, therefore, that a special committee of five be appointed by the Chair, to whom the draft of a bill for the assumption by the United States of municipal taxes on allotted lands, and the other bills which have been before the conference for giving further provisions of law to the Indians on reservations and in the transition stage, shall be referred, to ascertain and report whether any such legislation is desirable and practicable; and, if so, what.

Voted.

The next order of business was the consideration of civil service with reference to the Indians. An address was made by Mr. Herbert Welsh, of Philadelphia.

#### CIVIL SERVICE REFORM.

[By Mr. Herbert Welsh.]

Civil-service reform is simply the putting into operation of a principle which is universally recognized in all business affairs excepting those of the Government, and methods by which that recognized principle may be carried into effect. It is the selection of officials and employes on account of fitness, not on account of partisan politics, and their retention, so long as their work is well done. The method of the reform is the imposition of suitable tests of fitness. It is not a difficult thing to understand: it is extremely simple. What we need is that principles of order, of right judgments, of reasonably secure tenure of office, should reign in the Indian service as they do in the work of a large business administration. I can give no better illustration of civil service reform, which the friends of the Indian have already to some extent succeeded in introducing into the Indian service, and which they hope will soon triumph absolutely, than by a simple illustration. We are in this house the invited guests of an honored friend. Our host has a large business to carry on. Is there disorder, confusion, uncertainty, in the method by which this business is conducted? Not at all. Everything is done with cheerfulness, certainty, despatch, and ease, because our host selects his officers and employes with a view to secure good service. But what would be the result if some partisan politician in the State of New York claimed the right to make the appointment of Mr. Smiley's employes for him, and did it to serve party ends? The glory of Lake Mohonk would speedily depart. In the Indian service we must also have a wise and discreet head, in order to have its business carried on efficiently; and we must have the principle of permanence in it.

What do we actually find? We have found for years that in the management of Indian Affairs, instead of having such a method, we have precisely the reverse. Agents, school teachers, various employes, have been appointed not so much with the view to carrying out their work as to satisfy certain party demands. That has constantly interfered with the civilization of the Indian. Under one administration we had almost a complete change of Indian agents. Only two or three incumbents were left in. Another administration followed, and but one of those who had been appointed by the previous administration remained. What is the result? Dislocation and disorder. The work can not be carried out effectively on this plan. Recently a superintendent was appointed to an important school. He was ready to go, when his appointment was suspended. The Senator of the State where the school was located went to the President and said, "I want that place for one of my workers, for a politician

who has served me." The President resisted, but the demand was strenuous; and it was only after a consultation by the President, the Secretary of the Interior, and the Indian Commissioner that the superintendent was allowed to remain. When he went to his post he found serious opposition. Political machinery was in motion to drive him out. Persons in the school worked against him; and he did his work under great strain, though he kept the place.

In many other cases appointees have not been so successful. In a certain school upon an Indian agency the superintendent was appointed by one Senator and the agent by another, and the two were at "outs." The agent has been doing everything he could to break down the work of the superintendent by forcing him to receive unsuitable men as appointees. It can be shown that in case after case appointments have been made not by the responsible authority in Washington, but by local political influences. In one instance an educated Republican, a man of great prominence and position, was excluded from an important school because he could not or did not have the political influence of the particular locality in which his school was placed.

But the sentiment of the friends of the Indians that has been brought to bear in Washington has been recognized, and our efforts have given us a rock in the midst of quicksands on which to rest. The civil-service rules have been extended to several hundred places in the Indian service. That is the recognition of the principle that merit, character, are to be the tests of appointment to the Indian service. Having gone so far, shall we not all join hands, and with one thought and mind demand of the authorities, as I do not doubt they really desire us to do, that they resist the pressure brought to bear upon them; that this principle which has been so far recognized shall run throughout the entire Indian service; that the purpose of the Christian and intelligent people of the United States to educate and civilize the Indian shall be realized, and that the administrative work of the Government shall be placed on an enduring foundation? In demanding this, we are simply putting ourselves in the line of a necessary reform, which is fighting its way in all other branches of the civil service of the country, and which shall ultimately rescue the people of the United States from the tyranny of the spoils system.

The question of method in this reform is simple. School-teachers, farmers, physicians, and some others can, as you may readily imagine, be put through a certain examination which shall be a reasonable test for their fitness to hold their respective places. If after six months they show themselves incapable of filling the places, the appointing officer can remove them. By this method the appointing officer is himself relieved from political pressure. Regarding agents the Civil Service Commissioner and those who are adepts in this question are disposed to think that a test examination can not be made. What we desire, therefore, in regard to them is that the appointing officer in Washington shall have at least some assurance of the fitness of a man for the post of agent, and that the applicant should not be appointed at the dictation of any local politician, which in many instances would be against the welfare of the Indian. I think we ought to ask the President to make the appointment of Indian agents, upon the recommendation of the Indian Commissioner.

Mr. A. K. SMILEY. Would you have agents removable only for cause?

Mr. WELSH. I certainly should. As it is now, the Commissioner of Indian Affairs has nothing whatever to do with the appointment of Indian agents.

Mr. SHELTON. Hasn't the President reached the limit of his power in regard to this matter?

President GATES. It will require a very important modification of the laws for the civil-service rules to apply to agents.

Mr. WELSH. The President in choosing an agent, or in letting the Indian Commissioner choose him, can determine upon what principle the choice shall be made, whether it is to gratify a Senator or because he is a good man for the place. He has the power to make these appointments upon a sound basis.

Mr. A. K. SMILEY. You would keep an agent permanently unless found inefficient.

Mr. WELSH. I do not think you can dictate to the President, but the principle can be recognized that the man should not be appointed because he is a Republican or because he is a Democrat, and that we should not be subjected to the shame and loss of having a clean sweep of sixty-one agents every four years.

President Gates read some extracts from a letter from Commissioner Morgan.

Col. Oberly was invited to speak on the subject of civil-service reform as applied to the Indian service.

Hon. J. H. OBERLY. The subject of the application of the civil-service law to

the Indian service is one in which I have been interested from the time I became connected with that service. Six years ago, at this place, I expressed myself as opposed to the wholesale periodical partisan dismissals of the employés of the agencies and of the schools.

There is only one school for Indians that, in my opinion, has been conducted from the first, and that is being conducted now, upon really true civil-service-reform principles, and that is the school of Capt. Pratt. That school is in a Democratic Congressional district, but no representative of that district has ever asserted any right to make even a suggestion to Capt. Pratt as to what employés he should select.

Indeed, I know that during the Cleveland administration no Democrat ever thought of saying to the captain "I want certain appointments in your school as a part of the spoils;" and if any one had done so that strong-headed and sometimes wrong-headed man would have given him the proper answer. If it were possible to have in all the schools of the country the conditions that exist at Carlisle, there would be no need of this reform; but in every other school the politician, is, in fact, the appointing officer; and he is not a very conscientious one. Occasionally I am pleased to know Commissioner Morgan takes things into his own hands; but it is almost impossible for the Indian Commissioner to act in Indian matters uninfluenced by the dominating spirit of the spoils system, under which men are too often put in positions not because they are qualified, but because certain politicians want them appointed for reasons that have no relation to the good of the service. The result is that under this system the Indian schools have been demoralized. I am glad, therefore, to learn that at last the President has consented to extend the civil-service law over these schools. For awhile it will be difficult to adapt the rules to the service; but I believe that in time, when practical experience shall have taught us how to apply them wisely, the whole country will applaud the action of President Harrison in this respect, and you will see the beneficent results of his action in the better moral as well as in the better intellectual condition of every Government school in the land.

Mrs. Quinton was asked to speak.

Mrs. QUINTON. I have just been on a journey of seven months, beginning in Florida and going through the Southern States, up the Pacific coast as far as Washington, and thence home; and everywhere I found a great desire among Indians for some settled officials, for something permanent, and a feeling that there ought not to be this constant change. To go to the bottom, we ought to ask that there should be permanence in the office of the Commissioner. Why should it not be made a permanent office? And why should not the Commissioner have power to do the work needed to be done? Now, by the time a commissioner learns what he needs to know, and we have confidence in him, he leaves. That has been true from the top of the service all the way down. It seems to me it might be a good thing to have an Indian secretary; but perhaps that is not wise nor possible. But more power could be given to the Commissioner. Can the office be taken out of politics? That is like asking, can the right be done? Our president here, in his opening speech, touched on all the principles necessary in the solution of these questions; and we have had the same all the way through.

There is power enough here to secure anything needed. Senator Dawes has told us that the people of this country can get what they want, and, if they demand anything, it can be had. To be sure, it is like asking a king to abdicate; but kings have been asked to abdicate, and kings have had to abdicate. God's people are committed to a moral work in this country. I believe the time has come when, if we ask it, "the crooked" can be "made straight." Shall we not ask it? It is surely the business of Christians. There are fifteen millions of Christians in this country. That means that there is great moral strength here. Have we not been dealing with half-measures long enough? Let us ask for the one thing that will insure all the rest. We need at the head of the Indian service a man who has a heart, who has convictions, who has courage, and who dares defy the powers if they be wrong. We have such a one; and why not ask the Government and the people to keep him in, and that power needed may be given him during good behavior? During my long trip my heart was grieved everywhere because of the great evils from this want of power and permanence. We can not now do missionary or educational work as both should be done.

The CHAIRMAN. Judge Draper has a statement, touching the matter of which he spoke this morning, which he desires to make.

Judge DRAPER. It was said by Dr. Hubbell, while I was speaking this morn-

ing, that, although the report of the legislative committee provided against the claim of the Ogden Company, yet the legislative bill did not. Here was another suggestion that something wrong was going on. I was sure he was in error, but could not on the moment prove it. By Mrs. Draper's thoughtfulness, however, a copy of that bill was brought here with other papers, and from it I read the following provision:

"The provisions of this act shall not apply to any land in the Allegheny, Cataraugus, or Oil Spring reservations now occupied by the Seneca Indians, nor to the lands of the Tuscarora Indians, until the claim of the Ogden Land Company to an interest in said lands or any part or portion thereof shall be extinguished.

Adjourned at 1 p. m.

#### FOURTH SESSION.

THURSDAY NIGHT, *October 8.*

The conference met at 8 p. m., the president in the chair.

President GATES. The year has not left us untouched. Who that ever heard him can fail to remember the fearless, helpful, hearty words of Gen. J. F. B. Marshall? He and his wife rounded out together a noble and a useful life, interested in all questions that concerned their fellows. We recall them to-night. And the one whose ready pen and wise planning for this conference, and whose wide acquaintance with the press kept us more closely in touch with the great newspaper interest of the country than any other man was able to do, whose wife, through her devotion to this work, and especially to the home building department of it, had endeared herself to many—Maj. Kinney we also recall. And yet another is not here. She has been taken away, and her bereaved husband is now in foreign lands. There are other names that we might mention, whom we all remember with affection to-night. "Their works do follow them."

A letter from Mrs. Sara T. Kinney was read by Mrs. Clinton B. Fisk, of which the following is an abstract:

"At Bancroft I was met by my Indian hostess, and taken at once to her home, a pretty little cottage a mile from the village, where she lives with her husband, six children, and one and often two servants, who, by the way, are not Indians. There are several persons in Hartford, and perhaps elsewhere, who have a vicious habit of insisting that no good thing can come out of a reservation; and I would very much like to introduce them to this pretty, well-ordered Christian Indian home.

"A canary swinging in its cage on the outer porch, and a hammock under the trees, filled with one little, two little, three little Injuns, four little, five little, even six very jolly little Injuns, first attracted my attention, as we drove into the yard. I was taken directly to my room, to rest and free myself from the dust of travel. After a while there was a knock at the door, and one of the children, a little chap of nine years, asked if I would please walk out to supper. I was very well pleased to do so; and, since Nebraska breezes have a wonderful trick of sharpening one's appetite, I was particularly well-pleased to find a most appetizing meal awaiting me. The same little boy to whom I have referred asked a blessing with all the ease and reverence one would expect from any member of the Hartford theological fraternity, and then we fell to and made havoc with the broiled prairie chicken and other good things. The evening was spent in discussing not only the various aspects of the always absorbing Indian question, but other topics as well—matters of general interest in the world at large, such as in an Indian household would not be deemed possible by the ordinary unbeliever in the desire and ability of the Indian race to "evolute" itself out of barbarism into civilization. \* \* \*

"At one end of the room, in a prettily draped bay window, was a table strewn with papers and magazines—Harper's Monthly, the Century, the Youth's Companion, the Agriculturist, and other well-known periodicals. The unbeliever to whom I have referred will shrug his (or her) shoulders and say: 'Oh, but your hostess is not an average Indian.' True, O king! She is very far from being an average Indian, and perhaps not much more like the average white woman! A sweet, gentle, modest, wise, far-sighted, quick-witted, refined Christian woman—such is my hostess. Yet she is a full-blooded Indian, who never attended any other than the reservation schools, and, I believe, has never in her life been further than 50 miles from her home.

"I spent two days with this friend, and then, in a comfortable phaeton, with an Indian driver, and another Indian on horseback (a sort of honorary escort), I started on an 18-mile ride across the open prairie for the agency school, where Dr. Susan La Flesche, the first protégé of the Connecticut Indian Association, is now the Government physician in charge of all the 'Los,' both great and small; and as there are nearly twelve hundred of them on the reservation, one can easily understand that she is a busy woman. The doctor's practice includes a number of white families living near the reservation, and she assures me that in spite of being an Indian they never attempt to shirk the payment of her bills for medical services. So we must score one for the white settler of Nebraska.

"She also assures me that there has been within a few years a wonderful change in public sentiment out there in regard to her people. Educated Indians, with a reasonable amount of push and business energy, can now secure good situations in most of the outlying towns as clerks in stores, agents, farm hands, and so on. This is a gratifying statement, and one for which I was unprepared. \* \* \*

"Thirty years ago the Omahas took to drink. Their chief, Joseph La Flesche (Dr. Susan's father), finally threatened to have any man who should be found drunk on the reservation soundly horsewhipped. The threat was carried out in a few cases, and the whole business stopped then and there. Now Chief Joseph is dead, these Indians are citizens, and claim the right to buy and drink as much whisky as they please. There are plenty of white men who are more than willing to sell it to them, and the local laws are entirely inadequate to suppress the evil. Some of the Indians, including Dr. La Flesche, are taking active measures to bring the delinquents to justice, and their efforts are meeting with some success. A law and order committee has been organized among the Indians, and the members thereof are both alert and aggressive. Several offenders have already been brought before the courts through the efforts of this committee, and many more are in danger of the same fate. It is clearly evident that if these Indians fail to meet the expectations of their Eastern well-wishers, as well as of the better class among their own people, it will be because of no inherent disqualification on their part for a higher civilization, but simply and solely because of whisky, the white man's gift to the red man—a gift which carries with it a curse, and one which will surely sap all that is good and noble from any race.

"The Omahas are a quiet, gentle, well-disposed agricultural people. They are, in many respects, very like children. It is but recently that they have awakened to a sense of responsibility for the future, and even yet they are a little dazed by the many requirements of civilized life. \* \* \*

"A decade ago, with very few exceptions, they were savages, pure and simple, with no rights that a white man was bound to respect. To-day they are citizens, in the main self-supporting, self-respecting citizens of the State of Nebraska. They vote. They are taxed. They receive no help from the Government. They depend for their livelihood upon their own exertions. They are doing well on their farms and in their homes. Since last March they have built between 50 and 60 houses. They have purchased 150 cultivators, 20 corn-planters, 10 corn-cutters, 150 plows, 100 sets of harness, 40 stoves, 75 farm wagons, 40 buggies, 185 horses, and have broken 300 acres of virgin prairie soil."

Extracts from letters were also read from Miss Alice C. Fletcher, Gen. S. C. Armstrong, Mr. C. P. Huntington, and Mr. T. W. Blackburn.

The subject of the evening was then taken up, "The Distribution of Land in Severalty: Its Progress and its Hindrances." Gen. Whittlesey was asked to open the subject.

#### THE DISTRIBUTION OF LAND IN SEVERALTY: ITS PROGRESS AND ITS HINDRANCES.

[By Gen. E. Whittlesey.]

I have heard of a preacher who, after taking his text, began by saying, "I propose, in the first place, to digress from this text; and, in the second place, I propose not to return to it." With your permission, I will imitate him and digress for a moment in order to answer a question which was asked this morning by Gen. Eaton. I understand the question to be, what was the attitude of the Christian Indians in the recent outbreak in Dakota? I have made no personal investigation of that subject, but Mr. T. W. Blackburn, who was superintendent

of Indian education, went out last March to make a thorough investigation of the causes of that outbreak, and he writes as follows:

"The Christian Indians, Protestant and Catholic, the former particularly at Pine Ridge and the latter particularly at Rosebud, have been almost universally loyal. They are generally progressive. Those who were found among the hostiles claim to have been compelled by force and wholly against their own wills to abandon their homes. This is probably true, and the large number of unwilling followers of the hostile leaders in the Bad Lands contributed finally to the breaking up of the hostile camp."

This testimony, though he gives no figures, is satisfactory proof that the Christian Indians, as a body, remained loyal to the Government.

The subject of land in severalty has become pretty familiar to this conference. I myself prefer the phrase "Indian homesteads." That conveys a better idea of what we are trying to do; that is, to enable the Indians to make for themselves homes as we understand that dear word. The idea of the separate home is becoming familiar to a large body of Indians. When we consider what their life has been and how strong their superstitions and prejudices are, it really is surprising that they are receiving this idea with so much favor as they do. It means a radical revolution in their condition. The progress of this work of allotting lands has been shown by the figures which I gave at the opening of this conference. Allotments are being made by several agents, and land has been allotted to some nonreservation Indians. There are a good many scattered about in the different States and Territories who are not on the reservations. They are entitled under the law to take homesteads on the same terms as white men take them, but more favorable, because they are exempt from paying the fees which white men are required to pay. To help them to select lands agents have been sent out.

It is not commonly understood that Indians, though they hold lands in common nominally, do not actually hold lands in common to any great extent. The more enterprising Indians get hold of large tracts of land, and have herds of cattle and flocks of sheep, and become quite wealthy. There are rich Indians as well as poor Indians. These rich Indians, who are somewhat educated, naturally do not take very kindly to the idea of having those lands distributed equally. It will take away a large portion of the lands which they now possess, and they are an obstacle and a hindrance to the successful carrying out of this policy of distributing land in severalty. On the part of those who seek allotments troubles arise as to selections. Two, three, six, perhaps a dozen Indians want the same tract of land. It requires no little patience and skill on the part of the allotment agents to adjust these differences and to satisfy the desires of every individual. Most of the agents have succeeded very well in doing this. Miss Fletcher told us in Washington some of the difficulties she had experienced in the Nez Percés' Reservation.

Another hindrance is the influence brought to bear by surrounding white settlers, who are waiting to get possession of the lands that may be reserved after allotments are completed. If there are valuable tracts of land, they try to prevent those lands from being allotted, and to prevent Indians from selecting them, by bribery and by other means. Another thing which has to be considered is that there are a good many Indians who are incapable of managing a landed estate, who know nothing about the value of land or improving it or taking care of it, and have no disposition to learn. Others do not wish to occupy their lands, but prefer to engage in mechanical pursuits or to hire out to white men as laborers. Much reservation land is almost worthless, arid, sandy, sterile plains, which without irrigation will produce nothing, any more than crops would grow on this floor. Such lands have to be allotted in small tracts, so that irrigation may be made available. Others are only fit for grazing, and they must be guarded by fences from the intrusions of the cattle of white settlers.

When this policy is carried out, it thrusts upon the Indians the obligation of citizenship. They are brought under the laws of the States and Territories where they dwell, and it is not to be supposed that they understand much about those laws. They must learn by experience and by taking risks. Common sense and humanity dictate that we should throw around these Indians all the safeguards possible; and they should have education, so that they may be fitted for the new responsibilities and new duties of the position into which we thrust them.

Dr. Riggs was then asked to speak.

Dr. RIGGS. The allotments of the Santee Indians were made about six years ago, before the general land in severalty bill was passed. The Indians are on

their own homesteads. The last few years in Dakota and Nebraska have been very hard for the farmers, and so the Indians have received some help in the way of rations. If it had not been for that they could not have got through. They are all mixed up with the white settlers, who came in after their choice had been made.

Many of the white settlers have been starved out. If occasionally the Indians have to leave that is not doing worse than white men have to do. They have become voters, and have been accepted by the white population; and they are cultivated by the office-seekers just as much as their white neighbors for the sake of their vote. They have not had recognition in the courts of the State. That seems to be a long and slow process; but, in the main, land in severalty has been a success on the Santee Reservation.

Gen. WHITTLESEY. I wish to allude to the home building. This work has been undertaken by the Ladies' Indian Association. I have myself seen nine of these beautiful houses, all built by the aid of the Home Building Association—built by the Indians themselves, with money for purchasing materials furnished by the association; and these homes were occupied by Christian Indian families, who were an object lesson to all the Indians of that region. I wish Mrs. Quinton would tell us about this.

Mrs. QUINTON. The work of Indian home building was first started by Miss Fletcher at Hampton; and Mrs. Kinney afterward introduced it into our Connecticut Auxiliary, and asked that association to build the first cottage. It was built among the Omahas, and was a success. At the end of that year our National Association made home building a separate department, putting it into Mrs. Kinney's hands, and she has had the entire charge of it. In the five years fifty or sixty cottages have been built or made over in eight or ten different tribes. During the last year reported applications were received from 37 different Indians, and those worthy have mostly been helped. This department includes also loans for the purchase of horses, wagons, sewing machines, and other such helpers into civilized self-support.

In Alaska Indians have built several cottages by our loans. Among the Omahas of Nebraska a number of such cottages have been built, and I found one young Indian there who had just filled with wheat his new granary, 18 or 20 feet square, and he said he should soon harvest 2,000 bushels of corn. He had built from our loan a house of two or three rooms, and it was kept so tidily and furnished so neatly that all the people on the reservation desire such a home. The money loaned has come back better than we could have expected. In 1887 \$125 was returned from these loans, without interest, of course; the next year, \$175; in the following, \$553; and the next year \$652 was paid. They have been fairly prompt and very few bad debts have been incurred. Mrs. Kinney has taken pains to conduct this business in strict business form. Notes and mortgages have been given, though, as she said, she knew the notes were not worth the paper. Still they were made as a business education. The tribes helped have been very much influenced by this department and their aesthetic taste has been cultivated. They have learned how to paint their houses tastefully. One wanted a little porch over the door to keep the sun out, and "because it is so pretty, you know." Another wanted a window-ledge, so that they could have plants "because they are so bright."

Mr. Duprez, a Sioux, was asked to speak.

Mr. DUPREZ. I am very glad to be here, and to look in your faces and hear you speak good words about the Indians. I came from Yankton. You could once find the Indians there with painted faces, and with blankets, dancing those old savage dances. If you go there now, you will find them in a different position from what they were ten years ago. You will find them in the field, trying to raise some corn and support themselves. But the Government makes the Indians lazy. As long as the Government feeds the Indians they will never work. If the Government wants to civilize the Indian, he must first make him learn to work and take care of himself. Some time ago I went to a farmer's house. The farmer owned a large flock of chickens. All the time the chickens came round the house. So I say to him, "Farmer, what makes these chickens come round the house so much?" "I feed them here," he said; "that is the reason they come round the house all the time." I asked him again, "If you do not feed them what will they do?" He said, "If I do not feed them, they will go out in the fields and scratch the ground, and get food for themselves." I think the Indians are just like the chickens. As long as the Government feeds the Indians they will never work. But, if the Government will give them some implements to work,

and show them how, then I think the Indians will go out and scratch the ground, and get food for themselves, just like the chickens.

Some time ago I went to some chiefs' meeting. They talked about civilization, and they said: "We used to have hard times when the Government did not feed us. We had to hunt for our meat, and we had to make our own clothes. Now we do not have to work; we just sit in our homes, and the Government feeds us and gives us clothes. We think civilization is a good thing!" The Indians live, some of them, 30 or 40 miles from the agency; and, when they go after rations, they lose three or four days going after three or four pounds of meat. Some of the Indians do not like that at all. They say, "Why doesn't the Government give us implements, or cattle or herds, instead of rations and clothes? Then we might stay at home and earn more pounds of meat."

The mission schools are doing good work among the Indians. If they did not do good work, I would not stand here to speak to you. The mission schools take us and clean our hands, and show us how to take care of ourselves, and then send us to Eastern schools to learn more of civilization. At the Hampton school all the Indians have to work. We work half a day every day, and go to school half a day. We get up at quarter past 5 in the morning, and go to bed at 10 o'clock. It is a hard thing for us to do, to work and study all day; but I think it is a good thing.

Mr. LYON. When I was first appointed on the board of supplies fifteen years since we purchased 30,000,000 pounds of beef. This season we have ordered 35,667,600 pounds of beef. This has been distributed among 57,960 individuals, giving them 615 pounds each, about 2 pounds a day. In addition, we give 756,460 pounds of bacon, 2,162,750 pounds of corn, 866,600 pounds of oats, 412,000 of wheat, and 9,958,600 pounds of flour, making 172 pounds of flour to each Indian. My impression has been that the Indians ought to be taught to raise these things. We give them some luxuries, too. The requisition came for 1,132,450 pounds of the best granulated sugar—19 pounds of sugar for every Indian. This we give to 57,960 Indians. Five hundred and sixty-six thousand six hundred pounds of coffee, 22,395 pounds of tea, 7,300 pounds of barley, 363,340 pounds of beans, 55,800 pounds of corn-meal, 92,100 pounds of hard bread, 40,725 pounds of hominy, 27,200 pounds of oatmeal.

Gen. WHITTLESEY. Mr. Lyon is feeding, as he says, 57,960 Indians. It must be remembered that there are nearly 250,000 Indians. Many people suppose that we are feeding all, but nearly 200,000 are supporting themselves.

Mr. MOSES PIERCE, Connecticut. I want to say a word about the home-building work. That originated in this room. The first time that Miss Fletcher came to this conference she told what could be done in regard to home building among the Indians by lending them small sums of money. Five hundred dollars was placed in her hands for that purpose.

Mr. SMILEY. Mr. Pierce gave that himself.

Mr. PIERCE. That money has been lent and relent. Miss Fletcher continued to manage it for several years, and then she turned it over to the Connecticut ladies to manage. If there is any credit for originating this branch of work, it is due to Miss Fletcher.

Mr. SMILEY. I think there is a misapprehension about the quantity of supplies given to Indians. How much is given under treaty stipulation?

Gen. WHITTLESEY. Without attempting to answer exactly, without documents, I think I am not far from the truth when I say that two-thirds of the rations are required by treaty stipulation.

Miss Emily S. Cook, of the Indian office, was asked to answer that question.

Miss COOK. The 50,000 Indians who have been spoken of include all the Indians who are supported from rations, also all for whom last year any subsistence was purchased. Some of them receive only two or three, or, in some cases, five, seven, or twelve dollars' worth a year. The bulk of it goes to the Apaches in Arizona, and to Cheyennes, Arapahoes, Kiowas, and Comanches in the Indian Territory, who have not made much progress in civilization; also, to some of the Sioux, who are on alkali lands, in the Dakotas. Of the 250,000 Indians, about four-fifths are entirely self-supporting.

President GATES. This should be remembered. It is too commonly supposed that the United States Government feeds the great mass of the Indians.

Mr. SMILEY. I suppose two-thirds of those who receive rations do so by treaty.

Gen. WHITTLESEY. From 15,000 to 18,000 of those who receive rations are children in our schools.

Mr. MESERVE. I should like to ask Miss Cook if the agents do not issue them on the same basis that I issue rations to my students?

Miss COOK. No; the school ration is better than the Indian ration.

Dr. WOODBURY. Is not the point that has been suggested of great importance, with reference to the amount of time taken up every week or every month in long journeys to get rations?

Gen. WHITTLESEY. In the last appropriation bill it will be found that the Indian Commissioner has authority to establish five points of delivery, or more if necessary, on any reservation, and send the provisions to them. That is going to be done this very year.

Gen. EATON. Suppose a young man has land allotted to him while he is still in school. What can he do with this land? Or suppose the land is allotted to a man who has no money with which to purchase implements, but who has lumber on his land. Can he make any sale of the lumber, or in any way secure rental from the use of the land or what is on it, by which he can secure funds for the purchase of food or implements or horses or anything of the kind? Or is there a deficiency in the law which demands our attention?

