1892.

REPORT  
OF THE  
COMMISSIONER OF INDIAN AFFAIRS.

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*October 1, 1891.*

SIR: I have the honor to submit the Sixtieth Annual Report of the Commissioner of Indian Affairs.

A SETTLED INDIAN POLICY.

A variety of causes have of late conspired to stimulate public interest in the subject of Indian administration, and to provoke a very widespread discussion of the so-called Indian problem. As was to be expected, there has been a great diversity of views expressed, and many discordant theories advanced as to its proper solution. I think, however, there is coming to be a very general consensus of opinion as to the essential elements that should enter into the settled policy of the Government in all its dealings with these people, and I venture to suggest the most important of them here with a view of furnishing a test of the present administration.

(1) **Comprehensiveness.**—It is important that any theory shall rest primarily upon a careful induction of all pertinent facts. No two reservations are exactly similar, and no two tribes present the same condition. The Indians, while alike as belonging to one common race and as sustaining to the United States Government the general relation of wards, differ among themselves very widely in language, manners, customs, religion, and environment. They represent a great number of distinct phases of human development.

Some are yet very degraded, living a mere animal life with few of the characteristics of humanity, while others have already become absorbed into our national life and are not distinguishable from their fellow citizens. Some still live by hunting and fishing; others, like the Nav-

ajos, are successful herders; many cultivate the soil with an increasing degree of success, and others already participate in manufacturing, mercantile, and professional life. While some, like the White Mountain Apaches, are almost destitute of anything that may be characterized as education, others, like the Poncas and the Pawnees, have almost all their children of suitable age in school. While the great majority of the 250,000 receive absolutely nothing directly from the Government in the way of subsistence or support (see Appendix, p. 147), others, like the Sioux, Cheyennes, Arapahoes, and Apaches, are dependent largely upon Government rations.

Although many, like those just mentioned, are under the immediate control of the Government and require more or less of vigilant surveillance, multitudes of others, such as the Indians in New York, those in Michigan, and the 65,000 of the five civilized tribes, are only nominally under Government control, while thousands, like the Santee Sioux, the Sissetons and Wahpetons, the Nez Percés, the Puyallups, etc., are, by the operation of the land-in-severalty law, becoming citizens and gradually passing out from under governmental supervision.

Any theory which ignores these essential facts and attempts to deal with them *en masse* must, of necessity, be radically and fatally defective. Any rational scheme, therefore, must rest upon a careful survey of the present condition, needs, and possibilities of each of the tribes, and must also, of necessity, be very general in its character.

(2) **Definiteness of aim.**—There has hitherto been more or less confusion in the public mind as to precisely what the Government is aiming to accomplish, and so long as this uncertainty exists there can be no considerable progress toward determining the best measures to be adopted. If it were the purpose of the Government to exterminate the Indians by violence, or to leave them to shift for themselves under such circumstances that their destruction would be only a question of time, this purpose would necessarily determine legislation and administration. If the object were to simply guard them as prisoners of war, feeding and supporting them in idleness, as it is sometimes asserted the Government is doing, without regard to the future outcome of this policy, this purpose should be clearly avowed and should have its weight in determining everything pertinent to Indian matters.

If, however, the purpose is to incorporate the Indians into the national life as independent citizens, so that they may take their places as integral elements in our society, not as American Indians but as Americans, or rather as men, enjoying all the privileges and sharing the burdens of American citizenship, then this purpose should be not only clearly and definitely stated, but should be dominant in all matters of legislation and administration. It should be understood not only by our own people but by the Indians themselves, and should be inculcated as a fundamental doctrine in every Indian school.

No pains should be spared to teach the rising generation that the old

condition of things is rapidly and forever passing away, and that they must prepare themselves for self-support. This is the inevitable, from which there is no escape. They should be taught that their future lies largely in their own hands, and that if they improve the opportunities for education now so generously offered them by the Government, they may become intelligent, prosperous, strong, and happy; but that if they neglect them they will be swept aside or crushed by the irresistible tide of civilization, which has no place for drones, no sympathy with idleness, and no rations for the improvident.

(3) *Clearness of outline.*—In the process of elevating a rude and barbarous people to the plane of civilization there is involved a combination of many forces—heredity, tradition, soil, climate, food supply, and the needs of surrounding civilization. There are also involved the great forces of legislation, administration, and institutions—such as industrial schools and missionary agencies—and a failure to comprehend the legitimate work of each of these great factors leads inevitably to gross errors in judgment. We can not gather grapes from thistles nor figs from thorns.

Perhaps one of the most mischievous fallacies is the assumption that because the Anglo-Saxon race has been centuries in developing its present proud civilization it is therefore necessary that the same length of time should be consumed by the Indians in passing through the successive stages of economic and social evolution. Time as an element in human progress is relative, not absolute. Indian children taken from a life which represents Anglo-Saxon barbarism of more than a thousand years ago may, if placed at an early age in proper relations with modern civilization, enter very largely into participation of the best results of nineteenth century life. A good school may thus bridge over for them the dreary chasm of a thousand years of tedious evolution.

(4) *Adaptation of means to ends.*—If the Indians are expected to thrive by agriculture they should not be thrust aside onto sterile plains or into the mountains, but should be allowed to occupy such portions of the country as are adapted to agricultural pursuits. If the forces of nature are too strong for them to cope with single-handed, then they should have such assistance from the Government as will enable them to succeed. A little timely help would, in many cases, be sufficient to put them upon the road to self-support and independence when withholding would doom them to hopeless struggle. If we expect the rising generation to become intelligent, we should see to it that they have ample opportunities for education. If we design that they should be industrious we should encourage among them all forms of handicraft. If we wish them to become self-reliant we should throw them upon their own responsibility and exact of them strict obedience to law. If we expect them to be just we should set them an example. It is as true in our dealings with them as it is in the natural world that "Whatsoever a man soweth that shall he also reap."

(5) **Justice.**—The charge most frequently brought against the American people in reference to their dealings with the Indians is that of injustice. This charge is sometimes flippantly made, and oftentimes rests upon no historical basis, and yet it is unfortunately true that the impression widely prevails in the popular mind and is deeply rooted in the mind of the Indians that treaties have been broken and that the Government has failed in numerous instances to perform its most solemn obligations. It certainly cannot be said that this great nation has intended to be unjust, and recent acts of legislation have shown conclusively a desire not only on the part of Congress, but of the people of the country generally, to fulfill to the letter all the obligations, promises, and even expectations of the Indians.

But justice is two-sided. It demands as well as concedes. While it is desirable that we should pay the Indians to the last dollar all that is due them, we should expect of them the fulfillment of their obligations. They should be held to a strict accountability for their deliberate actions, and where, without provocation, they go upon the warpath, commit outrages, destroy property, or otherwise disturb the peace, they should be punished.

It is also worthy of consideration that in the past we have made agreements which later developments have shown to be unwise and undesirable both for them and for us. Such are all those treaties which recognize the autonomy and perpetual independent nationality of the tribes. One great political truth has been made absolutely clear by the march of events, and that is that the people of the United States constitute one nation. There is no place within our borders for independent, alien governments, and the Indians must of necessity surrender their autonomy and become merged in our nationality. In requiring this we do not ask that they concede anything of real value to themselves, but only that for their highest welfare they abandon their tribal organizations, their provincialisms, their isolation, and accept in lieu thereof American citizenship and a full participation in all the riches of our civilization. By this great transformation they are the gainers, rather than we ourselves.

(6) **Firmness.**—Thousands of them are yet in a stage of childhood; they are living in the twilight of civilization, weak, ignorant, superstitious, and as little prepared to take care of themselves as so many infants. It is therefore unwise, out of excessive regard for their manhood, to defer wholly to their wishes with reference to what is clearly for their good. The allotment of land, the restriction of the power of alienation, the compulsory education of their children, the destruction of the tribal organization, the bestowment of citizenship, the repression of heathenish and hurtful practices, the suppression of outbreaks, and punishment for lawlessness are among the things which belong unmistakably to the prerogatives of the National Government.

Equally evident is it that those who, by the beneficent aid of the Government, or otherwise, have been rendered capable of self-support

must depend upon themselves and not look to it for help. There is no more reason why the General Government should feed and clothe an Indian who is able to feed and clothe himself by his own industry than there is why it should feed and clothe any other man.

The circumstances that justify and require the establishment and maintenance for a time of industrial schools, in which Indian youth may be trained for self-support, are exceptional and transitory, and in the very nature of the case will pass away. All that can be asked is that a reasonable opportunity be afforded to these people whereby their children can be lifted onto a plane where they will have something like an equal chance in life's struggles along with the more favored races in this country. If, after this reasonable preparation, they are unable or unwilling to sustain themselves, they must go to the wall. It will be a survival of the fittest. It is rightly claimed that thus far they have not had an equal chance with the rest of us, by reason of their isolation, and the present effort of the Government in the establishment of costly Indian schools is for the purpose of removing this inequality and bringing the Indian children into competitive relations with other children. Justice demands this, but it asks no more.

(7) **Humanity.**—It should be borne in mind, however, that this peculiar people are our brethren, made of the same blood, and as such have claims upon us. This vast country which is now the scene and the support of our greatness once belonged to them. Step by step they have been driven back from the hills and beautiful valleys of New England, the fertile fields of Ohio, the prairies of the West, until to-day, for the most part, they are gathered together on reservations poorly suited for agricultural purposes, and where the conditions of life are the hardest. The buffalo and the deer, which only a few years ago were found in countless thousands and afforded them food, raiment, barter, and occupation, are about gone, and they are, in many cases, driven by stress of circumstances over which they have no control to desperate straits for food. As a people they are poor and weak and well-nigh helpless. The vast and resistless tide of European emigration and the overflow of our aggressive population have despoiled them of their hunting grounds, robbed them of their richest fields, restricted them in their freedom, destroyed thousands of them in battle, and inflicted upon them great suffering.

A large part of this, of course, has been the inevitable consequence of the conflict of a higher, stronger civilization with a lower and weaker one. In this day of our greatness and prosperity we can afford to treat them with the greatest kindness. We can not afford to be cruel. For their own sake, and for ours as well, and for the sake of the history we are making as a Christian nation, we should treat them not only justly and humanely, but with as much generosity as is consistent with their highest welfare. This we are doing.

(8) **Radicalness.**—"Whatever is worth doing is worth doing well." The course of the Government has not always been self-consistent. Legis-

lation has been tentative and administration fitful. Many things have been attempted, but few have been accomplished. Now that there is coming to be a pretty well recognized and rational policy, it should be carried into execution with as much vigor as is practicable, to the end that the results anticipated from it may be reached as speedily as possible.

If the policy of allotting lands is conceded to be wise, then it should be applied at an early day to all alike wherever the circumstances will warrant. If we have settled upon the breaking up of the tribal relations, the extinguishment of the Indian titles to surplus lands, and the restoration of the unneeded surplus to the public domain, let it be done thoroughly. If reservations have proven to be inadequate for the purposes for which they were designed, have shown themselves a hindrance to the progress of the Indian as well as an obstruction in the pathway of civilization, let the reservations, as speedily as wisdom dictates, be utterly destroyed and entirely swept away.

If we purpose to educate Indian children let us educate all of them. The reasons that determine us to educate the few apply with increasing force to the education of the many. If we look to the schools as one of the chief factors of the great transformation that is being wrought, why not at once establish enough to embrace the entire body of available Indian youth, and thus not only hasten but render doubly sure their good work. "Make haste slowly" does not seem to apply here. There is now a widespread demand for education among the Indians; it has become comparatively easy to secure the attendance of their children, and the work of education has proceeded so far as to establish beyond question the advisability of educating them to self-support, so that there would seem to be no good reason why the system of education that has been, since 1876, gathering force and strength, should not at once be so far extended as to be entirely adequate for the end in view. If this were done, and there could be gathered by the end of 1893 into well-manned and suitably equipped schools nearly all of the Indian children, and they could be kept there for 10 years, the work would be substantially accomplished; for within those 10 years there would grow up a generation of English-speaking Indians, accustomed to the ways of civilized life, and sufficiently intelligent and strong to forever after be the dominant force among them.

(9) *Stability.*—Having determined upon a policy, we should regard it as permanent until its work is accomplished. Whatever laws are to be passed should be framed with reference to the perfecting and not the essential modification of the plan. All acts of administration should be with reference to its success. Agents should be selected, employes appointed, regulations framed, and orders given with a single eye to the speediest and most complete carrying out of the purpose of the Government as formulated. The day of experiment should be ended. Consistency in legislation, uniformity in administration, permanence of the tenure of office based upon intelligent comprehension of the work to be

done, and competence and fidelity in the discharge of duty would very materially hasten the successful accomplishment of the wise ends of the Government.

(10) *Time*.—The great forces now at work; land in severalty with its accompanying dissolution of the tribal relation and breaking up of the reservation; the destruction of the agency system; citizenship, and all that belongs thereto of manhood, independence, privilege, and duty; education, which seeks to bring the young Indians into right relationship with the age in which they live, and to put into their hands the tools by which they may gain for themselves food and clothing and build for themselves homes, will, if allowed to continue undisturbed a reasonable length of time, accomplish their beneficent ends. They should be fostered, strengthened, maintained, and allowed to operate.

Other forces scarcely less powerful than these, namely, the progress of our own civilization, which is invading the reservations and surrounding the Indians on every side, the progress of Christianity through the active missionary efforts of the churches, the changed conditions which have forced upon the Indians themselves the necessity of greater efforts towards self-help and improvement, combine and coöperate with the organized efforts of the Government to bring about their uplifting.

How long it will take for the work to be completed depends partly upon the wisdom of Congress when making necessary laws, partly upon the will of the Executive in making appointments and giving direction to Indian affairs, partly upon the fidelity and intelligence of agents and others chosen to superintend the work, partly upon the vigor and efficiency of the schools and those employed to teach industries, partly upon the zeal of Christian churches and humanitarians, and largely upon the spirit of those of our people who find themselves in face-to-face relationship with Indian families and individuals, on the reservations and elsewhere. It is not safe to prophesy, and in view of the past hundred years it may be unwise to predict, yet I will venture to say that it is possible, before the close of the present century, to carry this matter so far towards its final consummation as to put it beyond the range of anxiety. Not everything can be accomplished within that time, but enough can be done so that the Commissioner who writes the seventieth annual report can speak of the Indian solution instead of the Indian problem.

### THE POLITICAL STATUS OF THE INDIANS.\*

In the administration of the affairs of this office I am constantly confronted with difficult problems arising out of the unsettled political status of the Indians. These perplexities will increase rather than dimin-

---

\*Since this paper was prepared I have had the pleasure of reading in the *Atlantic Monthly*, for October, the first of a series of papers, entitled, "A People without law," by Prof. J. B. Thayer, LL. D., of Harvard University.

ish, and therefore it is of the utmost importance that the real relations which the Indians sustain to the Government of the United States should be definitely and finally settled. With this end in view, I present for your consideration a statement of what seems to me to be the truth of the matter.

The question is one of so much difficulty and importance, and so much depends upon it, that I am somewhat diffident in expressing my opinion. I venture to do so, however, with the hope and expectation that if the position which I assume is incorrect the errors will be pointed out, and thus, even if it should not be the final statement of the truth, it may at least be helpful in securing such.

#### INDEPENDENT POLITICAL COMMUNITIES, DEPENDENT ALLIES.

At the time of the discovery and settlement of America the many Indian tribes inhabiting that portion now embraced within the limits of the United States were recognized by the various governments under whose authority the settlements by the whites were made, and by each other, as separate, distinct, and independent political communities, capable of maintaining the relations of peace and war.

Under the laws and customs of nations the several governments under whose authority and by whose subjects this country was discovered and settled became entitled to the right to preëempt the land from the natives as against each other and all other European powers. Of necessity, each government was exclusively entitled to the right to extinguish the Indian title to the country claimed and occupied by it, and this right of course abridged the right of the Indian to the extent that he could only dispose of his title in the land occupied by him to that government which claimed and had the right of preëmption, and in which the absolute ultimate title or the fee vested. While the several tribes were recognized as distinct political communities, with the right to govern themselves in such manner as they saw fit, and were not subject to the laws of the white man, they were no longer independent nations, but were defined as dependent nations, or half sovereign states. (1 Whart. Com. Am. Law, sec. 137).

It seems to be and to have been from time immemorial a settled doctrine of the law of nations that a weaker power does not necessarily surrender its independence and rights to self-government by associating with a stronger power and receiving its protection, and all of the governments interested—France, Holland, Spain, and England—regarded the status of the Indian as above set forth.

It seemed necessary that each of the great European powers interested in the settlement of America should throw its protecting care around and over the Indians upon the lands inclosed within its jurisdiction; otherwise, there was danger that foreign agents by promises of greater privileges could seduce them into foreign alliances, and with their assistance overthrow the Government. On this point, in the case

of the Cherokee Nation *v.* Georgia (5 Peters, 17), Chief Justice Marshall said, in delivering the opinion of the court, that—

They (the Indians) and their country are considered by foreign nations, as well as by ourselves, as being so completely under the sovereignty and dominion of the United States, that any attempt to acquire their lands, or to form a political connection with them, would be considered by all as an invasion of our territory and an act of hostility .

By the laws of Spain—

proper portions of the soil of Louisiana were allotted to the Indians, and care was taken to make the acquisition valuable by preventing the intrusion of white settlers. The laws of the Indies directed that when Indians gave up their lands to the whites, others should be assigned to them, and the lands allotted to the Indian tribes by the Spanish officers in pursuance of the laws of the Indies, were given to them in complete ownership, equally, as if they were held under a complete grant. But, as the Indians were considered in a state of pupillage, the authority of the public officers who were constituted their guardians was necessary to a valid alienation of their property. (Kent Com., Vol. 3, p. 380.)

The people of all the English colonies, especially those of New England, settled their towns upon the basis of title procured by equitable purchase from the Indians with the consent of the several colonial governments, except in a few instances where lands were acquired by conquest after a war which was deemed to have been just and necessary. (*Ibid.*)

The English Government never attempted to interfere with the internal affairs of the Indian tribes further than to keep out the agents of foreign powers. Being located within the territorial limits of the country claimed by England, and being unable to relinquish any rights in the lands occupied by them to any government except the Government of Great Britain, the Indian tribes in the British colonies were regarded as domestic, dependent nations, or dependent allies. They were considered as nations competent to maintain the relations of peace and war (*Worcester v. Georgia*, 6 Peters, 584) and to govern themselves under the protection of the Government of Great Britain.

After the war of the Revolution, or upon the attainment of independence, the United States succeeded to the rights of Great Britain, and continued the policy instituted by that Government. The protection given was understood by all parties as only binding the Indians to the Government of the United States as dependent allies.

#### SUBJECTS BUT NOT CITIZENS.

As the settlement of the country advanced, and as the demands of an increasing population required, the United States adopted the policy of extinguishing, as far as possible, the title of the various tribes to the territory in which each respectively claimed a right, and of devoting to

each tribe, a separate, distinct district or reservation \* of land, of smaller area, within whose limits it was protected in the enjoyment of a modified or local sovereignty.

Their subjugation and absorption as a mass was not attempted. The tribes continued independent, and individual members were not, in the proper sense, citizens of the United States. While they were subject to the laws of a State when mingling in its population they were regarded, when living on their own reservations, as subject under certain limitations to their own distinctive jurisprudence, civil and criminal.

While the Indians and the Americans were in theory living under the same dominion, they were, in fact, members of different political societies, owning allegiance primarily to different governments. The Americans belonged to one political community and the Indians to many. But as the whites increased in number and power, and in time inclosed by their settlements the reservations that had been set apart by treaties for the use of the different tribes, and were only prevented from entering and making settlement thereon by an enforcement of those treaties by the Government, the Indians became entitled to and relied upon its protection while owning no allegiance thereto. Thus it was that the relation of domestic dependent nations now held by Indian tribes within the United States to this Government arose, and this relation, which has been said to "resemble that of guardian and ward," embraces every tribe within our jurisdiction.

Although the Indians were not citizens of the United States when retaining their tribal relations, nor were they citizens of any particular State unless made so by the laws of such State, they were, however, even when maintaining tribal relations, subject to certain federal legislation such as the internal-revenue laws, and other legislation of which a resumé will be given.

#### EARLY LEGISLATION REGARDING INDIANS.

**Regulating intercourse with Indian tribes.**—In the adoption of the Constitution the several States granted to the Congress of the United States the power "to regulate commerce \* \* \* with the Indian tribes" (section 8, article 1, Constitution), and under this grant Congress has exclusive control of all Indian affairs, and of all intercourse between the Indian tribes and citizens of the United States and foreigners residing in the United States.

**Treaties.**—In the exercise of this control the First Congress, by an act

---

\* See treaties with the Cherokees of 1785, 1791, and 1794; 7 Stats., 18, 39, and 43; with the Six Nations of 1794, *Ibid.*, 44; with Seven Nations of Canada of 1796, *Ibid.*, 55; with the Mohawks, 1797, *Ibid.*, 61; with the Creeks, 1790 and 1802, *Ibid.*, 35 and 68; with the Choctaws, 1786 and 1803, *Ibid.*, 21 and 80; with the Chickasaws, 1786 and 1805, *Ibid.*, 24 and 89; see, also, early treaties with various other tribes located in the eastern portion of the United States.

approved August 20, 1789 (Stats., 54), appropriated \$20,000 to defray expenses which might attend negotiations or treaties with the Indian tribes, and provided for the appointment of Commissioners to manage such negotiations and treaties.\*

**Licensed trade.**—By an act of July 22, 1790 (1 Stats., 137), Congress inaugurated a system of trade by which no person was to be permitted— to carry on any trade or intercourse with the Indian tribes, without a license for that purpose under the hand and seal of the Superintendent of the Department.

**Restriction of sale of Indian lands.**—This act also provided that no sale of lands made by any Indian or any nation or tribe of Indians to any person or persons or to any State should be valid, “unless the same shall be made and duly executed at some public treaty, held under the authority of the United States.” †

**Trespass upon Indians or Indian lands.**—It also provided for the punishment of persons going into any town, settlement, or territory belonging to any nation or tribe of Indians, and committing any crime upon or trespass against the person or property of any peaceable and friendly Indian or Indians.

All of the provisions of the act of 1790, which was to expire by limitation March 4, 1793, were reenacted by Congress March 1, 1793 (1 Stats., 329), with others necessary to the proper regulation of trade and intercourse with the Indian tribes. This act in turn was superseded by an act approved May 19, 1796 (*ibid.*, 469), by which certain boundary lines established by treaty between the United States and various tribes were to be ascertained and definitely marked, a penalty for settling on Indian lands was prescribed, and the main provisions of prior acts respecting trade were revived or continued in force.

**Government trading houses.**—In addition to licensed traders Congress, by act of April 18, 1796 (*ibid.*, 452), authorized the establishment of trading houses on the western and southern frontiers, or in the Indian country, “for the purpose of carrying on a liberal trade with the Indians within the limits of the United States,” and the appointment of agents to conduct them under the direction of the President. For the purpose of carrying on this trade \$150,000 was appropriated. This act from time to time (as by limitation it expired) was revived by Congress, and in 1806 (2 Stats., 402) the office of Superintendent of Indian Trade was established for the term of three years, which term was extended three years in 1809 (*ibid.*, 544), again three years in 1811 (*ibid.*, 652), and from time to time thereafter until 1822, when the law was permitted to

\* The office of Superintendent of Indian Trade was not established by law until March 2, 1806, and it is presumed that by the term “Superintendent of the Department,” here used, Congress had reference to the officer who had been assigned under an ordinance adopted in 1786, before the constitution went into effect, to superintend our relations with the Indian tribes, or to such other person as the President of the United States might appoint for that purpose.

† This provision is now incorporated in section 2116, Revised Statutes.

expire, and the office of Superintendent of Indian Trade, with the system of Government trading houses, was abolished.

**Correspondence with Indians prohibited.**—By an act of January 17, 1800 (2 Stats., 6), correspondence with the Indians to produce infraction of treaties or disturb the peace of the United States, and correspondence with foreign powers in relation to Indians, was prohibited under heavy penalties.

**Issuing rations and defraying expense of Indians visiting Government.**—By an act of May 13, 1800 (*ibid.*, 85), the President was authorized to issue such rations to Indians visiting the military posts on the frontier, or within their respective nations, as he should judge proper, and as could be spared from the army provisions without injury to the service; also, to defray expenses of such Indians as might from time to time visit the seat of Government, and during their stay to give them such presents as he might think best.

Except the act last above referred to, all important laws relating to Indian affairs that were passed by Congress prior to March 30, 1802, were of a temporary character, and except where they were superseded before the time fixed for their expiration, they all expired by limitation.

**Agents appointed to promote civilization.**—At that date a permanent act was approved (2 Stats., 139) making provision for ascertaining and marking the treaty boundaries of lands of various tribes, for the protection of those lands from trespass and settlement by the whites, for continuing the system of licensed traders, and authorizing the President, "in order to promote civilization among the friendly Indian tribes, and to secure the continuance of their friendship," to expend annually a sum not exceeding \$15,000 in furnishing them with useful domestic animals, implements of husbandry, goods and money, and in appointing persons from time to time as temporary agents to reside among them.

**Annuities under treaties.**—Contemporaneously with the legislation above referred to, treaties were entered into with many of the tribes, by which they ceded lands to the United States and acknowledged themselves to be under the protection of "the United States, and of no other sovereign whatsoever,"\* and the United States on its part agreed to protect them in all their rights, under their several treaties, as well as to give them annually, for a period, certain supplies, goods, and moneys.

These annuities were paid by the War Department, which had charge of all Indian affairs (see act of August 7, 1789, 1 Stats., 49), through the agents or factors appointed under the act of April 18, 1796, and the

---

\* See treaties with the Cherokees, 1785, 1791, 1792, 1794, and 1798, 7 Stats., 18, 39, 42, 43, and 62; with the Chickasaws, 1786 and 1801, *ibid.*, 24 and 65; with the Chipewewa and other tribes, 1785, 1789, and 1795, *ibid.*, 16, 28, and 45; with the Choctaws, 1786 and 1801, *ibid.*, 21 and 66; with the Creeks, 1790 and 1796, *ibid.*, 35 and 56; Delaware and other tribes 1785, 1789, *ibid.*, 16, 28, and with the Shawnees, 1786, *ibid.*, 26.

factory system established by that act more clearly outlined the relation assumed by the Government toward the tribes.

**Education.**—In 1819, for “the purpose of providing against the further decline and final extinction of the Indian tribes adjoining the frontier settlements of the United States, and for introducing among them the habits and arts of civilization,” Congress appropriated (3 Stats., 516) an annual sum of \$10,000 to enable the President—

in every case where he shall judge improvement in the habits and condition of such Indians practicable, and that the means of instruction can be introduced with their own consent, to employ capable persons of good moral character to instruct them in the mode of agriculture suited to their situation, and for teaching their children in reading, writing, and arithmetic, and performing such other duties as may be enjoined according to such instructions and rules as the President may give and prescribe for the regulation of their conduct in the discharge of their duties.

This act was the inauguration of an educational policy, having in view the preservation, civilization, conversion, and elevation of the race, and in the treaties entered into subsequently, school funds were created, the interest from which was to be applied by the United States for the establishment and maintenance of schools upon the reservations for the benefit of the Indians with whom the treaties were made.

**Bureau of Indian Affairs organized.**—As before stated, the law creating the office of Superintendent of Indian Trade, and establishing a system of Government trading houses with the Indians, expired by limitation in 1822. Two years later, March 11, 1824, the Secretary of War organized a Bureau of Indian Affairs (McKenny's Travels, page 57) in the War Department; but it was not until 1832 (act of July 9, 1832, 4 Stats., 564) that the office of Commissioner of Indian Affairs was created by Congress, and the present Bureau of Indian Affairs was organized.

Under the direction of the Secretary of War and in conformity with regulations from time to time prescribed by the President, the Commissioner was charged with the duty of directing and managing all Indian affairs and all matters arising out of Indian relations.

In 1849 the Department of the Interior was established (act March 3, 1849; 9 Stats., 395), and the Secretary of that Department was given the supervisory and appellate power up to that time exercised by the Secretary of War, relating to the acts of the Commissioner of Indian Affairs.

I have deemed it necessary to refer thus briefly to the early legislation adopted by Congress in its control of our commerce and intercourse with the Indian tribes in order to show distinctly the relations existing between this Government and these nations or tribes—the Indians holding the relations of allied dependencies, and the United States standing to them as protector and guardian. It also shows the development of a policy in the administration of Indian affairs which, wisely pursued, will result in the accomplishment of one of the objects for which nearly all of the colonial charters were expressly granted,

namely: "To reduce the Savage Natives by gentle and just manners to the Love of Civil Societie and Christian Religion."\*

LATER LEGISLATION—ENCROACHMENTS ON INDIAN AUTONOMY.

**Treaties with Indians forbidden.**—By an act of March 3, 1871 (16 Stats., 566), Congress declared—

That hereafter no Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent nation, tribe, or power, with whom the United States may contract by treaty: *Provided further*, That nothing herein contained shall be construed to invalidate or impair the obligation of any treaty heretofore lawfully made and ratified with any such Indian nation or tribe.

This enactment was not regarded as depriving the several tribes or nations of their condition as alien dependent powers, but simply as restricting to simple agreements such diplomatic negotiations between them and the United States as the changing conditions might render expedient or necessary. The apparent reasons for this action were to bring under the immediate control of Congress our diplomatic as well as commercial intercourse with those tribes, and to simplify and expedite such diplomatic negotiations as might from time to time be found necessary, in order that the guardianship of their rights, which, by the exigencies of the situation, had devolved upon the United States, might be most effectively and equitably discharged.

**Indian Police.**—In the Indian appropriation act of May 27, 1878 (20 Stats., 86), Congress provided for the appointment of Indian police to be "employed in maintaining order and prohibiting illegal traffic in liquor on the several Indian reservations." These officers are appointed from the Indians on the reservation, and are subject to the direction of the agent.

**Indian Courts.**—In 1882 rules were promulgated by this office, under which certain crimes and misdemeanors and certain Indian customs and dances considered peculiarly opposed to advancement in civilization were declared to be Indian offenses, and to be punishable as such by the Indian courts established by said rules upon the various reservations. These courts were termed "courts of Indian offenses," and subsequently Congress recognized them and made appropriations for their maintenance.

**Indians placed under criminal law.**—The ninth section of the Indian appropriation act of March 3, 1885 (23 Stats., 385), declared that all Indians committing against the person or property of another Indian or other person any of certain crimes, within any Territory of the United States, and either within or without an Indian reservation—

shall be subject therefor to the laws of such Territory relating to said crimes, and shall be tried therefor in the same courts and in the same manner, and shall be subject to the same penalties as are all other persons charged with the commission of said crimes respectively,

\* Charter of Pennsylvania, Charter and Constitutions—the United States, part 2, p. 1509; see also other charters, *ibid.*, part 1, pp. 255, 922, and 952; part 2, pp. 1596 and 1902.

and gave the courts of the Territories jurisdiction in all such cases ; also, that Indians committing said crimes against the person or property of another Indian or other person within a State of the United States, and within an Indian reservation—

shall be subject to the same laws, tried in the same courts and in the same manner, and subject to the same penalties as are all other persons committing any of the above crimes within the exclusive jurisdiction of the United States.

Prior to this, section 25 of the act of 1834\* had provided that—

the laws of the United States, as provided for the punishment of crimes committed within any place within the sole and exclusive jurisdiction of the United States, shall be in force in the Indian country : *Provided*, The same shall not extend to crimes committed by one Indian against the person or property of another Indian.

United States Court established in Indian Territory.—By an act of March 1, 1889 (25 Stats., 783), “to establish a United States court in the Indian Territory, and for other purposes,” Congress provided for the settlement of civil controversies arising between citizens of the United States or of any State or Territory residing in the Indian Territory, and any citizen of or person or persons residing or found within the said Indian Territory where the amount in controversy is \$100 or more. The effect of this was to extend to the Indians within the Indian Territory certain civil liberties and responsibilities under the laws of the United States not previously enjoyed or borne by Indians not citizens of the United States. By its terms, however, the internal affairs of the tribes or nations in the Indian Territory were in no wise abridged or interfered with.

Compulsory education.—So on through the Indian legislation down to the present time, and through the various treaties with the several tribes in this country, can be traced the growth and development of a paternal policy. The extent to which it has developed is shown by a clause in the last Indian appropriation act (26 Stats., 1014), which is as follows :

And the Commissioner of Indian Affairs, subject to the direction of the Secretary of the Interior, is hereby authorized and directed to make and enforce by proper means such rules and regulations as will secure the attendance of Indian children of suitable age and health at schools established and maintained for their benefit.

\* See 4 Stats., 733, now incorporated in section 2145 of the Revised Statutes. Also section 3 of the act of March 27, 1854 (10 Stats., 270), now incorporated in section 2146 of the Revised Statutes, which provided that this section of the act of 1834 should not be construed as extending to the Indian country any of the laws of the United States enacted for the District of Columbia, and that section 20 of the said act, which provides for the punishment of persons introducing spirituous liquor or wine into the Indian country and furnishing the same to the Indians, shall not be construed to extend to “any Indian committing said offenses in the Indian country, or to any Indian committing any offense in the Indian country, who has been punished by the local law of the tribe, or in any case where, by treaty stipulations, the exclusive jurisdiction over such offenses may now or hereafter be secured to said Indian tribes, respectively, and anything in said act inconsistent with this act be, and the same is hereby, repealed.”

## CITIZENSHIP.

**Citizenship by treaty and special acts of Congress.**—As early as 1817 provision was made in a treaty of that year with the Cherokees (7 Stats., 159) by which any member of that tribe who desired might become a citizen of the United States; and in 1820 a treaty (7 Stats., 211) with the Choctaws provided for the future allotment of the lands of those Indians east of the Mississippi River, and for making the Indians themselves citizens. Subsequently, by treaties and acts of Congress,\* provision was made under which members of the Stockbridge and Munsee, the Ottawa, Pottawatomie, Wyandotte, and other tribes might become citizens, and under which some of each of those tribes became such. In nearly all treaties made with different tribes contemporaneously with and subsequently to those above referred to, and prior to 1871, provisions appear under which members of the tribes with whom the treaties were signed could become naturalized citizens of the United States; but there was no general law under which all members of the Indian race could become such.

**Citizenship by the fourteenth amendment and a naturalization law.**—The first clause of article fourteen of amendments to the Constitution of the United States provides that "all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside." Upon the adoption of this amendment to the Constitution the question arose whether an Indian could by severing his tribal relations and fully and completely surrendering himself to the jurisdiction of the United States become a citizen thereof, and it was strongly contended that he could. It was argued that when an Indian born within the territorial limits of the United States, although born in tribal relations, severed his relations with his tribe, or voluntarily renounced his allegiance to the government thereof, and surrendered himself to the jurisdiction of the United States, he would thereby fulfill all the conditions necessary to give him citizenship, and therefore become a citizen thereof, under this amendment. This question, however, was determined in the negative by the Supreme Court in *Elk. v Wilkins* (112 U. S., 100), in which it was held that—

This alien and dependent condition of the members of the Indian tribes could not be put off at their own will, without the consent of the United States. They were

---

\* See as to Stockbridges acts of Congress of March 3, 1843, 5 Stats., 645; of August 6, 1846, 9 Stats., 55; of March 3, 1865, 13 Stats., 531; and of February 6, 1871, 16 Stats., 404; and treaties of November 24, 1848, 9 Stats., 955; and of 1856, 11 Stats., 663. As to the Wyandottes, see treaty of 1855, 10 Stats., 1159, the Pottawatomes, treaties of 1861, 12 Stats., 1192; and of 1866, 14 Stats., 763; the Ottawas, treaty of 1862, 12 Stats., 1237; and the Kickapoos, treaty of June 28, 1862, 13 Stats., 624; and act of Congress of March 3, 1839, 5 Stats., 351, concerning the Brothertown Indians in Wisconsin.

† The fourteenth amendment was proposed by Congress to the legislatures of the several States June 16, 1866, and declared in a proclamation of the Secretary of State July 28, 1868 (see 14 Stats., 358, and 15 Stats., 708.)

never deemed citizens of the United States, except under explicit provisions of treaty or statute to that effect, either declaring a certain tribe, or such members of it as chose to remain behind on the removal of the tribe westward, to be citizens or authorizing individuals of particular tribes to become citizens on application to a court of the United States for naturalization, and satisfactory proof of fitness for civilized life.

\* \* \* \* \*

This section contemplates two sources of citizenship, and two sources only, birth and naturalization. The persons declared to be citizens are "all persons born or naturalized in the United States, and subject to the jurisdiction thereof." The evident meaning of the last words is, not merely subject in some respect or degree to the jurisdiction of the United States, but completely subject to their political jurisdiction, and owing them direct and immediate allegiance. And the words relate to the time of birth in the one case, as they do to the time of naturalization in the other. Persons not thus subject to the jurisdiction of the United States at the time of birth can not become so afterward, except by being naturalized either individually, as by proceedings under the naturalization acts, or collectively, as by the force of a treaty by which foreign territory is acquired.

Indians born within the territorial limits of the United States, members of and owing immediate allegiance to one of the Indian tribes (an alien, though dependent power), although in a geographical sense born in the United States, are no more "born in the United States and subject to the jurisdiction thereof," within the meaning of first section of the fourteenth amendment, than the children of subjects of any foreign government born within the domain of that government, or the children born within the United States of ambassadors or other public ministers of foreign nations.

The first clause of section two of the fourteenth amendment provides that "Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed," and the first clause of the act of Congress of April 9, 1866 (14 Stats., 27), provides "that all persons born in the United States and not subject to any foreign power, excluding Indians not taxed, are hereby declared to be citizens of the United States." If Indians *not taxed* were by this amendment expressly *excluded* from such enumeration, it would seem that those living within a State or Territory, not in tribal relations, and *paying taxes*, would be *included* in such enumeration; and, as by section one of the act of Congress above quoted Indians not taxed are excluded from citizenship, it would follow that those bearing the burden of taxation within a State or Territory would be, by that law, admitted to such citizenship. But in order to be entitled to the enjoyment of privileges of citizenship under this act, the Indian must be "born in the United States and not subject to any foreign power." As already stated the Supreme Court has decided that Indians born members of and owing immediate allegiance to, one of the Indian tribes are not "born in the United States and subject to the jurisdiction thereof," within the meaning of the first section of the fourteenth amendment," and by a parity of reasoning it would seem that an Indian born in tribal relations, owing superior allegiance to his tribal government, would not be "born in the United States and not subject to any foreign power" within the meaning of section one of the act of 1866, and could not

under the provisions of that act become a naturalized citizen of the United States.

While, therefore, this act is the first law of a general character adopted by Congress under which Indians could become naturalized it would seem from the foregoing that it was limited in its operation to members of the Indian race who at the time of their birth in the United States owed no allegiance to any tribal government, and who bear the burdens of taxation. So far as this office is aware no one of Indian blood ever claimed or exercised the rights of citizenship under this law.

**Citizenship by the General Allotment Act.**—No general law provided a means for the naturalization of all the members of the Indian race, until, in 1887, Congress adopted an act (24 Stats., 388) which provided for the allotment of lands in severalty and declared all Indians born within its limits who shall have complied with certain conditions to be citizens of the United States.

Section 1 of this act provides—

That in all cases where any tribe or band of Indians has been, or shall hereafter be, located upon any reservation created for their use, either by treaty stipulation or by virtue of an act of Congress or executive order setting apart the same for their use, the President of the United States be, and he hereby is, authorized, whenever in his opinion any reservation or any part thereof of such Indians is advantageous for agricultural and grazing purposes to cause said reservation, or any part thereof, to be surveyed, or resurveyed, if necessary, and to allot the lands in said reservation in severalty to any Indian located thereon, etc.

The first clause of section 2 provides—

That all allotments set apart under the provisions of this act shall be selected by the Indians, heads of families selecting for their minor children, and the agents shall select for each orphan child, and in such manner as to embrace the improvements of the Indians making the selection.

In this section it is also provided that if any person entitled to an allotment shall fail to make a selection, the Secretary of the Interior may, after four years from the time allotments shall have been authorized by the President on a particular reservation, direct the agent for the tribe, or a special agent appointed for the purpose, to make a selection for such person, which shall be patented to him as other selections are patented to the parties making them.

Section 4 provides for making allotments from the public domain to Indians not residing upon any reservation or for whose tribe no reservation has been provided by treaty, act of Congress, or executive order.

Section 6 provides as follows:

That upon the completion of said allotments and the patenting of the lands to said allottees, each and every member of the respective bands or tribes of Indians to whom allotments have been made shall have the benefit of and be subject to the laws, both civil and criminal, of the State or Territory in which they may reside; and no Territory shall pass or enforce any law denying any such Indian within its jurisdiction the equal protection of the law. And every Indian born within the territorial

limits of the United States to whom allotments shall have been made under the provisions of this act, or under any law or treaty, and every Indian born within the territorial limits of the United States who has voluntarily taken up within said limits his residence separate and apart from any tribe of Indians therein, and has adopted the habits of civilized life, is hereby declared to be a citizen of the United States, and is entitled to all the rights, privileges, and immunities of such citizens, whether said Indian has been or not, by birth or otherwise, a member of any tribe of Indians within the territorial limits of the United States without in any manner impairing or otherwise affecting the right of any such Indian to tribal or other property.

**Number of Indians now citizens under the Allotment Act.**—The first effect of the "General Allotment Act," as the act of February 8, 1887, above referred to has come to be known, was the immediate admission to full citizenship of 10,122 Indians, to whom, it appears from the records of this office, allotments had been made under special laws and treaties; also the admission to citizenship of all Indians who had voluntarily taken up their residence separate and apart from their tribes, and adopted the habits of civilized life; the number of the latter there are no means of determining.

In addition to the number who immediately became citizens under this act, the records of this office show that 3,072 members of various tribes had, by special laws and treaties, previously become citizens.

Since the passage of the act allotments have been made and patents issued to 2,897 Indians who have thus become citizens, and allotments have been made to 3,650 others to whom no patents have as yet been issued. So at this time there are in the United States over 16,000 Indians who have become citizens, either under the general allotment act or under special acts or treaties, and nearly 4,000 others who, by taking allotments, have signified their desire to become citizens, and who will be entitled to the rights of citizens as soon as the patents provided for by law shall have been issued to the allottees.\*

This statement does not include the allotments recently made in the Territory of Oklahoma under agreements ratified by the second session of the last Congress.

**Exceptions under the General Allotment Act.**—Section 8 exempts from the operation of this act the territory occupied by the Cherokees, Creeks, Choctaws, Chickasaws, Seminoles, Osages, Miamies and Peorias, and Sacs and Foxes in the Indian Territory, the reservations of the Seneca Nation in the State of New York, and that "strip of territory in the State of Nebraska adjoining the Sioux Nation on the south added by executive order." The effect of this section, however, is not to exclude from citizenship any member of the tribes named who may take up his residence in the United States, separate and apart from his tribe, and adopt the habits of civilized life, but only to exempt the lands occupied by said tribes, from allotment in severalty under the act. Subsequent

---

\* For detailed information in regard to allotments see page 38.

legislation has given allotments to the Miamies and Peorias, and by a late act the Peorias have been made citizens.\*

**Citizenship for the Five Civilized Tribes.**—By act of May 2, 1890 (26 Stats., 81), Congress divided the Indian Territory and created the Territory of Oklahoma out of the western portion thereof, with the public land strip south of Kansas and Colorado, otherwise known as "No Man's Land"; enlarged the jurisdiction of the United States court for the Indian Territory, and restricted it to the reduced limits of the Territory as defined by that act. As so defined, the new Indian Territory is that part of the United States occupied by the Cherokee, Creek, Chickasaw, Choctaw, and Seminole Nations, known as the five civilized tribes, and by the several tribes of the Quapaw Agency contiguous to the northeast corner of the Cherokee Nation. Section forty-three (*Ibid.*, 99) provides a means of naturalization for the Indians in the Indian Territory, in addition to that provided by the general allotment act, which is as follows:

That any member of any Indian tribe or nation residing in the Indian Territory may apply to the United States court therein to become a citizen of the United States, and such court shall have jurisdiction thereof and shall hear and determine such application as provided in the statutes of the United States: \* \* \* *Provided*, That the Indians who become citizens of the United States under the provisions of this act do not forfeit or lose any rights or privileges they enjoy or are entitled to as members of the tribe or nation to which they belong.

#### WHAT DOES CITIZENSHIP IMPLY.

**In the Nation.**—"A society of men † united together for the purpose of promoting their mutual safety and advantage by the joint efforts of their combined strength," is the definition given in Bouvier's Law Dictionary for the word nation. The nation of the United States was formed by the association together of the sovereign people or inhabitants of the several independent States in America who had, uniting in a common cause and by force of arms, asserted their independence of, and dissolved the political bands which had connected them with Great Britain. Each one of the people thus associated—that is, each inhabitant of the States forming the United States, became a member of the nation established by the association; and immediately every member of the nation owed allegiance to it and was entitled to claim its protection.

In the case of *Minor v. Happersett* (21 Wall., 166) Chief Justice Waite, in delivering the opinion of the Supreme Court, said in relation to this membership that—

For convenience it has been found necessary to give a name to this membership. The object is to designate by a title the person and the relation he bears to the

\* Section 43 act of May 2, 1890 (26 Stat., 99).

† In *Minor v. Happersett* the Supreme Court held that women and children have always been citizens of the United States—members of the association which it represents—and it would seem that under this decision a better definition of the word "nation" would be "a society of persons," etc.

nation. For this purpose the words "subject," "inhabitant" and "citizen" have been used, and the choice between them is sometimes made to depend upon the form of the government. Citizen is now more commonly employed, however, and as it has been considered better suited to the description of one living under a republican government, it was adopted by nearly all of the States upon their separation from Great Britain, and was afterwards adopted in the Articles of Confederation and in the Constitution of the United States. When used in this sense it is understood as conveying the idea of membership of a nation, and nothing more.

Therefore, the members, inhabitants, or citizens of the States became, upon the formation of the nation of the United States of America, members or citizens of that nation, owing to it an allegiance separate and superior to the allegiance due to the State governments under which they were severally residing.

For this allegiance they are entitled, and have a right to expect, to be protected by the nation in all the rights, privileges, and immunities guaranteed to them as citizens under its Constitution, which are the articles of association, and from which the nation derives all of its powers and receives its life.

The original citizens of the United States were those who were members or citizens of the States forming the same at the time the nation was established, and the natural-born citizens of the United States are the descendants of these, and of persons who have become naturalized pursuant to laws enacted by Congress in accordance with the Constitution. Citizens by naturalization enjoy the same rights, privileges, and immunities that are enjoyed by natural-born citizens, with the exception that, under the Constitution, they are not eligible to the offices of President and Vice-President.

Among these rights, are the right of a citizen of one State to pass without molestation into any other State for the purpose of engaging in lawful commerce, trade, or business, or of pursuing pleasure in a lawful manner; to acquire personal property; to take and hold real property; to bring and defend actions in the State courts; and to be exempt from any higher rate of taxes than are imposed by the State upon its own citizens (Constitution U. S., Article IV, section 2), and from being deprived by the State of life, liberty, or property without due process of law, together with the right to demand the equal protection of the laws of the State (*ibid.*, Article XIV, section 1).

In the States.—Indians naturalized, either under the general allotment act or any other law, or any treaty of the United States, become not only citizens of the United States, but, under the fourteenth amendment to the Constitution, citizens of the States in which they severally reside as well. They are, therefore, not only entitled to look to the United States for protection in their rights as citizens, but also to the States in which they reside for protection in the exercise of the privileges guaranteed to them as citizens thereof, which are distinct from those of citizens of the United States.

In the case of *Corfield v. Coryell* (4 Washington's circuit court, 371), Mr. Justice Washington, in delivering the opinion of the United States circuit court for the district of Pennsylvania, discussed the privileges and immunities of citizens of the several States in the following language:

The inquiry is, What are the privileges and immunities of citizens of the several States? We feel no hesitation in confining these expressions to those privileges and immunities which are *fundamental*, which belong of right to the citizens of all free governments, and which have at all times been enjoyed by citizens of the several States which compose the Union from the time of their becoming free, independent, and sovereign. What these fundamental principles are it would be more tedious than difficult to enumerate. They may all, however, be comprehended under the following general heads: Protection by the Government, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety subject, nevertheless, to such restraints as the Government may prescribe for the general good of the whole.

This definition of the privileges and immunities of citizens of the States has been adopted by the Supreme Court in the case of *Ward v. Maryland* (12 Wallace, 430), and again in the *Slaughter House* cases (16 Wallace, 76). Indians who become citizens of the United States have the right to claim and are entitled to receive from the government of the State in which they reside full protection in those fundamental privileges and immunities "which belong of right to the citizens of all free governments and which have at all times been enjoyed by citizens of the several States," as embraced in the general heads above quoted.

These fundamental privileges and immunities are civil in their character and may be further defined as those which are granted to man by his Creator and for the protection and restriction of which governments are designed and courts are established.

Besides these there are other privileges and immunities enjoyed by certain classes of the citizens of the several States which the Indians possessing the proper qualifications will be entitled to claim and enjoy as citizens thereof. These are artificial, such as may be granted by the body politic and may be termed political liberties. They embrace the rights to participate in the government of the State, to vote, to hold office, and such other privileges and immunities of a like character as may be granted by the State to its citizens.

In compensation for his protection by the State in all these privileges and immunities, or such as he may be qualified to exercise, the Indian as a citizen will owe allegiance to the government of the State. Allegiance seems to be the term adopted to express in one word all the burdens and obligations of the citizens of a State or nation. Among these are those of obedience to the laws of the State, contributing, as by payment of taxes, to its support and bearing arms in its defense when called upon to do so.

## A PRECARIOUS SITUATION.

The Government has now full care of the estates of the Indian tribes as represented by their lands and by their trust funds upon which interest is annually paid to them and for their benefit, and, to a limited extent, it has control over and care of the persons of the Indians themselves. It is in these respects that our relations to the Indian tribes and to the Indians themselves have been said to resemble those of a guardian to his ward. This paternal care and control of their affairs was assumed by the United States by virtue of the necessities of the situation and not by virtue of any power granted the nation in the Constitution. The degraded condition of the Indians, their thriftless habits, and their ignorance of and inability to adapt themselves to the customs of the whites, as well as to cope with them in commerce, all required that some proper authority should be exercised in protecting the tribes "against further decline and final extinction" and their estates from waste and destruction. As the only power competent under the circumstances to exercise this guardian care it devolved upon the United States.

When the Indians shall have become citizens of the United States this paternal control will cease. They will no longer be subject in any respect to restraint by this office, but will have the right to go where they please and when they please. Their contracts will not be subject to approval by the Commissioner of Indian Affairs or the Secretary of the Interior, but will stand on an equal footing with those of other United States citizens. There will be no restriction of trade with them, and in fact whatever rights may be enjoyed by a citizen of the United States will be theirs, and they will no longer be subject to arrest at the instance of a United States Indian agent or by the Indian police, nor to trial and punishment by the courts of Indian offenses for misdemeanors over which those courts now have jurisdiction.

At the same time, with the exception that their lands received under allotment laws will be exempt from taxation for a period of twenty-five years, and possibly longer, they will be subject to the burdens borne by other citizens, and must manage their own affairs.

Except in a very few cases where the members of a particular tribe have had peculiar advantages over others, in acquiring the habits and customs of our civilization and a knowledge of the laws of our commerce, the Indian naturalized into the United States, under recent laws provided for the purpose, will find himself in a most precarious and dangerous situation. Unaccustomed to the recognition in him of any rights as an individual, and accustomed as he is to regard himself only as an integral part of the unit represented by his tribe, subject to the control and protection of the United States, he will find himself suddenly released from his wardship and ushered upon the threshold of a new life, with new privileges and new responsibilities, the gravity of which his

untutored mind is possibly incapable of comprehending. In this new career he will be alone, and alone he must solve the problems of his life. Whether he will be able to successfully conduct his own affairs, cope with his more intelligent and more active white neighbor, and make himself a good citizen, is a problem for the future to solve.

#### CITIZENSHIP INEVITABLE.

The policy above outlined will eventually make all Indians citizens of the United States, when the Indian reservation will no longer appear on our maps, and the autonomy of the tribes, a fact to us, will be mere history to the generations that will come.

Nearly every year Congress has taken a step toward the full recognition of the individuality of the Indian, the final abolition of tribal organizations, and the total extinction of the tribal sovereignty, and this is what the future has inevitably in store for the race. It may be remote, but the time is surely coming when these alien, quasi-independent nations within our territorial limits will have disappeared, and the individuals composing them will have been absorbed in our population, becoming fully and completely subject to the jurisprudence of the United States, both civil and criminal.

#### STATUS OF INDIANS IN MEXICAN CESSION.

In the preceding discussion of the political status of Indians reference has been had to all the Indians in the United States, although the status of those within the territory ceded by Mexico by the treaty of February 2, 1848, and known as the "Treaty of Guadalupe Hidalgo" (9 Stats., 929), is not so clear as that of other Indians. The tribes which came into the United States by the Louisiana and Florida purchases had not by any treaties with Spain or France been made subjects or citizens of either of those countries, so their political relations to the United States at the time they came within its jurisdictional limits were not in any manner different from the relations then existing between the United States and other tribes within the territory originally belonging to the English colonies.

**Treaty of Guadalupe Hidalgo.**—The eighth and ninth articles of this treaty provide as follows, viz :

#### ARTICLE VIII.

Mexicans now established in territories previously belonging to Mexico and which remain for the future within the limits of the United States, as defined by the present treaty, shall be free to continue where they now reside, or to remove at any time to the Mexican Republic, retaining the property which they possess in the said territories, or disposing thereof and removing the proceeds wherever they please, without their being subjected, on this account, to any contribution, tax, or charge whatever.

Those who shall prefer to remain in the said territories may either retain the title and rights as Mexican citizens, or acquire those of citizens of the United States. But they shall be under the obligation to make their election within 1 year from the date

of the exchange of ratifications of this treaty; and those who shall remain in the said territories after the expiration of that year, without having declared their intention to retain the character of Mexicans, shall be considered to have elected to become citizens of the United States.

In the said territories property of every kind, now belonging to Mexicans not established there, shall be inviolably respected. The present owners, the heirs of these, and all Mexicans who may hereafter acquire said property by contract shall enjoy with respect to it guaranties equally ample as if the same belonged to citizens of the United States.

#### ARTICLE IX.

Mexicans who, in the Territories aforesaid, shall not preserve the character of citizens of the Mexican Republic, conformably with what is stipulated in the preceding article, shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged of by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States according to the principles of the Constitution; and in the mean time shall be maintained and protected in the free enjoyment of their liberty and property, and secured in the free exercise of their religion without restriction.

The questions are immediately presented, Who were the "Mexicans" remaining in the ceded territories? Were the Indians residing therein "Mexicans" within the meaning of these provisions of treaty? And if so have they been admitted to the full enjoyment of the rights of citizens of the United States by Congress as contemplated thereby? In determining the first of these questions we must examine the history of Mexican legislation on the subject of citizenship; and the last the history of our own legislation must decide.

The plan of Iguala.—We first find that on February 24, 1821, the revolutionary government of Mexico adopted "the plan of Iguala," in which it was declared "that all the inhabitants of New Spain, without distinction, whether European, African, or Indian, are citizens of this monarchy, with the right to be employed in any post according to their merits and virtues," and that the person and property of every citizen will be "respected and protected by the Government." The district court of New Mexico in *U. S. v. Ortiz* (quoted in 1 *New Mexico*, 450), after discussing the plan of Iguala and other documents bearing on the subject declared as follows:

The treaty of Cordova,\* August 24, 1821, and the declaration of independence of September 28, 1821, reaffirmed these principles, as subsequently did the first Mexican Congress, by two decrees, one adopted the 24th of February, 1822, the other the 9th of April, 1823; the first, "the sovereign Congress declares the equality of civil rights to all the free inhabitants of the Empire, whatever may be their origin in the four quarters of the earth;" the other reaffirms the three guaranties of the plan of Iguala: (1) Independence; (2) the Catholic religion; and (3) union of all Mexicans of whatever race. By an act of September 17, 1822, to give effect to the plan of Iguala, it was provided that, in the registration of citizens, "classification of them with regard to their origin shall be omitted," and that "there shall be no distinction of class on the parochial books."

---

\*This treaty was between the Spanish viceroy and the revolutionary party, by which the independence of New Spain or Mexico was established for the time (*United States v. Ritchie*, 17 *Howard*, 538).

Indians were Mexican citizens.—From this it would seem that the Indians occupying a great part of the territory ceded to the United States were citizens of the Mexican Republic and included in the term “Mexicans” used in the eighth and ninth articles above quoted; and that in accordance therewith they were entitled to elect, within a year from the exchange of ratification, whether they would retain the title and rights of Mexican citizens or acquire those of citizens of the United States. Indeed, on this question there can be no doubt, for the Supreme Court of the United States has decided (*United States v. Ritchie*, 17 Howard, 539) that—

These solemn declarations of the political power of the Government had the effect necessarily to invest the Indians with the privileges of citizenship as effectually as had the Declaration of Independence of the United States of 1776 to invest all those persons with these privileges residing in the country at the time, and who adhered to the interests of the colonies.

In delivering the opinion of the court in the above case, Mr. Justice Nelson said that from their degraded condition and ignorance generally the privileges extended to them—

in the administration of the Government must have been limited, and they still doubtless required its fostering care and protection. But as a race we think it impossible to deny that under the Constitution and the laws of the country no distinction was made as to the rights of citizenship, and the privileges belonging to it, between this and the European or Spanish blood. Equality between them, as we have seen, has been repeatedly affirmed in the most solemn acts of the Government.

It will be seen from this opinion that every Indian (of whatever tribe or of whatever degree of civilization) located within the limits of Mexico at the time of the adoption of the plan of Iguala, and the other acts referred to became by the operation of that plan of government a citizen of the monarchy of Mexico and was at the time of the cession of 1848 a citizen of the Republic of Mexico and entitled to all the privileges in this country guaranteed by the treaty of Guadalupe-Hidalgo to Mexicans established in the territory ceded by that treaty. In other words, they were entitled to elect, within one year after exchange of ratifications of the treaty, to retain the title and rights of Mexican citizens or to “acquire those of citizens of the United States,” and those electing, and those who by their silence were deemed to have elected to acquire citizenship in the United States were entitled at the proper time, of which Congress is made the judge, to “be incorporated into the Union” and to be admitted “to the enjoyment of all the rights of citizens of the United States according to the principles of the Constitution.”

The Mexicans in this territory might be divided primarily into two distinct classes: (1) Mexican citizens of the European or Spanish blood, and (2) Mexican citizens of the Indian blood. Of this second class two subdivisions might be made: (a) The civilized Pueblo and Mission Indians, or those inhabiting towns or villages and engaged in pastoral

and agricultural pursuits, noted for their intelligence, virtue, sobriety, and industry, and Indians only in race and as to a few of their customs; and (b) the wild, nomadic, and savage tribes, not further advanced in civilization than the hunter state, whose only means of subsistence were the chase and depredations not infrequently committed upon the property of their more civilized and industrious neighbors. As the result of the plans of government adopted by the Mexicans after throwing off the Spanish yoke, the members of these wild tribes were made Mexican citizens with equal rights, according to their merits and virtues, with the more civilized Indians and with Mexican citizens of European or Spanish blood.

**Act of Congress needed to make them citizens of the United States.**—The question now arises, have the Mexican citizens of Indian blood above described, or has either class of such citizens, been admitted to the enjoyment of all the rights of citizens of the United States? It will be remembered that the treaty of Guadalupe-Hidalgo did not confer full citizenship in the United States upon Mexicans remaining in the ceded territory and electing to acquire such citizenship, but only provided that they could elect to acquire the rights and title of American citizens, and after so electing Congress should, when in its judgment the proper time should have arrived, admit them "to the full enjoyment of all the rights of citizens of the United States according to the principles of the Constitution."

There are always two things necessary to be done before a foreigner can become a citizen of the United States: (1) Renunciation by him of his old allegiance, and (2) an acceptance by the United States of that renunciation. (*Elk. v. Wilkins* 112 U. S., 101).

The treaty of Guadalupe Hidalgo provided a manner in which the Mexicans remaining in the territories ceded could make renunciation of their allegiance to Mexico, but the ratification of that treaty by the United States did not operate as such an acceptance of this renunciation as would immediately confer citizenship upon such Mexicans as elected to acquire the same. It operated simply as an agreement that at some future time the renunciation would be accepted so as to make citizens of the United States of all Mexican citizens desiring the same.

Some positive action was necessary before Mexicans in said territory could exercise all the rights of American citizens; that is, Congress must fix the time when they could exercise those rights. Clearly, however, it had the power to admit one class of Mexicans to the enjoyment of rights of citizenship at one time and to postpone to a future date the admission of another class.

**Act of Congress Wanting.**—But Congress has not by any act declared that the time has come for the admission of Mexican Indians to the privileges of citizenship in the United States. On the contrary, acts passed respecting the political rights of persons in the Territories embraced within the ceded country would seem to indicate that Con-

gress purposely intended to exclude them from the enjoyment of those rights.

**"Indians Excepted."**—The country ceded by Mexico now comprises the States of California and Nevada, part of the States of Wyoming and Colorado, the Territories of Arizona and Utah, and a part of New Mexico.

In establishing a Territorial government for New Mexico (9 Stats., 446), September 9, 1850, Congress, in providing for the apportionment of representation in the Territorial legislature, declared in section five that—

An apportionment shall be made as nearly equal as practicable, among the several counties or districts, for the election of the council and house of representatives, giving to each section of the Territory representation in the ratio of its population (Indians excepted) as nearly as may be.

In section four of an act of the same date (9 Stats., 454), "to establish a Territorial government for Utah," and section four of the act of February 28, 1861 (12 Stats., 173), "to establish a temporary government for the Territory of Colorado," the same language is used respecting the apportionment of representation in the legislatures of those Territories.

The Territory of Wyoming was established after the adoption of the fourteenth amendment to the Constitution, and the language used in the organic act of that Territory (July 25, 1868, 15 Stats., 178) in respect to the apportionment of representation in its legislature varies from that used in the acts above referred to, so as to give "to each section of the Territory representation in the ratio of their population (excepting Indians not taxed) as nearly as may be." Nevada and Arizona were established out of parts of the Territories of Utah and New Mexico, respectively (acts of March 2, 1861, and February 24, 1863, 12 Stats., 209 and 664), and in the admission of California as a State (September 9, 1857, 9 Stats., 452) Congress makes no mention of the Indians located therein. Provision was made, however, in the first constitution of that State by which its legislature was empowered to admit the Indians therein to the rights of suffrage, when in its opinion they shall be competent to exercise that important franchise.

Further evidence as to the intention of Congress with regard to the admission of Mexican citizens of Indian blood to citizenship in the United States can be found by again referring to the laws establishing Territorial governments within the country acquired from Mexico.

Section six of the organic act of New Mexico and section five of the organic act of Utah make the following provisions respecting the qualification of persons within the Territory to vote at elections and to hold office, viz:

That every free white male inhabitant above the age of twenty-one years who shall have been a resident of said Territory at the time of the passage of this act shall be entitled to vote at the first election, and shall be eligible to any office within the

said Territory; but the qualifications of voters and of holding office at all subsequent elections shall be such as shall be prescribed by the legislative assembly: *Provided*, That the right of suffrage and of holding office shall be exercised only by citizens of the United States, including those recognized as citizens by the treaty with the Republic of Mexico concluded February 2, 1848.

If by the foregoing provision of law Congress can be held to have admitted any class of the Mexican citizens within the Territory named to full citizenship in the United States, that class could only have been "Mexicans of the European or Spanish blood;" for by the section of each organic act immediately preceding the provision above quoted Indians are excepted from the enumeration upon which apportionment of representation was to be made, and the right of suffrage and of holding office at the first election in each Territory was given by Congress only to the free white male inhabitants of the Territories respectively. It would seem, therefore, that when it declared that after the first election the qualifications for voting and for holding office should be such as the legislature of the Territories respectively should prescribe, and limited those privileges to citizens of the United States (including those recognized as such under the treaty with Mexico), it intended to give those Territories respectively the power to prescribe the qualifications that should be possessed by the free white citizen of the United States who was an inhabitant of the Territory before such inhabitant should be entitled to the privileges named, and that it intended not to give the territories power to confer the privileges of citizenship on the Indian inhabitants thereof, although such Indians were full citizens of the Republic of Mexico at the time of the treaty. And it is not understood that the States or Territories within the section of country under discussion claim or attempt to exercise such power.

The language adopted by Congress in section five of the organic act of the Territory of Colorado would seem to sustain the view above expressed as to its intentions with regard to the admission of Mexicans to citizenship in the United States. That section is as follows:

That every free white male citizen of the United States above the age of twenty-one years, who shall have been a resident of said Territory at the time of the passage of this act, including those recognized as citizens by the treaty with the Republic of Mexico concluded February two, eighteen hundred and forty-eight, and the treaty negotiated with the same country on the thirtieth day of December, eighteen hundred and fifty-three, shall be entitled to vote at the first election and shall be eligible to any office within the said Territory; but the qualifications of voters and of holding office at all subsequent elections shall be such as shall be prescribed by the legislative assembly.

It will thus be seen that Congress has by implication accepted the renunciation of their old allegiance in the case of Mexican citizens of the European or Spanish blood but has not accepted the renunciation of allegiance to Mexico in that of the Mexican citizens of Indian blood, Indians being excepted from the operation of the statutes affecting the question.

**Dicta of Courts of New Mexico.**—But the Mexican citizens of Indian blood, as already stated, were of two classes: (1) Civilized Indians inhabiting towns and principally engaged in pastoral and agricultural pursuits, such as Pueblo and Mission Indians, and (2) savage, warlike Indians, such as the Apaches and Navajos.

It has been held by the courts of New Mexico\* that the Pueblo Indians are citizens of the United States by virtue of the treaty of Guadalupe Hidalgo. But each case in which they were declared American citizens was an action of debt on statute, brought by the United States to recover the penalty prescribed by section 11 of the act of Congress of June 30, 1834 (4 Stat., 730), for unlawful "settlement on lands belonging, secured, or granted by treaty with the United States to any Indian tribe," in which the political status of the Indians occupying the lands on which the unlawful settlements were alleged to have been made was not necessarily involved. Therefore the expression of opinion on that question, in deciding whether the status of said lands was such as would sustain the action, was mere *dicta*, and without force as an adjudication.

The action in the cases arose out of settlements made by Messrs. Lucero and Ortiz upon certain Pueblo lands in New Mexico, and suit being brought under the statute above cited for recovery of penalty prescribed, the question for the court to determine was merely whether the lands in question were lands "belonging, secured, or granted by treaty with the United States to any Indian tribe" within the meaning of that act. Whether or not the owners or occupants of those lands were citizens of the United States was not necessarily involved in that question, and an expression of opinion thereon would not have the force of a judicial decision.†

In *The United States v. Joseph* (94 U. S., 614) the Supreme Court passed upon the questions involved in the cases of the *United States v. Lucero* and *The United States v. Ortiz*; and while the judgment of the court below, that the Pueblo Indians do not constitute Indian tribes within the meaning of section 2118 of the Revised Statutes (originally

\* *United States v. Lucero* and *United States v. Ortiz*, 1 New Mexico, 423 *et seq.*

† In *Cohens v. Virginia* (6 Wheat, 399) Chief Justice Marshall, in delivering the opinion of the Supreme Court, said (as to the effect to be given, upon subsequent investigation and decision of the particular point, to *dicta* of the court appearing in a former decision in which that point was not necessarily involved), that—

The counsel for the defendant in error urge, in opposition to this rule of construction, some *dicta* of the court in the case of *Marberry v. Madison*. It is a maxim not to be disregarded that general expressions in every opinion are to be taken in connection with the case in which those expressions are used. If they go beyond the case they may be respected, but ought not to control the judgment in a subsequent suit, where the very point is presented for decision.