President GATES. Senator Dawes, to whom we put all the hard questions, will perhaps answer that.

Senator DAWES. The amendment to the allotment law provides that whenever, in the opinion of the Secretary of the Interior, land can not be profitably occupied by the allottee, by reason of age or other disability, the leasing of land is authorized. There has been a change of sentiment about this matter, and I think the law has got to be modified further in regard to this leasing matter.

Gen. CHARLES HOWARD. It is a mistake to mass the Indians together. What additional law is necessary in regard to this?

Senator DAWES. I happen to know that it was the original intention of the President of the United States, when he signed the law, to have land allotted in alternate sections. The President intended to put the law in operation in a very different way from what has been done.

Dr. STRIEBY. Under the law, unless a farmer can make use of his soil, he is prohibited from becoming anything but a farmer. Isn't that an objection to the whole thing?

Senator DAWES. I think we have got to modify the severalty law a good deal. I have been heretofore very strenuous against farming out or leasing allotments, because I knew that an Indian, if he once lost his allotment, would never get it back. I never knew a white man to get his foot on an Indian's land who ever took it off. But on certain reservations Indians have found that the labor of breaking the land in the first year and getting ready for the crop the next year was so great that they abandoned the idea, and have leased out their land to white men who have turned them into grazing ranges, and the Indians have gone back into the tepees. It is hard work for white men to break up prairie land, and they will not do it if they can help it. It has occurred to me that under the superintendence of the Indian Bureau an allottee might be authorized to lease for two or three years to a white man one-half of his allotment on condition that the white man should break up so many acres each year, and that the rental should be expended in breaking up the land on the remainder of the allotment, where the Indian should live himself.

At the end of the lease the whole 160 acres would be in some condition for him to carry on the business of farming. What Dr. Strieby says has been pressing on the Government from the beginning. But civilization comes from the occupation of the land. Whatever can be done for the poor allottee under proper supervision ought to be done. It depends upon the Administration. If anyone is allowed to lease his land who chooses, the Indian will be despoiled of his land and his home. He will no longer have a homestead. But so long as the Indian Bureau is administered as it is now, and as it ought to be, with care, with constant vigilance and determination, you are safe with a flexible law. But, if it should pass out of such hands into such hands as we can contemplate, then woe to the allottee who is authorized to lease his land.

President SEELYE, of Smith College. I have been impressed with the idea of sending Christian families to those Indian tribes, that by contact with Christian civilization the Indian tribes may be civilized. I can not believe that it is possible to take all these Indian families and transport them into the midst of our own civilization. I think there are family rights that must be respected. We can not induce these older men and women to leave their homes. But I do believe we can induce Christian men and women to make their homes among these Indians. We know what the Riggs family has done among them. We know what Miss Goodale did before she was married and what she will do as a married woman among them. What I want to know is whether any legislation

is needed in order to accomplish this. If we could have a law made which would render it possible for Christian men and women to colonize in the midst of these Indians, I think there would be an army of them who would avail themselves of that law; and, through this contact of Christian men and women, we would preserve those who go back from Eastern schools from relapsing into their former barbarism.

President Gates said that he would like to read an extract from an address which he delivered six years ago, as he believed that it was apposite still:

"Guard the rights of the Indian, but for his own good break up his reservations. Let in the light of civilization. Plant in alternate sections or townships white farmers, who will teach him by example. Reserve all the lands he needs for the Indian. Give land by trust-deed in severalty to each family.

"Among the parts of the reservation to be so assigned to Indians in severalty retain alternate ranges or townships for white settlers. Let only men of such character as a suitable commission would approve be allowed to file on these lands. Let especial advantages in price of land, and in some cases let a small salary be offered, to induce worthy farmers thus to settle among the Indians as object-teachers of civilization. Let the parts of the reservations not needed be sold by the Government for the benefit of the Indians, and the money thus realized be used to secure this wise intermingling of the right kind of civilized men with the Indians. Over all extend the law of the States and Territories, and let Indian and white men stand alike before the law.

"It is my firm conviction that a plan of this kind can be devised which will meet a response from settlers of the right stamp quicker and more generous than could be accounted for by the mere money inducements offered.

"There is a great mission work to be done by laymen and farmers for these Indians. The spirit that settled Kansas in the interest of liberty and fair play for all men, however despised, is not yet dead in our land. And, while I see clearly many difficulties in the way, I believe they can all be met in a plan that shall gradually substitute homes and family life for the tribal organization, settlements of mingled whites and Indians for the reservation system, and the reign of law, with the duties and responsibilities of citizenship, for the state of unprotected anarchy to which we have hitherto condemned the Indians. \* \* \*

"The ideal plan (which I believe to be also a practical plan) is to reserve alternate sections, ranges, or townships among the Indian allotments for white settlers, of character approved by a philanthropic and experienced commission. Offer special inducements to reputable white settlers to occupy these farms. Thus 'object-teaching' in thrifty farming will go forward on a large scale."

Dr. C. L. THOMPSON, New York. Since coming here, I have realized as never before that in this room is the very heart of the Christian and patriotic sentiment of this country concerning the Indian question, and that from here have gone out the potent influences that are settling the Indian problem in the way in which it ought to be settled by Christian people. The Presbyterian Board of Home Missions has endeavored to take its share in solving some of the Indian questions. Last spring that board adopted a series of resolutions or made a declaration of principles which I wish to read:

"The Board of Home Missions of the Presbyterian Church in the United States of America, having carefully considered the movement of the National League for an amendment to the national Constitution in the matter of appropriation of Government funds to different denominations for the support of what are called 'contract schools' among the Indians, desires to give expression to the following declaration: We are in hearty accord with the end aimed at by the National League.

"We believe it to be contrary alike to the form and spirit of our Government that any governmental aid should be given to any church for the prosecution of any part of its work. We are, therefore, in favor of such an amendment to the Constitution as will put an end to Government grants to denominational schools.

"But the judgment of the board is that the closing of the contract system of Indian schools devolves on the Government the duty of extending to the Indians the benefits of our common-school system. Until this is done, it would be disastrous to the Indian tribes to take away from them or put in jeopardy the schools whose advantages they now enjoy. It is further to be observed that the contract system of Indian schools now existing between this board and the Indian Bureau is the outcome of offers made to the board by the Commissioner of Indian Affairs, years ago, which offers we did not seek, but, on the contrary, our cooperation was sought: and these schools, which have been of such undoubted blessing to

the Indians, can not be abruptly terminated without serious harm to their moral and spiritual interests."

Dr. W. H. WARD. I understand this Presbyterian plan is that they shall withdraw when the Government shall extend the school system to all the Indians. All schools must be religious. A Government boarding school has got to be Protestant or Catholic. If they are Protestant, they have got to be under the religious instruction of Methodists or Baptists or Presbyterians or Quakers or some other sect. You are not going to give Indian children in a boarding school a purely secular education. The question involved in the contract school is exactly that which is involved in the Government boarding school. If you will say, Government shall withdraw all boarding schools and shut them up, and no longer teach religion in the boarding schools, then that moment you can say, We will give no more money to the contract school in which precisely the same religion is taught.

Prof. J. B. Dunbar, New Jersey, exhibited several interesting Indian books, among them a John Eliot Bible. Prof. Dunbar was born among the Indians as the son of a missionary. He thought Mrs. Quinton had made it very clear that the one thing most desirable in treating the Indians was the element of certainty. For two things the Indian has respect—power and the inevitable. The laws heretofore with respect to Indians had been made for the advantage of the white man and not for the Indian. The Indians do not respect the present vacillating system. The whole subject should be taken out of the range of politics. He thought a board made up of one military man and two civilians should be put in charge to look after these questions.

Miss Edna Dean Proctor was then introduced, who recited one of her own poems at the request of the conference, "The Last Inca of Peru."

President GATES. When the touch of genius is thrown over the history of those who thus sadly perished, we owe a special debt to the one who presents history to us in this idealized form. Those who would like to thank Miss Proctor for the pleasure she has given us will say ay.

There was a hearty and unanimous vote of thanks.

Adjourned at 10:30.

---

## FIFTH SESSION.

FRIDAY MORNING, *October 9.*

The conference was called to order after prayer. President Gates said that all who remembered the prayer of Bishop Whipple a year before, in which he prayed for the Indians as "this people of the restless eye and the wandering foot," would be interested to know that a letter had been received from him, expressing his deep interest in this conference.

The letter was then read. A letter was also read from Hon. John W. Noble, Secretary of the Interior, regretting his enforced absence.

President GATES. It requires a great deal more stamina on the part of men high in office than sometimes, in our moments of criticism, we are willing to give them credit for, to resist the powerful pressure of the spoilsmen. When men like Secretary Noble and President Harrison and President Cleveland stand firm in their advocacy of justice for the Indian, they should have expressions of our confidence and regard. Therefore, without advising any formal deliverance, I wish to suggest that the men who are exposed to the ceaseless fire of criticism from newspapers will be helped by a word from thoughtful, Christian people, honestly praising what has been done that is right. If any man or woman, then, is disposed to write to Secretary Noble and President Harrison of our gratification at the civil-service rules that have been adopted, I doubt not that such letters would be acceptable.

We come now to consider education for the Indians, the crying need of the hour. What are we going to do to uplift the Indians, unless we can bring them under the sway of ideas? There is no other way of getting them out of barbarism and bringing them under the reign of law. Did you notice that some one said, "We need more law, because the Indians are getting loose in their morals?" It is as impossible to legislate a love of sin out of the human heart as it is to legislate vice out of a community. There must be another power, deeper than law, to accomplish this result. We emphasize law, because there is no progress for a people from barbarism up to civilization except as right moral convictions, clearer ideas as to right and wrong, take on a permanent form in institutions and laws. The best ideas of the past have been fixed for us in social customs, in laws and

institutions. We are fortified in goodness by this crystallized result of the thinking of previous generations of men. When the question arises, How shall the 30,000 Indian children of school age become self-directing citizens? we feel that law alone will not do it. There must be the constraining power that comes from Christian education. There must be the constraining power of Christ, which sends men into the work of missionary teaching, and holds them steadfast in that work. We take up, therefore, the subject of education, and I invite the Rev. Dr. George Dana Boardman, of Philadelphia, to open the discussion.

Dr. G. D. BOARDMAN, Philadelphia. I would like to say a word on the limitations of education. I am one of those who think the State can not give a thorough education. To give a thorough education would be for the State to overstep its constitutional limits. The church, and church only, can give an education which is symmetrical as well as total. It is my conviction that this question of education is to be remitted ultimately to the church. No one is a stronger admirer of the common school and the secular system than I am. But that education which does not take in the hereafter, which does not rest on those fundamental principles which are to abide when the scenery of this world passes away, is defective, and in that regard an untrue education. A question of right is not to be settled by a numerical majority. A question of conscience is not to be decided in any scales, avoirdupois or Troy. We have got to come to the fundamental question, Shall these 30,000 Indian children of whom we have heard be allowed to grow up in ignorance of these fundamental principles? What does it advantage to give an education to your child that shall cover all the principles of this life? What shall it advantage your son going forth from his university to know everything about earth's latitudes and longitudes, everything about a ship from pennon to keel, to have every chart and the best of compasses, if, after all, when life's voyage is over, he has no heavenly harbor to make?

President GATES. I will ask Miss Cook of the Indian Department, whom we sometimes call "the library of useful knowledge," to open the subject, "Education: Its progress, its obstacles, and its limitations."

#### EDUCATION: ITS PROGRESS, ITS OBSTACLES, AND ITS LIMITATIONS.

Miss COOK. A great advance has been made in education for Indians. I can remember the time when there were no Indian police, when the first one was started at San Carlos among the Apaches, when there were no courts of Indian offenses, when there were no training schools, no allotments, no Mohonk. When I began my work, the whole number of Indian children in school, exclusive of New York, and the five civilized tribes, was about 3,500.

Mr. SMILEY. Miss Cook is eighteen years old in the Indian service.

Miss COOK. Last summer I was being ferried across the Potomac in a rowboat by an old colored man with gray hair and an expansive smile. I talked with him a little, and asked him how he got his living. "By fishing," he said. "How much can you earn?" "Miss," he replied, "sometimes I gits 10 cents a day, and then I lives down to it; and sometimes I gits a dollar a day, and then I lives up to it, but I keeps on livin' all the time." I can remember when we lived down to 10 cents a day. Then there a very great joy in the Indian office because there was an appropriation of \$20,000, which made it possible to branch out in new directions. Since then, from the \$20,000, the 10 cents a day, we have come up to the dollar a day; and the result has been that there are now thirteen training schools in ten different States and Territories, and five more will probably be in operation the present year. At the end of this fiscal year it is hoped these will accommodate 4,600 pupils, more than a thousand more than all the Indian pupils who were in school eighteen years ago. Those 3,500 then in school included all the mission schools, and all the children who could hear of who were in school.

Almost all the scholars in mission schools are also reported in the Government statistics, because they are more or less supported by Government aid. New schools have been opened at Fort Belknap, Fort Totten, Fort Sill, and on the Colville Reservation; and there is to be a new one for the Navajos on the San Juan, and one for the Cheyennes and Arapahoes at Seger Colony. A good many here have been interested in the self-denying labors of Mr. Seger among those Indians, and have given him some help. He actually is to have a boarding school and a house for himself, and be comfortable. There is also to be one among the Round Valley Indians. They had one, but it was burned. The Rosebud Sioux have been promised a boarding school regularly every year, and an advertisement calling for bids for buildings is now out. The Utes will have one before

the year is over, as will also the Oneidas in Wisconsin. A large number of day schools will be added to the Sioux in Dakota in strict accordance with the treaty provisions of twenty years ago.

The great advance in our income to a dollar a day has been used not only to increase the number of pupils, but to improve the buildings and equipment. The personnel of teachers and employes has been raised. The principal work of the last two years has been not so much adding to the number as to the efficiency of the schools in operation. Last year rules for the conduct of all Indian schools were formulated, and a course of study and books was adopted, so that uniformity and system could be had and the different schools could work along nearly the same lines.

The extension of the civil-service regulations to physicians, matrons, superintendents, and teachers will eventually very largely assist the Indian school service. I do not think it will make any material difference in the present personnel, for the reason that for the last two years civil service has been practically applied in that department.

Added to this is the compulsory law obliging the attendance of children at school. That has not been put into operation yet, and how successfully it will work remains to be seen. The law seems to have more moral sanction than anything else, and it gives the Commissioner something to fall back upon.

That law does not apply to the New York Indians, nor to the five civilized tribes, nor to the Pueblos, nor to the Indians who have become citizens of the United States by taking up land in severalty. Leaving those out, it applies to all Indians, whether on or off reservations, of suitable age and health. The age limit is between 5 and 19 years of age. Whether they have suitable health shall be determined by the physician. The parents and guardians of Indian children shall decide for them, and Indian youth of mature judgment may choose for themselves whether they shall go to a Government or to a private school or to a public school. By that I mean ordinary State public school. As a rule, most of them will naturally and inevitably go to the schools near them.

President GATES. In case the children were all to attend in accordance with the provision of the law, how many children would there be, exclusive of the civilized tribes?

Miss COOK. About 30,000.

President GATES. And we have accommodations in all the schools for how many?

Miss COOK. About 24,000 by the end of this fiscal year. That would take the extreme limits of all buildings, but they can not be used to their extreme limits.

President GATES. Taking the most favorable figures, how many children would be unprovided for?

Miss COOK. About 10,000.

President GATES. Then we need a great deal more money.

Miss COOK. Yes; a great deal more.

Mr. GARRETT. How can the compulsory law be enforced if there is not sufficient accommodation?

Miss COOK. The Commissioner will stop at the right place. The work that has been accomplished has been very satisfactory in a great many lines, but a great deal has yet to be done. We have no schools among the Southern Utes, none for the Zufis. We have none for the White Mountain Apaches, and not room for those at San Carlos, even if they were inclined to come. Among the Navajos, at White Earth, at Pine Ridge, and at Rosebud, more schools are needed than they have. Then, when the new schools go into operation and the scholars come into them, they will have to be supported; and that will require more work and more appropriations.

The Indian Office has been embarrassed by the limits in the cost of buildings. It has been impossible sometimes to put up any sort of suitable buildings for the money allowed, \$10,000 (now \$12,000) a building being fixed as the limit. A makeshift policy has been adopted of putting up something that they did not want one year and tearing it down the next year, and they have had to resort to all sorts of contrivances in carrying on schools. On prairies which are limitless they have placed the kitchen, dining room, and laundry in the basement, to save the cost of roofing. The laundries are poor and bathrooms are wanting. Sitting rooms are contracted, and assembly rooms are luxuries that few have. In very few is there a place where the parents can come to visit the children. The advisability of some improvement in these things is recognized and there is some progress.

Another thing has been done which may come to a good deal in the end—the

effort of the Commissioner to put Indian children into the State public schools. Any State or Territory that has Indian children running round loose that wants to put them into the public school can do so by contract with the Indian Office, and for each child \$10 a quarter will be paid.

President GATES. That is a very hopeful thing.

Gen. WHITTLESEY. A hundred Indian children are in such schools under that arrangement.

Miss COOK. I think that will be one of the "ways out."

Mr. SMILEY. Is there any limit to that fund?

Miss COOK. I do not think there will be any trouble about that. There is a general fund of nearly a million, out of which the Commissioner makes such appropriations in minor sums as to meet these new ideas which are always in his mind.

Mr. MESERVE. Could they go into the high schools under such an arrangement?

Miss COOK. I do not think there would be any trouble about that?

Capt. PRATT. We had nearly two hundred Indian children in the public schools of Pennsylvania last year. We have had them there without any \$10 a quarter. We have had them there for nothing. There is no limit to the expansion of that sort of work. I will place a thousand children there next year without charge to the United States if I can have the proper children. They can then be learning the lessons of home life and civilization, which can not be learned in an Indian school.

President GATES. Judge Draper, will New York allow that?

Judge DRAPER. No. Is the State of Pennsylvania ready to receive an unlimited number of nonresidents free of charge?

Capt. PRATT. We have the good will of the governor of Pennsylvania, and we have had constantly the indorsement of the superintendent of education. The people are in favor of it right straight through. Indian children are educated there just as German and Irish and other children are educated when they are placed in families there.

President GATES. In inspecting the Carlisle school it once became my duty to look over several hundred letters concerning the pupils who had been on the outings; and from those letters it was plainly seen how easily the great mass of Christian people in this country could take care of these Indians if we could get them out of the reservation.

Gen. EATON. May I ask Judge Draper, if any district in his State should choose to receive in the school from a family resident there an Indian pupil, would there be any objection from his office?

Judge DRAPER. Certainly not.

Miss COOK. Two things have been accomplished. The Commissioner has been able to district the entire service into four districts, with a supervisor of education for each district. The Commissioner is proposing to hold an institute, to include the superintendents and a few others. They will meet and discuss pupils, schools, buildings, new schools on and off the reservations, apparatus, methods, etc. Then they will return to their respective districts, and the best ideas will go from the top down and permeate the whole body of the Indian school service. In view of all that has been done, and especially of what there is to do, the Indian Office must have a dollar and a quarter a day!

Dr. Riggs was invited to speak.

Dr. RIGGS. I wish to confine my talk to a particular point, one of the difficulties of compulsory education. We all rejoice that we have a Commissioner with wide experience and with an earnest purpose to carry out some sufficient and extensive plan of schools that will cover the ground. We wish that plan perfect success. It is because there are circumstances in the way that may prevent this perfect success that I wish to speak. The plan of the Commissioner is for a scheme of day schools, reservation boarding schools, and central training schools of a high grade that shall ultimately provide the educational facilities for the whole Indian school population. The necessary result is that this system will crowd out of existence the missionary schools that have been planted. It has already crowded out a school at Albuquerque started by the Presbyterians. All of the pupils have been taken away. You will pardon me if I speak more particularly of my own school at Santee, because I want to speak of what I know. It started twenty years ago. It has not only had some influence among white people, but it has had a large influence among Indians. It has almost always had the confidence of the Indian Office. The most friendly relations have always existed with that office. Yet its work has been hampered by this scheme of the Govern-

ment for universal education. When we go to the agency to solicit pupils—not so much to solicit pupils, because we do not have to do that, for they solicit themselves, or their parents for them—we are met with the question, have you authority from the Indian Office to take those pupils? If we have not, the door is shown to us. No pupil can come to us until the Government school is full. This year some of our pupils who had returned home on vacation, but were technically members of our school, had to hide from the Government police to prevent being put into the agency school, because it was not full.

At Devils Lake Agency we have two schools combined with our Congregational and Presbyterian missions. The people have some idea of what they want in regard to the education of their children. It has been on their minds to have to put them in a school dominated by Catholic teachers. They were wise enough to appreciate the difference in the grade of instruction, and they remembered that they would be able to always read the open Bible; and so they sent them down to us, as in previous years. But they were not permitted to remain, because the Government school had capacity to receive all the children. So the religious preferences of the parents were not respected. The rules that have been mentioned by Miss Cook may seem to make all this talk of mine out of date; but sometimes things are not as they are supposed to be. A year ago a mother came to me, saying she wanted to have her daughter transferred from the Government school to attend our normal school. She was growing to be a young woman. The mother could not read herself, nor could her husband; and they wanted the daughter to learn to read the Dakota Bible. They were both members of the church. I told her it was impossible to make the arrangement and to get permission from the Commissioner, as it was so near the opening of the term. She came again in the middle of last summer. So I wrote a letter for her and for the girl, making application that she be allowed to send her daughter to our school. At the same time one of the elders in one of our churches made the same request to the Commissioner, for leave to put his two boys into our school. I have in my hand, under date of September 12, the reply from the Indian Office, saying that the agent had been consulted, and had reported that the children ought not to be taken out from the Government school.

Gen. WHITTLESEY. Are not these Indians all citizens of the United States?

Dr. RIGGS. They have been for six years, but that does not affect the matter.

Gen. WHITTLESEY. Can not they choose the school they want to?

Senator DAWES. The appropriation bill has been compelled to make special provision that the children of Indians who are citizens may come into Government schools. It is only a permission for them to come in. Nobody has a right to compel an Indian citizen to send his children to a Government school unless he wishes to.

Dr. WARNER. Does not your school, Dr. Riggs, expect compensation from the Government? If so, isn't the objection that the children are all provided for, and hence it is not necessary to make this extra compensation for them?

Dr. RIGGS. It costs the Government less to educate the children in our school than in the other schools. This restrictive influence has affected those that are above school age. It took me three years to bring from Montana a young man who wanted to go down and train himself as a teacher for his people. The restrictive principle worked against the Christian training school. I do not believe the Commissioner would have signed that letter himself.

President GATES. Are the existing laws such as to make it competent for parents to send children to your school, if they will?

Dr. RIGGS. Citizens should certainly have that right; but I think there is a wider right than that. It can not be settled by the matter of citizenship. I know the courts would sustain us if we made an issue, but it does not seem desirable. It seems to me that public opinion and the good sense of the Commissioner will settle this.

President GATES. Is legislation needed, or only that the attention of the Commissioner be drawn to it?

Dr. RIGGS. There is no legal protection for missionary schools on reservations.

Senator DAWES. You make a contract with the Government by which you agree to educate some of the Government pupils. Of course, the Government can make such terms with you as you and the Government can agree upon. It is between you and the Government. The Government insists upon it that if it gives you a contract to educate so many children you must not take them out of the other schools.

Dr. RIGGS. Our contract at Santee does not allow us to receive any pupils from

Fort Berthold, although we have a school there to prepare pupils for Santee. Because it is not mentioned in our contract, we are not allowed to go there to receive pupils without special permission.

Senator DAWES. You agreed that you would not?

Dr. RIGGS. We agreed that we would not. But I think we should receive any pupils. We must recognize the right of the Indian parent to judge where his children shall be educated. That Indian parent must come under the proper rules of the compulsory-education law. He must feel the obligation of seeing that his child receives an education. That is a good principle. I am not at all talking in favor of the contract system. I see the day when that will be done away. It is because I have an interest in general education and the work of the Government that I do not want any mistakes made. The Government can not afford to crowd out missionary work. It may take up a portion of its educational work. It has been remarkable to me to see the enthusiasm of these secular superintendents. You would think they were foreign missionaries just returned. The results they are most proud of are Christian results. Under existing circumstances it is possible to have Christian men and women in control, but the whole system will not be Christian. In some of the Government schools to-day the moral tone is utterly degrading. That is lamentable, of course.

The people of the United States can not afford to drop out missionary schools. They ought to have the chance to go on with their work; they have something higher to give than mere secular education. Our work is to attain Christian teachers and preachers. We have sent out many who have done good work, and we hope we may have the opportunity to train more and more. We must have a trained native agency in carrying it on. The principles that I contend for are those that must have a wide application. We can not say that we must have these privileges and the Catholics must not. They should have the same privileges that we have, but should be held to the same standard of excellency that we are willing to meet. Please understand that we are working for something broader than the success of our own particular mission school. When I gave myself to educational work twenty-one years ago, it was not for the sake of building up one little school, but for the sake of general Christian education among the Indians, for the salvation of the Indian people.

President GATES. Does the question of the language used in your school have anything to do with this?

Dr. RIGGS. I do not think it has. I would not, under any circumstances, give instruction only in English.

President GATES. Is any effort made to preserve their native language among the children?

Dr. RIGGS. Yes; we train them so that they can go with two Bibles in their hands.

President GATES. The children are taught Dakota whether they are intending to be missionaries or not?

Dr. RIGGS. Yes; and over and above that we are giving the best education given to any Indian pupils in the missionary field.

Mr. BOYD. You heard from Dr. Thompson last night that the Presbyterian Board of Home Missions expects to give up its contracts with the Government as soon as practicable. Now, if the Presbyterian Board gives up these contracts and receives no aid from the Government, can it go onto another reservation, where the people have become citizens, and be able to educate anybody, without regard to the Indian Office or anybody else? Can anyone interfere with our right to educate Indians? Will Mr. Smiley answer that?

Mr. SMILEY. I have had the matter of education very much at heart. The great difficulty with reference to it has been broached. In California the Government has established a school at Banning, the largest settlement of Mission Indians. They had a school building and grounds, and appointed a most competent teacher to go there. What has taken place? The Catholics have put up a large brick building within a short distance, and they want to fill up that school. They have a contract with the Government. The Government pays for each pupil more than it costs them, I think. They employ as teachers nuns, who work for nothing. They can run a school more cheaply than the Presbyterians or Quakers. They have a good school in many respects. But here is the Government paying for one school 4 miles away, from which pupils are abstracted, and also paying money to this contract school. That is, it is paying the same thing twice over. It pays for its own school, and then it pays \$150 for every pupil that the Catholics can gather in.

Here are contract schools fighting for scholars, because, if they are not full,

they do not get the Government support. Every contract school is also anxious to get the brightest and best scholars. The different contract schools fight among themselves for these. That is taking place all over the country, and I think it is a miserable muddle. When Capt. Pratt wants to get scholars he ranges over the Western States. They all want to go to Capt. Pratt's school. The name of Carlisle is a great name. General Armstrong does the same thing. Capt. Pratt's is not a contract school: it is a Government school. General Armstrong's is a contract school. The Presbyterians do the same thing. The Quakers in some places do. They all want the best sheep out of the pasture. Sometimes I have known of their taking two generations, a father and the child, so as to fill up the school. Sometimes they will take scholars that others have rejected on account of sickness or bad behavior. This ought to be remedied.

At Santee there is a most admirable school under Dr. Riggs, one of the oldest contract schools. There is a Government school one mile away, and a Congregational school another mile, and an Episcopal school on the other side. Each of these receives funds from the Government. The Government has a right to say where it shall place its scholars. The moment these schools pay their own expenses the pupils should be allowed to go where they like. So long as they receive pay from the Government they must submit to the terms of the Government. Capt. Pratt's is a Government school, supported and built by Government, and is on a different footing. I think, sooner or later, all the contract schools will be abolished. There is no doubt about it. They will become independent missionary schools. Religious schools should be perfectly free from the Government.

Mr. BOYD. We are asked very earnestly to start a school among the Apaches. Suppose we start an independent school, what is the process by which we should start it there? Can we have it independent of the Government, and get on without being molested or made afraid?

President GATES. No one will molest you probably, and it will depend on your own courage whether you will be afraid or not.

Mr. GRAVATT. Mr. Smiley has said that contract schools will gather up children who have been dismissed from other schools. That was once true, but I do not think it is now. I think there is a black list of scholars kept at the Department.

Mr. MESERVE. There is.

President GATES. With reference to teaching their native language to the Indians, it seems to be a good rule that, unless a nation has a history or a literature, there is no possible use in keeping up the language. I am satisfied that our Indian languages ought to go.

Mr. WOOD. It may be of interest to the Conference to know that Dr. Riggs was the first teacher of Dr. Eastman. It was through his influence and assistance that Dr. Eastman procured the scholarship that carried him through Dartmouth College.

Gen. HOWARD. Will Mr. Smiley answer the question asked by Mr. Boyd? The question is this: Here are many children unprovided for. Our churches now propose to go forward, as I trust, to make additional provision for these children, and to pay all their own expenses. There is no school for the White Mountain Apaches. Can they, without interruption from the agent or any one else, establish a school and have the children go to that school?

Mr. BOYD. I should like to have Senator Dawes answer that question.

Senator DAWES. The thing is perfectly plain, so far as the children of citizens are concerned, those who become citizens by withdrawing from the tribal relations. They can go as any white children would go. So far as the children of noncitizen Indians upon a reservation are concerned, no one can go on a reservation without leave of the Government; not a white person, except the officer in charge and his employes, can put his foot on a reservation without the consent of the Government. It is a question between Government and the people who wish to carry on the school. The time will come—I wish it would come to-morrow—when there will be just one class of people in the United States, citizens, with all the rights of citizens. I trust we shall all stand shoulder to shoulder in that position.

Gen. HOWARD. Dr. Riggs has stated that the children of citizens of the United States can not go to school where they wish. That is a matter of official action of the Government. It seems to me that this Conference should plainly declare that every citizen of the United States who is an Indian shall have the same rights as a white citizen.

Senator DAWES. They have it now.

Gen. HOWARD. We want to educate these other six thousand children. There are denominations who want to establish more schools. We do not ask for more legislation. Can there be regulations so that we can establish schools on these reservations?

Mr. SMILEY. You say these denominations are ready to go in and establish more schools. Do you mean for \$150 a scholar?

Gen. HOWARD. I mean without help from the Government.

Mr. OBERLY. I understand the question to be whether the Government, if it so desire, shall have a monopoly of the right to educate Indian children. Shall the Government do all the school work, even if persons, churches, and individuals should desire to engage in it also? I understand the sentiment of this Conference to be a Christian sentiment. The chairman is constantly saying, with our unanimous concurrence, that we desire to have and must have Christian instructors, who will lead our Indian children by Christian instruction into Christian civilization. Can we get this kind of Christian instruction more certainly in the Government than in the denominational contract school? This Conference seems to believe that we can. Is this so? You know that the teachers in all the contract schools are Christians; and they do much good work in leading Indian children into the churches—into Christian civilization by Christian paths. But do you know this of the Government teachers? You can not; but you do know that too many of the Government school employes, being the creatures of what is known as the spoils system, it can not be said, "Ye are the salt of the earth," for many of them are indeed blind guides leading the blind.

But we are about to throw off the spoils system; we are indeed in the very act of putting the Indian schools under the civil-service law system. But will this action enable us to dispense with the denominational contract system by giving us the certainty of obtaining Christian employes for the Government schools? I doubt that it will; for it is made an offense by the civil-service rules to make inquiry concerning the religious belief or affiliations of an applicant for place under those rules. A man may be an infidel, and he may be an applicant for the position of Indian school teacher. Under the civil-service rules, which are being applied now to the Indian school service, you can not ascertain this fact; for it is unlawful to ask an applicant under the civil-service rules anything concerning his religious opinions. You have no right to ask him if he is a member of this or that church. You dare not ask him even if he is a believer in the religion of Christ. And if an applicant for the position of Indian school teacher, having passed the civil-service examination, were to be certified to the Commissioner of Indian Affairs, and the Commissioner, having ascertained the applicant to be an infidel, were to refuse to appoint him for that reason, it would be the duty of the President to dismiss the Commissioner from office. I mention this fact for the purpose of showing one of the great difficulties in the way of securing persons known to be Christians as employes of the Government schools. I mention the fact for the purpose of suggesting, also, that it is just probable that in crowding out the denominational contract school, and putting into its place the Government school, you may be crowding out a good deal of Christian endeavor on behalf of the Indian and be putting into its place a good deal of endeavor that will be utterly devoid of that unselfish spirit of the Christian missionary which has made the Indian Christian work resplendent with the glories of unselfish toil in a field of danger, deprivation, and even martyrdom.

President Julius D. Dreher, of Roanoke College, Salem, Va., was invited to speak.

President DREHER. So many things come into my mind as I rise to speak for the first time in a Mohonk conference that I am reminded of the colored clergyman who announced his text, and then said: "My brethren, I will divide de subject into two parts, what's in de tex' and what's not in de tex': and we will proceed to wrastle wid de secon' part first." I am tempted to "wrestle" with the second part first; but I am also reminded that you have provided "a way out" for your speakers, which gives a pretty plain hint that the way into the subject should be as direct as possible. Although deeply interested in the general work of Indian education, I shall confine myself, in the brief time allowed me, to a few statements with respect to higher education among the Choctaws in the Indian Territory. As is generally known, these Indians have had churches and schools for many years, several academies being maintained to prepare boys for college.

The Choctaws receive about \$60,000 a year from leases on their reservation, and an equal amount from our Government as interest on money due them for the land surrendered in Mississippi in 1830. The Choctaw legislature appropri-

ates a part of this annual income for the higher education of a number of young men and women who are distributed among a number of colleges in order to bring them into closer contact with white students. Twenty-one years ago, while I was yet a student at Roanoke, President Bittle received from a young Choctaw a request in these words: "Please send me a catalogue of your college. Please send her soon, as I shall need her." The catalogue was sent, and he was so well pleased with "her" that he entered Roanoke College, where he remained three years, much of his time being occupied during the last session in studying the question of the rights of the Indians with respect to the allotment of lands in severalty. He returned to the Territory, and within two years was elected as senator in the Choctaw Legislature. Mainly through his influence, Roanoke was selected as one of the institutions to be patronized by the Choctaws, and since that time we have every year had Indian students at the college.

Four of their superintendents of education—themselves Choctaws—have visited Roanoke in their official capacity. One of these—ex-Governor Allen D. Wright—a graduate of Union College and Union Theological Seminary, New York, preached one Sunday in two of the churches of Salem; and another, Rev. J. B. Turnbull, in an address in the college chapel, took the advanced position that it is more important to educate girls than boys, because mothers have the larger influence in training and educating children. The reports of these superintendents, as well as the success in life of their boys trained at Roanoke, have produced so favorable an impression for the college that in the distribution of their students Roanoke receives a larger number than any other institution in the States. Up to this time only three of these students have completed the course for the degree of bachelor of arts, and only one of these is a full Indian. His graduating address (in 1883) was delivered in Choctaw and English; and Mr. Charles Dudley Warner, in an address on commencement day, remarked that, judging from the applause, he would say "Choctaw was the favorite language in Salem." When this young man took his degree in the Yale Divinity School in 1886, by request of the faculty he translated the Book of Malachi into Choctaw, with a critical and exegetical commentary, a work in which it is safe to say the learned doctors about to try Professor Briggs for heresy will not be able to detect the slightest departure from the strictest orthodoxy.

Of the eight Choctaws now at Roanoke, six are in the regular courses of graduation. Upon the whole, our Indian students have done well at college, and on their return to the Territory have filled various positions of honor and influence among their people, as members of the senate and house of delegates, speaker of the house, interpreter to the house, auditor, national secretary, school trustee, judges, clergymen, teachers, lawyers, etc. While at college they are most kindly treated by the other students and by the people of Salem. White students have chosen Indians as room-mates, and invited them to make visits during the vacation. One of our graduates from the Territory—not a full Indian, however—married a refined white lady in Virginia, who went with him to his home among the Choctaws.

A word more before my time is up. I wish to make my grateful acknowledgments to Mr. Smiley for the pleasure of my being here. An invitation to a previous Indian conference I could not accept; and I was prevented from coming to the conference in June on the negro question—a question in which, as a Southern man by birth, education, and residence, I feel a profound interest—because that conference was held the week before our college commencement. But when I returned from Alaska the 1st of September and found Mr. Smiley's cordial invitation to "Mrs. Dreher" and myself—an invitation too large by "the better half"—I determined to accept it. And I am glad I did, for I have enjoyed the conference exceedingly. In the language of one of our Choctaw students, it is "mighty first rate." Besides my general interest in the question I have kept in touch with the Indians by our work at Roanoke, by visits to Hampton and Carlisle, a week spent in the Indian Territory, several trips across the continent, and a visit to Alaska; but nothing has so quickened my interest as the discussions of this conference. Mohonk is to many a "mount of heavenly rest." To me it will always seem to be a mount of illumination, a Calvary of consecration. In this atmosphere of enthusiasm and devotion to the great cause of Christian philanthropy I have gained new inspiration for my own work; and as I have witnessed this beautiful spirit of consecration I have felt more deeply than ever that, if we are to be at all fit for any part, however small, in the Master's service, it must be when, all the selfish considerations of our little lives being set aside, we enter with loving sympathy and the spirit of helpfulness into the larger life

of humanity, and especially into the lives and needs and crushed aspirations of the less fortunate classes of our fellow men.

Dr. LUCIEN C. WARNER. Almost my only opportunity for observation of the Indian question has been among the Indian tribes of this State. As I read this report by Mr. Garrett, it seemed to me there was an object lesson in it which would be useful to us in the larger question of reaching the Indians of the United States. If we could tell the Indians of the West that seventy-five or one hundred years of civilization would do for them what it has done for these tribes in New York, they would say, No more civilization. The reservations in New York are small. They are surrounded by highly civilized communities. They are well provided with mission and day schools. Education has been provided. The record is that improvement has been slight. In some cases the people have retrograded. There are one or two things that we may specially learn from these Indians. We want to treat the word "education" in its largest meaning. The day school alone does not furnish a full education. With our white children it may, because it is supplemented by the education of the family and home.

But when we take the Indians and put them into day schools, and teach them to read and spell, we are not really educating them. They go right back into their barbaric homes. The children and the young men and women must be educated during the whole day. They must be put into boarding schools where they are guarded and taught all the time; and the outing system, which is undoubtedly the best, must be adopted. Another mistake has been made in perpetuating the tribal relation. If the tribal relation could be broken up in New York and in the whole country it would go very far towards the solution of the Indian question. Let the Indian take his chance, wherever he is. Provide education for him, but do not do too much for him. We are thinking too much of him as an Indian. It is not the Indian, but the man, that we want. It will be well for the country when the tribal relation everywhere is broken up and the Indians are absorbed in the general community. The Indian problem will then be solved.

Mr. W. Townsend, an Indian student from Carlisle, was asked to speak.

Mr. TOWNSEND. I believe in education, because I believe it will kill the Indian that is in me and leave the man and citizen. I believe education will give the Indian the right to vote. I believe in the Indian learning the English language; one people, one language, that is my idea. I contradict the statement that the only good Indian is a dead Indian. The only good Indian is an educated Indian. Only by education can he compete with the white man. Send an Indian into a school, and then let him go back to the reservation, and he turns into an Indian again. Give him a higher education; make him, for example, a doctor, and he will remain a doctor.

A letter from Henry Kendall, a Carlisle student, now in the West, was read by President Gates. Miss Annie Thomas, a Carlisle Indian girl, was asked to speak.

Miss THOMAS. I fear Miss Thomas was not cut out for a speaking girl; but I can tell you a little about myself. I was born among the Pueblos, and I went to Carlisle when I was a little girl. I had lived at the top of a hill, or pueblo, 500 feet high, so that I am an expert at climbing ladders. I am now climbing another kind of ladder. Sometimes it is very hard, but I still keep on climbing. I am now at the normal school at Fredonia, N. Y.; and I hope to reach the top some day and be a "schoolma'am."

The remainder of the session was devoted to a free parliament.

Rev. J. W. HARDING, D. D. I wish to express my firm conviction that, whatever may be the securities of the Dawes bill or the Thayer bill or any other bill, nothing less than the grace of God conveyed by living and daily and loving contact of unselfish lives with the hearts and lives of these poor and weak brethren of ours will ever solve the Indian problem. And my present argument is the experience of the Stockbridge Indians, a remnant of whom, about two hundred, survive on the Showano reservation in Wisconsin. It is a good object lesson. The Massachusetts house of representatives passed an act December 30, 1749, very like the Dawes bill, granting lands in severalty to the Stockbridges, and most carefully guarding their proprietary rights, declaring that "the Indian inhabitants of the town of Stockbridge are and shall be subjected to and receive the benefits of the laws of this Government to all intents and purposes in like manner as others, His Majesty's subjects in this Province."

Now, this act carried with it not only land in severalty and complete citizenship, Stockbridge being laid out as an Indian township, 6 miles square, but also the best thoughts of Gen. Armstrong and Capt. Pratt; for there were also gen-

eous allotments to John Sargent, the missionary, called from a tutorship in Yale College, and ordained to his work at Deerfield, in the presence of Governor Belcher, a delegation from the house of representatives, and a large congregation of townspeople and Indians, Rev. Mr. Appleton, of Cambridge, coming up to preach the sermon. Allotments also were made to Timothy Woodbridge, Indian schoolmaster, and one of the very best, and, moreover, to six English families, selected for their special fitness to be model farmers and housekeepers. And they had an industrial school and a sewing school and "outings." The boys were scattered about among the farmers in various towns, and some of the girls were even sent over to England, and some of the young men to Dartmouth College. Jonathan Edwards was called from Northampton to be their pastor, and by the church of which the Indians themselves were in large majority the members. They proved themselves to be fully equal to the foremost officers of trust both in the church and the town. John Metoxin was a deacon. John Aupaumat was chorister and town clerk. Hendrick Wahponseet was tithing-man and constable. John Metoxin, besides being deacon, was also an assessor and surveyor of highways; and he sat with Capt. Wa-haun-wum-wan-meet on the board of selectmen with Timothy Edwards, Elisha Brown, and Thomas Williams.

In a word, for I see that your gavel is about to fall, these Stockbridge Indians were well on their way to become fully incorporated into the body politic. They would surely have disappeared as Indians, had the salutary influences which prevailed during their stay of forty-nine years in Stockbridge been allowed their just fruition. And, now, why is it that this poor, depleted remnant are to-day eking out a contorted reservation existence at Showano? Why is it that all that remains to trace their once happy and prosperous and promising existence in Stockbridge is a rude cairn of rough stones, their only memorial, save the frame of an old barn, once the timbers of their meetinghouse?

Well, the time only permits me to say two words, "whisky," "covetousness," although there came in the accessories of disturbing and disintegrating wars and the demoralizing contaminations of the camp. Most of these able-bodied men were enlisted, several of them proving excellent officers. But their white neighbors were shrewder than they; and they gradually got them into debt, and finally changed the laws so as to permit them to sell their lands, until their best escape from bankruptcy seemed to be an acceptance of the invitation of the New York Oneidas to share their reservation. And then that powerful corporation, the Ogden Land Company, wanted their lands; and so went on the sad, old story of uprootings and migrations.

But the saddest thing of all was—and the chiefest hinderance—and this is my present point—the loss of that living and daily and loving contact with their earlier Christian and unselfish neighbors, such as the two Sargents, Timothy Woodbridge, and Jonathan Edwards. The latter loved them and they loved him. He did not preach to them hard, metaphysical doctrine, but in the simplest method of familiar catechetical instruction, some of his words being yet extant; and when he was called to the presidency of Princeton College, and had to say farewell to his beloved Indians, he burst into a flood of tears.

Rev. J. J. GRAVATT. There seems to be a growing sentiment against contract schools. In going through the Western country I have seen excellent contract schools that could not have been established otherwise. Something has been said about the principle of the thing. Of course, if they are on a wrong principle they should be stopped. But changes can not be made in a week or a month. We would better move slowly. It will not be long, probably, before they are abolished; but let us have time. Can these mission schools go to-day and get all the money they need, or can they get it to-morrow? When the people are educated to know the best way, I have confidence enough in the religious feeling of this country to believe that they will respond nobly to the work of the Christian school and church.

On motion of Mr. P. C. Garrett, it was voted that speakers should be limited to three minutes.

Prof. J. W. CHICKERING, Washington. I want to speak a word for the children of silence, those who can not speak for themselves. For such white persons we make provision in nearly every State and Territory, but we do not know the numbers of them among the Indians. We only know they exist. We have had two at Washington who went on well with their studies and made good progress. I want to suggest to those present that when they come across these mutes anywhere, they will communicate the fact to the authorities at Washing-

ton, that some provision may be made to send them to schools or institutions for mutes in the States nearest their homes.

Miss E. L. FISHER, of Carlisle. I am very anxious that there should be higher education for our brighter girls and boys. It does not seem to me that the way is quite open for that yet. Miss Thomas was at a young ladies' school in Michigan for two years, almost entirely supported by kind friends there. Now she is at Fredonia, where she is supported largely by funds furnished by Capt. Pratt. In Carlisle we have three young ladies beyond our course, who are at a school in town. Of course, we can give them board and clothes, but there are other expenses that must be paid. One is an excellent musician. She has had many lessons on the piano, and we feel that she should still go on. Then we have boys that we should like to help. I would like to make a strong plea for something to be done by which these brighter ones should have a higher education. We feel that white boys and girls need some help to get on their feet, and Indians need it quite as much. Much has been said with reference to Christian work. We feel very strongly the need of Christian work. We need the spirit of Christ in the heart. One of the questions Capt. Pratt always asks of those applying to be teachers is, "Are you a church member?" He does not say what church, for we belong to many churches; but he considers it necessary that teachers of Indians should be Christians.

Capt. PRATT. I wish it to be understood that we have Catholic teachers and employés there also.

Mr. C. P. CORNELIUS. I am ashamed to say I own a piece of land in the West that I can not manage. I have not a word to say about it. Two years ago, when the Oneida Indians had their lands allotted, I was in correspondence with a farmer, who said if I would get a certain piece of land he would rent it for \$200 a year if I would place a team on it. I agreed to do so. I got a nice farm and paid \$500 for improvements on it. I corresponded with the agent in Wisconsin, and with Secretary Noble and with Commissioner Morgan. They all told me that I could do nothing with this piece of land; that I could not rent it, because I was able physically to farm it; that I must farm it myself or let it lie there for the next twenty-five years. This did not quite suit me, as I am attending school; and, as I am paying my way through school, I could have used that \$500 better than to have it lie there idle. But I have higher aspirations than to tarry on the reservation and farm 45 acres of land. That is one defect in the law. Senator Dawes acknowledged last night that there are a good many defects in the Dawes bill. I am glad that came from him, because now we have a chance to say some things about it.

The law should permit those who are not on the reservations, who can not utilize the land by farming it, to lease it. There is no provision for anyone who is qualified to become a full citizen of the State and of the United States to be allowed to pay taxes. I have other property, worth several times the amount of that land, upon which I am paying taxes, and I feel fully qualified to pay taxes on that piece of land. There are others of the Oneidas who are no more Indians than you are, so far as regards customs of living, and who are fully capable of being citizens. We are citizens of the United States, but not citizens of the State, because when we appeal to the courts of Wisconsin we are not received. The lawyers say, Are you paying taxes? No. Are you citizens of the United States? Yes. Well, then, we have no interest in you. We pay nothing for the cost of trials in the State of Wisconsin, and so the people do not care to have us in the courts. They have no use for us, and we can not appeal to the laws of the State.

Gen. EATON. With regard to the higher education, there is a sum of sixty or seventy thousand dollars for the purpose of higher education for the Indians. Another point is to be kept in mind: that this outing business depends upon the personal choice of families and localities and communities. There is no State superintendent who would differ from Judge Draper about the Indians when placed in different families. They would favor it. I have urged this again and again. I believe that you here have much to do in this direction. You can impress the public with the fact that where an Indian boy or girl is in a district the district school should be open to him as it is to any other child resident in that district. This sentiment, which is growing in the States east of the Rockies, will soon prevail in the States west of them.

Judge DRAPER. Gen. Eaton asked whether Indian children could be received into the public schools of the State, and my answer was, No. The right to attend any school is a statutory right. The statute provides that any resident child of school age, between 5 and 21, shall have the right to attend upon the public school. The one question is whether the child has become a resident. If

the Indian child has been received into the family and become a part of that family, the child, under the statute, becomes entitled to attend the school. But it can not be said that any number of Indian children may move into a district solely for the purpose of attending school there.

Gen. WHITTLESEY. I have been asked to correct a statement that is often made, that the appropriations for the support of schools come from trust funds. Such appropriations do not, to any extent, come from trust funds. I have not the exact figures, but I think less than 10 per cent of the appropriations for the support of schools comes from trust funds.

The draft of the resolutions to be acted upon in the evening session was read. Adjourned at 1 p. m.

## SIXTH SESSION.

FRIDAY NIGHT, October 9.

The conference was called to order after a song by Mrs. Hector Hall. The annual report of the treasurer, Mr. Frank Wood, was read, as follows:

*Frank Wood, treasurer, in account with Mohonk Indian Conference.*

DR.		CR.
To cash received from members of the conference .....	\$543.00	
Interest .....	3.16	
	546.16	
		Oct. 20. By cash paid Isabel C. Barrows, postage .....
		Jan. 15. By cash paid Geo. H. Ellis, printing .....
		15. By cash paid Frank Wood, printing .....
		Feb. 4. By cash paid Geo. H. Ellis, binding in cloth .....
		535.45
		By cash in bank to balance.....
		10.71
		546.16

\*Stamps on hand, 57 cents.

It was moved that the Government be asked to print the proceedings of the Mohonk Conference in advance of its usual publication in the report of the Board of Indian Commissioners, where it always appears.

Referred to the publication committee.

On motion of Mr. Garrett, the publication committee was appointed, as follows: President M. E. Gates, Amherst; Gen. E. Whittlesey, Washington; Mrs. Isabel C. Barrows and Mr. Frank Wood, Boston.

The report of the committee on the Mission Indians was read by Mr. J. W. Davis, as follows:

REPORT OF THE COMMITTEE ON LEGAL ASSISTANCE TO THE MISSION INDIANS,  
1891.

The presence of many new members in this conference makes desirable the statement that a committee has been continued for several years for the furnishing of legal assistance to the Mission Indians.

The first presentation of their interests was to the conference of 1885 by Prof. Painter, after his first visit to them, and a concurrence of influences from Mrs. Helen Hunt Jackson upon the conference of the following year led to the immediate appointment of the committee and the raising of \$5,000 in the conference for its work.

To Mr. Painter and a member of this committee with his wife, all previously acquainted with Mrs. Jackson, she extended a most enthusiastic welcome to her last sick room in San Francisco, when it was to be illumined by her presence only a few weeks longer. The radiance of her face while she talked of "her" Indians, and revealed her longings for a wider, more complete work for them, gave an impression, not so much of intensity of enthusiasm that was consuming her fading strength and would soon be lost as of a glorious fulness that only

needed channels to reach others, to thoroughly enkindle them, and perpetuate itself, till her great purpose should be accomplished.

A visit by us to the Indians to establish personal acquaintance and confidence, so as to continue more effectually her work, involved a return from the extreme north of California, after fulfilling other plans there, and therefore a journey of 1,000 miles and a drive through the hills in the extreme heat of midsummer, and the arguments against it were generously urged by Mrs. Jackson. But to change that wistful, longing look, and that flush of hope that her work might be adopted by others into assurance to her and give restfulness to that closing life was sufficient reason for undertaking it, and soon Mr. Painter and ourselves were testing the reality of the reasons that had been urged against the journey.

A temperature of 106° in the shade proved too much for the full prosecution of the plan, but heralded by a letter from the "Queen," as Mrs. Jackson was named by the Indians, we were warmly greeted by a considerable company gathered at Pala from scattered homes among the hills from a range of many miles.

Report of the little that had been accomplished and the more that would be attempted was borne to Mrs. Jackson and then to you, with the message she sent by Prof. Painter to President Cleveland, and at the same time Mrs. Hiles came with her report of individual work already begun.

In connection with the legal work then initiated personal contact with these people has been cultivated in each of the succeeding years by Mr. Painter, acting in behalf of both the Indian Rights Association and this committee, and by the continuous services of Mr. Frank D. Lewis under your committee, during which he was everywhere known among the Indians as the Abogado (the lawyer) who worked for them without pay, and thus acquired their unlimited confidence and regard. (For instance, whenever he appeared at Warner's ranch he could have the free use of any horse in the village for the prosecution of his work.)

In all this the work has taken in the line pointed out by Hon. Austin Abbott in one of the earlier conferences, the line in which sympathy with a race, so often conceived as sentimentalism, wisely takes the practical and more unmistakable form of uniting help to individuals with the establishment of principles and other broad work for the race. And since the special Mission Indian bill was secured and the Administration blessed the Indians and honored itself in the choice of Messrs. Smiley, Painter, and Moore as commissioners, the same earnest care of individual interests has been given in the journeys and labor of the commission of which we have heard from Mr. Smiley, and which have been continued by Mr. Painter through all the heat of midsummer. The amount of labor bestowed and the fruit from it of settled, peaceful homes in prospect, where there has been so much of wrong and unrest, are easily underrated.

The work of your committee for supply of legal assistance was intended to be supplemental to the limited legal help that could at first be secured from the Government, and during the past year, with such a Government commission at work in the field and Mr. Lewis in the office of special United States attorney caring for the work in the courts, the attitude of your committee has been one of simple waiting for the developments from this enlarged Government effort.

The question naturally arises whether there is any further scope for action by your committee and need of the remaining funds, almost untouched for the year, and therefore accumulating, as follows:

Balance from last year.....	\$1,075.45
Interest on funds for the year.....	63.50
	<hr/>
	1,138.95
Less paid for telegrams on a case of protection of water supply for a village.....	3.45
	<hr/>
Balance on hand.....	1,135.50

The advice of Mr. Smiley confirms the judgment of your committee that this balance had best be held by the conference in reserve for certain contingent needs directly in the line of the original purpose for which it was raised.

The interesting statements of Mr. Smiley and the limits of your time make the presentation of many facts received from Mr. Lewis now undesirable, but one will interest you.

There is an impression that the acreage cultivated by these Indians this year has decreased rather than increased. Mr. Lewis attributes it to the unusual demand for day labor at Redlands, Riverside, and San Jacinto, and by the water

companies; and, even with less acreage, the season has been so favorable and crops so good that there will probably be no shortage in results.

In behalf of the committee.

PHILIP C. GARRETT.  
MOSES PIERCE.  
J. W. DAVIS.

The same committee on Mission Indians was, by vote, continued for another year; namely, Philip C. Garrett, Moses Pierce, Joshua W. Davis.

A letter from Rev. E. E. Hale, D. D., expressing regret at his inability to attend the conference, was read.

On motion, the following resolution was adopted:

Whereas it has been announced that an Indian congress is to be held in connection with the World's Columbian Exposition of 1892, in which the problems of Indian civilization are to be discussed, and where Indians, representing different tribes, are expected to appear and illustrate what American Christianity and civilization have done and can do for the Indian, demonstrating the capabilities of the Indian race, and thus enforcing the consequent duty to afford the Indians the same opportunities that are offered other races under our Government; and whereas an exhibition of this nature, in which thought, moral truth, and the higher aims and acquirements of humanity shall be illustrated, would be of more interest and importance than any material exhibit can possibly be, and would tend to further the cause of Indian civilization,

*Resolved*, That this conference commends the purpose of the proposed Indian Congress, and invites the coöperation of the friends of the Indian in making it a success.

The following resolution, offered by Gen. C. H. H. Howard, was passed:

*Resolved*, That it is the sense of this conference that as rapidly as possible the issue of rations to Indians should cease; that where a treaty exists the amount of food issued be, as soon as practicable, reduced to the minimum, and that where consent of the Indians can be obtained, the rations be commuted to other articles of use needed in civilized occupations.

The platform prepared by the committee appointed for that purpose was then read and discussed. Each section was voted upon separately, and the platform was then adopted as a whole, as follows:

#### PLATFORM OF THE NINTH ANNUAL CONFERENCE OF THE FRIENDS OF THE INDIANS.

In no year since the general severalty bill was enacted have we had occasion to record so important an advance in the administration of Indian affairs. The year is signalized by the fact that the President of the United States has extended the provisions of the civil-service act to over 600 employes of the Indian service—superintendents of schools, teachers, matrons, and physicians—whose appointment and permanency of service will no longer be affected by political influences.