And Mr. Justice Curtis, in delivering the opinion of the Supreme Court in the case of *Carroll v. Lessee of Carroll et al.* (16 Howard, 286), said that—

This court, and other courts organized under the common law, has never held itself bound by any part of an opinion in any case which was not needful to the ascertainment of the right or title in question between the parties.

section 11 of the act of June 30, 1834) and that they do not hold their lands by a tenure such as would bring them within its meaning was affirmed, the court declined to rule that they are citizens of the United States, declaring that—

Abiding by the rule which we think always ought to govern this court, to decide nothing beyond what is necessary to the judgment we are to render; we leave that question until it shall be made in some case where the rights of citizenship are necessarily involved.

If therefore it would be *dicta* for the Supreme Court in *The United States v. Joseph* to declare that the Pueblo Indians are citizens of the United States, it would likewise be *dicta* for the supreme court of New Mexico to make such a declaration in *The United States v. Lucero*, the same questions being involved in both cases.

But the expressions on this subject which occur in the opinions of the courts of New Mexico are entitled to respect as opinions of eminent jurists, and for this reason it seems necessary here to briefly consider them and to point out such errors as have presented themselves to my mind as reasons for believing that the courts were mistaken as to the true political status of the Pueblo Indians.

**Errors in decisions of courts of New Mexico.**—By a reference to the First New Mexico Reports (p. 422 *et seq.*), where will be found the opinion of the court in *United States v. Lucero*, in which is quoted the opinion in the case of *United States v. Ortiz*, it will be seen that in reaching the conclusion that the Pueblo Indians are citizens of the United States, the courts did not refer to the power given Congress in the ninth article of the treaty of Guadalupe Hidalgo over the question, but construed the eighth article alone as conferring all rights of citizenship in the United States on all Mexican citizens remaining in the ceded territories and electing to acquire such citizenship. This I believe to be an error, for by all rules of construction of law it seems that the eighth and ninth articles of the treaty should be construed together, and if this is done but one conclusion, it seems to me, can be reached, and that is that Mexican citizens electing to become citizens of the United States would be entitled to exercise all the rights of such citizens only when Congress shall have given them that privilege.

Then, again, if the eighth article of the treaty is to be construed alone, all the wild, savage Indians in the country to which the treaty relates must be declared citizens of the United States, unless it can be shown that the savage tribes were not made citizens of Mexico by the plan of Iguala and other acts of the revolutionary government of that country. To meet this question the supreme court of New Mexico declares—

When Spanish law books and Spanish legislators speak of Indians they mean that civilized race of people who live in towns and cultivate the soil, and often mentioned as *naturales* and *pueblos*, natives of the towns; and for the other distinct and separate class of Indians whose daily occupation was war, robbery, and theft carried on against the Pueblo Indians as well as the Spaniards, the term savages (*savagejos*) or barbarous Indians (*Indios barbaros*) was the expression used.

This theory, however, was overruled by the Supreme Court in *The United States v. Ritchie*, in which the court expressed the opinion that it is impossible to deny that under the constitution and laws of Mexico no distinction was made as to the rights of citizenship, and the privileges belonging thereto, between the Indian and the European or Spanish blood. That is, that the term Indians, when used without qualification in the constitution and laws of Mexico, applied not to any faction, or tribe, or class of Indians, but to the whole Indian race.

**Opinion of the House of Representatives.**—Besides this we have against the opinions of the respective judges of the courts of New Mexico the opinion of the House of Representatives of the United States, which, in adopting the report of its committee\* in the contested-election case of *Lane v. Gallegos*, decided that the Pueblo Indians were not citizens of the United States and not entitled to vote; also the opinion of Congress as expressed by its appropriations from year to year, for a number of years, providing for the salary of a United States Indian agent† and for the support and civilization of the Pueblo Indians.‡

**Pueblo Indians are bodies politic.**—By an act of the legislature of New Mexico (compiled laws of New Mexico, 1865, page 470) the Pueblo Indians were created and constituted bodies politic and corporate, and given names by which they are known in the law and by which they and their successors should have—

Perpetual succession; sue and be sued, plead and be impleaded, bring and defend in any court of law or equity all such actions, pleas, and matters whatsoever proper to recover, protect, reclaim, demand, or assert the right of such inhabitants or any individual thereof, to any lands, tenements, or hereditaments, possessed, occupied, or claimed contrary to law, by any person whatsoever, and to bring and defend all such actions, and to resist any encroachment, claim, or trespass made upon such lands, tenements, or hereditaments, belonging to said inhabitants or to any individual.

Like the individual members of the wild tribes, the Pueblo Indian has no civil status in the eyes of the law. His individuality is merged in the pueblo of which he is a member and he has become a part and parcel of that unit. Whatever civil rights he may have superior to those of the wild Indian are only such as his pueblo as a corporation can under law enforce. He has no political rights not enjoyed by the wild Indian, except the right to vote at "elections for overseer of ditches, to which they belong, and in the elections proper to their own pueblos, to elect their officers according to their ancient customs." (Com. Laws of New Mexico, 1865, 448.) This latter right declared to him by the law above quoted is one which he had before the law passed, and one of which the Territory of New Mexico had no right to deprive him. It is a right to participate in the government of his pueblo.

\* No. 121, Thirty-third Congress, first session, House Journal, February 24, 1854, page 455.

† See Indian appropriation acts from 1874 to the present time.

‡ See 25 Stats., 232 and 997; 26 Stats., 353 and 1006; and Indian appropriation acts from year to year appearing in the Statutes at Large.

The same right exists in the wild Indian, who has the right to participate in the government of his tribe according to its ancient custom.

Pueblo Indians are not citizens of the United States.—As before stated, under Spanish law all Indians were regarded as having a greater right in the lands held by them under guaranties of treaties than the mere right of occupancy and perpetual possession, that is, they were deemed to have a right of property in them. As early as 1689, extensive grants of land were made to the several Pueblo bands who even at that early date had reached a degree of civilization far in advance of other tribes. The treaty of Guadalupe Hidalgo provided for the protection of these grants, and, even if it had not, the United States in acquiring sovereignty over the territory within which they were embraced would have been bound to respect and protect them. In *United States v. Ritchie* the Supreme Court held that the Pueblos held their lands by a right superior to that of the United States.

That they hold their lands under ancient Spanish grants, which give them rights therein superior to those of the United States; and that they are a sober, virtuous, and industrious people, and far in advance of other tribes in civilization, are strong reasons why Congress should admit them to the enjoyment of all the privileges guarantied by our laws to citizens of the United States; but they do not of themselves confer the privileges of citizens upon them. While, therefore, it would appear that, on account of their advanced civilized condition, their habits and virtues, the Pueblo Indians are not Indian tribes within the meaning of the intercourse acts\* (4 Stats., 730), nor within the meaning of the acts of August 15, 1876† (19 Stats., 179), and of March 3, 1891‡ (26 Stats., 1014), I am of the opinion that their status as to citizenship in the United States is in no wise different from that of the savage tribes who inhabit other portions of the territory acquired by cession from Mexico, and who are, I believe, conceded not to be citizens. In expressing this opinion I am not stating what I think ought to be, but what I think is their political status: that they are not citizens of the United States, and I trust Congress will enact the legislation necessary to make them citizens.

If these conclusions are correct, then all the tribes within the boundaries of the Mexican cession of 1848 (notwithstanding they were at one time citizens of Mexico) hold to this Government, like the other tribes within its territorial limits, only the relations of domestic dependent nations, and, like other Indians, are in a state of pupilage, dependent upon the United States for protection in their rights as distinct political communities.

---

\* *United States v. Joseph*, 94 U. S., 614.

† Opinion of the Attorney-General, July 23, 1891.

‡ Opinion of the Assistant Attorney-General for the Department of the Interior, May 4, 1891 (see appendix, page 149.) In this opinion the Assistant Attorney-General does not directly pass upon the question of the citizenship of the Pueblo Indians; but the inference might be drawn that he regarded them as citizens of the United States.

## PRACTICAL CONCLUSIONS.

It seems to me that since the Government has assumed the guardianship of the Indian tribes, and has for years, by direct Congressional enactments, controlled their affairs and cared for and protected the Indians themselves, it should now take some steps which will take away from all Indian tribes absolutely their character as nations, and bring them completely and fully under subjection to its laws.

From the foregoing discussion of the political status of the Indians it seems to me the following practical conclusions may be drawn :

First. During the whole course of our history the Indians of this country have been treated as separate communities, sustaining exceptional relations to us. They have been regarded as having relations directly with the General Government alone and not indirectly through the States or to the States.

Second. That the fiction of regarding them as independent peoples has been displaced by the theory of regarding and treating them as wards of the General Government.

Third. That the purpose of the Government, as has been made more evident, is to change their status from that of wardship to that of citizenship.

Fourth. That during the transition period and until the completion of their citizenship they should be regarded as subject to the laws of the General Government and under its care and guardianship.

In this connection I submit that the time has come for establishing laws and courts among the Indians under the authority of the General Government. In doing this it would seem wise that these laws should be assimilated in each case to those of the State or Territory in which the reservation is situated, and that any system of courts should build upon the existing courts of Indian offenses.\*

Fifth. That the time has come for a declaration by Congress to the effect that hereafter it will not recognize the Indians as competent to make war, but that in our dealings with them they shall be treated not as belligerents, but as subject and dependent people, capable, of course, of insurrection, rioting, or disturbance of the peace, but not of waging war.

Sixth. That the General Government has the right, both for its own protection, for the promotion of the public welfare, and for the good of the Indians, not only to establish schools in which their children may be prepared for citizenship, but also to use whatever force may be necessary to secure to the Indian children the benefit of these institutions. Even in the cases where, by taking their lands in severalty, they are in

---

\* See reference to case in United States court of Plenty Horses, who killed Lieut. Casey, page 131. From the decision of the court in this case it would seem that Indian tribes still retain their status of quasi-independent nations, capable of maintaining a state of war with the United States, notwithstanding the relationship of guardian and ward that has come to be recognized as subsisting between the United States and the tribes within its limits.

process of becoming citizens, they are still in a state of quasi-independence, because the General Government withholds from them for twenty-five years the power of alienating their lands, while by exempting them from taxation for the same period it practically excludes their children from the public schools. For these reasons it would seem that the Government has not only the right, but is under obligation to make educational provisions for them, and to secure to their children the benefits of those provisions.

Seventh. I venture also to suggest whether the time may not be near for the passage of an enabling act whereby the five civilized tribes may form either a Territorial or a State government and be represented on the floors of Congress.

Eighth. That the time has come when the Pueblo Indians should be admitted by special act of Congress "to the enjoyment of all the rights of citizens of the United States according to the principles of the Constitution," as contemplated by the treaty of Guadalupe Hidalgo.

Ninth. The definite determination by the highest authority of the actual political status of the Indians is necessary as a basis of wise legislation and to the satisfactory administration of Indian affairs.

#### CHANGE OF TRIBAL RELATIONS.

A matter requiring frequent attention is the desire of Indians to leave the tribes to which they belong and join others. Their nomadic instincts are in a great measure responsible for this, but in some instances, especially among the mixed bloods, business interests or family connections constitute the main reason for the wish to change.

The importance of the subject in the administration of the affairs of the Indian may be readily appreciated when it is remembered that the tribes occupying the various reservations are completely distinct from and independent of each other as to tribal citizenship, property rights, etc., and that some are much richer in lands and annuities than others.

In each case the approval of the office is requisite for a change of tribe, and when the tribe into which incorporation is sought has under treaty or law the exclusive right to its reservation, the request of the applicant is not granted unless he is able to secure a formal adoption by said tribe. It is also essential that he relinquish and renounce all rights, interests, and benefits in the tribe he wishes to leave.

Favorable action upon such applications is not taken as a matter of course upon the adoption of the applicant and his relinquishment of rights elsewhere, but each case is considered in all its bearings upon both parties involved, and is decided entirely on its own merits.

#### INDIAN SOLDIERS.

Indians now form an integral part of the Regular Army. The enlistment of not exceeding 1,000 scouts was authorized by sections 1094 and 1112 of the Revised Statutes—taken from the act of July 28, 1866 (14

Stats., p. 333)—the latter section providing that they should serve in the Territories and Indian country, and should be discharged when the necessity for their service should cease, or at the discretion of the department commander.

On April 1 last, by Department reference, this office received copies of Army orders,\* directing the enlistment of Indians as soldiers in the regular Army, accompanied by request that the agents in charge of tribes and reservations be instructed to afford every facility and encouragement to the officers of the Army charged with the raising of Indian companies. The office promptly complied with the request.

A later communication from the Secretary of War stated that among the inquiries made by Indians of the recruiting officers was whether those who became soldiers would lose their right to lands, annuities, and other assistance furnished by this bureau in fulfillment of treaties. This office replied in the negative.

Up to the present time quite a number of Indians have been enlisted, and some encouraging reports have been received from those in command of them; but it is of course too early to predict permanent results. The discipline to which they must submit in the military service, and the regular duties involved, will doubtless be of advantage to them, while the feeling that they are United States soldiers, armed to battle by the side of the whites in a common cause, should occasion arise, will awaken patriotic sentiments, and tend to inspire mutual confidence and friendship between the two races. The final outcome of this experiment must, of necessity, depend very largely upon the character of the officers immediately in charge, and upon the kind of discipline and instruction to which the Indians are subjected.

### ALLOTMENT OF LANDS.

During the past year the work of allotting lands in severalty has been pushed with unusual vigor. The idea of a separate home, with its attendant advantages and incidental disadvantages, has become more or less familiar to the great body of Indians, and has been received by most of them with increasing favor. It is a great change, a radical and far-reaching revolution, for them to abandon their tribal occupancy and to accept of individual holdings.

### HINDRANCES TO ALLOTMENT.

It is a fact not generally understood, perhaps, that the common possession of land by a tribe is in many cases nominal rather than actual. It occurs among Indians as among others that there are ambitious and powerful men who reach out and lay claim to a larger portion of the common heritage than can be properly claimed by them as individuals.

---

\* General Orders No. 28, headquarters of the Army, Adjutant-General's Office, series of 1891.

It is not uncommon to find Indians who exercise a sort of ownership over vast bodies of land and who have in their own right extensive herds and flocks. There are among them, as among us, the rich and the poor. When, therefore, it is proposed to divide their land among them individually, giving to each the same amount, the argument for it is, in many cases, very much the same as if it were proposed to take all the real estate of New York City and divide it equally among its several inhabitants. It is not surprising, therefore, that there should be, on the part of the more aggressive, able, and prosperous Indians, very serious objections urged against the policy of an equal distribution of the landed estate of the tribe. It is indeed quite surprising that the general policy of allotting the tribal lands in equal quantities to all individuals has been received with as much favor as it has.

Another hindrance to the successful operation of the land-in-severalty law arises from the fact that there are among the Indians a large number who, for one reason or another, are incapable of managing successfully a landed estate. Many of them know little of farming and care less, and the children, the widows, the diseased, the infirm, are incapable of making any use of the wild, uncultivated lands which are offered them.

Multitudes of them have no true conception of the value of good land, and moreover a large proportion of that which it is proposed to divide up among them is practically worthless. In some instances it consists of vast tracts of sandy plain, absolutely sterile and unfit for cultivation without extensive and costly irrigation; in others, of mountainous tracts fit only for grazing purposes and suitable for this only when enclosed and guarded from the encroachments of the cattle of the white man; in other cases it is heavily timbered and valuable only for its lumber, which too frequently the Indians are unable to utilize. In a large number of instances, therefore, giving an Indian 80 acres of land and asking him to make it his home and gain from it a subsistence, when he has no farming implements, no horses or cattle, no house but a tepee, no knowledge of farming, no ability to bring the wild land under cultivation, seems but a mockery.

Another very serious matter to consider in this connection is that when they have received their land in severalty they become thereby citizens of the United States and have thrust upon them the obligations of citizenship for which they are often absolutely unprepared. They are brought under the operation of laws which they do not understand; are taken largely from the care and guardianship of the General Government, upon which they have been accustomed to lean for protection; are thrown upon their own resources and subjected to the fierce competitions of border civilization, for which they have little or no preparation.

Land in severalty has in it "the promise and the potency" of great things, but only the promise and the potency. Very much depends

upon the manner of its administration. In many cases it brings unutterable woe, and in all it is liable to leave the Indians worse off than before. It certainly would be a great misfortune to them as a body to thrust severalty and citizenship upon them suddenly; they ought to be prepared for the great change; it should come to them gradually, and certainly should be accompanied with such safeguards as are dictated by common sense and humanity.

Land in severalty without education may prove a bane rather than a blessing.

#### EARLY ALLOTMENTS.

The policy of dividing lands owned or occupied in common by an Indian tribe among its several members was inaugurated by act of March 3, 1839, which authorized division of the lands of the Brothertown Indians (Wisconsin) by a commission of five of their principal head men, and for the issuance of patents in fee simple to the Indians and their heirs and assigns.

The act also provided that upon the filing of the report of this commission, with a map of the allotments, and the transmission of the same to the President, the Brothertown Indians should be deemed citizens of the United States, and be subject to its laws, and to those of the Territory of Wisconsin.

By law or treaty this policy was subsequently applied, with various modifications as to the tenure of the lands allotted, the status of the allottees, the right of alienation, etc., to several other tribes, notably the Ottawas and Chippewas, the Pottawatomies, the Shawnees, and the Wyandottes.

The Brothertown Indians (remnants of the Mohican and other New York tribes) long since passed from the notice of this office, and, so far as the other tribes are concerned, the records show that where their lands were conveyed in fee simple, with no restrictions as to alienation, they soon parted with them without sufficient consideration, and squandered what little they received. The disastrous result of this policy in several cases has led this office to insist that the right of alienation should be limited in some manner, so that Indians can not improvidently dispose of their lands.

#### PROGRESS IN ALLOTMENTS.

In 1887 the first general law was enacted (24 Stats., 388), and by its provisions lands were to be given to the several members of a tribe (except married women), in quantities differing according to the age of the allottee, or status as the head of a family, or otherwise.

Difficulties having arisen in regard to its administration, Congress was asked to amend the act so as to provide for the allotment of the same quantity of land to each member of the tribe. This was done by the act of February 28, 1891 (26 Stats., 794), which secures the only

fair and equitable division of tribal property, each member of the tribe having an equal share.

The general allotment act provides that lands, when allotted, shall not be immediately conveyed to the allottees, but shall be held in trust for a period of 25 years (which period may be indefinitely extended by the President), at the end of which it is to be conveyed to the allottee or his heirs, in fee, discharged of the trust and free of all incumbrance. The allottee is thus secured in the possession of his home for at least 25 years, during which time the force of example, education, and contact with white civilization will, in a great degree, fit him for absolute and unconditioned ownership. Special acts have since been passed or agreements concluded under which allotments have been made or are to be made, but all of them contain substantially the same provision as to the trust period.

The work of making allotments has been carried on since the date of the last annual report, as follows: To the Indians on the Yankton Reservation, 1,484 patents have been issued and will be delivered at an early day. The work of revising allotments made to the Yankton Sioux, rendered necessary by the act of February 28, 1891, was begun about the 1st of June last and will probably be completed by the 1st of January next.

To the Sac and Fox Indians of Oklahoma, 548 patents have been issued and delivered under the agreement ratified by the act of February 13, 1891 (26 Stats., 749), by which 160 acres were allotted to each member of the tribe, 80 acres to be held in trust for 5 years and 80 acres for a period of 25 years.

To the Eastern Shawnees in the Indian Territory, 72 patents have been issued and delivered.

The following allotments have been approved and the issuance of patents directed:

Modocs in the Indian Territory .....	68
Papagoes in Arizona .....	291
Poncas in South Dakota .....	167
Grande Ronde Indians in Oregon .....	269
Citizen Pottawatomies in Oklahoma .....	1,363
Absentee Shawnees in Oklahoma .....	563
Iowas in Oklahoma .....	109
Total .....	<u>2,830</u>

A schedule of 1,530 allotments made to the Oneida Indians in Wisconsin has also been submitted for approval.

The following schedules of allotments have been received in this office, but not yet acted upon:

To Sac and Fox Indians in Kansas and Nebraska .....	76
To Wyandottes in Indian Territory .....	238

Work is progressing in the field as follows:

On the Lake Traverse Reservation, in South Dakota, it will probably be completed early in October.

On the Devil's Lake Reservation, in North Dakota, it will doubtless be finished during the present season.

On the Nez Percés Reservation, Idaho, there is fair prospect of completing the work in the field before winter.

Work on the Jicarilla Apache Reservation, in New Mexico, is nearly completed.

Reports from the Siletz Reservation, in Oregon, do not indicate very rapid progress.

Allotments to the Tonkawas, in Oklahoma, are finished.

Allotments are progressing on the Otoe Reservation, though with considerable opposition.

Satisfactory progress is being made on the Crow Creek and Lower Brulé reservations.

Very little has been accomplished among the Kickapoos and Pottawatomies, of Kansas.

Allotments are in progress on the Umatilla Reservation, Oregon.

In April last a corps of five agents was appointed to make allotments on the Cheyenne and Arapaho Reservation, in Oklahoma, as provided in the agreement with these Indians ratified by the act of Congress approved March 3, 1891 (26 Stats., 1022). They proceeded to duty early in May, but owing to the refusal of the Indians to take allotments until they had received the payment stipulated, they were unable to commence work before the middle of July. Subsequently two more agents were added to the corps. On the 13th of September they had made some 1,325 allotments, the total number entitled to allotments being about 3,300. The appropriation of \$15,000 available for prosecuting the work became exhausted on the 30th of September, and it was therefore found necessary (on the 26th) to discontinue further work in the field.

Work is in progress on the Sioux ceded lands in South Dakota.

Surveys have been executed on the Wind River Reservation, in Wyoming, with a view to future allotments, and have been contracted for on the Moqui Reservation, in Arizona, and the Rosebud Reservation, in South Dakota.

The present season will close the work on a large number of reservations. Hereafter it will doubtless proceed more slowly, the Indians on many of the unallotted reservations being wholly unprepared for this important change in their condition.

#### ALLOTMENTS TO NON-RESERVATION INDIANS.

Under the 4th section of the general allotment act of 1887, a number of applications for allotments have been presented by Indians off reservations; but owing to the press of other duties during the year and the lack of proper clerical force allotments have not as yet been made.

Prior to March 3, 1891, no appropriation had been made to assist non-reservation Indians in making applications for allotment under said section, and in consequence but little progress could be made in

this direction; but whenever and wherever practicable this office has instructed agents and special agents to aid in the preparation of applications and in securing the proof required for an allotment.

October 7, 1890, Special Agent Lewis was instructed to proceed to the vicinity of Redding, Cal., for the purpose of assisting the Wintu and Yana Indians. But soon afterward it became necessary to detail him to ascertain and report the condition of affairs among the Indians around Fort Bidwell, Cal., and subsequently his appointment as United States special attorney for the Mission Indians in that State caused a temporary cessation of the work.

October 13, 1890, Special Agent Litchfield was instructed to allot lands to non reservation Indians in Washington and Oregon and to assist Indian homesteaders in making final proof and completing title to entries already made.

November 5, 1890, Agent Sears, of the Nevada Agency, was instructed to aid certain Indians in Nevada in securing their allotments, and his successor, Agent Warner, is continuing the work.

By act of March 3, 1891 (26 Stats., 989), the Secretary of the Interior is authorized and directed to apply the balance of the sum carried upon the books of the Treasury Department, under the title of Homesteads for Indians, in the employment of allotting agents, and payment of their necessary expenses, to assist Indians desiring to take Homesteads under section four of the general allotment act. Michael Piggott, of Illinois, has been appointed special agent for the prosecution of this work.

Authority has been granted for the agent of the Mission Indians in California to use a portion of the said funds for the purpose of assisting those who desire to take homes in the southern portion of that State.

The office correspondence shows that many Indians, seeing the public lands rapidly disappearing, are manifesting a strong desire and are even making efforts to secure a title to the lands which they have long used and occupied. With the funds on hand and the agents in the field it is expected that the next year will witness much progress in this direction.

#### PRACTICAL RESULTS OF ALLOTMENTS.

I am not in receipt of enough information, nor indeed has sufficient time elapsed, to enable me to judge of the practical results of the allotment policy. I purpose at an early day to institute a series of careful inquiries regarding the status and prospects of individual Indians who have not only taken their lands, but have also endeavored to improve them. The result of such inquiries, if thoroughly prosecuted, ought to be very valuable to this office in administration as well as to Congress in determining future legislation.

I have seen nothing during the year to lead me to change my views as to its ultimate success, although doubtless the change will come with too great suddenness to some of the tribes.

## REDUCTION OF RESERVATIONS.

The work of reducing the area of the reservations, by extinguishing by purchase from the Indians their title to the land and its restoration to the public domain, has been carried forward rapidly, as is shown in the following detailed statements:

Counting the 22 small reserves of the Mission Indians of California as only one reserve and the 19 Pueblo reserves of New Mexico as one also, the number of reservations as given in the annual report of this office for 1890 was 138, having an aggregate area of about 104,314,349 acres, or 162,991 square miles. This amount is about 12,071,380 acres, or 18,861 square miles, less than the amount reported in 1889, while at the present time there are five more reservations than in 1889, owing to the division of the Great Sioux Reservation, as provided by act of March 2, 1889.

The agreements ratified by act of Congress approved February 13, 1891 (26 Stats., 749), restored to the public domain 391,184.65 acres from the Sac and Fox Reservations, in Oklahoma, including 25,194.61 acres for school purposes; and from the Iowa Reservation, in the same Territory, 219,446.27 acres, including 12,271.75 acres for school purposes. The ratification of agreements by the act of March 3, 1891 (26 Stats., 989), restored to the public domain from the Pottawatomie Reservation, Oklahoma, 309,134.77 acres, including 22,650.44 for school purposes; from the Cheyenne and Arapaho Reservation, Oklahoma, about 3,000,000 acres; from the Cœur d'Alène Reservation, Idaho, about 185,000 acres; from the Fort Berthold Reservation, North Dakota, about 1,600,000 acres; from the Lake Traverse Reservation, South Dakota, about 660,000 acres, and from the Crow Reservation, Montana, about 1,800,000 acres; a total of about 8,164,765 acres.

The following schedule shows the disposition of the lands embraced within the Pottawatomie, Iowa, and Sac and Fox Reservations above mentioned:

POTTAWATOMIE.		Acres.
Allotted .....	286,494.33	
Opened to settlement .....	266,241.93	
Reserved for school lands .....	22,650.44	
Reserved for (Indian) school, church, and agency purposes..	490.63	
IOWA.		
Allotted .....	8,685.30	
Opened to settlement .....	207,174.52	
Reserved as school lands .....	12,271.75	
Reserved for burying and other tribal uses .....	20.00	
SAC AND FOX.		
Allotted .....	87,683.64	
Opened to settlement .....	365,990.04	
Reserved as school lands .....	25,194.61	
Reserved for agency and (Indian) school purposes .....	800.00	

The ceded portion of the Fort Berthold Reservation, North Dakota, consisting of about 1,600,000 acres, has been thrown open to settlement by proclamation of the President.

The ceded lands of the Cœur d'Alêne Reservation, Idaho, were opened to settlement from the date of the approval of the act.

Allotments of land are being made on the Lake Traverse Reservation, South Dakota, and the Cheyenne and Arapaho Reservation, Oklahoma, and surveys are in progress upon the Crow Reservation, Montana, and when they are completed and the terms of the act ratifying the respective agreements with the Indians of the several reservations shall have been fully complied with, the unallotted or vacant lands embraced within the ceded portions will be thrown open to settlement.

The agreement with the Indians of the Southern Ute Reservation, in Colorado, referred to in my last annual report, was not ratified by the last Congress.

#### NEGOTIATIONS FOR FURTHER REDUCTIONS.

The Indian appropriation act for the fiscal year ending June 30, 1892 (26 Stats., 1010), contains the following provisions:

To enable the Secretary of the Interior in his discretion to negotiate with any Indians for the surrender of portions of their respective reservations, any agreement thus negotiated being subject to subsequent ratification by Congress, \$15,000 or so much thereof as may be necessary.

Under the provisions of this act the Secretary of the Interior has appointed three commissioners to negotiate with the Shoshone and Arapaho Indians of the Shoshone or Wind River Reservation, in Wyoming, for the surrender of such portion of their reservation as they choose to dispose of; also three commissioners to treat with the Indians of the Pyramid Lake Reservation, in Nevada, for the same purpose.

The work of these and other commissions will be referred to hereafter, page 47.

For some 2 years or more there has been rumor of the existence of rich gold and silver deposits in the Carrizo Mountains, within the Navajo reservation, in New Mexico and Arizona, and it is the settled belief of the people in that section of the country that there is rich mineral wealth in the mountains referred to.

Prospectors surreptitiously visited this region, and in the spring of 1890, by request of this office, the military removed a party of 15 who were found locating claims.

This reservation embraces an area of about 8,200,000 acres, and, though no accurate census of the tribe has ever been taken, its number has been variously estimated at from 14,000 to 20,000, a large proportion of whom reside outside on the public lands.

The reservation is, for the most part, largely worthless for agricultural purposes, and the Indians depend almost entirely upon their sheep, goats, and horses. They could surrender the northern central

portion, where the Carrizo Mountains lie, without disadvantage to themselves. On the contrary, a sale of this land for a reasonable sum and a judicious investment of the same would prove beneficial to them.

It is proposed to negotiate with them at an early date for the cession of this portion of their reservation.

#### RESERVATIONS SHOULD NOT BE REDUCED TOO RAPIDLY.

While perhaps it is possible to push such work too rapidly, I do not hesitate to say that the ultimate destruction of the entire system of reservations is inevitable. There is no place for it in our present condition of life, and it must go. The millions of acres of Indian lands now lying absolutely unused are needed as homes for our rapidly increasing population and must be so utilized. Whatever right and title the Indians have in them is subject to and must yield to the demands of civilization. They should be protected in the permanent possession of all this land necessary for their own support, and whatever is taken from them should be paid for at its full market value. But it can not be expected under any circumstances that these reservations can remain intact, hindering the progress of civilization, requiring an army to protect them from the encroachments of home-seekers, and maintaining a perpetual abode of savagery and animalism. The Indians themselves are not slow to appreciate the force of the logic of events, and are becoming more and more ready to listen to propositions for the reduction of the reservations and the extinguishment of their title to such portions of the land as are not required for their own use.

The same considerations, however, which suggest the possibility of pushing the allotment of lands too rapidly also suggest the desirability of moving with caution and deliberation in reducing the reservations. If they are broken up too suddenly and violently, the harm resulting to the Indians would not be, by any means, counterbalanced by the benefit conferred upon other people. The ultimate swallowing up of the Indians by our civilization will be to them a decided benefit. Those Indians on reservations who live close to white settlements and come into vital relationship with civilized people make the greatest progress. They learn by contact and observation, and in many cases adopt the better ways of their more intelligent neighbors. There are, of course, exceptions to this, as our civilization bears, unfortunately, many elements of evil as well as of good. The Indians are quite as ready to copy the vices of the white man as his virtues. Gambling, intemperance, impurity, falsehood, larceny, idleness, are not peculiar to the Indians, and oftentimes are intensified by the precepts and examples of those who claim to belong to a superior race. Nevertheless, the fact remains that in general the building of towns, opening of farms, construction of railroads, establishment of schools, building of roads and bridges, etc., which are common incidents of the throwing open

of a reservation to white settlement, are beneficial to the Indians who remain in close contact with the incoming tide of population. Among the great disadvantages under which they have lived hitherto have been their isolation, provincialism, and antagonism to civilization. They have looked upon the pale faces as their enemies, with whom they could have no dealings which would be of mutual advantage; but the breaking up of the reservations and the coming of the white men with all their better modes of life necessitate a closer acquaintance with each other and a knowledge of the general superiority of the white man's civilization. Multitudes of Indians are now beginning to understand this, readily accept the situation, and benefit by the change.

### COMMISSIONS.

#### SHOSHONE COMMISSION.

Instructions prepared and submitted to the Department July 14, 1891, for the guidance of this Commission were approved and returned to this office the following day.

The Commission was directed to meet at the Shoshone Agency, Wyo., August 2, 1891, and from reports received it is believed that their negotiations for the surrender of a portion of the Shoshone Reservation will be successful.

#### PYRAMID LAKE COMMISSION.

July 27, 1891, instructions for the guidance of the Pyramid Lake Commission were submitted to the Department, and were approved by the same August 26, 1891, and on August 28 the Commission was directed to meet at the town of Wadsworth, Nev.

The work of this Commission is important and somewhat complicated, for the reason that the town of Wadsworth is located within the boundaries of the Pyramid Lake Reservation, that many whites have settled therein along the bottoms of the Truckee River, and that about one-fourth of the Indian population of the reservation have settled in and around the town.

#### MISSION INDIAN COMMISSION.

Under the act of January 12, 1891, for the relief of the Mission Indians in the State of California (26 Stats., 712), the Secretary of the Interior appointed C. C. Painter, A. K. Smiley, and Joseph B. Moore commissioners to arrange a just and satisfactory settlement of these Indians on reservations to be selected by them.

Instructions were issued January 31, 1891, by this office, and approved by the Department February 4, 1891.

The Commission met and prosecuted their labors together for a short time; but for the last 2 or 3 months Messrs. Smiley and Moore have been absent on leave, and during their absence Mr. Painter has been

engaged in collecting data and information for their use; it is expected that the absent members of the Commission will soon return to duty.

The object of the act is the determination and adjustment of the rights of the Mission Indians regarding their lands, as well as the rights and claims of settlers, and it is confidently hoped that this Commission will bring about a satisfactory and final settlement of the troublesome questions which have for so many years beset these Indians and perplexed this office.

#### PUYALLUP COMMISSION.

The Puyallup Commission, consisting of Chas. D. Drake, Geo. B. Kinkead, and B. F. Harness, was appointed by the President under authority of a clause contained in the Indian appropriation act approved August 19, 1890 (26 Stats., 354), to make full inquiry and investigation in reference to all questions bearing upon the lands of the Puyallup Reservation, especially as to the wisdom or necessity of the disposal by the Indians of their interest, in whole or in part, in any individual or tribal lands belonging to said reservation.

March 11, 1891, the Commission submitted its final report to the Department, which was referred to this office April 16, 1891, for consideration. July 8, 1891, this office made a full and complete report to the Department as called for, submitting therewith its views and suggestions upon the work and final report of the Commission.

#### WARM SPRINGS COMMISSION.

By virtue of a clause contained in the Indian appropriation act approved August 19, 1890 (26 Stats., 355), the President appointed Mark A. Fullerton, William H. Dufur, and James F. Payne commissioners for the purpose of determining the northern line of the Warm Springs Reservation, Oregon, according to the terms of the treaty of June 25, 1855.

June 8, 1891, they submitted their report to the Department, stating among other things that they conclude and find—

That the line known as the McQuinn line, as surveyed and run, in no respect conforms to the said treaty of 1855, and is not the line of the northern boundary of the Warm Springs Reservation or any part thereof; that the line known as the Handley line, as surveyed and run, substantially and practically conforms to the calls of the said treaty of 1855, from the initial point of said line up to and including the twenty-sixth (26th) mile thereof, [and] it is, therefore, considered and declared by the Commission that the northern boundary of the Warm Springs Indian Reservation, in the State of Oregon, is that part of the line run and surveyed by T. B. Handley, in the year 1871, from the initial point up to and including the twenty-sixth (26th) mile thereof, thence in a due west course to the summit of the Cascade Mountains.

#### COLVILLE COMMISSION.

The clause in the Indian appropriation act for the fiscal year ending June 30, 1891, under which Messrs. Fullerton, Dufur, and Payne were appointed to investigate and determine the correct location of the north-

ern boundary line of the Warm Springs Reservation, Oregon, required that the Commission should also visit the Colville Reservation, Washington, to negotiate with the Colville and other bands of Indians of that reservation for the cession of a portion of their reservation.

June 8, 1891, the Commission submitted an agreement concluded May 9, 1891. The Indians cede to the United States 1,500,000 acres, or a little more than the north half of the reservation, in consideration of the payment of \$1,500,000 in five equal annual installments, to be distributed per capita among those entitled thereto.

Provision is made for the erection of sawmill, blacksmith shop, and schoolhouses upon certain conditions.

The cession is made subject to allotment within the ceded territory of 80 acres to each Indian residing thereon and entitled thereto.

The Commission report that the ceded portion is estimated to contain about 300,000 acres suitable for agriculture; that the remainder is valuable for grazing and timber; that much of it is mountainous and abounds in mineral deposits; that the reserved portion contains more than 160,000 acres of agricultural lands; that its grazing lands are for the most part very fine; and that they are satisfied that the Indians have reserved sufficient for their needs for years to come.

#### CHEROKEE COMMISSION.

A clause contained in the Indian appropriation act for the year ending June 30, 1892 (26 Stats., 1008), authorizes the continuation of the Cherokee Commission provided for by act of March 2, 1889 (25 Stats., 1005).

June 5, 1891, the Commission, consisting of David H. Jerome, Alfred M. Wilson, and Warren G. Sayre, submitted a report concerning negotiations with the Wichitas and affiliated bands of Indians in the Indian Territory, together with the agreement entered into with them June 14, 1891.

The Commission states that the reservation or tract of country upon which these Indians reside contains 743,610 acres, and that provision is made for 1,060 allotments of 160 acres each, requiring for that purpose 169,600 acres, and leaving available for white settlement 574,010 acres, or 3,600 homesteads of one quarter section each.

Article five provides that the consideration to be paid, if any, for the surplus lands—not required for allotments as indicated—shall be fixed by Congress, the decision of that body to be final and binding.

#### ROUND VALLEY COMMISSION.

Henry C. Hunt, David W. Shryock, and Luther R. Smith were appointed commissioners by the President for the purpose of carrying into effect an "Act to provide for the reduction of the Round Valley Indian Reservation, in the State of California, and for other purposes," approved October 1, 1890 (26 Stats., 658).

November 3, 1890, the duties of this Commission were defined under three distinct heads, and instructions given—

1. To appraise the value of any and all tracts of agricultural lands within the reservation, with the improvements thereon, which have become the property of individuals by purchase from the State of California or from persons deriving title from said State.

2. To select a reasonable quantity of grazing and timber lands to be used by said Indians in common, or allotted in severalty, as the President may determine.

3. To appraise the value of all improvements made by private persons or firms before the 3d day of March, 1873, upon any of the lands included in the reservation as established under the act of March 3, 1873, other than those actually disposed of by said State of California, and within the lands selected by the Commission to be retained for the Indians.

The report of the Round Valley Indian Commission was submitted March 10, 1891, signed by Commissioners Shryock and Smith, and a minority report, without date, was submitted by Commissioner Hunt. April 7, 1891, this office made report of the matter to the Department with certain recommendations.

### IRRIGATION.

A large proportion of the lands reserved for Indian occupation are located within the arid or semi-arid regions of the United States. On such lands the attempt to engage in agriculture without proper facilities for irrigation can result only in failure. Although the allotment law of 1887 provided for allotments of farming lands on all reservations, very little had been attempted or provided, previous to the last session of Congress, in the way of irrigating the lands to be allotted.

It was therefore suggested to the commission appointed to negotiate with the Crow Indians in Montana for a cession of a portion of their reservation, that in any agreement which might be concluded provision should be made for the application of a portion of the funds to be paid the Crows to the furnishing of irrigating appliances for the lands retained by them. In compliance with this suggestion the commission incorporated an article in the agreement concluded with those Indians December 8, 1890, ratified by the act of Congress approved March 3, 1891 (26 Stats., 1039), whereby the sum of \$200,000 was set apart to be expended in the building of dams, canals, ditches, and laterals for the purpose of irrigation in the valleys of the Big Horn and Little Big Horn rivers, on Pryor Creek and such other streams as the Secretary of the Interior might deem proper, the expenditure for any one year to be limited to \$50,000. In submitting the agreement the commissioners refer at length to this important subject, and say:

Allotments of land in severalty have been made to the Indians along these streams. Houses have been built for them; wagons, farm implements, and seeds have been furnished by the Government. Competent white men are employed to instruct them in the business of farming, but the return has been practically nothing, because irri-

gation, the chief factor in making agriculture a profitable pursuit in that region, is not provided. If farming is to be made successful on the reserve a system of irrigation is the first thing required, and until that is provided the time, labor, and money expended to make the Crow Indian a farmer is mostly thrown away. \* \* \*

The commission feel justified in presenting this question of irrigation somewhat at length, by reason of its great importance to the future welfare and prosperity of the Crow tribe. With irrigation the land is capable of marvelous production; but without it the uncertainty of raising a crop makes the land comparatively worthless except for grazing purposes. Plainly, then, if it is the object of the Government to make the Crows self-supporting, one of the first steps to be taken is to make the land allotted to them productive by means of a thorough system of irrigation.

In May last, Walter H. Graves, of Denver, Colo., was appointed Superintendent of Irrigation for this reservation and soon after entered upon the discharge of his duties. He has been given full authority for the employment of the assistants necessary to make a careful and thorough examination of the work necessary to be done, in order to furnish as complete a system of irrigation as can be constructed within the limit of the funds set apart for that purpose. He has as yet submitted no reports showing what progress he has made.

By an item in the Indian Appropriation Act, approved March 3, 1891 (26 Stats., 1011), the sum of \$30,000 was appropriated for the construction, purchase, and use of irrigating machinery and appliances in Arizona, Montana, and Nevada. In urging this appropriation before the committees of Congress, I indicated Arizona, California, Nevada, and Idaho as the States and Territories in which the money should be expended, but for some unexplained reason California and Idaho were omitted and Montana substituted. This was unfortunate as there is great need of facilities for irrigation in California and upon the Fort Hall Reservation in Idaho, while the reservations in Montana are very well provided for by the agreement with the Crow Indians above referred to, and by treaty funds which are available for irrigation purposes upon the Flathead Reservation.

April 23 last I recommended that authority be granted for the construction of irrigating works on the Fort Mojave School Reservation in Arizona, at a cost not exceeding \$3,200.

Under date of May 9, 1891, you furnished this office with a copy of a communication referring to my recommendation addressed by you to the Director of the Geological Survey, and expressed the opinion that the expenditure should be made under the supervision of some person having knowledge of irrigating machinery and appliances for irrigating ditches; and you directed that a competent employé of the Geological Survey be instructed to proceed to the Fort Mojave Reservation, with directions to examine into the matter and report fully as to the needs of the school and reservation, and to recommend the kind and quantity of machinery required, with an estimate of its cost. You also requested to be informed by this office whether there were any other reservations on the Pacific Coast for which it was proposed to purchase such ma-

chinery, in order that steps might be taken to have the same reported upon. May 16, 1891, I submitted official correspondence, showing the importance of the immediate purchase of appliances for irrigation upon the Colorado River Reservation in Arizona, the cost of which was estimated by the agent to be \$5,010, also the necessity for similar appliances on the Navajo Reservation, Arizona, and the Western Shoshone Reserve in Nevada.

The report of Mr. Wilson, of the Geological Survey, dated June 13, 1891, on the irrigation of the Mojave School Reservation in Arizona, was received September 30. He recommends the purchase of machinery, for which his lowest estimate is \$4,813. This report will be considered at an early day.

No report has as yet been received regarding the other reservations mentioned.

Authority has been granted for the expenditure of small sums, aggregating some \$2,000, for the repair of ditches and machinery at the Nevada, Western Shoshone, Navajo, and Pima agencies.

The act of March 3, 1891, also authorized the Secretary of the Interior to grant right of way into and across the Fort Hall Reservation in Idaho to canal, ditch, or reservoir companies, for the purpose of enabling the citizens of Pocatello to receive a water supply, with a provision that he might attach such conditions as to the supply of surplus water to Indians upon this reservation as might be reasonable, and might prescribe rules and regulations for the same.

Under this act Mr. L. E. Hall, president of the Idaho Canal Company, was informed on the 3d of last July that a right of way across the Fort Hall Reservation would be formally granted that company when a map of definite location should be filed and the company should agree to all the stipulations, conditions, and agreements contained in its application. This was the only company that submitted a formal proposition for a right of way under the act. I hope to make arrangements for locating Indians along the line of the proposed canal, and if this can be done a considerable amount of land may be utilized.

It will be seen that but little progress has been made during the year in supplying the much needed appliances for irrigation as contemplated in the appropriation of \$30,000; it is believed, however, that the amount may be utilized before the close of the fiscal year. Such appropriation should be continued annually and should include all Indian reservations where irrigation is necessary to the successful cultivation of the soil. If it is thought desirable to have investigation made as to each particular reservation before the purchase of machinery or the construction of irrigating appliances is undertaken, it seems to me that it will be economy, certainly of time if not of money, if the appointment of a competent engineer to superintend such work be authorized by law.

## EDUCATION.

When I assumed charge of this office I held the opinion that the solution of the Indian question lay chiefly in the line of education, and that consequently one of the most important functions of the Commissioner of Indian Affairs was the perfecting of the scheme for bringing all Indian youth of suitable age under proper instruction. Accordingly I have given to this subject my most earnest attention during the more than two years of my administration. I have considered it in well-nigh every possible phase, and am more and more convinced of the truth of the position which I have stated.

It is not to be expected that any people can be raised suddenly from a plane of barbarism or semicivilization to one of enlightenment and complete civilization. Race prejudices are strong, heredity and environment are hard to overcome, and it is not to be presumed that any single force operating alone can bring about so great a transformation. A scholastic knowledge of books merely will not accomplish it, neither will a knowledge of trades. Even a complete change in the environment will not effect it. There are living to-day in the heart of the city of London people who are as degraded as the North American Indians on the Indian reservations. There are people living in close contact with a superior race, by whom they have been surrounded for centuries, whose language they do not yet understand and whose customs and mode of life differ largely from their own. On the other hand, it is true, and the truth is illustrated in innumerable instances in our own country, that the children of foreigners taken into our public schools, where they learn the English language and associate with our children, imbibe their ideas and grow up to be in all respects Americans in spirit, in habits, and in character.

The process now going on by which nearly 20,000 Indian children are gathered into English-speaking schools, where they are taught by English-speaking people, where they learn the correct use of the English language, and come into relationship with American life and American thought, and have begotten within them new hopes and desires and changed ideas of life, is certain to work a revolution in the Indian character and to lift them on to a higher plane of civilization, if it can be allowed to operate long enough.

That there should be individual exceptions to this statement; that there should be lapses on the part of those who have enjoyed the advantages of these schools; that there should be many instances in which pupils of these schools have gone away without bearing the impress of the school with them, either from one cause or another; that there should be many who succumb to the tribal influences of reservation life to which they often return, is not at all to be wondered at.

All that I contend for, and for that I most strenuously do contend, is that the practical industrial English education now being furnished

by the best equipped Government schools is sufficient, if it can be made to reach the great body of Indian youth, to work so complete a change in them that whether on or off the reservation they will enter upon a new career and show themselves in increasing numbers able to fight life's battles successfully. Education in its broad sense has made the American people what they are to-day, and education in the same sense must fit the Indian, if he is ever to become fitted, for participation in our civilization.

#### GROWTH OF ANNUAL APPROPRIATIONS.

The necessity of education for the Indians has grown in the public mind year by year, and has found expression in increasing appropriations for this purpose by Congress. The growth of these appropriations is shown in the following table:

TABLE 1.—*Annual appropriations made by the Government since the fiscal year 1877 for support of Indian schools.*

Year.	Appropriation.	Per cent. of increase.
1877.....	\$20,000	.....
1878.....	30,000	50
1879.....	60,000	100
1880.....	75,000	25
1881.....	75,000	.....
1882.....	135,000	80
1883.....	487,200	260
1884.....	675,200	38
1885.....	992,800	47
1886.....	1,100,065	10
1887.....	1,211,415	10
1888.....	1,179,916	*02.6
1889.....	1,348,015	14
1890.....	1,364,568	1
1891.....	1,842,770	35
1892.....	2,291,650	24.3

\* Decrease.

It will be seen from this table that for fifteen years there has been a very rapid advance in the amount of money appropriated, and this great increase has not only expressed the will of Congress but it has been fully and even enthusiastically indorsed by the people in general. In nothing regarding this Indian question is there a more absolute agreement of public opinion than as to the necessity and desirability of extending the work of education until it shall be adequate for the training of all available Indian youth.

The efforts of the office during my administration have been directed to the study of the defects of the scheme of education which had grown up largely without system, and to the elimination of such evils as had gathered about it and the perfecting and extending of the scheme. The development of the school system has kept pace with the increase of appropriations. Schools already established have been enlarged and better equipped; new schools have been established; the attendance has rapidly increased, and in all respects the system has been greatly improved, and the Government Indian schools are now entering upon

a new career of increased efficiency and enlarged usefulness, although much remains yet to be done.

## INDUSTRIAL TRAINING SCHOOLS.

I found in operation the following nonreservation Government Indian training schools: Carlisle, Pa.; Genoa, Nebr.; Fort Stevenson, N. Dak.; Grand Junction, Colo.; Chemawa, Oregon; Albuquerque, N. Mex.; Chillico, Ind. T.; and Lawrence, Kans. Additional schools had been authorized by law at Pierre, S. Dak.; Carson, Nev.; and Santa Fé, N. Mex.

It was regarded as important that those already established should be completed and properly equipped. They were subjected to thorough inspection, and much thought and labor have been bestowed upon securing for them as complete an organization as practicable. When the improvements now in progress are finished the schools will rank very high and will do most excellent work. It will be possible next year to take good care of 1,000 students at Carlisle, of 600 at Lawrence, and of from 150 to 400 at each of the other schools named.

**New schools.**—During the present administration new training schools have been established at Fort Mojave and Phoenix, Ariz., and are now in successful operation.

Similar schools have been authorized and will be established during the coming year in Mt. Pleasant, Mich., Tomah, Wis., Pipestone, Minn., Flandreau, S. Dak., and Perris, Cal.

**Attendance.**—The following table exhibits the attendance during the year ending June 30, 1891, at the training schools:

TABLE 2.—Location, attendance, cost, etc., of non-reservation training schools during the fiscal year ended June 30, 1891.

\* By aid of outing.

† Originally at Forest Grove, Oregon.

‡ Proposed capacity.

I am constrained to look upon these nonreservation training schools with especial favor as affording facilities for the most useful all-around practical education. In addition to the ordinary elements of an English education, the pupils receive training in the common industries and are brought into close contact with civilized life. They become weaned from the reservation, have aspirations and hopes for a higher life awakened within them, become acquainted with the white man, and gradually learn to adapt themselves to the ways of modern life. I know the criticisms that are made on these schools, but my faith in them is unshaken.

By the "outing system," now in such successful operation at Carlisle and beginning to take root in other places (see Appendix, p. 151), increasing numbers of boys and girls will be enabled to find profitable employment in white communities, and will thus be prepared, as they could not be in any other possible way, for absorption into our national life.

I am fully aware of the objections that may be urged against gathering such large numbers of pupils into one institution, as is done at Carlisle and Haskell. There are, however, compensating advantages in large schools. The per capita cost of maintenance is necessarily greatly reduced; there is an *esprit du corps* awakened by the mere presence of numbers, and it is possible to secure a more perfect organization and distribution of industries in a large school than in a small one.

Heretofore, these schools have been modeled substantially after the same pattern, and all of them have attempted to do much the same kind of work. I am inclined to think that the time is near at hand when there should be some differentiation and when each should have its own specific work. For example, it would be well to devote special attention at Chilocco to the development of farming, including stock-

raising and fruit-growing. At Haskell, in addition to shoe, harness, and wagon making, special attention might be paid to normal training. At Perris, Phoenix, and Grand Junction, there are reasons for making a specialty of fruit-growing. Especial attention is invited to the reports of the superintendents of these training schools as showing in detail the improvements that are being made. The record of industrial work is particularly gratifying.

I have recommended the establishment of a school at Fort Lewis for the Southern Utes, but at present I do not see the necessity for the establishment of any more nonreservation training schools unless possibly one should be established for the New York Indians. The nineteen now already in operation or in process of establishment, or recommended, will probably meet all the demands that are likely to be made. It will be desirable to enlarge and more properly equip some of them, but I am of the opinion that it would be better to enlarge those that are already authorized than to establish new ones.

RESERVATION BOARDING SCHOOLS.

\* When improvements are completed.

† Originally, Government buildings and school largely managed by Episcopalians. New buildings and additions were erected by Episcopalians, and original Government building was worn out, and "plant" now belongs to the missionary society which carries on the school.

‡ School is now conducted by contract in buildings erected by Government.

**New schools.**—During the present administration new reservation boarding schools have been established at Fort Belknap, Mont., Fort Totten, N. Dak., Fort Sill, Okla., and Okanagan, Wash.

New schools of this character are about to be established at the following places: In the San Juan country, Navajo Reservation; in the southwestern part of the Kiowa reserve; at Seger Colony on the Cheyenne and Arapaho reserve, and on the Round Valley, Rosebud, Ouray, and Oneida Reservations. The Indians of the last three reserves have

never had a boarding school, and the Round Valley school has been discontinued since the burning of their buildings in July, 1883.

It is desirable, at as early a day as practicable, to establish additional schools as follows: On Southern Ute,\* Hoopa Valley, Jicarilla Apache, Western Shoshone, and Spokane Reservations, and possibly in the Zuni pueblo, where no boarding schools have yet been provided, and upon the White Mountain, Navajo, Moqui, Pima, White Earth, and Pine Ridge reserves, where additional schools are required to supply the needs of the school population. Upon many other reservations where new schools are not required existing schools must have their accommodations enlarged to supply the educational needs of the respective reservations.

RESERVATION DAY SCHOOLS.

The following table gives a list of the reservation Government day schools:

Cochiti.....	30	Total.....	3,295

During this administration very little has been done to multiply day schools. Much attention has been paid to their improvement, old houses have been repaired, new houses have been built, and better apparatus has been provided.

This is especially true of the efforts that are now in progress among the Sioux. Heretofore the limitation of \$600 for the cost of a day-school building anywhere has brought the expenditure so low as in many cases to render it impracticable to put up a suitable house. Con-

\* Unless a school should be established at Ft. Lewis.

† Not on a reservation.

‡ Schoolhouse burned.

gress has recently authorized the erection of thirty day schools for the Sioux at a cost of \$1,000 each. A residence for the teacher adjoining each day school, with provision for a midday meal for the pupils and for a simple form of industrial training, will equip these institutions for excellent work.

**New day schools needed.**—I am of opinion that the time has now come for the multiplication of day schools, and during the next year I think a considerable number of new schools should be established and special efforts made to bring into them the younger children. Whenever practicable, kindergarten methods should be adopted and everything possible done, not only to supplement the work of the home, as is done in white communities, but to take the place of systematic home instruction where it does not exist, as is generally the case among the Indians.

#### EXPENSE OF BOARDING-SCHOOL BUILDINGS.

One of the most embarrassing things connected with the establishment of Indian boarding schools as well as day schools has been the limitation placed by Congress upon the cost of buildings. Formerly this was fixed at \$10,000, including furnishing. This limit was raised in 1890 to \$12,000, exclusive of furnishing, but it is still so low as to make it absolutely impossible to do what ought to be done.

The first and absolutely essential condition for establishing an Indian school is the plant, consisting of ground and the necessary buildings. Fortunately in most cases all the land necessary for schools on reservations is readily obtainable without expense to the Government. Everything, however, needed in the way of buildings in most instances has to be created.

As this is a vital matter I have prepared a statement showing the outlay for establishing a new school. In order that there may be a standard of comparison I will assume that the office undertakes to establish on some reservation remote from civilization a boarding school for 100 pupils of both sexes. To afford the needed accommodations and facilities for pupils and employes the following are absolutely essential:

	Square feet.
Dormitory for 50 boys (45 square feet each).....	2,250
Dormitory for 50 girls (45 square feet each).....	2,250
Dining-room for 100 pupils (12 square feet each).....	1,200
Kitchen, pantry, and dish closet (20 by 30).....	600
Sitting and reading room for boys (30 by 25).....	500
Sitting and reading room for girls (20 by 25).....	500
Sewing room (16 by 20).....	320
Five store rooms for bed linen, clothing, school books, and food supplies (10 by 10 each).....	500
Laundry (basement, 20 by 20).....	600
Employes' quarters: Mess kitchen (12 by 12), mess dining room (16 by 20), superintendent's office (15 by 16), sitting room (15 by 16), bed room (15 by 16), matron's room (15 by 16), industrial teacher (12 by 15), three teachers (3 rooms each, 12 by 12), cook (12 by 12), laundress (12 by 12), seamstress (12 by 12), reception room (15 by 18) other employes (2 rooms, 10 by 12)..	2,978

	Square feet.
Infirmaries (2 rooms, 16 by 20 each).....	640
Bath room and wash room for boys (5 tubs and 8 basins).....	200
Bath room and wash room for girls (5 tubs and 8 basins).....	200
Passageways and stairways.....	2,000
School building:	
First story, stairs, hallways, and three recitation rooms.....	1,800
Second story, assembly and chapel room for pupils, employés, and visiting parents and friends.....	1,800
Total superficial area required.....	18,338
Estimating cost at \$1.50 per square foot.....	\$27,507
Barn and cow shed.....	1,200
Pig sty.....	75
Hennery.....	50
Tool and implement shed.....	400
Root house or cellar.....	150
Fuel shed.....	150
Other outbuildings.....	600
Bath tubs and plumbing.....	600
Fences for premises and farm.....	1,000
Shops (one building for three trades).....	1,500
Total.....	\$33,232

In the above showing the estimates are low, and there are no buildings or structures of any kind which are not needed, and the accommodations contemplated can not be called ample. On the contrary, they are meager. But a small amount is allowed for plumbing and no allowance is made for bringing water into the buildings, for heating apparatus, or for sewerage. All the buildings, from the fuel shed to the general assembly room and chapel, are to be constructed in the plainest and most economical manner consistent with good workmanship.

I am forced to admit that I know of no reservation school in the Indian service which possesses the accommodations and facilities above outlined, nor has it been possible to furnish such facilities when the limit of cost of a school building has been fixed at \$10,000. The extension of the limit from \$10,000 to \$12,000 gave some relief, but still necessitates the putting up of buildings too small, too cheap, or ill arranged, thus calling for early and large expenditures for repairs, improvement, remodeling, and enlargement, and meantime seriously crippling the usefulness of the school. By additions made subsequent to the construction of the original structures, fairly good accommodations have been provided in a long course of time for several schools, though at a considerable increase of the expense that would have been incurred had the buildings all been constructed at one time upon one common plan.

The want of suitable school buildings having needed light, ventilation, plumbing and sewerage, and rooms sufficient in number and size and conveniently arranged, is a seriously weak point in the Indian-school service. This lowers the morale and injures the health as well as mars the comfort of the pupils. It also obliges employés to expend,

in overcoming the difficulties of inadequacy and bad arrangement, time and strength which to much better purpose might otherwise be devoted to caring for the highest interests of the children and advancing them in school room and industrial pursuits and in home culture.

The cheap, poorly built, poorly planned, rambling, and patched-together buildings which I have found at many agencies, are a discredit to the Government and do not fairly represent its real desire to elevate the Indians by education. The Government can afford to furnish suitable industrial-school buildings when and where they are needed. In the end it does afford them, but under the existing restrictions that no building shall cost over \$12,000 the Government ultimately loses money and continuously loses efficiency.

It will be observed that the above estimate contemplates an expenditure on buildings of \$332 per pupil.

As an illustration of the amount of money needed to establish a school, I cite the case of the Rhode Island Home and School and Orphan Asylum, with whose history I happen to be acquainted. This institute is very similar in its aims to Indian boarding schools, and I know that very rigid economy was exercised in founding it. In reply to my inquiry, Hon. T. B. Stockwell, commissioner of public schools for the State of Rhode Island, wrote from Providence December 31, 1890, as follows:

In reply to your inquiry of the 30th inst., I have the honor to submit the following statement:

Original cost of Walnut Grove Farm, with buildings, including mansion house, two wooden cottages, barn, etc.....	\$12,000.00
Additional land .....	8,000.00
Repairs and improvements upon the grounds and additional buildings .....	10,035.00
New buildings (five) .....	30,542.32
Furnishing .....	9,395.69
Sewers .....	612.32
Gas works .....	585.00
Steam and water supply .....	7,102.59
	78,572.92

If you wish to take out the value of the land, I should say that it would be safe to call that about \$15,000. The number of inmates varies somewhat. We have had over 100 now for nearly two years. The average will not be far from 110.

Deduct cost of land and furniture, gas, and sewerage and the cost for 110 inmates comes to over \$481 per capita.

The following is a list of various institutions in the United States, with the per capita cost of the buildings and grounds occupied by them. This list was furnished by the Commissioner of Education with the explanation that the valuation of grounds and buildings is taken as the basis and the number of inmates during the year as the denominator. These institutions do work similar to that undertaken in Indian boarding schools and need similar facilities and accommodations.

TABLE 6.—Per capita cost of grounds and buildings of various institutions.

Institutions.	Pupils.	Per capita value of grounds and buildings.
Kansas State Reform School.....	266	\$500
Indiana Reform School for Boys.....	469	533
Reformatory Institution for Women and Girls, Indianapolis, Ind.....	144	1,050
State Reform School, Pontiac, Ill.....	382	580
Reform School of Washington, D. C.....	198	1,260
State Reform School, Meriden, Conn.....	458	545
State Industrial School of Colorado.....	135	289
State Reform School, Portland, Me.....	115	879
Marcella Street Home, Boston, Mass.....	385	779
Massachusetts State Primary School.....	355	345
Lyman School for Boys, Westboro, Mass.....	183	562
State Reform School, St. Paul, Minn.....	275	1,455
State Reform School, Lausing, Mich.....	471	384
State Reform School for Juvenile Delinquents, Jamesburg, N. J.....	363	413
New York Juvenile Asylum.....	976	922
Boys' Industrial Home, Lancaster, Ohio.....	600	667
South Dakota Reform School, Plankinton, S. Dak *.....	59	847
House of Correction and Reformatory, Gatesville, Tex*.....	87	862

\* The Dakota and Texas institutions have been established within a year or two.

After two years' embarrassing experience in this office grappling with this problem of cost and after careful study in the field of buildings already erected, I wish to express most earnestly my deep conviction that ordinarily under existing circumstances it is impossible to establish a suitable Indian training school for the accommodation of 100 pupils with the necessary employés for less than about \$50,000.

#### COST OF INDIAN EDUCATION.

In my annual report for 1889 I submitted the following table of estimates as to the approximate cost of educating the entire body of Indian youth :

TABLE 7.—Amount required to put and support all Indian children in Government schools.

New buildings and furnishings for 9,410 boarders, at \$230* per capita ...	\$2,164,300
New buildings and furnishings for 4,217 day pupils, at \$1,500 for every 30 pupils .....	210,000
Repair and improvement of present buildings .....	50,000
Additional furniture, apparatus, stock, tools, and implements.....	50,000
	<hr/> 2,474,300 <hr/>
Support of an average of 15,000 boarding pupils, at \$175.....	2,625,000
Support of an average of 6,600 day pupils, at \$62.50.....	412,500
Transportation of pupils .....	40,000
Superintendence .....	25,000
	<hr/> 3,102,500 <hr/>

This contemplates an annual expenditure of about \$3,000,000 for the work of Indian education after the necessary buildings are erected.

The experience of two years has confirmed me in the belief that this

\* As already shown this is too low an estimate.

estimate was moderate, and I see no reason for modifying the opinion then expressed as to the desirability of spending the amount of money indicated in the table for the accomplishment of this important work. I regard it as a wise, just, humane, and economical expenditure of the public funds. Money thus used will accomplish its purpose directly, immediately, and permanently. A neglect or failure to so expend it will leave this perplexing question as a legacy for the next when it ought to be solved in the present century. I reiterate my strong conviction that it is wise now to make adequate provision for the education of all Indian youth that can be induced to attend school.

The appropriation made for the fiscal year ending June 30, 1892, is \$2,291,650. The sum asked for the year ending June 30, 1893, is \$2,917,060, which includes the amount asked for buildings.

#### SCHOOL SUPERVISION.

Daniel Dorchester, Superintendent of Indian Schools, and Mrs. Dorchester, special agent, have during the past year prosecuted their arduous labors with great diligence and efficiency. Their reports are herewith submitted (pages 480 and 539).

The Indian country has been divided into four school districts, as follows:

District No. 1 comprises Michigan, Wisconsin, North and South Dakota, Nebraska.

District No. 2, Montana, Wyoming, Idaho, Oregon, Washington, Nevada, Northern California.

District No. 3, Utah, Colorado, Arizona, New Mexico.

District No. 4, Oklahoma, Indian Territory, and Kansas.

For each of these districts a supervisor of education has been appointed, whose duty it is to visit every Indian school in his district as often as practicable and to keep himself and this office informed as to the condition and needs of each school in the way of buildings, farming and other industries, school-room methods and appliances, efficiency of employes, attendance and grading of pupils, and everything connected with the educational status and possibilities of the Indians in his district. Among the things to be accomplished by such supervision it is hoped that a regular system of promotion of promising pupils from schools of a lower to schools of a higher grade will be put into effect. In general, the object of this supervision is the same as that sought by similar means in the public schools of States and cities, viz, to promote the welfare, increase the efficiency, and raise the standard of the schools.

The need of such detailed and systematic supervision of Indian schools has repeatedly been referred to by this office in its annual reports and elsewhere. The Superintendent of Indian Schools, whose duties cover the whole field of Indian educational work, can not possibly give to each tribe, band, reservation, or school the close personal super-

vision required. In fact, I should be glad if these supervisors' districts could be larger in number and smaller in size.

It is expected that agents and school superintendents will give the supervisors every opportunity to know exactly the status and prospects, the successes and failures, the strong points and the weak points of the schools which they visit, and by coöperating with them and by seeking their coöperation and assistance strive to make this additional help in the Indian-school service an active force in extending and improving the work of Indian education.

Care has been taken to select for the positions of supervisors men who have had personal experience in school work and who have practical knowledge of affairs, and they are prosecuting their work with diligence, zeal, intelligence, and efficiency.

#### NEW COURSE OF STUDY.

The course of study and the uniform series of text-books adopted last year are now in use in all the Government institutions and are bringing the various schools gradually more and more into harmonious relations.

#### CIVIL SERVICE.

At the request of the Commissioner of the Indian Affairs and the approval of the Secretary of the Interior the President has so classified the Indian Service that hereafter all physicians, school superintendents, assistant superintendents, teachers, and matrons will be appointed upon certification from the Civil Service Commission.

By this extension of the rules of the civil service over the Indian schools they have been largely removed from the sphere of politics and rendered strictly nonsectarian and nonpartisan. It is confidently believed that this action will secure a higher grade of teaching talent and increased efficiency in the entire school service.

For the rules relating to the Indian Service, prepared by the Civil Service Commission, see Appendix, page 156.

#### ATTENDANCE.

The following tables show the attendance of Indian pupils in school for several years past:

TABLE 8.—Indian school attendance from 1882 to 1891, both years inclusive.

Year.	Boarding schools.		Day schools.		Totals.	
	Number.	Average attendance.	Number.	Average attendance.	Number.	Average attendance.
1882.....	71	2,755	54	1,311	125	4,066
1883.....	75	2,599	64	1,443	139	4,042
1884.....	86	4,358	76	1,757	162	6,115
1885.....	114	6,201	86	1,942	200	8,143

Increase .....					1,549					1,356

An inspection of this table shows that during the last five years there has been a steady increase in the number of pupils enrolled and also in the average attendance. The enrollment is, as now reached, nearly 18,000, being 3,593 greater than in 1887, and 2,142 greater than in 1889. If it were possible to keep up this rate of increase for a very few years all the Indian school population would be provided for. The difficulties of increasing the number, however, are many and great, and have taxed to the utmost the patience and ingenuity of those engaged in the work. In view of all the circumstances, I look upon the increase in enrollment and attendance during the past two years with special satisfaction.

It is not at all surprising that considerable difficulty has been experienced in securing regular and satisfactory attendance. This is a difficult matter, even in old, settled communities, where the children have comfortable homes, where the schools are contiguous and easily accessible, and where the parents feel the necessity of education. It is rendered much more difficult by the circumstances that now exist among the Indians. Multitudes of these people know nothing of education by experience, have no appreciation of its value for their children, and are loath to have them taken from them even for a short time. They are devotedly attached to them, they miss their companionship, and they are accustomed to rely upon their assistance in the performance of such simple duties as they are capable of.

I regret to be obliged to say that very persistent efforts have been put forth in several instances to prejudice the Indians against the Government schools. Their minds have been excited, their antagonisms aroused, and in many cases they have been induced by various means to resist to the utmost of their power the efforts of the Government to secure the attendance of their children. The attention of those engaged in this has been called to its harmful results, and I hope that the evil complained of will cease.

## COMPULSORY ATTENDANCE.

During the last session of Congress a compulsory law was passed, designed to enforce attendance of Indians at school where compulsion should be found necessary.

The text of the law is as follows :

And the Commissioner of Indian Affairs, subject to the direction of the Secretary of the Interior, is hereby authorized and directed to make and enforce by proper means such rules and regulations as will secure the attendance of Indian children of suitable age and health at schools established and maintained for their benefit.

The rules and regulations prepared by this office for the enforcement of this law will be found in the Appendix, page 158.

The difficulties of executing any compulsory law are many and perplexing. It is an unsettled question how far it is wise or expedient to attempt to compel by force the attendance of children at school. In some instances force has been used, and in others the knowledge of the fact that the Government would use force if necessary has been sufficient. Special pains have been taken to familiarize the Indians with the idea that it is now the settled policy of the Government to educate their children, and they have been told that they are expected to voluntarily avail themselves of the munificent provisions made for this purpose, and that if they do not do this the Government will use such force as is necessary to compel it.

That the Government has a perfect right to insist that the Indians, who are dependent upon it for support and protection, and whose children are liable to grow up in savagery, barbarism, or helpless ignorance, shall allow their children to have the benefit of Government institutions established for their welfare, hardly needs argument. Ordinarily the parent should be regarded as the natural guardian and custodian of his child, and so long as he is willing or able to provide such an education as will fit the child for his position in life as a citizen of the Republic the Government ought not to interfere. When, however, it becomes evident that the parent is unwilling or unable to do this, and that the child, in consequence, is wellnigh certain to grow up idle, vicious, or helpless, a menace or a burden to the public, it becomes not only the right of the Government as a matter of self-protection, but its duty toward the child and toward the community, which is to be blessed or cursed by the child's activities, to see to it that he shall have in his youth that training that shall save him from vice and fit him for citizenship.

If, therefore, the present law is found to be inadequate to secure the purposes designed by its passage, some measure sufficiently comprehensive and stringent should be adopted and put at once into operation, both as a matter of public safety and out of regard for the welfare of the Indian wards of the nation.

## CONTRACT SCHOOLS.

In addition to the Government schools in operation numerous contract schools are included in the foregoing tables. The amount of money set apart for these institutions for the year ending June 30, 1892, as well as in preceding years, is shown by the following table:

TABLE 10.—Amounts set apart for various religious bodies for Indian education for each of the fiscal years 1886 to 1892, inclusive.

	1886.	1887.	1888.	1889.	1890.	1891.	1892.

Appropriation for Lincoln Institution.....	33,400	33,400	33,400	33,400	33,400	33,400	33,400
Appropriation for Hampton Institute.....	20,040	20,040	20,040	20,040	20,040	20,040	20,040
Total.....	228,259	363,214	376,264	530,905	562,640	570,218	611,570

The contracts hereafter with all contract schools will be made directly with those having immediate charge of the schools and not with missionary boards. This will simplify the work.

All contract schools in which public money is expended will be subjected to the same inspection and supervision as Government schools, so far as this can be done without interfering with the organization, discipline, and management of the schools as church institutions. They can thus be brought into closer and more harmonious relations with Government schools and be helped to do their work more efficiently.

The policy of aiding church schools is one that has grown up as a matter of administration, having only a semblance of legislative authority. But the rapid development of the public-school system has brought the Government schools into a position where it is entirely feasible for them at an early day to assume the whole charge of Indian education, so far as it is carried on by the Government.

I can not refrain from the expression of the earnest conviction that it is contrary to the letter and the spirit of the Constitution of the United States (see Appendix, page 160) and utterly repugnant to our American institutions and our American history to take from the public moneys funds for the support of sectarian institutions. I believe that the Government ought to assume, absolutely and completely, the control of Indian education, and that these wards should be trained in the Government institutions with the specific end of fitting them for Amer-

ican citizenship, and that no moneys from the public Treasury should be devoted to sectarian or church institutions.

If churches desire to maintain mission schools among the Indians they should do so as missionary work and support them out of missionary funds.

There is a rapidly growing public opinion, shared by those who have heretofore received from the Government large sums of money for church schools, that the time is near at hand when the mixed system should be done away with. There should be no violent or sudden change, no action that can be construed as partial or unjust, but a gradual extension of the national system until it embraces the entire work. Meantime, the purpose of the office is to maintain practically the *status quo*, making no changes except such as are rendered necessary by circumstances.

In thus expressing my own personal convictions on this important question I believe I am giving expression to the American idea of the entire separation of church and state.

#### CHARACTER AND AIM OF GOVERNMENT SCHOOLS.

In Government schools industrial training receives special attention. It is of the highest importance for the interests of all concerned that the Indians should be taught to work, and arrangements have now been completed by which they can receive in the Government schools instruction and training in all the ordinary trades and occupations, including farming, gardening, fruit-growing, dairying, stock-raising, the work of the carpenter, wheelwright, wagonmaker, blacksmith, shoemaker, harness-maker, tailor, tinsmith, broom-maker, and printer.

The Government schools have been systematized and now have a carefully graded course of study, a uniform series of text-books, a carefully prepared system of rules and regulations, and are critically supervised.

The teachers in the Government schools are selected with great care,\* and special stress is laid upon their ability to speak the English language with correctness and fluency in order that Indians shall be trained by them to use the English language with ease.

Special attention is paid in the Government schools to the inculcation of patriotism. The Indian pupils are taught that they are Americans, that the Government is their friend, that the flag is their flag, that the one great duty resting on them is loyalty to the Government, and thus the foundation is laid for perpetual peace between the Indian tribes in this country and the white people. Over every Government schoolhouse floats the American flag, and in every Government school there are appropriate exercises celebrating Washington's birthday, the Fourth of July, and other national holidays.

The utmost pains are taken in the Government schools to inculcate in

---

\* Hereafter the appointments are to be made through the Civil Service.

the minds of the Indian pupils the broadest principles of morality, honesty, integrity, truthfulness, fidelity to duty, respect for the rights of others, etc., in no narrow way, but in such a manner as to lead them to cherish good will towards all, and to be prepared to take their places as American citizens on the plane of good fellowship with all.

In Government schools coeducation prevails. The Indian boys and girls are educated together; they sit at the same tables, recite in the same class, and are thus brought into such relationship as to lead them to respect each other. This is particularly helpful in destroying the false notion which so largely prevails among the Indians as to the inferiority of the women. Indian boys who are educated in the same schools with Indian girls, and who are often surpassed by them in their studies, come to have such a respect for them as will insure to the Indian women in the future a fuller recognition of their rights and a greater respect for their womanhood.

The Government schools are modeled after the public schools, and the Indian pupils who are educated in the Government Indian schools understand their workings, and pass easily into the public white schools, as opportunity offers. Those educated in these schools will be prepared, as they become citizens of the United States, to understand and appreciate the value of the public school, and will seek to establish and maintain such for their own children. The Indians will thus be brought into close sympathetic relationship with one of the greatest American institutions.

In all the large Government training schools there is a blending together of many tribes. There are to-day more than forty tribes represented at Carlisle. By bringing representatives of these various bodies of Indians together they learn to respect and love each other, and there is thus broken down those tribal animosities and jealousies which have been in the past productive of so much harm and a fruitful source of so much trouble both to the Indians and the nation.

Finally, the Government schools all being modeled on the same plan and administered in the same spirit, the thousands of Indian pupils who are educated in them have for each other a fellowship that will in a few years result in bringing about homogeneity among all the various Indian tribes and render future strifes between tribes and wars between the Indians and United States entirely improbable, if not impossible.

#### MISSIONARY WORK.

I would not be understood as wanting in appreciation of the good that may be accomplished for the Indians by the churches through distinctively missionary work. Untold good has already been done; much more can be done, and there perhaps never has been a time in the history of the Indians when they are so susceptible as now to religious influences. There never was a better opportunity for the churches to establish schools or missions and prosecute Christian work

among them than at the present; and while it is not the function of the Government to evangelize or to propagate any particular creed, it is desirable that all proper facilities should be afforded to the various religious denominations, without distinction, partiality, or favoritism, for the prosecution of their legitimate missionary work among the Indians. I think, too, that it will be conceded by all friends of the Indians that it is desirable at present, while these people are passing through the transition period from barbarism and heathenism to civilization, that those great fundamental principles of morality, which are recognized by all denominations in common, should be inculcated in the young Indian mind, with the view that they may grow up not simply informed as to their intellect but formed as to their moral character; that they may be not only intelligent, but moral and upright.

#### BUREAU OF CATHOLIC INDIAN MISSIONS.

The relation of this office and the Bureau of Catholic Indian Missions is indicated in the correspondence herewith published. (See Appendix, p. 161.)

#### INDIANS IN PUBLIC SCHOOLS.

Considerable progress has been made during the year in securing the admission of Indians living off reservations into the public schools in their vicinity, and special efforts in this direction will be made during the year to come.

The following table shows the number of pupils for whose instruction in public schools the Government has contracted with public-school districts during the past year. The rate paid by the Government for this schooling, including books, is \$10 per pupil per quarter, based on average attendance. (See also Appendix, p. 170.)

TABLE 11.—*Public schools at which Indian pupils were placed under contract with the Indian Bureau during the fiscal year ended June 30, 1891.*

Name and location.	Date of contract.	Number of Indian pupils.
California: Carbon, Shasta County, Albion School District.....	June 18, 1891	8

Portage, Box Elder County, District No. 12.....	July 17, 1890	39
Washington: Rockland, Klickitat County, District No. 1.....	Apr. 13, 1891	15

#### HIGHER EDUCATION.

An increasing number of Indian youth of both sexes have evinced a capacity and desire for the prosecution of higher studies to fit them for professional life, some as lawyers, some as physicians, and some as

teachers and clergymen. During the past year a number of these who are pursuing their studies in colleges and professional schools received help from the Government.

I have had considerable sympathy with this part of the work, as I believe the higher education of the few who are thus lifted in intelligence and power above the mass is very essential for the highest welfare of the whole. They become leaders and examples and exert a very wide and ordinarily wholesome influence upon their own people and also upon public sentiment by showing the capacity of the Indians for the higher walks of life.

I can not help expressing my regret that it has been deemed wise to suspend this feature of the work.

#### HEALTH OF INDIAN PUPILS.

One of the most perplexing difficulties which the office is called upon to contend with in school work is the health of Indian children. Many of them come to the school already diseased, others with peculiar susceptibilities to disease, and they suffer more or less perhaps from the greatly changed conditions of life to which they are thus subjected.

Some of the diseases with which the superintendents have been called upon most frequently to contend have been scarlet fever, measles, diphtheria, small-pox, sore eyes, and lung troubles. (See Appendix p. 173.)

The difficulties in the way of improving the Indian schools have been so many and so great that at times it has seemed well-nigh impossible to overcome them. It has required all the persistence, patience, ingenuity and hard work that could possibly be summoned in order to make the progress already achieved. The history of the struggle of the past two years will never be written, and is only known to those that have put their lives into it. If the results that issue from these labors, anxieties, and discouragements are at all commensurate with the expectations of those who have endured them, they will constitute their chief reward.

#### PURCHASE OF LAND FOR SCHOOL SITES.

The 160 acres of land which was authorized by the Indian appropriation act approved August 19, 1890 (26 Stat., 358), to be purchased near the village of Flandreau, Moody County, South Dakota, for an Indian industrial-school site, was purchased on the 30th of March, 1891, for \$2,000, the sum stipulated in the appropriation.

By the same act Congress authorized the purchase of additional land for Haskell Institute at Lawrence, Kansas. I gave this matter my personal attention when at the institute last November, and the north-west fractional quarter of section 18, township 13 S., range 20 E., containing 153.60 acres, was purchased for \$7,680. Another small piece, containing 9.54 acres and costing \$1,928, was added, making a total

of 163.14 acres, for which was paid \$9,608. The land thus purchased is a very desirable accession, adding greatly both to the value and appearance of the school premises.

By the Indian bill approved March 3, 1891 (26 Stat., 1013), Congress appropriated the sum of \$6,000 for the erection of buildings and the purchase of lands or improvements at Phoenix, the capital of Arizona. When there last fall, I gave this matter attention, and in company with Superintendent Rich and some of the most prominent citizens of the place, drove quite extensively about the city and its vicinity, studying locations. After careful consideration, an admirable site, was selected, about  $3\frac{1}{2}$  miles north of the capital, with which, in a comparatively short time, it will be connected by a broad and beautiful avenue. The land is excellent, already under cultivation, sufficiently elevated to be secure from inundation, and so located as to be easily irrigated. It is considered amply worth \$12,000 in its present condition, but was purchased for \$9,000, \$3,000 having been contributed by the citizens of Phoenix. A deed was executed April 8, 1891, together with two water-right certificates (Nos. 52 and 53) in the Grand Canal, the total cost to the Government being \$6,000.

The validity of the title to the lands thus purchased has passed the inspection of the Attorney-General, as required by section 355 of the Revised Statutes, and the deeds of conveyance have been duly recorded in this office and in the respective counties in which the lands lie.

#### INDIAN LANDS OCCUPIED BY BENEVOLENT SOCIETIES.

In recognition of the value of the religious and educational work undertaken among Indians by various denominations and benevolent societies and in furtherance of that work, it has been the custom of this office to grant to such organizations the use and occupancy of specified tracts of land upon Indian reservations. The Indians receive no compensation for the use of the lands thus assigned; but the assignment is not made without their consent. The requisite consent of Indians has rarely been withheld.

In addition to the lands thus set apart, as exhibited in the table on page CLXXII of the appendix to my last annual report, the office has during the present year made further grants, as follows: On the Gila River Reservation, Ariz., two tracts of 3 acres each to the Board of Home Missions of the Presbyterian Church; on the Yakama Reservation, Wash., four tracts, containing respectively 160, 5, 8, and 12 acres, to the Methodist Episcopal Church; on the Nez Percés Reservation, Idaho, not exceeding 1 acre, to the Board of Foreign Missions of the Presbyterian Church; at the Navajo Agency, N. Mex., a building site to the Missionary Society of the Methodist Episcopal Church; on the Crow Reservation, Mont., not exceeding 1 acre, to the Board of

Catholic Indian Missions; on the Blackfeet Reservation, Mont., not exceeding 160 acres, to the Brooklyn Women's Indian Association; on the Siletz Reservation, Oregon, not exceeding 10 acres, to the Methodist Episcopal Church; on the White Earth Reservation, Minn., not exceeding 160 acres, to the Swedish Christian Mission Society; on the Devils Lake Reservation, N. Dak., not exceeding 7 acres, to the Episcopal Church; and on the Oneida Reservation, Wis., not exceeding 5 acres, to the Catholic Church.

In each of the above cases the amount of land assigned is exactly the amount asked for by the society desiring to occupy it. It is customary to allow also to such societies the use for building purposes of stone or timber found on the respective reservations.

### SALE OF LIQUOR TO INDIANS.

I asked your attention last year to the deficiencies in legislation designed for the protection of the Indians against the evil effects of intemperance, and to action taken with a view to inducing Congress to so amend the laws as to meet the necessities of the case.

The law provides (sec. 2139, Rev. Stat.) that

No ardent spirits shall be introduced, under any pretense, into the Indian country. Every person (except an Indian in the Indian country) who sells, exchanges, gives, barter, or disposes of any spirituous liquors or wine to any Indian under the charge of any Indian superintendent or agent, or introduces or attempts to introduce any spirituous liquor or wine into the Indian country, shall be punished by imprisonment for not more than 2 years and by a fine of not more than \$300.

In view of the changed status of parts of the Indian Territory, especial difficulty has been experienced by the agents in that Territory and in the recently organized Territory of Oklahoma in preventing the introduction of intoxicants in the shape of beer, ale, and other malt liquors. The Wells-Fargo Express Company, under advice from its attorney, instructed its agents, September 18, 1889, that malt liquors are not included in the prohibition of the law against the introduction of ardent spirits or spirituous liquors and wine into the Indian country, and that thereafter packages of such liquors would be accepted for shipment to points in the Indian Territory. This definition of the terms used in the statute was not accepted by this office, and the agent included such liquors in the list of articles to be destroyed. So far as this office is advised the company did not contest the agent's rights in the premises, but accepted the situation.

It now appears from a report of August 13, 1891, that the United States court for the eastern district of Texas, Judge Bryant, has recently decided that malt liquors can be introduced into the Indian country and sold to Indians without violating the law; in consequence of this opinion many saloons were opened and large quantities of beer were shipped into the Indian Territory, especially into the Chicka-

saw Nation, where for a time it was freely sold to whites and Indians alike. Some of the complications arising under this opinion of the court were set forth in office report of August 18, 1891, in which the matter was submitted, for instructions, to the Department with the following suggestion :

There appears to be but one course to pursue, and that is to instruct the agent to seize all packages of beer shipped into the Indian country and turn them over to the proper United States marshal to be libeled, as provided in section 2140 of the Revised Statutes. The action in such a proceeding would be of such a character that the United States could appeal if the court should follow Judge Bryant's decision, as above set forth, and the question could in this way be brought to the Supreme Court for final determination.

This suggestion was approved, and in letter of August 21, 1891, this office was directed to instruct the agent in accordance therewith, and under date of August 22, 1891, Agent Bennett was telegraphed as follows :

Referring to your reports of August 14 and 18, 1891, relative to the sale of beer in the Indian Territory, the Secretary of the Interior, under date of August 21, 1891, directs me as follows: " You are directed to instruct the agent of the Union Agency, Ind. T., to seize all packages of beer shipped into the Indian country, and turn them over to the United States marshal, appointed under the act of March 1, 1889, 'An act to establish a United States court in the Indian Territory, and for other purposes (25 Stats., 783), to be libeled, as provided in section 2140, Revised Statutes.'"

You are so instructed.

In pursuance of these instructions Agent Bennett reports, August 29, 1891, that he has closed twenty-eight beer saloons at Ardmore, Wynnewood, Purcell, Paul Valley, and Berwyn, all in the Chickasaw Nation, and seized the beer, together with all the goods, fixtures, buildings, etc., owned, used, or occupied by the parties engaged in the traffic.

In order that no question may arise in the future as to the class of liquors prohibited from introduction into the Indian country and sale to the Indians, it is my purpose at the proper time to resubmit, for transmission to Congress, the proposition for the amendment of the statute which was made to the last Congress, and was fully discussed in my last annual report.

The administration of the affairs of the Puyallup Agency, Wash., have been of late somewhat complicated by the traffic in intoxicating liquors which has been carried on with the Indians of that reservation and the attitude assumed by the courts in connection therewith. In a report of January 2, 1891, Agent Eells stated that much drunkenness existed, and requested authority to expend \$50 in detecting and bringing to justice the parties who had been furnishing the whisky, which authority was granted by the Department January 14, 1891, in accordance with the recommendation contained in office report of the previous day. Under this authority Agent Eells expended a small sum of money in securing evidence against those parties who had furnished the Indians with liquor, and in a short time he had over a dozen parties either committed for trial or bound over to appear; several were indicted by the grand jury, and one was brought to trial. At this

trial the defense contended that as the Puyallup Indians are citizens of the State, the Government has no authority to appoint an agent or to exercise any special jurisdiction over them, and, this being so, it was claimed that they could not be held to be under the charge of an Indian agent within the meaning of the law, and that it is not against law to furnish them whisky. This point was sustained by the court, and the prisoner was discharged from custody.

This decision, whether correct or not, has had the effect to demoralize the service at the Puyallup Agency. The Indian judges and police are unwilling to risk arresting and punishing Indians of the Puyallup Reservation for Indian offenses, and the agent suggests the propriety of disbanding his courts and dismissing his police force.

During the year important arrests of persons charged with furnishing the Indians with whisky have been made at the Devil's Lake Agency, N. Dak., and the Tongue River and Blackfeet Agencies, Mont., and William Long, James Minor, and James Williams were convicted early in May for furnishing the Indians of the last-named agency with intoxicants. The agents in Montana and North and South Dakota have been very active in their endeavors to suppress the whisky traffic with the Indians of their several agencies, and from reports recently received I am encouraged to believe that this evil is abating in those States, where its effects have been most seriously opposed to the efforts of the Government to elevate and civilize the Indians.

As an illustration of the difficulties to be met with in the prosecution of parties furnishing whisky to the Indians, one incident reported to this office by Agent Warner, of the Nevada Agency, would seem to be in point. After much trouble Agent Warner secured the arrest of three white men who had been engaged in the traffic at Reno, Nev., and a Wadsworth Indian, by name Johnnie Wadsworth, gave testimony at the trial, which resulted in the conviction and sentence of the prisoners. As a punishment for testifying and in order to intimidate other Indians and prevent them from appearing against whisky dealers in similar trials in the future, the friends of the parties convicted on Johnnie Wadsworth's testimony killed him by administering poison. This case shows the desperate character of the men who engage in the traffic of whisky among Indians and the necessity that the Government should make every effort in its power to secure the punishment of every man who gives or otherwise furnishes whisky to the Indians, not only to prevent the Indians from securing liquor but to protect them against the evil influences of such a lawless and degrading element of society.

#### INDIAN TRADE.

No change has been made in the policy pursued with reference to Indian traders which was outlined in my last report. By the growth of towns along reservation borders trade upon Indian reservations has

become so largely self-regulating that the office attempts little more than to see that licensed traders and their employés are proper persons to reside upon a reservation and that they obey the regulations of the Indian Bureau.

One of the most strenuous of these regulations is that relating to the use or sale of intoxicating liquors of any kind, including even compounds composed in part of alcohol or whisky, such as cologne, essences, etc., which Indians are apt to use as "beverages" for the sake of their alcoholic effects. The wording of the regulations is as follows:

License to trade does not confer the right to traffic in or to have in possession any description of wines, beer, cider, intoxicating liquor, or compounds composed in part of alcohol or whisky.

The wording of the statute on this subject is as follows:

Section 2139, Revised Statutes:

No ardent spirits shall be introduced, under any pretense, into the Indian country. Every person (except an Indian, in the Indian country) who sells, exchanges, gives, barter, or disposes of any spirituous liquors or wine to any Indian under the charge of any Indian superintendent or agent, or introduces or attempts to introduce any spirituous liquor or wine into the Indian country, shall be punishable by imprisonment for not more than 2 years and by a fine of not more than \$300. But it shall be a sufficient defense to any charge of introducing or attempting to introduce liquor into the Indian country that the acts charged were done by order of or under authority from the War Department or any officer duly authorized thereunto by the War Department.

Section 2140, Revised Statutes:

If any superintendent of Indian affairs, Indian agent or subagent, or commanding officer of a military post has reason to suspect or is informed that any white person or Indian is about to introduce or has introduced any spirituous liquor or wine into the Indian country in violation of law, such superintendent, agent, subagent, or commanding officer may cause the boats, stores, packages, wagons, sleds, and places of deposit of such person to be searched; and if any such liquor is found therein, the same, together with the boats, teams, wagons, and sleds used in conveying the same, and also the goods, packages, and peltries of such person, shall be seized and delivered to the proper officer, and shall be proceeded against by libel in the proper court, and forfeited, one-half to the informer and the other half to the use of the United States; and if such person be a trader, his license shall be revoked and his bond put in suit. It shall, moreover, be the duty of any person in the service of the United States, or of any Indian, to take and destroy any ardent spirits or wine found in the Indian country, except such as may be introduced therein by the War Department. In all cases arising under this and the preceding section Indians shall be competent witnesses.

Act of August 15, 1876 (19 Stat., 200):

The Commissioner of Indian Affairs has the sole power and authority to appoint traders to the Indian tribes, and to make such rules and regulations as he may deem just and proper, specifying the kind and quantity of goods and the prices at which such goods shall be sold to the Indians.

The rules of the office and the meaning and intent of the statutes are explicit and unmistakable, and the office has been strict in its endeavors to enforce them. It has repeatedly refused licenses because the papers submitted showed the applicants for license to be, or to have been, persons more or less addicted to the use of intoxicants. The ground

has been taken that if it is to insist that Indians shall abstain absolutely from everything of the sort, the Government can not send among them as its quasi representatives persons whose habits and example shall run counter to rather than coincide with what is required of the Indians.

Although trade among the five civilized tribes is largely under the jurisdiction of those tribes respectively, and they grant permits and exact fees for giving noncitizens the privilege of trading within their borders, yet under the law all such trade must be carried on under license from this Bureau and subject to its rules and regulations. The only difference between the legal status of trade among the five civilized tribes and among other tribes is that traders among the former are exempted from liability to confiscation of goods and \$500 penalty if they trade without license.

The recent decision of the United States court for the Eastern district of Texas that malt liquors can be introduced into the Indian country and sold to Indians without violating the law has already been referred to on page 74. Among the establishments found by Agent Bennett to be selling beer at Ardmore, in the Chickasaw Nation, were four which held licenses from this office to trade at that point. They were all under bond of \$10,000 each to "faithfully conform to and observe all the laws and regulations made or which shall be made for the government of trade and intercourse with the Indian tribes."

Their cases were submitted to the Department in office report of September 3, 1891, with recommendation that the Attorney-General be requested to cause the proper suits to be brought for the recovery of the penalty which they have forfeited. Also, on the 18th of September, they were notified, through Agent Bennett, that their licenses were revoked and that they must cease trading forthwith and close their places of business, and the agent was instructed to see that they complied with these directions.

#### EXHIBITION OF INDIANS.

My views regarding the so-called "Wild West shows" as previously expressed have undergone no modification whatever. During the year only one party, and that by special instructions from the Department, has been allowed to take Indians for this purpose; for their care and compensation the proper bonds were required. Five of these Indians have been returned owing to failing health.

By reference from the President and from the Department, this office has lately received petitions from the Women's Indian Association, of Poughkeepsie, N. Y., and the Wisconsin Indian Association, each praying that no more permits be issued for the Indians to join "Wild West" shows. Such petitions coming from associations laboring exclusively for the good of the Indians, together with many letters of the same general

tenor from influential citizens in different parts of the country, are worthy of careful consideration.

In accordance with the suggestion contained in your letter of January 30, 1890, I have considered the question of the advisability of making a special recommendation on the subject to Congress, and have concluded that the enactment of legislation prohibiting the exhibition of Indians in shows of any kind, without authority from this office, is desirable, as it would effectually break up this practice, which I regret to say still prevails to a considerable extent.

In a few cases authority has been granted for Indians to attend industrial expositions, not only in response to the urgent request of the responsible parties having the expositions in charge, but because the office fully believes in the beneficial influences of such industrial expositions, fairs, etc., upon the Indians themselves as an educative force. Where authority is thus given such conditions and restrictions are imposed as will secure good treatment for them, and, so far as possible, insure their being kept away from bad company.

#### INDIANS AND THE COLUMBIAN EXPOSITION.

During the current fiscal year, definite plans must be formed in regard to the exhibit to be made by this office at the World's Columbian Exposition. It is the desire of the office to set forth as graphically as practicable the progress made by Indians in the various lines of civilization, especially in industrial pursuits and in education. Materials out of which a noteworthy and attractive display can be secured are varied and ample, and, if adequately presented, the exhibit will prove an instructive as well as an interesting feature of the Exposition. Blankets, beadwork, needlework, pottery, baskets, jewelry, products of the farm, kitchen, and dairy, manufactures in the lines of the various trades, specimens of the work of school children, etc., can all be gathered to illustrate what Indians not only *can* but *will* do if opportunity and training are given.

If possible, Indians themselves should be on the ground pursuing various avocations, which will illustrate their present as well as their former modes of life. The new and the old can be sharply contrasted, and though the old may attract popular attention by its picturesqueness the new will impress the thoughtful with the hopefulness of the outlook and the wisdom, as well as fairness, of extending to the weaker the helpful hand of the stronger race.

Although certain phases of Indian life and history, especially relating to early periods, may be presented by bureaus or organizations which have made special study of our aborigines from ethnological and anthropological standpoints, yet all Indian exhibits of whatever nature should form a unit, not be a confused and confusing group of collections more or less duplicating each other. As a matter of economy, as well as effectiveness, all Indian displays should be so planned and arranged

as not to conflict with nor overlap one another. To that end, all public funds devoted to this purpose should be appropriated by Congress to be expended upon the Indian exhibit of the Interior Department to be used by the Indian Bureau, and by other bureaus so coöperating with it as to insure a single, clear, complete presentation of Indian advancement.

The extent and success of an exhibit by this Bureau will depend largely upon the amount of money which can be put at its disposal for that purpose, and steps toward preparing it can not be advantageously taken until the amount of funds which will be allowed therefor shall be approximately known. The attention to the Indian question which has been enlisted throughout the country in the past ten years will give to the exhibit importance and interest, and if suitably presented it will have special interest for visitors from abroad. Great care should be taken to make such a presentation as shall be creditable to a Government which has furnished one of the rare instances in history of a systematic attempt on the part of the conquering power to respect the rights and improve the condition of a conquered people. In spite of the blunders, failures, and disasters which can be cited in what has been stigmatized as a "century of dishonor," our Government can claim credit and take satisfaction in what it has attempted and is now doing for its Indians, and time and money will be wisely spent in giving the results of its efforts a clear and adequate setting forth at Chicago. A meager, inadequate display will be worse than none, and it is hoped that Congress at its coming session will make just and even generous provision for the representation at the Exposition of the process of evolving United States citizens out of American savages.

#### INTRUDERS IN THE CHICKASAW NATION.

Except as to the Chickasaw Nation the situation with regard to the question of intruders in the Indian Territory has not materially changed during the past year.

Pursuant to instructions of July 24, 1890, Agent Bennett, of the Union Agency, in the Indian Territory, was directed, in office letter of July 28, 1890, to call on the authorities of the Chickasaw Nation for a list or lists of the names and places of abode of intruders in that Nation. These lists were transmitted with his report of November 14 and 19, 1890, and contained the names of some 6,000 persons whom the Chickasaws claimed to be intruders. They were transmitted to the Department December 15, 1890, with a recommendation that the Secretary of War be requested to furnish troops to assist the agent in removing them. In reply, March 24, 1891, I was directed to "proceed to have these intruders removed in such manner and with such precautions against unnecessary severity" as I might deem best.

No provision for the assistance of troops in execution of these instructions had been made, and in view of the reports received in this

office as to the number of intruders and their desperate character, such assistance appeared to be necessary. Consequently, April 15, 1891, the Department was requested to call upon the Secretary of War to cause troops to be furnished, and on the same day this office directed Agent Bennett to notify the intruders of this action, and to advise them that the authority given by the Secretary of the Interior would be carried into execution at the earliest practicable moment.

The War Department replied April 29, 1891, that troops would be furnished, and Agent Bennett was directed to proceed to make the removals. He appointed June 17, 1891, as the day upon which he would begin the work, but on account of unavoidable delays, which prevented the troops from reaching the point where removals were to begin, they were not actually commenced until five days later.

On the 28th of June, 1891, he telegraphed that after six days' vigorous work, with 100 Chickasaw scouts, 400 square miles had been gone over—a section of country in which the Chickasaw authorities had said that there were 300 families of intruders—with the result that only 9 intruders had been found; that many of the names on the lists submitted by the nation were fictitious; many others were names of parties who had held permits for years, of Mexican war veterans, of whom no permit had ever been demanded, of widows and aged men who had never been asked to pay permits, of fathers and mothers who were visiting their intermarried children, and of ministers of the gospel of whom no permits had ever been required; that Chickasaw permit collectors had issued hundreds of permits which had not been reported, and which were paid for in good faith and were held by non-citizens listed as intruders, who also held permits for each previous year of their residence in the Chickasaw Nation; and that parties reported by Chickasaw authorities as intruders were, with rare exceptions, law-abiding men, who were in the Nation under permits issued by legally qualified officers. He therefore recommended a suspension of the work.

Upon receipt of this telegram I wrote, June 29, 1891, to General Halbert E. Paine, attorney for the Chickasaw Nation in this city, and, quoting the telegram, asked him to advise me in the premises. On the following day I telegraphed Agent Bennett to "prosecute the work of removing intruders under existing instructions." I wrote the governor of the nation, asking him to communicate to me what further steps he deemed advisable to effect the removal of the several thousand intruders reported, advising him that—

It is the purpose and intention of the Department, now and at once, to prosecute the work until it shall have faithfully fulfilled the obligations of the Government. But in order to do so it must have your cooperation and aid in pointing out where the intruders are and who they are, \* \* \* and if you do not, or if by reason of any connivance on the part of the Chickasaws themselves, or persons acting for them, or through failure on the part of the constituted authorities of the nation, to show who and where the intruders are, the undertaking should prove unsuccessful, the responsibility will not be with the Government of the United States but will rest entirely with the Chickasaws themselves.

In response to my request Mr. Paine suggested, June 30, 1891, that in view of his predictions of failure, Agent Bennett be relieved of the work of removing the Chickasaw intruders, and that it be placed in charge of some special agent of known integrity, with instructions to proceed with the execution of the orders previously given Agent Bennett.

Pending the consideration of this communication Governor Byrd, of the Chickasaw Nation, arrived in Washington, July 7, 1891, and on the same date I received a report from Agent Bennett, with which he transmitted copy of a circular issued by him June 13, 1891, prescribing rules to govern his action in making removals. The circular is as follows:

The following rules have been adopted by me to govern my action in the matter of the removal of intruders from the Chickasaw Nation:

First. I shall permit those non-citizens to remain who are in possession of permits issued by legally authorized permit collectors.

Second. Also those who hold permits for their previous years of residence, and hold their "natives" receipt for money paid for permit of 1891.

Third. Also those who hold permits for their previous years of residence, and can prove they have paid or offered to pay the money for permit of 1891 to their "native."

Fourth. Also those who hold permits for their previous years' residence, and can prove that the permit collectors (as has been the custom) granted to them an extension until their crops were gathered to pay their permit tax.

Fifth. I consider proper subjects for removal those non-citizens who have settled upon the Chickasaw lands, claiming residence under "squatter" rights.

Sixth. Those who have refused to pay the permit tax.

Seventh. Those who are disorderly disturbers of the peace and violators of the law.

In view of the fact that the Chickasaw laws are openly violated by Chickasaw citizens, who also encourage the non-citizens therein, equity as well as law must be so administered that justice shall be tempered with mercy, and fairness toward all concerned characterize every action in executing the orders of removal.

LEO E. BENNETT,  
*United States Indian Agent.*

A copy of this circular was furnished Governor Byrd and he was requested at his early convenience to submit such modifications of the rules prescribed as seemed to him desirable for the effectual accomplishment of the end sought, together with his reasons for the same.

Replying, under date of July 8, 1891, he submitted objections to the rules, requested the modification of some and the total abrogation of others, and gave his reasons therefor briefly as follows:

First. Claiming that permits, to be valid and binding upon the Chickasaw Nation, must be issued on blanks furnished by the national secretary, he objected to rule 1 on the ground that many permits, issued by the legally authorized permit collectors of the Chickasaw Nation, but on paper not furnished by the national secretary, would thereunder be recognized by the agent.

Second. His objections to rules 2 and 3 were based upon his claim that a non-citizen can have no right to reside in the nation unless he shall have received a permit regularly of the permit collectors of the nation, and that therefore the receipt of the citizen employer evidencing

the fact that a non-citizen has paid him money for procuring a permit, does not relieve such non-citizen of the liability to removal as an intruder.

Third. His objection to rule 4 was that the permit collectors have no authority of law for extension of the time within which permits may be procured, and he alleged that no such custom had ever obtained in the nation.

Fourth. He objected to rules 5, 6, and 7, because he claimed they would not reach all the cases of intruders in the Chickasaw Nation who are liable to removal as such, under the law.

For the above reasons he asked that rule 1 be construed so as to give effect only to permits issued by legally authorized permit collectors and on paper furnished by the national secretary, and that rules 2, 3, and 4 be totally abrogated.

The laws of the Chickasaw Nation which bear upon the questions involved in this matter are acts of council of September 23, 1887, and October 17, 1876 (constitution, treaties, and laws of the Chickasaw Nation, pp. 197, 229). The former provides in section 1 for the election of a permit collector in each county; in section 2 for the issue of commission to and the execution of bond by the permit collectors, and for the appointment of his deputies, etc.; and in section 3, as follows:

*Be it further enacted*, That the national secretary shall furnish the permit collector in each county with blank certificates, book form, with stubs attached, numbered from one up, that is necessary, and said stubs and certificates shall be printed and the numbers shall correspond with each other.

Section 4 repeals all acts or parts of acts in conflict with this act and fixes the time when it shall take effect.

The provisions of the act of October 17, 1876, otherwise known as the "permit law," which have a bearing on the justness and fairness of Agent Bennett's rules, are as follows:

SECTION 1. *Be it enacted by the legislature of the Chickasaw Nation*, That citizens of any State or Territory of the United States wishing to hire or rent land, or be otherwise employed in this nation, shall be required to enter into contract with a citizen, and after a contract has been agreed upon, the non-citizen shall place in the hands of the citizen a sufficient amount of money to pay permits, and that the permit collector shall receive no permit money from any other person, except from a citizen of this nation, and for each and every violation shall be fined in any sum not less than ten dollars for each and every offense, by the county judge of the county where the offense was committed.

SEC. 2. *Be it further enacted*, That any citizen who shall employ any non-citizen, shall apply within fifteen days after entering into contract to the permit collector of the county where said non-citizen wishes to reside, for a permit for every male non-citizen over the age of eighteen years in his employ, and for each permit so obtained the citizen shall pay to the permit collector issuing the same the sum of five dollars, and the permit collector shall retain for each permit issued fifteen per cent. for his services, and shall report to the auditor and treasurer quarterly of all moneys received by him for permits, and after deducting out his fee shall pay the balance over to the treasurer for national purposes.

\* \* \* \* \*

SECTION 6. *Be it further enacted,* That any non-citizen having entered into contract with any citizen of this nation and obtaining a permit under his employ, and shall leave the employ of said citizen, shall forfeit his permit, and no other permit shall be granted any non-citizen forfeiting the same by either permit collector of this nation.

Viewing the permit certificate as a receipt for money received by the Chickasaw Nation from a citizen thereof in payment for a permit for the non-citizen holding the receipt to remain in the nation, it seemed to me but just and fair that such receipt in the hands of a non-citizen, whether given on a particular style of blank or otherwise, should be accepted by this Government as evidence that said non-citizen had complied with the law and paid the money for his permit to the citizen of the nation with whom he had entered into contract, and therefore should be taken as evidence of his right to remain in the nation; provided such certificate should bear the signature of one of the legally authorized permit collectors of the nation who had the power to issue the permit in the county or district within which such non-citizen resided.

As the laws of the Chickasaw Nation only require the non-citizen to enter into contract and pay to the citizen with whom he contracts a sum of money sufficient to pay for his permit, it would seem that his right of residence in the nation would be complete when the contract required is entered into and the money is paid to the proper party, and that if he can prove that he paid the money, either by a receipt therefor from his "native" or otherwise, he should not be removed from the nation.

So, likewise, if he should have entered into a contract and tendered money to the proper party to pay for his permit during the period for which the same is to run, and that party should have refused to accept it and to procure the permit, as required by law, he should not be removed from the nation to his disadvantage and to the advantage of his "native," who refused, after entering into contract with him, to buy the permit.

Notwithstanding Governor Byrd's statement that the custom of allowing non-citizens to wait until they should have gathered their crops before paying for their permits had never obtained, it appears from an affidavit by the head permit collector of Pickens County that such has been the custom. In view of this I do not think a party who can show his good faith in the matter by the exhibition of permits for each year of his previous residence, and who has been permitted to commence a crop this year upon an agreement that he would pay for his permit after he gathered his crop, should be removed as an intruder.

These views of the matter were expressed at length by me, in a letter of July 17, 1891, to Governor Byrd, in which I approved rules 1, 2, 3, and 4, and modified rules 5, 6, and 7, by substituting one rule therefor, as follows:

I consider proper subjects for removal all non-citizens who can not claim exemption under one of the four preceding rules.

From the fact that Governor Byrd, in his letter above referred to, had expressed the belief that if this office decided to adhere to the rules adopted by Agent Bennett to govern him in making his removals, the result would be to render the movement against the intruders non-effective, and in view of the fact that after a careful consideration of those rules in the light of the laws of the Chickasaw Nation I decided to approve them, I telegraphed Agent Bennett, July 14, 1891, as follows:

You are hereby authorized to exercise your own judgment with reference to the further continuance of present effort to expel intruders from Chickasaw Nation. Wire me your decision.

This telegram was quoted in my letter to Governor Byrd of July 17, 1891, to which he has not replied.

July 16, 1891, Agent Bennett telegraphed his response to my telegram as follows:

My judgment regarding Chickasaw intruders [is that work] should be continued. I request authority to personally lay the facts before you in Washington with view to specific instructions covering classes of cases to be considered, that the work be continued, be thoroughly performed, and the nation fully delivered of those who (are) actually intruders. Answer Paul's Valley.

In my reply to this telegram, dated July 17, 1891, I inclosed a copy of my letter of even date to Governor Byrd (in which the rules adopted by Agent Bennett were discussed and approved without material alteration), and instructed the agent that if after reading that letter he still thought it desirable for him to visit this city to telegraph for the necessary authority.

He replied August 3, 1891, that the reasons given in my letter to Governor Byrd for approving his rules were the same which prompted him to adopt them, and that his fear that I might be misled by Governor Byrd's vigorous arraignment of his course into a misapprehension of the situation was his reason for desiring to be personally present to defend his action. As no such misapprehension existed he did not think it necessary to come.

For further details in regard to this removal of intruders, see Agent Bennett's report herewith, page 240.

#### TIMBER DEPREDATIONS ON THE FOND DU LAC RESERVATION, MINN.

In my annual report for the year 1889 I invited your attention to certain depredations that were committed during the season of 1888-'89 by Patrick Hines and Andrew Gowan upon the timber of the Fond du Lac Reservation, in Minnesota; also to the fact that suit had been instituted against Hines for over 6,000,000 feet of timber, valued at some \$43,000, and that a proposition from Mr. Hines to compromise the suit was then under consideration by the Solicitor of the Treasury, to whom it had been referred by the Attorney-General.

Communications from the Solicitor and Assistant Secretary of the Treasury to Mr. J. M. Vale, of this city, attorney for the Fond du Lac Indians (both of which are filed by Mr. Vale with his letter of September 15, 1891, to this office) show that Mr. Hines' proposition was accepted by the Secretary of the Treasury June 8, 1891, and that in pursuance of the compromise agreed upon Mr. Hines has paid the sum of \$20,446.52, which has been covered into the Treasury as a miscellaneous receipt derived from depredations on public lands.

As frequently expressed in reports on the subject of depredations upon timber on this reservation, this office maintains that the Indians located thereon have an equitable right to receive the benefit of all moneys recovered from the parties committing such depredations. This view is strengthened by the action taken by the Government in providing for the sale of the timber standing on the lands recently ceded by the Chippewas of Minnesota and the use of the proceeds for their benefit, which is a recognition of the rights of the Indians. In view of the fact that they would have received the value of this timber had it not been unlawfully cut and removed I believe that the rule of law which gives the Government absolute property in the timber, upon its being unlawfully severed, should not be permitted to stand in the way of devoting the proceeds to the benefit of the Indians, especially as it does not appear that they were in any manner responsible for the depredations. I have, therefore, included in my estimates of appropriations for the Indian Office, to be submitted to Congress, an item of \$20,446.52, to be appropriated for the benefit of the Fond du Lac Indians, the same being the amount recovered on account of Mr. Hines' depredations upon the timber on their reservation.

Notwithstanding the fact that the Government has been prosecuting its suit against Mr. Hines for the depredations committed by him upon the timber on this reservation in 1888-'89, the recent investigations of an inspector show that other and extensive depredations have been committed during the seasons of 1889-'90 and 1890-'91. March 28, 1891, Bishop Marty advised this office that he had been informed that Mr. Stack, the Government farmer, was robbing the Indians by selling timber from the Fond du Lac Reservation, and April 7, 1891, a copy of Mr. Marty's letter was transmitted to the Department with the request that an inspector be sent to investigate the charges.

Inspector B. H. Miller was assigned to this duty, and reported that during the season of 1889-'90 about 4,000,000 feet of timber were cut and sold under the direction and management of Farmer Stack, while during that of 1890-'91 over 11,000,000 feet were cut and sold under the direction and management of the additional farmer for that reservation.

In this report of July 22, 1891, Inspector Miller states that he is satisfied that within the past year millions of feet of standing green pine and thousands of cedar telegraph poles, ties, and paving have been cut

with the consent and under the management of Farmer Stack; that while the Indians have taken contracts, invariably verbal, for much of the work, the labor has been performed by white men; that in all cases Stack has furnished the Indians with the supplies required, giving them orders on the Nelson Lumber Company's store for the goods; that he has also paid for the labor and, so far as the facts show, has sold the cut to the Nelson Company without bids from other parties and without advertising, telling the Indians that the price he received was \$5 per 1,000 feet on the river bank.

January 20, 1891, the agent for the La Pointe Agency was furnished with a copy of the rules and regulations approved by the President October 17, 1890, to govern logging operations on the White Earth and Red Lake Reservations,\* and was advised that the Indians on the Fond du Lac Reservation could do logging under these regulations. Such logging had been authorized by act of Congress February 16, 1889 (25 Stats., 673), and had reference only to "dead timber standing or fallen."

May 7, 1891, the agent advised this office that under this authority these Indians had cut and banked on the Northern Pacific Railroad 394,100 feet of timber, and asked instructions. Authority was granted for its sale on sealed bids, in accordance with the regulations, under the supposition that it was dead and down timber. Inspector Miller's report, however, states that the timber had actually been cut from green and growing trees on the reservation; for such cutting there was no authority of law. Its sale had been authorized to Messrs. Paine & Co., who bid \$3.35 per thousand feet, but since it was cut without legal authority it became the absolute property of the Government, and the sale was void.

Upon the recommendation of this office the Department submitted the following questions to the Attorney-General:

First. Can the Indian agent at La Pointe Agency, Wis., under the instructions of the Indian Office, or Department of the Interior, dispose of and give a valid title to the pine timber cut on the Fond du Lac Reservation, Minn., by Patrick Hines and Andrew Gowan, or their agents and employés, during the season of 1888-'89, and now lying in the woods or on skids on said reservation, and not embraced in any suits now pending in the courts between the United States and these parties or any of them?

Second. Should the proceeds of such sale (if the same be allowable) be treated as belonging to the Indians occupying the reservation or to the United States?

December 31, 1890, he replied as follows:

I am of the opinion that the timber now in question may be sold, but that the sale should be made by the Commissioner of the General Land Office under the supervision of the Secretary of the Interior.

The timber having been cut on lands which are none the less public because inclosed by the Indian right of occupancy, its preservation and sale would seem to

\* This authority was modified November 22, 1890, so as to permit the Indians on the other Chippewa Reservations in Minnesota to do logging thereunder.

belong the Commissioner of the General Land Office, who is required to perform, under the direction of the Secretary of the Interior, all executive duties "in any wise respecting" the public lands (R. S., sec. 453). Indeed, Congress has removed all doubt on the subject by repeatedly recognizing the authority of the Secretary of the Interior, through the General Land Office, to seize timber unlawfully cut on the public lands, by appropriations to pay the agents employed from time to time to make such seizures (*Wells v. Nickles*, 104 U. S. R., 447).

It sufficiently appears, therefore, that the Indians have no interest in this timber, and that it in no way appertains to the Indian Bureau or its agents to assume charge of the same.

The second question is answered already; it being clear, if the above reasoning is sound, that the proceeds of the timber, when sold, will belong to the Government absolutely.

This, I think, disposes of both questions.

Under this opinion this office has no authority to take steps to recover the timber unlawfully cut on the Fond du Lac Reservation during the two seasons, 1889-91, or its value, but the whole matter comes under the jurisdiction of the General Land Office. The office therefore recommended, July 30, 1891, that the Commissioner of the General Land Office be instructed to dispose of the timber now within the reservation, which has been unlawfully cut; to institute suits for the recovery of that which has been removed, or of its value, and to prosecute those parties who are responsible for the trespasses.

Department letter of August 8, 1891, to this office states that, the Commissioner of the General Land Office has sent two special agents to Fond du Lac to protect the interests of the Government. Since that date this office has transmitted to the General Land Office all papers bearing on the case.

### MENOMONEE LOGGING.

The Menomonee Indians in Wisconsin have long urged that some action be taken by Congress which would allow them to market their green standing timber. Their logging operations had been restricted by law to the disposing of dead and down timber, and of such green timber only as was cut to clear land for cultivation.

Among several bills which have been presented and considered, the following was finally passed by Congress, and approved June 12, 1890 (26 Stats., 146), viz :

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior is hereby empowered to authorize the agent of the Menomonee tribe of Indians in Wisconsin to employ at a reasonable compensation said Indians to cut all, or any portion of the timber on the lands reserved for the use of said Indians in that State, into logs, and haul the same to the banks of the rivers; and said logs shall be scaled and advertised, and after due notice all or any part thereof sold to the highest bidder or bidders for cash, in such manner and at such time and place as the Secretary of the Interior may direct; no sale to be valid until approved by said Secretary. In case said logs can not be sold where landed on the river at what the Secretary of the Interior considers a reasonable price, he shall cause said logs to be run down the river to market, to be sold

in the manner he deems for the best interest of the Indians, employing Indians at all times when in his opinion practicable and for the benefit of the Indians in doing such work; and the Secretary of the Interior may appoint a competent man to superintend these Indians while logging, and fix the rate of his compensation. The Secretary shall appoint an assistant superintendent, who shall be a practical logger and shall have full charge and direction of such logging operations under the superintendent, and who shall receive such compensation as the Secretary of the Interior shall determine: *Provided*, That not exceeding twenty millions of feet of timber shall be logged and sold in any one year.

SEC. 2. That the sum of seventy-five thousand dollars, or so much thereof as may be necessary, be, and the same is, hereby appropriated out of any money in the Treasury not otherwise appropriated, for the payment of the expense of cutting, banking, scaling, running, advertising, and sale thereof; also pay of superintendent and assistant superintendent; which expenses and pay shall be reimbursed to the Treasury of the United States from the first proceeds of the sale of timber as hereinbefore provided. *And provided*, That after the first year's logging, and annually thereafter, the Secretary of the Treasury is authorized to advance a like amount provided for in this bill, on the order of the Secretary of the Interior, out of any money in the Treasury belonging to said Indians for the purpose of enabling them to carry on logging as provided in this act.

SEC. 3. That from the net proceeds of sales of said Menomonee logs shall be deducted one-fifth part, which shall be deposited in the Treasury of the United States to the credit of the Menomonee Indians in Wisconsin, to be used under the direction of the Secretary of the Interior for the benefit of said Indians, and the residue of said proceeds shall be funded in the United States Treasury, interest on which shall be allowed said tribe annually at the rate of five per centum per annum, to be paid to the tribe per capita, or expended for their benefit under the direction of the Secretary of the Interior.

SEC. 4. That this act shall be and remain inoperative until full and satisfactory evidence shall have been placed on the files of the office of the Commissioner of Indian Affairs that the sales of timber and the manner of disposing of the proceeds of same herein authorized have the sanction of the tribe, evidenced by orders of agreement taken in full council; and if the provisions of this act shall not be accepted as aforesaid, no further cutting of timber shall be permitted by said Indians upon said reservation until otherwise provided.

In pursuance of the requirements of section four Gen. E. Whittlesey and Mr. Joseph T. Jacobs, members of the Board of Indian Commissioners, consented to present the act to the Menomonees and ascertain their wishes. July 9, 1890, they reported that in a council of some three hundred there were but one hundred and twenty four who were willing to sign a paper agreeing to accept the provisions of the act.

As the privileges granted by the act would be of great benefit to the Menomonees and its rejection would deprive them of the privilege of marketing any timber whatever, the office, under date of September 24, 1890, directed their agent to call a council and resubmit the act to them. This was done, and October 10, 1890, he reported that after due notice through the Indian police a council assembled and everyone present signed "orders of agreement" to the effect that it was a full council of the tribe; that the act had been carefully explained; that they fully understood its provisions, and that it had the sanction of the tribe.

This report and the "orders of agreement" accompanying it were approved October 27, 1890, and authority granted for the appointment of a superintendent and an assistant superintendent of logging, as provided for in the first section of the act, who together with the agent were directed to submit rules for the government of the logging business.

These rules, prepared at the agency, revised by this office, and approved by the Department January 7, 1891, are as follows:

First. That Agent Kelsey, with the assistance of the superintendent and assistant superintendent, enter into agreements with such of the Menomonees as desire to engage in logging, and are able to do so, to pay a certain price for pine timber on the river banks.

Second. Each contractor or boss of squad to be paid a rate to be agreed upon for cutting and banking timber in consideration of all the conditions under which his timber is situated and the ease or difficulty which may be expected to attend its banking, said price in no case, however, to exceed \$5 per thousand feet. Said agreement to be submitted to this office for approval, with full explanation.

Third. That as soon as the loggers commence to place their timber on the river bank a sufficient number of scalers be employed to keep all so delivered scaled up every week, said scalers to be of well-known competence for that duty and sworn when employed to perform it faithfully.

Fourth. That at the end of each month one-half of the amount found due to each contractor by a computation of the number of feet of logs he and his squad have banked during said month, at the rates named in the several agreements, be paid to said contractors and that the other half be retained as security for pay of the laborers.

Fifth. That a final settlement be made with the contractors next spring, when the logging is over for the season and the logging camps break up; that at the same time the contractors be required to pay the laborers (their assistants) in full such balances as may still be due for wages, and that each contractor bind himself in the agreement above referred to to so pay his laborers at that time.

Sixth. That a fair, reasonable, and usual rate of wages be named in said agreements to be paid by the contractors to each member of their squads, and that monthly statements be prepared by the contractors, with the assistance and under the supervision of the superintendents of logging, and delivered to the agent, showing exactly how much is due to each laborer at the end of each month.

Seventh. That the scalers make weekly reports to the agent, showing the exact number of feet of logs banked by each contractor during the week.

Eighth. That all Menomonees who are able and desire to engage in logging, or as laborers in logging camps, be allowed to do so.

Ninth. That no squaw man, or white man of any class, be allowed under any circumstances to act as logging contractor, and that white men be not employed in any capacity by the contractors except when authorized by the agent and upon approval of this office.

Tenth. That some provision be made in the agreements named for paying the contractors a reasonable price for cutting and banking other kinds of timber than pine.

Eleventh. That the scalers and their assistants be employed by the agent (after consultation with the superintendents) and paid through him, and that he be required to take such means as may be necessary to keep a correct record of their services that he may swear to the same, as required by law.

Twelfth. That while the agent is prohibited from in any manner guaranteeing payment to merchants or traders for supplies they may furnish the Menomonees he will be instructed to faithfully endeavor to prevail on the Menomonees to pay promptly,

and that if it will be any advantage to the contractors he may allow them to give written statements to him of such supplies as they may purchase, on which statement he may indorse one-half of the amount then due to the contractor as soon as he ascertains it, but must expressly state in said indorsement that he does not guarantee any part of the indebtedness incurred by the contractor. That, however, if the prices charged are reasonable and the articles furnished proper for the Indians to have, he will endeavor by advice and persuasion to prevail on the loggers to pay promptly.

Thirteenth. That if it is found that any of the contractors can not proceed without additional ox-teams, sleds, etc., the agent may submit to this office an estimate for the purchase of what may be actually necessary, provided that he has satisfactory proof that any contractor asking for such assistance will undoubtedly have sufficient funds coming to him at the end of the season to pay all his other debts, including his laborers' wages, and also pay for such oxen, etc., as he may request the agent to purchase for him.

Fourteenth. That bills showing in detail the articles furnished the loggers, and the prices charged therefor, be submitted to the agent for his information at the end of each month.

Fifteenth. The superintendent and the assistant superintendent to have entire charge of the logging operations, under the direction of the agent, with whom they will consult in regard to all matters of consequence in connection therewith.

As provided in rule one the agent and superintendents entered into agreements or contracts with various Menomonees as chiefs of squads to pay a certain sum per thousand feet for a specified quantity of logs delivered on the bank. The rate agreed upon with each was governed by the quality of the timber, its accessibility, distance to be hauled, etc., and, though varying greatly, averaged about \$3.25.

The attention of the agent and superintendent of logging was repeatedly called to that clause of the act which limited the timber to be disposed of in any one year to 20,000,000 feet. But many were slow in making contracts, and it was almost impossible to tell in advance how many feet each squad could bank. The result was that some of the first applicants received contracts for such large quantities as would have excluded many later applicants from any share in the work; therefore many of the contracts were arbitrarily reduced by the agent and superintendent. This caused some dissatisfaction, but the situation could not well have been foreseen, especially as the first season's logging under the act was somewhat in the nature of an experiment.

As the work progressed and it became evident that much more than 20,000,000 feet of green growing timber could be banked, the Indians requested that they be allowed to market dead and down timber in addition to the 20,000,000 feet of green timber. The opinion of the Assistant Attorney-General on the subject, given February 13, 1891, was that the request could not be complied with, as the terms of the act limited the cutting and banking of timber of *all kinds* to the quantity named.

February 11, 1891, the Department directed that the following advertisement be inserted for a period of two weeks in the *Inter Ocean*, of

Chicago, Ill. (daily), and the Pioneer Press, of St. Paul, Minn. (daily), viz:

MENOMONEE INDIAN LOGS FOR SALE.

Sealed proposals, marked "Bids for Menomonee logs," addressed to the undersigned, will be received until 1 o'clock p. m. on the 2d day of March, 1891. These logs aggregate 20,000,000 feet of pine, more or less, and are banked, or are to be banked, partly on the South Branch of the Oconto River and partly on the Wolf River and its tributaries, on the Menomonee Reservation, Wis. The logs banked on each river will be sold on separate bids. Proposals will be received for about 6,000,000 feet of logs banked on the West Branch Creek and West Branch of Wolf River.

The logs are or will be scaled by competent and sworn scalers, whose work can be readily tested, and logs must be paid for in cash within 10 days after acceptance of bid.

The bids will be opened in the presence of bidders in the office of the Green Bay Agency, at Keshena, Wis., at 1 o'clock p. m. of March 2, 1891. Awards will be made to the highest bidder or bidders; the sale to be approved by the Commissioner of Indian Affairs and the honorable Secretary of the Interior, who reserve the right to reject any or all bids, as they may deem best for the interest of the Indians.

Checks of parties whose bids are not accepted will be returned to them. If accepted bidders fail to comply with the requirements of the Department in the purchase or payment for logs as advertised, their certified checks will be forfeited and the timber resold.

CHARLES S. KELSEY,  
United States Indian Agent.

KESHENA, WIS., *February, 17, 1891.*

Authority was also given for the printing of posters to be distributed among lumbermen, and conspicuously placed in the vicinity of the agency and elsewhere.

March 2, 1891, the agent reported that he had received the following bids:

	Oconto River.	Wolf River.	Tributaries of Wolf River.
	<i>Per M.</i>	<i>Per M.</i>	<i>Per M.</i>
F. H. Hurlburt .....	\$9.22		
D. Jennings .....		\$8.88	\$8.88
S. W. Hollister .....		10.50	9.00
Tom Wall .....	9.37	10.36	8.77
Oconto Company .....	10.80	9.05	9.05

Awards were made to the Oconto Company and to S. W. Hollister. Taking into account the quantity of timber at each point, Hollister's bid for the logs on the Wolf River and its tributaries was \$1,940 higher than that of any other bidder.

On the scale of logs being completed it was discovered that the limit as to quantity fixed by the act had been exceeded by 2,769,560 feet, viz: On Wolf River and tributaries 1,365,470 feet, and on the Oconto River 1,404,090 feet. The agent was therefore instructed to withhold this surplus, and to deliver only 20,000,000 feet to the purchasers.

The bidders claimed that they had bought all, and that by the terms

of the advertisement they were entitled to all. Mr. Hollister, however, reluctantly submitted to the ruling, and agreed to receipt for the 10,000,000 feet only, but the Oconto Company objected, claiming that the logs to be retained by the agent and superintendent were of superior quality and not a fair average. The claim of the purchasers that they should be awarded all was not considered altogether unreasonable, and the arbitrary selecting of logs to be retained threatened to prevent an early or satisfactory settlement of the matter. Moreover, the retained logs would deteriorate by exposure on the river bank for a year or so, and might at any time be consumed forest fires. The office, therefore, became satisfied that it would be for the best interests of the Government to sell all the logs. Recommendation to that effect was approved by the Department April 30, 1891, with the understanding that the question of disposition to be made of funds arising from the sale of the surplus over the 20,000,000 feet would be reserved for future consideration.

The total proceeds of this sale amounted to the following:

S. W. Hollister & Co., 4,539,590 feet on Wolf River (main stream), at \$10.50 per thousand .....	\$47,665.69
S. W. Hollister & Co., 6,825,880 feet on the tributaries of the Wolf River, at \$9 per thousand .....	61,432.92
Oconto Company, 11,404,090 feet on the Oconto River, at \$10.80 per thousand.....	123,164.17
<b>Total</b> .....	<b>232,262.78</b>
Deduct amount received from the sale of the surplus over the 20,000,000 feet, not legally the property of the Indians .....	27,453.40
Gross proceeds of the 20,000,000 feet allowed by law to be sold.....	204,809.38
Deduct expense of cutting, banking, scaling, selling, etc. (The exact amount of this can not be known until the accounts of the agent are received and examined, but it will probably be nearly the amount advanced by the Government, which is to be reimbursed).....	75,000.00
<b>Leaving</b> .....	<b>129,809.38</b>
Deduct the one-fifth part to be deposited in the Treasury of the United States to the credit of the Menomonees, to be used at the discretion of the Secretary of the Interior for their benefit, viz.....	25,961.87
	<u>103,847.51</u>

This will leave nearly \$104,000 to be funded in the United States Treasury, interest on which, at the rate of 5 per cent. per annum, is to be paid to the Menomonees per capita, or to be expended for their benefit under the direction of the Secretary of the Interior. It must be borne in mind, however, that section 2 of the act authorizes the Secretary of the Treasury to annually advance \$75,000 on the order of the Secretary of the Interior to the Menomonees out of any money of theirs in the Treasury to enable them to carry on logging under the act, which will temporarily reduce this sum.

The one-fifth, \$25,961.87, will be needed for, and no doubt applied to, the purpose for which the stumpage or poor fund has hitherto been

used, viz., maintaining a hospital, and otherwise providing for the poor, sick, and helpless of the tribe.

The Indians are anxious to have the act amended so as to allow a greater quantity of logs to be banked and sold in one year, claiming that 20,000,000 feet does not give them work enough for the season.

Although it is probable that they could have marketed a second 20,000,000 at considerable less expense per thousand feet than attended the first, yet it is doubtful if authority to sell a greater quantity in one season would be beneficial, as it might induce them to turn their attention wholly to the lumber business, to the neglect of farming interests.

### RAILROADS OVER RESERVATIONS.

During the past year Congress has made the following grants for the construction of railways across Indian lands:

#### GRAND JUNCTION SCHOOL LANDS, COLORADO.

**Rio Grande Junction Railway.**—The act of October 1, 1890 (26 Stats., 364), authorizes the Secretary of the Interior to convey in fee to this company for right of way a strip of land in Mesa County, Colo., now held by the United States for school purposes, not to exceed in the aggregate 26.3 acres, provided the company shall first convey or cause to be conveyed to the United States in fee a tract adjoining the said school lands aggregating 35 acres.

The attorneys for the company filed in this office a deed for this tract, but it was returned to them August 27 last for more complete information relative to certain transfers indicated in the abstract of title presented therewith.

#### INDIAN AND OKLAHOMA TERRITORIES.

**Fort Gibson, Tahlequah and Great Northern Railway.**—The act of March 3, 1891 (26 Stats., 844, and page 634 of this report), grants the right of way for the extension of this railway from the town of Rogers, in the State of Arkansas, through the Cherokee Nation, via Tahlequah, to Fort Gibson. No maps of the proposed road have as yet been filed in this office.

**Fort Worth and Denver City Railway.**—The act of October 1, 1890 (26 Stats., 661), extends the provisions of the act of February 24, 1887 (24 Stats., 419), granting right of way through the Indian Territory to this company, so that it shall have until February 24, 1893, to build the first 50 miles of its road.

**Hutchinson and Southern Railway.**—The act of September 26, 1890 (26 Stats., 485), grants the right of way north and south into the Indian (Oklahoma) Territory to a connection with the Chicago, Kansas and Nebraska Railway at or near Pond Creek. So far as this office is advised no steps have yet been taken looking to its construction.

**Kansas and Arkansas Valley Railway.**—The act of February 24, 1891 (26 Stats., 783, and page 627 of this report), authorizes the construction of the following lines of railway, in addition to the roads authorized to be built by the act of June 1, 1886 (24 Stats., 73) :

A line beginning at the most suitable point on the present main line of said railway at or near Wagoner, in the Indian Territory, and thence running in a westerly and northwesterly direction by the most feasible and practicable route, passing through or near the town of Guthrie, in the Oklahoma country, and through or near Fort Supply military reservation to a point on the western boundary line of the Indian Territory; also an additional or branch line running from the most suitable point on the line last above described, in a southwesterly direction, and passing through or near Oklahoma City, and through or near Fort Reno military reservation, to a point on the western boundary line of the Indian Territory south of the point where the Canadian River crosses said boundary line; also a line commencing at the most practicable point on the main line at or near Fort Gibson, and running thence in a southwesterly direction through the Cherokee, Creek, Choctaw, and Chickasaw countries, either or all of them, to a point on the southern boundary line of the Indian Territory, with the right to construct, use, and maintain such tracts, turn-outs, and sidings as said company may deem it to its interest to construct along and upon the right of way and depot grounds herein provided for.

Up to the present time no maps have been filed by the company, and, so far as this office is advised, none of the conditions prescribed by the act as prerequisite have been complied with.