We also heartily thank Congress for the enactment of important laws. By one of these laws provision is made for the compulsory education of Indian children. By two laws the wrongs to the Mission and Round Valley Indians, against which this conference has long protested, have been corrected, and their provisions are now being carried out, so that we may soon expect to see these Indians holding firm titles to their own individual lands. Congress has also made increased appropriations for the education of Indians.

Under the direction and with the sympathy of the President and Secretary of the Interior, the Indian service has had the rare fortune of being conducted by a Commissioner of Indian Affairs whose energetic, courageous, and skillful administration has our heartiest approval.

What has been gained the past year encourages us to renewed effort for further advance. We heartily thank the President and Secretary of the Interior for the partial extension of the civil service to the Indian service; and we ask them to complete their work by putting under the provisions of the same act, so far as possible, all other appointees, including farmers and carpenters, etc., if found practicable, amounting to as many more. And, if it is not thought possible to apply the letter of the civil-service act to the appointment of agents, we would most earnestly ask that the spirit at least of that law be applied in this case also, as it is especially important that their selection be for merit and competency only, and that their tenure of office be not limited by political considerations.

With the same purpose we would call attention to the importance of maintain

ing from one quadrennium to another a consistently wise line of Indian administration. The duties of a Commissioner of Indian Affairs are no more political than those of any agent or teacher. We therefore urge that the responsibility for results in the conduct of Indian affairs be left with him, including a return to the former custom of devolving upon him the selection of agents as well as other employes.

The amount of \$2,216,000 appropriated by Congress last year for the education of the Indian was 20 per cent larger than the amount appropriated in any previous year, but it yet leaves a third of the Indian youth unprovided with schools. We still ask for rapidly increasing appropriations until the Indian school system shall be perfected, and provision made for the education of all Indian youth. We warmly approve the extension of the rational public-school system, so administered as not to restrain the freedom of religious schools supported for the benefit of the Indians.

We look with satisfaction upon the allotments of lands in severalty, but with concern upon the rapidity with which they are being made. In order that public sentiment may not be impeded, that schools may be provided, and that justice may be done adjacent white settlers, we ask Congress to pass a law providing that the Government shall pay all equitable local taxation, or its equivalent, assessed on allotted lands, so long as these allotments remain inalienable, either from proceeds of surplus lands or from the public Treasury.

The legal status of an Indian who holds an allotment in a reservation not yet fully allotted should be speedily decided. Legislation by Congress should provide for easy access to duly established courts of law, and for competent legal advice and service for Indians, during the transition period which must precede their intelligent entrance upon the full duties of independent citizenship. We do not favor the establishment of an elaborate system of special courts for Indians; but we affirm unhesitatingly that legislation to secure immediate and easy access to regularly established courts for legal protection and remedies is greatly needed, and should be by law provided.

The policy of getting the Indians into civilization by keeping them out of civilization has never succeeded, and never will. We therefore commend the policy of mingling the Indians with the whites, by seeking employment for them in Christian families and on farms, by placing them in the public schools in the States, and by encouraging their settlement together.

We regret that we have occasion again to note that the lands of the New York Indian tribes have not yet been allotted, and the tribal system thus abolished. We hope that the State of New York will follow the United States in securing to the Indians within its limits the individual ownership of their lands under some just legislation; and, if for any reason it may be impracticable to at once do this, we urge that the Legislature shall without delay extend the operation of the civil and criminal laws of the State to residents of such reservations, except so far as such laws relate to the ownership of lands.

The public exhibition of Indians in their savage costumes and customs is demoralizing and humiliating, and we ask that no permission be hereafter given to take Indians from the reservations for this purpose.

We protest most earnestly against the removal of the Southern Utes from Colorado, as against their best interests, as involving their pauperization and needless expense to the Government, and as, in our opinion, dictated solely by a desire on the part of the white man to obtain the valuable lands now occupied by these Indians.

Believing that in education lies the chief hope for the future of the Indian people, the conference rejoices in the increased facilities afforded by Government schools, trusts that regulations enforcing the compulsory education law will be so wisely carried out as to allow to Indian parents all reasonable freedom in choice of a school for their children, while still preventing undue solicitation of pupils by rival schools, and expresses its conviction that, as the work of Indian education began with Christian missionary efforts, and has had its strength in mission effort, the Christians of America are called upon to-day more strongly than ever before, by the hearty and generous support of missions to the Indians, to make manifest the supreme constraining force in civilization, that love of Christ, in accomplishing the work that remains to be done for these our fellow-countrymen of Indian descent.

Rev. T. A. NELSON, D. D., of Brooklyn, N. Y., said that his denomination had taken steps to assume the whole support and management of its religious schools as soon as practicable.

Mr. O. E. Boyd said that there had been many discouraging things in connec-

tion with the mission work among the Indians. But what shall we do? he asked. Shall we stop? No. Shall we go on? Yes. Presbyterians believe in the perseverance of the saints. All we ask of the Government and of the friends of the Indian is simply fair play in the transaction of work, nothing more; or fair play and an endeavor to help us as best they can. Give us that, and we will do our part. We are going to give up Government aid as soon as we can. We are going to fight it out on this line until every Indian shall be not only an Indian but a Christian citizen; and let all the Presbyterians and Christians say, Amen.

Rev. PHILIP S. MOXOM. I come before you with a good deal of diffidence, for this is my first visit to a Mohonk conference; but I am very thankful that the opportunity was given me to come. I have been an eager listener and a hard student here. Let me, in the brief time which I may take, turn your thought with mine to a certain aspect which is, after all, the chief aspect of this movement. This conference seizes my imagination, the work you are doing seizes my imagination, and my mind has begun instinctively to see the relations of it to the whole great enterprise of the establishment of the kingdom of God. For hundreds of years the church was engaged with the definition of the metaphysical personality of Christ. Within the last hundred years or a little more, and certainly within the last twenty-five years, the church, as never before in its history, has reached after a true interpretation of the essential Christ, and has been moving into sympathy with him. The whole work of the church manifests that endeavor as never before. It has moved into sympathy with the purpose of Jesus Christ; and, as it has done this, it has become alive. No one can study the religious life of our time without being impressed with this. Constantine, says the old legend, saw a standard in the heavens bearing the figure of a cross and the words, *Εν τούτῳ νικά*—"By this conquer." Whether he really saw it or not, the vision expresses the truth. It is not by the cross as a thing, not as a mere religious emblem, but by that spirit of self-sacrifice which the cross truly interpreted represents, and which was embodied in Jesus Christ as in no one else in the history of the world, that we accomplish every reform affecting the moral life of man.

One day last summer I stood in High Holborn, in London. The street was crowded with all sorts of vehicles, so that one could cross only at the peril of life or limb. As I was crossing on that day last summer there came a sudden hush, and everything stopped. I looked up to see the cause of this remarkable pause in the hurry and roar of that street. And there, on either hand I saw brawny policemen grasping the horses' heads and holding them back. Everything stopped dead still. That mighty current of life seemed to have felt a power like that which divided the Red Sea. I wondered, and looked about; and at my side was a little carriage on four wheels, and in this carriage lay a young girl, perhaps 15 years old; but so pallid and frail, and a woman was pushing the carriage across the street, and all the business of that street had stopped for that weak, helpless child! A happy smile played upon her pale face as she passed me, and I had a vision. It seemed as if I saw Him of Nazareth standing there with outstretched arms shielding one of his little ones.

Wherever there are want and ignorance and weakness, there we find the Master. Jesus Christ has identified Himself with the helpless and the poor. We are beginning to feel the pulse of His heart and to catch the wisdom of His insight. And just in proportion as we do that, whatever the detail of our methods, we shall be successful in our work; and only as we do get into sympathy with the heart of Jesus Christ will our work be successful and permanent.

So I say that all the enginery of legislation and the machinery of law are valuable. I believe in the worth of these, and I believe in getting the best we can; but underneath all this we must, more and more, put the spirit of Him whom we delight to honor as our Lord into this work on behalf of the Indians. In proportion as we do this shall we draw them to ourselves and to Him, and we shall lift them into the capacity of citizenship, not only in the Republic of the United States, but also in the kingdom of Almighty God.

Rev. J. M. HARK, Pennsylvania. I am glad for all that has been done in the line of legislation in the shaping of public opinion and in the means being used in this work. But the mighty thing, after all, is personal, individual, devoted work for our red brothers and sisters. All that we desire or pray for can be done. I was present at Carlisle at the graduation of an Oneida girl. I heard her make one of the most remarkable addresses I ever heard from any girl. She is now at home, teaching in a reservation school. She has just sent twelve of her scholars to Carlisle, and has twenty-five more in her school. She writes that she wants the prayers of her Indian associates at Carlisle and at Lancaster that she may be

a better woman, that she may more abundantly show forth the love of the Master to the young hearts entrusted to her care. She is full of Christian devotion.

Mr. Hark closed by narrating incidents about several other Indians who had become Christian missionaries and teachers, thoroughly devoted, judicious, filled with enthusiasm and with good practical common sense, which are as necessary in missionary work as anywhere else.

Gen. O. O. HOWARD. The white people are around the Indian reservations, waiting for them to be opened. Selfishness, greed, and liquor are brought in upon them. I have visited every State and Territory except one, and also Alaska, and I can say this: An Indian does not accept the civilization about which we talk until he is converted. I asked Capt. Pratt if they had yet become Christians, and he speaks of members of the church. But I asked, do not they take a Christian's view of things? And with few exceptions he says they do. We do not want to put our whole stress upon secular schools. I am in favor of common schools as much as anybody; but I have a great deal of solicitude about excluding the Scriptures from the schools—the last book that ought to be excluded from any place. You do not exclude Virgil. Would you repress this advance by the Government in compelling Indians to go to school? No; the more teaching, the better; but, as the Government multiplies its work, Christian brethren multiply your work. The help from the Government may have been a little paralyzing. I rejoice as the Presbyterians come forth and say they will give up the Government money; and I hope, when good Presbyterians die, that they will leave their money for the pushing on of this work.

When I was in the Freedmen's Bureau, we used to put a dollar of the Government money with a dollar of missionary money, and help the American Missionary Association and others to do a good work. The old people should not be neglected and forgotten. I saw an old man in Arizona, named Santo, a man with hardly any clothing on, connected with the chief family of the tribe. "Santo," I said, "I have a Father up yonder, and you have; and your Father and mine are the same being. We must be brothers." Tears ran down the old man's cheeks as he gave me his hand. The tribe had never sent a delegation to Washington, and he was the first man to say he would go. His heart was changed. From that time on until he died he was earnestly in favor of our civilization and did everything he could for it. It is the change of a man's heart that we want, and I do not know anything that will do that but Christian influences. Sustain contract schools as heartily as you can, and, when Government aid is withdrawn, have the contributions enlarged and seek a greater work every day until the whole field is covered.

The Chair appointed the following persons as a special committee on legislation, in accordance with a resolution offered by Mr. Garrett: Mr. P. C. Garrett, of Philadelphia; Judge William Strong, of Washington; F. J. Stimson, of Boston; and Austin Abbott and Darwin R. James, both of New York.

The following resolution was offered by Rev. J. G. Van Slyke, D. D., of Kingston, N. Y.:

*Resolved*, That the members of the ninth conference, gathered at the Lake Mohonk Mountain House to consider the interests of the American Indian, give emphatic expression in this hour of adjournment to their appreciation of the generous and beautiful hospitality of their entertainers, Mr. and Mrs. Albert K. Smiley, who have contributed in almost every conceivable way to the pleasure and profit of their guests. In this expression we desire to include our sense of the value of the counsels and influences which have so materially promoted the welfare of the Indian, and which have proceeded out of this parliament of philanthropy, due to their creative and molding hands.

Dr. VAN SLYKE. In offering this resolution, I feel disposed to compare this conference, on this mountain height, to some of those glittering peaks of the Sierras which materialize the vast loads of snow. The moisture of the Pacific breathes against those heights, and out of them proceed the streams that irrigate the vast plains of California. So some of the finest intelligence and moral spirit and philanthropic zeal of this country, under the magic wand of Mr. and Mrs. Smiley, like trade winds, seem to have converged upon this spot, and deposited themselves in counsels and influences and plans which shall go forth to irrigate the barrenness and sterility which have hitherto characterized the condition of the Indians in this country.

Our immediate problem is to put the Indian into some homogeneity with ourselves, and it is an imperative problem. Our population is sweeping on and obliterating reservation lines. The Indian can no longer be maintained in isolation, and it is not desirable that he should be. He must become part of Ameri-

can life, and be directed by the forces of American and Christian civilization, and become part of it, so that he shall cease to be a foreign ingredient. As such he will be crushed and overborne; but make him an actual participant in our political, social, and moral life, and, like the Germans and Scandinavians, he will become a genuine element in our civil life. We must forget that the Indian is an Indian, and regard him as having all the potentialities of a man. The members of this Mohonk Conference are the schoolmasters of the nation.

Rev. Francis Tiffany, of Cambridge, Mass., seconded the resolution in a happy speech.

Mr. SMILEY. I thank you for the kind expressions which have been made. I am rejoiced that so many have come and have made this conference such a success. I always think the last is the best. We have had reports from the field from devoted men engaged in the work, discussions have been sharp and instructive, and the conclusions sound and measurably unanimous; and I feel that much good has been done.

The man is here at whose house this conference was organized. When I was at Santee, Dr. Strieby, Mr. Riggs, Dr. Ward, Bishop Hare, Mr. Williamson, Gen. Whittlesey, myself, and others took about three days to discuss the Indian question in reference to the Sioux. It was so profitable that I said, I invite you to spend a week with me; and I will get together a company of men to talk the whole thing over with you, and Mr. Riggs is the one who is really responsible for this conference. When we had the first conference, I saw that we needed a second, and now this is the ninth, and we need another. I wish you a pleasant return home, and a return here at our next conference.

The resolution of thanks was adopted by a standing vote.

A resolution of thanks was voted to President Gates for his courtesy and service, the doxology was sung, and the conference adjourned.

## LIST OF MEMBERS.

- Avery, Miss Myra, 137 Academy street, Poughkeepsie, N. Y.  
 Bailey, Mrs. Hannah J., superintendent World and National Woman's Christian Temperance Union, Department of Peace and Arbitration, Winthrop Center, Me.  
 Banks, Rev. Louis Albert, pastor St. John's Methodist Episcopal Church, 88 G street, South Boston, Mass.  
 Barrows, Mrs. Isabel C., The Christian Register, 141 Franklin street, Boston, Mass.  
 Barstow, Hon. A. C., Board United States Indian Commissioners, Providence, R. I.  
 Barstow, Mrs. A. C., Providence, R. I.  
 Bergen, Mr. Tunis G., 127 Pierrepont street, Brooklyn, N. Y.  
 Bergen, Mrs. Tunis G., 127 Pierrepont street, Brooklyn, N. Y.  
 Blight, Rev. Robert, chaplain Indian Department, Lincoln Institution, 324 South Eleventh street, Philadelphia, Pa.  
 Boardman, Rev. Dr. George Dana, pastor First Baptist Church, 3827 Walnut street, Philadelphia, Pa.  
 Boardman, Mrs. George Dana, 3827 Walnut street, Philadelphia, Pa.  
 Bolles, Mr. E. L., Union League Club, New York, N. Y.  
 Booth, Mr. Frederick A., 39 West Tenth street, New York, N. Y.  
 Booth, Mrs. Frederick A., 39 West Tenth street, New York, N. Y.  
 Boyd, O. E., recording secretary Board of Home Missions of the Presbyterian Church in the United States of America, 53 Fifth avenue, New York, N. Y.  
 Braislin, Rev. Dr. Edward, pastor Washington Avenue Baptist Church, 306 St. James street, Brooklyn, N. Y.  
 Bridgman, Rev. H. A., managing editor the Congregationalist, 1 Somerset street, Boston, Mass.  
 Bruce, Rev. James M., editor the Examiner, 38 Park Row, New York, N. Y., and Yonkers, N. Y.  
 Bullard, Mrs. Stephen H., president Massachusetts Indian Association, 149 Beacon street, Boston, Mass.  
 Burgess, Miss M., Indian industrial school, Carlisle, Pa.  
 Callahan, Prof. Henry White, principal Kingston Academy, Kingston, N. Y.  
 Capen, Dr. Frank S., principal State Normal School, New Paltz, N. Y.  
 Capen, Mrs. Frank S., New Paltz, N. Y.  
 Chickering, Prof. J. W., National Deaf-Mute College, Kendall Green, Washington, D. C.

- Chickering, Mrs. J. W., Kendall Green, Washington, D. C.  
 Christensen, Gen. C. W., president Brooklyn Trust Company, Brooklyn, N. Y.  
 Christensen, Mrs. C. T., Brooklyn, N. Y.  
 Cleaveland, Miss Abby E., first vice-president, Poughkeepsie Indian Association, Hudson River State Hospital, Poughkeepsie, N. Y.  
 Cook, Miss Emily S., Indian Bureau, Washington, D. C.  
 Coppock, Mr. Benjamin S., superintendent Chilocco industrial school, Chilocco, Ind. T., Arkansas City, Kans.  
 Coppock, Mrs. Benjamin S., Arkansas City, Kans.  
 Cornelius, Mr. Chester P., Oneida Indian, assistant disciplinarian Indian industrial school, Carlisle, Pa., and student Eastman's Business College, Poughkeepsie, N. Y.  
 Crannell, Mrs. W. Winslow, president Albany Indian Association, 9 Hall Place, Albany, N. Y.  
 Davis, Mr. Joshua W., vice-president Boston Indian Citizenship Committee, 460 Center street, Newton, Mass.  
 Davis, Mrs. Joshua W., 460 Center street, Newton, Mass.  
 Davis, Dr. Robert T., Fall River, Mass.  
 Dawes, Miss Anna L., Pittsfield, Mass.  
 Dawes, Hon. H. L., United States Senate, Pittsfield, Mass.  
 Dawes, Mrs. H. L., Pittsfield, Mass.  
 Denison, Mrs. C. H., Williamstown, Mass.  
 Draper, Hon. A. S., superintendent public instruction of State of New York, Albany, N. Y.  
 Draper, Mrs. A. S., Albany, N. Y.  
 Dreher, Julius D., president Roanoke College, Salem, Va.  
 Drury, Rev. Dr. J. B., managing editor the Christian Intelligencer, 4 and 6 Warren street, New York, N. Y.  
 Drury, Mrs. J. B., 4 and 6 Warren street, New York, N. Y.  
 Dunbar, Prof. John B., Bloomfield, N. J.  
 Dunbar, Mrs. John B., Bloomfield, N. J.  
 Du Bray, Mr. J., Indian pupil, Normal and Agricultural Institute, Hampton, Va.  
 Eaton, Gen. John, president Marietta College, Marietta, Ohio.  
 Elliott, Mrs. Elizabeth, president New York Branch Woman's Indian Association, 607 Lexington avenue, New York, N. Y.  
 Field, Mr. Franklin, 81 Grant street, Troy, N. Y.  
 Fisher, Miss E. L., Indian industrial school, Carlisle, Pa.  
 Fisk, Mrs. Clinton B., Rumson Hill, Seabright, N. J.  
 Fisk, Mrs. James C., 32 Quincy street, Cambridge, Mass.  
 Foote, Miss Kate, president Indian Association, Washington, D. C., and also Guilford, Conn.  
 Fountain, Mr. Gideon, 153 East Sixty-second street, New York, N. Y.  
 Fountain, Mrs. Gideon, 153 East Sixty-second street, New York, N. Y.  
 Frye, Mrs. Myra E., president of the Maine Indian Association, Woodfords, Me.  
 Gallup, Mrs. J. C., president Woman's New York Synodical Committee of Home Missions, Clinton, Oneida County, N. Y.  
 Galpin, Mr. S. A., secretary of the New Haven Indian Rights Association, New Haven, Conn.  
 Garrett, Hon. Philip C., member of Board of United States Indian Commissioners, Logan Postoffice, Philadelphia, Pa.  
 Gates, Merrill E., LL.D., president Amherst College and chairman Board of United States Indian Commissioners.  
 Gilman, Miss Clarabel, secretary Jamaica Plain Indian Association, 8 Harris avenue, Jamaica Plain, Mass.  
 Gilman, Rev. Dr. Edward W., general secretary American Bible Society, Bible House, New York, N. Y.  
 Given, Mr. James B., Indian industrial school, Carlisle and Eastman's Business College, Poughkeepsie, N. Y.  
 Goodwin, Mrs. W. W., 5 Follen street, Cambridge, Mass.  
 Gravatt, Rev. J. J., Normal and Agricultural Institute, Hampton, Va.  
 Greene, Mr. J. Evarts, member of Boston Indian Citizenship Committee, Worcester, Mass.  
 Gregory, Miss L. Gertrude, 325 Clinton avenue, Brooklyn, N. Y.  
 Hall, Rev. C. L., missionary Fort Berthold Mission of American Missionary Association, Fort Berthold, N. Dak.  
 Hall, Rev. Dr. Hector, pastor Second Presbyterian Church, Troy, N. Y.

- Hall, Mrs. Hector, Troy, N. Y.  
 Harding, Rev. Dr. J. W., editor Springfield Republican, Longmeadow, Mass.  
 Harding, Mrs. J. W., Longmeadow, Mass.  
 Hark, Rev. J. Max, pastor Moravian Church, Lancaster, Pa.  
 Hark, Mrs. J. Max, Lancaster, Pa.  
 Hooker, Mrs. B. E., Hartford, Conn.  
 Howard, Gen. C. H., editor Farm, Field and Stockman, 156 and 158 Washington street, Chicago, Ill.  
 Howard, Mrs. C. H., Chicago, Ill.  
 Howard, Rev. Dr. George A., Catskill, N. Y.  
 Howard, Mrs. George A., Catskill, N. Y.  
 Howard, Gen. O. O., major-general United States Army, Governors Island, N. Y.  
 Hubbell, Rev. Dr. Wm. S., 379 Pearl street, Buffalo, N. Y.  
 Huizinga, Rev. Dr. A. H., pastor Reformed Church, New Paltz, N. Y.  
 Huizinga, Mrs. A. H., New Paltz, N. Y.  
 Ives, Miss Marie E., P. O. Box 1065, New Haven, Conn.  
 Lee, Mrs. Frances H., 14 Chestnut street, Salem, Mass.  
 Longwolf, Miss Hattie, Indian pupil, Indian Industrial School, Carlisle, Pa.  
 Lyon, Hon. William H., member Board United States Indian Commissioners, 170 New York avenue, Brooklyn, N. Y.  
 Lyon, Mrs. William H., 170 New York avenue, Brooklyn, N. Y.  
 MacArthur, Rev. Dr. R. S., pastor Calvary Baptist Church, 358 West Fifty-seventh street, New York, N. Y.  
 MacArthur, Mrs. R. S., 358 West Fifty-seventh street, New York, N. Y.  
 McCabe, Rev. C. C., corresponding secretary Missionary Society of the Methodist Episcopal Church, 150 Fifth avenue, New York, N. Y.  
 Meserve, Mr. Charles F., superintendent Haskell Institute, Lawrence, Kans.  
 Meserve, Mrs. Charles F., Lawrence, Kans.  
 Nelson, Rev. Dr. Thomas A., 48 Eighth avenue, Brooklyn, N. Y.  
 Nelson, Mrs. Thomas A., 48 Eighth avenue, Brooklyn, N. Y.

 Wortman, Mrs. Denis, Saugerties, N. Y.

*JOURNAL OF THE TWENTY-FIRST ANNUAL CONFERENCE OF  
THE UNITED STATES BOARD OF INDIAN COMMISSIONERS  
WITH REPRESENTATIVES OF MISSIONARY BOARDS AND IN-  
DIAN RIGHTS' ASSOCIATION.*

WASHINGTON, January 7, 1892.

The annual conference of the Board of Indian Commissioners, with secretaries of religious societies in charge of missionary and school work among the Indians, of Indian Rights' Association, and others, convened at 10 a. m. in the parlor of the Riggs House.

Prayer was offered by Rev. F. F. Ellinwood, D. D. President Gates, in calling the meeting to order, said:

We regret the absence of Gen. Whittlesey, whose presence has not only provided for the smooth flow of business, but has been a benediction among us. He is recovering from a severe illness, and is not able to be here. In his absence we shall elect a temporary secretary.

On motion of Mr. Philip C. Garrett, Dr. Sheldon Jackson was elected secretary *pro tempore*.

President GATES. We welcome to this conference, which has come to be annual, the secretaries of religious societies and workers in the field. A year ago we met under profound gloom. The disturbances in Dakota were at their height. You will remember how grave and serious were the questions that faced us. I think the whole history of that disturbance in Dakota is most encouraging. As we review the events of the year it becomes manifest that education and Christianization held the main part of the tribe from being drawn into an attitude hostile to the Government at the time of the excitement. That ought to lead us to feel, that when we gather to consider questions of educational policy and of Christian mission work, we are concerning ourselves with the vital principles that are to civilize the Indian. We are in the realms of principles, a realm which is always serene, where sunshine is constant.

When a body of men and women, no matter how small, resolve to see that righteousness is done, that it is worked into our institutions and laws, when we meet and resolve to secure the rights of our fellow men and to help the helpless, defeat is impossible. We may continue to be for a longer or shorter time in the minority, so far as special details are concerned; but our ultimate triumph is assured from the beginning. In that spirit we meet.

Within the last year Mr. Darwin R. James, whom we came to know and honor as a member of Congress, and who, as a member of the House, used to meet with us in these conferences and showed a deep interest in all right measures for the Indians, has been appointed a member of the Board of Indian Commissioners, and we are glad to welcome him here this morning. The President has also appointed to our Board another gentleman, who has long been devoted to this cause, Mr. Elbert B. Munroe, chairman of the board of trustees of Hampton Institute. He meets with us this morning for the first time. It is a good omen that at this time, when Gen. Armstrong is absent, and his illness throws a shadow over the Indian work, the president of his board of trustees takes his place among us in this work. We recall Gen. Armstrong's words to us at New York, some years since, when it had been apparently demonstrated that certain greatly needed reforms could not be secured, that it was impossible to have civil-service regulations extended to the Indian service, Gen. Armstrong sprang to his feet and said, "Of course it is impossible to do this, but what are Christians here on earth for but to do what is impossible!" It seems to me that Providence may have extended Gen. Armstrong's lease of life to demonstrate that to us. It is a matter of rejoicing that he is as well as he is. A dispatch reaches us this morning, through Mr. Munroe, saying that Gen. Armstrong has reached his home in safety. He can not work for a long time to come; let us hope that he will never be allowed to work again as hard as he has done for these last years.

Not only have we occasion for gratitude that the disturbance in Dakota passed away with no more serious results, but we meet for the first time with civil-service regulations extended over the Indian service, to go into effect the 1st of

March. The employes who come under these provisions are the superintendents of schools, assistant superintendents, matrons, teachers, and physicians, covering about seven hundred employes out of three thousand. This is an important reform. This means that if the Administration changes, if the complexion of political majorities changes, there will not be a total overthrow of all that has been accomplished. We need to ask to have civil-service regulations extended so as to cover the appointments of the Indian agents. That is regarded too much as a matter of Senatorial prerogative. Where appointment is by the President, confirmation is by the Senate. We have to face the spoils system which has entrenched itself behind so-called "home rule," which means that Senators are virtually to have the appointment of Indian agents in the State they represent. There is no safety to our work until we reach a degree of certainty of tenure for good agents which we have not yet reached. Under one Administration which was favorable to the Indians, under a President who earnestly wished to do the best thing possible for the Indians, the pressure of partisans was so effective that there were changes of fifty-three out of fifty-eight agents within four years, and this while the head of the nation had at heart the best interests of the Indian service. You see how difficult it is to secure reform under such conditions. Let us, grateful for the reforms we have secured, ask for still more. Let us ask particularly and strenuously that the appointment of agents may be made more carefully, and that there be less chance of the removal of good agents.

I remember that Capt. Pratt used to tell his Indian boys if they wanted to become citizens of the United States there was only one way to do it. There is no one who can tell us what an Indian is. His civil and political status is not fixed. While anyone else in the world might become a citizen of the United States at that time, those who had in their veins the blood of the Indian, in the truest sense "Americans," could not possibly become citizens. Capt. Pratt, after taking a party of his Indian boys down the harbor at New York, where they could see an emigrant ship coming in, perhaps bringing in 1,600 immigrants who could become American citizens, advised his Indian boys, if they wished to become citizens of the United States, to steal out in the night, and charter a rowboat, and, rowing down the bay, to get aboard the incoming emigrant vessel. To-day we have 16,000 native-born Indian citizens of the United States, and 4,000 more who have made application, who will soon be citizens. This fact indicates hopeful progress along that line.