**Sherman and Northwestern Railway.**—The act of October 1, 1890 (26 Stats., 632), grants the right of way through the Oklahoma and Indian Territories, but the preliminary conditions of the act have not yet been complied with, and hence the work has not begun.

#### RED LAKE RESERVATION, MINNESOTA.

**Red Lake and Western Railway and Navigation Company.**—The act of October 1, 1890 (26 Stats., 660), grants right of way through the reservation in a northeasterly direction upon condition that the consent of a majority of the male adult Indians is obtained. No maps of definite location have been filed, and it is not known that any steps have been taken looking to a compliance with the preliminary conditions of the act.

#### FLATHEAD RESERVATION, MONTANA.

**Missoula and Northern Railway.**—The act of March 3, 1891 (26 Stats., 1091, and page 671 of this report), grants the right of way from a point at or near the mouth of the Jocko River, on the Northern Pacific Railroad, running thence in a northerly direction to the southerly end of Flathead Lake, and thence by the most practicable route, either to the east or west of said lake, in a northerly direction to the northern boundary of Montana. No maps of the definite location have been filed.

#### SILETZ RESERVATION, OREGON.

**Newport and King's Valley Railway.**—The act of October 1, 1890 (26 Stats., 663), grants right of way from a point on the eastern boundary

in a westerly direction through the reservation, and it is provided that no right shall accrue to the company until the consent of the Indians is obtained. This office is not advised whether the company has yet undertaken to comply with the preliminary conditions.

#### GRANTS REFERRED TO IN PREVIOUS ANNUAL REPORTS.

**Blackfeet Reservation, Montana.**—October 6, 1890, the President gave his consent to the extension of the line of the *St. Paul, Minneapolis and Manitoba Railway (Great Northern Line)* through this reservation under the power vested in him by act of May 1, 1888 (25 Stats., 113), which ratified an agreement with these Indians, article VIII of which provides that—

It is further agreed that whenever, in the opinion of the President, the public interests require the construction of railroads or other highways, or telegraph lines, through any portion of either of the separate reservations established and set apart under the provisions of this agreement, right of way shall be, and is hereby, granted for such purposes, under such rules, regulations, limitations, and restrictions as the Secretary of the Interior may prescribe; the compensation to be fixed by said Secretary and by him expended for the benefit of the Indians concerned.

Accordingly, October 24, 1890, the company was allowed to occupy a right-of-way strip not to exceed 150 feet in width, with an additional strip not exceeding 100 feet in width where heavy cuts or fills should occur. The additional land for station purposes was limited to strips not to exceed in dimensions 200 feet in width by 3,000 feet in length. An approved bond in the penal sum of \$25,000 was also required.

Under date of July 1 last the attention of the company was invited to the fact that the maps of definite location on file represented an area of land greater than the limit fixed, and an explanation of the matter was called for.

**Crow Reservation, Montana.**—Five maps of the definite location of the Big Horn Southern Railway through this reserve have been approved, except as to that portion which is within the Fort Custer military reservation. In accordance with the provisions of section 3 of the act of February 12, 1890 (25 Stats., 660), which authorizes the President to require the consent of the Indians thereto in such manner as he shall see fit to prescribe before any rights accrue to the railway company, the President, June 30, 1889, directed that such consent be obtained by convening a council of the chiefs and other leading men. The approved maps of definite location above referred to were mailed to Agent Wyman November 4, 1890, with full instructions to ascertain the wishes of the Indians as directed by the President, and also to see that satisfactory settlement was made by the company with individual occupants damaged by the proposed road. January 14 last the agent forwarded the report of the proceedings of the council held by him, stating that the maps of definite location were held in his office pending the completion of the settlements to be made with individual occupants.

**Fond du Lac Reservation, Minnesota.**—The Fond du Lac Indians, having been convened in council by the agent for the La Pointe Agency, Wis., in accordance with the direction of the President, agreed to accept the sum of \$5 per acre as compensation to be paid for the right of way granted to the *Duluth and Winnipeg Railway* by the act of October 17, 1888 (25 Stats., 558). The written evidence of the action taken by the council not being in the form required it was returned June 30, 1890, for additional evidence as to the action taken by the Indians. December 5, 1890, the report of the agent in accordance with his instructions, above referred to, with plats of grounds for two stations filed by the company, were submitted to the Department by this office with the recommendation that the amount of compensation agreed upon, and also plats of stations, be approved.

**Fort Hall Reservation, Idaho.**—*The Utah and Northern Railway Company* was required by the right-of-way act of September 1, 1888 (25 Stats., 452), to pay, in addition to the right of way, compensation of \$8 per acre for all land to be occupied within the town site of Pocatello, Idaho, a sum per acre equal to the average appraisal of each acre of town lots outside of the portion so taken. When the report of the appraisers of this town site was approved by the Department, the company was called upon to tender this additional payment, which was found to be \$13,182.72. A draft for this amount was submitted by the company and transmitted to this office by the Department under date of July 16 last for collection, the proceeds to be placed to the credit of the Shoshone and Bannack Indians as required by the act above referred to.

**Fort Peck Reservation, Montana.**—This office has had considerable correspondence with officers of the *St. Paul, Minneapolis and Manitoba Railway Company* (*Great Northern line*) relative to the removal of gravel by the company from this reservation for the purpose of ballasting its line of railway. It was maintained by this office that the act of February 15, 1887 (24 Stats., 402), granting the company right of way, did not authorize it to transport gravel beyond the limits of the reservation; and June 30 last the agent was directed to allow no more to be taken from the said beds for use outside of the reservation.

**Former Great Sioux Reservation in the Dakotas.**—By act of March 2, 1889 (25 Stats., 888), the *Chicago, Milwaukee and St. Paul Railway Company* and the *Dakota Central Railway Company* were granted, upon compliance with certain conditions, the right to occupy, prior to any white person or corporation, the right of way described in certain agreements heretofore negotiated by these companies with the Sioux Indians (see House Ex. Docs. Nos. 11 and 20, Forty-eighth Congress, first session). Before securing any rights thereunder they were required to have made the payments stipulated within 6 months after the act took effect and within 9 months thereafter to have filed with the Department maps of the definite location of the lands to be occupied by each.

Nine maps of the definite location of the line of the proposed railway

west of the Missouri River, together with a plat of the 640-acre tract of ground to be used for railway purposes on the west bank of the said river and a plat of the tract of 188 acres on the east bank, were duly filed with and approved by the Department, and the sum of \$15,335.76, which had been previously paid under the agreements and held in the Treasury pending their ratification, has been applied in accordance with the provisions of the act.

The total length of the proposed road appears from the approved maps to be 175.23 miles. Payment has been made for only 90.1 miles and when the work of construction shall be carried beyond 100 miles west of the Missouri River the additional payment upon the remainder of this line (85.13 miles), at \$110 per mile, will become due.

The Dakota Central Railway Company failed to file maps of the definite location of its line of railway within the limit prescribed and therefore, January 26, 1891, this office presented the matter to the Department, with a full report of all facts in the case.

**Indian and Oklahoma Territories.**—By act of June 27, 1890 (26 Stats., 181), the *Chicago, Kansas and Nebraska Railway Company* was authorized to sell its entire line of road and all its railway property in the Indian and Oklahoma Territories to the *Chicago, Rock Island and Pacific Railway Company*. May, 1891, the latter company filed in this office for record a first mortgage covering this property, executed to the United States Trust Company of New York.

December 4, 1890, the attorneys for the *Choctaw Coal and Railway Company* filed for record in this office a mortgage covering its property in the Choctaw Nation, executed to the Girard Life Insurance, Annuity, and Trust Company of Philadelphia in the sum of \$1,000,000. The act of February 21, 1891 (26 Stats., 765), extends the right-of-way acts of this company so that it shall have until February 18, 1894, to build.

November 3, 1890, the attorneys for the *Kansas and Arkansas Valley Railway Company* submitted two drafts aggregating the sum of \$3,438.72 to cover the annual payment of \$15 per mile required by its right-of-way act.

September 12, 1890, the *Kansas City and Pacific Railway Company* filed a map of the definite location of the first 25-mile section of its line of railway which, September 13, 1890, was submitted to the Department by this office, with a recommendation that it be approved.

**Nez Percés Reservation, Idaho.**—The maps of the definite location of the *Spokane and Palouse Railway* through this reserve were approved by the Department April 2, 1891, after which they were transmitted to the agent by this office, with instructions to convene the Indians in council for the purpose of having them agree upon the amount of compensation to be paid them in their tribal capacity for the right of way, and also the amount to be paid to such individual members as would sustain damages in construction of the road.

**Red Cliff Reservation, Wisconsin.**—In 1885 the *Bayfield Transfer Railway Company* executed agreements with the Red Cliff band of Indians for

right of way through their common lands, and also with certain individual members of said band holding lands in severalty under patent. Without approving these agreements the Department authorized the company to proceed with the work of construction pending the preparation of papers, etc. This was not done, however, and January 5, 1891, this office received a communication from its attorneys, claiming for the company a vested right in said right of way, and requesting authority to begin construction. March 20 following, the whole matter was presented by this office to the Department, with the recommendation that the Assistant Attorney-General for the Interior Department be requested to give his opinion upon the questions raised. The opinion was rendered that the company had no vested right in said right of way, and that the matter was before the Department and subject to its decision. Pursuant to this the office approved the agreement with the band, and submitted it, with a blank form of relinquishment, to be used by the individual patentees in granting the right of way. Both of these were approved by the Department, and the agent has been instructed to see that no advantage is taken of the individual Indians by the company. The relinquishments of the individual patentees must receive the approval of the President to be valid.

**Red Lake, Cass Lake, Winnebagoish, and White Oak Point Reservations, Minnesota.**—October 23, 1890, maps of the definite location of the *Duluth and Winnipeg Railway* through these reservations were approved by the Department, and councils of all the bands of Chippewa Indians in Minnesota were directed to be convened for the purpose of having them agree upon the amount of compensation to be paid for right of way. The sum of \$5 per acre for all land to be occupied was agreed upon, except in the case of the Winnebagoish Reservation, where the sum fixed was \$10 per acre. May 25, 1890, the Department approved the said agreements and authorized construction.

**Sale of Pocatello Town Lots, and Final Settlement of Utah and Northern Railroad Company for Lands in Pocatello.**—The sale of the lots in this town site, which was segregated from the Fort Hall Reservation by the act of Congress approved September 1, 1888 (25 Stats., 452), has been made under the direction of the Commissioner of the General Land Office; but Special Agent Parker, of this Bureau, was instructed July 22 last to go there and remain during the sale, and to report to this office from time to time as the sale proceeded. His reports state in substance that the results of the sale were satisfactory, and that fair prices were realized. The act above referred to provides that the proceeds shall be deposited in the Treasury to the credit of the Indians, after deducting the expenses of the survey, appraisement, and sale.

The said act also granted right of way to the Utah and Northern Railway Company and provided that said Company should pay the sum of \$8 per acre for all lands occupied by it within said reservation, and, for a tract not to exceed 150 acres granted within the town of

Pocatello, the company was required to pay an additional sum equal to the average appraisal of each acre of town lots therein.

After the approval of the appraisal by the Department this payment was found to amount to \$13,182.72, and July 16, 1891, this office received, by reference from the Department, a draft from the company for this sum.

**Conditions to be Complied with by Railroad Companies.**—In the construction of railways through Indian lands a systematic compliance by companies with the conditions expressed in the right-of-way acts will prevent much unnecessary delay. Each company should file in this office—

1. A copy of its articles of incorporation, duly certified to by the proper officers under its corporate seal.

2. Maps representing the definite location of the line. In the absence of any special provisions with regard to the length of line to be represented upon the maps of definite location, they should be so prepared as to represent sections of 25 miles each. If the line passes through surveyed land, they should show its location accurately according to the sectional subdivisions of the survey; and if through unsurveyed land, it should be carefully indicated with regard to its general direction and the natural objects, farms, etc., along the route. Each of these maps should bear the affidavit of the chief engineer, setting forth that the survey of the route of the company's road from — to —, a distance of — miles (giving termini and distance), was made by him (or under his direction) as chief engineer, under authority of the company, on or between certain dates (giving the same), and that such survey is accurately represented on the map. The affidavit of the chief engineer must be signed by him officially, and verified by the certificates of the president of the company, attested by its secretary, under its corporate seal, setting forth that the person signing the affidavit was either the chief engineer or was employed for the purpose of making such survey, which was done under the authority of the company. Further, that the line of route so surveyed and represented by the map was adopted by the company by resolution of its board of directors of a certain date (giving the date) as the definite location of the line of road from — to —, a distance of — miles (giving termini and distance), and that the map has been prepared to be filed with the approval of the Secretary of the Interior, in order that the company may obtain the benefits of the act of Congress approved — (giving date).

3. Separate plats of ground desired for station purposes, in addition to right of way, should be filed, and such grounds should not be represented upon the maps of definite location, but should be marked by station numbers or otherwise, so that their exact location can be determined upon the maps. Plats of station grounds should bear the same affidavits and certificates as maps of definite location.

All maps presented for approval should be drawn on tracing linen, the scale not less than 2,000 feet to the inch, and should be filed in duplicate.

These requirements follow, as far as practicable, the published regulations governing the practice of the General Land Office with regard to railways over the public lands, and they are, of course, subject to modification by any special provisions in a right-of-way act.

## REMOVAL OF CHARLOT'S BAND TO FLATHEAD RESERVE.

Under the provisions of the act of Congress approved March 2, 1889 (25 Stats., 871), which authorized the Secretary of the Interior to secure the consent of such of the Indians of said band as hold patents to lands in the Bitter Root Valley, in Montana, to the appraisal and sale of such lands,

Gen. Henry B. Carrington, of Hyde Park, Mass., was appointed a special agent to secure the consent of said patentees and make the appraisements provided for. His report is printed in Senate Ex. Doc. No. 70, *Fifty-first Congress, first session*. A paragraph in the last Indian bill (26 Stats., 1009) contains an appropriation of \$5,500 for the removal of these Indians from their present homes and their settlement upon the Jocko (or Flathead) Reservation, and General Carrington is now engaged in that work. Agent Ronan, of the Flathead Agency, has been instructed to receive them upon their arrival and to look after their location and settlement upon the lands under his jurisdiction.

### GRAZING ON CROW RESERVATION, MONT.

The agreement with the Crow Indians, ratified by the act of Congress April 11, 1882 (22 Stat., 43), provides as follows:

That if at any time hereafter we, as a tribe, shall consent to permit cattle to be driven across our reservation or grazed thereon, the Secretary of the Interior shall fix the amount to be paid by parties so desiring to drive or graze cattle; all moneys arising from this source to be paid to us under such rules and regulations as the Secretary of the Interior may prescribe.

Under this agreement the Indians in council have consented from time to time to pasturage on their reservation, and the amounts paid by the cattle men have been fixed by the Department and received and accounted for by the agent. This system, however, engendered much dissatisfaction among the Indians, while the cattle men became involved in almost continuous strife in regard to alleged encroachments upon districts occupied by them, thus bringing upon this office much annoyance and labor.

To avoid these complications, and to bring matters more under its systematic control, this office, March 16, 1891, formulated a system which was submitted to and received the approval of the Department. It constituted five grazing districts, which were, under advertisement, to be let to the highest bidder. The permit agreements, covering the five districts, executed by Agent Wyman, to be in force from July 1, 1891, to June 30, 1894, were approved by this office June 11 and by the Department June 12, and are more particularly described as follows:

The permit agreement covering district No. 1, executed with Samuel H. Hardin, of Bingham, Wyoming, is estimated to contain 188,000 acres, and the price to be paid therefor is 3 cents per acre per annum, or \$16,920 for 3 years. The maximum number of cattle to be held at any one time is limited to 8,500 head.

District No. 2, estimated to contain 191,000 acres, was secured by the Columbia Land and Cattle Company, by its managing director, M. Rosenbaum, esq., of Chicago, Ill., at the rate of 3.95 cents per acre per annum, or \$22,633.50 for three years. The maximum number of cattle to be held at any one time is 9,000 head.

Portus B. Weare, of Chicago, Ill., holds the permit covering district

No. 3, estimated to contain 199,000 acres, and the price to be paid is 3.51 cents per acre per annum, or \$20,954.70 for three years; maximum number of cattle, 8,000.

District No. 4, estimated to contain 179,000 acres, at 3.57 cents per acre, or \$19,170.90 for 3 years, is held by Thomas Paton, of New York city; maximum number of cattle, 7,500.

The permit covering district No. 5, estimated to contain 89,000 acres, is held by Matthew H. Murphy, of Miles City, Mont., at 3.62 cents per annum, or \$9,665.40 for three years; maximum number of cattle, 5,000.

It is provided in these agreements that no horses, sheep, or hogs shall be introduced upon these lands, and that the herds and private holdings of the Indians shall be kept free from interference by the stock of the parties holding these permits.

A comparison of the proceeds of the two systems shows that under the arrangement now in force the diminished reservation yields a greater return than the entire reservation did under the old system. Under the former, the proceeds during the last fiscal year aggregated \$24,079.65, while under the present, the annual proceeds will be \$29,781.50, notwithstanding the fact that an area of 1,800,000 acres from the western portion of the reservation has been relinquished by the Indians to the Government.

#### CHEROKEE FREEDMEN, DELAWARES AND SHAWNEES.

By an act entitled, "An act to secure to the Cherokee freedmen and others their proportion of certain proceeds of lands under the act of March third, eighteen hundred and eighty-three," approved October 19, 1888 (25 Stats., p. 608), there was appropriated \$75,000, the amount actually expended from this sum to be charged against the Cherokee Nation, on account of its lands west of the Arkansas River, and to be a lien to be deducted from any payment thereafter made by reason of those lands. It was stipulated that this fund should be distributed per capita by the Secretary of the Interior, first, among such freedmen and their descendants as were mentioned in the ninth article of the treaty of July 19, 1866; second, among the Delaware\* tribe of Indians incorporated into the Cherokee Nation; and, third, among the Shawnee† tribe of Indians incorporated into the Cherokee Nation. The distribution was to be made in such manner and in such amounts as to give to the Freedmen, Delawares, and Shawnees per capita payments equal to those which had been made to Cherokees by blood ‡ out of the sum

\* Agreement made under the fifteenth article of the treaty of 1866 by the Cherokees and Delawares on the 8th of April, 1867, and approved by the President April 11, 1867.

† Agreement made under the aforesaid article by the Cherokees and Shawnees on the 7th of June, 1869, and approved by the President June 9, 1869.

‡ This payment was made in accordance with an act of the Cherokee legislature which was passed over the veto of the principal chief, and became a law on the 19th of May, 1883.

of \$300,000 appropriated by the act of March 3, 1883 (22 Stats., p. 624).

By the Indian act approved March 2, 1890, the further sum of \$5,000 was appropriated to enable the Secretary of the Interior to ascertain who were entitled to share in the per capita distribution of the aforesaid sum of \$75,000 and to make payment thereof. (25 Stats., p. 994).

In pursuance of said legislation, John W. Wallace, of Leadville, Colo., was appointed a special agent, and under instructions from this office July 11, 1889, he was informed that there were three classes of freedmen coming within the purview of the ninth article of the Cherokee treaty of 1866; first, those liberated by the voluntary act of their former owners or by law; second, all free colored persons who were in the Cherokee country at the commencement of the rebellion or who returned within 6 months after the proclamation of the treaty of August 11, 1866; and, third, the descendants of the two classes named.

The question of the rights of the Delawares and Shawnees was more susceptible of ready adjustment, the terms of their incorporation with the Cherokees being fully set out in Senate Executive Document No. 86, Forty-eighth Congress, first session, and House Report No. 844, Fiftieth Congress, first session, which were furnished him.

He was directed to proceed to the Union Agency, Ind T., and elsewhere, as might be found necessary, and, after consultation with Agent Bennett, to adopt some plan to be observed in making the necessary enrollment. He was especially directed to give the widest publicity to the provisions of the act and to the fact that evidence and the testimony of claimants would be received at a given time and place, to the end that all persons interested might have ample opportunity to present their claims, and that sufficient time might be allowed to give every claimant an opportunity to fully present his case and to have it properly considered. He was also instructed to obtain from the Cherokee authorities certified copies of the schedules of enrollment of the freedmen referred to in the ninth article of the treaty of 1866 who were duly recognized by the nation, as well as of the schedules of Delaware and Shawnee Indians incorporated in the nation by said agreements. He was further directed to obtain a certificate in due form as to the amount of per capita payment made to the Cherokees by blood under the act of the Cherokee legislature of May 19, 1883, aforesaid.

In his report, of April 8, 1890, Agent Wallace states that, after consulting with Agent Bennett and before settling upon a definite plan of action, he consulted with J. B. Mayes, principal chief of the Cherokee Nation, and obtained the opinions of many of the principal Cherokees as well as of intelligent freedmen. It was suggested that, in the absence of some one who had personal knowledge of the character and claim, of those who should present themselves for enrollment, the opportunity for imposition upon him and injury to the nation would be very great; and he therefore requested Chief Mayes to appoint some person properly qualified, whose duty it should be to be present at all examina-

tions, and to assist the special agent by every means, not only in detecting fraud, but in observing the manner in which the investigation was conducted, etc. Chief Mayes so far approved the suggestion as to appoint Judge R. F. Wyly for this work, but subsequently reconsidered his action, concluding—that the power to make such an appointment vested solely in the national council. Agent Wallace commenced taking testimony in September, 1889, and concluded his work in the spring of 1890. He reported 5,129 persons as entitled to participate in the per capita distribution of the \$75,000, as follows:

Cherokee freedmen.....	3,599
Delawares .....	821
Shawnees.....	709
Total .....	5,129

As the Cherokee Nation made a per capita payment of \$15.50 to each Cherokee by blood out of the appropriation of \$300,000 under the act of 1883, it was estimated that it would require the sum of \$79,499.50 to pay all of said claimants.

These schedules have been carefully revised by this office, together with the mass of evidence taken and submitted by Agent Wallace. As a result of that examination and revision a schedule was submitted to you on the 29th of October, 1890, containing the names of 1,988 living and 107 dead freedmen who had been, or were descendants of those who had been, recognized by the Cherokee authorities; of 1,087 who were "admitted" by Special Agent Wallace as entitled to participate in the per capita distribution, whose decision was sustained by the evidence presented; of 13 whom he rejected, but from the evidence this office held should have been "admitted;" and of 21 persons known as "free colored" persons who were in the country at the commencement of the rebellion and were then residents of the Cherokee Nation, and their descendants; making 3,216 persons who were, in the judgment of this office, from the evidence and facts presented in Special Agent Wallace's report and in pursuance of the policy set forth in his plan of action, entitled to participate in the payment. This schedule was approved by the Department November 21, 1890.

At the same time a list of 130 names was presented, in which the evidence submitted was not in my judgment sufficient to entitle the claimants to participate in this fund.

A copy of the approved schedule and this list of 130 names were forwarded December 19, 1890, to Agent Bennett for further evidence. The claims of the persons represented on the "questioned list" having been partially investigated by Agent Bennett, and other claimants (some of whom had been rejected by Mr. Wallace), having filed new evidence with him, a supplemental schedule of said Cherokee freedmen, containing 102 names, was submitted to you June 25, 1891. Of these 87 had been on

the "questioned list." This supplemental schedule was approved July 7, 1891, and a copy thereof sent to Agent Bennett July 11, 1891, for payment. The two schedules contained an aggregate of 3,318 names, and from this number, upon recommendation of Agent Bennett, there were stricken 40 names, being the names of persons who were born after or died before the 3d of March, 1883, or were unknown or duplicated, or were paid by the Cherokee or Creek Nation of Indians and did not wish to be enrolled with the Cherokee freedmen, thus making the true aggregate 3,278.

Of the 821 Delaware Indians reported by Agent Wallace as entitled to participate in the per capita distribution of said fund, etc., a schedule, as revised by this office, containing the names of 754 Delawares, was submitted by you May 15, 1891, approved by you the following day, and sent to Agent Bennett for payment May 18, 1891. A schedule of 157 names, which had been reported by Agent Wallace as entitled, was not submitted for your approval, but was sent to Agent Bennett for further investigation, for the reason that in some instances the age of claimant had not been stated, and that the dates of the deaths of many reported as deceased had not been furnished.

Of the 709 Shawnee Indians reported by Special Agent Wallace as entitled, a schedule, as revised by this office, containing the names of 694 Shawnees, was submitted to you September 25, 1891. This schedule was approved September 26, 1891. At the same time, a schedule of 19 names, which Agent Wallace claimed to be entitled, but whose evidence of title was not satisfactory, was laid before you and returned, with directions that Agent Bennett make further investigation of the several cases represented thereon. A copy of the approved schedule for payment and of this schedule for investigation was forwarded to Agent Bennett October 6, 1891.

It appears, therefore, that the number of persons entitled to share in the per capita distribution of the \$75,000, as examined, and reported by Special Agent Wallace, revised by this office and finally approved by the Department (less the 40 freedmen reported by Agent Bennett as not entitled), can be stated as follows:

Cherokee freedmen .....	3,278
Delawares .....	754
Shawnees .....	694
Total .....	4,726

This number of claimants is subject to decrease by reason of the discovery of duplications, or the fact of birth before or of death after March 3, 1883, the date of the appropriation, or other causes; also to increase by reason of evidence which may hereafter be furnished establishing a claim for recognition as entitled to share in the per capita distribution of said fund.

## ERRONEOUS SURVEY OF DEVIL'S LAKE RESERVATION.

By the fourth article of the treaty of February 19, 1868, between the United States and the Sisseton and Wahpeton bands of Dakota or Sioux Indians (15 Stat., 505), the boundaries of the Devil's Lake Reservation are described as follows :

Beginning at the most easterly point of Devil's Lake; thence along the waters of said lake to the most westerly point of same; thence on a direct line to the nearest point on the Cheyenne River; thence down the said river to a point opposite the lower end of Aspen Island; and thence on a direct line to the place of beginning.

The present lines were run in 1875, and their correctness was not questioned until 1883, when the agent discovered and reported to this office that the western boundary line did not touch the said river at the nearest place from the most westerly point of Devil's Lake. The matter was referred to the General Land Office for examination, and June 30, 1873, the Commissioner informed the Department that he had directed the surveyor general of Dakota to let a contract for certain surveys, to ascertain whether "the west end of Devil's Lake was nearer to some other point on the Cheyenne than the point fixed by Bates in 1875, and if so, to find the nearest point, and establish a new west boundary of the reservation, and close the public surveys upon it.

By departmental communication dated July 2, 1883, the General Land Office was requested to take no steps looking to the change of the western boundary as then established until a careful examination had been made and all the facts reported to the Department.

September 11, 1883, the General Land Office reported that examination and survey had developed the fact that the western boundary line as originally established by Deputy C. H. Bates did not strike the Cheyenne River at the nearest point by  $2\frac{1}{2}$  miles, nor so near as it would if it had been run on a different course; and submitted the case to the Department for decision as to whether the line should stand.

September 18, 1883, the Department held that no change would be made in the western line as established in 1875, for the reason that a large number of settlers had in good faith gone upon the lands lying west of the said line and acquired rights thereon, believing them to be a part of the public domain.

By the error in the survey of 1875, a reservation was established which contained 64,000 acres less than that provided in the treaty, and, had the points named in the treaty been followed by the surveyors, no question would have arisen.

The whole subject has been reexamined by this office, and March 29, 1890, a report was submitted, with the recommendation that as the United States had parted with the title to a large portion of the tract in question, so that it could not be added to the reservation, some action

should be taken by Congress with a view to compensating the Indians for the loss they had sustained by reason of the erroneous survey.

As the land thus segregated from the reservation was agricultural, this office deemed \$1.25 per acre a reasonable compensation for said 64,000 acres, making a total of \$80,000, and recommended that payment be made for the loss thus sustained, the amount to be expended for the benefit of the Indians under the direction of the Secretary of the Interior.

The desired legislation was not secured until the passage of the Indian appropriation act for the fiscal year ending June 30, 1892 (26 Stats., 1010), which contains the following provision :

For the payment to the Sisseton and Wahpeton bands of Sioux Indians of Devil's Lake Reservation, in the State of North Dakota, for sixty-four thousand acres of land (being at the rate of one dollar and twenty-five cents per acre) to which they are justly entitled under treaty of February nineteenth, eighteen hundred and sixty-seven (fifteenth Statutes, five hundred and five), but which were not included within their reservation boundaries, surveyed in eighteen hundred and seventy-five, this amount to be expended under the direction of the Secretary of the Interior in the purchase of stock and agricultural implements, and in promoting the comfort and improvement of said Indians, eighty thousand dollars, to be immediately available.

A small portion of the money has already been expended in the purchase of seed potatoes and pork, and contracts have been let for 200 brood mares, 100 milch cows, 100 steers, 4 bulls, 75 plows, 100 sets of double harness, 50 set ox harness, and estimates have been submitted for material and labor to repair 217 Indian houses, all to be paid for from the said \$80,000.

#### CHIPPEWA AND MUNSEE RESERVATION, IN KANSAS.

By the first article of the treaty of July 16, 1859, with the Swan Creek and Black River Chippewas, and the Munsee or Christian Indians of Kansas (12 Stats., p. 1105), the United States agreed that the reservation of thirteen sections of land in Franklin County, set apart for the entire band of Swan Creek and Black River Chippewas, should inure to the benefit of that portion of said band then residing thereon, and should also be a permanent home for the band of Munsee or Christian Indians who by this treaty united with the said Chippewas. Provision was made for the allotment of land in severalty to these Indians, care being taken to respect the improvements of the Chippewas so far as it could be done consistently with the rights of the Munsee or Christian Indians, and 160 acres was set apart for the establishment of a manual labor school and for other educational or missionary purposes.

These allotments were to be made in as regular and compact a body as possible, so as to admit of a distinct and well-defined boundary around the whole tract, which was not to exceed seven sections of land; the intermediate parcels not included in any allotment to be held in common, subject to distribution and assignment in severalty to the increase

in said bands in such manner as the Secretary of the Interior should direct. The assignment of lands in severalty was to be made under the direction of the Secretary, and upon approval was to be final and conclusive. Certificates of allotment were to be issued by this office for the tracts assigned, specifying the names of the individuals to whom they had been assigned respectively, setting forth the fact that the land described therein was for the exclusive use and benefit of the person named, his or her heirs and descendants, and that the several tracts should not be alienated in fee, leased, or otherwise disposed of, except to the United States, or to the members of said band of Indians under such rules and regulations as might be prescribed by the Secretary of the Interior; neither should they be subject to taxation, levy, sale, or forfeiture until otherwise provided by Congress. Rules and regulations were to be made prior to the issue of said certificates respecting the disposition of any of said tracts in case of the death of the reservee, so that they might be secured to the family of such deceased persons, and in case any assigned tract should be abandoned, the Secretary of the Interior should take such action in relation to the proper distribution as might be expedient.

The second article provided for the sale of the remainder of the lands.

The land was selected as required, and contained an area of 4,395.31 acres, out of which the W.  $\frac{1}{2}$  of the NE.  $\frac{1}{4}$ , and the E.  $\frac{1}{2}$  of the NW.  $\frac{1}{4}$  of section 24, T. 17, range 18, containing 160 acres, was assigned for school and missionary purposes, and 3,549.03 acres to the 84 members of the United Chippewa and Munsee or Christian Indians. These assignments, made by Agent Fuller, October, 1859, were approved by the Department September 5, 1860, and certificates were issued September 20 following, before any rules or regulations were issued respecting their disposition, as required by the treaty. Agent Fuller at the same time reported a fine tract as "reserved for school purposes" at the special request of the Indian council, being the NE.  $\frac{1}{4}$  of the SW.  $\frac{1}{4}$  of section 12, in T. 17, R. 18, but the schedule submitted did not contain a description of this land. Nevertheless, the Indians built a schoolhouse thereon and the tract is still held and used for that purpose, although the treaty provided that only 160 acres should be reserved for school purposes.

On the 6th of February, 1867, Agent Martin transmitted additional lists of assignments for 19 persons, children of Indians born after the first assignment, or persons subsequently admitted to the tribe, and these lists were submitted to the Department February 11, 1867, and returned approved February 13, with direction to issue certificates.

One of them reads as follows:

CHIPPEWA AND MUNSEE RESERVE, *January 19, 1867.*

We, the undersigned head men and council of the Chippewas and Munsees, do hereby wish and desire that the quarter section of land known on our plat as mission land be divided and allotted to the within-named individuals.

John Williams to receive and be allotted for his two children, John Williams, jr., to be allotted the NE.  $\frac{1}{4}$  of said mission quarter, Henry E. Williams the SE.  $\frac{1}{4}$  of do.; Andrew Caleb the SW.  $\frac{1}{4}$  of do.; and Catherine Gokey the NW.  $\frac{1}{4}$  of do.; Elvira Wilson to be allotted any or all the fractions lying contiguous to the southwestern boundary line of our reserve.

EDWARD MCCOONSE (his x mark),  
 LOUIS GOKEY (his x mark),  
 IGNATIUS CALEB (his x mark),  
 MOSES H. KILLBACK,

Council.

Maj. H. W. MARTIN,  
*United States Indian Agent.*

The foregoing was written and read and subscribed in my presence.

HENRY DONOHUE.

The 2d of February, 1871, this office forwarded to Superintendent Hoag, for the signatures of the council, a schedule of fifteen of the aforesaid assignments, numbered 85 to 99 inclusive (leaving out the assignment of the mission land to John and Henry E. Williams, Andrew Caleb, and Catharine Gokey), and adding one other name, Mary L. Turner, numbered 104. This schedule, signed by the council, was returned to this office February 28, 1871, and approved by the Department March following, and certificates were issued April 6.

It is presumed, though nowhere stated, that the assignment and issue of certificates to John and Henry Williams, Andrew Caleb, and Catherine Gokey was omitted because they were for lands that had previously been assigned and approved for school and mission purposes. Subsequent investigation showed that Henry Williams, Andrew Caleb, and several other allottees in the second assignment were dead before the allotments were made, and in June, 1880, the mission lands were, in violation of treaty stipulations, leased by the council, the proceeds of lease passing into the missionary's hands for the benefit of the school located upon the NE.  $\frac{1}{4}$  of the SW.  $\frac{1}{4}$  of section 12. December, 1884, the school was closed, most of the children having been sent to Haskell Institute, and in 1886 the building was burned.

In 1882 these Indians appointed a delegation to confer with the general council of the Cherokee Nation in regard to removal and a consolidation with them; and in 1884 a bill was introduced in Congress authorizing them to sell their lands, to purchase land in Indian Territory with a view to a union with some tribe located therein, or to purchase a distinct tract of country there for their exclusive use.

Owing to the peculiar tenure by which they hold their lands, many complications have arisen in the title by reason of the death of reservees, and it is becoming a tedious and difficult matter to determine who are the present legal owners or heirs of any of the allotments, or the proportionate share of each heir. Many illegal transfers of some of these allotments have from time to time been made to white persons or other persons not members of the tribe. Legal transfers have been presented for the approval of the Department, most of which are to certain members of the tribe who have the means to purchase, and as

they are the only ones who can buy it is only a question of time, if no relief is granted, before these members, few in number, will become the owners of the whole reservation. Some of the allottees have left the reservation, and it is probable will never return. Complaint has been made that some allotments have been made to white persons who were never members of the tribe.

In view of this condition of their affairs and the fact that under the general allotment act of February 8, 1887, they were made citizens of the United States, I respectfully recommend that Congress be asked to grant authority to issue patents in fee to the allottees of the several tracts, or their assigns, and that such lands as are vacant or abandoned, including their school and mission lands and the tract on which the schoolhouse was located, be appraised and sold by the Commissioner of the General Land Office, the net proceeds arising from the sale to be funded for the use and benefit of those members of said tribes born since the allotments were made, or who never received an allotment.

#### MEDAWAKANTON BAND OF SIOUX IN MINNESOTA.

In various Indian appropriation acts the aggregate sum of \$58,000 has been provided for the benefit of these Indians. By the act of July 4, 1884, Congress appropriated \$10,000 for the purchase of stock and other articles necessary for their civilization and education, and to assist them in their efforts to become self-supporting (23 Stats., p. 87).

By the act of March 3, 1885, that of 1884 was so amended as to allow the Secretary of the Interior to disburse the same to them for agricultural implements, lands, or cash; according to his discretion.

The act of May 15, 1886, appropriated the further sum of \$10,000 to be expended under the same general conditions and for the same general purposes.

By the act approved June 29, 1888, Congress appropriated \$10,000 for those of the Medawakanton Sioux who had resided in Minnesota since the 20th day of May, 1886, and had severed their tribal relations, this sum to be expended under the direction of the Secretary of the Interior for agricultural implements, cattle, horses, and lands, provided that out of this amount, if he thought it for the best interests of the Indians, he might cause a schoolhouse to be built for their use, and at a cost not to exceed \$1,000 (24 Stats., p. 229).

By the act of March 2, 1889, the further sum of \$10,000 was appropriated for the support of those above named and those who were engaged on the 20th of May, 1886, in removing to Minnesota, had since resided there, and had severed their tribal relations—\$1,000 of this sum to be used for the completion and furnishing of the schoolhouse authorized by act of 1888, and the balance to be expended by the Secretary of the Interior in the purchase of such lands, agricultural implements, seeds, cattle, horses, food, or clothing as might be decided upon

in the case of each Indian or family. Provision was made for the appointment of a suitable person to make the expenditures in such manner that each of the Indians should receive as nearly as possible an equal amount in value out of this appropriation and that of June 29, 1888: Provided, that as far as practicable the lands should be purchased in such locality as each desired, and that none should be required to remove to any locality against their will (25 Stats., p. 992).

The act of August 19, 1890, appropriated \$8,000, to be expended in the same manner and for the same purposes as the last-mentioned appropriation; provided that \$2,000 of it should be used for the Prairie Island settlement of Indians in Goodhue County.

Under the authority set forth in these various acts Walter S. McLeod, esq., of Bloomington, Minn., was appointed October 16, 1886, special agent to purchase lands, etc., for this band of Sioux. At a total cost of \$4,103 he purchased 339.70 acres of land as follows: 10 acres in Dakota County for \$175; 84.70 acres in Goodhue County for \$1,070; 98 acres in Scott County for \$1,475, and 147 acres in Redwood County for \$1,383 (besides expending \$549.17 in paying off mortgages on 36 and 80 acres in Redwood County, purchased by the Indians, Charles Lawrence and Good Thunder, respectively). A schedule showing the Indians to whom the land was conveyed in fee, its area, and cost will be found on page 178.

Robert B. Henton, esq., of Morton (Birch Cooley post-office), Minn. was appointed, and October 20, 1888, was instructed, to make further purchase of land, for which additional appropriations had been made, and accordingly expended \$16,581.42 for 1,100.99 acres, as follows:

TABLE 12.—Lands purchased by Agent Henton for Medawakanton Sioux.

Date.	Vendor.	Area.	Cost.	Location.				County.
				Subdivision.	Sec.	T.	R.

	Total .....	1,100.99	16,581.42					

Special Agent Henton is now negotiating for another tract of 25 acres in Goodhue County for \$335, the title to which has not yet been made satisfactory to the Department.

The amount of land to which each member is entitled under the stipulations of the act of 1889 has not yet been determined, and therefore the lands purchased by Special Agent Henton have not been subdivided and allotted to individual members of the band.

### LEGALIZING THE RECORDS OF THE INDIAN OFFICE AND AUTHORIZING THE USE OF A SEAL.

Your attention is again invited to the subject of legalizing the recording of Indian deeds and other papers of this office and the authorization of the use of a seal, which was brought before the Department by Commissioner Atkins. In his report for 1887 (see page XLVI), he says:

In sundry treaties made with the Indians, from the Chickasaw treaty of September 20, 1816 (7 Stats., p. 150), to the treaty of the Sacs and Foxes of the Mississippi, February 18, 1867 (15 Stats., p. 495), grants of land were made to sundry individual Indians. On many of these grants or reservations restrictions were placed as to their conveyance, some requiring the approval of the President, others the approval of the Secretary of the Interior. By reason of these restrictions many deeds of conveyance from the reserves, or their heirs or representatives, have been submitted to this office for the requisite approval, and of each conveyance that has received such approval a record has been made in this office until there has accumulated 10,755 pages of such record, as follows, viz, 2,602 pages of individual and miscellaneous deeds; 5,130 pages of Shawnee deeds; 1,516 pages of Miami deeds; 1,458 pages of Kaskaskia, Peoria, Wea, and Piankeshaw deeds, and 49 pages of deeds from the L'Anse band of Chippewas.

There is no enactment of law that I can find authorizing the recording of these deeds. It has been done for the convenience of the office and for its guidance in the adjustment of any questions that might arise or that might be submitted for consideration respecting each particular tract, or touching any inquiry that might be made as to its status.

Many calls have been made, and their frequency is increasing, for certified copies of deeds recorded in this Office, the parties calling therefor averring, in many cases, that the original papers have been lost, destroyed, or mislaid, and that no record of such papers was made in the proper office of record. Many of these deeds pass the title to lands which, at the day of execution, may not have been of much value, but to-day, by reason of improvements made thereon, are very valuable. Therefore, since in many instances this Office has the only record which shows a transfer of said land from the Indian, I respectfully recommend and urge that Congress be requested to legalize these deed records, and all other records of this office, and to make it the duty of the Commissioner of Indian Affairs to continue to keep a record of every such conveyance that may hereafter be approved, and further, to empower him to prepare and certify under seal, such copies of records, books, and papers on file in this office as may be applied for, to be used in evidence in courts of justice and for other purposes (see seventh section of the act of July 4, 1836, 5 Stats., p. 111, and the twelfth and fifty-seventh sections of the act of July 8, 1870, 16 Stats., pp. 200, 207)\*, and to au-

\* For additional precedents, see act of April 9, 1824, 4 Stats., p. 18, chapter 35, and act of March 3, 1841, 5 Stats., p. 417.

thorize the use of a seal by this office, and to provide that papers authenticated therewith shall have the same validity as in case of the use of a seal by other Bureaus (see fourth and fifth sections of act of 1812, 2 Stats., p. 717).\*

Since this report was made there have been added to the record 24 pages of miscellaneous deeds, 78 of Shawnee deeds, 17 of Miami deeds, 9 of Kaskaskia, etc., deeds, and 76 of deeds from the L'Anse band of Chippewas; in all, 204 pages.

Realizing fully the necessity of keeping this record and its value to the many land-owners in Kansas, who are constantly applying for certified copies of deeds on record in this office to complete the chain of title to their land, I earnestly concur in the recommendation made by my predecessor in 1887.

As showing the necessity for prompt legislation, I invite your attention to the communication of P. T. McElhone, an attorney of Chicago, who, on the 6th of November, 1885, advised this office that in a lawsuit at that time but recently tried in that city, a certified copy of a deed, recorded in this office, was offered in evidence and was refused by the court, on the ground that neither the statutes of the United States, nor any act of Congress made it the duty of this office to keep a record of such conveyance. From this it would seem that the *very records themselves* of this office have been declared not to be competent evidence where the original paper is lost. The effect of such a decision should, in my opinion, be remedied at the earliest date.

It is a fact, as stated by the court alluded to, that there is no enactment of law authorizing the recording of these deeds, and, in view of the case above recited, I respectfully recommend and urge that Congress be requested to adopt such legislation as may be necessary to legalize the recording of these Indian deeds and other records of this office. Also to authorize the use of a seal by this office and to provide that all papers authenticated therewith shall have the same validity as in the case of the use of a seal by other bureaus of this Department.

#### INDIAN DEPREDACTIONS.

There were on file in this office at the close of the fiscal year ending June 30, 1890, as shown by my last annual report, 6,053 claims arising from Indian depredations, involving \$20,922,939. These have been augmented by 978 additional claims, involving \$3,530,561, which, added to the "Creek claims" (to be referred to later), make the total number now on file 7,983, and the aggregate sum claimed \$25,589,006. The unprecedentedly large number of filings during the last year was occasioned, no doubt, by the prevalent idea that Congress was about to legislate for the relief of this class of claimants, who thus hastened to get

\* For precedents additional to those referred to by Mr. Atkins, see the act of February 22, 1849, 9 Stats., p. 346, chapter 61, amended March 2, 1849, 9 Stats., p. 350, chapter 82.

their papers on file, lest they should be barred by the terms of the proposed act.

There are in the files of the office, but not yet entered upon its books (included, however, in the foregoing total, as above stated), 954 claims, involving \$1,135,506, which were filed before a commission authorized by a clause in the Indian appropriation act approved March 3, 1837 (5 Stat., 162), and are known as claims on account of depredations committed by the Creek and Seminole Indians during their war of 1836-'37. The clause in the appropriation act is as follows:

That the sum of \$5,000 be, and the same is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to enable the President of the United States by suitable agents to inquire what depredations were committed by the Seminole and Creek Indians on the property of citizens of Florida, Georgia, and Alabama immediately before the commencement of actual hostilities on the part of said respective tribes of Indians; what amount of depredations were committed during the pendency of said hostilities; what portion of the Creek tribe were engaged in such hostilities, and what depredations have been committed by a remnant of said tribe supposed to be friendly and a part of whom were actually employed against the Seminoles, since the removal of the main body of them west of the Mississippi, and that the President report the information so acquired to Congress at its next session: *Provided*, Nothing hereinbefore contained shall be so construed as to subject the United States to pay for depredations not provided for by the act of April 9th, 1816, and the acts amendatory thereto, nor by acts regulating the intercourse between the Indian tribes and the United States.

The claims provided for in the foregoing section were examined by that commission (as appears in Ex. Doc. H. R. 127, Twenty-fifth Congress, second session), and reported upon November 28, 1837, which report was, January 27, 1838, transmitted by President Van Buren to Congress for its consideration. No further action seems to have been taken, and the claims were returned to the files of the Indian Office (at that time part of the War Department), where they have since remained. Petitions regarding many of them have been filed in the Court of Claims, under the act of March 3, 1891, and they will now be regularly entered upon the records, as they should have been originally, and will be treated as other depredation claims.

The following tables will show the total number of claims filed and disposed of during the last fiscal year:

TABLE 13.—*Number of depredation claims on hand and received since March 3, 1885.*

	Number of claims.	Amount involved.
Claims on account of depredations committed by Creek and Seminole Indians in 1836-'37, filed before the Commission authorized by act of Congress, approved March 3, 1837	954	\$1,135,506
Claims on file March 3, 1885	3,846	13,981,816
Claims filed between March 3 and June 30, 1885	93	897,272
Claims filed during fiscal years ending June 30—		
1886	168	674,939

1891.....	357	345, 160. 25	1, 028, 187. 22
Acted upon by the Secretary of the Interior during 1891, pursuant to the act of March 3, 1885, but not reported to Congress.	5	15, 340. 00	28, 049. 75
Total.....	1, 733	2, 000, 517. 58	5, 668, 800. 04
Remaining on file in Indian Office June 30, 1891.....	6, 252	.....	19, 920, 205. 96

I submit two interesting and suggestive tables, which have been corrected to the end of this fiscal year. Table 15 shows the number of deprecations committed by Indians each year from 1812 to 1891, and the losses occasioned thereby, as indicated by claims presented. Table 16 gives the names of the tribes to which the deprecations are charged, with the number of deprecations committed by each tribe and the amount of losses thereby occasioned.

TABLE 15.—Number of deprecations committed each year, from 1812 to 1891, and the total amount involved in the claims.

Year.	No.	Amount.	Year.	No.	Amount.	Year.	No.	Amount.
1812.....	1	\$7, 548	1853.....	79	\$244, 340	1873.....	144	\$405, 303
1821.....	1	5, 770	1854.....	87	326, 298	1874.....	134	358, 511

May 17, 1796, under the approval of George Washington, Congress solemnly promised eventual indemnification to the citizens and inhabitants of the United States who might, through no fault of their own, lose their property at the hands of Indians who were holding treaty relations. In the nearly 100 years which has elapsed since that date the promise has been kept in regard to not more than 3 per cent. of the claims which have been filed. The law forbade these claimants under penalty of losing the amounts of their claims, from attempting by private efforts to recover their property where such efforts might involve the country in an Indian war—in the language of the law from taking “private satisfaction or revenge.” Becoming thus, by its own law, their agent and attorney, and forbidding them any other course of procedure, the Government appeared bound by honor and good policy to redeem its pledges and faithfully carry out its promises.

On the last day of its last session Congress enacted a law\* transferring jurisdiction as to the adjudication of all these claims from the Interior Department to the Court of Claims. This office has long desired, and frequently recommended that some such action should be taken; and while the measure adopted by the last Congress does not, in some of its aspects, meet my entire approval, yet in the main I welcome its enactment, and am glad that a step has been taken looking to the ultimate redemption of the obligations of the United States.

\* See page 637.

In section 6 of the act approved March 3, 1891, above referred to, appears the following :

That the amount of any judgment so rendered against any tribe of Indians shall be charged against the tribe by which, or by members of which, the court shall find that the depredation was committed, and shall be deducted and paid in the following manner : First, from annuities due said tribe from the United States ; second, if no annuities are due or available, then from any other funds due said tribe from the United States arising from the sale of their lands or otherwise ; third, if no such funds are due or available, then from any appropriation for the benefit of said tribe, other than appropriations for their current and necessary support, subsistence, and education ; and fourth, if no such annuity, fund, or appropriation is due or available, then the amount of the judgment shall be paid from the Treasury of the United States : *Provided*, That any amount so paid from the Treasury of the United States shall remain a charge against such tribe, and shall be deducted from any annuity, fund, or appropriation hereinbefore designated which may hereafter become due from the United States to such tribe.

Under the operation of the law contained in this section, it is apparent that a lien is constituted upon all funds which now are or may hereafter become due to any Indians on any account whatever, for the payment of these claims, except so much as may be necessary "for their current and necessary support, subsistence, and education." By an examination of the tables herewith presented, showing the date of origin and the amount of the claims on file in this office, it will be seen that many of them originated at so remote a period that the present generation of Indians can not possibly have any knowledge of or personal responsibility for them. It thus occurs that a great hardship is liable to be imposed upon the present generation (which is making, comparatively speaking, satisfactory progress in civilization), by punishing children for crimes committed by their ancestors, and imposing upon them, in their advanced and advancing condition, a burden which was created by their fathers while yet in a state of savagery. If the law is permitted to remain as it is, it will work great hardship and will be a matter of very considerable discouragement to the present, if not to future generations. Many of the Indians belonging to the different tribes which are chargeable with depredations are poor and struggling to become self-supporting, and the collection of these amounts will unduly punish them for sins of which, personally, they are not guilty. It certainly would provoke, in many cases, a spirit of antagonism and restlessness that would be very hurtful, primarily to the Indians themselves, and might seriously impair the peaceable relations between them and the Government, in which event the unlimited expense of reducing them to a state of peace would be far greater than the payment of these claims outright from the United States Treasury.

When the different tribes which have entered into treaties and agreements with the United States bargained that the moneys to become due them by reason of such treaties or agreements should be held in trust by the Government and be paid to them in the manner and form set

forth in such agreements or treaties, it was not contemplated by them that it would, at some subsequent period, enact a law, in the consideration of which they could have no part, which would practically confiscate these various moneys and divert their payment into an altogether different channel from that originally intended and agreed upon.

In view of this situation, I would respectfully recommend that the act be amended so as to leave it discretionary with the Secretary of the Interior to determine as to whether or not the financial condition of any tribe, against whom judgment may be obtained in the Court of Claims on account of depredations committed by members of that tribe, will justify the deduction from tribal moneys of the funds necessary for the payment of such judgments. At present it will be noticed there is no such discretion, except as to what funds may be necessary for the "current and necessary support, subsistence, and education" of such Indians.

Under the provisions of the act above referred to the depredation claims on file in this office are transferrable to the Court of Claims only upon its order given in each individual case; hence it is that the great bulk of them, which were on file the 3d day of March, 1891, still remain here and the following provision concerning their care and custody was made in said act:

That the investigation and examinations, under the provisions of the acts of Congress heretofore in force, of Indian depredation claims shall cease upon the taking effect of this act, and the unexpended balance of the appropriation therefor shall be covered into the Treasury, except so much thereof as may be necessary for disposing of the unfinished business pertaining to the claims now under investigation in the Interior Department pending the transfer of said claims and business to the court or courts herein provided for, and for making such transfers and a record of the same and for the proper care and custody of the papers and records relating thereto.

In obedience to the order of the court there had been transmitted at the end of this fiscal year the papers in only 763 claims, from which it will be seen that a very inconsiderable number of claimants have taken advantage of the jurisdiction conferred upon the Court of Claims. As, under the act referred to, they are given 3 years from the date of its passage in which to present their petitions in the court (otherwise they will be barred), it is manifest that unless they proceed more expeditiously in the future than they have in the past in transferring their cases the end of the period will find a very large number of them barred.

The "care and custody" of these claims devolves upon this office a considerable amount of labor, of which no visible sign appears. Attorneys and claimants must obtain the data from these papers before they can prepare their petitions. The searching and verification of the records; the making of copies of lost papers or records; the large and miscellaneous correspondence involved; the transmittal, under the orders of the court, of the various papers with all the records pertaining thereto, necessitating as it does laborious search and careful scrutiny in order that errors may be guarded against; as well as other points too numerous to be specifically mentioned, make the work

onerous and exacting, as it will continue to be until the last case shall be disposed of or the 3 years' limitation shall intervene.

Up to the 3d of March, 1891, special agents had investigated a large number of claims. There now remain in the files of this office a total of 605 which have been so investigated within the last two years, under the act of March 3, 1835, and which have not been reported to the Secretary for transmission to Congress as provided by that act. As in their investigation the claimant and the United States were each represented, or had the opportunity of being so, and the investigations were carefully and thoroughly made and by competent authority, it is believed that in all probability when these cases shall have found their way to the Court of Claims no further testimony concerning them will be desired or required; and thus it will be found that the service performed by these special agents will not have proved fruitless, but will result in a saving of time and expense to all parties interested.

## INDIAN FINANCES.

## FUNDS AVAILABLE DURING THE FISCAL YEARS 1890-'91 AND 1891-'92.

**Appropriations.**—The following statement shows the amounts that were appropriated by Congress for the Indian service for the fiscal years 1890-'91 and 1891-'92.

TABLE 17.—*Appropriations for 1890-'91 and 1891-'92.*

Appropriations.	1890-'91.	1891-'92.	Increase.
Fulfilling treaties with Indian tribes, permanent.....	\$1, 543, 675. 29	\$3, 996, 829. 08	\$2, 453, 153. 79
Fulfilling treaties with Indian tribes, annual.....	1, 597, 740. 00	1, 754, 740. 00	157, 000. 00
Support of Indian tribes, gratuities.....	746, 000. 00	757, 500. 00	11, 500. 00
Support of Indian schools.....	1, 842, 770. 00	2, 291, 650. 00	448, 880. 00
Incidentals and contingent expenses.....	171, 000. 00	173, 000. 00	2, 000. 00
Current and miscellaneous expenses.....	1, 226, 209. 40	4, 510, 273. 40	3, 284, 064. 00
Total.....	7, 127, 394. 69	13, 483, 992. 48	6, 356, 597. 79

Under the head of "Fulfilling treaties with Indian tribes, permanent," are such specified sums as are required to be appropriated annually under existing treaties, either for a certain number of years or for an indefinite period.

A number of treaties contain provisions for clothing, subsistence, agency and school employés, etc., to be furnished by the United States for a certain number of years, but such provisions do not state specifically the amount of money that must be appropriated. These amounts are annually approximately estimated by this office, and the sums so appropriated can be used only for expenditures incurred during the fiscal year for which the appropriations are made. The total sums so appropriated by Congress for the fiscal years 1890-'91 and 1891-'92 are to be found in above table (No. 17) under the head of "Fulfilling treaties with Indian tribes, annual."

A number of the tribes have no treaties; others have treaties, but the amounts due thereunder are not sufficient for their support. Congress therefore annually appropriates certain sums as gratuities. The total sums appropriated for such purpose for the fiscal years 1890-'91 and 1891-'92 are found in above table under the head of "Support of Indian tribes, gratuities."

For Indian education Congress annually appropriates certain sums in addition to those provided for under existing treaties. The total amounts of such appropriations for the fiscal years 1890-'91 and 1891-'92 are found in above table under the head of "Support of Indian schools."

For contingent and incidental expenses of agents and employés, for aid for certain tribes in Arizona, California, Nevada, Oregon, Utah, and Washington, etc., Congress annually appropriates certain sums, the totals of which for the fiscal years 1890-'91 and 1891-'92 are to be found in above table under the head of "Incidentals and contingent expenses."

For pay of agents, interpreters, Indian police, additional farmers, Indian inspectors, superintendent of schools, for the erection and repair of agency buildings, surveying and allotting land, advertising, telegraphing, transportation of Indian supplies, and for a number of other purposes, Congress annually appropriates certain sums. The total amounts appropriated for these purposes for the fiscal years 1890-'91 and 1891-'92 are found in the above table under the head of "Current and miscellaneous expenses."

**Unexpended Balances.**—In addition to the appropriations named in Table 17 there were available for expenditure at the commencement of the fiscal years 1890-'91 and 1891-'92 the following unexpended balances of permanent Indian funds:

TABLE 18.—*Unexpended balances of permanent funds available for 1890-'91 and 1891-'92.*

Balances.	1890-'91.	1891-'92.	Increase.	Decrease.
Of funds appropriated, treaty stipulations of a permanent character .....	\$739, 211. 31	\$787, 055. 52	\$47, 844. 21	.....
Of funds appropriated for erection of school buildings at various points.....	81, 386. 20	105, 097. 18	23, 710. 98	.....
Of appropriations for negotiating treaties with certain Indian tribes, surveying and allotting Indian lands, digging ditches, and proceeds of sale of Indian lands .....	411, 328. 81	401, 054. 02	.....	\$10, 274. 79
Of Indian moneys, miscellaneous .....	153, 833. 24	145, 112. 77	.....	8, 720. 47
Total .....	1, 385, 759. 56	1, 438, 319. 49	71, 555. 19	18, 997. 26
Net increase.....	.....	.....	52, 559. 93	.....

NOTE.—The balance of \$105,097.18 available for erection of school buildings included liabilities incurred before June 30, 1891, but not yet paid for.

**Trust Funds.**—The total amount of trust funds, in bonds or otherwise, held at the beginning of the fiscal year 1890-'91 and 1891-'92 were as follows :

TABLE 19.—Trust funds held at commencement of 1890-'91 and 1891-'92.

Trust funds.	1890-'91.	1891-'92.	Increase.
Principal .....	\$21,244,818.39	\$24,256,808.42	\$3,011,990.03
Accrued interest, annual .....	1,058,276.87	1,198,558.86	140,281.99
Accrued interest, balance .....	967,406.43	973,643.85	6,237.42
<b>Total .....</b>	<b>23,270,501.69</b>	<b>26,429,011.13</b>	<b>3,158,509.44</b>

The increase arises from the sales of lands by the Cheyenne and Arapahoes, Sac and Fox, Sisseton, and other tribes.

## FUNDS AVAILABLE AND EXPENDITURES FOR 1891.

The following table gives the several funds which were available for Indian expenditures at the commencement of the past fiscal year and the amount which was expended during that year from each of said funds :

TABLE 20.—Money available and expenditures made during fiscal year ending June 30, 1891.

Sources.	On hand July 1, 1890.	Expended during year.
Fulfilling treaties with Indian tribes, permanent .....	\$1,543,675.29	\$810,750.66
Fulfilling treaties with Indian tribes, annual .....	1,597,740.00	1,522,042.66
Support of Indian tribes, gratuities .....	746,000.00	673,642.26
Support of Indian schools .....	1,842,770.00	1,572,194.03
Current and miscellaneous expenses .....	1,226,209.40	413,628.54
Incidental and contingent expenses, Indian service .....	171,000.00	161,090.22
Interest on trust funds .....	1,058,276.87	1,052,039.45
<b>Total .....</b>	<b>8,185,671.56</b>	<b>6,205,367.82</b>
<i>Balance, permanent.</i>

Interest, balances .....	973,643.85
<b>Total .....</b>	<b>17,094,514.68</b>

## TRUST FUNDS OF THE FIVE CIVILIZED TRIBES.

Of the \$24,256,808.42 principal held in trust, as shown in the 1891-92 column of Table 19, the sum of \$8,009,924.52 belongs to the five civilized tribes in the following proportion :

TABLE 22.—Trust funds of the five civilized tribes.

Tribes.	Amount of principal.	Annual interest.
Cherokees .....	\$2, 636, 634. 13	\$137, 808. 88
Chickasaws .....	1, 308, 695. 65	68, 404. 95
Choctaws .....	564, 594. 74	33, 094. 73
Seminoles .....	1, 500, 000. 00	75, 000. 00
Creeks .....	2, 000, 000. 00	100, 000. 00
Total .....	8, 009, 924. 52	414, 308. 50

The interest on the principal of these funds is placed semiannually with the United States assistant treasurer at St. Louis, Mo., to the credit of the treasurer of each nation, and the expenditure of these funds is entirely under the control of each nation and its council. This office has no control whatever over these expenditures.

## TRUST FUNDS OF OTHER TRIBES.

The balance of the before-named sum of \$24,256,808.42, amounting to \$16,246,883.90, belongs to a number of tribes, as stated below, and the interest thereon, say 4, 5, 6, and 7 per cent., as the case may be, is either paid to or expended for the benefit of the respective tribes:

TABLE 23.—Trust funds of tribes other than the five civilized tribes.

Tribes.	Principal.	Tribes.	Principal.
Cheyennes and Arapahoes .....	\$1, 000, 000. 00	Sac and Fox of the Missouri .....	\$21, 659. 12
Chippewa and Christian Indians .....	42, 560. 36	Sac and Fox of Mississippi .....	55, 058. 21
Delawares .....	874, 186. 54	Sac and Fox of Oklahoma .....	300, 000. 00
Eastern Shawnees .....	4, 079. 12	Santee Sioux .....	20, 000. 00
Iowas .....	171, 543. 37	Senecas .....	40, 979. 60
Kansas .....	27, 174. 41	Senecas, Tonawanda Band .....	86, 950. 00
Kaskaskias and Peorias, etc .....	52, 000. 00	Senecas and Shawnees .....	15, 140. 42
Kickapoos .....	115, 727. 01	Shawnees .....	1, 985. 65
L'Anse and Vieux de Sert Indians .....	20, 000. 00	Shoshones and Bannacks .....	13, 621. 04
Menomonees .....	153, 039. 38	Sissetons and Wahpetons .....	1, 699, 800. 00
Osages .....	3, 295, 079. 69	Stockbridges .....	75, 988. 60
Omahas .....	182, 324. 08	Umatillas .....	55, 270. 44
Otoes and Missourias .....	601, 085. 88	Uintah and White River Utes .....	3, 340. 00
Pawnees .....	309, 196. 41	Utes .....	1, 750, 000. 00
Poncas .....	70, 000. 00		
Pottawatomies .....	184, 094. 57	Total .....	16, 246, 883. 90

The balances of accrued trust-fund interest, as shown in Table 19, amounting to \$973,643.85, are applicable for such expenditures as from time to time may be found to be proper.

## THE "MESSIAH CRAZE."

During the summer and fall of 1890 reports reaching this office from various sources showed that a growing excitement existed among the Indian tribes over the announcement of the advent of a so-called Indian Messiah or Christ, or Great Medicine Man of the North. The delusion finally became so widespread and well-defined as to be generally known as the "Messiah Craze." Its origin is somewhat obscure and its manifestations have varied slightly among different tribes. A few instances may be cited as representative.

In June, 1890, through the War Department, came the account of a "Cheyenne medicine man, Porcupine," who claimed to have left his reservation in November, 1889, and to have traveled by command and under divine guidance in search of the Messiah to the Shoshone Agency, Salt Lake City, and the Fort Hall Agency, and thence—with others who joined him at Fort Hall—to Walker River Reservation, Nev. There "the Christ," who was scarred on wrist and face, told them of his crucifixion, taught them a certain dance, counseled love and kindness for each other, and foretold that the Indian dead were to be resurrected, the youth of good people to be renewed, the earth enlarged, etc.

From the Tongue River Agency, in Montana, came a report, made by the special agent in charge, dated August 20, 1890, that Porcupine, an Indian of that agency, had declared himself to be the new Messiah, and had found a large following ready to believe in his doctrine. Those who doubted were fearful lest their unbelief should call down upon them the curse of the "Mighty Porcupine." The order went forth that in order to please the Great Spirit a six days and nights' dance must be held every new moon, with the understanding that at the expiration of a certain period the Great Spirit would restore the buffalo, elk, and other game, resurrect all dead Indians, endow his believers with perpetual youth, and perform many other wonders well calculated to inflame Indian superstition. Dances, afterward known as "ghost dances," were enthusiastically attended, and the accompanying feasts were so associated by stockmen with the disappearance of their cattle that very strained relations resulted between the rancher and Indian, which at one time threatened serious trouble.

About the same time the Cheyenne and Arapaho agent\* in Oklahoma reported that during the autumn of 1889 and the ensuing winter rumors had reached that agency from the Shoshones of Wyoming that an Indian Messiah was located in the mountains about 200 miles north of the Shoshones; that prominent medicine men had seen and held conversation with him, and had been told by him that the whites were to be removed from the country, the buffalo to come back, and the Indians to be restored to their original status. This report excited considerable interest among the Cheyennes and Arapahoes, particularly the Arapahoes, and they raised money to defray the expenses of sending two of their number to

---

\* See annual report of Indian Bureau for 1890, page 178.

Wyoming to investigate the matter. After an absence of about two months these delegates returned, reporting that they had been prevented by snow from making the journey to the mountains to see the "Christ," but that the rumors concerning him were verified by the Indians at Shoshone. Great excitement soon prevailed; all industrial work came to a standstill; meetings were held in which hundreds of Indians would rise from the ground, circle around, and sing and cry until apparently exhausted. At one time they even contemplated leaving their reservation in a body to go and seek the "Christ."

During my absence from the office last fall on a tour of observation among the Indian agencies and schools, which lasted from September 5 to early in December, I had occasion to notice the effect of this craze among several tribes, and it was brought up prominently in a council with the Kiowas, Comanches, etc., of Oklahoma. As I stated in the supplement to my annual report of December 8 last, I found that among the tribes which I visited the excitement was comparatively harmless, and although it had seriously retarded progress in civilization for the time being, it had been readily controlled and had furnished no occasion for alarm; and I added:

The only danger to be apprehended is that influences from without, emanating from those who in some manner might be benefited by the Indians uprising or the movement of troops, or by the excitement growing out of "wars and rumors of wars," may precipitate a needless conflict and bring on a disastrous and costly war. Of course this is said in regard to the Indians whom I have visited. I have not been among the Sioux of the Dakotas.

Among some of the Sioux the matter became more serious.

In August, 1890, Agent Gallagher stated that many at the Pine Ridge Agency were crediting the report made to them in the preceding spring that a great medicine man had appeared in Wyoming whose mission was to resurrect and rehabilitate all the departed heroes of the tribe, restore to the Indians herds of buffalo which would make them entirely independent of aid from the whites, and bring such confusion upon their enemies, the whites, that they would flee the country, leaving the Indians in possession of the entire Northwest for all time to come. Indians fainted during the performances which attended the recital of the wondrous things soon to come to pass, and one man died from the excitement. The effect of such meetings or dances was so demoralizing that on August 22, 1890, when about 2,000 Indians were gathered on White Clay Creek, about 18 miles from the agency, to hold what they called a religious dance connected with the appearance of this supernatural being, the agent instructed his Indian police to disperse them. This they were unable to do. Accompanied by about 20 police the agent himself visited the place, and on hearing of his approach most of the Indians dispersed. Several men, however, with Winchester rifles in their hands, and a good stoving of cartridges belted around their waists, stood stripped for fight, prepared to die in defense of the new faith. They were finally quieted.

But the dances continued, and October 12, 1890, Agent Royer, who had just taken charge of the agency, reported that more than half the Indians had already joined the dancing, and when requested to stop would strip themselves ready for fight; that the police had lost control, and if his endeavors to induce the chiefs to suppress the craze should be unavailing, he hoped for hearty coöperation in invoking military aid to maintain order.

About the same time the Cheyenne River agent reported that Big Foot's band were much excited about the coming of a "Messiah," were holding "ghost dances" and, armed with Winchester rifles and of very threatening temper, were beyond police control.

A similar condition of affairs existed among the Rosebud Sioux.

Agent McLaughlin also reported from Standing Rock October 17, as follows :

I feel it my duty to report the present craze and nature of the excitement existing among the Sitting Bull faction of Indians over the expected Indian millenium, the annihilation of the white man and supremacy of the Indian, which is looked for in the near future and promised by the Indian medicine men as not later than next spring, when the new grass begins to appear, and is known among the Sioux as the "return of the Ghosts."

They are promised by some members of the Sioux tribe, who have lately developed into medicine men, that the Great Spirit has promised them that their punishment by the dominant race has been sufficient, and that their numbers having now become so decimated will be reinforced by all Indians who are dead; that the dead are all returning to reinhabit this earth, which belongs to the Indians; that they are driving back with them, as they return, immense herds of buffalo, and elegant wild horses to have for the catching; that the Great Spirit promises them that the white man will be unable to make gunpowder in future, and all attempts at such will be a failure, and that the gunpowder now on hand will be useless as against Indians, as it will not throw a bullet with sufficient force to pass through the skin of an Indian; that the Great Spirit had deserted the Indians for a long period, but is now with them and against the whites, and will cover the earth over with thirty feet of additional soil, well sodded and timbered, under which the whites will all be smothered, and any whites who may escape these great phenomena will become small fishes in the rivers of the country, but in order to bring about this happy result the Indians must do their part and become believers and thoroughly organize.

It would seem impossible that any person, no matter how ignorant, could be brought to believe such absurd nonsense, but as a matter of fact a great many of the Indians of this agency actually believe it, and since this new doctrine has been engrafted here from the more southern Sioux agencies, the infection has been wonderful, and so pernicious that it now includes some of the Indians who were formerly numbered with the progressive and more intelligent, and many of the very best Indians appear dazed and undecided when talking of it, their inherent superstition having been thoroughly aroused.

Sitting Bull is high priest and leading apostle of this latest Indian absurdity; in a word he is the chief mischief-maker at this agency, and if he were not here, this craze, so general among the Sioux, would never have gotten a foothold at this agency. Sitting Bull is a man of low cunning, devoid of a single manly principle in his nature, or an honorable trait of character, but on the contrary is capable of instigating and inciting others (those who believe in his promise) to do any amount of mischief. He is a coward and lacks moral courage; he will never lead where there is danger, but is an adept in influencing his ignorant henchmen and followers, and there is no knowing what he may direct them to attempt. He is bitterly opposed to having any sur-

veys made on the reservation, and is continually agitating and fostering opposition to such surveys among his followers, who are the more worthless, ignorant, obstinate, and non-progressive of the Sioux.

On Thursday, the 9th instant, upon an invitation from Sitting Bull, an Indian named Kicking Bear, belonging to the Cheyenne River Agency, the chief medicine man of the ghost dance among the Sioux, arrived at Sitting Bull's camp on Grand River, 40 miles south of this agency, to inaugurate a ghost dance and initiate the members. Upon learning of his arrival there I sent a detachment of 13 policemen, including the captain and second lieutenant, to arrest and escort him from the reservation, but they returned without executing the order, both officers being in a dazed condition and fearing the powers of Kicking Bear's medicine. Several members of the force tried to induce the officers to permit them to make the arrest but the latter would not allow it, but simply told Sitting Bull that it was the agent's orders that Kicking Bear and his six companies should leave the reservation and return to their agency. Sitting Bull was very insolent to the officers and made some threats against some members of the force, but said that the visitors would leave the following day. Upon return of the detachment to the agency on Tuesday, the 14th, I immediately sent the lieutenant and one man back to see whether the party had left or not, and to notify Sitting Bull that this insolence and bad behavior would not be tolerated longer, and that the ghost dance must not be continued. The lieutenant returned yesterday and reported that the party had not started back to Cheyenne before his arrival there on the morning of the 15th, but left immediately upon his ordering them to do so, and that Sitting Bull told him that he was determined to continue the ghost dance, as the Great Spirit had sent a direct message by Kicking Bear that to live they must do so, but that he would not have any more dancing until after he had come to the agency and talked the matter over with me; but the news comes in this morning that they are dancing again and it is participated in by a great many Indians who become silly and like men intoxicated over the excitement. The dance is demoralizing, indecent, and disgusting.

Desiring to exhaust all reasonable means before resorting to extremes, I have sent a message to Sitting Bull, by his nephew One Bull, that I want to see him at the agency and I feel quite confident that I shall succeed in allaying the present excitement and put a stop to this absurd "craze" for the present at least, but I would respectfully recommend the removal from the reservation and confinement in some military prison, some distance from the Sioux country, of Sitting Bull and the parties named in my letter of June 18 last, hereinbefore referred to, some time during the coming winter before next spring opens.

At other Sioux agencies the Messiah craze seems to have made little or no impression. At Lower Brulé it was easily checked by the arrest by Indian police of twenty-two dancers, of whom seventeen were imprisoned for eight weeks at Fort Snelling. The Crow Creek, Santee, Yankton, and Sisseton Sioux, through schools, missions, and industrial pursuits, had been brought to give too valuable hostages to civilization to be affected by such a delusion.

This alleged appearance of a Messiah was not an entirely new thing. Some 6 or 8 years ago one of the Puyallup Indians claimed that in a trance he had been to the other world. As a result of his visions a kind of society was formed, churches were built, one of the Indians claimed to be the "Christ," and the band became so infatuated and unmanageable that the agent was obliged to imprison the alleged "Christ," punish his followers, and discharge a number of Indian judges and policemen in order to regain control.

During the past six months ghost dances have almost entirely disap-

peared, and although the Messiah craze prevailed to an unusual extent among a large number of widely separated tribes, and aroused a general feeling of discontent and unrest, yet it is doubtful if it would have had any history as more than one of many such ephemeral superstitions of an ignorant and excitable people, if it had not been complicated with other disorders among the Sioux in the Dakotas so that it became one of the causes which led to the so-called Sioux war.

#### TROUBLES AMONG THE SIOUX.

As early as June, 1890, a rumor that the Sioux were secretly planning an outbreak and needed close watching led this office to call upon the agents for the Sioux for reports as to the status and temper of the Indians in their charge. The replies indicated that no good grounds for apprehending trouble existed. The Rosebud agent, however, referred to the fact that secret communications had been passing between dissatisfied nonprogressive Indians at the various agencies who had refused to sign the agreement under which a large portion of the Sioux reserve had been opened to settlement by the President's proclamation of February 10, 1890. The Standing Rock agent reported as follows:

So far as the Indians of this agency are concerned there is nothing in either their words or actions that would justify the rumor, and I do not believe that such an imprudent step is seriously meditated by any of the Sioux.

There are, however, a few malcontents here, as at all of the Sioux agencies, who cling tenaciously to the old Indian ways and are slow to accept the better order of things, whose influence is exerted in the wrong direction, and this class of Indians are ever ready to circulate idle rumors and sow dissensions, to discourage the more progressive; but only a few of the Sioux could now possibly be united in attempting any overt act against the Government, and the removal from among them of a few individuals (the leaders of disaffection) such as Sitting Bull, Circling Bear, Black Bird, and Circling Hawk of this agency, Spotted Elk (Big Foot) and his lieutenants of Cheyenne River, Crow Dog and Low Dog of Rosebud, and any of like ilk of Pine Ridge, would end all trouble and uneasiness in the future.

The agent at Cheyenne River reported some little excitement regarding the coming of an Indian "Messiah," as did the agent at Pine Ridge Agency, who also expressed his belief that it would soon die out without causing trouble.

After receiving later reports, already mentioned, which showed that ghost dancing was becoming a serious element of disturbance, the office instructed the agents at Standing Rock, Crow Creek and Lower Brulé, Rosebud, and Pine Ridge Agencies, to exercise great caution in the management of the Indians, with a view to avoiding an outbreak, and, if deemed necessary, to call upon this office to secure military aid to prevent disturbances.

Agent Royer, of the Pine Ridge Agency, was especially advised, October 18, that Major-General Miles, commander of the military division in which the agency was situated, also chairman of the Commission recently appointed to negotiate with the Northern Cheyennes, would shortly visit the agency, and that he would have opportunity to explain

the situation to him and ask his advice as to the wisdom of calling for troops.

October 24, 1890, this office recommended that the War Department be requested to cause Sitting Bull, Circling Hawk, Black Bird, and Circling Bear to be confined in some military prison, and to instruct the proper military authorities to be on the alert to discover any suspicious movements of the Indians of the Sioux agencies.

Early in November reports received from the agents at Pine Ridge, Rosebud, and Cheyenne River showed that the Indians of those agencies, especially Pine Ridge, were arming themselves and taking a defiant attitude towards the Government and its representatives, committing depredations, and likely to go to other excesses, and November 13 this office recommended that the matter be submitted to the War Department, with request that such prompt action be taken to avert an outbreak as the emergency might be found by them to demand.

On that day the President of the United States addressed the following communication to the Secretary of the Interior:

Replying to your several communications in regard to the condition of the Indians at the Sioux and Cheyenne agencies, I beg to say that some days ago I directed the War Department to send an officer of high rank to investigate the situation and to report upon it from a military standpoint. General Ruger, I understand, has been assigned to that duty, and is now probably at, or on his way to, these agencies. I have to-day directed the Secretary of War to assume a military responsibility for the suppression of any threatened outbreak, and to take such steps as may be necessary to that end. In the meantime, I suggest that you advise your agents to separate the well-disposed from the ill-disposed Indians, and while maintaining their control and discipline so far as may be possible, to avoid forcing any issue that will result in an outbreak, until suitable military preparations can be made.

November 15 Agent Royer sent to this office the following telegram from Pine Ridge:

Indians are dancing in the snow and are wild and crazy. I have fully informed you that employes and Government property at this agency have no protection and are at the mercy of these dancers. Why delay by further investigation? We need protection, and we need it now. The leaders should be arrested and confined in some military post until the matter is quieted, and this should be done at once.

#### ARRIVAL OF MILITARY.

A military force under Gen. John R. Brooke, consisting of five companies of infantry, three troops of cavalry, and one Hotchkiss and one Gatling gun, arrived at Pine Ridge November 20, 1890. Two troops of cavalry and six companies of infantry were stationed at Rosebud. Troops were ordered to other agencies until finally nearly half the infantry and cavalry of the U. S. Army were concentrated upon the Sioux reservations. When the troops reached Rosebud about 1,800 Indians—men, women, and children—stampeded toward Pine Ridge and the bad lands, destroying their own property before leaving and that of others en route.

On December 1, 1890, in accordance with Department instructions, the following order was sent to the Sioux agents:

During the present Indian troubles you are instructed that while you shall con-

tinue all the business and carry into effect the educational and other purposes of your agency, you will, as to all operations intended to suppress any outbreak by force, cooperate with and obey the orders of the military officer commanding on the reservation in your charge.

#### DEATH OF SITTING BULL.

In the latter part of November the military authorized the arrest of Sitting Bull by W. F. Cody ("Buffalo Bill"), but at the request of Agent McLaughlin, who deemed it prudent to postpone the arrest until colder weather, the order was canceled by direction of the President.

Sitting Bull's camp where the dancing had been going on was on Grand River 40 miles from the agency. The number of Indian policemen in that vicinity was increased and he was kept under close surveillance. December 12 the commanding officer at Fort Yates was instructed by General Ruger, commanding the Department of Dakota, to make it his special duty to secure the person of Sitting Bull, and to call on Agent McLaughlin "for such coöperation and assistance as would best promote the object in view." December 14 the police notified the agent that Sitting Bull was preparing to leave the reservation. Accordingly, after consultation with the post commander it was decided that the arrest should be made the following morning by the police under command of Lieutenant Bullhead, with United States troops within supporting distance.

At daybreak, December 15, 39 Indian police and 4 volunteers went to Sitting Bull's cabin and arrested him. He agreed to accompany them to the agency, but while dressing caused considerable delay, and during this time his followers began to congregate to the number of 150, so that when he was brought out of the house they had the police entirely surrounded. Sitting Bull then refused to go and called on his friends, the ghost dancers, to rescue him. At this juncture one of them shot Lieutenant Bullhead. The lieutenant then shot Sitting Bull, who also received another shot and was killed outright. Another shot struck Sergeant Shavehead and then the firing became general. In about two hours the police had secured possession of Sitting Bull's house and driven their assailants into the woods. Shortly after, when 100 United States troops, under command of Capt. Fechet reached the spot the police drew up in line and saluted. Their bravery and discipline received highest praise from Capt. Fechet. The ghost dancers fled from their hiding places to the Cheyenne River Reservation, leaving their families and dead behind them. Their women who had taken part in the fight had been disarmed by the police and placed under guard and were turned over to the troops when they arrived. The losses were six policemen killed (including Bullhead and Shavehead who soon died at the agency hospital) and one wounded. The attacking party lost eight killed and three wounded.

For a detailed report of this affair see Agent McLaughlin's report, page 325.

## INDIANS CONCENTRATE IN THE BAD LANDS.

Groups of Indians from the different reservations had commenced concentrating in the "bad lands," upon or in the vicinity of the Pine Ridge Reservation. Killing of cattle and destruction of other property by these Indians almost entirely within the limits of Pine Ridge and Rosebud reservations occurred, but no signal fires were built, no war-like demonstrations were made, no violence was done to any white settler, nor was there cohesion or organization among the Indians themselves. Many of them were friendly Indians who had never participated in the ghost dance but had fled thither from fear of soldiers, in consequence of the Sitting Bull affair, or through the over-persuasion of friends. The military gradually began to close in around them, and they offered no resistance, and a speedy and quiet capitulation of all was confidently expected.

## FIGHT AT WOUNDED KNEE CREEK.

Among them was Big Foot's band belonging to the Cheyenne River Agency, numbering with others who had joined him, about 120 men and 230 women and children. They had escaped to the bad lands, after arrest by the military at Cheyenne River, but soon started from the bad lands for the Pine Ridge Agency, and with a flag of truce advanced into the open country and proposed a parley with the troops whom they met. This being refused they surrendered unconditionally, remained in camp at Wounded Knee Creek over night, expecting to proceed next morning under escort of the troops to Pine Ridge, whither most of the quondam bad-land Indians were moving. The next day, December 29, when ordered to turn in their arms, they surrendered very few. By a search in the teepees 60 guns were obtained. When the military—a detachment of the Seventh Cavalry (Custer's old command), with other troops—began to take the arms from their persons a shot was fired and carnage ensued. According to reports of military officers, the Indians attacked the troops as soon as the disarmament commenced. The Indians claim that the first shot was fired by a half crazy, irresponsible Indian. At any rate, a short, sharp, indiscriminate fight immediately followed, and, during the fighting and the subsequent flight and pursuit of the Indians, the troops lost 25 killed and 35 wounded, and of the Indians, 84 men and boys, 44 women, and 18 children were killed and at least 33 were wounded, many of them fatally. Most of the men, including Big Foot, were killed around his tent where he lay sick. The bodies of women and children were scattered along a distance of two miles from the scene of the encounter.\*

Frightened and exasperated, again the Indians made for the bad lands. Indians en route thence to the agency turned back and others rushed away from Pine Ridge.

---

\* For the Indian account of the Wounded Knee affair see Appendix, page 179.

## AGENCIES PLACED UNDER MILITARY SURVEILLANCE.

On January 6, 1891, military officers were assigned to the five Sioux agencies, under the following telegraphic instructions of that date to General Miles from Major-General Schofield:

You are hereby authorized under existing orders of the President to assign Capt. E. P. Ewers, Capt. J. M. Lee, Capt. C. A. Earnest, and Capt. F. E. Pierce to the charge of the Indians of the several Sioux and Cheyenne agencies, to exercise over those Indians such military supervision and control as in your judgment is necessary, without interfering unnecessarily with the administration of the agents of the Indian Bureau under the regulations and instructions received by them from the Interior Department. It is not deemed advisable to detail two captains from the First Infantry. You will, therefore, please recommend another officer in the place of Captain Dougherty. Also, if you need other officers in addition to those, named recommend such as you think best qualified for that service.

## END OF DISTURBANCES.

A few skirmishes with the Indians followed the Wounded Knee affair, but by the end of January the Indians had come into the agencies and all serious troubles were practically ended.

Soon afterward a delegation of Sioux representing the different agencies and factions visited this city, had full conference with the Secretary of the Interior and the Commissioner of Indian Affairs relative to their rights and grievances, and were given an audience by the President.

It is worthy of note that the Christian Indians among the Sioux, those who had accepted the teachings of missionaries, were almost universally loyal, and in fact that the large body of the Sioux had no participation in the disturbances except to suffer from the consequences. Undoubtedly the large number among them in the bad lands who had abandoned their homes against their own desire, and were unwilling followers of their leaders, contributed in no small degree to bringing all hostilities to an end. While the damage done to the property of white settlers is slight, many friendly, progressive Indians suffered severely in the destruction of houses, stock, and other property, a loss from which it will take them long to recover.

On several occasions the office has been informed that the Sioux contemplated a renewal of hostilities, and very recently information was received, from a source deemed reliable, that they were endeavoring to induce other tribes to join them in a contemplated outbreak; but these reports prove, upon investigation, to have but little foundation in fact. Although some factions among the Indians are, undoubtedly, sullen and dissatisfied, and idle and vicious Indians have indulged in incendiary utterances, yet good feeling and satisfaction prevail almost universally on the Sioux reservations, and I do not consider that there are reasonable grounds for belief that any portion of the Sioux Nation of sufficient strength to be dangerous contemplates any overt act against the Government or the settlers.

## KILLING OF LIEUT. CASEY, AND FEW TAILS.

It should also be recorded that no attempt was made by the Indians to reach and ravage any white settlements, no white person was killed off the reservation, and except in battle, only two were killed on the reserve.

A government herder, an old man named Miller, was wantonly murdered by a son of No Water. Lieut. E. W. Casey, of the Twenty-second Infantry, was killed by Plenty Horses. The death of this gallant young officer was much lamented. He was deeply interested in the welfare of the Indians, and was zealous in enlisting and drilling them as soldiers. All the facts in the case clearly show that the killing was without provocation, premeditated, and deliberate. Plenty Horses was arrested and tried in the United States court on the charge of murder but was released by the court on the ground that at the time of the killing "a state of war" existed between his tribe and the United States, and that the killing of Lieut. Casey was an incident of the war and not murder under the law.

On the other hand, an unprovoked attack made January 11, 1891, by white citizens upon a hunting party of friendly Sioux Indians, in Mead County, greatly excited the Indians, and had a strong tendency to retard their pacification. Some United States troops, at the instance of the attacking party, joined in pursuit of the Indians and fired upon them. Few Tails was killed and 2 Indian women were wounded. Few Tails was a peaceable Indian, and the attack upon his party was cold-blooded and wanton. For the murder of Few Tails 5 white men were indicted in the State court, Sturgis, S. Dak. Their trial, June 22 last, was ended July 2, with a verdict of "not guilty."

## CAUSES OF THE TROUBLE.

In stating the events which led to this outbreak among the Sioux the endeavor too often has been merely to find some opportunity for locating blame. The causes are complex and many are obscure and remote. Among them may be named the following:

First. A feeling of unrest and apprehension in the mind of the Indians has naturally grown out of the rapid advance in civilization and the great changes which this advance has necessitated in their habits and mode of life.

Second. Prior to the agreement of 1876 buffalo and deer were the main support of the Sioux. Food, tents, bedding, were the direct outcome of hunting, and with furs and pelts as articles of barter or exchange, it was easy for the Sioux to procure whatever constituted for them the necessaries, the comforts, or even the luxuries of life. Within eight years from the agreement of 1876, the buffalo had gone and the Sioux had left to them alkali land and Government rations.

It is hard to overstate the magnitude of the calamity as they viewed it, which happened to these people by the sudden disappearance of the buffalo and the large diminution in the numbers of deer and other wild

animals. Suddenly, almost without warning, they were expected at once and without previous training to settle down to the pursuits of agriculture in a land largely unfitted for such use. The freedom of the chase was to be exchanged for the idleness of the camp. The boundless range was to be abandoned for the circumscribed reservation, and abundance of plenty to be supplanted by limited and decreasing Government subsistence and supplies. Under these circumstances, it is not in human nature not to be discontented and restless, even turbulent and violent.

Third. During a long series of years treaties, agreements, cessions of land and privileges, and removals of bands and agencies have kept many of the Sioux, particularly those at Pine Ridge and Rosebud, in an unsettled condition, especially as some of the promises made them were fulfilled tardily or not at all. (A brief history of negotiations with the Sioux was given in my letter of December 24, 1890, to the Department, which will be found in the Appendix, page 182.)

Fourth. The very large reduction of the Great Sioux Reservation, brought about by the Sioux Commission through the consent of the large majority of the adult males, was bitterly opposed by a large, influential minority. For various reasons they regarded the cession as unwise, and did all in their power to prevent its consummation and afterward were constant in their expressions of dissatisfaction and in their endeavors to awaken a like feeling in the minds of those who signed the agreement.

Fifth. There was diminution and partial failure of the crops for 1889 by reason of their neglect by the Indians, who were congregated in large numbers at the council with the Sioux Commission, and a further diminution of ordinary crops by the drought of 1890. Also, in 1888 the disease of black-leg appeared among the cattle of the Indians.

Sixth. At this time, by delayed and reduced appropriations, the Sioux rations were temporarily cut down. Rations were not diminished to such an extent as to bring the Indians to starvation or even extreme suffering, as has been often reported; but short rations came just after the Sioux Commission had negotiated the agreement for the cession of lands, and as a condition of securing the signatures of the majority, had assured the Indians that their rations would be continued unchanged. To this matter the Sioux Commission called special attention in their report dated December 24, 1889, as follows:

During our conference at the different agencies we were repeatedly asked whether the acceptance or rejection of the act of Congress would influence the action of the Government with reference to their rations, and in every instance the Indians were assured that subsistence was furnished in accordance with former treaties, and that signing would not affect their rations, and that they would continue to receive them as provided in former treaties. Without our assurances to this effect it would have been impossible to have secured their consent to the cession of their lands. Since our visit to the agencies it appears that large reductions have been made in the amounts of beef furnished for issues, amounting at Rosebud to 2,000,000 pounds and at Pine

Ridge to 1,000,000 pounds, and lesser amounts at the other agencies. This action of the Department, following immediately after the successful issue of our negotiations, can not fail to have an injurious effect. It will be impossible to convince the Indians that the reduction is not due to the fact that the Government having obtained their land has less concern in looking after their material interests than before. It will be looked upon as a breach of faith, and especially as a violation of the express statements of the Commissioners.

Already this action is being used by the Indians opposed to the bill, notably at Pine Ridge, as an argument in support of the wisdom of their opposition.

In forwarding this report to Congress the Department called special attention to the above-quoted statements of the Commission and said:

The Commission further remarks that as to the quality of rations furnished there seems to be no just cause for complaint, but that it was particularly to be avoided that there should be any diminution of the rations promised under the former treaties *at this time*, as the Indians would attribute it to their assent to the bill. Such diminution certainly should not be allowed, as the Government is bound in good faith to carry into effect the former treaties where not directly and positively affected by the act, and if under the provisions of the treaty itself the ration is at any time reduced, the Commissioners recommend that the Indian should be notified before spring opens, so that crops may be cultivated. It is desirable that the recent reduction made should be restored, as it is now impossible to convince the Indians that it was not due to the fact that the Government, having obtained their lands, had less concern in looking after their material interests.

Notwithstanding this plea of the Commission and of the Department, the appropriation made for the subsistence and civilization of the Sioux for 1890 was only \$950,000, or \$50,000 less than the amount estimated and appropriated for 1888 and 1889, and the appropriation not having been made until August 19, rations had to be temporarily purchased and issued in limited quantities pending arrival of new supplies to be secured from that appropriation.\*

It was not until January, 1891, after the troubles, that an appropriation of \$100,000 was made by Congress for additional beef for the Sioux.†

Seventh. Other promises made by the Sioux Commission and the agreement were not promptly fulfilled; among them were increase of appropriations for education, for which this office had asked an appropriation of \$150,000; the payment of \$200,000, in compensation for ponies taken from the Sioux in 1876 and 1877; and the reimbursement of the Crow Creek Indians for a reduction made in their per capita allowance of land as compared with the amount allowed other Sioux, which called for an appropriation of \$187,039. The fulfillment of all these promises except the last named, was contained in the act of January 19, 1891.

---

\* The amount of supplies actually issued is given in my communications to the Department, of January 5 and 6, 1891. See Appendix, pages 191 and 197.)

† A bill containing this item of \$100,000 passed the Senate April 26, 1890. The House Committee reported it favorably with the statement that the appropriation was in pursuance of promises made by the Commission to the Indians, which were reasonable and should be faithfully kept; but the bill failed of passage in the House.

Eighth. In 1889 and 1890 epidemics of *la grippe*, measles, and whooping cough, followed by many deaths, added to the gloom and misfortune which seemed to surround the Indians.

Ninth. The wording of the agreement changed the boundary line between the Rosebud and Pine Ridge, diminished reservations, and necessitated a removal of a portion of the Rosebud Indians from lands which by the agreement were included in the Pine Ridge Reservation to lands offered them in lieu thereof upon the diminished Rosebud Reserve. This, although involving no great hardship to any considerable number, added to the discontent.

Tenth. Some of the Indians were greatly opposed to the census which Congress ordered should be taken. The census at Rosebud, as reported by Special Agent Lea and confirmed by a special census taken by Agent Wright, revealed the somewhat startling fact that rations had been issued to Indians very largely in excess of the number actually present, and this diminution of numbers as shown by the census necessitated a diminution of the rations, which was based, of course, upon the census.

Eleventh. The Messiah craze, which fostered the belief that "ghost shirts" would be invulnerable to bullets, and that the supremacy of the Indian race was assured, added to discontent the fervor of fanaticism and brought those who accepted the new faith into the attitude of sulen defiance, but defensive rather than aggressive.

Twelfth. The sudden appearance of military upon their reservation gave rise to the wildest rumors among the Indians of danger and disaster, which were eagerly circulated by disaffected Indians and corroborated by exaggerated accounts in the newspapers, and these and other influences connected with and inseparable from military movements frightened many Indians away from their agencies into the bad lands and largely intensified whatever spirit of opposition to the Government existed.

#### INSTRUCTIONS TO THE SIOUX.

After the return of the delegation from Washington to their homes I addressed the following letter, dated March 22, 1891, to their respective agents at Standing Rock, Cheyenne River, Crow Creek, and Lower Brulé, Rosebud, and Pine Ridge Agencies, setting forth in detail the rights of the Sioux under treaty or law, and what had been and would be done for them by the Government:

Referring to office letter of February 24, 1891, relative to the late Sioux troubles and recent legislation concerning the Sioux, and in which it was stated that copies of such enactments, with a synopsis of the agreements in them, was inclosed, but which, through oversight were not transmitted, I inclose herewith copies of the enactments of Congress on the subject at its late session, to wit: Act approved January 19, 1891 (Public—No. 43), to carry out in part the act of March 2, 1889, which was consented to by the Sioux for a division of their reservation and relinquishment of their title to the remainder, etc.; and the Indian appropriation act of March 3, 1891 (Public—No. 144).

I also transmit a copy of Senate Ex. Doc. No. 51, Fifty-first Congress, first session, which contains a copy of said act of March 2, 1889, and the proceedings of the Commission which obtained the consent of the Indians thereto.

You will explain fully to your Indians the following synopsis of all existing agreements and treaty provisions between the United States and the Sioux Indians, whereby the Government agreed to furnish them money, supplies, clothing, etc., and of the appropriations and provisions made by Congress to carry out the same, viz :

#### CLOTHING.

By article 10 of the treaty made between the United States and the Sioux on April 29, 1868 (15 Stats. 635), the Government agreed to deliver for 30 years the following articles :

For each male person over 14 years of age a suit of good substantial woolen clothing, consisting of coat, pantaloons, flannel shirt, hat, and a pair of home-made socks.

For each female over 12 years of age, a flannel skirt or the goods necessary to make it, a pair of woolen hose, 12 yards of calico, and 12 yards of cotton domestics.

For the boys and girls under the ages named, such flannel and cotton goods as may be needed to make each a suit as aforesaid, together with a pair of woolen hose for each.

And in order that the Commissioner of Indian Affairs may be able to estimate properly for the articles herein named, it shall be the duty of the agent each year to forward to him a full and exact census of the Indians, on which the estimate from year to year can be based.

There is no other treaty or agreement whereby the Government stipulates to furnish specifically clothing for the Sioux.

By the Indian appropriation act of March 3, 1891, the expenditure of \$125,000 is authorized to purchase clothing for the Indians, as the 22d of the 30 instalments provided therefor by the tenth article of said treaty of April 29, 1868. This fund is deemed adequate to purchase all the clothing provided for in said article and will be promptly applied to that purpose in the new fiscal year.

#### RATIONS.

The obligations of the Government to furnish to the Sioux rations rest upon the agreement with them, ratified by act of Congress approved February 28, 1877 (19 Stats., 254), which is still in force, promising—

to provide the said Indians with subsistence consisting of a ration for each individual of a pound and a half of beef (or in lieu thereof one-half pound of bacon), one-half pound of flour, and one-half pound of corn, and for every hundred rations 4 pounds of coffee, 8 pounds of sugar, and 3 pounds of beans, or in lieu of said articles the equivalent thereof, in the discretion of the Commissioner of Indian Affairs. Such rations, or so much thereof as may be necessary, shall be continued until the Indians are able to support themselves. Rations shall in all cases be issued to the head of each separate family, and whenever schools shall have been provided by the Government for said Indians, no rations shall be issued for children between the ages of 6 and 14 years (the sick and infirm excepted) unless such children shall regularly attend school. Whenever the said Indians shall be located upon lands which are suitable for cultivation, rations shall be issued only to the persons and families of those persons who labor (the aged, sick, and infirm excepted), and, as an incentive to industrious habits, the Commissioner of Indian Affairs may provide that such persons be furnished in payment for their labor such other necessary articles as are requisites for civilized life. The Government will aid said Indians as far as possible in finding a market for their surplus productions and in finding employment, and will purchase such surplus, as far as may be required, for supplying food to those Indians, parties to this agreement, who are unable to sustain themselves, and will also employ Indians, so far as practicable, in the performance of Government work upon their reservation.

The agreement contains certain provisions permitting the Government to regulate and restrict the issuance of rations, etc. As you no doubt have a copy of the agreement, you should read and fully explain its provisions to the Indians, impressing upon them that, while insisting upon compliance on the part of the United States

with the spirit and letter of the agreement, the United States expects and will insist that the Indians shall comply strictly with the obligations which the agreement imposes upon them.

Almost without exception the full amount of rations named in the agreement have been issued to the Indians. The exceptions were caused by delayed or reduced appropriations by Congress. In 1889 Congress reduced appropriations for the subsistence and civilization of the Sioux to the lowest point reached since the agreement of 1877, viz, to \$900,000, \$100,000 less than the amount estimated and appropriated for the 2 preceding years. This caused a reduction of 2,600,000 pounds in the amount of beef purchased for the Sioux for the fiscal year ending June 30, 1890, and the appropriation for the subsistence and civilization of the Sioux during the current fiscal year was reduced to \$950,000.

By the act of January 19, 1891, Congress appropriated \$100,000, to be immediately available, to purchase additional beef required for issue to the Sioux to supply said deficiency of the appropriation for the fiscal year ending June 30, 1890. The matter will be attended to as soon as practicable, under suggestions hereinafter stated. By the Indian appropriation act of March 3, 1891, there is appropriated for the fiscal year ending June 30, 1892, \$1,100,000 for the subsistence of the Sioux, and for purposes of their civilization as per said agreements ratified by act of Congress approved February 28, 1877. This appropriation will be promptly used in the new fiscal year for the purposes for which it was made.

#### EDUCATION.

It is provided in the seventh article of the Sioux treaty of April 29, 1868, that the Sioux children between the ages of 6 and 16 years shall attend school, and the United States agreed that for every 30 children between said ages who could be induced or compelled to go to school, a house should be provided and a teacher furnished; such provision to continue 20 years; and by the thirteenth article of the same treaty the United States agreed to furnish annually to the Indians the teachers contemplated in the treaty.

By article 5 of the agreement with the Sioux, ratified by Congress February 28, 1877, the United States agreed to furnish them schools as provided for by treaty of 1868.

By section 17 of the act of March 2, 1889, the educational provisions contained in said article 7 of the treaty of 1868, subject to such modifications as Congress shall deem most effective to secure to the Sioux equivalent benefits of such education, are continued in force for 20 years from the time the act was to take effect. It is also provided in section 20 of said act of March 2, 1889, that the Secretary of the Interior shall cause to be erected not less than 30 schoolhouses, and more if found necessary on the different Sioux reservations.

Provision was made in the Indian appropriation act of August 19, 1890, for the erection of 15 school buildings, being in part compliance with the provisions of section 20 of the above-mentioned act of March 2, 1889, and \$15,000 was appropriated for that purpose.

The sum of \$150,000 is appropriated by the first section of the act of January 19, 1891, to be immediately available, for the erection of day and industrial schools, providing furniture and other necessary articles, and pay of teachers in accordance with article 7 of the treaty of April 29, 1868, which article is continued for 20 years, as above indicated; and in the same section, \$15,000 is appropriated for the erection of 15 school buildings provided for in article 20 of the act of March 2, 1889.

There is a clause in the first section of the Indian appropriation act of March 3, 1891, appropriating \$10,400 for pay of 5 teachers and 1 physician, 1 carpenter, 1 miller, 1 engineer, 2 farmers, and 1 blacksmith, per thirteenth article of said treaty of April 29, 1868. \* \* \* (See also provisions as to education under head of "Permanent fund for Sioux," hereinafter set out.) During the recent disturb-

ance it is understood that some school buildings and school appliances were destroyed. The Sioux must understand that they have no right to insist on compliance with those stipulations of their agreements which provide for them food, clothing, etc., while at the same time they reject and refuse to comply with those provisions which require their good behavior, peaceable conduct, the education of their children, efforts to become self-supporting, etc. They must live up to all the stipulations of their agreements if they want the United States to do likewise.

#### PONIES.

By section 27 of the act of March 2, 1889, \$28,200, or so much thereof as might be necessary, was appropriated to pay to Indians of the Red Cloud and Red Leaf bands of Sioux for ponies of which they were deprived by the Government in 1876, at the rate of \$40 for each pony. This matter has been submitted for the consideration of the Secretary of the Interior. It will no doubt soon receive action by him, and the above sum will doubtless be disbursed at an early date to Indians entitled thereto.

Two hundred thousand dollars is appropriated in the first section of the act of January 19, 1891, to be immediately available, to reimburse to such Indians of the Standing Rock and Cheyenne River Agencies as have been deprived by authority of the United States of ponies in 1876, the value of the same at the rate of \$40 for each pony.

The War Department has been called on for information as to the persons from whom these ponies were taken, and the matter will be adjusted with all practicable speed. Instructions to guide a special agent in making the necessary investigations are now being prepared, and I hope the matter will soon be put in such shape as to warrant early payment of what shall be found to be due.

#### APPROPRIATION FOR SANTEE SIOUX AT FLANDREAU, S. DAK.

There is an item in the Indian appropriation act of August 19, 1890, appropriating \$45,000, or so much thereof as might be necessary, to pay the Santee Sioux located at Flandreau, S. Dak., in case they chose to take the money instead of land, the sum of \$1 per acre in lieu of the allotments to which they would be entitled. One installment of said fund has been sent to the agent at Santee Agency, Nebr., for payment to the Indians entitled thereto, and the remainder will be transmitted him at an early date to complete the payment.

#### CATTLE, ETC.

The seventeenth section of the act of March 2, 1889, contains a permanent appropriation for the purchase for the use of the Indians from time to time of such number, not exceeding 25,000 cows and 1,000 bulls, as in the judgment of the Secretary of the Interior could be, under regulations furnished by him, cared for and preserved, with their increase, by said Indians; also for providing each head of a family or single person over the age of eighteen years who shall have or may hereafter take his or her—

Allotment of land in severalty with two milch cows, one pair of oxen with yoke and chain, or two mares and one set of harness in lieu of said oxen, yoke and chain; one plow, one wagon, one harrow, one hoe, one ax, and one pitchfork; also for the payment of \$50 in cash to be expended for the erection of houses and other buildings suitable for residence or improvement of their allotments, in accordance with section 17 of said act of March 2, 1889.

Proper action will be taken by the Department to carry out all the purposes of said appropriation when reports furnishing the information called for shall have been received from all of the agents.

#### MONEY FOR OTHER ARTICLES NECESSARY FOR INDIANS.

The tenth article of the treaty of April 29, 1868, provides that the sum of \$10 for each person entitled to the benefits of the treaty shall be annually appropriated for

30 years, while such person roams and hunts, and \$20 for each person who engages in farming, to be used by the Secretary of the Interior in the purchase of necessary articles for the Indians.

The Indian appropriation act of March 3, 1891, appropriates \$150,000, or so much thereof as may be necessary, to purchase proper articles as the 22d of the above 30 installments at \$20 per head, for persons engaged in agriculture, but there is no existing appropriation for the \$10 per head for the Indians who roam and hunt, as the habits of the Indians in those respects do not warrant the same.

#### PERMANENT FUND FOR SIOUX.

Section 17 of said act of March 2, 1889, provides that there shall be set apart, out of any money in the Treasury not otherwise appropriated, \$3,000,000, which shall be deposited in the Treasury of the United States to the credit of the Sioux Nation as a permanent fund, the interest of which at 5 per centum per annum shall be appropriated under the direction of the Secretary of the Interior for the use of the Indians receiving rations and annuities upon the reservations created by such act in proportion to the numbers that shall so receive rations and annuities at the time the act takes effect, as follows: One-half of said interest shall be so expended for the promotion of industrial and other suitable education among said Indians, and the other half thereof in such manner and for such purposes, including reasonable cash payments per capita, as in the judgment of the Secretary of the Interior shall from time to time most contribute to the advancement of said Indians in civilization and self-support, and the Santee Sioux, the Flandreau Sioux, and the Ponca Indians shall be included in the benefits of said permanent fund as provided in sections 7 and 13 of said act of March 2, 1889.

Section 3 of the act approved January 19, 1891, provides that the principal of the permanent fund provided for in section 17 of said act of March 2, 1889, shall be divided in proportion to the number of Indians entitled to receive rations and annuities upon the separate reservations created by such act, or residing or belonging thereupon at the time the act took effect, and that the Secretary of the Treasury should carry the amount of principal of said permanent fund belonging to the Indians of each of the diminished reservations to the credit of the Indians of each of the said diminished reservations, separate and distinct from each other, and that the principal as well as the interest of each of said funds should be expended for the purposes specified in said article 17 of said act only for the use and benefit of said Indians so entitled to receive rations and annuities upon each of the said separate diminished reservations, or so residing or belonging thereupon.

Said appropriation will be duly applied for the purposes and in the manner above specified. The disposition of the question of boundary between the Rosebud and Pine Ridge Reservations hereinafter set out will prevent final action in this matter until such boundary question and the other matters involved therewith are settled.

#### PAYMENT FOR LOSSES INCURRED DURING LATE SIOUX TROUBLE.

The Indian appropriation act of March 3, 1891, appropriates \$100,000, or so much thereof as may be necessary, to be immediately available, for prompt payment to the friendly Sioux and legal residents on the Sioux reservation for property destroyed or appropriated by the roving bands of disaffected Indians during the recent Sioux trouble. Instructions have already been issued for the investigation of said losses, with a view to early payment of the same.

#### BOUNDARY BETWEEN ROSEBUD AND PINE RIDGE RESERVATIONS.

Said act of March 3, 1891, also contains an appropriation of \$6,000, or so much thereof as may be necessary—

to enable the Secretary of the Interior, by negotiation, to adjust all differences between the Indians of the Pine Ridge and Rosebud Reservations in South Dakota, in

reference to the boundary lines of said reservations, their rations, annuities, and interest in the principal and interest of the permanent fund, and to make such an arrangement with the Indians drawing rations on the Rosebud Reservation as will be satisfactory to them, by which those of the Lower Brulé Indians who desire to do so may take lands in severalty upon the Rosebud Reservation, south of the White River.

This matter has already been laid before the Secretary of the Interior, with a view to early action being taken thereon.

#### COMPENSATION TO CROW CREEK INDIANS.

Congress failed to make the appropriation recommended by this Department of \$187,039 to compensate the Indians of the Crow Creek Reservation for loss sustained by them in receiving less land per capita in their diminished reservation than is received by the Indians occupying other diminished reservations, the amount to be added to the share of the permanent fund of the said Crow Creek Indians, and to draw interest.

#### THE FUTURE.

The Government has thus fairly and adequately complied with its treaty obligations to the Sioux, has complied with all the promises made to them by the Commission, consisting of General Crook, Messrs. Foster and Warner, except as to the \$187,039 for the Indians of the Crow Creek Reservation, and it has contributed to their support largely more than it was required to do by treaty or agreement.

This office regrets to be informed by the acting agent of the Pine Ridge Agency that the ponies and other means of transportation owned by the Indians are in such poor condition, and the hauling, by reason of bad roads and bad weather, is so difficult that the Indians are unable to perform the work of transportation of supplies from the railroad to the agency and from the agency to the camps of the Indians, and that this transportation must be performed by white men, and the money earned thereby paid to such white men instead of being paid to the Indian freighters as heretofore. The Indians should put up hay enough in haying season to keep their stock in good condition during the winter and spring.

You will see from the above statement:

First. That with one exception all of the essential agreements and promises made with the Sioux by the late Commission have now become matters of law. Say to the Indians that the President, the Secretary of the Interior, and the Commissioner of Indian Affairs all rejoice very much that at last Congress has put the power into their hands to carry out fully these promises.

Second. Say to the Indians that the rations they are now receiving are the full ration promised to them, and that they will continue to receive this during the year to come provided they are loyal and peaceable.

Third. Tell them that the \$100,000 voted by Congress for the benefit of those who received last year reduced rations will be expended for them at once, or as soon as possible, in such way as will give them great satisfaction. Say that I think a part of this, at least, should be used in the purchase of stock cattle, that they may keep them and raise cattle for themselves and begin in a small way the industry of stock raising, for which most of their reservation is adapted, and just as soon as I can know that they wish this money spent in that way it will be used.

Fourth. Tell them that Agent Cooper has gone to Pine Ridge to find out definitely what persons had their property destroyed during the late trouble, and as soon as he reports to me their names, and the nature and amount of their losses, the money that Congress has put into my hands (\$100,000) will be paid to them. When this will be paid will depend upon how long a time it will take for Mr. Cooper to find out all about the facts, and I want them to help him in all the ways they can, so that he may get a knowledge of the exact truth.

Fifth. Explain to them that I have asked the agents to report to me what Indians are ready and entitled, according to existing agreements, to receive from the Gov-

ernment cows, etc., and as soon as all of the agents have reported I will take steps to purchase the articles named and supply them, if I find that the money therefor will be judiciously expended.

Sixth. Tell them that Doctor Dorchester, Superintendent of Indian Schools, is now in Dakota investigating the matter of establishing a large boarding school at Rosebud, improving the boarding schools at Pine Ridge and elsewhere, and of locating and building the thirty day schools provided for, and that I hope that before the opening of the new school year in September all of this work will either be completed or well under way; so that they will have next year better school facilities than they have ever had.

Seventh. Tell them that I hope that a commission will go within 4 weeks to make final arrangements in regard to the boundary line between Pine Ridge and Rosebud, and to settle satisfactorily other questions in reference to changes of location.

Eighth. Tell them that orders have already been given for the establishment of some sub-issue stations at convenient places, so that it will be more convenient for them in the future than it has been heretofore to get their supplies.

Ninth. Tell them that I will take great pains in purchasing beef, so that, if possible, we can give them larger and better cattle than have sometimes been furnished for them.

Tenth. Explain to them that owing to the difficulties of procuring a correct census roll, and owing to the disturbances during the last winter, these matters have been delayed and that it will take some time to prepare all the numerous papers necessary to complete the work. Tell them that I am doing everything that I can do to hasten matters, and that they must be patient.

Explain very fully and very emphatically to them that a renewal of the disturbances will of necessity interfere with our plans, and will postpone the payment of money and furnishing of supplies.

Tell them that every Indian who loves his people ought now to be on the side of the Government, and use all his influence in preserving the peace and in preventing any act of unfriendliness of whatever nature toward the Government. They should discourage any who are disposed to even talk unkindly, because hard words often lead to bad deeds.

The President, in the talk which he made to the men who came recently to Washington from the Sioux, said to them very earnestly but very kindly, that he warned them that they would get nothing by going to war, and I am very sure that any renewal of the troubles in Dakota must result disastrously for the Indians. They can have no possible excuse now for renewing the trouble, and if they do so everybody will understand that they do it not because they have any justice on their side, but because of bad hearts, and from an expectation or hope to gain something by trouble which they can not get without.

I want to warn them through you very earnestly, as one who is their friend, that any renewal of trouble will bring upon them severe punishment, great loss, and take away from them the sympathy of their friends and of all the people of the United States. It is my belief that if this matter is fully explained to all the leading men they will see the wisdom of patiently waiting until these things which have been promised them have been furnished, and that they will be not only peaceable and friendly towards the Government, but that they will use all their endeavors to remove any unkind feelings that may exist among them toward each other, and that they should be friends among themselves.

Since this letter was prepared, the Secretary of the Interior has taken action on the matter of the claim of the Indians of the Red Cloud and Red Leaf bands of Sioux for ponies, and has directed payment to be made as reported by the special agent who investigated the matter, and that a special agent be designated to make the payment. This will be given attention at an early date.

## DEFICIENCY—SIOUX APPROPRIATIONS.

In accordance with Department letter of December 5, 1890, the agents at the several Sioux agencies were immediately instructed to issue to the Sioux Indians the full rations prescribed in the agreement of February 28, 1877 (19 Stats., 254), viz,

a pound and a half of beef (or in lieu thereof one-half pound of bacon), one-half pound of flour, and one-half pound of corn; and for every 100 rations, 4 pounds of coffee, 8 pounds of sugar, and 3 pounds of beans, or in lieu of said articles, the equivalent thereof;

and the Sioux have received since that date and are now receiving the full rations prescribed by this agreement.

It has been correctly argued that by the method of purchasing beef in vogue for a number of years—that is, to receive cattle at the different agencies as required for issue from July 1 of each year up to October 1 or 15 following, and then to receive at one delivery the entire balance contracted for—the Indians actually received less than was purchased for them, owing to the natural shrinkage of cattle during the winter, caused by a lack of proper range feeding. Therefore the contracts for furnishing beef cattle for all the Sioux agencies for the fiscal year 1892 have been made as far as possible for weekly or monthly deliveries of cattle, thus insuring the issue to the Indians the full quantity of beef purchased for them.

Under the former manner of receiving cattle, the contract price was of course less than where deliveries are required to be made each month, as the contractor was then not under the expense attendant on herding the cattle and did not have to bear the loss of shrinkage or death incident to a severe winter.

To carry out your instructions that full rations be issued to all of the Sioux, and to have monthly deliveries of cattle made, the expenditure of a much larger sum annually is necessary, and for this reason it became necessary to contract for subsistence for the Sioux at an aggregate cost that will cause the creation of a deficiency of \$150,000 in the appropriation for the subsistence and civilization of the Sioux for the fiscal year 1892. I shall be compelled to submit to you, for the consideration of Congress at its next session, a request for a deficiency appropriation for that amount.

This deficiency has been brought about in part by the increase in the price of flour and corn at the time bids were opened in New York City last spring.

## TRANSFERRING THE INDIANS TO THE WAR DEPARTMENT.

In this connection attention is asked to the suggestion of General Miles made both in November and December, 1890, that "the Sioux agencies be turned over absolutely to the military authorities."

In my reports on that subject, dated November 25 and December 23, 1890, I stated that the President's communication of November 13, 1890, clearly did not contemplate that the military should have absolute general control over said agencies, but on the contrary specifically directed that the agents should maintain their control and discipline. The office did not consider that the situation demanded the assumption of absolute general control of the Sioux agencies by the military, and it was hoped that the issuance of an order to that effect would not be entertained, but that on the contrary the military authorities would confine themselves strictly to the duty of suppressing any threatened outbreak, without interference with the duties of the respective civil agents or their management of agency affairs under directions of the Interior Department.

Again, March 20, 1891, General Miles made the following suggestion, that—

The Indians at *Pine Ridge* and *Rosebud* Agencies be turned over entirely to the control of the military authorities in order to put an end to the division of responsibility now existing, in order that one department may be enabled to restore entire confidence and bring about a condition of permanent peace. The officials are in a condition of uncertainty, and the Indians are in doubt as to what their condition is and what to expect in the future.

In its report of March 31 last the office referred to the fact that there was no law which would warrant carrying out the above plan, and stated its conviction that the exigencies at the two Indian agencies designated did not require the exercise of any *extraordinary* power on the part of the Executive in order to transfer to the control of the military authorities any portion of the duties imposed by law upon the proper officers of the Department of the Interior.

I see no reason to change the views expressed in my communication of December 23, 1890, and as they have the same bearing on the general question which they then had on the specific question of turning over the Sioux agencies to the military, I desire to repeat them here:

In 1870 Congress authorized and the President appointed a joint committee representing the Senate and House of Representatives "to take into consideration the expediency of transferring the Indian Bureau to the War Department." The work of the committee, together with two reports, one for the other against the transfer, was reported to Congress and printed (Senate, Forty-fifth Congress, third session, Report No. 33). The fact that such transfer was not made is evidence of the insufficiency of the reasons urged therefor, and of the force of those presented in behalf of the continued civil administration of Indian Affairs. The arguments against the transfer are stated with great clearness and

cogency by the Hon. N. G. Taylor, Commissioner of Indian Affairs, in his annual report for 1868, pages 7 to 15 inclusive, and as these are public documents, easily accessible, I will not repeat them.

After having been under the control of the War Department for many years the Indians were placed under the charge of the Interior Department, and the reasons assigned for restoring them to the War Department in 1868 have far less weight at the present time than they had then.

The one great and all-important object which the nation has set before itself is to civilize and make of them intelligent, self-supporting, self-respecting American citizens. This is essentially a civil process, to be brought about by civil measures and agencies.

I yield to no man in my respect for the Army and in my recognition of its valuable services in the performance of its legitimate functions, but it is not, never has been, and never can be a civilizing force. All that can be claimed for the Army in this connection is that it crushes, or holds in check, forces antagonistic to civilization, and renders it possible for the real up-lifting agencies—education, industry, religion—to operate. To turn the Indians, or any considerable number of them, over to absolute military control, would be to take a great step backward in the humane work which the Government has undertaken.

If it should be said that the proposition is limited to the Sioux, I am constrained to say that I am of opinion that there is no such exigency in the present condition of affairs in the Dakotas as to warrant so radical a departure as this in the Indian policy of the Government. The so-called hostile element embraces but a small portion of the Sioux, and even if it does not yield to peaceable measures, which it will be very likely to do, can be controlled by the military authorities without this great addition to their power.

As soon as the present trouble has subsided it will be better for all concerned that the military retire from the reservations, leaving only a sufficient force in the neighborhood to meet future exigencies should such arise.

With reference to the question of "divided responsibility," allow me to say that according to my understanding the President has given to the War Department absolute authority to suppress any uprising, and that in this respect there is no divided responsibility. Certainly the Indian Bureau has not interfered with the plans of the military, and, so far as I know, the Department has not. I am sure that the Indian agents are ready to obey Department orders, and in the suppression of any outbreak will place themselves and their police force absolutely at the control of the military authorities.

I see no reason whatever why, when the Army is called in to suppress a turbulent Indian faction, it should be put in absolute control of the whole Indian country. The great body of these Indians are friendly, submissive to authority, and engaged in peaceful pursuits. They should so far as possible be unmolested, and should be left under the control of their civil agents and police. Here there could be no "divided responsibility." It may not be easy to determine precisely what Indians are peaceable and what hostile, nor exactly where the functions of the military and those of the civil authorities begin. I think, however, that the terms of the order already issued by direction of the President are sufficiently explicit and elastic to enable these authorities to cooperate in suppressing any outbreak and in preserving order, while leaving the civil authorities—agents, teachers, farmers, etc.—to go on with their important work of promoting civilization.

To place these Sioux agencies absolutely in the control of the military authorities would create a "divided responsibility" between the War and the Interior Departments which could not fail to be embarrassing to each.

If there has been any unwarrantable interference with military plans by any Indian agent it ought not to be a difficult matter to fix the responsibility. But I submit that to take away at one fell swoop all power and authority from the Indian agents among the Sioux, without the most unquestionable necessity therefor, would be an act of great injustice to them, a severe reflection upon the entire Indian administration of the Interior Department, and a violent blow to the whole Indian policy of the Government.

The present plan of allowing civil agents among the Sioux to administer civil affairs while acting absolutely under the control of the military in suppressing any outbreak, should, in my opinion, be preserved until it seems safe to remove the soldiers from the reservation and no longer.

#### CONCLUSION.

I beg to ask special attention to former recommendations for the increase of salaries of the Commissioner, Assistant Commissioner and financial clerk, and that a chief clerk be provided for this office; also for an increase in the salaries of agents and physicians, and for the better pay of Indian policemen. The present experience of the office shows the urgent necessity of paying Indian policemen at least respectable salaries if we are to secure competent men for the work. The enlistment of Indians into the Army at so much better pay than the Government gives them for service as policemen has made it in some cases, for example, at Pine Ridge, well-nigh impossible to secure men competent to render the important service required.

The work of this office increases steadily in magnitude and importance. The changes that are now taking place in the environment of the Indians as well as in their respective conditions are much more rapid than ever before, necessitating urgency in doing for them whatever is to be done.

The disbursements of money made through this office during the two fiscal years ending June 30, 1891, amount in the aggregate to \$13,842,330.69. I think it not too much to say in behalf of those directly interested in the disbursing of this large sum and in the transaction of the vast amount of business incident thereto, that their action will stand the most rigid investigation and the most searching inquiry. The affairs of the Indian Office are managed on strictly business principles,\* and whatever of waste or of inefficiency there may be connected with it is due to the system and is inherent in the necessary defects of so complicated machinery rather than to dishonesty or any want of fidelity on the part of those engaged in the work.

---

\* For a statement showing the methods of transacting the financial business of this Bureau see Appendix, page 20.

I wish especially to bear testimony, in this connection, to the fidelity and efficiency of that force of employés under my immediate charge in the Indian Office. The chiefs, particularly, of the several divisions, perform an amount of work and work of such quality as is little understood and poorly appreciated by those who are not intimately familiar with their duties. I wish likewise to especially put on record my appreciation of the earnestness, zeal, and ability of my assistant, the Hon. R. V. Belt.

Notwithstanding the immense labor, the difficulties, perplexities, and annoyances connected with the administration of this Bureau, I am profoundly interested in the work, and while realizing how many things there are connected with it which I would like to have different, I think it is not claiming too much to say that its work on the whole is in admirable condition, that progress is being made in many directions, and that there is a hopeful outlook for the Indians.

I am grateful for the support accorded my administration by the Department, which I hope it may continue to merit and receive.

Very respectfully,

T. J. MORGAN,  
*Commissioner.*

The SECRETARY OF THE INTERIOR.

### OPINION OF ATTORNEY-GENERAL IN REGARD TO STATUS OF PUEBLO INDIANS.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE ASSISTANT ATTORNEY-GENERAL,  
*Washington, May 4, 1891.*

The SECRETARY OF THE INTERIOR:

SIR: I have the honor to acknowledge the receipt, by reference from the honorable Acting Secretary Chandler, of a communication from the Commissioner of Indian Affairs, dated April 15, 1891, relative to the effect of the paragraph on page 28 of the act making appropriations for the current and contingent expenses of the Indian Department for the year ending June 30, 1892, and whether the same can be made applicable to the Zuni and other Pueblo Indians in New Mexico. Said paragraph reads as follows:

And the Commissioner of Indian Affairs, subject to the direction of the Secretary of the Interior, is hereby authorized and directed to make and enforce by proper means such rules and regulations as will secure the attendance of Indian children of suitable age and health at schools established and maintained for their benefit.

The Commissioner states that said clause is one of the most important features of recent legislation for the Indians, and he expects, on account thereof, that in the future the attendance of Indian children at the schools will be larger and more regular; that there is a government training school at Santa Fé, N. Mex., now in successful operation, with excellent accommodations, and that "there is no reason at all why the school established by the munificence of the General Government for the special benefit of such people as the Zunis, should not be well patronized, and there is strong reason why the children of these unfortunate people should not be debarred from the privileges of the school by the ignorance, superstition, and stubbornness of their parents." He also asks whether the status of the Zuni and other Pueblos be "such as to warrant the exercise of any of the authority now vested in the Department under the law above quoted to secure the attendance of their children of suitable age and health at schools established and maintained for their benefit."

In order to answer satisfactorily the question submitted, it will be necessary to consider the status of said Pueblo Indians and their relation to the Government of the United States, and also whether Congress intended to include the children of Pueblo Indians in the term "Indian children" in said act.

The Pueblo Indians, so called on account of their dwellings in towns or villages, occupy that portion of New Mexico acquired by the United States under the treaty of Guadalupe Hidalgo, executed February 2, 1848, and proclaimed July 4, same year (9 Stats., 922). In said treaty (Article VIII) it was provided that "Mexicans now established in territories previously belonging to Mexico," could remain where they were or remove to Mexico, and whether they went or staid, they could dispose of their property without let or hindrance; and if they chose to remain in said territories after the expiration of a year from the ratification of said treaty without choosing to retain their character as Mexicans, then they "shall be considered to have elected to have become citizens of the United States."

By the ninth article of said treaty it was provided that—

Mexicans who, in the territories aforesaid, shall not preserve the character of citizens of the Mexican Republic, conformably with what is stipulated in the preceding article, shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged of by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States, according to the principles of the Constitution, and in the mean time shall be maintained and protected in the free enjoyment of their liberty and property, and secured in the free exercise of their religion, without restriction.

The status of the Pueblo Indians has frequently been adjudicated by the courts of New Mexico and the Supreme Court of the United States. In the case of *United States v. Ritchie* (17 Howard, 531-540), the court referred to the plan of *Iguala* adopted by the revolutionary government of New Mexico on February 24, 1821, just prior to the overthrow of the Spanish authority, in which it was declared that "all the inhabitants of New Spain, without distinction, whether Europeans, Africans, or Indians, are citizens of this monarchy, with a right to be employed in any post according to their merits and virtues," and that "the persons and property of every citizen will be respected and protected by the Government." The court also referred to the treaty of Cordova of August 24, 1821; the Declaration of Independence, issued September 28, 1821; the decrees of the first Mexican Congress, adopted February 24, 1822, and April 9, 1823, and said:

The Indian race having participated largely in the struggle resulting in the overthrow of the Spanish power, and in the erection of an independent government, it was natural in laying the foundations of the new government the previous political and social distinctions in favor of the European or Spanish blood should be abolished, and equality of rights and privileges established. Hence the article to this effect in the plan of *Iguala*, and the decree of the first congress declaring the equality of civil rights, whatever may be their race or country. These solemn declarations of the political power of the government had the effect, necessarily, to invest the Indians with the privileges of citizenship as effectually as had the Declaration of Independence of the United States, in 1776, to invest all those persons with these privileges residing in the country at the time, and who adhered to the interests of the colonies. (3 Pet., 99, 121.)

But as a race we think it impossible to deny that, under the construction of the laws of this country, no distinction was made as to the rights of citizenship, and the privileges belonging to it, between this and the European or Spanish blood. Equality between them, as we have seen, has been repeatedly affirmed in the most solemn acts of the Government.

In the case of *The United States v. Lucero*, decided in 1869 by the supreme court of New Mexico (1 N. Mex., 422-458), is given a very full history of the Pueblo Indians of New Mexico, with a reference to the legislation prior to the acquisition of said Territory by the United States and also to the legislation of Congress and the Territory since that time, specially relating to the Pueblos; and it was held, among other things, that said Pueblo Indians had the same rights as other Mexicans in said Territory; that not being tribal Indians they were not within the provisions of the intercourse act of 1834, and not "subject to the jurisdiction of the Indian department of the United States Government." The opinion of the court is very elaborate, and although some of the expressions of the court relative to the conditions of the Pueblos seem extravagant, yet the conclusions arrived at appear to be fully sustained by the history and legislation set out in the opinion.

The doctrine announced in the above case was approved in the case of *The United States v. Juan Santistevan* (*id.*, 583-593), and also in the case of *United States v. Anthony Joseph* (*id.*, 593-602). Those cases were affirmed on appeal by the Supreme Court. (*United States v. Joseph*, 94 U. S., 614-619.)

The court said that the question whether the Pueblo Indians and their lands were subject to the provisions of the intercourse act of 1834, extended to New Mexico by the act of July 27, 1851 (9 Stats., 587), must be determined by the answers to the two questions, namely: (1) "Are the people who constitute the pueblo or village of Taos an Indian tribe within the meaning of the statute? (2) Do they hold the lands on which the settlement mentioned in the petition was made by a tenure which brings them within its terms?"

The court quotes from the opinion of the court below, showing the character of the Pueblos to be "a peaceable, industrious, intelligent, honest, and virtuous people. They are Indians only in feature, complexion, and a few of their habits; in all other respects superior to all but a few of the civilized Indian tribes of the country and the equal of the most civilized thereof." Again, after referring to the fact that the intercourse act was extended to New Mexico, there were the wild nomadic tribes of Apaches, Comanches, Navajoes, and other tribes, requiring the guardian care of the United States, the court said:

The Pueblo Indians, if, indeed, they can be called Indians, had nothing in common with this class. The degree of civilization which they had attained centuries before, their willing submission to all the laws of the Mexican Government, the full recognition by that Government of all their civil rights, including that of voting and holding office, and their absorption into the general mass of the population (except that they hold their lands in common), all forbid the idea that they should be classed with the Indian tribes for whom the intercourse acts were made, or that in the intent of the act of 1851 its provisions were applicable to them. The tribes for whom the act of 1834 was made were the semi-independent tribes whom our Government has always recognized as exempt from our laws, whether within or without the limits of an organized State or Territory, and in regard to their domestic gov-

ernment left to their own rules and traditions, in whom we have recognized the capacity to make treaties, and with whom the governments, State and national, deal, with few exceptions only, in their national or tribal character, and not as individuals. (P. 617.)

The court declined to expressly rule that the Pueblos were citizens of the United States and of New Mexico, but they did state:

But we have no hesitation in saying, that their status is not, in the face of the facts we have stated, to be determined solely by the circumstance that some officer of the Government has appointed for them an agent, even if we could take judicial notice of the existence of that fact, suggested to us in argument,

and rules that:

If the defendant is on the lands of the Pueblo, without the consent of the inhabitants, he may be ejected, or punished civilly by suit for trespass, according to the laws regulating such matters in the Territory.

With this judicial exposition of the status of the Pueblo Indians of New Mexico, it must be held, I think, that said paragraph in the Indian appropriation act was not intended to and does not include the Pueblo Indians of New Mexico. It may be conceded that it is very desirable that the children of the Pueblo Indians should be educated in the schools established by the Government; but the Government is equally interested in the education of the children of the Mexicans who remained in New Mexico and became citizens of the United States and all other children in said Territory. Yet, in the absence of an express declaration by Congress that the Pueblo Indian children may be compelled by the Department to attend schools "established and maintained" for the education of Indian children, I am of the opinion, and so advise you, that the Commissioner of Indian Affairs is not authorized under the provisions of said paragraph to prescribe rules and regulations to enforce the attendance of the children of Pueblo Indians in the schools established by the Government for the education of the Indians.

The papers submitted are herewith returned.

Very respectfully,

GEORGE H. SHIELDS,  
*Assistant Attorney-General.*

CORRESPONDENCE IN REGARD TO THE EMPLOYMENT BY THE OXNARD BEET COMPANY OF INDIAN PUPILS FROM GRANT INSTITUTE, GENOA, NEBR.

OXNARD BEET SUGAR COMPANY,  
*Grand Island Nebr., May 15, 1891.*

Hon. J. M. RUSK,  
*Washington, D. C.:*

DEAR SIR: I regret very much not having the pleasure of meeting you in Omaha yesterday, and wish to thank you for the kind words you have spoken in behalf of our new industry, which you have done so much to foster, and also wish to ask a favor of you, knowing that you are interested in the development of this great industry. It is this:

We have in Nebraska, at a place about 50 miles from here, an Indian school. Genoa is the name of the place, and there are now being educated there for agricultural purposes some 400 or 500 Indian boys.

I have been informed that at a similar place in Carlisle, Pa., these Indian boys are hired out in the summer time to farmers. Now one of the great drawbacks of the beet-sugar industry is the fact that unfortunately there is a certain amount of work (thinning out) which must be done by hand, covering in all a period of about 4 to 6 weeks. At our factory in southern California we have Indians for this work, and have met with great success, they being even better than Chinamen.

It occurred to me that what I ought to do was to get those Indians in the beet fields around Grand Island, but was informed, in order to do so, I had to get permission from the Secretary of the Interior, and that is what I want you to obtain for me if possible, as it would be of mutual advantage to the school and ourselves, helping the farmers out when labor is scarce.

We shall want these Indians, if at all, within the next two weeks, and if you would be kind enough to hand my letter to the Secretary of the Interior, to whom I shall also write a few lines, I shall be greatly indebted to you. The governor of the State of Nebraska has already given his consent, which is a mere formality, as the Secretary of the Interior is the one to reply.

Trusting to have a favorable reply, I remain, very sincerely and respectfully,  
yours,

HENRY T. OXNARD.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, May 26, 1891.

HENRY T. OXNARD,  
Grand Island, Nebr.:

SIR: Replying to yours of the 16th instant, in which you propose "to employ for a brief period for temporary purposes the Indians being schooled at Genoa, Nebr., with the understanding that "similar work is done at the school at Carlisle, Pa., the Indians being rented out as it were to the farmers," I have to say:

The system of Carlisle known as the outing system is not such an arrangement as you propose. The pupils at Carlisle are placed in private families for periods varying from a few months to a year, and in such families they receive careful personal instruction in farming and domestic pursuits, and are usually treated as members of the family under whose care they are placed, and many of them attend the white public schools of the town.

The rates of wages are agreed upon by the representative of the Carlisle school and the family with whom the pupil is to live; but they belong to the pupil personally. The report of this office for 1890 will give an idea of this system. (See pp. x and 310.)

If the superintendent of the Genoa school, W. B. Backus, should deem it for the benefit of the school generally and the pupils personally to enter into some temporary arrangement with you for obtaining the help of their labor and giving the pupils employment, I have no reason to suppose that the office would object to any arrangement which he might deem advisable. Copy of your letter has been referred to him with copy of this reply thereto. You should confer with him on the matter.