The vast domain of land occupied by the Indians must be cut up. If we remember that 104,000,000 of acres of land (a territory two-thirds as large as that of France or Spain) are held by the Indians in nominal occupancy, we shall see that before titles to that land should be confirmed to the Indians forever to be held by them to rove over while the game they used to hunt has disappeared, we need to consider what is true tenure of land—what gives a title to land. Let no one understand me as opposed to giving compensation for unused land which we take by agreement from the Indians. They can not hold all this land perpetually outside the sphere of civilization. Twenty-one million acres out of the 125,000,000, with the assent of the Indians, have been put back into the public domain and opened to settlers within the last three years. But we must go further in considering the rights of the Indians. The question has come up, whether in the future the money to be received by Indians from the sale of their unused land shall be divided among the Indians per capita. It seems to me that it would be better to build up a fund that may be used in place of taxes to bring courts and schools and roads within the reach of the Indians during the the period while their land is held by a protected title and remains untaxed. I have no doubt this question will receive full attention from the friends of the Indians.

Let us pass to the subject of Christian education. In 1819 (as the Commissioner has reminded us in his able, scholarly, and statesmanlike report) the Government made its first appropriation of \$10,000 for education, industrial and Christian education. The appropriation for this purpose was not materially increased until Commissioner Price came in. He found it \$75,000. In 1881 he left it nearly a million dollars. Commissioner Morgan has steadily pushed forward that good work. We rejoice that we have at the head of this work a Commissioner who emphasizes the importance of education. He clearly declares the line of action which he believes the Christian people of this country should take. There is a strong demand for Christian and missionary effort in order to bring the Indians under the sway of civilization in the highest and best sense.

I will now call upon the different representatives of the religious bodies which support missions and schools among the Indians to report for their respective

associations. And first we shall hear from Dr. F. P. Woodbury, of the American Missionary Association.

Dr. WOODBURY. We have gone forward steadily through the past year. I had the privilege of spending a month in Dakota in inspecting our work there. I went first to Berthold, where we have carried on work for seventeen years. I was impressed there with one fact which attended me throughout the journey, and that is the momentum of influence that a man of probity can have with these people when it is extended year after year. Mr. Hall, who went from the Broadway Tabernacle seventeen years ago, has worked steadily in Dakota all these seventeen years. I found his word and presence went a great ways. The Indians had confidence in him. They came to him for consultation. The Indians are ready to give this confidence when it is deserved. I remember one instance that was related to me. They had claims for the taking of their ponies on one occasion, but they had only a rude way to estimate the number taken. Each one put in as many kernels of corn as he had ponies. Then they took a long journey to find a man in whom they had perfect confidence to count them up. At last they came to one, and they said, "Thomas, we know you and we know you will count true; we know you will not lie. Take this bag of corn and count it, and whatever you say it is, *it is*, and we will present that number to the Government." And he counted it up and made up their claim, and they were abundantly satisfied.

At Berthold I found an industrial work going on and a willingness to work among the Indians. I went to Standing Rock Agency and I am persuaded that the difficulties which arose there have not only been settled but they have resulted in openings not found before. The relatives of those who engaged in the hostilities are now in school under the immediate influence of Christian education. There as elsewhere I found an obstacle in the system of distributing rations, where the people had to leave their homes once or twice a month and take a journey of two or three days to get these rations. The establishment of sub-agencies to prevent this will be a great benefit. It will prevent the Indians coming together in great crowds. I went down to Santee, where our main educational work and industries are carried on; blacksmithing, carpentering, painting, printing, and everything was going on well. I also visited the Rosebud Agency and some of the schools in Nebraska.

There is present one of our teachers from Alaska, who can tell us of the work there.

President GATES. Last year Dr. Jackson told of two young men who were left as teachers just outside the arctic circle, 46 miles from Asia, where they were to face savage surroundings, with no chance of communication with white men, for six months. One of them is here and I am sure we shall all be glad to hear from Mr. Thornton.

Mr. H. R. THORNTON. I was in Alaska, at Cape Prince of Wales, for about fifteen months. I have returned here for the winter and expect to go back to Alaska in the spring. My colleague, Mr. W. T. Lopp, and I were thrown into very intimate daily contact with the people in the schoolroom, in the Sunday school, in their houses, where we visited them socially, to doctor them, and for business purposes, and in hunting with them, which we did not only for the sake of exercise, but because we knew that it would give us great influence with them. They live by hunting and fishing entirely, and of course their test of a man's manhood is his ability to acquit himself tolerably well in that direction. I mention the time and circumstances because I want you to feel that I know what I am talking about.

I want to speak first of some important reforms that we think should be made. We found the natives very peaceable, intelligent, and I may say very virtuous, their moral code being essentially the same as ours. Their morality compares favorably with the morality of uneducated white men of this country. We succeeded beyond our fondest hopes in teaching them English and in making some slight beginning toward civilization and Christianization. We have no doubt that on account of the character of the people they can be civilized and Christianized within a much shorter time than many other heathen tribes, and we feel sure that they will amply repay all the time and labor and money that may be expended for their benefit.

The gravest danger that threatens the people is the liquor traffic. There is a stringent law against it on the statute books of the United States, but for some reason or other it has not been enforced strictly. The liquor, the whaler's trade, is the very vilest, cheapest, and most poisonous that is made. Under its influence the natives are more like maniacs than ordinary drunken men. Even a

man of strong nerve coming in contact with them has a feeling of shuddering repulsion, as if in coming in contact with a lunatic or idiot. I have seen drunken women crawling on all fours, uttering beastlike sounds, and drunken men mouth-ing and ranting and carrying on in a beastlike way. I think it is due to the quality of the liquor and that white men would be reduced to a similar beastly level if they drank the same stuff. This debauches the people morally and physically. Unless stopped it will effectually prevent their becoming civilized. If we can put an end to it we think that with a little help from the Government the people will be able to provide themselves with the appliances of civilized life. Their property consists of furs, walrus, ivory, and whalebone, and the more of these they have the more desperate their condition will become unless the traffic is stopped, because it will enable them to buy more liquor. We thought it was a part of our duty, and a great pleasure too, to take steps to help these people in temporal affairs as well as educationally and spiritually. We have plans under consideration, especially with regard to the whaling industry, to provide modern whaling apparatus, and we hope in future they will be able to get several whales in a season. The whalebone of one whale is worth from four to eight thousand dollars; a few whales, therefore, will enable them to provide themselves with household furniture, flour, cloth, tools, and all the appliances of civilized life they need so much.

The condition of things since we have been there, and we have reason to believe it has been so for several years, is this: The whaling ships get up there between the 1st and 15th of June. Last year the revenue cruiser arrived the 5th of July, the year before not much earlier. In other words, the whalers are there from two to four weeks before the cruiser and they get their trade with liquor in before the officers arrive. Most of it is traded on the Siberian coast, but our natives go over and get it at various points on that coast. I think it will be feasible to send the cruiser up earlier. If that could be done and the whaling ships could be searched before they get up to our section of the country it would be a good thing. I hope this plan will receive due consideration from the proper authorities. Possibly that can not be done. It may be necessary to secure the co-operation of Russia and the Sandwich Islands. According to the law, as I understand it, our revenue cruiser has no right to search even an American vessel in Russian waters; so she can trade as much liquor there as she wants to, and indirectly that comes, as I have said to our natives. Much of the liquor is taken on at the Sandwich Islands, and if anything can be done to prevent that, it should be done. I have been told that there is need of a more stringent watching of the whaling vessels in taking on cargoes at San Francisco. I have reason to suspect that liquor is sometimes smuggled aboard there.

It is impossible for me to give you any idea of the condition of abject poverty in which these people live, in underground houses, sitting on the floor, eating with their fingers. They get a little flour from the whalers, but for ten months they are without flour or other farinaceous food and they live almost entirely on fish or flesh. The parents come to us and tell us their children are crying for bread, either because their systems demand that kind of food or because, having got a taste of it, they want more. We carried up a little extra supply and we always furnished it under these circumstances.

We do not want the United States Government to support this people outright, as it has done in times past for some of the Indians in the United States. We do not want their manhood and self-respect destroyed. We feel sure that with a little help from the United States they will be able to get for themselves, through our help, the appliances of civilized life. It will be a great deal better to do that than to make paupers of them by supporting them outright.

There is a law against trading breach-loading rifles and fixed ammunition to Indians, and it is considered illegal to trade such arms and ammunition to the Eskimos. That should be repealed at once so far as they are concerned. We hunted with them very often, and we feel sure that the rifle is as necessary to the Eskimo as a plow to the farmer. As a matter of fact, the United States officers in that section recognize the un wisdom of the law and no attempt is made to enforce it. We took an accurate statement of the possessions of the people. There are between five and six hundred natives in our village, and they have 132 guns and among them 67 breach-loading rifles, so the law is practically disregarded. But the breaking of any law is always a bad thing and exercises a bad moral effect on the people. Besides, that law may be made an engine of unrighteous oppression. A Government officer might take up any man for trading rifles, although he knows that plenty of people do trade them. He may say, "I did not find these other people trading them and I did find this fellow."

I want to indorse as heartily as possible the movement that was made last year for introducing domesticated reindeer into Alaska. In winter the game is found on the floating ice-fields. When the wind blows on shore it is safe hunting, but if it blows off shore and the hunter is too far out to get back to the stationary ice in time, or does not notice the change in the wind, he is carried off and suffers a terrible lingering death from cold and starvation, or the ice is broken up by storms and he is drowned. The people gave us the names of sixteen men who have perished in this way within the last ten years. We ourselves came very near being carried off and four parties of natives were carried off last winter. In three cases they were seen in time and a canoe rescued them. In the fourth case they were too far up the coast and it was near nightfall. We offered the natives our canoe to go for them, but they said it was no use; they must be left to their fate; it was too dark. We prayed for their safe return, and providentially during the night the wind changed and blew the ice back and they escaped. An unusually long spell of weather when the winds blow off shore is very bad. Our natives were nearly reduced to starvation last winter on that account. They had to live by chewing little bits of walrus hide, which is about like chewing a rawhide whip. It may happen at any time that an unusually long spell of unfavorable weather may occur and some of the Eskimos will actually starve. So you see the absolute necessity for an auxiliary food supply such as would be furnished by the reindeer. Then, the skins are useful for clothes and bedding. The reindeer can be used for drawing sledges, too. In all these respects they are useful.

I have been told that some six or eight years ago, when walrus hides and ivory were rather higher priced than now, quite a number of vessels engaged in the business of killing walrus, and they killed them out so that the supply is very much diminished. Last year our natives secured only 109 during the whole season. They told me that they used to get from six to seven hundred. It may happen that any time the demand for walrus hide and ivory will be such as to induce American whalers to repeat that performance. In that case, if the destruction goes any farther, the people will necessarily starve, because the walrus is not only useful as food, but the skin is indispensable for their boats. The only timber they have is driftwood. With this they make a light framework which they cover with walrus hide. If the walrus are killed off they will not be able to have boats for whaling and sealing, and can not go about to different places for their living, as they now do in certain months. About nine-tenths of the people go away in summer to get fish enough to live on.

My own idea is that the time has come when the walrus and whales should be protected by the Government as it is proposed to protect the seal, not only for the benefit of the natives but for the benefit of future generations of whites. If the destruction of the whales goes on as it has been going on, the time is not far off when they will be virtually exterminated. It will be much wiser to take the matter in time by limiting the number of seals and whales and walrus to be killed, and allowing the species to be propagated for the benefit of posterity.

These, then, are the points that we wish to have considered: First, the whisky traffic should be suppressed; second, the law against rifles should be repealed; third, every good man should give his support to the introduction of domesticated reindeer into Alaska; fourth, American whalers should not be allowed to kill the walrus.

Mr. S. F. TAPPAN. Do the natives make whisky of molasses?

Mr. THORNTON. I think not last year; but we were informed that they had made whisky of molasses and flour, and that the whaling captains taught them that art. They have no native liquors of their own.

Gen. JOHN EATON. Has there been any judicial decision that the law about selling rifles to Indians applies to the Eskimos?

Mr. THORNTON. I have been informed that it is against the law.

Mr. J. J. Janney, of the Society of Friends, was introduced.

Mr. JANNEY. We have no formal report to make here. All the details of our work are in the report of the society, which will be given to your secretary. We feel greatly encouraged with the result of the experiment we have made in coöperation with the Commissioner with reference to the employment of field matrons to teach the Indian women the art of housekeeping. With one exception, that work is to be continued. We feel like invoking the influence of those who can exercise it over members of Congress to secure appropriations for doing more of this work the ensuing year.

On motion of Gen. Eaton, the chairman appointed a business committee of five, consisting of the following persons: Hon. Philip C. Garrett, Hon. Darwin R. James, Dr. F. F. Ellinwood, Mrs. A. S. Quinton, and Dr. J. R. Rankin.

At the request of Dr. Ellinwood, his name was dropped, and that of Dr. Sheldon Jackson was substituted. The committee was asked to meet immediately on the adjournment of the morning session.

Mr. O. E. Boyd, of the Presbyterian Home Missionary Society, was introduced.

Mr. BOYD. Our missionary board was the first to begin work in Alaska. Ten or twelve years ago Dr. Sheldon Jackson went there, taking with him Mrs. McFarland. She has been there ever since, but we have just received word from her that her health is so impaired that she must have a long vacation or resign. While our good friends the Congregationalists have the point the farthest west in Alaska, the Presbyterian board has the one the farthest north. We are as near the north pole as possible until Dr. Jackson harnesses up his reindeers and finds us another still further north. We will be ready for him when he comes. We receive good reports from our teacher at Point Barrow. There are from thirty to forty scholars there. They learn English readily. The main hindrance there, as in so many other places, is rum brought in by bad white men. The report of the moral degradation that it has produced could not be repeated in this presence. When at Mohonk I said that I wished a certain judge at Alaska might be removed, a man who had been guilty of immorality and debauchery. Thank the Lord he has been removed.

At Sitka we have our largest school in Alaska, about 175 pupils. We have also two hospitals fully equipped, one for boys and one for girls, under the care of a thoroughly educated physician, the son of a foreign missionary. Our other schools are at Juneau, where there are twenty or twenty-five pupils, at Hydah, where we have about the same, and at Fort Wrangel, where we are getting under way to establish another home for girls. At Chilkat we have a missionary who is calling for a home also, and it is probable that he will get one within a year. We have a building there which was abandoned because our missionaries were driven out by the greed of the white men. At Hoonah we have a day school and a home for girls. We have also appointed a native and his wife to open a school. At Fuchinoo we have taken up work, where it looks very promising.

In Washington we have no school but a missionary at Puyallup, who is at work among the tribes where there are a good many church members among the Indians. We need another missionary there.

Our next field is in Arizona. At Tucson we have an industrial school, one of the finest in all the service. The superintendent is a man of rare gifts. There are now in school 165 boys and girls of the most promising type. The moral surroundings are very different from what they are in Alaska. We have every help to bring them into Christianity as well as civilization. Among the Pimas we have a man of God who has been there ten years. He has a great influence for good over the people. He preaches weekly to from three to five hundred Indians.

In New Mexico we have a sad story. We have been forced out of Albuquerque and have given up our school there. We have in New Mexico only four Pueblo day schools. When we were asked to take these day schools we did so. We had hardly started before a request came from the Roman Catholics to start similar schools. They had the privilege of starting there given to them though there were eight or nine other places without any schools. They have tried to drive us out and we have done the best we could. There is a loss there that ought to be remedied. I wish Commissioner Morgan would find a plan. It is not right for two denominations to do the same work with the same pupils, fighting with each other, when by a judicious arrangement each might do good work for the Indians.

Commissioner MORGAN. I wish Mr. Boyd would send me an official statement making that request.

Mr. BOYD. I will do it with pleasure. Coming to Iowa we have the Sac and Fox Indians. We have no missionary there, only a woman. She teaches them not only to read and write, but is winning her way in a wonderful manner. We have a school building. Commissioner Morgan has opened a school, and we may have control of it perhaps by and by. Among the Omahas and Winnebagoes we have the same work as before. We have had to change some of the teachers; however, the schools are filling up, and we are ready to do more work. At Sisseton, in South Dakota, among the Sioux we have had one of our best schools—about 125 pupils. But we have had a hard time there for the reason that the Sisseton Sioux have been receiving from the Government some supplies of money or goods, or both, and the result is that the place which is usually entirely free from tepees and wickiyups has been literally covered with them, the Indians coming to get their supplies. As long as the money lasted the Indian interest in the school vanished, and for the first quarter we had hardly any pu-

pils. The same was true of the Government school; but the money is going and the school is filling up. We have an admirable superintendent. I wish the policy of giving money and supplies might cease. It is a hindrance to Christian and all other good work.

I have another story to tell you of the Chippewas. We have a school there under two daughters of Mr. Dougherty, as noble women as ever lived. I found them a year ago in the cold and bleak Round Lake region teaching in a log schoolhouse. All through that region they are spoken of as "the ladies." That school of twenty or thirty scholars has been broken up by the policy of the Government, good as that policy is. We paid the full expenses of these teachers and all the school expenses. A contract was made with the public school of the neighborhood and the scholars were sent there, all except those who went to Carlisle. I believe the policy is good, but that is the effect of it on Christian education in this case, at least. Ours was a Christian education without expense to the Government. Now a contract is made with the public officials. While I do not know the men personally, yet if they do not know more than the men I did see there I should hate to make a contract with them to put any child under their care.

Commissioner MORGAN. That was not intended. If you will continue the school as you have done we will not renew that contract.

Mr. BOYD. The school is given up. Now for the sequel. Those two girls, the teachers, were born among the Indians. Being Presbyterians they believe in the perseverance of the saints, and they came to us and asked us to send them to Minnesota where the rest of the Chippewas are. To-day one of those girls is way up on the borders of Canada, in the Rain Lake region. She got there by herself, by canoe and just as she could, and there she is alone in that cold, bleak, not to say "God-forsaken" region. She writes bravely, but wants to feel that she will not be turned out again. I can not speak too highly of the influence of such women. I do not know any man who would do such a thing as she has done. I have been amazed as I have seen such women on the frontiers among such privations as this sister is enduring and as the other sister is going to. I have been amazed at their self-sacrifice and bravery and devotion to Christ and to his cause and to the raising up of fallen humanity.

We have a little school among the Stockbridge Indians, about two hundred of whom are left in Wisconsin, a school of twenty or thirty. The Government pays a part of our missionary's salary; we pay him as missionary and the Government pays him as teacher. The tribe will soon be all gone.

Our largest work is in the Indian Territory. There we have the Cherokees, Seminoles, Creeks, Kiowas, and Choctaws. We have schools everywhere, at Talequah, Dwight, Nuyaka, Muskogee, Wewoka, Wheelock, Spencer, and elsewhere; besides these a number of churches and native ministers. It would take too long to tell the story. We have in the Indian Territory 92 ordained ministers, 111 churches, 4,743 church members; many Sunday schools, with 153 teachers and 2,460 scholars.

Mrs. M. E. Griffith, of the Methodist Episcopal Church, was invited to speak.

Mrs. GRIFFITH. I represent an organization of sixty thousand women who are taking up the work among the Indians. We have work among the Osages, and a boarding school for girls among the Pawnees and Poncas and Creeks. We have also work in Washington and in Arizona. We are also doing something among the Indians of California, and we hope to establish work among the Digger Indians in Bishop County. We have struggled with this work because until the present administration we have had no help from the Government. Since Commissioner Morgan and Superintendent Dorchester came in we have had all the aid we could ask for. We are glad to say that our work is going forward as never before. I am pleased to hear from the gentleman representing the Presbyterian board a remark to the effect that different denominations should not take up the work in the same pueblos. I have visited many of the denominational schools in the Indian Territory, and I have spent a great deal of time with the Presbyterians and am a friend to many of their missionaries, and I want to say that it has been my policy, ever since I visited those homes, to discourage our society from doing mission work in the same community where any other denomination had missions. In regard to the contract schools I hope the time will come, though we are receiving our first contract money, when no contract will be given to any denomination whatsoever. I hope that will be the future policy of the Government. We want to work in the truest Christian harmony with all workers among the Indians, for the cause of the Indians is heavy on our hearts.

President GATES. That is the way many of us look at the whole contract system. If we face our churches and religious organizations and say, "Give as you never gave before for missionary work among the Indians," and show that the growing sentiment of certain religious denominations is for supporting this work without contracts, I think we shall find ourselves doing stronger work than ever before. We have the assurance from the Commissioner that so far as he represents the policy of the Department, there is no change proposed that shall be unfavorable to the contract system as it now stands.

Dr. Ellinwood was asked to speak.

Dr. ELLINWOOD. I ought to speak apologetically, perhaps, for having worked for the Indians under our foreign board. Most of our work has been transferred to the Board of Home Missions, but in western New York we have a mission in which I feel a great interest, because my boyhood was spent not far from these tribes. We tried to transfer the Seneca mission to the Synod of New York or the presbytery of Buffalo, but they refused to take it and they urged upon the Board of Foreign Missions to continue it, feeling that it was better off in the hands of a board of foreign missions than it would be in any local organization. Whether it was from a feeling that always in the immediate vicinity of an Indian tribe there is more or less irritation in the public sentiment and that the interest in the Indian is in inverse ratio to the distance, I can not say. We have retained the missions. All the work is done in the English language, though that has been the line of cleavage between our foreign and home mission boards.

To recur to the work that Dr. Hubbell represents so vigorously and enthusiastically, there is an effort in New York to carry out the general ideas which prevail here, and with which I have entire sympathy so far as the great reservations are concerned, to secure a division of lands. But I fully share the feeling that where the amount of land is so small that it would give but about 15 or 16 acres per capita it is absolutely absurd to push the general idea. And I share very deeply in the spirit of resistance to the schemes which have been on foot in the Legislature at Albany to secure the transfer of city property or village property at Salamanca which is leased on long leases. If the plans were carried out the Indians would be brought to distress, and large numbers of them, if not all, would be thrown upon the hands of Erie and Cattaraugus Counties as paupers. At the present time our work, which is wholly in the line of evangelistic effort, having nothing to do with schools, is very prosperous—never was more so. We never received larger accessories to our churches. There was never better discipline or more self-help or more aspiration than now. I believe on the Tuscarora Reservation it is true there is a larger per cent of church members than in any white community in western New York, even embracing all the denominations. That fact was brought out by a report in the New York Herald three or four years ago.

We have also work among the Choctaws; but I pass at once to our work among the Nez Percés. And here I may say I have come to Washington largely to learn more about our work there from Miss Fletcher. She knows more about it than anyone else, because she has spent three years in allotting land in severalty there. She has been in thorough touch with those two grand missionaries, the Misses McBeth, who are the only missionaries we have there. I am glad Mr. Boyd redeemed his remark that in one place they had "only a woman" by his rapturous encomiums upon the Misses Dougherty, whom I know well, because I have been at Round Lake. I do not know anywhere in the annals of missions, present or past, instances of grander heroism than we find here and there in these Indian missions, afforded by women. We have an interesting and successful theological seminary among the Nez Percés. It has raised up all our native preachers there. It has taken them from blanket Indians and has trained them in theology and has brought them up to a point where the presbyteries have been ready to receive them and ordain them, so that there are now about ten or twelve. The name of that institution is Miss Sue McBeth. She is the living embodiment of it. She has done that entire work. She has learned the Nez Percé language and has put herself into complete touch and sympathy with the Indians. She thinks their thoughts. They trust her. They know she is on their side—sometimes too vigorously, in the squabbles with the agents. She is Scotch, and that means a good deal. She has ideas of her own. I do not know of a grander figure, a more splendid object-lesson of what may come from getting right down among these people and showing sympathy of heart, than we find in that work. I know Miss Fletcher appreciates all I have said of these two women. Kept as we are, by the force of circumstances, in this work, we are glad that we are so kept, for we need as many arms as possible to do it.

Commissioner MORGAN. I have not been able to give to the New York Indians

any careful personal attention. I think the time may have come for a more aggressive work educationally there. Is it true that they have only day schools?

Dr. ELLINWOOD. It is true, and yet not quite true. There is a very fine orphanage on the Cataraugus Reservation, established by the Friends, but it has passed under the auspices of the State and is supported by the State. The lady and gentleman in charge are in complete touch with us and cooperate with our missionary. They are Christian people and give not only complete school instruction but they go into our Sunday school. It is a model institution. The day schools ten years ago were very objectionable, and were under the charge of teachers who were not of such character as was required. Some of them were half-breeds and some of them were positively corrupt. The schools are now in a very satisfactory condition.

Commissioner MORGAN. Quite recently a band of twenty-six of these Indian youth were gathered together, and they have probably been taken to Carlisle. Would it be your judgment that it is desirable to put two or three hundred of them into the Carlisle school?

Dr. ELLINWOOD. I think it would be an admirable step.

Commissioner MORGAN. It seems to me that if several hundred of these Indians could be put into Carlisle and put out afterward among the Pennsylvania farmers that in a few years those reservations would be disrupted and the Indians would find homes where they could find a living. This is a practical matter up in New York.

Dr. ELLINWOOD. I should hope they would go back to New York to teach their friends. There are 5,000 Indians in New York. There are more Senecas to-day than there were at the end of the Revolutionary war.

Mrs. A. S. Quinton was invited to speak.

Mrs. QUINTON. Our society has been doing more work than in any single year. We had the pleasure of welcoming thirty different associations last year. The various departments are being pressed with vigor. There are workers and representatives of the society in forty different States. Until last year only the Connecticut branch had a State mission of its own. Last year Maine had work of its own in the Indian Territory; New York among the Mission Indians; Massachusetts sent teachers to the Apache prisoners; Brooklyn is still gathering funds for a mission among the Indians in Nevada. So the work has been extended in that direction. The number of tribes helped has been much larger than ever before. We have helped fifteen tribes continuously and fifteen more temporarily. I have just had a seven or eight months' trip among the wild Indians, making the circuit of the United States. There has been a vast change in educational matters. I have been studying the Indian question for thirteen years and for eight years I have been going about among them, and this year shows a perfect revolution in educational matters. The Governmental work is admirable; we have only to push its claims. The Government schools are Christian schools by the presence of Christian teachers. Where inefficient teachers are found they are put out. The whole system is going straight towards the ideal. I am a perfect convert to the idea that all the "ab, abs," the educational work, should be in English and should be given by the Government, and that the mission work should be done by our religious bodies, so long as the educational work is what it is. That it should be kept so is the work of the friends of the Indians. We can not afford to let the system grow less in any way. It should be pushed to the utmost. This matter of civil-service reform touches the whole question. The officials who are doing good work should be kept.

Commissioner MORGAN. I want to emphasize what Mrs. Quinton has said, with reference to the character of the teachers, by reading two comments on the meeting of the Indian school superintendents held at Lawrence, Kans. Dr. and Mrs. Dorchester were there; the four school supervisors were there; the superintendents of all the large training schools, and of two or three of the larger reservation schools—in all about thirty. The meeting was an impressive one. Mrs. Dorchester said if they had only come together and looked into each other's faces it would have been worth all it cost. Another person wrote that it was better than a presbytery. A Moravian missionary wrote that it reminded him of a Moravian conference. This is testimony as to the character of the men shaping Government education in the Indian fields.

Rev. R. R. Shippen was asked to report for the Unitarians.

Mr. SHIPPEN. The work of the industrial school in Montana, which is under the care of the Unitarian body, is going forward steadily, and I believe is doing better work to-day than ever before.

Bishop Walker, of the Episcopal Church, was called upon.

Bishop WALKER. I can only speak for the little work going on in North Dakota. We are reaching a few Sioux and a few Chippewas. The Sioux are a nobler race than they seem to many of us. There are men who ask me, "Is it not a fact that your Indians when they are converted lapse?" My answer is that an Indian converted is generally a truer Christian than the average white man. I speak from practical knowledge. I find they are willing to make such sacrifices for their religion as often white men are not. When they appreciate what Christianity brings to them in this life and the life to come they long to have their friends know the truth that is such a source of peace to them. As an illustration let me tell you this: I am not in collusion with my friend at my right hand, the president at Hampton; I do not believe he knows the incident I am going to give. About a year ago I received a letter from a man calling himself Matthew Too-young-bear, living near Standing Rock. He said he had gathered some of his own people together and was holding service with them from week to week. "You do not know me," he said, "and I did not know you personally, but I have heard of you and I want to know if you will come to us and tell us what we ought to do."