Very respectfully,

R. V. BELT,  
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, May 26, 1891.

W. B. BACKUS,  
Superintendent Indian School, Genoa, Nebr.

SIR: Inclosed find copies of letters from Henry T. Oxnard to honorable Secretaries of the Interior and of Agriculture; also office letter to Oxnard.

In connection with these consider office telegram of even date, and if you deem it advisable make with Oxnard such an arrangement as shall be conducive to the best interests of the school as a whole and of the pupils individually, who may be engaged by Oxnard for this labor.

Very respectfully,

R. V. BELT,  
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,  
INDIAN SCHOOL SERVICE,  
Genoa, Nebr., June 5, 1891.

The COMMISSIONER OF INDIAN AFFAIRS,  
Washington, D. C.:

SIR: I have the honor to inclose herewith The Norfolk Daily News, of recent date, which was sent me, containing a marked article of resolutions passed by the workmen of that place in regard to the employment of Indian labor.

Owing to the fact that the people of Norfolk seem to be opposed to the employment of our Indian boys I have concluded to keep them at home.

First. Because we can employ all the boys to advantage on our farm.

Second. Because I thought we were rendering a favor to the Norfolk people in allowing our Indians to help them out during the weed season, and if they do not appreciate a favor of this kind we can keep our boys at home.

The agreement with Mr. Oxnard was that our boys were to receive the same wages as the white boys engaged in the same work, and hence would not have had the effect of reducing the scale of wages.

Owing to the fact that there is great agitation on the labor question in this State at the present time, I hope my action in not allowing these boys to go to Norfolk will be approved.

Very respectfully,

W. B. BACKUS,  
Superintendent.

[From the Norfolk (Nebr.) Daily News, June 2, 1891.]

A large and enthusiastic body of the laboring men of Norfolk and their friends met pursuant to call at K. of L. hall last evening. The chairman stated that the object of the meeting was to take some action in regard to the employment of Indian laborers in the beet fields and desired an expression from those present. The following resolutions were adopted:

Whereas, it has come to our knowledge that the Oxnard Beet Sugar Company and others engaged in the raising of sugar beets near this place contemplate bringing in and employing Indian laborers in their beet fields, and believing there are enough white laborers in this vicinity who are ready and willing to perform such labor, provided a just compensation is offered, therefore be it

*Resolved*, That we, the laboring men and the friends of labor of Norfolk, Nebr., do most earnestly and sincerely protest against the employment of said Indians or any other alien labor for the following reasons:

First. It is contrary to the best interests of our city and county to bring in a class of people who neither contribute to the support of the Government in the shape of taxes nor pay out any of the wages so earned except their actual living expenses while engaged in such labor.

Second. That it is an innovation and attempt to set aside the established principle that supply and demand regulate the price of all commodities, labor not excepted, and is practically the same in principle as the importation of criminal and pauper European laborers in the eastern part of the United States and of Chinese and Japanese in the western part in order to unjustly reduce the price of labor.

Third. That the importation and employment of such labor tends to degrade the condition of the laboring classes to the level of those with whom they are brought into competition, and is only done by those who for the greed of gain would sacrifice everything which has induced many of our best citizens to select our city and State as a place of residence.

Fourth. That it has been the universal experience of all who have had occasion to employ a number of laborers that their most industrious, reliable, competent, and contented men were those who owned a home of their own, and as almost all the laboring men of Norfolk belong to this class or are saving all they can for the purpose of having a home of their own by and by, we consider it a gross injustice to this class of our citizens to compel them to compete with such imported labor.

*And be it further resolved*, That while we are not opposed to the emigration and settlement among us of that worthy class of foreigners who are an honor to the country from which they came, and a credit to any country they may adopt, we are unconditionally opposed to and will use all means in our power to prevent the bringing in or importation of that class of laborers, which can only result in lowering the condition of the laboring class of this country.

*Resolved*, That a copy of these resolutions be furnished to the leading papers of the State for publication.

J. L. RITCHIE,  
*Chairman.*

DEPARTMENT OF THE INTERIOR,  
INDIAN SCHOOL SERVICE,  
*Genoa, Nebr., June 5, 1891.*

The COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.:*

SIR: I have the honor to inclose herewith a letter which I have just received from the Norfolk Beet Sugar Company per J. G. Hamilton, secretary, requesting that our boys be sent to Grand Island for work in the beet fields, instead of to Norfolk, as the citizens of the latter place were opposed to Indian labor.

I would respectfully report that the Farmers' Alliance at Grand Island (and it is an organization numerically strong) are complaining that the Oxnard Company do not pay enough for the beets raised, and have entered into a combination not to raise any more beets for the company unless a higher price be paid for them.

Further, the Farmers' Alliance and the Knights of Labor organizations are very strong in Grand Island and Hall County, and I fear that if our Indian boys are permitted to go there to work it will make trouble; and in order to have peace I would suggest that our Indians be not allowed to work in the beet fields for the Oxnard Company.

Of course I understand that you left the matter for me to decide, but I am anxious to advise you of all the circumstances in detail. We can keep our boys at work at home, and no trouble will arise.

We have three political parties in this State at the present time, about 70,000 in each party. One party is composed of the Farmers' Alliance and Knights of Labor combined; the other two are the Republicans and Democrats. I feel sure that if we allow our boys to work in the beet fields the Farmers' Alliance and the Knights of Labor organizations will unite as a party in condemning our action.

I will not send the boys unless you advise me to do so. Please wire me your opinion.

Very respectfully,

W. B. BACKUS,  
*Superintendent.*

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, June 8, 1891.

W. B. BACKUS,  
*Superintendent Grant Institute, Genoa, Nebr.:*

SIR: I am in receipt of your letter of June 5, inclosing a copy of the Norfolk Daily News of June 2, 1891, which contains the record of a meeting of laboring men held in Norfolk, together with the resolutions passed by them protesting against the employment of Indian boys from Grant Institute in the beet fields.

I am very much surprised, first, at the action of these men in protesting against the employment of "Indians or any other alien labor." Indians are not aliens, and are the only genuinely native Americans, and they certainly are entitled to earn their daily bread by their labor if any class of people upon this continent is.

Second. But I am especially astonished that you should be so easily frightened and should annul a contract providing for labor for these pupils.

Allow me to say with all sincerity, but with great positiveness, that your action in the case is not approved.

Very respectfully,

T. J. MORGAN,  
*Commissioner.*

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, June 9, 1891.

W. B. BACKUS, ESQ.,  
*Superintendent Grant Institute, Genoa, Nebr.:*

SIR: I am in receipt of your communication of June 5, regarding the matter of placing boys from your school at work at Grand Island in the beet fields.

I had already considered the resolutions passed by the workmen of Norfolk, and had written to you that I disapproved your action in annulling the contract because of that opposition.

I note what you say in the following paragraph:

We have three political parties in this State at the present time, about 70,000 in each party. One party is composed of the Farmers' Alliance and Knights of Labor combined. The other two are the Republicans and Democrats. I feel sure that if we allow our boys to work in the beet fields the Farmers' Alliance and the Knights of Labor organizations will unite as a party in condemning our action.

I have not time at present to enter into a full discussion of this matter, but I wish to ask your attention to a few points which present themselves to my mind with considerable force.

In the first place, the Indians are the only original Americans. They once occupied and owned all the soil which now constitutes the basis of our national life. Only a few years ago the entire State of Nebraska was the hunting ground of the Indians, and where your school is now located was the Pawnee Reservation.

These Indians have gradually ceded to the United States their vast landed possessions, and have slowly receded from civilization until, to-day, they occupy a comparatively small portion of land, and are struggling with many most discouraging obstacles in their endeavors to secure for themselves a livelihood.

The Government of the United States, appreciating the circumstances in which they are placed, has with great generosity provided for the establishment of a system of industrial schools where the young Indians can receive not only the rudiments of an English education, but can be brought into such relationship with the civilization of the present that they may be able to earn for themselves an independent support by the labor of their hands.

This wise policy of the Government is not only of inestimable value to the Indians who are most immediately affected by it, but is certainly of the greatest possible concern to the white people as well, because it is evident to any thoughtful man that unless the Indians are rendered self-supporting they must depend upon the Government for support and be maintained at public expense. The buffalo is gone. All the old methods of procuring their subsistence have been taken away from them by the progress of civilization, and they are shut up to the absolute necessity either of being allowed to earn their living as white men earn theirs or else of being maintained as paupers by the Government of the United States. I can not believe that the people of this country are willing that the burden of supporting these Indians in idleness at public expense can be tolerated. It is bad for the Indians; bad for the white people. It has no redeeming feature.

Besides this, it is most evident that Indians supported in idleness are a menace to the peace of their neighbors. The experiences of last winter show how great loss

and distress may be brought upon the people of Nebraska by the simple fear of an outbreak among the Indians. The surest way of preventing and rendering impossible Indian outbreaks in the future is to prepare the rising generation of Indians for absorption into our civilization by making them self-supporting and acquainting them with our industries. I know of no way in which this latter can be done so effectively, so swiftly, and so absolutely satisfactorily as by the method which is known as the "outing system." If these boys and girls from your school can go out onto the farms, into the fields and shops and kitchens and homes of Nebraska people, associating with them on terms of good fellowship, and learn from them their way of labor, acquire skill in their industries, and thus earn for themselves a support and become enamored with the white man's mode of civilization, they will very readily adjust themselves to the necessities of modern life, will become Americans in spirit, as they are already in fact, and will cease to be Indians. This is a matter that concerns the people of Nebraska in a preëminent degree, and any effort on the part of any of the citizens of Nebraska to interfere with this work is not only a great injustice to these original occupants of the soil, to the former owners of the very land on which the commonwealth now rests, but is an injustice to the people themselves by necessitating the continuance of the burdens of public taxation for the support of the Indians and by rendering possible that condition of unrest which must continue so long as the Indians remain uncivilized.

Besides this, the Government has established in Nebraska, at Genoa, an industrial school of a high order, and is spending there this year \$60,000, a large portion of which goes at once into circulation, gives employment to a considerable number of teachers and other residents of Nebraska, and in various ways contributes to the welfare and prosperity of the State.

Now, if the people of Nebraska propose to set themselves solidly against this institution of learning, and instead of taking a pride in it and fostering and helping it as they should, are to use every means to thwart it in its endeavor to do its work, it becomes a very serious question whether the school should not be discontinued and removed to some place where the sentiment of the people is more friendly.

I leave this matter to your own discretion. I do not think it best to issue any absolute orders in the case, but I suggest to you that if you find that your efforts to secure proper employment for the pupils of your school at reasonable wages are to be resisted by political parties or other organized bodies of citizens of Nebraska, that you report the case fully and in detail to the office that I may, if necessary, lay the matter before Congress at its next session. If it is your judgment that the citizens of Nebraska are so hostile to the school in its laudable endeavor to made intelligent, independent citizens of the pupils now there that you can not successfully go on with your work, let me ask you whether it is not wise, in your judgment, to arrest at once all projected improvements, with the view of closing the school at an early day and abandoning the enterprise. The money that is being expended there can be expended at Carlisle and in other States where the citizens are only too glad to have these institutions of learning.

At Carlisle, Pa., which I visited last week, there are now nearly 800 pupils, of whom 440 are to-day engaged in various industries among the citizens, chiefly of Pennsylvania, where they are receiving kind treatment and ample wages. Capt. Pratt informed me that he could have put out not less than 150 more if he had had them. Farmers told me that they were exceedingly anxious to secure a larger number of pupils from the school to assist them in their work. It would not be difficult for us to transfer at once every pupil that you have in your school to Carlisle and find for every one that is competent for it work and wages immediately, and if the people of Nebraska desire it I see no reason why it should not be done.

Please give such publicity to this letter as you see fit in order that the people who are opposing you and those who have heretofore been the friends of the school may know what they are doing.

Very respectfully,

T. J. MORGAN,  
Commissioner.

## CIVIL SERVICE RULES RELATING TO THE INDIAN SERVICE IN THE FIELD.

## INDIAN RULE I.

The classified Indian service shall include all the physicians, school superintendents, assistant superintendents, school-teachers, and matrons, in that service, classified under the provisions of the act to regulate and improve the civil service of the United States, approved January 16, 1883.

## INDIAN RULE II.

(1) To test fitness for admission to the classified Indian service examinations of a practical character shall be provided on such subjects as the Commission may direct for physician, superintendent, assistant superintendent, teachers, and matrons.

(2) The following age limitations shall apply to applicants for examination for the classified Indian service: For physician, not under 25 years of age nor over 45; for superintendent, not under 25 nor over 50; for assistant superintendent and for teacher, not under 20 nor over 50; for matron, not under 25 nor over 55: *Provided*, That these limitations shall not apply to the wives of superintendents of Indian schools who apply for the position of matron, nor shall the maximum limitations apply to persons allowed preference under section 1754, Revised Statutes, by the Commission.

(3) Blank forms of application shall be furnished by the Commission, and the date of reception and also of approval by the Commission of each application shall be noted on the application paper.

## INDIAN RULE III.

(1) The papers of every examination shall be marked under regulations made by the Commission. Each competitor shall be graded on a scale of 100, according to the general average determined by the markings.

(2) Immediately after the general average shall have been ascertained, each competitor shall be notified that he has passed or has failed to pass.

(3) A competitor who has failed to pass an examination may, with the consent of the Commission, be allowed reexamination at any time within six months from the date of failure without filing a new application; but if he be not allowed reexamination within six months, he shall be required to file a new application before being again examined.

(4) No eligible shall be allowed reexamination during the period of his eligibility unless he shall furnish satisfactory evidence to the Commission that at the time of his examination, because of illness or other good cause, he was incapable of doing himself justice; and his rating on such reexamination shall cancel and be a substitute for his rating on his former examination.

(5) All competitors whose claim to preference under section 1754 of the Revised Statutes have been allowed by the Commission, who attain a general average of 65 per cent or over, and all other competitors who attain a general average of 70 per cent or over, shall be eligible for appointment to the place for which they were examined. The names of all the competitors thus rendered eligible shall be entered, in the order of grade, on the proper register of eligibles.

(6) When two or more eligibles are of the same grade, preference in certification shall be determined by the order in which the application papers are filed.

(7) For the Indian service there shall be four districts, and a separate register of eligibles for each grade of examination for each district, the names of males and females being listed separately on each register. The districts shall be comprised as follows: No. 1, of the States of Michigan, Wisconsin, Minnesota, Iowa, Nebraska, North Dakota, South Dakota, Montana, and Wyoming; No. 2, of the States of Idaho, Washington, Oregon, Nevada, and that part of California lying north of the thirty-seventh parallel of latitude, and the Territory of Utah; No. 3, of that part of California lying south of the thirty-seventh parallel of latitude, the Territories of Arizona, New Mexico, Oklahoma, the Indian Territory, and the States of Colorado, Kansas, Missouri, Arkansas, Louisiana, and Texas; No. 4, of all of the States of the United States not embraced in any of the foregoing districts, together with the District of Columbia. Upon the written request of any eligible, his name shall be entered upon the register of any one or more of the districts other than that in which he resides: *Provided*, that he shall state in writing his willingness to accept service wherever assigned in any such district.

(8) The period of eligibility to appointment shall be one year from the date on which the name of the eligible is entered on the register, unless otherwise determined by regulation by the Commission.

## INDIAN RULE IV.

(1) All vacancies, unless filled by promotion, transfer, or reappointment, shall be filled in the following manner:

(a) The Commissioner of Indian Affairs, through the Secretary of the Interior, shall, in form and manner to be prescribed by the Commission, request the certification to him of male or female eligibles from the district in which the vacancy exists.

(b) If fitness for the vacant place is tested by competitive examination, the Commission shall certify from the proper register of the district in which the vacancy exists the names of the three eligibles thereon, of the sex and grade called for, having the highest averages: *Provided*, That the eligibles upon any register who have been allowed preference under section 1754 of the Revised Statutes shall be certified, according to their grade, before all other eligibles thereon: *And provided further*, That if the vacancy is in the grade of matron or teacher, and the wife of the superintendent of the school in which the vacancy exists is an eligible, she may be given preference in certification if the appointing officer so requests.

(2) Of the three names certified to him the appointing officer shall select one; and if at the time of making this selection there are more vacancies than one he may select more than one: *Provided*, That if the appointing officer to whom certification has been made shall object in writing to any eligible named in the certificate, stating that because of physical incapacity, or for other good cause particularly specified, such eligible is not capable of properly performing the duties of the vacant place, the Commission may, upon investigation and ascertainment of the fact that the objection made is good and well founded, direct the certification of another eligible in place of the one objected to.

(3) Each person thus designated for appointment shall be notified and upon indicating acceptance shall be appointed for a probationary period, if a physician, of six months, and if a school employé, to expire at the end of the then current school year, at the end of which period, if his conduct and capacity be satisfactory to the appointing officer, he shall receive absolute appointment; but if his conduct and capacity be not satisfactory to said officer he shall be so notified, and this notification shall be his discharge from the service: *Provided*, That any probationer may be discharged during probation for misconduct or evident unfitness or incapacity.

(4) The Commissioner of Indian Affairs shall require the officer under whom a probationer may be serving to carefully observe and report in writing upon the services rendered by and the character and qualifications of such probationer as to punctuality, industry, habits, ability, and adaptability. These reports shall be preserved on file, and the Commission may prescribe the form and manner in which they shall be made.

(5) In case of the sudden occurrence of a vacancy in any school during a school term which the public interest requires to be immediately filled, the Commissioner of Indian Affairs is authorized, in his discretion, to provide for the temporary filling of the same until a regular appointment can be made under the provisions of sections 1, 2, and 3 of this rule, and when such regular appointment is made the temporary appointment shall terminate. All temporary appointments made under this authority and their termination shall at once be reported to the Commission.

## INDIAN RULE V.

Until promotion regulations shall have been applied to the classified Indian service promotions therein may be made upon any test of fitness determined upon by the promoting officer, if not disapproved by the Commission: *Provided*, That preference in promotion in any school shall be given to those longest in the service, unless there are good reasons to the contrary; and when such reasons prevail they shall through the proper channels be reported to the Commission: *And provided further*, That no one shall be promoted to any grade he could not enter by original appointment under the minimum age limitations applied thereto by Indian Rule II, section 2, and that no one shall be promoted to the grade of physician from any other grade.

## INDIAN RULE VI.

Subject to the conditions stated in Rule IV, transfers may be made after absolute appointment from one school to another, and from one district to another, under such regulations as the Commissioner of Indian Affairs, with the approval of the Secretary of the Interior, may prescribe.

## INDIAN RULE VII.

Upon the requisition of the Commissioner of Indian Affairs, through the Secretary of the Interior, the Commission shall certify for reinstatement, in a grade or class no

higher than that in which he was formerly employed, any person who within one year next preceding the date of the requisition has, through no delinquency or misconduct, been separated from the classified Indian service: *Provided*, That certification may be made, subject to the other conditions of this rule, for the reinstatement of any person who served in the military or naval service of the United States in the late war of the rebellion and was honorably discharged therefrom, without regard to the length of time he has been separated from the service.

INDIAN RULE VIII.

The Commissioner of Indian Affairs shall report to the commission:

(a) Every probational and every absolute appointment in the classified Indian service.

(b) Every refusal to make an absolute appointment and the reason therefor, and every refusal to accept an appointment.

(c) Every separation from the classified Indian service, and the cause of such separation, whether death, resignation, or dismissal.

(d) Every restoration to the classified Indian service.

These rules shall take effect October 1, 1891

BENJ. HARRISON.

RULES IN REGARD TO ATTENDANCE OF INDIAN YOUTH AT SCHOOL.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, D. C., October, 30, 1891.

The following rules and regulations, having been approved by the honorable Secretary of the Interior, are hereby promulgated for the information and guidance of all concerned:

T. J. MORGAN,  
*Commissioner,*

The Congress of the United States, in the Indian appropriation act approved March 3, 1891, enacted the following law:

And the Commissioner of Indian Affairs, subject to the direction of the Secretary of the Interior, is hereby authorized and directed to make and enforce by proper means such rules and regulations as will secure the attendance of Indian children of suitable age and health at schools established and maintained for their benefit.

In order to give full force and effect to the above enactment, the following rules and regulations are hereby promulgated:

1. The law applies to all Indians, whether on or off reservations, who are subject to the absolute control, and are under the special protection of the United States Government.\*

2. The object of the law is to secure to all Indian youth the benefits of a practical education, which shall fit them for the duties of United States citizenship, and it requires that every Indian child of suitable age and health shall attend some school. So far as practicable the preferences of Indian parents, or guardians, or of Indian youth of sufficient maturity and judgment, will be regarded as to whether the attendance shall be at Government, public or private schools.

3. "Children of suitable age" is defined to include all those over 5 and under 18 years of age.

4. The "suitable health" of a child, as a condition of being sent to school, is to be determined by a medical examination and the certificate of a physician.

5. Indian children will attend the day or boarding schools established for their benefit on their respective reservations; but in case such schools are lacking, or they are already filled with pupils, or if for other reasons the good of the children shall clearly require that they be sent away from home to school, they will be placed in non-reservation schools.

6. The consent of parents shall, ordinarily, first be secured, if practicable, for placing children in non-reservation schools.

7. Cases of refusal to allow children to be sent to schools, either on or off reservations, or of opposition to the proper officers in their attempts to secure the school attendance of Indian children, shall be referred to the Indian Office, accompanied by explicit statements setting forth the circumstances of each case. Such punish-

\*NOTE.—The law is not held to be applicable to the so-called Five Civilized Tribes, the Indians residing in the State of New York, the Pueblos of New Mexico, and the Indians residing in States who have become citizens of the United States.

ment or penalties as the circumstances may seem to call for will be prescribed by this office.

8. It is hereby made a duty of agents, special agents, and supervisors of education, to use their authority wherever necessary to secure the attendance at school of all Indian children within their reach.

9. It shall be proper for agents, after reporting the facts and being specially authorized, to use the Indian police force to compel attendance at school, wherever necessary.

10. The sole purpose of this legislation is to secure the highest good of the rising generation of Indians, in order that they may no longer remain savage, uncivilized, uneducated, or dependent. It is therefore earnestly hoped that both the Indians and all interested in their welfare will cooperate in every practicable way to secure the attendance of all Indian children of suitable age and health at such institutions and for such length of time as shall be necessary to equip them for life's duties.

*Rules for the guidance of employes of the Indian service whose duties are connected with the enrollment and transfer of pupils.*

#### DUTIES OF AGENTS.

**RULE I.**—Every United States Indian Agent shall, if practicable, keep to date a census of children of school age on his reservation; against each child's name he shall place the name of the school the child attends, if any. He shall furnish this office and the supervisor of education for that district with a copy of such census.

**RULE II.**—The prime duty of the agent, in connection with Indian education, shall be that of keeping the Government schools filled. Each agent should receive from the supervisor of the district in which the agency lies, on or about July 1, a descriptive list of children on the reservation who some time during the summer are to be transferred by the supervisor to other schools; said list showing the school to which each child is to be transferred.

**RULE III.**—Agents shall report to this Office all cases of transfer, accompanied by descriptive lists of children transferred, showing name, sex, age, tribe, residence, date of transfer, school to which transfer is made, with such remarks as may be necessary.

**RULE IV.**—Every agent shall cooperate with the supervisor in collecting and transferring pupils to the nonreservation schools.

#### DUTIES OF SUPERVISORS.

**RULE V.**—On or about May 1 of each year (earlier if possible) each supervisor shall send to this Office descriptive lists of Indian school children in Government and contract schools in his district who are fitted for transfer to nonreservation industrial training schools, and also lists of children to be transferred from day schools to reservation Government boarding schools.

**RULE VI.**—Each supervisor shall, immediately after receipt of directions from this Office, to be furnished not later than June 15, if possible, send to each agent in his district a descriptive list of the children whom he proposes to transfer.

**RULE VII.**—It shall be the duty of each supervisor to gather from his district, after the receipt of his final instructions, the children to be transferred, and conduct and deliver them to the respective nonreservation industrial training schools, or their agents, if practicable not later than August 31.

**RULE VIII.**—Supervisors, immediately after a transfer of pupils conducted by them, shall furnish the proper agents with duplicate descriptive lists of the children transferred to enable them to comply with Rule III.

**RULE IX.**—The rule of transferring pupils from reservation to nonreservation schools shall be performed ordinarily by supervisors; transfers may be made, however, by the agent or other Government officer, acting under special direction of this Office.

#### DUTIES OF SUPERINTENDENTS.

**RULE X.**—The superintendents of each nonreservation industrial training school, and of each reservation Government boarding school shall, on or about April 11 of each year, send to this Office a report stating as far as he may then be able the number of pupils, male and female, that he will require for enrollment in his school for the ensuing fiscal year.

**RULE XI.**—The superintendent of each reservation Government boarding school, the superintendent of every contract boarding or day school, and the principal teacher of each reservation Government day school, shall at the end of the first quarter in the year furnish a descriptive list of pupils in his school to the agent to whose

reservation they belong, showing name, sex, age, tribe, residence, date of entering school, with any remarks found necessary, and at the end of each subsequent quarter furnish a descriptive list of changes during the quarter.

## MISCELLANEOUS.

RULE XII.—Pupils once enrolled in any school, unless separated therefrom by authority of this Office, will be considered as members of the school where last enrolled.

RULE XIII.—Superintendents of contract schools, unless by special consent of this Office, are expected to recruit their schools from the children in camps who have not been previously enrolled.

## STATE LEGISLATION IN REGARD TO GIVING PUBLIC FUNDS IN AID OF SECTARIAN SCHOOLS.

The following is collated from "American Statute Law", by Frederick J. Stimson, 1886:

1. By the constitutions of *thirteen* States no public money can be appropriated for the support of any sectarian school—New Hampshire, Massachusetts, Pennsylvania, Illinois, Michigan, Wisconsin, Minnesota, Missouri, Texas, California, Colorado, Alabama, Louisiana.

2. By the constitution of *fourteen* States no money can ever be taken from the public treasury in aid of any church, sect, or sectarian institution—Pennsylvania, California, Michigan, *Georgia*, Missouri, Texas, Illinois, Colorado, Minnesota, *Indiana*, *Oregon*, Wisconsin, *Mississippi*, Louisiana. The four States in italics are not in the previous list.

3. In *six* States money can not be appropriated for sectarian purposes or education by any municipal corporation—Illinois, California, Missouri, Colorado, *Virginia*, *West Virginia*. The two States in italics are not included in the two previous lists.

4. In *six* States no property of the State can be appropriated for any sectarian purpose—Illinois, Michigan, Missouri, Texas, California, Colorado.

5. In *four* States no property of any municipality can be so appropriated—Illinois, California, Colorado, Missouri.

6. In *one* case the State can not accept or grant a bequest to be used for sectarian purposes—Nebraska.

7. In *four* States no public money can be appropriated for any school not under the exclusive control of the State or its school department—Massachusetts, *Maine*, Pennsylvania, California. *Maine* is not included in any of the previous lists.

8. The constitutions of *four* States declare that no sect shall ever have any exclusive right to, or control of, the State school fund,—*Ohio*, Mississippi, *South Carolina*, *Kansas*. Here are three States not before mentioned.

9. In *six* States no sectarian instruction is permitted, directly, in any of the State schools—Wisconsin, Nebraska, California, *Nevada*, Colorado, South Carolina. *Nevada* is not in the previous lists.

10. In *two* States no money can be appropriated for religious services in the Legislatures—Oregon, Michigan.

Here are *twenty-five* States in which the principle under consideration is recognized in some form, and the appropriation of public moneys for sectarian schools is either directly or constructively prohibited.

## EXTRACTS FROM CONSTITUTIONS OF THE SIX NEW STATES.

*Montana*.—No appropriation shall be made for any charitable, industrial, educational, or benevolent purpose, or to any person, corporation, or community not under the absolute control of the State, nor to any denominational or sectarian institution or association.

*Washington*.—The entire revenue (public school) shall be exclusively applied to the support of the common schools. And "all schools maintained or supported wholly or in part by the public funds shall be free from sectarian control or influence."

*Wyoming*.—No part shall be used for the support of any sectarian or denominational school, college, or university.

*North Dakota*.—No money raised for the support of the public schools of the State shall be appropriated for, or used for the support of, any sectarian school.

*South Dakota*.—No appropriation of lands, money, or other property or credits to aid any sectarian school shall ever be made by the State, or any county or municipality

within the State, nor shall the State, or any county or municipality within the State, accept any grant, conveyance, gift, or bequest of lands or money, and no sectarian instruction shall be allowed in any school or institution aided or supported by the State.

*Idaho.*—Neither the legislature, nor any county, city, town, township, school district, or other public corporation, shall ever make any appropriation, or pay from any public fund or moneys whatever, anything in aid of any church, or sectarian or religious society, or for any sectarian or religious purpose, or to help support or sustain any school, academy, seminary, college, university, or other literary or scientific institution controlled by any church, etc.

#### CORRESPONDENCE WITH THE BUREAU OF CATHOLIC INDIAN MISSIONS.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C., July 1, 1891.*

Rev. Father CHAPELLE, *Vice-President Bureau Catholic Indian Missions:*

DEAR SIR: Replying to your application for renewal of contracts for 1891-'92 for the education of Indian children and youth, allow me to say:

When I entered upon the duties of this office two years ago yesterday I found the important work of Indian education being carried on under two distinct systems—the Government, or public, and the contract school system. Beginning in 1876 by an appropriation of \$20,000 for Indian education, the Government has gradually increased this sum until, for the year ending June 30, 1889, it amounted to something more than \$1,300,000.

The Government had established and was maintaining three classes of schools—the large training schools off reservations, the reservation boarding schools, and the reservation day schools. The attendance of these various Government institutions for the year ending June 30, 1889, showed an enrollment of 9,660, and an average attendance of 6,956, while the enrollment in all the contract schools in the same period was only 6,124, with an average attendance of but 4,596. The various Government schools were in full operation, and my work has been limited to enlarging and improving the system. I was in no wise responsible for and claim no credit for its origination, but its proper administration was committed to me as a great trust.

By special and general legislation Congress has, during the last two years, largely increased the number, capacity, and equipment of these Government schools, and has added more than a million dollars to the annual appropriation for Indian education.

On entering upon my present duties I expressed my preference for the Government rather than the contract system, as being more in harmony with the American idea of education by means of the public schools. At the same time I stated that the schools maintained by the Government for the education of the Indians should be strictly nonsectarian and nonpartisan; and further, that the appropriation of public funds to sectarian institutions was, in my opinion, contrary to the spirit if not the letter of the Constitution and opposed to public policy.

I said, however, distinctly and repeatedly, that it was not my purpose or wish to interfere in any way with the contract schools then existing, unless for good and sufficient reasons, expressing, however, a determination not to authorize any new contract schools.

These views were widely disseminated and earnestly discussed through the public press and in the halls of Congress, and the general subject found a place in the annual report of the honorable Secretary of the Interior and the President's annual message.

My position on the question was violently assailed by your bureau. False charges were preferred against me, and the most determined but futile efforts were made to prevent my confirmation and to secure my displacement. An employé discharged for cause from this office was immediately given employment by your bureau, where he is still retained, and during the entire two years the bureau has, both directly and indirectly, in season and out of season, publicly and privately, through newspapers and personal interviews, through official correspondence and in the lobby of Congress, assailed the policy of the administration and attempted to defeat the extension and successful operation of the Government schools. Those in your employ in the field and others, instigated apparently by the attitude of the bureau, have endeavored directly and indirectly to hinder the efforts of the Government in its beneficent work of educating and civilizing the Indian through its own appropriate means. These influences emanating from your bureau have been in some respects at least hurtful, and it is certainly not its fault that the Govern-

ment schools have not been crippled or even destroyed. While drawing hundreds of thousands of dollars of Government funds to build up and sustain the mission schools under your charge, your bureau has thrown the whole weight of its influence against the Government, upon whose bounty it subsisted.

Your attitude of hostility, criticism, and aggressive antagonism has rendered official intercourse between your bureau and this office very difficult and harassing, largely increasing its work and hindering and delaying the general cause of Indian education.

During this period of time the president of your bureau, Rev. J. A. Stephan, has never, so far as known, taken any pains to bring about pleasanter relations with the Indian Office; has never spoken to me, or, so far as I am aware, been in the office, and is entirely unknown to me, even by sight.

Recently, simply in the interest of harmony and with a sincere desire to promote the common cause, I intimated to your secretary that I would be glad to confer with the officers of your bureau, and on the 10th of June last you and your secretary called at the office, where there was a full, pleasant, and, to me, satisfactory interview. I received from you the repeated assurance that you greatly desired harmony; that you regretted the unpleasant relations then existing, and that in the future this office would have no occasion to complain of the attitude of your bureau. I at the same time expressed to you my desire for friendly coöperation and my readiness to grant to your bureau all that you could reasonably expect.

In this connection, let me ask your attention to the growth of the appropriation of public funds to your bureau, which has been as follows: 1886, \$118,343; 1887, \$194,635; 1888, \$221,169; 1889, \$347,672; 1890, \$356,957; 1891, \$363,349, from which it will be seen that during each of the two years of my administration you have received an increased amount of money.

Subsequent to this interview your secretary made an official request for an appropriation for the year to come of a sum aggregating, in connection with amounts especially appropriated, \$450,210. Your attention is particularly invited to the fact that the total sum suggested by act of Congress for all contract schools of all denominations for 1891-'92 was \$535,000, of which your bureau claimed nearly five-sixths.

I looked upon this demand as unreasonable, and yet, in order, if possible, to promote harmony, I intimated a willingness to set apart considerably over \$400,000 for your use, confidently expecting, in accordance with your express agreement, that the unseemly, unjustifiable, and harmful antagonism of your bureau to the Indian Office and the Government schools was at an end.

Imagine my surprise, chagrin, and disgust when my attention was called on Monday, June 29, to an article emanating from your bureau, published in the New York Sun, Sunday, June 28, of which the following is a copy:

**THE MOQUI INDIAN TROUBLE—COMMISSIONER MORGAN'S SCHOOL POLICY SAID TO BE RESPONSIBLE FOR IT.**

*Washington, June 27.*—The action of Commissioner of Indian Affairs Morgan in requesting that a detail of troops be sent to the Moqui Pueblo Indian school at Keam's Cañon, Arizona, to force the Indians to desist from taking their children away from the Government school and threatening the whites, as they are alleged to have done, has aroused the utmost indignation among the various benevolent associations interested in civilizing and educating the Indians. The Commissioner is generally criticised, especially by the Board of Catholic Indian Missions in this city, who claim that the trouble, if there really is any at Keam's Cañon, is the first ill fruit of the Commissioner's policy of pig-headed obstinacy and opposition to the contract schools that have existed and flourished for years. At the Indian Bureau the information is furnished that the recent difficulties are due to the fact that the Moqui Indians are bitterly opposed to sending their children to the Government school. The mission bureau states emphatically that there is no truth whatever in this statement, so far as it indicates opposition to education on the part of these Indians. They say that it is quite possible, and altogether probable, that the school, as at present managed by the Commissioner of Indian Affairs and his political teachers, and other appointees, are unpopular, but they claim that the Moqui Indians are heartily in favor of schools, and in support of this they point to a petition submitted by the Moquis to the Commissioner about four years ago and signed by all their village chiefs. The petition, after describing the Indian mode of life and their admiration for the whites, concluded as follows:

"We are also greatly concerned for our children. They pray that they may follow in their fathers' footsteps, and grow up pure of heart and good of breath. Yet we can see that things are changing around us, and many Americans are coming in this region. We would like our children to learn the American's tongue and their ways of work. We pray you to cause a school to be opened in our country, and we will gladly send our children."

In view of this petition and the fact that no trouble whatever has been experienced heretofore with the Moquis or any other tribe in connection with the school's attendance, it is thought that Commissioner Morgan himself is responsible for the present disquietude at Keam's Cañon. The action of the Commissioner, moreover, in asking for the presence of United States troops before making a careful investigation of the reported trouble, occasions much surprise. Gen. Morgan is an enthusiastic supporter of the Indian Rights Association, and professedly a firm believer in the arts of peace as more powerful in the pacification of the savage instincts than the arts of war. Yet at the first note of alarm he forgets his teachings and his principles and calls the military to his aid.

As has been before stated, the present difficulty is the first case on record of Indians being charged with refusing to allow their children to attend the schools. For many years, under the contract-school system, the various religious associations of all denominations have conducted successful contract schools, and have never experienced the slightest trouble in getting the Indians to attend. But for the opposition of Commissioner Morgan the Board of Catholic Missions would be conducting a school at Keam's Cañon to-day for the benefit of the Moqui Indian children. In 1889, Father Chapelle, of this

city, the president of the board, visited the reservation and arranged for the erection of a commodious and expensive schoolhouse. The contract between the Government and the board had been drawn up when Commissioner Morgan came into office.

He at once announced a policy of opposition to the contract school and would not allow the Board of Catholic Indian Missions to erect the contemplated one at Keam's Cañon. Not a single contract school has been allowed to be started since Commissioner Morgan came into office. Instead, the Government now constructs and manages all the schools and has inaugurated a system of building expensive schoolhouses all over the West. The teachers and employes are appointed by the Commissioner and a new army of Republican political officeholders, placed under the control of Commissioner Morgan and the Interior Department. Under the new policy the expense to the Government of maintaining Indian schools has increased so rapidly that \$2,222,000 was appropriated for their support during the present fiscal year, as against \$1,300,000 a year or so before Commissioner Morgan came into office. Under the old system the cost to the Government for the subsistence of each Indian child attending a contract school was \$9 per month, or \$108 per year. The benevolent associations paid the rest. Now the cost to the Government is about \$200 for each child.

Commissioner Morgan's supposed ground of objections to contract schools is that the Indian children are there taught some form of religious belief, and urged to become Catholics, Presbyterians, Episcopalians, Methodists, or some other sort of denominational Christians, and that they ought not to be subjected to this kind of teaching. During his two years in office he has grown more than ever determined in his opposition to the contract-school system, and has recently stated that President Harrison indorses his policy of placing and keeping the schools entirely under the control of the Government and the Indian Bureau. His critics are inclined to think that the alleged refusal of the Moqui Indians, a very peaceable tribe, to allow their children to attend the schools, and his hasty action in asking for the protection of the military, without having investigated the reports of trouble, is a severe reflection on his policy of opposition to the contract school system. The officials of the Board of Catholic Indian Missions declare that if it is true that the Indians are rebellious it is due entirely to dissatisfaction with the management of the school, growing out of the political appointees sent out by Commissioner Morgan to take the places of the philanthropic persons who had the welfare of the Indians at heart. These officials say that had not Commissioner Morgan prevented the consummation of the contract which they had in 1889 for the construction of a school for the Moquis it would have been in existence to-day, and that no trouble would be experienced in securing the attendance of the children. They denounce Commissioner Morgan's policy of entire Government control as indorsed by President Harrison as impractical, wasteful, inefficient, and as conspicuously unjust to the Indians."

Receiving no explanation or apology from you, therefore, as I had a right to expect, I sent you word that I would be glad to see you in reference to it, and, in a full conference, you expressed yourself as being displeased with the offensive article, disclaimed all responsibility for it, and said that you had reprimanded the employé of your bureau from whom it emanated. You admitted that he was the person who had been dismissed from this office for cause, and who was at once taken into your employ, where he still remains; and I pointed out to you that he had been the promoter of discord the last two years, and that in my opinion there could be no harmonious relations while he continued in your service.

I further maintained that no employé of your bureau, sustaining the relations it does to this office, has a right to make these assaults, and suggested in the interest of harmony that this man be immediately discharged from your bureau. To this proposition you would not consent, although repeating with emphasis your disapproval of his action, stating that it was unwarrantable, that he had used your name without authority, and that you were both pained and shocked.

I have reflected very carefully over this matter, have taken high counsel regarding it, and I most reluctantly feel constrained to say that the office declines to enter into contract with your bureau for the education of the Indian youth.

In taking this step allow me to say that it is not the purpose of the office to essentially modify the agreement already made with you as to the amounts to be allowed for the ensuing year to the various Catholic contract mission schools. On the contrary, having, by painful experience and patient endurance for two years, found it impossible to maintain friendly relations with your bureau, the office proposes to enter into contract directly with those having these schools in charge, as several of them have already requested it to do.

The Catholic bureau has no claim whatever upon this office, and it is not essential for the operation of the contract-school system. No other denomination thinks it worth while to maintain a similar bureau here, and although the office has repeatedly refused to grant several of these denominations their requests for increased appropriations—in some cases where the circumstances were peculiarly trying—its relations with them have always been most friendly, and it has been treated by them with the greatest official courtesy, in strong contrast with the great discourtesy of your bureau.

In this connection your attention is invited to the following table, showing the sums devoted by the Government to the various religious bodies the last fiscal year:

Roman Catholic .....	\$363, 349
Presbyterian .....	44, 850
Congregational .....	27, 271
Martinsburg, Pa .....	.....
Alaska Training School .....	.....
Episcopal .....	29, 910
Friends .....	24, 743
Mennonite .....	4, 375

Middletown, Cal .....	
Unitarian .....	\$5,400
Lutheran, Wittenberg, Wis .....	9,180
Methodist .....	6,700
Miss Howard .....	1,000
Appropriation for Lincoln Institute .....	33,400
Appropriation for Hampton Institute .....	20,040
<b>Total</b> .....	<b>570,218</b>

In closing, permit me to say that I have been contemplating this action for some time as a last resort, in case I found it impracticable to sustain friendly relations with your bureau. This last act of assault, so ill-timed, unjust, false, and bitter, is simply the culmination of a long series, and coming as it does immediately after your expressed desire for harmony, and followed as it was by your refusal to apply a remedy, leads to the conclusion that there can be no harmonious relations between your bureau and this office.

As bearing on the general subject, I beg to ask your attention to your official copy of a letter written to me by your president under date of April 29, which was received during my absence in New York, and which I have this day seen for the first time.

Thanking you for your personal courtesy, I am  
Yours, very truly,

T. J. MORGAN,  
*Commissioner.*

THE BUREAU OF CATHOLIC INDIAN MISSIONS,  
*Washington, D. C., July 8, 1891.*

THE COMMISSIONER OF INDIAN AFFAIRS:

SIR: On Friday, July 3, 1891, the Bureau of Catholic Indian Missions received a communication in writing from the Indian Office, Division E, bearing date the 2d instant, addressed to its vice-president and signed by the honorable Commissioner of Indian Affairs.

In view of the character of the contents thereof, a special meeting of said bureau was on the 3d instant duly ordered to be held on Monday the 6th instant. Said meeting was so held at its office, at 10 a. m. on said date, when and where the entire contents of said letter were fully reviewed and maturely considered, and whereat, in conformity with a resolution unanimously adopted by said bureau it was decided to request an official personal interview with the honorable Commissioner of Indian Affairs relative to the contents of said letter, and for this purpose this bureau addressed the honorable Commissioner of Indian Affairs a letter, a copy of which is as follows, to wit:

THE BUREAU OF CATHOLIC INDIAN MISSIONS,  
*Washington, D. C., July 8, 1891.*

Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs:*

SIR: This bureau respectfully requests that the honorable Commissioner of Indian Affairs may appoint an early date (Thursday of this week excepted) for the purpose of an interview between him and this bureau in relation to the contents of his letter "E" of the 2d instant addressed to its vice-president.

Very respectfully,

P. L. CHAPELLE,  
*Vice-President.*

To this communication this bureau received a reply, copy of which is as follows, to wit:

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C., July 6, 1891.*

Rev. FATHER CHAPELLE,  
*Vice-President Bureau Catholic Indian Mission:*

DEAR SIR: Replying to yours of July 6, just received, requesting me to appoint an hour for an interview, allow me to say that I will receive any communication in writing from the representatives of the Bureau of Catholic Missions, but fail to see that anything will be accomplished by a personal interview.

With expressions of great personal respect, believe me,  
Yours, respectfully,

T. J. MORGAN,  
*Commissioner.*

Whereupon, on the 7th instant, another special meeting of this bureau was ordered to be held on the 8th instant. Said meeting was so held at its office, at 10 a. m. on said date, when and where the contents of said two letters were fully reviewed and further considered.

This bureau expressed not only its deep regret but its exceeding great astonishment that the head of any public office of the United States should decline and refuse to hold an official personal interview with persons having important public business to transact with it, and especially, too, in view of the necessity of a personal official interview on matters so important as those recited in said letter of the 2d instant, and wherein, too, the convenience of the Indian Office and not that of this bureau was sought to be subserved, rendering in its judgment an official personal interview necessary prior to making any response in writing to said letter. Furthermore, in asking for that interview, this bureau was simply adopting and following the policy of the honorable Commissioner, who had a few days previously sought personal interview with Rev. Dr. Chapelle, its vice-president, on the very same questions now under consideration.

At the meeting of this bureau, held July 6, 1891, the subject-matter of said letter of the 2d instant being under consideration, and particularly that part thereof which referred to matters that transpired on and subsequent to June 28 last, each and every member of this bureau was asked what connection, if any, directly or indirectly, in person or by proxy, he had with the article published in the New York Sun of Sunday, the 28th ultimo, as recited in said letter of July 2, and which publication seems to have constituted the gravamen of the complaint of the honorable Commissioner of Indian Affairs as recited in his said letter. Each and every member of this bureau declared that he had no knowledge of any kind relative to said article; that he neither inspired its creation, nor furnished data for nor caused its preparation, nor was he in anywise a party or privy to its publication or to any matter therein recited, and that all of same was done without his knowledge or consent, and concerning which each expressed his great surprise, sincere regret and chagrin, but in all of which Mr. John A. Gorman, an employé of this bureau, whose official connection with which began only on June 1, 1891, took no part.

Said article having been fully discussed by this bureau in the presence of Mr. Gorman, this bureau then unanimously disavowed, as it now disavows, either the inspiration, preparation, or publication of said article, and declared that no member or employé of the bureau, sustaining the relations it does to the Indian Office, had or has, as such member or employé, the right to make such assaults upon it or upon any other office, or head thereof, or branch of the administration of the Government of the United States, and thereupon declared the consequences that would arise in the event of any violation of this policy and the declaration thereof.

This bureau then and there further declared that should any of its members or employés so far forget themselves as to publicly criticise the Government of the United States in the administration of its laws, this bureau could not and should not be held officially responsible for such action on their part, respectively, unless this bureau would officially indorse such criticism.

These views of this bureau so formulated having been so declared in the presence of Mr. Gorman, he thereupon immediately, in writing, tendered, and thereupon this bureau duly and immediately accepted, his resignation as an employé thereof, the duration of which employment was only from June 9, 1891, to July 6, 1891.

This bureau does not deem that any matters contained in said letter of July 2, 1891, demand any further reply at its hands at this time, except a reference to the concluding paragraph thereof in these words:

As bearing upon the general subject, I beg to ask your attention to your official copy of a letter written to me by your president, under date of April 29, 1891, which was received during my absence in New York, and which I have this day seen for the first time.

Referring to said paragraph of said letter this bureau respectfully submits to the honorable Commissioner of Indian Affairs that the letter therein referred to was not written or signed by its president, the Right Rev. Bishop Marty; that said letter was never brought to the notice of this Bureau until July 6th instant, and then only by virtue of its attention being called thereto by the honorable Commissioner of Indian Affairs in his said letter of July 2.

This bureau states that said letter seems to have treated of matters principally if not entirely of a personal character; that its author is now and on July 2 was and for some time prior thereto had been absent in Germany, but that upon his return to the United States even said letter and the correspondence that inspired the same shall have the further consideration of the board.

This bureau calls the attention of the honorable Commissioner of Indian Affairs to the fact that for the twenty years last past all the relations between it, its founders, and the Indian Office, under every administration of the Interior Department and the Office of Indian Affairs, has ever resulted in the most harmonious action in their joint desires and efforts to ameliorate the condition of, to educate and civilize the Indian tribes of North America, and that while during this long interval many and serious propositions and details of administration have arisen, requiring forbearance and prudence at all times on the part of both, yet harmonious results, without any serious exception, have been the consequence.

This bureau declares that this is the first instance when any matters between the Indian Office and this bureau have arisen wherein the honorable Commissioner of Indian Affairs has felt called upon to declare that friendly relations between it and this bureau do not exist, even to the extent of further declaring it impossible to maintain friendly relations between it and this bureau, and still further substantially declaring (though he says he does so most reluctantly, and that, too, under constraint) that his office declines to hold any official personal interview with this bureau relative to the subject-matter of contracts for the education of Indian children.

Moreover, this bureau is of opinion that the causes alleged to it by the honorable Commissioner of Indian Affairs as grounds of an intention to sever the official relations heretofore existing between this bureau and the Indian Office are chiefly, if not entirely, of a personal character on the part of the honorable Commissioner, and do not furnish any valid or sufficient grounds for the grave official step which the honorable Commissioner has thought fit to contemplate, this bureau declaring that private grievances of officials should not in any case be allowed to stand in the way of the due administration of public business intrusted to their charge.

This bureau, so believing, declares that there does not exist any valid cause to substantially sever official relations in the matter of contracts for the education of Indian children between the Indian Office and this bureau, but respectfully submits that the honorable Commissioner of Indian Affairs, in his said letter of July 2, does not and, in fact, could not set forth, recite, or in anywise intimate any want of fidelity on the part of this bureau in the execution of any of its contracts with the Indian Office, or in the management of any of its Indian schools, or in the due administration of any of its trusts relating to Indians. This bureau points with pride to the monuments of its success planted throughout the continent, whether on Indian reservations or elsewhere, in connection with the Indian Office, and particularly in and at the homes of the Indians themselves where they have aided in their civilization and education.

This bureau refers the honorable Commissioner of Indian Affairs to the confidence heretofore reposed in it and its founders by his predecessors when dealing with the Indian Office during the twenty years last past, and further indorsed by the act of the present honorable Commissioner of Indian Affairs himself, who, in his letter of June 27 last, duly sent to this bureau, to be signed by its proper officers, the forms of contracts heretofore duly agreed upon between his office and this bureau (which contracts, having been duly signed, are now returned herewith as a part hereof) for the continuance of its several contract schools during the fiscal year ending June 30, 1892, for the due maintenance of which Congress made liberal appropriations in its last Indian appropriation act, in words as follows, to wit:

*Provided*, That at least five hundred and thirty-five thousand dollars of the money appropriated for the support of schools by this act shall be used exclusively for the support and education of Indian pupils in industrial and day schools in operation under contracts with the Indian Bureau.

That the expenditure of the money appropriated for school purposes in this act shall be at all times under the supervision and direction of the Secretary of the Interior, and in all respects in conformity with such conditions, rules, and regulations as to the conduct and methods of instruction and expenditure of money as may from time to time be prescribed by him.

This confidence in the continued success of its Indian schools is particularly emphasized by the honorable Commissioner himself in his said letter of July 2, in which he says:

In taking this step allow me to say that it is not the purpose of this office to essentially modify the agreement already made with you as to the amounts to be allowed for the ensuing year to the various Catholic contract mission schools.

And this agreement this bureau fully anticipates the honorable Commissioner of Indian Affairs will duly execute in the form and in the manner in which the same was mutually entered into and agreed to be done between his office and this bureau.

These explanations, these disavowals, and these declarations of this bureau in these premises, it is hoped and believed, will cause the honorable Commissioner of Indian Affairs to hesitate in carrying into effect the contemplated severance of official relation between his office and this bureau relative to said contracts, attended, as it no doubt will be, with consequences so grave and so far-reaching that neither the honorable Commissioner himself nor ourselves at this time are competent to fully measure or to fully calculate their import or the extent of injury that may be done to the cause of Indian education (in which we all are so deeply interested) and so liable, as it will be, to originate new causes of contention.

The cause of Indian education needs the continued and harmonious coöperation of all its friends, demanding that they stand together shoulder to shoulder in so important a trust, and which can not safely proceed to success without such friendly coöperation.

In conclusion, this bureau respectfully submits to the honorable Commissioner of Indian Affairs that the policy of Congress, as it understands the same to be from a

careful study of the last Indian appropriation act, is in perfect harmony with the objects of the creation of this bureau and its due organization under the laws of Congress, to wit: To aid in perfecting a system of education among the Indians as heretofore duly inaugurated by that great soldier, pure patriot, and true friend of the Indian, and whose practical experience in Indian management was great—President Grant, when he established his peace policy, in which, at his official invitation, the friends and founders of this bureau have been zealous collaborators for the twenty years last past.

While Gen. Grant was President Congress adopted and thence till now has successfully continued his said policy, so far as Indian education is concerned, at its every session, and as so strongly set forth even by the honorable Commissioner of Indian Affairs himself in his said letter of July 2, 1889.

This bureau assures the honorable Commissioner of Indian Affairs that its efforts in the future will be, as in the past they have ever been, to cordially cooperate in harmony in every proper manner with the Indian Office in its endeavors to ameliorate the condition of all Indians intrusted by Congress to its care, and to aid in the due administration of all laws providing therefor in the manner and according to the intent and spirit of their enactment.

This bureau, while assuring the honorable Commissioner of its great desire at all proper times to secure and maintain harmony with his office, regrets that the honorable Commissioner alleges that he thinks that any unpleasant relations exist between his office and this bureau, but further assures the honorable Commissioner that in the future his office shall have no valid occasion to properly complain of the attitude toward it of this bureau in any matters which may be within its province and capacity to rectify or remedy.

This bureau thanks the honorable Commissioner of Indian Affairs for all official courtesies heretofore extended to it by his office, and has directed that this communication be duly submitted to him for his mature consideration, early action, and reply, and that a copy thereof, (the same having been duly spread upon the records of its official proceedings), together with a copy of the letter to which it is responsive and copies of the correspondence to which it refers, shall be duly transmitted, for their information, consideration, etc., to his eminence James, Cardinal Gibbons, and to the secretary of the committee of Catholic bishops charged with the education of the Indians of the United States.

Very respectfully,

P. L. CHAPELLE,  
*Vice President.*

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, D. C., July 15, 1891.

Rev. Dr. P. L. CHAPELLE,  
*Vice-President Bureau of Catholic Indian Missions, Washington, D. C. :*

SIR: Replying to your communication of July 8, in answer to office letter of July 2, severing the relations between this office and your bureau, allow me to say that I have given it my most serious consideration point by point, and see no reason whatever for any modification of the action of the office as set forth in letter of July 2. Your assurance that the "efforts of your bureau in the future will be, as in the past they have ever been, to cordially cooperate in harmony in every proper manner with the Indian Office in its endeavors," etc., is a little too suggestive and promises anything but friendly relations.

I will not enter into any discussion at this time of the several points of your communication, but wish to offer an apology for the inadvertence of the typewriter in using the word "president" instead of "director" when mentioning Rev. J. A. Stephan, a mistake which I, too, overlooked. Allow me to say further that if I had read Mr. Stephan's offensive official letter of April 29, prior to the interview with you, that interview, notwithstanding my very sincere desire for friendly cooperation with your bureau, would never have been sought, and that while that letter remains in the files of this office without apology, and he remains officially connected with your bureau, any official relation between it and this office will be by courtesy and not by right.

As to this action originating "new causes of contention," I can only say that this office stands ready to meet them as they may arise.

I have already signed several contracts with the Catholic schools, which are apparently glad to enter into the new order of things.

In closing, permit me to say that although I, of course, can not be cognizant of how much you may have known personally of what has been going on in your bu-

rean, that I find it difficult to believe from my brief and pleasant acquaintance with you that you could or would have sanctioned its spirit and methods.

Yours, very truly,

T. J. MORGAN,  
*Commissioner.*

THE BUREAU OF CATHOLIC INDIAN MISSIONS,  
*Washington, D. C., July 14, 1891.*

Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs:*

SIR: I beg leave to inclose herewith for your serious consideration a communication addressed to you under date of the 12th instant, from his eminence James Cardinal Gibbons, in relation to the matter of contracts between your office and this bureau for the education of Indian children, and which he requests that I transmit to you.

Very respectfully,

P. L. CHAPPELLE,  
*Vice-president.*

CAPE MAY, N. J., *July 12, 1891.*

Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs, Washington, D. C.:*

DAER SIR: It is a matter of sincere regret to me that the article in the New York Sun of June 28, to which you kindly called my attention, should have appeared, for I am very much opposed to personal attacks of that character. I am not acquainted with the author of the article, who was an employé of the Catholic Indian bureau, but whose connection therewith is, I am advised, in deference to your wish, now ended.

I regret the publication of this article all the more since I understand that prior to its appearance an agreement had been reached whereby mutually friendly relations were apparently insured between your office and the Catholic bureau, of which fact I learned with much satisfaction, and that following its appearance you have deemed it proper to announce a determination to completely sever the relations between your office and that bureau by declining to enter into contracts with it for the education of Indian children.

This, I submit, is a very grave step, and one that I fear will be fraught with much embarrassment to all concerned in the great and necessary work of educating our Indian wards, and result in many complications and contentions that can be productive only of discord and trouble. I am clearly of opinion that it will be a mistake to carry out your intention, and therefore I trust that you will reconsider the matter and conclude to continue the relations heretofore existing between your office and the Catholic bureau.

From the assurances given by the Catholic bureau in its letter to you of July 8 (copy of which has been furnished me), I feel sure that you will not in the future regret having complied with this request. Its desire, as I am pleased to note, is to do everything that is right and proper to bring about harmony, and for myself I will say that I will use my influence to prevent any one connected with that bureau indulging in attacks upon you of a malevolent or personal character.

I had a very pleasant and quite lengthy talk with the President yesterday, but did not allude to this matter.

Yours, faithfully,

J. CARD. GIBBONS,  
*Abp. Balto.*

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, July 16, 1891.*

J. CARDINAL GIBBONS,  
*Archbishop of Baltimore.*

REVEREND AND DEAR SIR: I have the honor to acknowledge the receipt of your very polite letter of the 12th inst., and lest you may not have seen it, beg to inclose for your information copy of my letter of July 2 to the Catholic bureau declining to enter into further contracts with it for the education of Indian children.

Their reply to this communication is, I regret to say, far from satisfactory either in terms or spirit. Inclosed please find copy of my response to the same, and allow

me to say that the brief and summary statements of my two letters can give you but a faint idea of the enormity of the offenses of their bureau, continued through nearly two years, offenses which have been patiently endured until forbearance is no longer a virtue.

I did not care to enter into further discussion with the bureau, but desire to call your attention to two or three of the points made in their communication of the 8th inst.:

Regarding a personal interview, as it was suggested for "the convenience of the Indian Office," it surely was the privilege of the Commissioner to waive it if he chose. No discourtesy was intended. I simply preferred to have all that was said on the subject, in writing, and gave every opportunity for the same.

The statement in reference to the length of time during which Mr. John A. Gorman has been connected with the bureau seems to this office disingenuous. It is commonly understood that he has been in its service ever since his discharge from this office for cause, although he may not, of course, have been officially connected with it. When I suggested his dismissal from the Catholic bureau, as one means of securing more friendly relations, it was on the supposition that his connection with the bureau dated back nearly two years, and, had I known what they now declare, that he had only recently been employed by them, I should have regarded that—in view of his revengeful hatred of me and persistent opposition to the entire Government Indian school policy, well known to them—as a sufficient indication of their spirit of hostility to this office.

Their position that their bureau is not to be held responsible for the action of its employés or attachés unless those actions are officially indorsed by them, is not concurred in by this office. If persons in their employ, representing them, speaking for them, are to be allowed to make assaults upon this office, the Commissioner and the Government without restraint, harmonious relations are, of course, utterly impossible.

Their position in declaring that "private grievances of officials should not in any case be allowed to stand in the way of the due administration of public business entrusted to their charge" will hardly stand the test of reason. The assaults which have been made upon my personal character, charging me with being a perjurer, a liar, a bigot, a pagan, a dishonored soldier, a persecutor, a brute, a corrupter of morals, a destroyer of the faith, etc., attacks which have not spared my wife nor the sacredness of my home, could hardly have been pleasing under any circumstances. But when they went forth under the sanction of a great bureau styling itself Christian, when some of them were embodied in an official communication and sent in the name of the bureau to the United States Senate, which document lies before me as I write—others hurled at me in an official letter, and all accompanied by severe denunciations of the entire administration of Indian affairs, they certainly can not be regarded as merely trifling personalities, "personal grievances," as the bureau is pleased to call them. Many of them were laid before the President by a committee of bishops and made the basis of a demand for the removal of the Commissioner of Indian Affairs.

That the relations of the office and the bureau have not been harmonious is no fault of mine, and has been a constant source of regret to me. The unhappy controversy was not of my seeking, but was inaugurated and has been persistently kept up by the Catholic bureau. I have been maliciously misrepresented by one who knew better, and, unfortunately, wholly misunderstood by others, who were, but should not have been, misled by his falsehoods and slanders. You will perhaps recall that in a personal communication addressed to you November 2, 1889,—which communication lies before me now—I called your attention to the utter groundlessness of those attacks and expressed my earnest desire for friendly coöperation between this office and the Catholic bureau.

I have not now and never had the slightest antipathy to Catholics and am glad to count among my choicest friends members of that communion. I rejoice in whatever of good Catholic missions have accomplished among the Indians, and my attitude toward the Catholic contract schools is sufficiently evinced by the largely increased sums which I have conceded to them for next year, and for which I am now executing contracts directly with these schools, instead of through the Catholic bureau, and receiving from them—I am glad to say—the most courteous, satisfactory responses.

The great advance in Congressional appropriations for Indian education, the increased efficiency of the Indian service everywhere, the hearty support accorded my administration of the great trust committed to me by the President, the Secretary, and the public generally, are a sufficient refutation of the false charges of the bureau and indicate the unwisdom and futility of their factious opposition.

As a public official I am prepared to subject my administration of the Indian Office to the closest scrutiny and the ordeal of public criticism, and to bear with equanimity the representations inseparable from public life; but I submit that I can not be

expected to maintain harmonious relations with a great bureau subsisting upon the bounty of a Government whose work it antagonizes and misrepresents, and whose officers it defames. This important step was not taken without mature consideration and careful consultation, and nothing but the most weighty reasons would justify the office in retracting it.

I beg your indulgence, my dear sir, for this lengthy communication, for which my firm belief in your fair-mindedness and my great respect for your personal character must be my apology. I would have taken neither the time nor the pains to make so full a statement to anyone else and can only express my regret that your kind and authoritative offices did not sooner intervene to prevent the action which the unwise, unchristian course of the Catholic bureau forced upon this office.

Thanking you for your letter, and with assurances of personal esteem, believe me,  
Yours, very respectfully,

T. J. MORGAN,  
*Commissioner.*

CORRESPONDENCE WITH SUPERINTENDENT OF PUBLIC INSTRUCTION  
IN REGARD TO PLACING INDIAN CHILDREN IN PUBLIC SCHOOLS OF  
ARIZONA.

TOMBSTONE, ARIZ., February 23, 1891.

Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs, Washington, D. C. :*

SIR: Referring to your letter of August 15, 1890, in reference to the education of Indian children conjointly with others, in the public schools of Arizona, I sometime since forwarded to you a copy of a circular which I prepared and which has been mailed to the trustees of the various school districts of the Territory.

Assuming that the proposition contained in your letter was made in all seriousness, and notwithstanding the fact that you did not honor my communication with an acknowledgment, I have endeavored to carry out your wishes, and, irrespective of my own opinions, to obtain an expression on the plan from the parents and taxpayers of the Territory, and herewith beg leave to present the results of my inquiries.

There are in this Territory 187 school districts. The trustees of but 35 of these have responded to my inquiries, and of these 23 simply to the effect that there are no Indians within reach of their districts. From the others I make extracts as follows, that you may see the trend of opinion:

*Apache County.*—St. Joseph district reports: "Would be glad to give them any assistance we could. I think it would be a good plan for civilizing them."

Snow Flake district reports: "We have one Indian girl attending. Her mother is a full-blooded Piute. The lady and girl are quite well respected, and are in every respect worthy of any assistance the Indian Department may see fit to furnish."

*Cochise County.*—Bisbee district reports: "We have no Indian children in this district and hope never to come in contact with them or their parents."

Pool's district reports: "Should any come into our district we will endeavor to take care of them."

*Maricopa County.*—Mesa district reports: "We have a fine schoolhouse under way, and by another year would be prepared and willing to accommodate 50 or 60 if desired."

Lehi district reports: "There are some Indian children in this district, and we are willing to comply with the request spoken of."

*Mohave County.*—Kingman district reports: "We have more respect for our children than to think of educating them in such a mixed school. No white person familiar with their habits and manner of living could consent to have his children educated in this way."

*Pinal County.*—Vekol district desires to know "who is authorized to make contracts."

*Yavapai County.*—Tuba City district reports: "We are willing to make arrangements for 30 to 40." The main difficulty seems to be that "the parents of the white children can not afford to let their children go with the Indian children, unless the Indian children are cleaned up. They are very low in their habits; they wear little or no clothing at all, except a gee string, and all are very filthy and lousy. They would have to be provided with a change of clothing and with their dinners when they come to school."

It will be seen that in some instances a readiness to enter into the proposed arrangement is expressed, while in others there is the greatest repugnance, but from only 6 school districts out of 187 have I received a reply intimating a willingness on the part of white parents to the commingling of their children with those of the Indians.

It is true that in a majority of the districts in this large Territory no Indians are resident or even within reach. The inhabitants, if they know them at all, know them simply as nomads, whose presence is a menace to property, if not to life. To these districts the proposed plan does not seem to have any application, and I lack their opinions upon its merits. In others, where proximity to the Indians has taught the inhabitants by experience to know this question in all its phases, there is an evident disposition to ignore the proposition as one not even worthy of consideration. This information I gather from newspaper comment and personal conversation, and is, in my judgment, not the proper view to take of it.

You are at the head of that particular branch of the Government which is charged with the care of the Indian. His welfare occupies constantly your mind and thoughts. In solicitude for his welfare you have suggested a plan for his betterment, by education, and, as I said before, I believe that you have evolved it in all seriousness, and in all seriousness it should be considered. You have suggested this plan to me officially as the head of the public school system of this Territory, the other party to the proposed contract, and presumably will be willing to listen to my opinion upon its merits.

With the willingness expressed by the responses from some of our districts I can scarcely coincide officially or personally. I rather incline to the views expressed by the gentleman from Mojave County, who has put the condition and answer to the proposed remedy into a nutshell.

The school laws of our Territory make no distinction in race or color, excepting as to Indians and Chinese. They have been framed and are maintained with the end of making our public school system all what can be desired in the education of his children by any parent. That standard could neither be attained nor maintained under such an arrangement as you suggest, a plan that would inevitably result, not in the elevation of the Indian, but in the lowering of the white.

The truth of this as an abstract proposition you will hardly be prepared to deny, but possibly in your anxiety for the welfare of the Indian you have overlooked the other side to the question. To me as an Arizona parent and an officer of its public school system it has a considerable importance, or possibly I am in error as to the direction of elevation. I am informed by the Hampton Review, in an article credited to you, that—

The Indians are not unfriendly to the whites and will not go to war except for just reasons, \* \* \* but when we steal their stock, shoot down their women and children, murder their men and break our engagements with them, \* \* \* they prove that an Indian war is very often the expression of the highest manhood.

Can it be possible that you would permit the budding infant minds of these poor victims of the white man's avarice and barbarity to mingle with the cubs of their oppressors? Would there not be danger of our instilling into them some of our own sordid proclivities? We might teach them how to steal, lie, debauch, and murder, or even to like fire water and the noxious weed, accomplishments that, according to the same article, are now confined to the villainous white pioneer.