I went to this place on the Cannon Ball River, and there I found grouped together about fifty men and women. Among them were three young fellows who had been at Hampton and one who had been at another school. They had come back from school and had called the people together and had told them of the happiness of becoming Christians. For a year or more they had called the people together week by week and had read a part of the Episcopal service and a portion of the Bible and had tried to tell them what it meant. They had come back with no special instruction to do so, but they were impressed with the duty that rested on them as Christian men to be missionaries to their own people. They had sung hymns and prayed and had preached the gospel in their own tongue. It was to me a most touching sight as I saw these people. They said that several of the Indians wanted to be baptized. I hesitated about it. I asked a great many questions and I found to my amazement that these two young men who had been at Hampton had become so infused with the Christian idea that they were able to impart it to these heathen people, for they were all pagans. They had taught them so much religion that I found I could safely admit every one of them whom they presented for holy baptism, and then and there I admitted them into the Christian church. That shows the power of that school among these people. It shows that its influence comes out to the West in ways that some of us know not of.

Mr. Elbert B. Monroe, president of the board of trustees of the Hampton Institute, and a member of the United States Board of Indian Commissioners, was asked to speak.

Mr. MONROE. I do not need to say much of the work at Hampton save that it is going on as usual. The report of Bishop Walker was a surprise to me in its particulars. I had not heard of this instance; but I know the general fact that the young men and women are letting their light shine.

When the telegraphic news came that Gen. Armstrong was stricken with paralysis, those who loved him, and I can not imagine how any man or woman could come in contact with him and not love him for his unselfish life, the question that we asked was, "Is he going to die?" God has spared him so far, at least. I suppose that the friends of the Indian and of Hampton asked next, "If he is going to die what will become of Hampton?" Gen. Armstrong was asked that question ten years ago, what would become of his work if he should die. At that early day he began to plan and to provide that the school should go on as long as the Indian needed educating. He set off departments and put those he could trust at the head of each one. The best evidence of the success of this plan is, that stricken unto death suddenly, in a way to startle any institution, with the other head of the school, Mr. Frissel, called instantly to Boston, the school has gone on day after day in all its parts as though he had been there with his finger in touch with the works. I believe that the best thing I can say of Hampton is that if Gen. Armstrong should be taken to his rest and his reward that the work will go on. He has made a mark upon it that can not be effaced.

Dr. Bartlett, of Washinton, was asked to speak.

Dr. BARTLETT. I have always had a profound sympathy with this work and have tried to keep abreast of it. I believe it is being handled as never before by the application of good sense and Christian principles to it. The present Commissioner has given a new impulse to the cause, and I hope the methods that have been introduced will be crowned with success.

Miss Alice C. Fletcher was next introduced and asked to speak five minutes at this session and to speak again in the evening.

Miss FLETCHER. To take five minutes out of three years' experience among the Nez Percés is not easy. I will give you a little picture of the work of those two remarkable women to whom reference has been made, the Misses McBeth. They are unlike save in their energy, their patience, their strength, and their kindness. Miss Sue McBeth was the earlier upon the reservation, coming there eighteen or nineteen years ago. Mr. Spaulding began Christian work among these Indians. Passing away shortly after his mantle fell upon Miss McBeth. He was interested in the training of native teachers or lay preachers and missionaries among the people. She took up that work and carried it forward. She is no longer upon the reservation, but at Mount Idaho, a little settlement un-like anything I know of in the East, at the foot of the mountains, but holding very tight to the court-house, a small structure which gives it the importance of the county seat, that being a thing of great importance in a new country. She is in a little house of three rooms, one rather large which is her school-room, one of moderate size which is her reception room, and one very small chamber, her little retiring place. There she lives, entirely alone, a faithful Chinaman coming in to look after necessary matters once a day. She had an interesting experience in the Christian commission during the war and also in teaching the Indians in the Indian Territory. Owing to a very severe shock which she received during the war she is partially paralyzed. I mention that to show how much she has done. She has attached to her theological school something which I never knew to be attached to such a school before. That is a series of cottages in which live the wives and children of the men whom she is training, and these wives and children are taught to read and the elements of education and the women are taught many things in the way of living, so that the theological students, when they go out among the people, go with help-mets in their wives, and their homes are everywhere models and lessons to the people.

The work of Miss Kate McBeth is exclusively among the people, but that of Miss Sue is unique and is looked on with pride by all Kamas prairie. It has done great good and it shows what one active, persistent woman can accomplish.

Commissioner Morgan was invited to close the morning session with an address on education among Indians.

Commissioner MORGAN. If I consulted my own personal preference I should sit still and listen because I am being instructed, but I am willing to contribute something to the current discussion of the questions before us.

Looking back over the past two and a half years I can say that there has been progress in the solution of the vexing problems that we have connected with Indian administration. There have been head winds and cross currents, but on the whole there has been progress. It is difficult to treat of the Indians or of the Indian question by general propositions. I have done a good deal at that myself, and I have been reminded of a remark that President Anderson used to make that "nothing lies like figures except a general principle." The Indians differ so much among themselves that a statement made of a particular class will not apply to other classes, so that we have constantly to modify our general principles when we apply them to a particular case.

So in the application of a policy. Mr. Boyd had spoken of the evil results that have come of the admission of Indians to the public schools. He agrees with the idea, but says that in some cases it works to the detriment of the Indians by destroying a better school than that into which they are taken. In a service where 3,000 persons are employed many things are done in an unaccountable way. There is, however, progress.

There is growth in public sentiment; there has been progress in legislation and in determining more accurately, by the progress of legislation, on a settled policy of administration. We understand more clearly than ever before what the Government is attempting to do for the Indians. The Indians themselves are coming to understand that the reservations are to be reduced and the surplus is to be restored to the public domains; that their lands are to be allotted in severalty, and that they are to be treated as individuals and not as tribes; that they are to be citizens of the United States, and that they are to adjust themselves to the conditions thus forced upon them. The tide of civilization has swept on till the Indian reservations are not only surrounded, but invaded, by it. There are more white people, unauthorized, in the Indian Territory than there are Indians. There are sixty or seventy thousand Indians and a hundred and fifty thousand white people who have no business there.

One of the signs of progress that we hail is the fact that the Indians are recognizing the inevitable, that they must stand face to face with our civilization, must compete on its lines and stand or fall by their capacity to do that.

The work of allotments is proceeding as rapidly as is warranted by the welfare of the Indians, or as is necessitated by the demands of the white settlers. It is interesting to note that not less than one-tenth of all the Indians on reservations, men, women, and children, exclusive of the five civilized tribes and the New York Indians, have been given land in severalty and upwards of a thousand nonreservation Indians have taken allotments on the public domain. I have been gratified to find that we have succeeded in providing homesteads for the Indians just in the same way as for white men. I have given special attention to this, and we have a man who gives it his entire time, so that they are being assisted in making applications and perfecting their titles and protecting themselves from encroachments.

In reference to education I have set forth in my annual report the work that has been done during the year. I may say in general that there are now established, or in process of establishment, boarding schools on reservations in Arizona, California, Idaho, Indian Territory, Kansas, Minnesota, Montana, Nebraska, North and South Dakota, Nevada, New Mexico, Oklahoma, and other States. Certain of these will be completed in time for occupation in September or October of the present year. They will then accommodate about 5,000 Indians and it will not be necessary to establish any more schools of that character, unless one possibly for the Pappagoes and possibly one for the New York Indians. These schools have received a great deal of attention and they are to-day better equipped and better manned and under better discipline, with a revised course of study and a system of text-books and with intelligent supervision, than they have ever been before. They are making steady progress.

The enrollment last year in the schools was nearly 18,000. This year in the first quarter it was 19,000. I hope to have before the end of the year an enrollment of 20,000. I am inclined to think that that will be about two-thirds of all that we can hope to secure for the schools.

President GATES. What do you regard as the number of Indians of school age, not counting the civilized tribes?

Commissioner MORGAN. Taking the school age as from 5 to 18, I doubt whether we can count on more than thirty thousand that we ought to be able to reach. As to the work that these schools is doing, I have personally visited as many as I could, and I think they are doing all we have any right to expect, considering the pupils with whom they work, taken from homes where they have had no instruction, unacquainted with the English language. They must teach not only the rudiments of English, but the rudiments of civilization itself, and have training in morals and industries as well. If the work can be continued as it is for a few years, the influence of these pupils will be the dominant influence among all the Indian people.

An assault has been made upon the educational system, including both the Government and the religious schools, by the broad assertion that these pupils receive no benefit, that they go back from the schools worse off than before they went to the schools. I would be very glad if those who represent the church schools would write to the office and give me specific statements of men and women who have been educated in their schools or under their auspices, stating exactly what they are doing to-day. If there are those who have been educated who are filling honorable places, like Joseph Cook, at Pine Ridge, or Dr. Eastman, or a score of others I might name, men and women who have vindicated the claim of what training can do for them, I should be glad to have their names.

One point is overlooked in considering the education of Indians. If you send your child to school you probably begin with the kindergarten, then take the lower schools, the high school, and perhaps college. He is studying from fifteen to twenty years, and even then you are willing to wait a reasonable time for him to show what he can do. We send these Indian children to school to learn the very rudiments of education in a strange and foreign tongue, and because we have not at once revolutionized their tribes and overthrown their superstitions we are told that education is a failure. If we can keep these 20,000 children till they have acquired a medium education and give them time to show what they can do it will then be time to form a final estimate of the results of education. It is not fair to condemn the system till that time has elapsed.

In reference to the contract schools, the present policy of the Government is to preserve the *statu quo* and not interfere with schools already established. It will allow matters to take their own course. There is the most harmonious re-

lation between the Indian Office and all the schools maintained by the churches. Bishop Ireland confesses that he had not understood the policy of the office and states that he is more than satisfied with what we are doing. He had no complaint to make. Dr. O'Gorman says that they ought to adopt the Government course of study throughout their schools and have Government inspection and work in harmony with the Government schools. There has been no change in the attitude to the office.

So far as the general progress of the Indians is concerned in matters of self-support, I speak of the allotment of land which carries with it self-support, special attention is being paid to irrigation. Two hundred and fifty thousand dollars has been set aside for irrigation on the Crow and other reservations, that those living on semiarid land may have the benefit of irrigation. Efforts are being made to encourage the raising of cattle and sheep. At Standing Rock they have sixty-five hundred head of cattle, and they will have four thousand more in spring, and yet that body of people twenty years ago were roaming savages. They have settled quietly down and are attending to their business and are rapidly becoming self-supporting.

There is a misapprehension as to the number of Indians that receive rations from the Government. The amount of subsistence and food furnished to Indians who have no treaty claims upon us, that are given to them simply out of regard to their helpless condition, during the present year is only \$315,000, which is less than a cent a day for the Indians among whom it is distributed, so that the pauper list among the Indians, as compared with the pauper list among ourselves, is very small. The amount that we give as a gratuity, because they are unable to help themselves, including the aged, the sick, the infirm, is so small that we ought not to feel it too great a burden for this nation to bear.

With reference to the money paid to the Sissetons per capita, to which reference has been made, I venture to say that they have made better use of it than would have been made by the same number of white people under the same circumstances. I will say that of the \$60,000 paid out monthly in the heart of Indian reservations to white men, I have heard that fully a half goes into the liquor saloons. The record made of the money paid to the Sioux is that on the whole a good use was made of it. We have recently paid \$250,000 to the Cheyennes and Arapahoes, tribes not nearly so far along as the Sissetons, and with few exceptions they made good use of their money, which was distributed per capita. Much of it went for horses and mules and wagons and harnesses. One man alone sold 35 sewing machines to them. We have a letter from a gentleman who has been observing these things, saying that 11 wagons were then standing in the street loaded with wheat that they had raised. It is a two-sided question whether money paid to them is a harmful thing. I am inclined to agree with the idea that as soon as possible rations should cease and they should care for themselves, after they have received from the Government all that is due them, and that they should manage their affairs in their own way.

The statement has gone abroad that the Indian appropriation bill is to be largely cut down. I have had prepared a comparative statement of appropriations for Indians for eleven years, showing the specific purposes for which money has been given. The Indian Office invites the most searching criticism and investigation as to whether the money appropriated to its use is being wisely used. It is prepared to stand on the record of the office that every dollar that has been appropriated has been spent towards lifting up the Indians and lifting up a great many white people living alongside of them.

A great deal of thought has been given to the question whether there should be some specific system of courts and laws for the Indians. I have thought of that for two years, and the more I think the more difficult and perplexing it becomes. There are seven or eight thousand Indians in Michigan swallowed up in the State. Shall there be a system of law for them? There are eight thousand Pueblos in New Mexico living in villages, farther along in civilization than the average Mexicans who live about them. Will you have a separate system of courts and laws for them? The matter is involved in a great deal of difficulty. I believe there are certain modifications that are practical that may be made, possibly during the present session of Congress. Who are Indians? Who is entitled to have an allotment as an Indian? Is a man whose father was a white man and whose mother is an Indian? We have made treaties and accepted the signatures of half-bloods, and sometimes of three-quarter bloods. In the treaty with the Sioux, when we bought 10,000,000 acres of land, we bought it of the Indians. Who signed the agreement? Half-bloods. J. B. Mays, chief of the Cherokee Nation, had probably one thirty-second of Indian blood, not more

than that. The governor of the Chickasaws is an Indian only by courtesy; he has scarcely a trace of Indian blood in him. The law of descent among the Indians is through the mother, not through the father, so when we come to make a decision that any man is an Indian who has a certain per cent of Indian blood, we shall find ourselves involved in consequences that may give us pause.

I want to express my own personal interest, and I believe the interest of the President and the Secretary of the Interior and all who are responsible for Indian affairs, in the work of the churches, and a desire to do everything that can be done to further missionary operations and to ask for the cooperation of all who are interested in elevating the Indian to a higher plane of humanity and Christianity. I believe that the most central factor, of civilization is Christianity. The hope of the race is in the influences that come from the churches. Those things that have made our own race what it is are the things that they need. If through the churches and through education they can receive those things that have made of our own race what it is they will make progress rapidly and will justify all that is being done for them.

President Gates stated that he had received a letter from Secretary Noble, regretting his inability to be present. Letters from Chaplain McCabe, Capt. Pratt, President Gilman of Johns Hopkins University, and others, to the same effect, had been received.

Adjourned at 1:15 p. m.

#### AFTERNOON SESSION.

The meeting was called to order at 3 p. m. by President Gates.

A report from the Moravian mission was made by Rev. J. Taylor Hamilton.

Mr. HAMILTON. Our work for the aborigines dates back to 1735. We have at present four missions among the Indians with two stations in Alaska. We have not much to give in the way of statistics. The Commissioner has asked for instances showing the result of training Indians. I will give one. About eighteen years ago two lads, one of them the great-grandson of the former sachem of the Delawares, was sent from Kansas to be educated in Pennsylvania. When they arrived in Philadelphia they found the last train for Bethlehem had gone. They had no money. With Indian reticence they communicated with no one, but they were not at a loss. They started to tramp to Bethlehem. When they were well out of the city and in the fields, they built a little fire and proposed to camp for the night. But they were discovered by a kind gentleman who took them in and cared for them. One of those boys is John Henry Kilbock, now the chief missionary of our church in Alaska, where he is doing a glorious work. When a full-blooded Indian becomes a full-blooded Christian he is the noblest work of God. Last summer, when Bishop Bachmann was in Alaska, he found Mr. Kilbock, who has been there since 1885, perfectly fluent in the Eskimo language, having a congregation of between fifty and sixty, and the Indians almost worshipping him. They do not regard him as a white man but as a model of what they themselves may be.

I should like to emphasize from the experience of our missionaries in Alaska a few of the points that were brought out this morning. First, we long also for some way of keeping out the liquor traffic. The one hindrance to our work has been the drunkenness and debauchery encouraged by those who ought to know better. Second, I hope the strongest pressure will be brought to bear to secure the appropriation for the introduction of domesticated reindeer. We can not expect the Eskimo to be civilized in the sense that the Caucasian is civilized. His civilization must resemble that of the Laplander, and what the reindeer is to the Laplander it will be to the Eskimo. Third, I would emphasize the request made by Mr. Thornton, that in some way restrictive laws may be devised preventing the utter extinction of the walrus. Our missionaries report that the natives depend largely on the walrus hide for the canoes, kayaks, and boats of one sort and another that they use for traveling from one place to another, aside from the purposes of procuring food. May the work of this Government, and of the Christian men and women of this country, be so harmonized that even yet the native races of the continent may be preserved.

Dr. Sheldon Jackson was next introduced.

Dr. JACKSON. Take the question of selling breech-loading rifles to the natives of Alaska. The attention of the authorities has been called to the necessity of legalizing the sale of such arms to the natives, and they look upon it with favor. For state reasons, however, no action will be taken until after the Bering Sea operations are concluded. These weapons are essential for procuring food.

With regard to the liquor question, I shall present some resolutions later on the sessions of this convention calling for the appointment of a committee to con-

fer with the President and others as to the best method of protecting the native population from the evils of intemperance and other associated evils. There has been no limit whatever to the sale of liquors, especially in southeastern Alaska. Take Juneau, where there are a thousand men and twenty-seven open saloons! In Sitka, right under the eye of the Government officials, there are four or five such saloons. Wherever there are a dozen white men there are open saloons for the sale of liquor for any purpose. This has so far forced itself on the attention of the President that he has recently issued very stringent regulations, but they do not reach northwestern Alaska. There it is brought in largely from the Sandwich Islands by the whalers and landed upon the Bering Sea coast. Attention has been called to the late arrival of the revenue cutter on the ground. This was not the fault of the Revenue Service. It was ready to sail in May, 1890, but owing to a correspondence with the British minister with regard to the Bering Sea trouble, the cutter was kept at Seattle till the 3d of June.

It could not therefore get to the whaling fleet till July. This year it was also ready to go early but cutter was held back to get witnesses 1,200 miles distant, to wait on the court at Sitka and carry the witnesses back. It was this special business that called it from its own business and prevented it from getting up to Alaska earlier. And if it had got up it could not have done anything. A whaler getting into Russian water is perfectly safe. The Government thinks it can not seize any whisky on an American vessel in Russian waters. One one occasion the whalers took the American cutter for a Russian revenue boat and when they saw it coming began throwing their whisky overboard. A few vessels got away, over on to the American side, but when they discovered that it was an American cutter they hastened back into Russian waters where they were free. They do not attempt to land much whisky on the American side. They know the liability of having their vessel seized and of their being arrested and held during the busy season. But they land their liquors on the Siberian coast whence it comes over in the native canoes. The cutter can not stop that. The Government has never felt justified in keeping the cutter in the straits. The whalers drop anchor on the coast at Point Barrow and the sailing fleet lies at anchor there six weeks. Their presence is the degradation of the native women. If all the facts could be known concerning the enormities and brutalities going on there season after season it would shame the entire American Republic. If the truth could be known and felt, as realized by the teachers, there would be an indignation meeting in every city and town and hamlet in America, and such a pressure brought to bear on the Government that the iniquities would be crushed out. The object of the committee which it is hoped will be appointed, is to devise some way to stop these evils which are prevalent all through that land. If we could arrange to have some Government teachers appointed justices of the peace they might do much toward destroying the liquor trade; at least prevent it being brought in by natives.

Last year I spoke about the starting, by the Bureau of Education, of two or three arctic schools. I can assure you that it was with no usual interest that I reached those places this year. Of course I had heard nothing from them for nearly twelve months. But there had been so many stories started by whalers and white traders as to the dangers that those men were undergoing that I did not know what might have happened. It was with a sigh of relief and a feeling that I can not express when with a field glass I saw at Port Clarence the two men left at Cape Prince of Wales coming off to the ship in a canoe. I knew that at least their lives had been spared. We had heard so much of the savage nature of the natives that none of them would go to school, as one Government official had said that they would have to be driven to school at the point of the bayonet, that we were not prepared for the record the teachers brought. It cost so much to build that we put up last year a schoolhouse that would hold only thirty, though fifty might be packed into it. Last winter there was an enrollment of 304, and an average daily attendance for nine months of 105! Of course they could not get them all in at once, so they had three schools—one in the morning, one in the afternoon, and one at night. And they had to build parallel snow walls from the door and compel the children to enter single file keep the boys and girls from coming when it was not their turn to do so, and thus get more than their share of the schooling. And those were the filthy, degraded, terrible Eskimo children! I suspect it was much the same on Sunday when the people came together. They had to have church all day, one congregation taking the place of another.

While at the cape the captain of the revenue cutter gave a reception to the

Eskimos, inviting them on board his ship. The school children were placed on the quarter deck. The captain gave all the official dignity possible to it, putting on his sword and best uniform and required his officers to do the same. The children were ranged across the deck and under the guidance of the teachers went through their reading and recitations and arithmetic and singing. The deck was crowded with parents and friends watching with a great deal of pride the progress manifested by the children. At the close of the school exercises there were boat races among the natives, and a firing of the ship's guns by the crew. It was a regular holiday and all tended to impress the people with the high character of the teachers, that the whole power of the Government was displayed on their side.

Last winter some of the men, getting drunk, broke some of the schoolhouse windows and were fined skins and furs to replace them. One man refusing to pay his fine, the captain sent for him and required the fine, thus throwing his power in the moral support of the teachers. At the suggestion of the teachers some dozen of the principal men of the place were brought up before the captain and appointed special officers for the assistance of the teachers in their school and for preserving the peace of the place. The head chief gets two bags of flour for his services for twelve months, his first assistant two, and each of the others one bag of flour apiece.

At Cape Prince of Wales the tidings had come down that the missionary of the Episcopal Society at Point Hope, 200 miles farther north, had been killed by the natives and the buildings burned. But when we reached there we found the building standing and soon saw the teacher. He too had a wonderful story to tell. In that Eskimo village every child from the age of 5 up to 21, with the exception of three married girls, had been in school last winter, and no matter how cold and stormy the day, with the school 2 miles from the nearest house and with the thermometer from 30 to 50 below zero, with fearful blizzards, the attendance at school was always good.

We then started for Point Hope, the northernmost point on the mainland, but we could not reach there. The great polar ice pack, which sometimes swings away under an easterly wind for a few miles, making a channel to Point Barrow, did not leave the coast. We fought the ice three weeks, and then gave it up, within 70 miles of our destination. But as we had twelve months' mail from the teacher's wife and children in Ohio, he came to us. When the 1st of August came, the time for the arrival of the vessel, and the ice in front of the schoolhouse was piled 40 feet above the water and extending down to the bottom of the ocean, he decided to come to meet us, as he knew that no vessel could reach him. He took a canoe, with a crew of natives, and started. Occasionally there would be ponds of water a few feet deep where they could float the canoe, and when the ponds gave out they dragged the canoe over the ice. They were seven long days making that 70 miles. He reported a full school at Point Barrow, with an attendance of thirty or forty children. At one time when the great pack of arctic ice moved it shoved the ice field so that there was a height of 60 feet of ice between the children and the schoolhouse, but the storm had hardly ceased before the children had climbed over it and were in school. So much for the work of education among the Eskimo.

A part of our expedition was to get further information with regard to reindeer. A bill for \$15,000 for the purchase of reindeer which passed the Senate was lost in the conference of the closing days of the session of the last Congress. On the failure to get anything from Congress the Commissioner of Education gave me permission to make an appeal to the benevolence of the country. This appeal was published in Boston, New York, Philadelphia, and Chicago papers. As a result we received \$2,002, which gave us a start. I purchased goods as barter, for money would have been of no use. The natives know nothing of the value of gold or silver, but they eagerly take lead, tobacco, cotton goods, axes, and knives. While en route to Siberia I met with the suspicion that prevailed in Washington, that the Siberians would not sell their reindeer; they would sell them to kill, but would not allow them to be taken out of the country alive. But when I got to the Siberian coast I found that there was no difficulty in buying them. Unfortunately, I was disappointed in my plans for taking care of them. A sailor who had been wrecked on the coast and had been compelled to herd reindeer had partially promised that he would take care of a herd under commission from the Government and I expected to secure his services. I also expected to take two or three Siberian natives over, and, with this white man, start a central herd from which other herds should be detached as the young Alaskans learned to care for them. But the white man disappointed me. I bought over

a hundred reindeer, to be delivered next spring. In order to meet the objections that had been made I determined to take some back with me, or there would be no end to the ridicule of the scheme. I therefore brought sixteen. Another superstition was that reindeer would not live on a steamer; that they could not be transported; that within forty-eight hours all would die.

This was repeated so often and so positively that I began to fear it might be true, but upon trial found that they stood the journey as well as so many cattle. We had four on shipboard three weeks, during which we passed through a storm so severe that we had to lie to. When we landed and turned them loose on Umnak Island, after an ocean trip of 2,000 miles, they were as fat, plump, hearty, and well as the day we took them on board. We settled then two problems, that the reindeer can be purchased and that they can be transported. The question now is simply one of routine and money. With money enough we can get thousands of reindeer and put them in Alaska. A bill has been introduced for \$15,000. That is a mere bagatelle. I shall ask that the same committee that is to confer about temperance shall be authorized to confer with the committees of the Senate and House with regard to this project.

To show the interest of the natives in this work, we expected to start our central herd at Port Clarence, within a few miles of where our teachers are at work. Upon our return to Cape Prince of Wales from the north they said that the natives had taken up the project very earnestly, and that three or four were proposing to put all their furs together and buy a number of reindeer for themselves. Others had conferred and had made a cooperative association by which two or three of them were to go over to Siberia so late in the season that they could not get home, so that they would have a chance spend the winter and learn the secret of taking care of reindeer! The others were to take care of the families of those who should go to Siberia. Thus the natives themselves are making plans for their own advantage. I have not a particle of doubt if we can get the reindeer that we shall be besieged by more applicants to learn their care than we can take care of.

Wherever I went the same story of want of food met us. At Kings Island, which is a small settlement of 200 natives, some of them had come to the last stage of starvation. There was not a particle of food to be found such as we would consider food. The captain, after the representations which the natives had made, sent a lieutenant ashore and he went through every house. I accompanied him, and there was no food found. In a number of the houses we found the people making a broth by stewing the root of kelp, but that broth was the only thing they had to sustain life in many houses on that island. In a few families they had killed their dogs, which they will need this winter to drag their sleds. They all had the pinched appearance that starving people have. It so touched the hearts of Capt. Healey and his officers that we made up a purse and went 200 miles and bought all the flour that we could get and took it back to them, hoping it would last until the expected seal and walrus should return once more. If the steamer had not visited the island I presume there would not have been a man, woman, or child left to tell the tale. A white man who had been left at some of the mines on the northern shore said that the native Eskimo in the region where he had been were on the verge of starvation. Everywhere there is a diminishing food supply. Since returning to Washington I have been reading the reports of the missionaries of the English Church from Hudson Bay to Alaska, and they testify that for two seasons starvation has been facing the entire population of the northern portion of our continent. If we are going to save life we must move at once and energetically, and securing the reindeer is the only feasible way to keep them from starvation. If we succeed I have no doubt that Great Britain will follow in our steps and secure a supply for the British arctic region of Canada.

I rejoice that at a recent convention held in Washington \$10,000 was voted by the Methodist Woman's Home Mission Society to care for the orphans of the Aleutian Islands. Though they are a civilized people, the same destitution prevails there. The sea otter having been exterminated, their food supply is cut off. There are so many orphans that the Methodist women have not planned large enough and their house will be filled to overflowing within two or three months of the opening.

The schools in the southern and central region are doing a good work. Within the last three weeks the executive committee of the Baptist women have agreed to ask for a home for the Kadiak region of Alaska. The missions from Sweden, at the base of Mount St. Elias and above the mouth of the Yukon River, have been doing a good work during the winter, and it was with unusual interest that at the

Yuktat station I welcomed a young lady who had made a trip of 7,000 miles without an escort, to reach the man whom she was to marry. Because he was too busy to go and get her, she had bravely come to him. From the Moravian mission in Alaska you have heard. The Episcopal stations have been strengthened during the year by the sending of another minister to a station formerly belonging to the English Church, but will now be assumed by the Episcopal Church of this country.

The wife of the English missionary enjoyed the distinction of being the first woman that ever crossed the Rocky Mountains in winter above the arctic circle, accompanying the dog sledge on snowshoes, not for gain, not for honor, but for souls. They will go to a station where, through the eagerness of the people for secular and religious instruction, the missionary was actually driven insane. They did not give him time to eat or drink or sleep. In that region in summer it is one long day. There are no regular hours for going to bed. It is the same to them whether it is ten at night or ten in the morning. The people, having no idea of time, kept pressing him day and night, and with his warm heart and tender sympathies he could not lock the door, but taught them as he had opportunity till reason gave way under the strain, and he was sent down the coast to San Francisco and across the continent to his friends in England. In southeast Alaska the work is going on with great success. They can show greater results there because it has been going on longer. There are five organized churches and six hundred native communicants, who ten years ago were heathen doing every abominable deed that could be conceived of. They are now ready to make sacrifices for their religion; for instance, a native silversmith, who turns his key in the lock of his door and goes to the mission and sits in the church when the steamer arrives on Sunday, rather than sell curios on that day to travelers. That means the sacrifice of a month's living for the sake of his principles and for the sake of living up to the teaching he has received.

The Metlakatla work is doing well. They turned out a great many cases of salmon, which were shipped to the market. That means self-support for the colony. The boys' training school has been in operation over a year. They are about to raise a church. Their progress is slow but sure. In the last hours of the last Congress by Congressional act their island was set apart for the use of that colony solely, so that white men can not start liquor saloons in the neighborhood of that model village. There are about 800 people there.

Gen. L. A. Grant, Assistant Secretary of War, was asked to speak about the Apaches under Lieut. Witherspoon.

Gen. Grant spoke fully of the remarkable work accomplished by Lieut. Witherspoon, but as the facts are given in an address by Lieut. Witherspoon before the Mohonk conference (see page —) they are not repeated here. Gen. Grant concluded with the words, "I am satisfied that a great and good work is going on there."

President GATES. Lieut. Witherspoon has very rare gifts for this kind of work, and I hope the Department will keep an eye upon him.

Prof. C. C. PAINTER. As a member of the Indian Rights Association I was appointed on the Mission Indian Commission, though without any request from that association. The other commissioners were Mr. A. K. Smiley, of Mohonk, and Judge Moore, of Michigan. We supposed the work would last a year, and that an appropriation of five or ten thousand dollars additional would be needed. We accomplished the work within the year, and turned back into the Treasury eleven or twelve hundred dollars. We reached California, and after a brief survey of the field the others were compelled to return East, leaving me to look after the details and to attend to the surveys. We have selected thirty-one or thirty-two Indian reservations, aside from settling many Indians on public lands. We very much reduced the amount of land set apart by Executive order for the Indians, and subjected ourselves to some criticism perhaps by those who think the way to civilize an Indian is to give him a great extent of country. A large part of the land restored was utterly worthless, and we did not need any that was thus given up. But we have restored some very good land to the public domain, especially at the reservation at Banning. It was a very complicated case we had to deal with there. The Government set apart that reservation after it had granted by charter certain sections to the Southern Pacific Railroad. The Government has never surveyed the land, but parties went onto it and secured rights under the railroad to the land and developed water claims. To extinguish these rights and procure for the Indians this water necessitated exchanges of land and a reduction of the reservation. But on that reservation, small as we have

made it, there is room for more than one-half of all the Indians of Southern California if we could get them onto it.

On the Colorado Desert there is the bed of an old lake that once covered a large part of the reservation which we set apart for the Indians at that point. It is more than 260 feet below the sea level. Along its margin are still to be found the old fish traps, built of stone, where the Indians once got their fish. There are 370 Indians scattered on the fringes of the desert under the mountain, in a country where the thermometer rises to a hundred and thirty and forty in the shade and is sometimes 120° at midnight. Many of them had never been visited by any official of the Government before. There are probably seventy children down there uncared for. We had to make a selection for these Indians here, as they were unwilling to leave the graves of their grandfathers. We suggested that, as their grandfathers were all dead, they should be concerned about their children, but the only reply we could get was that they could not leave there. I went down in June, and we made a survey and set apart a reservation for them. An old medicine man among them had prophesied that there would be a great flood and the white people would all be drowned. The flood began to rise, and the Indians all fled to the mountain. They have been gradually coming back. We had to take into account that there might possibly be a flood that would again fill up the lake, and make provision elsewhere for them in case it does. We had difficulties in regard to the Indians who were settled on the Old Mexican grants. In many cases the Indians have been driven from them and are homeless. Some of them still remain, against the protest of the owners, and we had difficulty in settling their rights, as on the grant at Pauma, owned by Bishop Mora, of Los Angeles. He had brought a suit of ejectment against them. When that grant was made the land occupied by these Indians was excepted. After a great many conversations and a good deal of persuasion the bishop was willing to grant the land.

We had many difficulties with reference to water rights. Water is of more importance than land in California, because with water you have wealth, but no matter how much land you may have, without water you can do nothing. We have made arrangements in most cases so that the Indians will have water sufficient for the cultivation of their lands. But most of the difficulties encountered have disappeared, and I am happy to say that the situation of these Indians is much better than I had supposed possible. I had regarded much of the land as worthless which I find now to be very good. There is very little worthless land where water can be developed, and the supply of water is much larger than had been supposed. I doubt if any large amount of agricultural land in southern California will be left without a water supply in a few years. At the Morongo Reservation, where we had most difficulty, we have satisfactorily adjusted matters. The Moravians have a mission there which is doing good work. The President has accepted the suggestion that they have 5 acres of land for their mission. There is a chapel and a comfortable dwelling house. These are an object lesson to the Indians. Many of the Indians are very good farmers. All the work at Banning and much of the work on neighboring ranches is done by Indians, and so far from the people desiring to get rid of them, they would be glad to have more of them brought onto this reservation. There is on the whole good feeling for the Indians, except among some rough men who have made trouble, but they are comparatively few. What they now need specially is that this land should be allotted in severalty and that the schools should be adequate to the needs of the people. There are already a great many schools and two large boarding schools, one at San Diego and one at Morongo, but the Indians of the desert land do not send their children to them.

Commissioner MORGAN. Can not they reach Mohave?

Prof. PAINTER. No; they are a great many miles from there. As soon as these allotments are under way it may be wise to abolish the agency at that point. It is natural for agents to magnify their office. They are apt to make larger demands on the Government for supplies. It has a demoralizing effect. People who never expected to receive anything from the Government make some effort to procure what they want, but those who do are all the while waiting and wondering why the Government does not do something for them.

Commissioner MORGAN. We have checked off eleven agencies where I think we can abolish the agent and put in a bonded teacher. I would be glad if Prof. Painter would give his opinion more in detail, especially about the Hoopa Valley and the Round Valley agencies.

Prof. PAINTER. I am convinced that the issue of anything to those Indians, except what may be distributed through the superintendent of schools to the

aged and infirm, or in connection with school work, is bad, all of it; bad and only bad. It is not enough to do them any good, and it only raises expectations and makes complaint. That expectation keeps them from doing what they otherwise would do—help themselves. They are perfectly able to do it, and but for this expectation would do it. But the Indian will go 100 miles to an agency to see if he can not get a hoe when with half a day's work he could buy one at home.

I think a hospital ought to be established for these Indians. To be sure they are so scattered that it would be difficult to manage it. These reservations extend from San Diego half way to San Francisco. If a man is very sick he can hardly get to a physician before he dies, and if he is not very sick it is not of much use to go for the doctor; but a hospital for chronic cases would be of great advantage. Mrs. Quinton thinks there should be a hospital at Agua Caliente. The trouble there is that it is on private ground, but I should be glad if the Government sees fit to go in there and put up a hospital on that land and maintain its rights. At San Isabel when the agent was told to build a schoolhouse a few years since, he hauled his lumber there, but when the grantees forbid his building he hauled his lumber away and allowed the men to fence out the Indians and leave them with nothing to cultivate; and now the difficulties there will have to be settled in the courts. I propose to bring this and two other cases before the Commissioner and ask to have suits commenced to quiet title, as at Warner's Ranch and San Isabel. At Santa Inez mission, once very populous, the Mexican Government made a very large grant of land for the establishment of a college known as the college grant. There was a school there for awhile, but no college, and now the grant has been sold.

The Indians were driven off from the land and settled in a little cañon. None of them have been protected there in their grants. The owners of this grant offered them, outside of the cañon, 5 acres of land to each family, with a frame house, and water conducted to each house if they would leave the cañon, but the Indians refused to do this, and, as we were not able to force them to move, and were not able to set apart the land, they are on as a reservation, because some years ago the bishop got an acknowledgment from the Indians that they were tenants, who, in consideration of \$100 paid by them, and a rental of \$1 per annum, were allowed to occupy this land. The Indians say they never signed such a paper, at least did not know its contents. This acknowledgment that they are tenants, seemed a barrier we could not break through, in maintaining what would, but for this, be their defensible rights. The owners of this grant are still willing to give them land, as before stated, if they will accept. They also declare they shall not be disturbed if they remain where they are.

It is very gratifying to me, having made the promise to Mrs. Jackson that I would look after them, that we have been able to accomplish so much. I think the Mission Indians are substantially in possession of lands adequate to their needs, enough for their support. What we want to push for now is the allotment of this land as rapidly as it can be done, and that the school work shall be equal to the needs of the people.

Commissioner MORGAN. As soon as we can we propose to erect a boarding school at Perris, and develop a fruit farm, and teach the boys self-support in this direction.

The subject of law was then introduced, and Mr. P. C. Garrett of the law committee appointed at Lake Mohonk, was asked to speak.

Mr. GARRETT. There is not much to be said as from our committee on the subject of law. A committee was appointed to see whether any measure was practicable to give courts of law to the Indians on reservations, and at the time of the Mohonk conference, or immediately after, Mr. Stimson, who had been conspicuous in connection with the Thayer bill, undertook to draft a new bill which should be more acceptable to Congress. It is that which I hold in my hand and that is all which I will present at this time.

President GATES. Is this presented by the committee?

Mr. GARRETT. No; it is the draft of a bill by Mr. Stimson. I do not speak for the committee; but it seems to me that a bill should proceed from the other end of the line—from the Congressional end; that a bill should be drafted in Congress and introduced there by agreement among those who have to support or reject it. It is difficult for people outside of Congress to present and introduce a bill which will be satisfactory, especially on a subject of this kind. If this bill should not be accepted I hope there will be a bill drawn by one of the Congressional committees.

The proposed bill was then read by Mr. Garrett.

Mr. GARRETT. I have not seen this bill until to-day, and the committee has

not been called together to consider it. I can not give a report about it. What we want is the opinion of those who have knowledge on the subject as to the practicability of this draft, and if they consider it unpractical, their opinion as to what would be accepted.

President GATES. The Indians should have an opportunity to come into touch with law just as rapidly as possible, for their protection as well as for their punishment. There is a truth in the idiom that some one dropped into in speaking of the Chicago anarchists when he said they "had a right to be hung." The Indian "has a right" to the application of the law, for his punishment when he becomes a criminal, for his protection always. The first thing that interested me in this Indian problem was the fact that we had quarter of a million people in our country over whom there was no law and over whom we had resigned all attempts to maintain justice. We have given them partial protection by law within these last five years. Here are men and women familiar with the field. What is the effect produced upon their minds by this proposed measure? What does Commissioner Morgan think of it?

Commissioner MORGAN. I have given a good deal of thought to it within the last two years, and I have had one or two interviews with Mr. Thayer, Mr. Hitchcock, and some others. I have had several conversations with members of the Senate and with Mr. Pancoast, of Philadelphia. I am convinced that there is a necessity for more law than the Indians now have, but I am not prepared to say what shape it shall take. The bill which has been read applies only to reservations. I should say, without having read this bill or having heard it until now, that it would not be practicable to put it into operation on the San Carlos Reservation, for instance, among the Apaches. They are held under military subjection. I have been among them. I think Mrs. Quinton would agree with me that they are not prepared for any system like this; they would get no benefit from it. It would be a cumbersome piece of machinery with them.

I have talked with a Senator who is interested in 25,000 Indians, who has lived with them, and he told me he was preparing a bill for laws and courts, but within a week he has made up his mind that the best thing for those Indians is to take up their land in severalty and pass under the law of South Dakota. That was his judgment after having set to work to frame a bill for them. This bill would not apply to the 5,000 Indians in New York, or the 5,000 or 6,000 in Wisconsin. It is hardly necessary for the 7,000 or 8,000 in Michigan or the 67,000 in the Indian Territory, or the 18,000 or 20,000 who have taken up allotments. It is not really necessary for the 10,000 or 15,000 about ready to take up land in severalty. It is hardly necessary for the Mission Indians, and I do not know that it is applicable to the 8,000 Pueblos. Nor would it be of use to the 5,000 or 6,000 out from any reservations, and as many in Nevada and Idaho. So when you narrow it down and ask where you would apply it you might say to North and South Dakota or to the Indians in Montana.

But the Crows are taking up allotments. Other tribes will take them as soon as Congress gives me money for agents. In other words, I am inclined to think, though I am not ready to pronounce an opinion, that the allotment of land in severalty is solving this question on the one hand, and that on the other the enlargement of the jurisdiction of the courts of Indian offenses, with the preparation of some simple code of procedure, giving them a legal status and making them courts of record by changing the absoluteness of the Indian agent, and in the Indian schools by fitting the boys for the work of judges and jurors—that all these things working together are solving this question. I doubt whether there is such a demand for law for the Indian as there was prior to the passage of the Dawes bill. I say this with great diffidence, and I am prepared to consider any bill with all the care the Indian Office can give it, and to recommend legislation that seems adapted to reach the end that these gentlemen desire, and with which I sympathize.

Mr. GARRETT. Has the Commissioner had conversation with those gentlemen about the possibility of extending the powers of the courts of Indian offenses?

Commissioner MORGAN. I am hardly prepared to quote anybody. I know the matter of Indian courts is under consideration both by the Indian Office and by Senators.

Mr. PAINTER. Is the Winnebago country still called a reservation?

Commissioner MORGAN. Yes and no. The Puyallup is in the same condition. We have an agent there who exercises a sort of oversight over them, but there is no court of Indian offenses. The Indians are regarded as citizens and their police is disbanded. But the agency is maintained and the reservation extends over any of the land that is not allotted.

Mr. PAINTER. I have a letter in my pocket from an Indian who speaks of trouble on the Omaha and Winnebago Reservation and the necessity for getting some law to protect them. It is a question with me whether to regard that as a reservation. You can not deal with them under the old courts.

Commissioner MORGAN. Not wholly.

Mr. PAINTER. The land is allotted but they are away from the courts of the State. Those courts do not protect them. There is no inducement on the part of the State to do that. It makes expenses that the State does not want to meet. If they kill themselves the State is not going to be greatly troubled about it. I think you can enlarge your police courts on the reservations. It is on these reservations where you have citizens of the United States, where the State does not protect them and will not unless the Government gives them some inducement to do so, that something should be done to give the Indians the protection of law. It strikes me that the most urgent thing to do is to make some arrangement by which the surplus lands of those allotted reservations shall go to meet the expenses of that kind and bring the State courts onto the reservation to preserve order. They speak of the condition there as deplorable. I had a letter from the Seneca Reservation where land has been allotted, and things are said to be in a horrible condition.

Commissioner MORGAN. This is discussed on page 25 of my report.

Miss FLETCHER. It makes a confusion to speak of the "Omaha and Winnebago Reservation," as the condition of the two tribes is quite different. The Omahas are allotted and hold their lands by patent, and they are citizens of the United States. Their reservation is divided into precincts; the people elect their county and precinct officers, and pay their taxes, and the law is working in their midst as fast as the people can take hold of it. The Winnebago allotments are not yet approved, and until they are approved the Indians can not be citizens; they are, therefore, still under an agent. It is hardly proper under the circumstances to speak of "the agent of the Omahas and Winnebagoes." While letters may come from different Indians telling of deplorable conditions, I take a hopeful view of affairs. The people are learning by the best of teachers, experience. Within a few days an Omaha man had been arrested, tried, fined, and punished by the local court. The establishment of law is largely a question of the Indian knowing how to handle the law and make it effective, and that he has to find out by experience. It is a great step from reservation and agency training to self-dependence and independence, and the change requires the process of years. Let the people struggle alone, even if they tumble at first. They will come out better in the end. If I may be allowed I will tell an incident in reference to the admirable suggestion of the Commissioner in regard to this matter of law on the reservation. The severalty act is solving this problem, but it must go more or less slowly. The practical way is to strengthen and regulate the machinery already in hand.

The Kamiah Indians who live in the Nez Percé Reservation are 70 miles from the agency, and have never had an agent among them, but they have been under the influence of Miss Sue McBeth. Kamiah is one of the progressive Indian communities and is a remarkable instance of what may be done. This year they had an election for their judge. By a happy circumstance and a little bit of politics a progressive Indian was elected, an elder of the church, a man well-to-do, who, by his own industry, has a comfortable home, a good farm, and is a good example in every way. About two or three days after his election he appeared at my camp, 50 miles away, and told me that the people had honored him by electing him as their judge. He said he would like to have me explain what it all meant. I took the regulations, read them to him, and told him the Indian judge was something like a justice of the peace. Then he asked, "What shall guide my actions?" It seems to me that as we are on the eve of becoming citizens, all my actions should be guided by the laws of the State." I said, "I think you are right." "Then what book shall I get to learn the laws? I can not read very well, but my daughter has been at school, and she can read the laws and I will exercise all my functions according to the law of the State." I wrote to several lawyers to find out if there had been a change in the statutes since the Territory had become a State and I found a copy of the revised laws that I presented to him, and he has been studying it and doing very well.

Col. TAPPAN. I had a little personal experience that may throw light on this subject. Some years ago I had charge of an Indian industrial school in Nebraska. One day a train of cars stopped at a bridge and the men made an assault on some of my children. I found no difficulty in arresting the conductor, engineer, and firemen, but I found, after taking them a hundred miles and arraigning them

before a magistrate, that I could not make an Indian a competent witness in that court, and I had no white witnesses; therefore I failed to make a case. The difficulty is in the incompetency of the Indian being a witness in our courts. I apprehend there is no difficulty in getting any case before the courts, but if you get them there, unless they are competent witnesses, you do not gain anything.

A resolution was presented by Dr. Sheldon Jackson with reference to the liquor traffic in Alaska. It was referred to the business committee.

Adjourned at 5:45 p. m.

#### EVENING SESSION.

The session was called to order at 8 p. m. by President Gates. Mr. H. R. Thornton was introduced.

Mr. THORNTON. I would like to say a word with reference to the suggestion that teachers should be appointed justices of the peace, in order that they might exercise jurisdiction over the native liquor dealers. That might answer in Southern Alaska, where the people are more familiar with laws of the white people, but it would not answer with us, nor I think in other stations recently established. We have discussed this question from all points of view, and we discussed that plan last winter independently of the recommendation of Dr. Jackson. It did not seem to us that it would be advisable at all. We are on perfectly friendly terms with the natives now, and have been for the last eight or ten months, with the exception that we are always conscious of an undercurrent of hostility on the part of the native liquor dealers. The most prominent one has a son and a daughter in our school.

Personally he is well disposed towards us. He probably says to himself: "They teach my children English, which will make them useful as interpreters; they buy food and skins for their clothes from me and in so far as they are useful to me, but their position with reference to the liquor traffic interferes with my business." If we should attempt to exercise the kind of authority that Dr. Jackson suggests, it would only excite the greatest animosity on the part of these liquor dealers, who would have great influence with the rest of the natives, and it would nullify all our efforts to civilize and educate and improve the natives. If the liquor traffic is to be stopped, the punishment should fall on the whalers. They are the real criminals. They are civilized men who understand the moral aspects of the traffic. You can not expect these ignorant Eskimos to look at it as civilized people do. The natives have plenty of sense. They would say, "Here are Mr. Thornton and Mr. Lopp trying to punish us, and calling in the revenue officers for that purpose, but they let the white men go scot free." The natives can see the injustice of that. I hope I have said enough to show how unwise the plan of having us appointed justices of the peace would be. If we were appointed we should probably consider that our wisest course would be to leave our authority in abeyance, so far as exercising control over the natives is concerned.

As for the measure of introducing reindeer it is only just for the United States Government to do something to replace what we have taken from the natives by killing their whales and walrus.

In regard to our school I will say that we have a total enrollment of 304, and for five months our average daily attendance was 156. Our accommodations were such that we had to have three sessions of school a day. It seems surprising to you, perhaps, that these savages, as you take them to be, should be so desirous of attending school and so anxious to gain an education. In the first place they appreciate as well you do the advantage it will be to them to know English in trading with the whalers—their only means of obtaining flour, cloth, tools, etc. In the second place, having no books and no resources for entertaining themselves, their life is exceedingly monotonous; so that the school is really a kind of entertainment for them. We try as far as possible, to explain everything that comes in incidentally alluding to civilization. Take a word like "kurigyëuk," which means "leopard seal" for instance, we explain why it is called "leopard" and they take a great interest in such explanations. We show them books and pictures too. But aside from that, they seem to us to show a very earnest desire for knowledge and pleasure in the acquisition of knowledge for its own sake.

To show how much they appreciate school let me mention one incident. We did not have lumber enough to build our coal shed as it should have been. It had a roof running slanting against our house. By that means the children got ready access to the roof of our house and they used that as a toboggan slide; as they would begin to slide by three in the morning there was danger to the slumber of the inmates of the house. Besides it was likely to loosen the shingles

and let the weather in. But Eskimo boys like other boys "will be boys." One morning when they had been worse than usual, we told them that we would suspend school until they had learned to behave themselves. The effect was magical and immediate. They were as quiet as so many little mice. We kept up the suspension two or three days and they were perfectly quiet. Then we opened again and they gave us no trouble for some months. They look on school as a privilege and not as a task; that is a good view to take, and we take some pains to cultivate the idea.

Mrs. Quinton was asked to speak.

Mrs. Quinton read extracts from a letter from Dr. Susan La Flesche, who is at work among the Omahas. She then made an address upon her recent journey of eight months among the various Indian tribes of the United States. The following tribes were visited: Seminoles, of Florida; Pueblo Indians, of New Mexico; Navajos, Moquis, and Apaches, of Arizona; Mission Indians, Southern California; Hoopa Valley and Digger Indians, Northern California. As some of the facts presented were given by Mrs. Quinton in an address at Mohonk (see page—) they are omitted here.

Mrs. QUINTON. The Woman's Indian Association has started a mission among the Florida Indians and the Government is coöperating generously, and we hope the day has dawned for the Seminoles. The whisky traffic there is a source of vast evil. The whisky men fill them with delusions and snares. They say to the Indians, "These women are apparently your friends, but presently the soldiers will appear and you will be driven off to the Indian Territory." But gradually the Indians are learning who are their real friends. We must not expect much to be done in a year, though one friend, more pious than wise, asked how many conversions we had had during the year and whether we were ready to build a church.

In New Mexico the Pueblo Indians were visited. Given a Catholic sovereign for the people and the rest of the work may pause! The children may come when they like and only when they like. The reading may come first or the geography, without any regular order. I think it would be better for the children to be taken to the Government school under such circumstances.

Among the Navajo Indians I saw a great deal that was interesting industrially. There are three points where good work could be done. The people do not settle in groups as other Indians do. They do not seem to care whether they have neighbors within 3 miles.

President GATES. Their chief industry is herding?

Mrs. QUINTON. Yes, and they do good work in silver and in making fine blankets.

President GATES. Has the Department made any appropriation for irrigation there?

Commissioner MORGAN. There is on the books of the Treasury considerable money for the purpose of irrigation at that place, probably \$25,000; but when I took up the matter and referred it to Maj. Powell he reported that a dam would cost not less than fifteen and probably fifty thousand dollars and it would be useless to attempt anything on the necessary scale with the money we have in hand. We are developing water for the Moquis, and we propose when we are through there to send the augur to the Navajos for wells. Irrigation means hundreds of thousands of dollars.

Mrs. QUINTON. We visited the Moquis. They are a quiet, industrious people, living on the high mesas, living by basketry and pottery. Between fifty and a hundred houses are in process of construction. The superintendent of the school is a bonded officer and therefore no agent is needed. One Indian we saw had been in Kansas. It seemed to him like the garden of Eden with the streams and greenery and fresh growths of every sort. It was all new to him.

I visited the White Mountain Apaches and they seem to me very much like other Indians, certainly as energetic. When I arrived I met several ladies, wives of army officers, who said that these Indians would not work. The Indians came at 4 o'clock for seeds, etc., and they kept the agent busy all day long. They had taken a large contract for hay and were cutting the grass or rather they were pulling it up by the roots, sometimes cutting it with a common knife. They had often to travel far over the mountains to do it. They would come in with it on their shoulders, young and old. I saw many illustrations of their willingness to work that were touching. One woman came to get her money for cutting wood. She had carried her loads on her back and had walked long distances. The first thing she did with her money after she was paid was to pay a

debt to the trader. She then got a little loan so as to buy a horse for her next year's crop, though those army ladies had said, "they will not work."

Commissioner MORGAN. Since you were there a day school has been opened at the fort, and on the 10th of December 26 of those boys came down to Albuquerque.

Mrs. QUINTON. I am delighted to hear that.

The visit that went most to my heart was among the San Carlos Apaches; 5,000 in number. Hundreds were there on issue day, the lame, halt, and blind. Such a collection of human wretchedness I have never seen in one picture. They were there for supplies. The agent, a real friend of the Indians, introduced me, and I told them about our society, and when I was through they asked to speak. They did so through two interpreters. They were not afraid to criticize the agent. They desired to have their children in school on the reservation. They wanted land of their own and were advised to go to another part of the country, and I believe 2,000 are to go.

Commissioner MORGAN. That has been thought to be unwise. They are anxious to have the children in school. I have sent some to Haskell and some to Genoa, and I have given orders that every child shall be put to school until we can build a school there.

Mrs. QUINTON. I can not begin to tell you of their gladness that they had friends working for them. It was evident from talking with them that they appreciate the necessity of law. They want something more than they have in the way of law. They asked for police courts, and they did not want the agent always to be the arbiter.

Commissioner MORGAN. The agent who was there has been relieved. The new agent said he would organize Indian courts among them.

President GATES. Aren't the Apaches well fitted for that?

Mrs. QUINTON. I think they are. They seem to have a sturdy sense of justice. They will execute sentences that are imposed even on their own brothers. The thing to do is to get them under the State law as soon as possible. I believe things are working out, and that if a little help can be given them the system need not last long.

Medical work is needed everywhere among the Indians. Hospitals are needed. There are questions of detail and management, but the Indians are ready for law and justice and hospitals and schools, and for good and true work. Nothing was more touching to me than the speech of an old blind man. He said he believed if the women were going to help something good could come to them. The whole of the work, after all, rests upon Christian activity and faith.

The work is practical. The agents should be selected by the man to whom they report, so that there can be unity and harmony, and they should be kept in office during good behavior. I believe it is possible to settle all these questions within five years if the Christian men of the country will set about it.

Miss ALICE C. FLETCHER. I am always struck, whenever I come East and listen to the talks concerning the Indian, with the contrast between those who sit at this end of the line and those of us who go out to work among the people. I am always impressed with the fact that here there is a great deal to do with summing up of matters and theories, that there is a very curious atmosphere through which facts are seen, while in the field the problems are so much simpler.

It has been my privilege to have to do with the severalty act. I have been working under it ever since it became a law, and every year's work increases my appreciation of its capacity. I do not think the country realizes what the act can do and is doing. I have myself great faith in it. I have watched its influence, its working, and I am more and more forced to bear testimony to the wisdom of those who constructed it. That one law could have been framed that would apply in so many different cases is very remarkable. I only wish that all the good people who are trying to get up amendments would be a little patient, remembering that you can not plant and harvest in the same day. Three years I have been working among the Nez Percés, and the changes that have taken place among those Indians, under the administration of this law, has been very remarkable.

I do not care to go too much into detail as to what I had to encounter when I first went there. One always enters at the agency end of the reservation and with all due deference to the agency system, it is, generally speaking, the most uncomfortable place to enter. The Indians around the agency are usually of the worst type. They are hangers-on, professional beggars, politicians, not in a good sense, and they live largely by their wits. There are exceptions, but I do not exaggerate in making this general statement. Among the Nez Percé Indians

the only men of whom I would say "Beware of those men; they are not to be trusted," are the men that every inspector, every special agent, every one who goes upon the reservation will meet in the agent's office and they will be the very men who will be the main spokesmen in any council. They do not represent the people, they misrepresent the people. I have had a great deal of trouble from this agency class. So great was the trouble in the beginning of my work it was suggested that I should request to have the military called in, but I felt that the difficulty should be solved in some other way.