No, Mr. Commissioner, your plan is not a feasible one, and in proposing it you show an ignorance of us, our standards and our aims, that is an injustice, almost an insult, to our and your own intelligence. We have no desire to found a race of "squaw men," nor to encourage the mania for Indian miscegenation now applauded and practiced in certain prominent Indian circles. In your own city you divide the negro from the white child in his school life, and yet you propose that our children shall mingle with the naked savage, infinitely the inferior of the negro. Our children are as dear to us and as tenderly nurtured as yours, and I dare say to you that you would not suggest to the mother of your children that she turn her babies over to the companionship of such naked, dirty, barbarous, and diseased little pieces of humanity as the Arizona Indian children.

You appeal to us "in the name of Christian civilization." When the sunlight of that great power you have invoked shall have dispelled the mists of hysteria and blind sentimentalism with which you are surrounding the Indian question; when that boasted civilization shall have accorded to the white settler simple justice, I pledge you that you will find him as ready as you, not only to applaud, but to assist, in all proper efforts towards the end you have in view—the education and improvement of the Indian—for he is, as you say, "as much interested in the result as the Indian is himself."

Until that justice, or in other words, protection, is given him; while the Indian is, withstanding your denial, a bloodthirsty savage, killing as his highest pastime unrestrained and unpunished; while the white is ignored as a factor in the question, his knowledge and his judgment despised, and himself held up to the world by you as a ruffian and desperado, you cannot reasonably look for that cordial cooperation which would go so far toward the solution of this, the most difficult American problem.

I am fully aware of the fate of this report and that you will simply regard it as

another evidence of that antagonism to the Indian and opposition to his advancement which you have determined to believe exists universally in the West, and which you perpetuate and intensify by every means in your power. It is not true. Disregarding the one fact that, since the settlement of the continent, the Indian has been dispossessed of his territory, for which, if a crime, your forefathers and ours and not we are responsible, the Indian has been the aggressor and the criminal. Not one case does history record of the white man as the aggressor, but the record of every settlement teems with stories of rapine and murder inflicted by the Indian. Our own land has suffered more than most; her stories of Indian atrocities would fill volumes, and she still suffers. At the present moment, within 50 miles of where I sit and write, a band of your gentle wards are depopulating the country, led and generated by an Apache yclept "Kid," who has been educated to a high state of civilization at Carlisle.

Our years of trial, peril, and loss have taught us the lesson we would fain have you learn. It is simple and brief. It is no secret, but has been recognized as *government* in all time. The power to punish and the will to submit is the source of control and the well-being and maintenance of society. Anything else is anarchy. That the offender shall be punished for his offenses is both divine and human law, and is the first lesson to be learned in the evolution of civilization from barbarism. It is the first lesson we teach our children at school, and it is the first lesson you must teach the Indian. When he offends punish him *as you would a white man for the same offense*, and you have solved the most serious part of your problem. You will have deserved and compelled his respect, and you will have commenced your pyramid of education at the base and not, as you are now doing, at the apex.

Respectfully yours,

GEO. W. CHEYNEY,  
*Superintendent of Public Instruction, Territory of Arizona.*

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
*Washington, April 20, 1891.*

GEORGE W. CHEYNEY, Esq.,  
*Superintendent of Public Instruction for the Territory,  
Tombstone, Ariz.:*

DEAR SIR: I have received and read with much care your letter relating to the placing of Indians in public schools. It is dated February 23, but was not received at the office until April 15.

I thank you for the pains you have taken in ascertaining the views of your school officers on the subject, and am gratified that so many express a willingness to cooperate with the Government in the matter. I hope, if a few take hold in earnest, that the results growing out of it will commend themselves to others to such a degree that they will also join in the movement.

The matter has been under consideration for some time in the office and you will find the responses from the various school superintendents printed on page CLXX of my annual report, copy of which is sent you by this mail.

A number of Indians have already been admitted under this arrangement into the public schools, and the correspondence in the office indicates that the number will be increasingly greater from year to year.

I appreciate very fully the difficulties that have been suggested by you, and, of course, where these exist in their most aggravated form it will probably be impossible to carry the scheme into successful operation. I certainly would not expect nor desire any self-respecting community to take into their public schools Indian children in the condition in which you describe some of them to be, but of course there are communities where the Indians have made considerable progress in civilization, where they live in houses, wear clothing, keep their children fairly decent, and are able to send them to school in such a way as not to be an offense to their white associates.

In communities where the number of Indian children is large enough, say 25, it may be possible to organize a school for them exclusively. I do not know whether it would be practicable to do this in any of the districts in your Territory or not, but would be glad to have your opinion on the subject.

You are doubtless aware that there are now enrolled in the various schools supported in whole or in part by the Government, more than 17,000 Indian pupils, and that, on the whole, they are making very satisfactory progress.

If you can do so I would be glad to have you visit the Presbyterian school at Tucson, the Pinna school at Sacaton, the Navajo school at Fort Defiance, or the Moqui school at Keam's Cañon, where you will find a large body of Indian pupils properly clothed, well behaved, and making excellent progress in their studies.

I need not say to you that I regard the education of the rising generation of Indians as a matter of the highest importance, not only to them and their welfare, but also to the communities in which they reside. I had supposed that in doing everything that is practicable in this direction for the education of those in Arizona, I would have not only the sympathy and the coöperation of the residents of that great Territory, but their gratitude, as well, for certainly they are more deeply interested in the matter than anyone else.

I am a Western man. My father was a pioneer who settled among the Indians when his nearest white neighbor was 12 miles away, and I have known something of the Indian character all my life, and am familiar by personal observation with the condition of Indians throughout the Indian country. I made a trip last fall through Arizona, visiting all of our schools and acquainting myself with the habits and conditions of the Indians as fully as possible, and while I realize how difficult the work is, I am encouraged by the work already accomplished and feel very hopeful for the future.

I wish to correct the misapprehension that is in your mind regarding the renegade "Kid." While at San Carlos last fall I took special pains to inquire into his history, and I found that he was not educated at Carlisle, nor at any other school. He was formerly a scout in the Government service and picked up something, of course, while in such capacity, but he has never had any schooling.

Quite a number of young men and women who have been in Indian and other schools have shown very decided capacity for scholarship and are now intelligent, industrious, prosperous, and useful. One of them, Dr. Charles Eastman, a full-blooded Sioux, is now a Government physician at Pine Ridge Agency, South Dakota; another, Dr. Montezuma, is Government physician in Wyoming. Miss Susan LaFlesche is the Government physician at the Omaha Agency, Nebraska, while others are occupying important positions as teachers, preachers, farmers, etc.

Assuring you of my single desire to do that which is best for these unfortunate people and their Western neighbors, and wishing you great success in your labors, I am,

Yours, very truly,

T. J. MORGAN,  
*Commissioner.*

### SIMPLE GENERAL DIRECTIONS FOR THE CARE OF THE SICK.

[Prepared at Carlisle Training School.]

The successful treatment of a case depends so much upon careful nursing, and the faithful, intelligent carrying out of the physician's orders, and so few of the schools are able to command the services of a trained nurse, that a few general directions and practical hints for emergencies are here given. For more comprehensive instructions some standard work on nursing can be procured; for instance, *Textbook of Nursing*, by C. Weeks, published by Appleton & Co.; or *Handbook of Nursing*, by Lippincott & Co.

In all cases where there is likely to be an illness of some duration the best room available should be selected. This should be large, light, and airy, with a southern or western exposure if it can be had. It should be as quiet as possible, and wholly under the control of those in charge of the patient. All superfluous furniture should be removed, and the room kept scrupulously clean. Single iron bedsteads, with woven wire springs are the best. On these a thick quilt doubled and kept in place by strings tacked to the top and sides, or several thicknesses of blankets, furnish a bed that yields to the curves of the body, and is easy and restful.

Bed linen is to be kept clean and fresh. To change the sheets when a patient can not be moved, fold or roll the soiled under sheet up close to the body, close against this place the clean one with half its width folded or rolled. Gently work both under the body, when the soiled one can be removed, and the clean one spread out over the rest of the bed. When the patient can be moved, even a little, or can turn on his side, the same course is to be pursued. Changing the nightdress or shirt of a helpless patient requires deftness and patience. Move as little as possible. Slip off the sleeves of the soiled garment and put on the sleeves of the clean one. Then with one raising of the patient the soiled one can be removed, and the other drawn into place. Garments worn by the helpless should be made to open the entire length.

Too much stress can not be laid upon the necessity of perfect cleanliness in everything pertaining to the sick. Floors must be kept clean. In sweeping a room where there are sick, a damp cloth pinned over the broom will keep the air free from dust. Where not practicable to scrub, the floor may be carefully wiped with a cloth wrung very dry. All vessels should be well washed in hot water and disinfectants used. It is well to keep some disinfectant in the spittoons and other vessels used about consumptive and fever patients.

The air of a room is best disinfected by exchanging the foul for pure. Do not be afraid of pure air; give the patient plenty of it. Arrange for the best possible ventilation of the room, allowing the pure air to enter all the time. Care must be taken that the patient is not exposed to a draft. If no other way can be arranged, the air of the room can be changed by frequently throwing open doors and windows for a few minutes. The patient can be protected by an umbrella opened over him and a blanket thrown over that. Keep the sick room as nearly even in temperature as you can—from 68° to 70°. Always have extra covers at hand to use if the temperature is lowered; this is especially necessary at night and in the early morning.

Baths should be given under the direction of a physician. In emergencies, and with convalescents, a few general suggestions will be sufficient. In giving a sponge bath do not allow the patient to become chilled. Only a small portion should be exposed at a time, and that dried and covered as quickly as possible. In giving a tub bath great care must be taken that the patient does not overexert himself. An attendant should be with him. In cases of collapse and great exhaustion, an alcohol sponge bath is often of great benefit. Where the skin is parched and dry and where there is feverishness, sponging is very grateful. To the bath may be added soda, ammonia, borax, etc. Pupils when detailed as attendants upon the sick must be instructed in the little details that mean so much to the invalid. Patients must have their faces and hands bathed frequently, the hair arranged, and teeth kept clean. Patients when very ill should not be left alone.

The proper feeding of the sick is one of great importance. The food, such as the doctor allows, should be prepared as carefully and served as daintily as possible. Do not allow the meals to stand until hot things become lukewarm and cold ones lose their freshness. Avoid seasoning too highly. Salt and sugar can be added to suit individual tastes. Give food regularly. This is very important. However, if at the regular time the patient is unable to take food, do not fail to watch and provide him with something later, when he is able to take it. If digestion is weak give small quantities of food in concentrated form. Milk is the only food which contains all the elements of nutrition. Where this can not be procured or taken by the patient, a good nutritious broth or soup with well-cooked rice or barley in it will be found good. Eggs, cooked and raw, are of great value. A raw egg beaten up with a dust of salt and a little sugar with often be retained and digested when all other food is rejected. To this may be added milk or cream, as desired, and when stimulants are ordered they may be added to this.

Beef tea, often so highly recommended, is not to be depended upon alone. With other food it gives an agreeable variety, but is not sufficient of itself. Very weak and helpless patients should be fed slowly, a small mouthful at a time and that swallowed before another is given. For giving drink and liquid food a bent glass tube is best. Be careful to protect the clothes and dry the mouth well before leaving the patient. Be particular to institute a crumb hunt after every meal; crumbs in the bed occasion much discomfort. Never allow food to remain standing beside the patient; nothing so quickly destroys all desire for it.

In acute cases and in the weakness following an attack of fever, pneumonia, etc., feeding at night is necessary. Except in special cases the patient should not be waked to take food, but it should be at hand. A glass of hot milk or broth will often help to carry a patient over a critical period of weakness. A few simple recipes for sick cookery are appended.

*Chicken broth.*—An old fowl is best for this. Cut up in small pieces, break the bones with a hammer or mallet. Cover well with water and boil from three to five hours (until the meat falls to pieces), strain, cool, and skim off the fat. Season to taste with salt and, if desired, a little pepper. To this may be added well-boiled rice or barley or toasted bread.

Beef and mutton broth are made in the same way.

*Beef essence.*—Take a juicy piece of beef, steak is best, and cut it in very small bits, put it in a glass jar or bottle and close it up. This should then be put in a pot of cold water and brought gradually to the boiling point. It should then be boiled until all the juice is extracted. Strain, season, and serve hot or cold.

*Beef tea.*—Cut the meat fine, as for essence, but add to it in the jar a pint of cold water, put on the back of the stove or range and let it simmer for two hours, then boil a few minutes, strain and serve.

*Gruels.*—A nicely made gruel is usually relished by the invalid, but care must be taken that they are not underdone or burned. Oatmeal, rice flour, corn meal, arrowroot, and cornstarch are used. In making them have the milk or water used boiling, and stir in the meal, first having it rubbed to a smooth paste with cold milk or water, boil until done, and if too thick thin before serving.

*Barley water.*—Take 1 ounce of pearl barley, wash well, boil in one quart of water in an open pan until reduced to half, strain, sweeten to taste. A little lemon added to this much improves it for some.

**Toast water.**—Toast nicely some stale bread, pour over it boiling water, let stand till cold, on ice if it can be had; add a little lemon juice.

**Poultices.**—Poultices are convenient for applying heat and moisture, for checking inflammation in its earlier stages, and for hastening suppuration. They should be applied as hot as they can be borne, but not so hot as to blister the skin. The length of time they will keep warm depends upon the thickness and how well protected they are from the outer air. Do not allow them to become hard and cold. Poultices may be made of various materials, the simplest being several thicknesses of cloth or lint wrung out of hot water. Linseed or flaxseed is very generally used. To make this, have some boiling water in a pan, and into it stir very slowly enough meal to make a thick smooth mass that will neither crumble nor run. Spread from a quarter to a half an inch thick on muslin, cut twice as long as the poultice is to be, and with an inch or two allowed around the edges to turn in. Fold over and secure with pins. If the poultice is to be applied directly to the skin a little oil, cosmoline, or pure lard will prevent its sticking. If for boils, carbuncles, etc., a little baking soda sprinkled over will help to clean the sore.

Bread, corn meal, oatmeal, and slippery elm pulverized make good poultices; hops and bran may be used also. The last are made by putting the hops or bran in a thin bag the required size, and wringing it out of hot water. Laudanum is sometimes added to poultices for the relief of intense pain.

Spice poultices are made by mixing the ground spices to a paste with a little flour and some spirits, or by putting in a thin bag and wringing out of hot water, either with or without spirits added.

In cases of pneumonia and pleurisy, where there is a scarcity of help, hot bran or hop bags in place of poultices are beneficial. To make these, heat the bran or hops very hot, pour into a bag and tie, place upon the part affected and cover to keep in the heat. A mustard plaster occasionally applied for a short time under this will aid in producing the desired effect. Where constant attention can not be given to the patient, this plan prevents any dampness or chilling from wet poultices grown cold.

Mustard plasters are made by taking from two to four times as much flour as mustard and mixing to a thin paste with tepid water, spread upon muslin, and cover with wetting, cheese cloth, or very thin cloth of any sort at hand. If mixed with the white of an egg it will irritate but not blister. If desirable to blister at once use pure mustard and mix with vinegar. This must be used carefully.

**Fomentations.**—In sore throat, pneumonia, etc., much relief is to be had from hot fomentations, *i. e.*; flannel cloths wrung out of boiling water and applied to the parts that hot as can be borne, covering at once with dry cloths, oiled silk, rubber—anything that will protect the clothing and keep the heat from escaping. They must be renewed frequently, and there should be at least two, so that one may be ready to put on as soon as the other is removed. For heating water for these, and for many other purposes, an oil stove, costing from 75 cents upward, will be found invaluable. To wring them out, a "stupe-wringer," a towel with a broad hem in each end, through which is run a chair-round or stick, is necessary. Place the flannel in the center, dip in the boiling water, and twist as dry as possible. This must be used, for water cool enough to allow them to be wrung out by hand will not be of much benefit. In applying these fomentations great care must be taken to keep them hot, to exclude external air, and keep the clothing dry. When discontinued see that the parts are well dried and covered with hot dry cloths.

**Temperature.**—The temperature of a patient needs to be carefully watched. In certain weak and diseased states there is a great tendency to collapse, and you must see that he is kept warm. If the feet are cold lose no time in applying local heat—hot flannels, blankets, hot-water bags or bottles, hot sand or salt bags, heated plates; heat in any form that may be at hand. Every one having or likely to have the care of the sick, should provide themselves with a self-registering clinical thermometer. Any physician will gladly give instructions as to its use.

**Fever.**—In this class of diseases the attack usually comes on gradually enough to not require any emergency treatment previous to the call of the physician, provided he can respond quickly. When he has prescribed, his directions are to be obeyed. The patient must be placed in a well-ventilated, quiet room. The bedding and clothing (simply a nightshirt), kept fresh and clean, and the surface of the entire body carefully sponged with tepid or warm water once or oftener every day. To the water may be added, with good results, a little aqua ammonia. Nourishment should be given regularly, and at such intervals as the stomach will manage. As a rule, the appetite will be a safe guide, so far as there is any appetite, but there are many exceptions to this rule, and where there is doubt let the physician decide the question. Do not allow the whims of the patient to work on your sympathies in such way as to render you sentimental. Kindly common sense—not hobbies and notions—must be your guide. Spittoons and vessels used about the patient should be kept thoroughly cleansed and disinfected.

Pain in stomach, bowels, or chest, calls for external applications at once. Flannel folded several thicknesses and carefully wrung out of hot water and placed over the region of pain will aid in giving relief. A few drops of turpentine over the surface of the flannel will often add to its efficiency, especially where the pain is in the bowels and there is a sense of swelling and bloating present. Over the chest a hot flaxseed poultice does well. In place of either of the above applications a mustard plaster will frequently give relief, and does not oppress the patient with the sense of weight that the former sometimes do.

*Simple acute diarrhoea.*—In this very common ailment the physician is generally not called, the tendency being toward recovery as soon as the bowels are relieved of all offending matter. The patient should be kept quiet. A few drops of spirits of camphor with a few drops of fluid extract of Jamaica ginger, will usually give relief. If there be much pain present paregoric may be given, and external applications as suggested above.

In *dysentery* or *flux*, as a rule, it will be found best to give some simple but effective cathartic, thus removing offending matters from the bowels and relieving their congestion. After this is accomplished follow the same course as in diarrhoea.

*Cholera morbus* is most often the result of overeating or eating something which the stomach refuses to digest, and is usually relieved by the resulting vomiting and diarrhoea. Sometimes, however, the condition becomes alarming and collapse is threatened. In such cases apply mustard plasters well over the bowels, keep the extremities warm, give small doses frequently repeated of stimulants; brandy, if you have it. If nothing else is present use hot ginger tea, or even hot water, and keep your efforts up until relief comes.

*Tonsillitis* or *quinsy* may be very much modified if not entirely checked by the prompt external application of hot fomentations, repeated at very short intervals. The same may be said of any form of sore throat in which there is swelling and pain, except diphtheria. Even in this, if pain and swelling be great, the hot applications will assist in relieving the suffering. In most cases of sore throat when there is need of a gargle a solution of common table salt is good. Its efficiency may be increased by the addition of ten or fifteen drops of pure carbolic acid to the pint of solution.

In *diphtheria*, do not wait, but secure the attendance of the physician at once. In fact no time should be lost before sending for medical aid in any case where there is any form of blister or deposit on the tonsils or pharynx, especially if there be any fever or disturbance of the general health. Do not allow other children in the room under any circumstances, and no one else except the nurse. Use great care in disinfecting all the vessels and anything upon which the sputa may fall. Follow carefully the directions of the physician and keep the patient regularly nourished. The same general directions apply to *scarlet fever* as well.

*Disinfection.*—After the termination of the case, the room should be thoroughly disinfected before anyone occupies it. This is most easily done by burning sulphur, taking care to close all openings so that the fumes may be retained in the room. Keep the room closed three or four days, then open and air well. The bedding and clothing should be first dipped in a solution of corrosive sublimate, 5 grains to the quart of water; after this let them remain a few minutes in boiling water.

*Sore eyes*, of whatever form, require rest. The eye should be shaded, kept clean from all secretions, if feverish, frequently bathed with water to which a little salt has been added, and such applications made as are suggested by the physician. The patient must have his own towel and basin, and must use no one's else.

*Earache.*—When there is pain heat applied over the ear will usually give relief. Gently syringing the ear with as hot water as the patient can bear, keeping up the action for several minutes, will often be beneficial. In many cases the pain is the result of dried secretions in the ear. In such cases drop in the ear two or three drops of olive or sweet oil, afterwards thoroughly washing out.

*Common colds*, if recognized early, may be broken up by a hot foot bath and any hot drink, even hot water, and tucking in bed until circulation is equalized and the surface is warm.

If there be threatened *inflammation of the lungs*, or *pleura*, as indicated by pain, move the bowels quickly, apply mustard plasters, hot poultices, or hot fomentations to the region of pain.

In cases of *hemorrhage* from the lungs, keep the patient quiet. Apply cold to the chest; if ice or snow be at hand, let the patient swallow small bits. If fluid extract of ergot is at hand, give teaspoonful doses every half hour until controlled.

*Colic* calls for external heat, both to the extremities and to the abdomen; a drink of hot water or tea, and rest. If costive, give cathartic.

*Headache* results from a number of causes. If the extremities are cold, equalize the circulation by warming them up. If there be costiveness, give any cathartic at hand.

For *convulsions*, place the feet or the entire lower extremities in as hot water as you can bear your own feet in; that is, be careful to not scald the patient. If the head be hot, apply cold to it.

*Burns and scalds*, if slight, may be easily cared for by at once covering the surface with oil, mixed with common soda to a paste; bandage, and let alone. If very severe, the shock must be overcome by stimulation and a physician called at once.

*Sprains* require rest and cooling applications until the period of inflammation is past, which is generally from one to three days. After this, as a rule, there should be some passive motion, but joints bearing the weight of the body need protection until all pain is gone.

In *drowning*, lose no time. Remove or loosen quickly all clothing about the chest and neck. Clean the mucus from the mouth. Hold the body up by the heels, thus emptying the water from the lungs. Lay on face, with head lowest if possible. Step astride of hips, with your face toward the head of the patient. Clasp your hands under his belly, raise him until the head just touches the ground, and jerk the body smartly two or three times, pausing a moment between times. Then lay on his face again, with head on extended arm. Now grasp the shoulders and raise the chest without lifting the head off the arm. Then place your hands against the patient's ribs, supporting your elbows with your knees; press the ribs slowly down and in. Then raise the shoulders as before, and repeat the pressure over the ribs, thus keeping up this alternate motion with the regularity of breathing, repeating it at the rate of about fifteen to twenty times per minute. Do not stop for at least one hour, unless breathing is established earlier.

For *sunstroke*, keep the patient quiet in an airy place, with needless clothing removed. Apply cold to head and neck, or if very warm to the whole surface.

#### TREATMENT FOR DISEASES OF THE EYE.

[Prepared at Haskell Institute, Lawrence, Kans.]

The commonest disease of the eye which we are called upon to treat is muco-purulent ophthalmia, commonly known as catarrhal ophthalmia, but as we seldom have along with the eye trouble any catarrhal symptoms of any other mucous surface, the latter name is misleading.

This disease may be brought on by a suppression of the cutaneous perspiration, a foreign body lodging in the eye, eye strain, disorder of the digestive apparatus; in fact, from any slight and transient cause either acting directly upon the eye or through the general system. This form of ophthalmia is very contagious, and crowded as the children are in the dormitories, having a very limited number of basins and towels for washing with, the disease when once introduced spreads with great rapidity and is with much difficulty brought under control.

This disease attains its height very quickly, usually in a day or two, and will generally run a course without treatment of about two weeks; it may be cured in much less time. The symptoms are intolerance of light, a gritty feeling in the eye, a great deal of congestion with swelling of the eyelid, often intense pain which may prevent sleep. These symptoms will generally disappear under a treatment of silver nitrate\*, 2 grains to the ounce of water; or sulphate zinc, 2 grains; sulphate atropia, 1 grain; acid, carbolic, 4 drops; distilled water, 1 ounce. A few drops in the eye, night and morning.

In addition to the above treatment the patient should be isolated, placed in a darkened room, and the eyes washed three times per day in hot salt water, about a teaspoonful of salt to the pint of water. This form of disease will attack all ages, and great care must be exercised in handling these cases to prevent inoculation. The severity of the disease varies greatly with different persons; some will be attacked very slightly, while others very severely.

One of the fruitful causes of this trouble here at Haskell lies in errors of refraction; frequently boys and girls will come to me complaining of pain in the eye and over the eyes; they say when they attempt to study the eye soon grows tired, black specks float before the eye, and finally, if they persist in reading, all on the page becomes blurred. I find on giving them a paper to read they hold it very close to the eye, they are unable to distinguish objects clearly at ordinary distances, they suffer from myopia (short sightedness). Some of the cases are probably hereditary, but by far the greater number are caused from habits of stooping over the book or work, reading by insufficient light or the arrangement of the light wrong, straining the eye beyond its power, thus paralyzing the muscle of accommodation; any of these causes may start the trouble, and then an ordinary amount of use will increase it.

The treatment of these cases is prophylactic and remedial. (1) Much may be done by the proper arrangement of light, regulating the books and seats for the children so as to prevent stooping. (2) By means of suitable glasses, distant objects may be seen clearly, the strain is taken off the eye; that is, the eye with the aid of proper glasses becomes emmetropic (normal). So far I have been unable to do anything in this line for lack of instruments to measure the refractive error; to do this work properly we need here a good Ophthalmoscope, a case of trial lenses and glasses for sale. Until we have these we can hope to accomplish little for this class of cases.

\* See foot note next page.

Another cause of eye trouble among the Indian children is of a strumous character. It exists in various forms and degrees, some times as a very mild affection, at other times as a very severe one. It may be acute or chronic and attack one or both eyes. The exciting cause may be a blow upon the eye, some foreign body lodging in the eye, reading, writing, or anything causing fatigue of the eye or some disturbance of the digestive system, in fact, may be so trivial as not to attract attention.

The most common form is phlyctenular ophthalmia. It comes on generally during childhood; it is rarely seen after puberty; it is found in the offspring of the syphilitic, consumptive, and scrofulous. The symptoms of this form of eye trouble are intense photophobia and lachrymation, the tears usually hot and scalding, so acid sometimes as to irritate and inflame the lids and cheek. In this disease we have very little discharge of mucus and pus, the redness is not nearly so intense as in mucopurulent ophthalmia; there is little or no tumefaction of the lids, but the photophobia is often so intense as to prevent sleep, and the child in order to escape the light will often crouch upon hands and knees in the darkest corner of the room. Often we have an eruption of little papules upon the face.

On looking in the eye we will find the redness not so diffuse as in ordinary inflammation. The vessels observe a straggling arrangement, usually running from the outer part of the ball toward the cornea, and when the disease is violent we will see the vessels crossing the cornea. Besides this arrangement of the vessels we will find little phlyctenulae or vesicles upon the cornea, the corneal-conjunctival margin, or upon the conjunctiva, thus forming "Phlyctenular keratitis or Phlyctenular conjunctivitis."

The treatment of these cases is sometimes very protracted and tedious, and in bad cases it takes a long time to effect a cure. Calomel dusted in the eye; an ointment containing yellow oxide of mercury 10 to 20 grains to the ounce of vaseline; iodoform powder or iodoform ointment, 10 to 30 grains of iodoform to 1 ounce of vaseline; and an eye water of zinc sulphate, 2 grains, sulphate atropia,\* 1 grain; carbolic acid, 4 drops, and distilled water, 1 ounce; will all be found useful. The treatment should also be constitutional—quinine, potass. iodide, syrup iodide iron, calomel, in short, the antisyphilitic and antiscrofulous treatment being the kind indicated.

ACCOUNT GIVEN BY INDIANS OF THE FIGHT AT WOUNDED KNEE CREEK,  
SOUTH DAKOTA, DECEMBER 29, 1890.

[Extracts from verbatim stenographic report of council held by delegations of Sioux with Commissioner of Indian Affairs, at Washington, February 11, 1891.]

TURNING HAWK, Pine Ridge (Mr. COOK, interpreter). Mr. Commissioner, my purpose to-day is to tell you what I know of the condition of affairs at the agency where I live. A certain falsehood came to our agency from the west which had the effect of a fire upon the Indians, and when this certain fire came upon our people those who had certain far-sightedness and could see into the matter, made up their minds to stand up against it and fight it. The reason we took this hostile attitude to this fire was because we believed that you yourself would not be in favor of this particular mischief-making thing; but just as we expected, the people in authority did not like this thing and we were quietly told that we must give up or have nothing to do with this certain movement. Though this is the advice from our good friends in the East, there were, of course, many silly young men who were longing to become identified with the movement, although they knew that there was nothing absolutely bad, nor did they know there was anything absolutely good in connection with the movement.

In the course of time we heard that the soldiers were moving towards the scene of trouble. After a while some of the soldiers finally reached our place and we heard that a number of them also reached our friends at Rosebud. Of course, when a large body of soldiers is moving towards a certain direction they inspire a more or less amount of awe, and it is very natural that the women and children who see this large moving mass are made afraid of it and be put in a condition to make them run away. At first we thought that perhaps Pine Ridge and Rosebud were the only two agencies where soldiers were sent, but finally we heard that the other agencies fared likewise. We heard and saw that about half of our friends at Rosebud Agency, from fear at seeing the soldiers, began the move of running away from their agency towards ours (Pine Ridge), and when they had gotten inside of our reservation they there learned that right ahead of them at our agency was another large crowd of soldiers, and while the soldiers were there there was constantly a great deal of false rumor flying back and forth. The special rumor I have in mind is the threat that a soldiers had come there to disarm the Indians entirely and to take away all their horses from them. That was the oft-repeated story.

So constantly repeated was this story that our friends from Rosebud, instead of going to Pine Ridge, the place of their destination, veered off and went in some other direction, towards the "Bad Lands." We did not know definitely how many, but understood there were 300 lodges of them, about 1,700 people. Eagle Pipe, Turning Bear, High Hawk, Short Bull, Lance, No Flesh, Pine Bird, Crow Dog, Two Strike, and White Horse were the leaders.

Well, the people after veering off in this way, many of them who believe in peace and order at our own agency, were very anxious that some influence should be brought upon these people. In addition to our love of peace we remembered that many of these people were related to us by blood. So we sent out peace commissioners to the people who were thus running away from their agency. I understood at the time that they were simply going away from fear because of so many soldiers. So constant was the word of these good men from Pine Ridge Agency that finally they succeeded in getting away half of the party from Rosebud, from the place where they took refuge, and finally were brought to the agency at Pine Ridge. Young-man-afraid-of-his-horses, Little Wound, Fast Thunder, Louis Shangrean, John Grass, Jack Red Cloud, and myself were some of these peacemakers.

The remnant of the party from Rosebud not taken to the agency finally reached the wilds of the Bad Lands. Seeing that we had succeeded so well, once more we went to the same party in the Bad Lands and succeeded in bringing these very Indians out of the depths of the Bad Lands and were being brought towards the agency. When we were about a day's journey from our agency we heard that a certain party of Indians (Big Foot's band) from the Cheyenne River Agency was coming towards Pine Ridge in flight.

Capt. SWORDS. Those who actually went off of the Cheyenne River Agency probably number 303, and there were a few from the Standing Rock Reserve with them, but as to their number I do not know. There were a number of Ogalallas, old men and several school boys, coming back with that very same party, and one of the very seriously wounded boys was a member of the Ogalalla boarding school at Pine Ridge Agency. He was not on the war-path, but was simply returning home to his agency and to his school after a summer visit to relatives on the Cheyenne River.

TURNING HAWK. When we heard that these people were coming towards our agency we also heard this. These people were coming towards Pine Ridge Agency, and when they were almost on the agency they were met by the soldiers and surrounded and finally taken to the Wounded Knee Creek, and there at a given time their guns were demanded. When they had delivered them up the men were separated from their families, from their tepees, and taken to a certain spot. When the guns were thus taken and the men thus separated there was a crazy man, a young man of very bad influence and in fact a nobody, among that bunch of Indians fired his gun, and of course the firing of a gun must have been the breaking of a military rule of some sort, because immediately the soldiers returned fire and indiscriminate killing followed.

SPOTTED HORSE. This man shot an officer in the Army; the first shot killed this officer. I was a voluntary scout at that encounter and I saw exactly what was done and that was what I noticed; that the first shot killed an officer. As soon as this shot was fired, the Indians immediately began drawing their knives and they were exhorted from all sides to desist, but this was not obeyed. Consequently, the firing began immediately on the part of the soldiers.

TURNING HAWK. All the men who were in a bunch were killed right there, and those who escaped that first fire got into the ravine and as they went along up the ravine for a long distance they were pursued on both sides by the soldiers and shot down, as the dead bodies showed afterwards. The women were standing off at a different place from where the men were stationed, and when the firing began those of the men who escaped the first onslaught went in one direction up the ravine, and then the women who were bunched together at another place went entirely in a different direction through an open field, and the women fared the same fate as the men who went up the deep ravine.

AMERICAN HORSE. The men were separated as has already been said from the women, and they were surrounded by the soldiers. Then came next the village of the Indians and that was entirely surrounded by the soldiers also. When the firing began, of course the people who were standing immediately around the young man who fired the first shot were killed right together, and then they turned their guns, Hotchkiss guns, etc., upon the women who were in the lodges standing there under a flag of truce, and of course as soon as they were fired upon they fled, the men fleeing in one direction and the women running in two different directions. So that there were three general directions in which they took flight.

There was a woman with an infant in her arms who was killed as she almost touched the flag of truce, and the women and children of course were strewn all along the circular village until they were dispatched. Right near the flag of truce a mother

was shot down with her infant; the child not knowing that its mother was dead was still nursing, and that was especially a very sad sight. The women as they were fleeing with their babes on their backs were killed together, shot right through, and the women who were very heavy with child were also killed. All the Indians fled in these three directions, and after most all of them had been killed a cry was made that all those who were not killed or wounded should come forth and they would be safe. Little boys who were not wounded came out of their places of refuge, and as soon as they came in sight a number of soldiers surrounded them and butchered them there.

Of course we all feel very sad about this affair. I stood very loyal to the Government all through those troublesome days, and believing so much in the Government and being so loyal to it, my disappointment was very strong, and I have come to Washington with a very great blame on my heart. Of course it would have been all right if only the men were killed; we would feel almost grateful for it. But the fact of the killing of the women, and more especially the killing of the young boys and girls who are to go to make up the future strength of the Indian people, is the saddest part of the whole affair and we feel it very sorely.

I was not there at the time before the burial of the bodies, but I did go there with some of the police and the Indian doctor and a great many of the people, men from the agency, and we went through the battle field and saw where the bodies were from the track of the blood.

**TURNING HAWK:** I had just reached the point where I said that the women were killed. We heard, besides the killing of the men, of the onslaught also made upon the women and children and they were treated as roughly and indiscriminately as the men and boys were.

Of course this affair brought a great deal of distress upon all the people, but especially upon the minds of those who stood loyal to the Government and who did all that they were able to do in the matter of bringing about peace. They especially have suffered much distress and are very much hurt at heart. These peacemakers continued on in their good work, but there were a great many fickle young men who were ready to be moved by any change in the events there, and consequently, in spite of the great fire that was brought upon all, they were ready to assume an hostile attitude. These young men got themselves in readiness and went in the direction of the scene of battle so that they might be of service there. They got there and finally exchanged shots with the soldiers. This party of young men was made up from Rosebud, Ogalalla (Pine Ridge), and members of any other agencies that happened to be there at the time. While this was going on in the neighborhood of Wounded Knee—the Indians and soldiers exchanging shots—the agency, our home, was also fired into by the Indians. Matters went on in this strain until the evening came on, and then the Indians went off down by White Clay Creek. When the agency was fired upon by the Indians from the hillside, of course the shots were returned by the Indian police who were guarding the agency buildings.

Although fighting seemed to have been in the air, yet those who believed in peace were still constant at their work. Young-Man-Afraid-of-His-Horses, who had been on a visit to some other agency in the North or Northwest, returned, and immediately went out to the people living about White Clay Creek, on the border of the Bad Lands, and brought his people out. He succeeded in obtaining the consent of the people to come out of their place of refuge and return to the agency. Thus the remaining portion of the Indians who started from Rosebud were brought back into the agency.

Mr. Commissioner, during the days of the great whirlwind out there these good men tried to hold up a counteracting power, and that was "Peace." We have now come to realize that peace has prevailed and won the day. While we were engaged in bringing about peace our property was left behind, of course, and most of us have lost everything; even down to the matter of guns with which to kill ducks, rabbits, etc., shotguns, and guns of that order. When Young-Man-Afraid brought the people in and their guns were asked for, both men who were called hostiles and men who stood loyal to the Government delivered up their guns.

## LETTER OF COMMISSIONER OF INDIAN AFFAIRS TO SECRETARY OF THE INTERIOR IN REGARD TO TREATY STIPULATIONS WITH THE SIOUX.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
Washington, D. C., December 24, 1890.

The SECRETARY OF THE INTERIOR:

SIR: By your reference of the 20th instant I am in receipt of a letter from the President, of the same date, inclosing a telegram from Major-General Miles, and directing to have prepared at once, for submission to him, "a full statement of the stipulations made by the Sioux Commission with these Indians, showing how far these stipulations have been complied with and what unfulfilled obligations on the part of the country still exist." Also a statement "as to the appropriations for rations for the last few years, and if these appropriations have been diminished, whether the reduction has been upon the advice of your Department or not."

In compliance with the President's directions, I have the honor to report as follows:

The commission that negotiated with the Sioux nation of Indians for the acceptance of the Sioux act of March 2, 1889, made recommendations in their report of December 24, 1889, for legislation on the following points:

(1) An appropriation to enable the Department to furnish the Indians in the early part of the coming spring with the mares, cows, bulls, agricultural implements, seeds, and cash payments needed to assist them in agricultural pursuits.

To make the interest on the permanent fund available at once.

To establish industrial and agricultural schools on each of the reservations in the near future.

(2) Liberal appropriations to carry into effect article 7 of the treaty of 1868, securing to the Indian youth the benefits of the "elementary branches of an English education."

Compulsory attendance at school for nine months in each year of all children and youth between the ages of 6 and 16 years.

(3) Legislation for dividing the permanent fund derived from the ceded land between the different reservations, and assigning to the Indians residing upon the several diminished reservations their respective portions of said fund. This they reported as desired by all of the Indians.

(4) An appropriation of \$187,000, payable from the U. S. Treasury, for the Indians residing on the Crow Creek Reservation, in consideration of their receiving less land per capita than the Indians on other diminished reservations.

(5) Legislation allowing military authorities at posts on or near reservations to purchase from the Indians in open market, at fair and reasonable rates not exceeding the market prices in the localities, any grain, hay, or other produce they may have for sale, and which may be required for the military service at said posts.

(6) An appropriation to be immediately available of a sum sufficient to make the beef ration of the Sioux Indians equal during the fiscal year ending June 30, 1890, to that of the previous fiscal year, stating that much of the beef could be bought from the Indians, and that the almost total failure of crops in the Northwest made the reduction in rations, which was required by reduction of appropriations, a great hardship.

(7) Provision by law for furnishing land or a money equivalent for the Santee Sioux entitled to the same.

(8) Appropriations to pay what was due for the ponies taken in 1876 and 1877 by the Government from the Indians at the Cheyenne River and Standing Rock agencies.

To carry out the provisions of the act accepted by the Indians, and to enable the Department to carry out the recommendations made by the Commission for legislation not embodied in or specifically required by the act, a draft of a bill was prepared by the honorable Secretary of the Interior and submitted on January 30, 1890, with the report and proceedings of the Commission, to the President, who on the 10th of February, presented the matter to Congress, earnestly commending it to the attention of that body.

The bill as drawn was passed by the Senate, but failed to receive any final action by the House during the first session of the Fifty-first Congress.

Provision, however, was made in the Indian appropriation bill, which became a law on August 19, 1890, for the following items, required in fulfillment of the act of March 2, 1889, accepted by these Indians, viz:

For the payment of one year's interest in advance on the sum of \$3,000,000 provided for a permanent fund, \$150,000.

To enable the Secretary of the Interior to pay to the Santee Sioux, located at Flandreau, S. D., in case they chose to take the money instead of land, the sum of \$1 per acre in lieu of the allotments of lands to which they would be entitled, \$45,000, or so much thereof as might be necessary.

For the erection of fifteen school buildings, being in part compliance with the requirements of section 20 of the above-mentioned act of March 2, 1889, \$15,000.

It was held subsequently by the Treasury Department, that the act of March 2, 1889, when declared to have been accepted by the Sioux Indians as therein provided, made a permanent appropriation for the purchase of the 25,000 cows and 1,000 bulls to be furnished; also, for providing each head of family or single person over the age of 18 years who shall have or may hereafter take his or her—

allotment of land in severalty, with two milch cows, one pair of oxen, with yoke and chain, or two mares and one set of harness in lieu of said oxen, yoke, and chain; one plow, one wagon, one harrow, one hoe, one ax, and one pitchfork; also for the payment of \$50 in cash, to be expended for the erection of houses and other buildings suitable for residence, or improvement of their allotments, in accordance with section 17 of the above-mentioned act of March 2, 1889.

It will be seen that the following items embraced in the draft of the bill submitted to Congress with the proceedings of the Commission remain unprovided for:

For the erection of day schools, the providing of furniture and other necessary articles, and pay of teachers in accordance with article 7 of the treaty of April 29, 1866, which said article of treaty is continued in force for twenty years by section 17 of the above-mentioned act of March 2, 1889; provided, that as fast as school facilities are furnished the Secretary of the Interior is hereby authorized and required to compel all children between the ages of 6 and 16 to attend the schools on the reservation at least nine months in the year, except such as may be attending school elsewhere, \$150,000.

For the erection of 15 school buildings, provided for in article 20 of the above-mentioned act of March 2, 1889, \$15,000.

To enable the Secretary of the Interior to pay to such individual Indians of the Standing Rock and Cheyenne River agencies as he shall ascertain to have been deprived by the authority of the United States of ponies in the years 1876 and 1877, at the rate of \$40 for each pony, \$200,000.

For the Indians of the Crow Creek Reservation for loss sustained in receiving less land per capita in their diminished reservation, \$187,039.

To enable the Secretary of the Interior to purchase for the Sioux Nation of Indians additional beef required for issue, the rations having been reduced on account of reduced appropriation for fiscal year ending June 30, 1890, \$100,000.

To enable the Secretary of the Interior to purchase lands for such of the Santee Sioux Indians in Nebraska as have been unable to take lands in severalty on their reservation in Nebraska, by reason of the restoration of the unallotted lands to the public domain, \$32,000. To divide the permanent fund in accordance with the number of Indians on each reservation, and to authorize the Secretary of War to make purchases from Indians for use of military posts.

Promptly upon the assembling of the first session of the Fifty-first Congress, these measures were urged upon the attention of that body by the Department, as will be seen by the copies of correspondence set out in the accompanying executive documents, H. R. Nos. 36, 37, Fifty-first Congress, second session.

Congress has been considering this subject, and the bill has been in conference, where, so far as this Office can judge from the report, it appears to have been agreed in form to carry all of the items not heretofore provided for, except the \$187,000 for the Indians of the Crow Creek Reservation.

The report of the Sioux Commission contained other recommendations for which no legislation was necessary, or for which it was not deemed advisable to ask for legislation until they should receive further consideration. These were as follows:

(1) Improvement in the quality and appearance of the woolen clothing furnished to the Indians, the sizes to be more in accordance with the needs of the Indians.

(2) Change in the time of issuing annuities, which should be distributed not later than November 15.

(3) That the hides of beef cattle killed for issue on the block be allowed to the Indians, instead of being sold and proceeds applied to expenses of herding and slaughtering beef cattle.

(4) That as pastimes are a necessity to all people, possibly even more so to the Indians than others, they be permitted to engage in such innocent dances as the corn dances, squaw dances, and the Omahas, the interdiction of which appears hardly judicious, but recommends prevention of such savage ordeals as the sun dance proper.

(5) That such necessary surveys be made before the ceded lands are thrown open for settlement as will clearly indicate the lines of the separate reservations.

(6) That such regulations be adopted as will protect the Indians in the enjoyment of all allotments they may see proper to take in the ceded portion of the reservations.

(7) That suitable reservations be made to protect the agency and school buildings at Lower Brulé and Cheyenne River agencies.

(8) That the saw and gristmills, to cost not exceeding \$8,000, provided for in the

last clause of article 4 of the treaty of 1868, be erected upon the reservations not now supplied with them at the earliest practicable day.

(9) That further regulations or legislation be provided to prevent trespassing upon the reservations by white people.

(10) That the pay of the Indian police, to whose efficiency the admirable condition of affairs and internal regulations of all the agencies is largely due, be made more in accordance with the service rendered.

(11) That the salaries of the judges of the courts of Indian offenses be more commensurate with the importance of their positions. They adjudicate matters in dispute between Indians, and those in office were found to be men of high character whose decisions were generally just and equitable.

(12) That the mixed-bloods be placed on the same footing as the Indians of full blood in the matter of trading.

(13) That the Rosebud Agency be removed from its present inconvenient locality, eastward toward the Missouri River to a place where there is plenty of good land, and where the agency will be more convenient of access for the Indians, utilizing present buildings for industrial school purposes.

(14) That so far as practicable employment be given to Indians, especially to the young men.

Taking these items up in their order, I have the honor to state :

(1) That special pains have been taken in making purchases of clothing by contract or otherwise, during the current fiscal year, to procure articles more durable and serviceable than heretofore, and to see that suitable sizes are furnished.

(2) This office realizes the importance of issuing annuities to the Indians before cold weather sets in, and impressed the importance of this and other needs of the service in every proper manner upon Congress and its committees, but the act making appropriations for the Indian service for the current fiscal year did not become a law until August 19, 1890, later than at any previous time for many years past, if ever. This has caused great and serious embarrassment to the administration of Indian affairs.

After the bill became a law contracts had to be executed, and after their execution time was necessarily required for the manufacture of blankets, clothing, etc., 60 days for which is usually required, after which their goods had to be received, to be carefully inspected at the New York warehouse or elsewhere, and then to be shipped to their destination. In consequence of the late passage of the Indian appropriation bill, goods and supplies which ought to have been in the possession of the Indians and which were required for their comfort and support are, many of them, only now being received at the places of delivery in New York, Chicago, etc., and at this season, when transportation is often obstructed, are being shipped to the agencies, many of which are remote from railroads and difficult of access because of deep snows, stress of weather, etc.

(3) On March 6, 1890, directions were given to the agents to allow the Indians to have all the hides of beef cattle slaughtered, to be issued from the block, and these directions are being executed accordingly.

(4) No action was taken and no instructions given on the recommendation of the Commission concerning Indian dances.

(5) The surveys of the diminished reservations were not made as recommended by the Commission before the ceded lands were opened to settlement, the honorable Secretary of the Interior, in his letter to the President, of January 30, 1890, stating: "In my own judgment, the act should now be proclaimed, the surveys made as soon as possible."

An appropriation of \$100,000 for surveys of the land within the diminished reservations for allotments to the Indians was estimated for in communication to Congress, as shown by correspondence in the accompanying Executive Document No. 284, H. R., Fifty-first Congress, first session, but the appropriation has not yet been made.

(6) Special agents of the Indian service and also of the public land service, were sent to the ceded lands to assist the Indians who were living thereon, and who had taken or desired to take allotments of land, and to instruct them how to proceed in the matter. Mr. Riggs, who has long been a missionary among the Indians, was employed for a time on this work because of his knowledge of and familiarity with the Indians, their locations, etc. The local agents were also instructed to be energetic and vigilant in this matter, and they have, from time to time, been instructed to leave nothing undone to render all required assistance to any Indian desiring to secure allotments on the ceded lands. Less than one hundred selections of such allottees have as yet been reported to this office. It has not been learned how many of such selections had been recorded at the respective agencies. The time within which such selections may be made will expire on February 28, 1891.

(7) Provision was made for reservations for the agency and school buildings at the Cheyenne River and Lower Brulé agencies, which fell within the ceded lands, in the

proclamation of the President dated February 10, 1890, declaring the acceptance by the Indians of the act.

(8) By article 4 of the treaty of 1868 the United States agreed to cause to be erected on said reservation a good steam circular saw mill, with a grist mill and a shingle machine attached, to cost not exceeding \$8,000. In the Indian appropriation act for the fiscal year 1872, approved March 3, 1871, the sum of \$8,000 was appropriated for that purpose, and it has been so expended.

(9) As far back as May, 1889, which was before the Sioux Commissioners reached the field, this office, in anticipation of a successful termination of the negotiations, in which event it was feared that there would be a rush of settlers to the ceded lands and intrusions upon the diminished reservations, directed the Indian agents at all the Sioux agencies to promptly report all acts of trespass, to remove all intruders then on the reservations, and to warn any who might be found journeying thither, that they would be arrested by the military if they should attempt to enter thereon. Later, in June, renewed diligence and watchfulness was enjoined upon all agents, and in July the attention of the War Department was called to the matter in order that the military might be prepared for any emergency that might arise. As soon as it became known that the commissioners had been successful in their negotiations with the Indians the agents were again warned to be on the alert to prevent trespassing upon the reservations, and at the same time they were notified that orders had been given by the War Department to the commanding general, Department of the Missouri, to take proper action to keep intruders from the ceded land. Subsequently the Attorney-General gave an opinion to the effect that the President might use troops to remove intruders from the individual claims of Indians within the ceded territory as well as from the reservations.

There have been but few, if any, cases of trespass to cause trouble up to the present time on the land occupied by the Indians within either the ceded portion or the reservations, and it is believed that there is little, if any, ground of complaint on this account.

(10) The increase of the pay of Indian police has been repeatedly urged upon Congress and estimates were pending at the time the commission made their report for such increase. Congress, by the Indian appropriation act of August 19, 1890, authorized and provided for the increase of the pay of the officers from \$12 to \$15 per month, but did not increase the pay of the privates.

I have urged a further increase in both the number and salaries of the police, estimating for the current fiscal year \$20 per month for privates and \$25 per month for officers, for which I hope that Congress will grant the authority and money.

Nothing is more helpful to the good order and management of an agency than an efficient Indian police. The Indians so employed are faithful, efficient, and reliable, and if a sufficient force could be maintained at each of the agencies, especially where the more turbulent Indians belong, there would be little, if any, need for calling on the military arm of the Government to sustain the authority of the agents and to assist in enforcing the regulations of the Department.

(11) Requests have been made for larger appropriations for the pay of the judges of the courts of Indian offenses, and an estimate for such increase was pending when the commission made its report. Congress, by the act of August 19, 1890, increased the appropriation from \$5,000 to \$10,000, which has enabled the Department to increase the compensation of those employed in this civilizing instrumentality.

(12) As Congress has specially provided against "any person other than Indians of the full blood" trading on Indian reservations without license, except among the five civilized tribes (see section 2133, R. S.), it was not deemed advisable to ask for legislation to remove the restriction as to the mixed bloods.

(13) The removal of the Rosebud Agency, as recommended by the commission, is reserved for future consideration. The present location of the agency has long been urged as unsuitable, and the same reasons and causes which make it unsuitable for agency purposes render it, in my opinion, peculiarly unfit for the location of an industrial school. It is reported to be in a hollow surrounded by sand hills unsuited for agricultural purposes. Many of the buildings are in bad condition.

(14) In the matter of giving employment to Indians, I have the honor to state that the following number are borne upon the regular rolls as employes at the respective agencies:

Standing Rock .....	54
Cheyenne River .....	20
Crow Creek and Lower Brulé .....	27
Rosebud .....	26
Pine Ridge .....	29
Santee .....	18
Total .....	174

In accordance with instructions, they perform much of the irregular service required upon the reservations, and many of them are employed with their teams in transporting the annuity goods and supplies from railroad stations to the agencies.

Complying with as much of the President's directions as require a statement, "as to the appropriations for rations for the last few years, and if these appropriations have been diminished, whether the reduction has been upon the advice of your Department or not," I have the honor to state that the annual estimates made by this Office for the "subsistence and civilization" of the Sioux Indians as provided for in the agreement of February 28, 1877, and the appropriations made by Congress, have been as follows:

Fiscal year.	Estimates for subsistence and civilization	Appropriations for subsistence and civilization.	Fiscal year.	Estimates for subsistence and civilization.	Appropriations for subsistence and civilization.
1879 .....	\$1,230,000	\$1,125,000	1886 .....	\$1,600,000	\$1,250,000
1880 .....	1,150,000	1,095,000	1887 .....	1,400,000	1,200,000
1881 .....	1,095,000	1,000,000	1888 .....	1,100,000	1,000,000
1882 .....	1,025,000	1,000,000	1889 .....	1,000,000	1,000,000
1883 .....	1,500,000	*1,225,000	1890 .....	1,000,000	900,000
1884 .....	1,600,000	*1,325,000	1891 .....	1,000,000	950,000
1885 .....	1,600,000	1,225,000			

\* For the years 1882 and 1883 additional deficiency appropriations of \$250,000 and \$200,000 respectively, were made by Congress.

It will be seen from the above table that only once in thirteen years has the Department received the amount estimated for subsistence and civilization of these Indians, as provided in the agreement of 1877.

The total amount of the appropriations made for the Sioux Nation of Indians for the current fiscal year, in fulfillment of stipulations of treaty of 1868 and of agreement of 1877, are as follows:

For clothing, treaty of 1868 .....	\$125,000
For Indians engaged in agriculture, treaty of 1868 .....	150,000
For pay of employes, treaty of 1868 .....	32,000
For industrial schools—Santee Sioux and Crow Creek Agencies, treaty of 1868 .....	6,000
For subsistence and civilization, agreement of 1877 .....	950,000
For pay of matron, Santee Agency, treaty of 1868 .....	500
<b>Total .....</b>	<b>1,263,500</b>

The following statement shows the amounts expended and to be expended under existing contracts, etc., for subsistence, for clothing, implements, wagons, etc., for agency and for school employes at the Sioux agencies in Dakota and Nebraska from the Sioux appropriation for the fiscal year 1891:

Agency.	Amount expended for subsistence.	Amount expended for clothing, implements, wagons, harness, etc.	Amount set aside for agency employes.	Amount set aside for school employes.
Pine Ridge .....	\$173,500	\$81,400	\$17,500	\$12,000
Rosebud .....	175,000	90,000	16,000	11,820
Standing Rock .....	160,000	63,000	15,000	18,500
Cheyenne River .....	81,000	49,000	12,000	10,000
Crow Creek .....	36,000	18,000	9,700	6,000
Lower Brule .....	40,000	16,000	8,800	6,000
Santee, etc .....	6,000	36,000	9,500	7,500
<b>Total .....</b>	<b>671,500</b>	<b>353,400</b>	<b>88,500</b>	<b>71,820</b>

Total amount of liabilities incurred for subsistence, clothing, etc .....	\$1,185,220
Estimated cost of transportation from steamship and railroad termini to agencies .....	25,000
Estimated expenses of Special Agent Lea for taking census .....	8,000
Reserved for 500,000 pounds of beef for Pine Ridge (ordered November 26) .....	15,000
Reserved for seeds in spring on basis of last year's expenditures .....	15,000
Balance of appropriation reserved for lumber, etc., for Indian houses for Pine Ridge, Rosebud, and Crow Creek agencies .....	15,280
<b>Total .....</b>	<b>1,263,500</b>
Total amount appropriated, including \$950,000 for subsistence and civilization .....	1,263,500

In the foregoing I have furnished the information specifically called for by the President. I deem it appropriate, however, to add a short résumé of Government dealings with the Sioux for the past forty years.

Without some such knowledge of and reference to the past, it is impossible for the present state of affairs to be rightly understood. Neither the Messiah craze nor reduced rations, nor both together, will account for it; but these two, taken in connection with prolonged disquiet and no unreasonable discontent with Government methods and distrust of Government pledges, offer a simple and natural explanation of the disturbances which are now taking place.

In the treaty at Fort Laramie, made in 1851, with the Sioux and seven other tribes, appears the first restriction of the Sioux to any special territorial limits. By that treaty they agreed to be at peace among themselves, to allow roads to be established across their territories, and "to recognize and acknowledge as their territories" certain described tracts. The tract assigned to the Sioux was bounded on the east by the Missouri River, from the mouth of the Heart River, near the present site of Bismarck, to the mouth of White Earth River, near the present site of Chamberlain, thence southwest to the forks of the Platte River, thence along the north fork of the Platte to Red Buttes, or Fort Casper, a point somewhat southeast of the center of Wyoming, thence to and along the Black Hills to Heart River, and along that river to its mouth. It was, however, expressly stipulated that the "Indian nations do not thereby abandon or prejudice any rights or claims they may have to other lands; and further, that they do not surrender the privilege of hunting, fishing, or passing over any of the tracts of country hereinbefore described."

It will be observed that this treaty did not contemplate the settlement of the Sioux at any special point. They were expected to roam and hunt and take care of themselves as before, but emigration to California had brought the Indians of the plains into new relations with the whites, and it was of the utmost importance that they should maintain friendly relations, not only with the whites but with each other.

The consideration which the United States agreed to pay the eight tribes of Indians who were parties to this treaty were goods, supplies, etc., annually, to the value of \$50,000 for fifty years. This would probably not have been more than \$1 per capita per annum. The treaty was ratified by the Senate with an amendment which substituted for "fifty years" the words "ten years, with the right to continue the same at the discretion of the President of the United States for a period not exceeding five years thereafter." The records show this amendment to have been accepted by the Indians, but the names of those thus assenting are not the same as those signed to the treaty, and it has been stated that the Indians did not know of this change.

Emigration increased; a railroad was laid through the center of the buffalo land; military stations were established in territory hitherto exclusively occupied by the Indians; a pushing alien race ignored their past and their prejudices, killed and wasted their buffalo for sport, and even disputed their rights in territory to which their claim had never before been questioned. Conflict was inevitable, and it came. To allay it, in 1865 separate treaties were made at Fort Sully with nine individual bands of Sioux, in which they agreed to be at peace with the United States and to try to keep the peace among themselves, and to withdraw from overland routes established through their country. The United States agreed to pay annually for twenty years to two bands \$6,000 each, to three bands \$10,000 each, to another \$7,000, and to the remaining three bands \$30 per capita. Most of them were promised that if they would locate permanently for agricultural purposes they would be protected from molestation by whites or Indians, and would receive help in the way of agricultural implements and improvements to the extent of \$25 annually for each family for five years, and to every hundred lodges or families would be given a farmer and blacksmith and, "at the option of the Secretary of the Interior whenever deemed necessary," teachers.

This foreshadowed the treaty of 1868, but these treaties with scattered portions of the Sioux seem to have produced little result, and prolonged war with the tribe over large sections of country was brought to a close only by the well-known treaty made at Fort Laramie in 1868 with representatives of the Sioux Nation as a whole, except that portion which has always remained in the region of Montana. In this treaty the Indians agreed not to molest white persons or their cattle, not to oppose or obstruct the building of wagon roads, railroads, or mail stations, or of military posts outside the proposed reservation. What has long been known as the "Great Sioux Reservation" was set apart for the "absolute and undisturbed use and occupation of the Indians," upon which none but Government employes were to be allowed to pass, settle, or reside; the Indians relinquished all claim to occupy permanently any territory outside the designated reservation, but reserved—

The right to hunt on any lands north of North Platte and on the Republican Fork of the Smoky Hill River, so long as the buffalo may range thereon in such numbers as to justify the chase.

It was also agreed—

That the country north of the North Platte River and east of the summits of the Big Horn Mountains shall be held and considered to be unceded Indian territory, and \* \* \* no white person or persons shall be permitted to settle upon or occupy any portion of the same, or without the consent of the Indians first had and obtained, to pass through the same; and the military posts now established in the territory in this article named shall be abandoned, and the road leading to them and by them to the settlements in the Territory of Montana shall be closed.

The Government agreed to establish an agency, provide employes, erect employes' dwellings, a sawmill, gristmill, and schoolhouse; for thirty years to give annually a suit of clothes to each Indian, and to purchase goods and supplies to the value of \$20 for each Indian "roaming" and \$30 for each Indian engaged in farming; for four years to furnish to every one over 4 years of age who should have settled upon the reservation 1 pound of meat and 1 pound of flour per day "provided the Indians can not furnish their own subsistence at an earlier date"; and to every family actually settling on the reserve a cow and a pair of oxen within 60 days from the date of settlement. Provision was also made for allotments of 320 acres to families, for giving seeds and implements to the allottees, and for patenting 160 acres to male Indians over 18 years old. As to schools, the Government agreed for twenty years to provide a schoolhouse and a teacher for every thirty children "who can be induced or compelled to attend school."

At the expiration of the four years the Government continued to make appropriations for rationing the Sioux in part, but a large portion of their subsistence was obtained from hunting. They were repeatedly reminded, however, that these rations were a gratuity, could not be indefinitely continued, and that the supply of buffalo would gradually diminish.

After the treaty of 1868 the lands reserved for hunting and the "unceded territory" became the source of much disquietude and misunderstanding. While the Indians made little or no distinction between the unceded and the reserved lands, their hunting grounds in Nebraska were soon occupied by white settlers who protested against the presence of Indians outside their reservation, and prospectors and others went at will into the unceded Big Horn country. Even as early as June 29, 1869, fourteen months after the date of the treaty, Gen. Sheridan issued an official order saying that—

Outside the well-defined limits of the reservation they (the Indians) are under the original and exclusive jurisdiction of the military authorities, and as a rule will be considered hostile.

In 1874 the appropriation for subsistence of the Sioux contained a clause authorizing the withholding of supplies until the Indians should agree to remain north of the Niobrara River and outside of Wyoming; a similar provision was inserted in the appropriation act for 1875, but referred only to the Niobrara River.

By the act of June 23, 1874, Congress appropriated \$25,000 to pay the Indians of the Red Cloud and Spotted Tail agencies for the relinquishment of their right to hunt in Nebraska. The Indians of the other agencies along the Missouri were tolerably well settled down and had little practical interest in the Nebraska hunting lands. A delegation of chiefs from the Red Cloud and Spotted Tail agencies came to Washington in May, 1875, and were induced to surrender their Nebraska hunting privileges, north of the Niobrara, and also to relinquish such claim as they possessed to that portion of Nebraska south of the south divide of the Niobrara River, which by the terms of the treaty of 1863 "should be held and considered unceded Indian territory," etc. This additional concession was obtained by the promise that Congress would be asked to appropriate for the Indians an additional \$25,000, which they understood as a promise of the money. Congress failed to make this appropriation. Other "unceded territory" still remained.

In 1874 gold was found in the Black Hills, and in direct violation of the treaty of 1863, that part of the Sioux Reservation forthwith swarmed with white people. A commission sent out in June, 1875, to obtain a cession of the Black Hills and of "unceded territory" in Wyoming was unsuccessful.

In the appropriation act of August 15, 1876, Congress provided that no more appropriations should be made for the Sioux unless they should consent (1) to relinquish all claim to any country outside the reserve established by the treaty of 1868; (2) to relinquish all claim to so much of their reserve as lay west of the one hundred and third degree of longitude; (3) to grant right of way from east to west across their reserve for at least three roads; (4) to receive supplies near the Missouri (this referred to the Pine Ridge and Rosebud Indians, the other agencies being already on the Missouri); and (5) to enter into arrangements looking to their self-support.

A commission, of which Mr. Manypenny was chairman, visited the Sioux and made negotiations with them covering all the points named in the appropriation act. By this agreement, dated August 15, 1876, the Sioux ceded not only all the country lying outside the boundaries of the reserve as defined by the treaty of 1868, but also so much of the reserve itself as included the Black Hills, a tract which has been termed the "garden spot of the reservation." The Government agreed "to furnish to them

schools and instruction in mechanical and agricultural arts, as provided for in the treaty of 1868; these provisions of the treaty of 1868 had been largely nonfulfilled. The Government also agreed—

To provide the Indians with a ration for each individual of a pound and a half of beef (or in lieu thereof one-half pound of bacon), one-half pound of flour, and one-half pound of corn; and for every one hundred rations, four pounds of coffee, eight pounds of sugar, and three pounds of beans, or in lieu of said articles the equivalent thereof in the discretion of the Commissioner of Indian Affairs. Such rations, or so much thereof as may be necessary, shall be continued until the Indians are able to support themselves.

This fairly committed the Government to keeping the Sioux on their reservation and supporting them there until they could be brought by the Government to self-support.

It is a noticeable fact that these negotiations were consummated during the progress of a "Sioux war" participated in by Sitting Bull and his adherents, who had never made any permanent settlement upon the Sioux Reservation, but had spent most of their time hunting in the "unceded territory" and its vicinity. Complaints had been made that his band had raided on both whites and Indians, and December 6, 1875, the Indian Office notified the agents for the Sioux that all Indians who did not report at the agencies before the 31st of January, 1876, would be regarded hostile. The time allowed was too short. Many of the Sioux who were then in the unceded country were entirely peaceable, and were hunting there with the express permission of their agents, but they could not reach their agencies before the Government opened active hostilities. The order and the presence of troops camped at the agencies for the purpose of carrying it out so alarmed the Indians that many others left the agencies and joined the fortunes of Sitting Bull. The war, which included the Custer massacre, was long and disastrous to both white people and Indians.

It was not participated in by much the larger proportion of the Sioux Nation; but these friendly Indians also suffered from it, especially by the loss of their ponies, which were taken from them under the order of the military as a war measure, with the distinct understanding that the value thereof would be returned to them in cattle. In some instances the ponies were sold at very low rates and only a small part of their value was returned to the Indians in cattle. In other instances the promise of reimbursement in cattle was unfulfilled for thirteen years, and had to be made a part of the agreement concluded with the Sioux last year.

Did space permit much might be said about the delays and discomforts attending the removal of the Rosebud and Pine Ridge, then known as Spotted Tail and Red Cloud Sioux, from place to place on their reservation until their agencies were finally established at their present locations. Under uncertainties of administration and failures or delays in appropriations the Indians suffered much hardship and had many reasonable grounds for irritation and for complaints of bad faith on the part of the Government.

Only a few years elapsed before the Sioux were again called upon to surrender part of their lands. Two commissions visited them for that purpose without success. The third, the commission referred to at the beginning of this communication, succeeded in getting the consent of three-fourths of the adult males of the tribe to the setting off of six separate reservations and the cession to the Government of intervening land, or about one-half their entire domain. The various provisions of that agreement have already been referred to and need not be elaborated here, and the present status of legislation required to carry out that agreement in full has been set forth above.

I desire, however, to ask your attention briefly to the situation as viewed from the Indian standpoint.

Prior to the agreement of 1876 buffalo and deer were the main support of the Sioux. Food, tents, bedding, were the direct outcome of hunting, and with furs and pelts as articles of barter or exchange it was easy for the Sioux to procure whatever constituted for them the necessities, the comforts, or even the luxuries of life. Within eight years from the agreement of 1876 the buffalo had gone and the Sioux had left to them alkali land and Government rations.

It is hard to overstate the magnitude of the calamity as they viewed it which happened to these people by the sudden disappearance of the buffalo and the large diminution in the numbers of deer and other wild animals. It was as if a blight had fallen upon all our grain fields, orchards, and gardens, and a plague upon all our sheep and cattle. Their loss was so overwhelming and the change of life which it necessitated so great that the wonder is that they endured it as well as they did. For not only did the vast herds of buffalo and exhaustless supplies of deer and other animals furnish them with food, clothing, shelter, furniture, and articles of commerce, but the pursuit of these animals and the preparation of their products furnished to the great body of them continuous employment and exciting diversion. Suddenly, almost without warning, this was all changed and they were expected at

once and without previous training to settle down to the pursuits of agriculture in a land largely unfitted for such use. The freedom of the chase was to be exchanged for the idleness of the camp. The boundless range was to be abandoned for the circumscribed reservation and abundance of plenty to be supplanted by limited and decreasing Government subsistence and supplies. Under these circumstances it is not in human nature not to be discontented and restless, even turbulent and violent.