I moved away from the agency and went some 70 miles and camped among the Kamiah Indians, those who had been under the influence of Miss Sue McBeth. There I found men ready to hear about law and citizenship. I gathered them into the church and the meeting was opened with prayer and the law was read by my interpreter, a returned student from Chemawa training school. He was the one man on the reservation, white or Indian, who had read the law when I arrived; he had heard of it and had written to the Commissioner of Indian Affairs and had received a copy and had translated it to his family. This young man has worked steadily by me during the past three years. His life has been threatened again and again by agency Indians and by one who held the position of judge through the appointment of the agent.

In the council the law was read and explained and while there was some question on the part of those who clung to old customs, the reason of the people was touched. The first to take their allotments were these Christian men, of Kamiah, and it was in spite of the threatening messages brought by the police from the agency that they would suffer in their persons or their stock if they listened to the law. The work has been successfully carried on in the face of all opposition, the agency clique is dying rather hard and is not quite dead yet. The people, however, have been stirred to ambition, they have felt the life that comes from the idea of personal responsibility and personal ownership of property. Large tracts of land that had never been cultivated have been broken up and work is going on in the preparation of homes. The people have done a great deal considering their limited means, and the Government stands ready to render them every possible help. The question is one of administration, which is all right at this end of the line, but gets tangled as it goes over the mountains, to the Pacific slope. There is, however, a strong intention to do right at this end, and matters will get straightened out over the breadth of the continent by and by.

The schools have been entirely changed in their character within the past few years; they are now good schools and well managed, and the children are eager to learn.

One day this fall, as I was breaking camp, I crossed a deep cañon to the upland over which ran a trail from one of the Indian settlements on the eastern part of the reservation to Fort Lapwai, where there is a large industrial school. I met a comely Indian woman on horseback, matronizing a group of twelve children that she was taking 80 miles to school. Each little thing was astride a pony, from the boy of five to the girl of fifteen. They had a pack horse or two carrying provisions. The matron and I stopped to chat, but soon they were off again, laughing and talking as their, gay-colored forms disappeared in a turn of the wood.

Afterwards I met two Indian men with a caravan of boys also on their way to school. During that day I ran across several other mounted parties of men and women taking boys and girls to school. The Nez Percés believe in sending their children to school.

The superintendent of the industrial school is an old and trusted friend, and he has introduced sociables, and these are the event of the school season. The band plays, the boys and girls wear their best clothes and march together. The parents and worthy young men and women are invited, and are allowed to join in the march; but it is very rare that any woman from the outside will march, since it is a requisite to wear citizen's dress, and it is hard for a woman to drop her blanket or shawl and leave her head uncovered. It was at one of these sociables that the wife of an elder in the church rose resplendent in a new red dress trimmed with green, tossed her shawl to one side, took the arm of a little boy and joined in the march. Her act caused a sensation throughout all Lapwai Valley.

Severalty arouses the individual from out the tribe. A man stands for his own value, and in accepting his land in severalty he also accepts the idea of citizenship. I always seek to have the Indians understand that the two go together and mean self-government. I explain to each allottee in what county his allotment is, and inform him concerning the county organization and what

will be the duties of a citizen, and also what taxes mean, and how the same law is over the white man and the Indian, giving to each protection of life and property. The manliness that is bred of these ideas I can not overstate. It is a great deal harder to govern people who think than people who do not think. Therefore allotment, since it starts the Indian thinking, makes the government of the tribe harder than under old conditions. The operation of this law tends to develop the power for self-government, and has in it the principle of growth. I am not so much concerned about the necessity for law on the reservation as I was before I had an opportunity to watch the result of the application of the severalty act. I am afraid of any increase of machinery for the government of the Indians.

I should regret the creation of any more places where men can be appointed to do this or that for the Indian. I think there is a great deal of danger in it. The severalty act throws off the shackles of the Indians; do not forge others for him. If the Indian comes under our own law, since that law is sufficient for us it is surely sufficient for him. Moreover, it is not good for a white man to think that there is a separate law for the Indian. As the severalty act makes the Indian a citizen of the United States, places him under the laws of the State or Territory in which he lives, subject to all the laws, civil and criminal, what would you have more? Can you give to him more than our Constitution gives to us? I think not.

I am more concerned, as I come East, with the great prominence which is given in all deliberations concerning the Indian to the Indian's property, to the forgetting of the right of the man himself. Much care is taken to prevent the Indian mispending a cent, that he loses all chance of making a bargain in any way. He may not derive benefit from his land in any way unless he works it personally. This excess of care works badly. After the Indian has had his sense of manliness, independence, and ownership of property awakened, it is not best to cast him back and say, "You shall not do so and so for yourself; we will send an agent to do it for you." I would rather the Indian should lose all he has and gain his own experience in the exercise of his manliness, and then if he fails, start from the beginning again and make his own fortune as the rest of us have had to do. I can not speak quietly of this matter, because I have seen so much mischief wrought by this excessive supervision. If there is anything that law can do for the Indian it should be to see that he has the rights of manhood when you have clothed him with manhood. Let him make mistakes. Give him a little more liberty and let him gain his own experience.

The work of the education of the children has been wonderfully accelerated. The progress is so rapid and is so well undertaken by the Government that it has required new channels for missionary effort. Just here I want to speak of the wisdom of the work of Miss Kate McBeth, for she has opened the way to a new departure in missionary work. She has specially devoted herself to home work among the Indian women. When she came to Lapwai I doubt if there was a woman who knew how to make raised bread—to preserve fruit or vegetables so that they could be used in the winter. They knew nothing of cutting and making garments, or the little appliances that tend to domestic comfort. To-day, among those who have come within touch of Miss McBeth there is not a woman but knows how to cut and make her own and her children's clothes, to crochet, embroider, and make them pretty; to make good bread; and hundreds of jars of fruits are preserved and vegetables are stored and cared for, so that the summer is not merely a time of garden feasting, but the garden is a blessing all the year round. More than that, she has books that have been sent through the kindness and interest of friends, and some that I have added to increase her library, and her cabin is a place where the young men and women who have been to school gather to read and talk. She has also a magic lantern, with which she entertains them. She lends it to the agency school, and it helps in the Christmas entertainment. She is aiming to bring school and home together, so that what the child learns at school will be put in practice in the home, to reach which it does not cross so wide a chasm. Her work is as beautiful as it is hopeful, and suggests the wide field which lies open for Christian workers throughout the country.

If I have any message to bring you from the field it is one of hope and cheer. You who have been so long interested in this people must be glad to know that your thought and your legislation have done so much. The severalty act is one of the great pieces of legislative work of our country and of our time.

Mr. LYON. After the Indians get their land do they desire instruction as to working it?

Miss FLETCHER. They manifest a desire to have a chance to work it, and they

are pleased to get new ideas. But almost all the Indians that I have seen did know how to do something.

Mr. LYON. Can they go on and manage it properly?

Miss FLETCHER. In some cases. They need better horses and plows to break up the land with. That is where the difficulty comes in. There are many practical things where instruction in farming would help them, but the instructor must be a man of brains, otherwise the Indian will know more than he does.

Mr. LYON. Would an intelligent farmer be of use to them?

Miss FLETCHER. An intelligent man can be of use almost anywhere.

Mr. LYON. You speak of improvement in education. Have you noticed as great improvement in industrial and agricultural matters?

Miss FLETCHER. My observation is limited. Returned students bring with them a great many admirable ideas concerning farming; and when I come to a family I can tell whether the children have been off the reservation by the appearance of things. As far as the farmers' work is concerned I think it would stand improvement.

Senator Dawes was invited speak.

Senator DAWES. If there is any place where a man finds encouragement for his work it is in such a place as this. When we hear of what is being accomplished, how this work for the Indian has spread, how its organizations have been developed, I think one who was here when it began feels as if there were compensation enough for all that has been disagreeable and hard. When I was told at my dinner table to-night that Prof. Painter had reported that the work of the Mission Indians was completed, and they had at last found homes and refuge, I forgot my dinner. My mind went back to the time when the petition signed by 32,000 names praying the United States to keep its treaties with these Indians was presented to the United States Senate by the Women's Association. It has taken ten or twelve years to accomplish this work. Then came the appropriation of \$20,000 to educate the Indians, in 1878, when the first appropriation of a dollar was ever taken out of the Treasury to educate an Indian. Then it was \$30,000, then \$40,000. At last it has come to more than \$2,000,000. And all this time the Congress of the United States has been led on by the enlightened action of this commission and those engaged in this work, to take the money out of the Treasury of the United States and put it into the hands of a Commissioner who had been able to appropriate every dollar of it in the way that will count most. His school houses, like light-houses on the coast, are all round the borders. He holds teachers institutes with the instructors that are employed in this great work. Then here are the women's associations, and the associations in Philadelphia and Boston, all with officers who spend so much time in advancing this cause. When I consider all these things I feel indeed as if something had been accomplished.

Every year I have played the rôle here and elsewhere of a faultfinder. I have got over that. I have come to believe that everybody has his own field to work in and it does not make any difference whether I agree with him or not. I have got a little field in which I can work and we need not interfere. I have my own notions about these courts that have been proposed, and I have tried to convince everyone that mine were right, but I have found out that no one agrees with me, and I have made up my mind that I do not care whether they do or not.

My friend, the Commissioner, knows what trouble we had in getting the appropriation bill through last winter, and it looks as if it were going to be still harder this year. It may be so. It is all well enough if it is so. It would not be good for anything if it were not so. These two millions that our friend expends so wisely and with such good results, if he had nothing to do but take it up with a scoop and use them just as much as he wanted to, it would ruin him and the whole work. It is only by the grace of hard work and hard fighting that we come to prize what we get. And he spends that \$2,000,000 to more effect and, with better and greater results because he has to work night and day in season and out of season in order to get it, and to get up such a sentiment among the people who have to appropriate it that they do not dare do otherwise.

The thing that troubles me most is to get the Indian started on his allotment. I know there are some Indians who can support themselves on their allotments, but they are rare birds. Indians, as a general rule, do not like to work, and they do not know how to work. If you set an Indian on 160 acres of land and go off and leave him, the last end of the poor fellow is worse than the first end. Unless you can get him into a position to want to work and give him material to work with, and somebody to show him how to work, he can do nothing. Having done

that, if he does not take care of himself, it is because he does not belong to the survival of the fittest.

I have introduced a bill into Congress, some of the points of which I will give you. The Indian does not know what to do with 160 acres, or 80, or 40. Forty is just as good as 80 to him for a good many years. Suppose you could contrive to put a white man on 40 acres of his land on condition that he break up so many acres and cultivate them each year for a number of years. Or, if he pay further rent, that it should be spent on the other half in breaking it up. Then when the white man goes off the real estate is in a condition for cultivation.

President GATES. When will the white man go off?

Senator DAWES. That is one of the difficulties. There would be no difficulty if the Indian office was officered as now. But the mutability of human affairs stares me in the face, and I can not expect that the present Commissioner will stay there all his life. I have tried to put round the bill all the safeguards that I could, but if you all condemn it it will go into the waste basket. But I think that is the difficulty of the allottee as a whole. He must be prepared more than we realize. We do not comprehend the great change that comes over him in an instant after Miss Fletcher or some one else puts him on land in severalty. Unless he is something more than a blanket Indian when that is done for him you have only increased his difficulties, and he is a more troublesome Indian to take care of after he becomes such a citizen as that than he was before, because he ceases to belong to the tribe; he ceases to have any right on the reservation; he ceases to have any protection from the agent. The agent has no more right to touch him; he has no more right to furnish him with food and raiment than he has to furnish you. He goes forth alone and must carry his burden alone. He is as bad as Robinson Crusoe on his island, unless we realize that and get him started right. If we do that then let him survive if he can; if not, let him go to the wall. But do not let us vainly think we have done this work when we have simply set apart so many acres of land and put him down on them. Here is one field of work.

Then my friend, the chairman of the law committee, has another field. He has a job on his hands. I hope he will work it out to the satisfaction of those people who feel that it will accomplish great good. No one will stand in his way. Everyone will help all they can.

I congratulate you who have accomplished so much and I commend to you the broader field that opens up to you as you go forward in this work. New questions, new duties, new opportunities, and new rewards await you.

President GATES. I believe we are on the right track. The problem of education must underlie all work. If we can keep up the school system, within five years we shall have a large body of Indian men who know something about farming. Such workers as Miss Fletcher and Capt. Pratt come to us and say, "Make more of the manhood of the Indian and think less of his property." I remember hearing Capt. Pratt say, "His land is a curse to the Indian; if we give it to him let him do what he will with it. Let him run through it, and come out poor, stripped of all hope of land, and this experience may become his greatest blessing."

I think the fact that he and Miss Fletcher and others lay the emphasis on man's personality and the kind of training that comes through trying to walk alone, through tripping and falling, through learning how easily property may be lost, should be carefully considered. We believe that faithful work and steady care of his earnings will soon enable a man to hold property. Having firm faith in this principle, that we are trying to do in one generation for savage races, by Christian education, what it has taken many generations to do for our own race, I think we may be perfectly convinced that we are on the right road. The Senate may be able to devise just the law that shall show us how to get white settlers among red men. That must be done. They need the teaching that comes from such neighborly association with industrious whites.

I felt as though I ought to say little when this proposed law was read. But I must "clear my conscience." I have studied this subject very carefully, and I find myself in a strange position. I find myself appealed to by men who study this question by the *a priori* methods alone, with the statement, "You are a student of these subjects, and you know that legislation should be thus and so!" And I find that I do not answer to that kind of appeal. I do know that every system of law that has "had a hold" on a people, and has trained them, has grown up with the people, and that an attempt to force upon any people a code from outside that did not have regard to their present position and their past training has been a failure. I therefore feel the need of adapting legislation

not to the theory of what ought to be, but to the circumstances of the Indian. On the way to this conference I read the bill that has been presented here. I also read over much of the legislation for Indians of the last few years.

The laws that have been framed here, under the advice of the Department, and notably by the Senate, have in every phrase and in every clause that which suggests to those of us who understand the situation a definite warning, a special application, while the new law is "up in the air." I find that difference between them, as I read the older laws and this new one. I feel, therefore, extremely doubtful as to the wisdom of our attempting to set up a system of independent judges for the reservations only. Rather is my object to get the children out of the reservation among the white children. I wish there were a thousand children to be taken out to-day. Get the men upon the allotted land, and bring them under the laws of the States and the counties where they live. It seems to me that our wise friends at the center can devise some measure by which the proceeds of surplus lands can be taken to make good to the treasuries of the counties what they would receive from the taxation of the Indian lands (which are held by protected title) for roads and the support of courts. Possibly some other funds might be applied in this same way.

To get the Indians under State law is the end we desire. If we try to draft a bill for a new system of courts in the States we soon find ourselves checked by the Constitution of the United States. The Indians are not now in the Territories, the most of them. They are in reservations within the States. Further, the tendency of such legislation would be to perpetuate a special Indian system for an indefinite period of time. This would involve questionable results. At the same time I hope that this measure may be carefully considered, may appeal to members of Congress on its merits. If it is regarded as practicable by our legislators let it be passed and tried. I only express one man's doubt. But whatever we do let us hold fast to the necessity of getting the Indians as fast as possible under State laws. One-tenth of the Indians have received allotments. That is very encouraging. Now, let us seek to secure the appropriations needed his winter.

#### ADDRESS OF COMMISSIONER MORGAN.

The whole amount of appropriations for Indian education last year was \$2,291,000. The amount we have asked for this year will amount to a little over \$3,000,000. As to the necessity for that sum I do not need to argue here. I believe it is true that every dollar we have received has been well used, and that the schools are doing a better work even than we expected. I believe the educational work now in progress will accomplish the results we are asking, as firmly as I believe that Amherst College will prepare young men for the business and adornment of professional life, and I have no doubt about that.

As to the prospects of our getting this amount that is a question that I can not answer. Last year our appropriation came very near being shipwrecked. I do not believe, in all the work Senator Dawes has ever done—I wish he were not here to-night—

President GATES (interrupting). We will consider constructively that Senator Dawes is not here.

Commissioner MORGAN. I do not believe he has ever done a more magnificent thing than when he said, "Gentlemen, if you do what you propose to do I have nothing further to do." The Senate at once replied, "Then we won't do it; what do you want, sir?" and we got our appropriation. I do not think the Senator knew what a magnificent thing he did, and whether he would have had courage to do it if he had known! I tell you this appropriation must be worked for. We shall need all the help that we can get. No one else knows as well as I what it cost to get the last appropriation. I know the work done, and it was worth all that it cost. It will cost more work to get the present appropriation than the last, but I believe we shall get it.

I have had prepared a more elaborate analysis of the Indian appropriation bill than has ever before been presented. The appropriations for the Indian service for 1891-'92 amounted in round numbers to \$17,000,000. Out of that amount, \$8,898,756 were for the payment of lands purchased from the Indians. Fulfilling of treaties required the payment of \$3,668,564. I doubt whether any one would say we had a right to refuse to pay that. Then it requires for salaries, for carrying on this work, \$560,890. What these salaries are is plainly set forth. If anyone thinks we are paying too many salaries or too large, that is an open question. Information on this point can be furnished to anyone who wants to

know. So far as my own judgment goes we are paying less money than is paid in almost any other branch of the general service. Then we pay for incidentals \$471,237, and what these are is carefully set forth. For miscellaneous expenses we pay \$1,272,139. That includes \$606,000 gratuities given to Indians, an amount which will compare favorably with the alms appropriation of any State. It also includes \$100,000 for the friendly Sioux, whose property was destroyed in the last "unpleasantness;" for the Sisseton scouts \$126,000; and to the Sioux for ponies, \$200,000, which should have been paid long ago.

This summary has been made that the appropriation for education may stand out in all its fullness. We are asking for \$3,000,000 for education. I will ask anyone who wants to criticise the Indian bill to put his finger on any place where he thinks there ought to be a reduction, where the Government can wisely cut down a single dollar, and if there is such a place let him tell us.

Now we ask for \$3,000,000 for education. Can it be justified? If this expenditure of \$3,000,000 can not be justified, then we ought not to have it; if it can be, I think we shall get it. I think Mr. Thornton's statement that the whales and walrus being taken from the people of Alaska imposes upon us a moral obligation to send them the reindeer is correct. We occupy what they once occupied. We have destroyed the buffalo and we have taken from them the great salmon fisheries, and I think as a people we owe it to them as a debt to educate their children so that they can earn their own living as we must earn ours.

Every consideration of economy is in favor of this appropriation. It is cheaper to educate men and to raise them to self-support than to raise another generation of savages and then fight them. There is a question of political economy here. It is cheaper to educate them, that they may become producers and bring back to the national wealth more than the nation expends in educating them.

On the ground simply of sentiment, if you will, this money should be given. Four hundred years ago Columbus discovered America. It was then occupied by these people, and if they had been let alone on this continent, with all its vast resources for four hundred years, I believe they would have developed upon this soil a civilization of their own. We have made it impossible for them to do that because we have driven them away ruthlessly, as we did the Cherokees from Georgia. We have driven them from one place to another and have made their own civilization impossible, and have insisted that they take ours. We are to celebrate next year the coming of Columbus. We are to gather in Chicago people from all parts of the world, that they may see our greatness. We shall dilate before them upon our art, our science, our philosophy, everything that marks our greatness. I shall have there one of our Indian industrial schools. We shall point to that as a representative of the magnificent work that this great people is doing for the remnant of the Indians! Out of the abundance of our harvests, out of the enormous accumulations of our capital that has been produced out of the soil that belonged to the Indian, out of the abundance that has come to us from their heritage, we are spending a paltry sum that the remnants of these Indians may be lifted on to a plane of higher civilization! I would justify this appropriation on the ground of national sentiment, that it is a humane thing to do, a generous thing to do.

I believe that we can justify it on the ground that we are a Christian people, extending a helping hand to the Indians, because they are our fellowmen, and from the impulse that Christ has put within us. I believe we can do it on the ground of furnishing to the world a magnificent illustration of what our institutions will accomplish. \*If we can take these schools of learning on which we concentrate our civilization, where English is taught, where our code of morals is taught, where unsectarian Christianity is taught, if we can make our schools, as they are to-day, *foci* where our concentrated American institutions and life can be felt, if our institutions will take these people and lift them up and make of them intelligent, self-reliant, independent, aggressive American citizens, then it is well worth while to do that. Because, if these institutions are working that kind of material over into good American citizens, there is nothing left that we need fear to attempt. Let come the floods from all Europe; only give us time and we will do with them what we have done with the Indians. If we have not organization enough, if we have not persistence enough to bring these ideas to bear on the Congress of the United States so as to secure the appropriation we need, then the question will be, not can the Indian be civilized, but have we lost our power? I do not think we have lost it. I think we will get the money.

The business committee reported recommending the adoption of the following resolution, offered by Dr. Jackson, and it was adopted:

*Resolved*, That a committee be appointed by the chair to confer with the Presi-

dent and other Government authorities with reference to the better protection of the native population of Alaska from intemperance and other evils.

*Resolved*, That the same committee shall be directed to cooperate in the effort to secure the necessary legislation for the introduction into Alaska of the domesticated reindeer of Siberia.

The following committee was appointed:

Dr. Sheldon Jackson, Gen. E. Whittlesey, Prof. C. C. Painter, Miss Anna L. Dawes, Miss Alice C. Fletcher.

The following platform was then presented and unanimously adopted:

#### PLATFORM.

The conference feels and regrets the absence, because of sickness, of two men who have from year to year been to it wisdom and inspiration, and it expresses the hope that Gens. Whittlesey and Armstrong may soon be restored to health. We congratulate the country on the marked progress which is being made from year to year in solving the "Indian problem." The solution becomes clearer and easier in proportion as there is a growing appreciation of the fact that there is no insuperable difficulty in anything abnormal in the Indian himself, and that he will show himself fully a man if we secure to him simply the conditions essential to the man as such. This has been recognized by Congress in the increasing appropriations made for his education; by the Bureau in its intelligent grasp of the problems with which it has to deal, and by the religious organizations of the country in their enlarged plans and increased contributions for his elevation.

The conference expresses its gratification and hereby extends its thanks to President Harrison and Secretary Noble for having so classified the Indian service that hereafter all physicians, superintendents of schools, assistant superintendents, teachers, and matrons will be appointed upon certification from the Civil Service Commission, and we express the warmest hope that at an early day the entire Indian service may be thus reformed.

We advocate, as heretofore, the most liberal policy in the education of the Indians, believing that the sooner the whole Indian population receive a sound and thorough education the sooner the Government will be relieved of the heavy special expenditures on their account. We therefore believe that economy as well as every other consideration should animate the Fifty-second Congress to make a further increase in the appropriations for the purpose of education; we also believe that the privileges of such Government schools as those at Hampton and Carlisle should extend to the Indians in the State of New York as to all other Indians, until the Indian problem is solved.

We continue to feel a concern on account of the inaccessibility of courts of law on the reservations, and we are gratified to find that the subject has been taken up earnestly in Congress, and that both the Secretary of the Interior and the Commissioner of Indian Affairs advocate action to that end. We favor such measures having this object in view, as may be practicable, in the opinion of those who best understand the needs of these Indians and the nature of our judiciary system.

The debauchery of the Alaska Indians arising from the illegal introduction and use of the worst kind of intoxicants has shocked the moral sense of the community; and we confidently look to the authorities for such action as will save these tribes from the sad demoralization which now prevails among them.

In view of the almost starving condition of many of the natives of Alaska, caused by the destruction of the sea animals by the whalers and hunters and the absence of any other source of food supply, and in view of the fact that the experiments of the past season have proven that Siberian domesticated reindeer can be successfully introduced into Alaska, we respectfully urge upon Congress the wisdom and prudence of an adequate appropriation for the purchase and transportation to Alaska of reindeer from Siberia.

The continued interest in these conferences from year to year, manifesting as it does the wide interest felt by the good people of the country at large, gives new zest and hope to those who are laboring to settle the question of Indian civilization.

Adjourned at 11 p. m.

*Approximate number of allotments made to Indians on the various reservations under the provisions of the general allotment act, up to the present date.*

Tribe.	No. of allotments.	Remarks.
Sisseton and Wapeton, Lake Traverse, S. Dak.	1,724	1,341 patented. Schedule of additional allotments made under agreement of Dec. 12, 1889, under examination.
Sioux, Yankton Agency, S. Dak. ....	1,445	1,445 patented. Work of making additional allotments under act of Feb. 28, 1891, now in progress in the field.
Eastern Shawnees, Indian Territory	82	72 patented. Schedule of revised allotments under act of Feb. 28, 1891, awaiting action.
Senecas, Indian Territory .....	296	Schedule awaiting action.
Wyandottes, Indian Territory .....	241	Under examination.
Chippewas, Fond du Lac, Minn. ....	505	These allotments have not been approved for the reason that the lands are mainly valuable for timber, and the law does not contemplate the allotment of such lands in severalty.
Crows, Montana .....	744	Made in the field. Schedules not examined.
Winnebagoes, Nebraska .....	952	Schedule reported to Secretary Nov. 2, 1889.
Siletz Agency, Oregon .....	110	Work in progress in the field.
Grande Ronde Agency, Oregon .....	269	269 patented.
Warm Springs Agency, Oregon .....	302	Work suspended on account of dispute as to boundary of reservation.
Papagoes, Arizona .....	291	Schedule approved.
Oneidas, Wisconsin .....	1,501	Do.
Sac and Fox, Kansas .....	76	Schedule awaiting action.
Modocs, Indian Territory .....	68	68 patented.
Ottawas, Indian Territory .....	156	Awaiting action.
Devils Lake Agency, N. Dak. ....	1,100	Completed in the field, but not reported here, owing to death of allotting agent.
Nez Percés, Idaho .....	1,300	Work nearly completed in the field; schedule not received here.
Jicarilla Apaches, New Mexico .....	846	Awaiting action.
Tonkawas, Oklahoma .....	68	Do.
Poncas, Pawnees, Otoes .....	375	Work in progress in the field.
Prairie Band of Pottawatomies of Kansas .....	105	Do.
Kickapoos in Kansas .....	33	Do.

*Allotments under special acts of Congress and agreements ratified by Congress.*

Tribe.	Act.	No. of allotments.	Remarks.
Peorias, Indian Territory .....	25 Stats., 1013	155	Patented.
Miamis, Indian Territory .....	do	65	Do.
Iowas, Oklahoma .....	26 Stats., 749	109	Do.
Sac and Fox, Oklahoma .....	do	548	Do.
Absentee Shawnee, Oklahoma .....	26 Stats., 989	563	Approved.
Citizen Pottawatomies, Oklahoma .....	do	1,498	Approved.*
Cheyenne and Arapahoés, Oklahoma .....	do	1,800	Awaiting action.
Umatilla Agency, Oregon .....	23 Stats., 341	337	Work progressing in the field.
Poncas, Nebraska .....	25 Stats., 888	167	Patented.
Crow Creek Agency, S. Dak .....	do	556	Work progressing in the field.

\* 1,363 allotments under the act of 1887, as provided in the agreement, and 135 allotments under the act of May 23, 1872.

Allotments to homeless Indians on the public domain outside of any Indian reservation (transmitted to Department for approval May 8, 1890) .....	164
Additional allotments under same section and act (awaiting action) .....	332
Applications received for allotments under same section and act (awaiting action) .....	205
Under section 13 of the Sioux act, allotments have been made within the ceded Sioux lands and reported to this office (awaiting action) .....	431

REMARKS.

From the foregoing it will be seen that the total number of allotments made to date within the several reservations is 18,387; total number of these allotments that have been patented, 4,239; and total number of allotments outside of Indian reservations, 1,132.

It is interesting to know, then, that no less than one-tenth of all the reservation Indians in the United States, men, women, and children (exclusive of the five civilized tribes), have been given lands in severalty, and that upward of 1,000 homeless or nonreservation Indians have taken allotments upon the public domain.

Surveys have been made for allotments on the Hoopa Valley Reservation in California and on the Moqui Reservation in Arizona, and have been ordered on the Pine Ridge and Rosebud Sioux Reservations in South Dakota.

Respectfully submitted.

C. F. LARRABEE,  
*Chief of Division.*