In this tremendous change in their status it was never contemplated by the Government that it should supply from the National Treasury the place which nature had supplied by its prodigal wealth of buffalo. It was only intended to supplement the efforts of these people at self-support, and that as soon as they had learned the art of supporting themselves by the products of their own labor in tilling the soil or in pastoral pursuits, they should cease to look to the Government for food and clothing.

Under the most favorable circumstances in a mild climate and on a fertile soil it would be no easy matter for such a people as the Sioux to turn to agriculture or stock raising and become self-supporting; but in the rigors of a northern climate, on land recognized as largely unfitted for agriculture and under circumstances of peculiar hardship, they have been as yet unable to secure for themselves a sufficiency of either food or clothing to supplement that provided by the Government so as to keep them from want. They have been hungry, cold, sick, and consequently dissatisfied, and while the ringleaders of revolt and those guilty of actual deeds of hostility should be punished, the great mass of them have a right to expect sympathy, help, and last, but by no means least, justice.

In all these negotiations there have been developed two parties, those favoring and those opposing the sale of their lands. The Government has always proceeded upon the presumption that the act of the majority was to be regarded as the act of all, while among the Indians the minority have always asserted their rights with a vehemence worthy of Anglo-Saxons. They have never voted away their lands and their freedom, but have simply submitted to force and the inevitable. Unwilling or unable to accept civilization they are being crushed by it, and while we crush them let us pity and spare them needless suffering.

The remedies for the present unfortunate condition of affairs seem to me to be the following:

(1) The speedy and complete fulfillment of all the promises made to them by the late commission.

(2) The increase of the number and pay of the Indian police.

(3) The making of adequate provision for the industrial education of all their children of school age, with a law to compel attendance when necessary.

(4) Their encouragement and help in the industrial pursuits which are best adapted to the country in which they live.

(5) The delivery to them at suitable subissue stations, near their homes, of the full quantities of beef and supplies stipulated in the agreement.

(6) Whenever it is considered desirable to decrease the quantity or change the kind of supplies, due notice should be given them.

(7) Some method should be devised by which their supply of blankets and clothing shall be delivered early in the season, before the advent of cold weather.

(8) Those who have already settled on land and made valuable improvements should be allowed to remain, if practicable.

(9) Some scheme should be devised at once for providing occupation for every able-bodied Indian. They should be employed in developing farms, building homes, constructing fences, irrigating ditches, roads, etc., and supplies of food and clothing should be withheld from those who are able but refuse to work when opportunity is offered.

(10) There should be an increase in the number and pay of physicians, and provision should be made for the care of the sick, aged, feeble-minded and infirm.

Justice, kindness, firmness, patience, and helpfulness will gradually change these children of nature into intelligent, industrious citizens.

Very respectfully,

T. J. MORGAN,  
Commissioner.

## LETTERS FROM COMMISSIONER OF INDIAN AFFAIRS TO SECRETARY OF THE INTERIOR RELATING TO AMOUNT OF SUBSISTENCE SUPPLIES ISSUED TO SIOUX.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C., January 5, 1891.*

The SECRETARY OF THE INTERIOR:

SIR: Complying with your request, I have the honor to submit the following statement regarding the matter of supplies for the Sioux Indians of Dakota.

In order that the purpose of my communication may be very specific, let me say that the statement has been repeated in the public press that the Sioux are slowly starving to death and that the present unhappy troubles among them are due to the cutting down of their rations and to the blunders of the Indian Office.

In order to meet these criticisms in such a way that the public may have an intelligent appreciation of the matters involved, it will be necessary for me to make an extended reply. I will make as brief a statement of the main points involved as is possible, consistent with clearness, and will subjoin to my statement a fuller discussion of the points involved.

It will be seen at once that the criticism is an arraignment, first, of the entire policy of the Government in dealing with the Indians. What this policy is I have set forth in accompanying paper marked A.

In the next place the criticisms are a reflection upon the persons engaged and who are directly responsible for the present administration of Indian affairs. Who these persons are, and the relations they sustain severally to this matter, I have discussed in a paper marked B.

The specific question presents itself for answer, "Are the Indians starving, and if so, who is to blame for it?"

In answering this question it seems to be pertinent to set forth somewhat in detail the reasons for furnishing subsistence to the Sioux, and the amount actually furnished.

In 1877 the United States entered into an agreement with the Sioux Nation, promising to furnish them certain subsistence and other supplies. Articles 4 and 5 are as follows:

Article 4. The Government of the United States and the said Indians, being mutually desirous that the latter shall be located in a country where they may eventually become self-supporting and acquire the arts of civilized life, it is therefore agreed that the said Indians shall select a delegation of five or more chiefs and principal men from each band, who shall, without delay, visit the Indian Territory, under the guidance and protection of suitable persons to be appointed for that purpose by the Department of the Interior, with a view to selecting therein a permanent home for the said Indians.

If such delegation shall make a selection which shall be satisfactory to themselves, the people whom they represent, and to the United States, then the said Indians agree that they will remove to the country so selected within one year from this date.

And the said Indians do further agree that in all things to submit themselves to such beneficent plans as the Government may provide for them in the selection of a country suitable for a permanent home, where they may live like white men.

Article 5. In consideration of the foregoing cession of territory and rights, and upon full compliance with each and every obligation assumed by the said Indians, the United States does agree to provide all necessary aid to assist the said Indians in the work of civilization; to furnish them schools and instruction in mechanical and agricultural arts, as provided for by the treaty of 1868.

Also to provide the said Indians with subsistence consisting of a ration for each individual of a pound and a half of beef (or in lieu thereof one-half pound of bacon), one-half pound of flour, and one-half pound of corn; and for every one hundred rations, 4 pounds of coffee, 8 pounds of sugar, and 3 pounds of beans, or in lieu of said articles the equivalent thereof, in the discretion of the Commissioner of Indian Affairs.

Such rations, or so much thereof as may be necessary, shall be continued until the Indians are able to support themselves.

Rations shall, in all cases, be issued to the head of each separate family; and whenever schools shall have been provided by the Government for said Indians, no rations shall be issued for children between the ages of 6 and 14 years (the sick and infirm excepted) unless such children shall regularly attend school.

Whenever the said Indians shall be located upon lands which are suitable for cultivation, rations shall be issued only to the persons and families of those persons who labor (the aged, sick, and infirm excepted); and as an incentive to industrious habits the Commissioner of Indian Affairs may provide that such persons be furnished in payment for their labor such other necessary articles as are requisite for civilized life.

The Government will aid said Indians as far as possible in finding a market for their surplus productions, and in finding employment, and will purchase such surplus, as far as may be required for supplying food to those Indians, parties to this agreement, who are unable to sustain themselves; and will also employ Indians, so far as practicable, in the performance of Government work upon their reservations.

This agreement is still in force and the questions now raised are questions as to how far the Government has kept its obligations.

It is worthy of special note that the end aimed at in the agreement was the civilization of the Indians. They were to settle down permanently; their children were to be educated; they were to live like white men; and the rations issued to them, or so much as might be necessary, were to be continued until "the Indians are

able to support themselves." It is clearly evident that the Government never intended that the Indians should look to it for continuous support; that no promises of this kind were ever made; and that the Indians themselves did not expect it and apparently did not desire it. The object of the rations was not that the Indians might be fed by the Government, but simply that they might be assisted and kept from want during the period of their probation while they were learning the art of self-support.

No one will question the wisdom of this policy. No intelligent man will doubt that the welfare of the Indian demands that just as soon as possible he shall be rendered self-supporting, and that any help in the way of food or other supplies furnished him by the Government, in excess of his absolute needs, so as to remove from him the spur and stimulus to labor, is not a kindness but an injury.

The only serious question which can be raised in this connection is, how long a time are these rations to be continued, and under what circumstances the Government shall reduce or discontinue them. It should be noted that the agreement expressly stipulates that—

Whenever the said Indians shall be located upon lands which are suitable for cultivation, rations shall be issued only to the persons and families of those persons who labor (the aged, sick, and infirm excepted); and as an incentive to industrious habits the Commissioner of Indian Affairs may provide that such persons be furnished in payment for their labor such other necessary articles as are requisite for civilized life.

It certainly will be accepted as a truism that the Government had a right to demand of the Indians that they put forth for self-support whatever efforts might reasonably be demanded of them considering their nature and surroundings. It will also be admitted that, considering the end in view, it would be a humane act on the part of the Government to decrease the rations even though such decrease should bring temporary hardship, provided such hardship should serve as a stimulus to labor and self-help. Of course no one would urge that the Indians should be starved. In fact all that can be demanded, either in fulfillment of treaty obligation, or as an act of justice or humanity, is this, that the Indians shall put forth all proper exertion in the way of gaining a livelihood by their own labor, as other men are forced to do, and that in connection with such effort on their part food supplies shall be issued to them in such quantities (not exceeding the amounts named in the agreement) and for such length of time as a sincere regard for the highest welfare of the Indians shall dictate.

It will be observed that this agreement went into effect nearly fourteen years ago. Since that time, almost without exception, the full amount of rations named in the agreement have been issued to the Indians, and the sums appropriated and expended therefor each year were shown in my communication of December 24, 1890 (see page 186). The exceptions have been caused by delayed or reduced appropriations by Congress. These rations the Indians have supplemented to a small extent, by their own earnings in freighting and by the raising of small and uncertain crops, and as the Indians have sometimes been overcounted, they have sometimes received overissues of rations.

In 1889, however, Congress reduced appropriations for the subsistence and civilization of the Sioux to the lowest point reached since the agreement of 1877, viz: to \$900,000, \$100,000 less than the amount estimated and appropriated for the two preceding years. This caused a reduction of 2,600,000 pounds in the amount of beef purchased for the Sioux for the fiscal year ending June 30, 1890. Up to that time I find no complaint of short rations to the Sioux, except that sometimes the full weight of cattle delivered in the fall was considerably reduced before the time came to issue them to the Indians. In the fall of 1889 the Sioux Commission, with considerable difficulty and many promises, negotiated with the Sioux for a cession of their land to which the majority assented, but to which a large and influential minority were bitterly opposed. It was immediately after these negotiations that the reduced appropriations, above referred to, necessitated a reduced beef ration. At the same time the drought and the neglect of their gardens, caused by their prolonged absences from home to council with the Commission, made an entire failure of the crops which otherwise might have supplemented the Government rations.

To this matter the Sioux Commission called special attention in their report dated December 24, 1889, as follows:

During our conference at the different agencies we were repeatedly asked whether the acceptance or rejection of the act of Congress would influence the action of the Government with reference to their rations, and in every instance the Indians were assured that subsistence was furnished in accordance with former treaties, and that signing would not affect their rations, and that they would continue to receive them as provided in former treaties. Without our assurances to this effect it would have been impossible to have secured their consent to the cession of their lands. Since our visit to the agencies it appears that large reductions have been made in the amounts of beef furnished for issues, amounting at Rosebud to 2,000,000 pounds, and at Pine Ridge to 1,000,000 pounds, and lesser amounts at the other agencies. This action of the Department following immediately after the successful issue of our negotiations can not fail to have an injurious effect. It will be impossible to convince the Indians that the reduction is not due to the fact that the Government, having obtained their land, has less concern in

looking after their material interests than before. It will be looked upon as a breach of faith, and especially as a violation of the express statements of the commissioners.

Already this action is being used by the Indians opposed to the bill, notably at Pine Ridge, as an argument in support of the wisdom of their opposition.

In forwarding this report to Congress, the Department called special attention to the above-quoted statements of the Commission, and said:

The Commission further remarks that as to the quality of rations furnished there seems to be no just cause for complaint, but that it was particularly to be avoided that there should be any diminution of the rations promised under the former treaties at this time, as the Indians would attribute it to their assent to the bill. Such diminution certainly should not be allowed, as the Government is bound in good faith to carry into effect the former treaties where not directly and positively affected by the act, and if under these provisions of the treaty itself the ration is at any time reduced, the commissioners recommend that the Indian should be notified before spring opens, so that crops may be cultivated. It is desirable that the recent reduction made should be restored, as it is now impossible to convince the Indians that it was not due to the fact that the Government, having obtained their lands, had less concern in looking after their material interests.

Notwithstanding this plea of the Commission and of the Department, the appropriation made for the subsistence and civilization of the Sioux, during the current fiscal year was only \$950,000, or \$50,000 less than the amount estimated and appropriated for 1888 and 1889, and the appropriation not having been made until August 19 last, rations to be supplied had to be temporarily purchased and issued in limited quantities pending arrival of new supplies to be secured from this appropriation.

It should here be stated that in the draft of a bill prepared by the Department and submitted to the President, January 30, 1890, to accompany the report of the Sioux Commission, and intended to carry out in part the provisions of the Sioux act of March 2, 1889, was a clause appropriating the sum of \$100,000 for additional beef to supply the deficiency in the subsistence supplies for the year ending June 30, 1890, and in fulfillment of pledges made to the Indians by the Commission. A bill containing said item of appropriation passed the Senate April 26, 1890; the House committee on Indian Affairs reported it favorably, with the statement that the provision was in pursuance of provisions made by the Commissioners to the Indians, outside of the agreement entered into, but in good faith, and that they were reasonable and should be faithfully kept. The bill did not become a law, and the appropriation was not made.

I will also state, parenthetically, that while some of the other items included in that draft of a bill for carrying out the provisions of the Sioux agreement were covered by provisions in other legislation, yet Congress not only failed to give the \$100,000 to restore the beef rations, but also failed to redeem other pledges made by the Commission and the agreement, among them the following:

The support of schools, for which \$150,000 was asked.

The payment of \$200,000 in compensation for ponies taken from the Sioux in 1876 and 1877.

The reimbursement of the Crow Creek Indians for a reduction made in their per capita allowance of land below that allowed the other Sioux, which would require \$187,039, and

The purchase of lands for the Santee Sioux, which would require \$32,000.

The un wisdom, the expensive economy, and from the Indian standpoint, breach of faith in the cutting down of rations, as above set forth, being admitted, it now remains to be seen to just what extent rations were reduced below the amounts stipulated in the agreement of 1877, how much was actually provided for the Indians, and how near the limit of supplies would bring them to the point of starvation.

For the fiscal year ending June 30, 1890, there were purchased for the Sioux 18,131,611 pounds of beef, gross, and 2,899,583 pounds of flour. Shrinkage in the beef purchased in the fall and held during the winter would probably reduce the amount about 2,800,000 pounds. These 15,331,611 pounds of beef and 2,899,583 pounds of flour divided among 22,324 Sioux, the number given in the report of this office for 1889, would allow for each man, woman, and child, about 1 2/3 pounds of beef, gross, and 1/4 of a pound of flour per day (not counting some additional supplies of bacon, coffee, sugar, corn, and beans), while the ration stipulated in the agreement was to be 3 pounds of beef, gross, and one-half pound of flour per day, plus coffee, sugar, corn, and beans.

For the current fiscal year, as shown in the report of this office, dated December 4, 1890 (House Ex. Doc. No. 52, of the present session of Congress), the beef purchased and contracted for for the Sioux amounts to 17,683,282 pounds. This is 1,000,000 pounds less than the amount stated in Ex. Doc. 52. By clerical error the amount there named as purchased for the Cheyenne River Agency is 3,403,715 pounds. It should have been 2,403,715 pounds. Add to this 522,847 pounds of bacon purchased and 261,519 pounds of bacon on hand (counting 1 pound of bacon as equivalent to 6 pounds of gross beef) and subtract about 2,000,000 pounds for shrinkage of cattle delivered in the fall, and held during the winter, and we have a total of 20,389,478 pounds of beef. The flour purchased and contracted for amounts to 2,792,200 pounds. This

divided among 20,058 Indians, enumerated in the census of 1890, gives to each man, woman, and child 2,7<sup>5</sup>/<sub>100</sub> pounds of beef and 3<sup>8</sup>/<sub>100</sub> of a pound of flour per day, to which may be added small quantities of the additional supplies named above.

With these rations Indians may be improvident enough to become hungry, but they can not be considered as reduced to starvation.

With reference to the purchase and distribution of beef for the Sioux and northern Indians, it is due to the present Commissioner of Indian Affairs to say that unusual precautions have been exercised by him during the current fiscal year to secure cattle that would stand the rigors of a northern winter. To accomplish this it was required that none be received except those that had been kept at least twelve consecutive months north of the southern boundary of the State of Kansas—a restriction more severe than was formerly imposed. In addition to this bids were asked for cattle "double-Montana wintered," and pains were taken to secure that class where practicable; and still further, an increased price was paid to have cattle delivered at such times as would be most to the advantage of the Indians; and in addition to all this, by special direction of the Secretary of the Interior, preparations were in progress and being pushed as fast and as far as the means at the control of the bureau would warrant for the establishment of sub-issue stations in order that the beef might be delivered to the Indians at points nearer their homes, so that they might be spared the loss of time heretofore required in going long distances to and from the agencies in order to secure their supplies.

After the late cession of land by the Sioux, Congress authorized the appointment of a special agent, who should be charged with the duty of taking an accurate census of these people with a view of determining both as to their numbers, their present condition, and the outlook for their future self-support. Mr. A. T. Lea was appointed to perform this service. There seems to have been more or less of opposition to the work on the part of the Indians. When he had completed his task at the Rosebud Agency he reported that the number of Indians whom he had enrolled was 5,245 as compared with the number, 7,586, reported by the agent by whom rations were being issued. The attention of the agent was called to this discrepancy, whereupon he took a special census which differed from that of Agent Lea by about 100. Having no reason to doubt the substantial accuracy of this census, orders were given by the Department for the reduction of rations to correspond with the actual number of Indians at the Rosebud Agency. This seems to have created dissatisfaction, but unless the census as taken by the special agent and corroborated by the regular agent is inaccurate, there is not only no reason for dissatisfaction on the part of the Indians, but there is grave reason for dissatisfaction on the part of the Government that they had been drawing rations for about 2,100 people more than they actually possessed.

From the above statement it will be seen that so far as the furnishing of subsistence to the Sioux is concerned the Government has strictly fulfilled its obligations to them, as set forth in the agreement of 1877; that where there has been a reduction of the amount of rations it has been made by Congress in the exercise of that discretion which was clearly reserved to them by the terms of the agreement; that this reduction, whether wise or unwise, was not brought about by the Interior Department, but rather against its expressed wishes; that the reduction was not brought down to a starving point, and that if there has been suffering among the Indians for want of food it has been due partially to drought and other causes for which the Government is not in anywise responsible.

In this connection attention is specially invited to the fact that the discontent at the Pine Ridge Agency began in midsummer, when as yet there were no complaints and no likelihood of actual suffering for food.

Having answered the question so far as information in my possession enables me to do so, as to whether the Sioux Indians are starving, and if so who is responsible for it, let me say a word as to the proposed remedy for this supposed state of things.

Admitting, which is not admitted, that they are starving or that they are suffering for want of food, would there be any gain to them by placing the military in charge rather than leaving them under the control of the Department of the Interior?

Whoever is responsible for the distribution of supplies can distribute only such as are provided for by act of Congress. A civil agent can do this as well as a military officer. In the absence of any and all proof whatever to the contrary, it is a very serious and cruel assumption that men chosen from the walks of civil life, recommended by responsible men, appointed to their places by the Chief Executive and confirmed by the Senate, supervised in their work by honest inspectors, are necessarily incapable or dishonest, and that the only remedy for this is to displace them en masse and substitute for them Army officers. The question seems to me hardly to admit of argument. First, let it be shown in any particular case that any given agent is dishonest or incapable, give him an opportunity to vindicate his honor, reputation, and standing as a man before he is summarily displaced from his position of trust and responsibility.

The system of accounting for disbursements and distribution of supplies in the Indian department is probably as exact and searching and difficult as in any other branch of the Government. All papers after having been examined in the Indian Bureau are transmitted to the Treasury Department for final settlement, and must pass the rigid scrutiny which that Department bestows upon all such documents.

In conclusion, let me say a word in regard to the cause or causes of the present unhappy state of the Indians. Of course, owing to the fact that the Indians make no declaration of war, and that there is great difficulty in getting at their state of mind by reason of the differences of language and the almost insurmountable difficulty of procuring accurate interpretation of their statements, it is impossible to give any more than a conjectural statement as to the true causes of their present attitude toward the Government. I think, however, from what information I have been able to gather, that the following brief résumé may be taken as an approximate statement of the causes:

(1) The widespread feeling of unrest and apprehension in the minds of the Indian tribes, originally growing out of the rapid advance of civilization and the great changes which this advance has necessitated in their habits and mode of life.

(2) The very large reduction of the great Sioux Reservation, brought about by the Sioux Commission through the consent of the large majority of the adult males, as already stated, was bitterly opposed by a large influential minority. For various reasons they regarded the cession as unwise, and did all in their power to prevent its consummation, and since that time have been constant in their expressions of dissatisfaction and in their endeavors to awaken a like feeling in the minds of those who signed the agreement.

(3) The failure to fulfill speedily all the promises made to them by the Sioux Commission, especially the restoration of the rations diminished by act of Congress, as a condition of securing the signatures of the majority, discouraged those who signed and gave some reason for the taunts and reproaches heaped upon them by the non-progressive party.

(4) The wording of the agreement which changed the boundary line between the Rosebud and Pine Ridge diminished reservations necessitated a removal of a portion of the Rosebud Indians from lands which by the agreement were included in the Pine Ridge Reservation to lands offered them in lieu thereof upon the Rosebud Reserve. This, although involving no great hardship to any considerable number, added to the discontent.

(5) The diminution and partial failure of the crops for 1889 by reason of their neglect by the Indians, who were congregated in large numbers at the council with the Sioux Commission, and the further diminution of their ordinary crops by the drought of 1890.

(6) It seems also that some of the Indians were greatly opposed to the census which Congress ordered should be taken. The census at Rosebud, as reported by Special Agent Lea, and confirmed by a special census taken by Agent Wright, revealed the somewhat startling fact that rations had been issued to Indians very largely in excess of the numbers actually present, and this diminution of numbers as shown by the census necessitated a diminution of the rations, which was based, of course, upon the census.

These, so far as I can gather, are the primary causes of the original manifestation of a turbulent spirit.

7. The fright occasioned by the sudden appearance of the military among them, and other influences connected with and inseparable from military movements, have had their influence to increase largely the numbers of the hostiles and to intensify their spirit of opposition to the Government.

8. It is also undoubtedly true that the so-called "Messiah craze," now so familiar to everybody, by which many Indians were led to expect the speedy destruction of the white race, the return of the buffalo, and the restoration of the old conditions, had its influence in leading many of them to assume an attitude of hostility to the Government.

In conclusion let me express the wish that the Indians now in seeming rebellion may be dealt with patiently, and that they be brought back if possible to submission to the Government without further shedding of blood. It is better to save life than to destroy it.

Very respectfully,

T. J. MORGAN,  
Commissioner.

## ACCOMPANYING PAPERS.

## A.

The general policy of the United States Government in dealing with the Indians may be briefly outlined as follows:

For the most part the Indians are gathered on to distinct reservations or bodies of land set apart for their exclusive use and occupancy. An agent is appointed who is charged with special oversight of the Indians under his care; he receives a salary for his services, is under heavy bond for the proper discharge of his duties, nominates his subordinate employes, receives from the Government the annuities, supplies, and other appropriations made for the benefit of the Indians, and is responsible for the faithful distribution of the same.

These agents and the entire management of Indian affairs were under the control of the War Department until the year 1849, when they were transferred to the Department of the Interior.

At present there are fifty-eight (58) Indian agents having the oversight of about 250,000 Indians.

The present system, it will thus be seen, is hoary with antiquity and has been the subject of criticism and discussion for many many years. Nothing perhaps can be said either for it or against it that has not been said time and time again. It is not my purpose in this paper to discuss the system either in its defense or in its criticism, but simply to ask attention to its historical character with a view of showing that those now charged with its administration should not be held in any sense responsible for whatever defects may exist in the system itself. They did not make it; they received it, and are simply attempting to administer it.

## B.

The responsibility for the administration of Indian affairs is divided as follows:

First. The Congress of the United States necessarily makes all laws relating to the system and there can be no radical departure without legislation. All agreements with the Indians for the sale of their lands must be ratified by act of Congress; all appropriations of money of whatever character for the Indians must, of course, be made by Congress. The amount and character of the subsistence, clothing, and other supplies, the number, function, and pay of all Indian agents and most of the employes are fixed by act of Congress.

Second. The Commissioner and Assistant Commissioner of Indian Affairs, Indian inspectors and Indian agents are appointed and removed directly by the President. He is also the ultimate authority in all questions of administration.

Third. The Secretary of the Interior is charged with the responsibility for the general administration of Indian affairs. He appoints special Indian agents and he reviews all the work done by the Commissioner of Indian Affairs, authorizes expenditures of money and in general gives direction to everything that is done through the Indian Bureau.

Fourth. The Commissioner of Indian Affairs under the immediate direction of the Secretary of the Interior is charged with the details of oversight of Indian matters. He disburses the funds voted by Congress and in general supervises the work performed by agents, school superintendents (whom he appoints), and other agency employes.

Fifth. The Indian agents are each charged with the responsibility of caring for all the details of administration of the special tribe or tribes under their respective control.

Sixth. Five inspectors appointed by the President are responsible directly to the Secretary of the Interior, from whom they receive their instructions and to whom they report. They visit every portion of the Indian country with the view of supervising the work of the agents, of counseling and advising with them, of detecting any irregularities, exposing any frauds, and in general of keeping the Secretary advised of everything that transpires in the Indian country.

Seventh. The five special agents report directly to the Commissioner of Indian Affairs, and do for him the same kind of work that is done by the inspectors for the Secretary of the Interior.

This simple statement reveals the somewhat complicated nature of the present Indian system and indicates how dependent the one upon the other are all parts of the machinery.

C.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
Washington, D. C., January 6, 1891.

The SECRETARY OF THE INTERIOR:

SIR: I have the honor to acknowledge the receipt of your letter of the 3d instant, requesting to be furnished with a statement of the amount of supplies, in gross, specifying the different kinds, delivered at the several agencies of the Sioux, between the 1st of January, 1890, and the 1st of January, 1891, making an intermediate rest on the 1st of November, 1890, and a tabulation of the whole at the close.

In compliance with your request, and supplemental to my report to you of the 24th ultimo, I have the honor to report that the following subsistence supplies have been delivered between the dates specified by you:

*Subsistence supplies delivered between January 1, 1890, and October 31, 1890.*

Agency.	Bacon.	Beef.	Corn.	Coffee.	Flour.	Lard.	Sugar.	Tea.	Hominy.	Pork.	Salt.	Wheat.
	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>
Pine Ridge...	225,000	4,420,260	36,000	62,574	302,800	4,000	117,101	383	.....	.....	.....	.....
Rosebud.....	274,231	4,579,020	64,682	58,524	345,000	.....	109,901	238	30,000	.....	.....	.....
Standing Rock.....	126,170	1,042,800	27,900	55,127	613,712	500	108,138	384	.....	20,000	18,846	.....

Lower Brule.	17,420	286,442	31,551	12,279	214,780	786	22,192	252	.....	.....	.....	.....

*Subsistence supplies delivered between November 1, 1890, and December 31, 1890.*

Agency.	Beef.	Flour.	Corn.	Hominy.	Rice.	Coffee.	Sugar.	Pork.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Pine Ridge.....	505,800	100,000	25,380	3,000	3,000	.....	.....	.....
Rosebud.....	.....	200,000	.....	30,000	.....	2,500	5,000	.....
Standing Rock.....	1,440,470	49,939	.....	.....	.....	.....	.....	40,000
Cheyenne River.....	134,240	.....	.....	.....	.....	.....	.....	10,900
Crow Creek.....	.....	.....	.....	.....	3,000	.....	.....	.....
Lower Brulé.....	100,790	.....	.....	.....	.....	.....	.....	.....

The beef cattle delivered at Pine Ridge and Rosebud were all delivered since July 1, 1890, and were intended to last until June 30, 1891. The beef cattle for the first six months of the calendar year 1890 were delivered prior to January 1, 1890. For the Cheyenne River Agency the agent has been authorized to purchase from time to time 1,000,000 pounds beef, gross, from Indians, and for the Standing Rock Agency 750,000 pounds. The balance of the beef cattle for these agencies, as well as those contracted for, for Crow Creek and Lower Brulé, are to be delivered from time to time as the agents may need them.

The following is a tabulation of all the supplies delivered during the calendar year 1890 at the Sioux Agencies:

Articles.	Pine Ridge.	Rosebud.	Standing Rock.	Cheyenne River.	Crow Creek.	Lower Brulé.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Bacon.....	225,000	274,231	126,170	28,553	17,714	17,420
Beef (gross).....	4,926,860	4,579,820	2,483,270	586,175	241,960	387,232
Coffee.....	62,574	58,024	55,127	30,278	14,015	12,279
Corn.....	61,830	64,682	27,900	16,968	.....	31,551
Flour.....	402,300	545,000	663,651	451,670	.....	214,780
Hominy.....	3,000	30,000	.....	.....	.....	.....
Lard.....	4,000	.....	500	.....	600	786
Pork.....	.....	.....	60,000	10,900	.....	.....
Salt.....	.....	.....	18,845	15,654	.....	.....
Sugar.....	117,101	114,901	108,138	62,086	23,034	22,192
Tea.....	383	238	384	137	190	252
Wheat.....	.....	20,000	30,000	.....	318,342	42,027
Rice.....	3,000	.....	.....	.....	3,000	.....

In addition to the foregoing I would state that the following supplies were on hand at the different Sioux Agencies December 31, 1889, to be used for issue during the calendar year 1890.

Articles.	Pine Ridge.	Rosebud.	Standing Rock.	Cheyenne River.	Crow Creek.	Lower Brulé.
	Pounds.	Pounds.	Pounds.	Pounds.	Pounds.	Pounds.
Bacon .....	38,990	.....	2,722	17,069	8,505	5,004
Beef (gross).....	1,746,656	3,264,900	1,966,120	634,473	417,110	545,070
Beans.....	38,625	31,159	3,126	16,608	3,651	3,063
Coffee.....	35,411	61,108	25,802	16,436	9,345	6,722
Corn.....	91,236	.....	.....	.....	44,363	37,000
Flour.....	293,013	210,528	199,206	48,600	15,122	13,115
Hard bread.....	41,125	71,946	8,025	857	4,227	8,080
Sugar.....	59,248	95,188	56,999	24,191	11,871	11,392
Salt.....	31,049	59,024	19,681	16,940	3,990	.....
Rice.....	4,524	23,081	2,654	678	3,135	848
Hominy.....	.....	26,352	2,197	1,946	.....	.....
Pork.....	.....	185	6,171	6,000	3,220	.....
Tea.....	.....	.....	.....	230	128	146
Meal.....	.....	14,607	.....	.....	.....	.....

These supplies were furnished for the number of Indians reported to be at the agencies, as follows:

Pine Ridge.....	5,609	Cheyenne River.....	2,846
Rosebud.....	7,586	Crow Creek.....	1,104
Standing Rock.....	4,110	Lower Brulé.....	1,067

Since the middle of August last, and on the report of Special Agent Lea, verified by Indian Agent Wright, the number of Indians at Rosebud has been reduced to 5,345, and since that time supplies for only that number are furnished.

You also request me to report whether to my knowledge it is a fact that the goods as contracted for have been delivered by the contractors at the warehouse in New York or elsewhere, where they were to be delivered and at the several agencies, and if I have reason to believe there have been any fraudulent practices whereby the goods as agreed for have not been delivered so as to reach the Indians themselves, of the same quality and in the same amount as the Department has contracted for, that I specify the same.

In reply thereto I would respectfully state that all sugar, coffee, clothing, dry goods, boots and shoes, and similar articles contracted for, are delivered at the New York warehouse in quantities, packed for each agency and marked ready for shipment by the contractor, with the weight of the articles, including package, marked on each box. They are there inspected by responsible and reliable parties, merchants in good standing, appointed on the recommendation of members of the board of Indian commissioners, and if found equal to the samples on which the awards were made they are accepted on the certificate of the inspector who certifies on the back of the invoice of the contractor furnishing the goods, that he has

Inspected the contents of the packages on the within invoice, numbered —, as the same appear on line —, and find the same to be equal in quality to the sample on which the contract of —, dated —, was awarded; that the said packages contain the quantity of goods charged for thereby, and that the aggregate weight thereof is — pounds.

After this the goods are turned over to the transportation contractors who are under bonds for the faithful delivery of these goods as consigned to them and who sign the following receipt on the back of the *same* invoice and below the certificate of inspectors:

Received from the Commissioner of Indian Affairs this — day of — the within-named packages, numbered — and weighing in the aggregate — pounds, for transportation to — under my contract dated —.

The contractor furnishing the goods presents these invoices, properly signed in duplicate by the inspector and transporter, at the Indian Office, where they are examined and if found correct as to quantity, price, certificates, etc., they are allowed and forwarded to the Second Auditor of the Treasury for examination; if found correct there, they are allowed and the transportation contractors are charged with the different articles covered by the invoices, and the invoices forwarded to the Second Comptroller of the Treasury for allowance; if found correct there, a settlement for the amount due is made and sent to this office for requisition, on which requisition, after passing through the Department and the different bureaus of the Treasury, a draft is mailed direct to the contractor who furnishes the goods, or to his duly authorized agent. No money passes through this office, the New York

warehouse, or the Indian agents to the contractor; he is paid directly by the Treasury.

In the meantime the transportation contractor, after receipting for the goods as above described, transports them to their destination and there delivers them to the bonded agents of this office (Indian agents, superintendents, etc.) who receipt to him bills of lading, in duplicate, of those delivered, giving the number and weight of each package, which bills of lading must be accompanied by a weigher's return giving in detail the weight of each package as actually weighed at destination and certified to as correct by the party weighing the same. On presentation by the transportation contractor of these bills of lading and weigher's returns at the Indian Office, they are examined as in the case of the invoices of contractors and if found correct sent to the Second Auditor for allowance of freight due. The Second Auditor, if he finds the papers correct, allows the freight, credits the transportation contractor, with the articles delivered, charges the same to the agents or superintendents receipting for the same and forwards the papers to the Second Comptroller for allowance and payment as specified above.

I am convinced without the shadow of a doubt, first, that the goods as contracted for in quality and quantity are actually delivered at the New York warehouse and elsewhere in the West, and that after being turned over to the transportation contractor, that these same goods are delivered at their respective points of destination. To do otherwise is impossible. While it may have been true fifteen or twenty years ago, when a majority of the goods had to be transported long distances by wagon road after leaving the railroad, that, in some instances, unscrupulous contractors tried to change or actually did change supplies en route to Indian agencies—such a thing at present is an absolute impossibility. Goods are transported by railroad either direct to the agencies (and it can not be claimed that an exchange is possible while in the hands and under the control of the railroad) or they go to a place near the agency and are thence hauled by the Indians to their respective agencies, in which case an exchange is equally impossible.

After the annuity goods are received at the agencies a time is set for their distribution among the Indians. Under the treaty with the Sioux, Crows, Cheyennes, and Arapahoes, Kiowas, etc., this distribution is made under the supervision of an Army officer. The War Department is requested to detail an officer for each agency, and for your information I inclose herewith copy of papers marked A, B, C, D, E, and F, showing the distribution of the annuity goods at the Sioux agencies for the fiscal year 1890. These papers give the articles issued to each Indian or head of family, and the Army officer certifies in each case that he was present and saw the distribution made to each Indian or head of family, etc. On these papers the respective Indian agents receive credit by this office and the Office of the Second Auditor of the Treasury for all articles so issued and certified to, and as they have been previously charged with the different articles delivered at the agencies by the contractors, all articles not issued as above or not properly accounted for are charged to them by the accounting officers of the Treasury under their bonds.

In relation to the delivery of beef cattle and flour, the first of which are delivered at the respective agencies and the latter either at the agencies or some convenient point near such agencies, whence they are transported by Indians to the agency warehouse, I would state that the inspection is very strict, and as an example I will cite the deliveries as made for Pine Ridge, Rosebud and Standing Rock agencies. At the beginning of each fiscal year the Secretary of War is requested to detail an Army officer to witness the delivery of beef, flour, corn, and similar articles at these agencies.

For the current fiscal year the following details have been made:

*For Rosebud Agency.*—Lieut. Wm. A. Mercer and Capt. C. A. Earnest.

*For Pine Ridge Agency.*—Lieut. Ph. A. Bettens, jr., and Capt. A. W. Corliiss.

*For Standing Rock Agency.*—Lieut. Ph. A. Bettens, jr., and Capt. D. J. Craigie.

As soon as this office is informed of the names of the officers detailed, they are furnished with copies of the respective contracts, showing the conditions, and in case of flour, with samples of flour on which awards have been made.

In the case of beef cattle for the above agencies, none are accepted, unless inspected and certified to by the inspectors detailed for the respective agencies. These officers must certify as follows:

I hereby certify that on the — day of —, 189—, I carefully inspected for the Indian Department — head of beef cattle, of which — head were steers, weighing — pounds, gross, and — were cows, weighing — pounds, gross (aggregate — pounds), and that I found the same to be —, and of quality fully up to the requirements of the contract of Mr. —, dated —, 189—, under which they were delivered.

And I further certify that the said cattle were all weighed and branded in my presence, and that I have signed this certificate in duplicate.

Inspector of Supplies.

In addition to the foregoing, when the large deliveries of cattle are made in the fall at Pine Ridge and Rosebud Agencies, it has been the custom for a number of years to detail an Indian inspector or special Indian agent, in addition to the Army officer, to witness and certify to the deliveries.

Under these circumstances the charges that cattle delivered were not in quality such as had been contracted for, or the number paid for were not actually delivered, appears ridiculous—as to sustain such charges it would be necessary to show that Army officers, Indian inspectors, special agents, and Indian agents, conspired together to defraud the United States.

In relation to the deliveries of flour, that for Pine Ridge is delivered at Rushville, Nebr., and for Rosebud at Valentine, Nebr. It is there inspected by Army officers, and if found equal to sample, certificates to that effect stating the number of sacks and the weight of same, gross and net, are furnished; these certificates being similar in language to those issued for cattle.

After this the flour is hauled to the agencies by Indian teams, warehoused, and issued from time to time to the Indians. When it is considered that at each agency there are a number of employes, averaging from 10 to 30, who are all watching the doings of each other; that the Indians also know what supplies have been brought to the agency for them, and that most of the agencies are near railroad stations, where the disposition of large quantities of supplies by the Indian agents could not be concealed, it will be understood that there is no reason to doubt, and I do not hesitate to state that I have no doubt, that all supplies purchased for and delivered at the respective agencies are actually issued, from time to time and as the necessity of the service may require, to the Indians, or expended for their benefit.

Indian agents are held to a very strict accountability by this office and the accounting officers of the Treasury; in fact, I may venture to say that the accountability of the officers of the Indian service is stricter than that of the War Department.

In this connection I desire to call attention to the following newspaper article in relation to the quality of beef cattle previously purchased and now contracted for:

To prevent "shrinkage" in cattle furnished for Indian supplies, a rule was made to accept only acclimated cattle for the northern agencies. The Harrison administration has rescinded it. The weights charged to the Government show an increase per head; the weights delivered to the Indians a decrease. "Comment is unnecessary," says a correspondent thoroughly familiar with Indian ring methods. The situation is undoubtedly self-explanatory to all who know how a contractors' ring operates.

This charges that at present cattle purchased for what is called the northern agencies are not acclimated, whereas in former years it has been the case. The truth is just the reverse in the case. In former years and up to the fiscal year 1888 all cattle for the northern agencies, which include the Sioux agencies, had to be wintered "north of the south line of Kansas." In 1888 this was changed, requiring the cattle for northern agencies to have been wintered "north of the thirty-fifth parallel." Last spring, when advertisements for beef cattle were to be published for the current fiscal year, my attention was called to this and it was shown to me that the expression "wintered north of the thirty-fifth parallel" was too vague, that under this clause cattle could be driven from Texas in January and it could be claimed that they wintered north. Besides, the line "thirty-fifth parallel" was too far south. Therefore the advertisements for bids were changed and the following conditions for cattle for northern agencies were made: "Bids for beef for all northern agencies must state that the cattle have been at least twelve months in succession, prior to July 1 next, north of the south line of Kansas. For Montana agencies bids are also invited for "double-wintered Montana cattle."

It will thus be seen that not only has the standard of quality of beef cattle not been lowered by this administration, but raised. All contracts for beef cattle for northern agencies for the current fiscal year have the above-mentioned clause inserted, and no cattle have been accepted according to the certificates of Army officers who inspected and witnessed the delivery of cattle at the agencies, which had not been, at least twelve months in succession, prior to July 1 last, north of the south line of Kansas.

Very respectfully,

T. J. MORGAN,  
Commissioner.

## METHODS OF ACCOUNTING FOR FUNDS AND PROPERTY IN THE INDIAN SERVICE.

## OPEN MARKET PURCHASES.

Prior to 1875 large discretion was exercised by the Indian Bureau in its purchases, which were frequently made under the "exigency" clause, which did not limit transactions to any specific sum. The act of Congress approved March 3, 1875, provided that no purchases of goods, supplies, etc., the cost of which exceeded \$1,000, should be made except after previous advertisement and contract. By the act of August 15, 1876, the open market limit was increased to \$2,000 in the case of an emergency, and by the act of March 3, 1877, it was further extended so as to permit of purchases in open market to an amount not exceeding \$3,000. This law has been reenacted from year to year, and by act of May 15, 1886, authority was also granted to purchase from Indians, in open market, to an amount not exceeding \$3,000, and to expend in open market, in the discretion of the Secretary, all funds appropriated for construction of ditches and other works for irrigating.

## PURCHASES UNDER CONTRACT.

The following is the method of letting contracts:

Advertisement are published upon authority previously obtained from the Secretary of the Interior, as required by law, inviting proposals to furnish annuity goods, supplies, etc., the quantities to be furnished being based upon estimates previously submitted by the various agents, the needs of the Indians and schools, existing treaty stipulations, and the amount of money provided by Congress available for the purpose. Sealed bids, in all cases when practicable accompanied by samples of the articles proposed to be furnished, are received and deposited until a specified date. At the day and hour specified they are opened in the presence of the Commissioner of Indian Affairs, a representative of the Interior Department designated by the Secretary of the Interior, members of the Board of Indian Commissioners and any other persons who may desire to be present. The bids are read publicly, are then numbered, recorded, and abstracted, after which the officers named, with the abstracts of bids and the samples before them, make the awards of contracts. These samples have previously been divested of all marks that would reveal ownership, and have been subjected to the scrutiny of competent inspectors, experts selected for their technical knowledge of the various kinds of goods, offered, and appointed for the purpose after the opening of the bids. The abstracts of bids contain only the numbers of the bids, not the names of the bidders.

After the awards have been made, contracts and bonds are executed by the successful bidders. The contracts, after receiving the signature of the Commissioner of Indian Affairs, are forwarded, with the bonds, to the Secretary of the Interior for his approval, thence they are returned to this office for record, and are passed to the office of the Second Comptroller of the Treasury for file. All contracts made by the office are executed in quadruplicate; the original, after approval by the Secretary of the Interior, is filed as stated above; one copy is transmitted to the Second Auditor of the Treasury for his information as required by act of March 3, 1875; one copy is sent to the contractor, and one filed in the "returns office" of the Interior Department.

As soon as possible after the approval of the contracts, shipments are ordered. Sugar, coffee, flour, corn, etc., which are purchased in large quantities and usually at points remote from the place of making contracts, are inspected before shipment, by competent experts appointed for that purpose, and compared with the samples upon which the contracts were awarded; and in all cases strict compliance with the terms of the contract as to the quality, etc., is required. Annuity goods, clothing, blankets, and other articles, the contractors are required to deliver either at the warehouse in New York, or at some designated place in Chicago, St. Louis, or elsewhere, where they are inspected in the same manner by reputable experts, appointed for that duty, the quantities being carefully compared with the invoices. If any of the articles fail to conform to or to equal the samples, they are rejected and the contractor is required to furnish proper articles within 5 days; failing which, the office has the right to purchase such articles at his expense. If, however, goods offered, which are not up to sample, are required for immediate use by the Indian Bureau, it has the right to accept them subject to the tests of a competent inspector to be designated by the Bureau, who determines the percentage of reduction in value below that of the samples upon which awards were made, and upon whose finding a deduction twice greater than this difference in value is made from the price agreed to be paid.

To insure security in the delivery at the agencies of the goods purchased and shipped, each package is stamped by the inspector with his name and is given a name and number which must correspond with a number on the invoice of the articles furnished. A copy of this invoice is forwarded, by the first mail after the shipment of the goods, to the agent for whom they were intended, in order that he may compare quantities, etc., of articles received with those invoiced.

The above arrangements in the awarding of contracts and the inspection and shipment of goods serve to protect the office from fraud and error, and great care is taken to insure the delivery at the agencies of the goods intended for them.

#### SETTLEMENT OF CLAIMS OR ACCOUNTS.

Prior to July 1, 1876, payments were made by superintendent and agents, except for goods, etc., purchased at the annual letting of contracts, which covered only a portion of the yearly purchases. About the commencement of the fiscal year 1877 the system of making payment through the office was adopted, excepting in occasional cases where the interest of the service would be better subserved by direct payment through the agents.

In payment for supplies furnished under contract, except for articles deliverable by contractors at agencies, each contractor must furnish this office invoices in quadruplicate of the articles delivered, two of which must bear the certificate of the inspector to the effect that the articles enumerated thereon (describing the packages by numbers and marks), are equal in quality to the samples upon which the contract was awarded, and he must also furnish the receipt of the transportation contractor for the packages covered by said invoices, describing them by number and weight. Upon presentation of these invoices the contractor's account is adjusted by the office, the quantities and prices of articles being compared by the examining clerk with the record of the original contract. If found correct, the account is "jacketed" and submitted to the financial clerk for his initials, and to the Commissioner for his signature. It then goes to the bookkeeper, who makes a memorandum of the amount to be charged to the different appropriations, after which it is entered in the "special accounts" records. A notice is mailed to the claimant or his attorney of the action by the office on the accounts, and it is passed to the Second Auditor of the Treasury for settlement, by whom it is forwarded, with his findings thereon, to the Second Comptroller of the Treasury for examination, who certifies the balance due and upon whose certificate a requisition for said balance is issued by this office on the Secretary of the Interior, who in turn makes requisition on the Secretary of the Treasury for the amount.

In cases of deliveries by contractors at agencies, other forms are used, as follows: "Receipt" of agent; "certificate" of inspector; and "weigher's return;" upon which, properly filled out and signed by the receiving, inspecting, and weighing officers, payment is made as described above.

Payments for articles purchased in "open market" by agents of the Bureau are made in a similar manner. The agents issue "certified vouchers" in duplicate, accompanied by duplicate invoices and, where articles purchased are not delivered by the seller at the agency, by transporter's receipts.

By a rule of the Department, agents are required to obtain authority from the Department, through the Indian Office, before purchasing any supplies or incurring any expense for the Indian service, except in cases of absolute emergency or exigency, when the necessary articles may be purchased in *small quantities*; and it is required that an explanation of the exigency accompany the vouchers presented for such purchases.

When beef cattle are received by an Indian agent he issues receipts, inspection certificates, and weigher's returns, in duplicate; the originals are given to the contractor and the duplicates mailed by the agent direct to the office. When the original from the contractor and the duplicates from the agent are received in this office, also inspection certificates and weigher's returns, the examining clerk sees that the papers are properly made out, that all the stipulations of the contract have been complied with, etc., and if he finds such to be the fact he states an account as follows:

*The United States to John Smith, Dr.*

For 237 head of steers, weighing 220,410 pounds gross, delivered at \_\_\_\_\_ Agency, \_\_\_\_\_, January 5, 1891, under contract of May 22, 1890, as per receipts, inspection certificates, and weigher's returns herewith, at \$3.20 per 100 pounds ..... \$7,053.12

A. BROWN,  
Examiner.

Account stated in Indian Office.

The original papers issued by the agent, together with the above account, are put in a "jacket" indorsed as follows:

The within account of John Smith for 237 head of steers, weighing 220,410 pounds gross, delivered at \_\_\_\_\_ Agency, January 5, 1891, under contract of May 22, 1890, amounting to \$7,053.12, has been examined, and allowed for the sum claimed and is forwarded to the Second Auditor of the Treasury for settlement, charging appropriation \_\_\_\_\_. Payment to be made to claimant, Saint Louis, Mo., and property to be charged to Agent Williams.

\_\_\_\_\_  
Commissioner

A. BROWN, *Examiner.*

The financial clerk gives the papers a cursory examination and sees that the appropriation charged is proper, and after being initialed by him and by the assistant commissioner, they are signed by the Commissioner.

A notice of the allowance of his claim is sent to claimant by the office, an entry is made charging the beef to the agent receiving it, the bookkeeper of the finance division notes the amount of the claim and the appropriation to which it is to be charged, and sends it to the clerk in charge of the "records of special accounts." A record is made of the exact wording of the Commissioner's indorsement and of the date on which the claim goes to the Second Auditor of the Treasury. The duplicate papers are filed in this office.

The originals are sent to the Second Auditor and under the law they are examined in that office and a settlement is stated and transmitted to the Second Comptroller of the Treasury, who examines it and certifies the balance due, which balance, under section 191, Revised Statutes, is binding on the executive departments of the Government. The settlement as certified to by the Second Comptroller is transmitted to the Indian Office, where a requisition for the amount certified to is issued on the Secretary of the Interior, copied on the records of the office, and entered in its ledgers. The requisition is examined and initialed by the financial clerk and the assistant commissioner, signed by the Commissioner, and passed to the Secretary of the Interior, who issues a requisition on the Secretary of the Treasury for the amount due. This requisition is countersigned by the Second Comptroller, registered by the Second Auditor, and then goes to the Secretary of the Treasury for warrant. When issued it is signed by the Assistant Secretary of the Treasury designated for that purpose, countersigned by the First Comptroller, and registered by the Register of the Treasury, from whence it goes to the Treasurer of the United States for draft, which is sent to the claimant.

#### REMITTANCES TO DISBURSING OFFICERS.

Advances of public funds are made only to bonded officers of the Bureau and officers of the Army detailed for duty under the Indian Office, who are required to submit quarterly estimates of the amount necessary for the service at their respective agencies and schools. Funds for the payment of money annuities arising under treaty stipulations are remitted in the fall and spring of the year. In other cases the sums advanced are limited to the amount actually required to pay salaries; a small amount for the traveling expenses of the agents and contingent expenses, and, in some cases, the amount necessary to pay for supplies, the purchase of which by the agents has already been authorized.

#### RECORDS OF APPROPRIATIONS AND DISBURSEMENTS, CONTRACTS, ETC.

The system of accounting for moneys appropriated by Congress for the Indian Office is very rigid and complete. The records of appropriations under existing treaty obligations require the use of nine large ledgers, in which are kept full and complete accounts of all receipts and disbursements of public funds appropriated for the various tribes. These accounts include not only a record of moneys appropriated by Congress, but also of receipts and disbursements arising from interest collected on bonds held by the Government for the benefit of the Indians and from the sale of their lands. There are nearly 350 different and distinct titles of appropriations, which, under the law, can be used only for such expenditures as the several treaties or existing law may specify in each case.

Copies of all requisitions issued for funds are kept in books which show the amount drawn from the Treasury, to whom paid, the character of the supplies furnished or services performed, and, if advances to disbursing officers, to whom and for what purpose.

Records are kept of all contracts, whether for supplies, services, or otherwise; of all property, whether purchased under contract or in open market, when payment therefor is made through this office and the Treasury Department; of all accounts paid through the office and the Treasury; and of all advances to disbursing officers, showing the appropriation from and the objects for which the funds are remitted, as well as the amounts thereof.

## ACCOUNTS OF AGENTS AND OTHER DISBURSING OFFICERS.

All agents, special agents, inspectors, school superintendents, and disbursing officers of every kind are required to render each quarter an account of all the cash and property remaining on hand, and that which has been received, disbursed, issued, or otherwise disposed of during that time, subject to the following statute:

Any disbursing or other officer of the United States or other person who shall knowingly present, or cause to be presented, any voucher or claim to any officer of the United States for approval or payment, or for the purpose of securing a credit in any account with the United States relating to any matter pertaining to the Indian service, which shall contain any material misrepresentation of fact in regard to the amount due or paid, the name or character of the article furnished or received, or of the service rendered, or to the date of purchase, delivery, or performance of service, or in any other particular shall not be entitled to payment or credit for any part of said voucher, account, or claim; and if any such credit shall be given or received, or payment made, the United States may recharge the same to the officer or person receiving the credit or payment, and recover the amount from either or from both in the same manner as other debts due the United States are collected: *Provided*, That where an account contains more than one voucher the foregoing shall apply only to such vouchers as contain the misrepresentation: *And provided further*, That the officers and persons by and between whom the business is transacted shall in all civil actions in settlement of accounts be presumed to know the facts in relation to the matter set forth in the voucher, account, or claim: *And provided further*, That the foregoing shall be in addition to the penalties now prescribed by law, and in no way to affect proceedings under existing law for like offences. That where practicable this section shall be printed on the blank forms of vouchers provided for general use.

Accounts must be rendered in duplicate and forwarded to the office within thirty days after the expiration of the quarter. When an account is received a letter is written to the agent, acknowledging the receipt of the account and describing it; also one to the Second Auditor, notifying him of its receipt; and a statement of the account current belonging in such account is sent to the Second Comptroller. The package is carefully examined, and if any abstracts or vouchers are missing the agent is immediately notified of the fact and instructed to forward the missing papers at once. The bookkeeper of the accounts division credits the agent with all the disbursements and deposits to the credit of the United States made during the quarter, and the accounts are then critically examined.

## EXAMINATION OF ACCOUNTS.

When a clerk examines an account he is furnished with both original and duplicate copies thereof; also for reference and comparison the duplicate account for the preceding quarter. The quarterly account is in fact composed of two accounts, cash and property, and the cash is examined first. The cash account comprises the account current, the abstract of disbursements, the various vouchers representing the expenditures made during the quarter, and the report of employés. The following outline will show the method of examination and the duty of the examiner who considers the various portions of the account.

**Account current.**—(1) See that the balance remaining on hand at the close of preceding quarter, as shown by the duplicate account current for such quarter, is properly brought forward.

(2) See that all remittances to the agent during the quarter (if made in time to reach him before the end of the quarter) are taken up. This information is obtained from the tabular statement of remittances in the finance division.

(3) See that all moneys received from miscellaneous sources, as shown by transcript of agent's cashbook accompanying the accounts, are properly taken up.

(4) See that all moneys arising from sale of subsistence to employés, as shown by abstract E, property account, are properly taken up.

(5) See that the account current bears the affidavit of the agent; that it embraces all the funds denominated "miscellaneous receipts" which have passed through his hands during the period for which it is rendered. If he certifies to the account current instead of swearing to it, see that he has had proper authority for so doing from the Secretary of the Interior.

(6) If agent swears to the account current before any officer other than a clerk or judge of a court of record, see that a certificate of such judge or clerk is attached, showing the official character of the officer before whom the affidavit was made, and that he was legally authorized to administer such oath.

(7) Where such certificate of official character is furnished, see that it is properly entered for future reference in the book kept for that purpose.

**Report of employés.**—(1) See that the names, period of service, and compensation of employés appearing on such report agree in every particular with the record of employés authorized.

(2) See that agent swears to the report, or, in the event of his certifying, see that he has proper authority for so doing, and that such affidavit conforms to the requirements of section 245, Regulations Indian Office, 1884.

(3) If irregular service in bulk has been approved on the record of employés, ex-

amine the agent's reports of approved irregular employes, in order to see that the quarterly report under examination agrees fully with such approved irregular reports.

(4) If school employes appear upon the report, compare it with the record of school employes kept in the office.

(5) If the report of employes is correct in every particular, the following certificate marked with his initials, is signed by the chief of the accounts division:

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
1897.

Examined, compared with the record of employes authorized by this office, and found correct.

Chief, Accounts Division.

(Examiner's initials.)

(6) If any inaccuracies appear in the report, insert after the word "correct," the words, "except as to," and then mention the discrepancies.

**Vouchers.**—The vouchers accompanying an account are numbered consecutively from one each quarter. Most of the vouchers ordinarily appearing in an account can be distributed into the following classes: Open market purchases, purchases under contract, traveling expenses of agents and employes, transportation of supplies, receipt rolls, and annuity rolls. The method of examining a voucher of each class will be given briefly.

**Open market purchases.**—(1) See if agent had authority to make purchase, and whether copy of such authority is attached to the voucher.

(2) If the authority given specifies the items and prices to be paid, see that the voucher conforms thereto in every particular.

(3) If the authority does not specify items or prices, but refers to an estimate submitted by agent, ascertain whether the estimate has been finally disposed of or still remains in the finance division.

(4) If the full amount authorized is not expended in the voucher under consideration, a slip must be made and the amounts expended for each article must be entered thereon for reference in examining other vouchers in the same account. If no other expenditures are made under such authority in the quarter under examination, the slip must be kept until the next account from the same agency is ordered to be examined, when it must be furnished the examiner for his information, in case any expenditures may be made under the same authority in a succeeding quarter.

(5) See that the authority bears date within the same fiscal year in which the expenditure was made, as all authorities expire with the fiscal year in which they were granted. If incorrect in this particular, note an "exception," and suspend the amount of the voucher till proper authority is furnished.

(6) If the authority bears a date prior to the beginning of the quarter, the account for which is under examination, but still in the same fiscal year, see what, if any expenditures have been previously made under that authority.

(7) If the voucher does not in every particular come within the limit of the authority, a note of the error must be made and the amount of the voucher or the overpayment suspended until correction is made, or a satisfactory explanation furnished.

(8) See that the original invoice of purchase is attached to the voucher as a sub-voucher, and that it contains an itemized bill of the property purchased, and the prices paid.

(9) See that the name of the person in whose favor the voucher is made is the same as the signature to the receipt appearing thereon, and if there is any discrepancy suspend the amount of the voucher until one in proper form is furnished.

(10) If the voucher is made in favor of a partnership or firm, see that the receipt is signed by the firm name, or the firm name per one of the partners. If such voucher is signed by the firm name per any initial or mark, indicating that it was done by a clerk, or person other than one of the partners, see that proper authority was furnished for such person to receive and receipt for money due the firm. If such authority does not appear, the amount of the voucher must be suspended until a properly signed receipt is furnished.

(11) If the voucher is drawn in favor of a corporation, the receipt must be signed by the corporate name, per the name of the officer authorized to receive and receipt for money due such corporation, giving his official title as treasurer, secretary, or whatsoever it may be. If any error exists in regard to this point the amount of the voucher must be suspended.

(12) If the person in whose favor the voucher is made can not write and his name is signed to the voucher by another person, it must be designated thus: John (his X mark) Doe, and such signature must also be witnessed. In case the payment is made to an Indian and the amount is \$10 or over, there must also be a certificate of the interpreter, in addition to the signature (*vide* section 302, Regulations Indian Department, 1884). For any error in this regard the usual suspension must be made.

(13) The computations in the voucher must be carefully examined to see that the correct amounts are extended, and the total correctly footed.

(14) See that the total footing of the voucher is the same as that given in the receipt, also see that the receipt is properly filled up.

(15) See that the certificate at the bottom of the voucher is properly filled, dated, and signed by the agent, including the statement that the prices paid were reasonable, and the lowest obtainable.

(1) See that the items purchased and appearing on the voucher are properly entered on Abstract A of the property account, checking the same on such abstract. If not properly taken up suspend the amount of the voucher until the property is accounted for.

(17) See that statement on back of voucher as to whether payment was made by cash or check is properly filled out, and if by check that the number of same is given. Suspend if this has not been done.

(18) See that the number of the voucher, the name of the person in whose favor it is made, and the total amount are correctly entered on the abstract of disbursement.

*Purchases under contract.*—(1) When a voucher shows a purchase made under contract see if such contract has been made, whether it has been approved, whether the articles named and the prices charged in the voucher are the same as specified in the contract, and if so, that none of these articles purchased exceed the quantity contracted for.

(2) Examine the computations appearing in the voucher, see that all amounts are correctly extended, and the total correctly footed.

(3) See that the names of all parties are correctly written, and the receipts correctly signed in the same manner as specified above in regard to the voucher for open market purchase.

(4) See that all certificates are properly filled out, dated, and signed by the agent.

(5) If the contract specifies that the goods shall be inspected before delivery or payment, the report of such inspection must accompany the voucher. There should also be a weigher's return, showing the weight of the property purchased.

(6) All property appearing upon such voucher must be taken up upon Abstract B of the property account. A defect or omission in any of the above particulars is ground for suspending the amount of the voucher.

*Traveling expenses.*—(1) A copy of authority from the Secretary of the Interior for making the journey or incurring the expense should be attached to the voucher. If no copy is so attached the records of authorities in the office should be examined to ascertain if such authority has been granted.

(2) If the authority fixes any limit to the amount to be expended, the voucher must not exceed such limit.

(3) Subvouchers for traveling expenses must be taken whenever practicable and must be attached to the voucher. Subvouchers when for board must show the time and rate and be signed by the person to whom payment is made.

(4) When no subvouchers are furnished the reason for failure to do so must be stated.

(5) The voucher must be made in the name of and be signed by the person incurring the expense. In addition to the subvoucher, except in case of an agent, there must also be an affidavit attached to the voucher stating that the various items appearing therein are correct, and that they have been verified by the memorandum of such expenses kept by the person making the affidavit, as required in section 135, Regulations, 1884.

If the voucher is in favor of the agent, the certificate at the bottom must state that the various items are correct and have been verified by his memorandum of expenses. Section 135, Regulations of 1884, must be fully complied with.

(6) Each subvoucher must be examined to see if the computations are correct and the amount properly entered on the voucher; also see that there is not more than one payment made for the same time or service, and that such subvouchers are properly signed.

(7) If railroad fare is included in such traveling expenses the table of subsidized roads in Department Regulations, 1884, must be examined to see that such roads are not included in those over which fare is paid. Should such payment be made the amount of the same must be disallowed.

(8) The total of the voucher must be properly entered on the abstract of disbursements.

If the voucher is defective in any of the above-mentioned particulars, except (8,) an exception must be taken by the examiner and the amount involved in such error suspended until proper correction is made by the agent.

The same regulations apply to such voucher in regard to filling and dating certificates, signing such certificates by the agent, and specifying whether payment was in cash or by check, as apply to vouchers for open market purchases.

*Transportation vouchers.*—A large part of the supplies purchased for the various

agencies are delivered by transportation contractors at railway stations or boat landings at some distance from the agencies, and the transportation of these supplies from such points to the agencies is usually performed by Indians. The form of voucher on which payments are made for such service is prescribed in section 320 of Department Regulations, 1884, and in the examination of such voucher the following points must be noted:

(1) See that a subvoucher is furnished for each load transported, which subvoucher must show the package numbers and weights of the various packages, and be signed by the Indian to whose care they are intrusted, his signature thereto being witnessed, as required in other cases.

(2) If the claims of the transportation contractor have been received in the office, each bill of lading attached to the voucher must be compared with such transportation claim, and every package identified by numbers and weight. This comparison is necessary to ascertain that transportation is not paid more than once on any of the supplies, and that none but Government supplies are so transported.

(3) If claims of the transportation contractor have not been received at the time of the examination, the account is held on the examiner's desk for a reasonable time to await their receipt. If by reason of failure of the transportation contractor to submit his claim promptly, such claim is not received by the time it is deemed necessary to forward the account to the Treasury, the examiner refers again to the invoices in the office showing the supplies purchased, and the package numbers and weights on the bills of lading attached to the voucher are then identified and verified by comparison with such invoices.

(4) When the property transported has all been verified and checked the voucher must be examined, to see that the rate paid is reasonable; that the computations are correctly made; that the receipts are properly signed and witnessed; that the certificate of the interpreter is properly made and signed, and that all certificates to be made by the agent are properly filled out and signed by him. The regulations in regard to payment being made by check or cash must be observed, and then the total correctly entered on the abstract of disbursements.

Any defect or error discovered at any stage of such examination must be noted and amount involved suspended until properly corrected. In notifying the agent of the exception so taken he should be instructed as to what is necessary to correct the defect.

*Receipt rolls.*—Agency employés, both regular and irregular, when paid for their services, are required to sign a receipt roll, showing the name and position of the employé, the rate of compensation, the period of service, the amount due, and the amount paid. Such roll is submitted as a voucher in the agent's cash accounts, and in the examination of such voucher the following points must be observed:

(1) The voucher must be compared with the report of employé, as to name, position, and period of service of the employé appearing thereon.

(2) If found correct, compute the amount due each employé, see that the receipt is properly signed, and if any signatures are made by mark, that the same are properly witnessed.

(3) If payment of \$10 or over has been made to an Indian on such voucher, there must be a proper certificate, signed by the interpreter, as required by section 302, Department Regulations.

(4) Receipt rolls for irregular service must be made out by months, showing the days on which service was rendered by each employé appearing thereon. The requirements as to witnesses, interpreter, and agent's certificates, apply to such roll in the same manner as to rolls of regular employés.

(5) The total footings of such voucher should be verified and the amount carried to the abstract of disbursements.

In the examination of such voucher, overpayments are disallowed, and others suspended for explanation and correction, as is the case with other vouchers.

*Annuity rolls.*—When annuity pay rolls appear in an agent's accounts their correctness must be verified as follows:

(1) When payments have been made to persons acting as guardians for minors or others, a certificate of guardianship must be attached to the roll, setting forth the fact that such person (giving number on roll and name), is the person properly authorized to receive and receipt for money due such minor or other person (giving number of same). Such certificate must be signed by two or more of the principal men of the tribe, and verified by an interpreter and two disinterested witnesses.

(2) Each name appearing on the voucher must be compared with the preceding roll for the same tribe, and identified thereon as to name, age, sex and family relation, except those shown on the voucher to have been born subsequent to the last preceding payment.

(3) All signatures must be witnessed by two disinterested witnesses, who can write their names.

(4) All additions must be verified, and it should also be seen that the correct total is carried to the certificates of the agent at the end of the roll.

(5) Where an annuitant is noted in the margin of the roll as having died, it should also be noted that such death did not occur prior to the last preceding payment; as but one payment can be made on account of an annuitant, after death.

(6) The certificate of the interpreter, witnesses, and agent, at the end of the roll, must all be properly filled, dated and signed.

(7) *The total amount of such annuity roll should appear properly entered on the abstract of disbursements.*

All errors appearing on the face of the roll, as well as all discrepancies between it and the previous roll, must be noted, and an exception taken in the same way as directed in regard to the other classes of vouchers heretofore mentioned. All unauthorized payments must be disallowed.

**Abstract of disbursements.**—After the examiner is satisfied that all vouchers representing the expenditure of money have been properly entered on the abstract of disbursements, the same must be footed and the total placed to the credit of the agent, on the account current.

**Certificates of deposit.**—When a certificate of deposit accompanies an account, showing funds deposited to the credit of the United States during the quarter, the amount of the same should appear upon the account current, to the credit of the agent.

**Closing the account current.**—After all entries to the credit of the agent have been made on account current, foot both debit and credit sides of the same, strike the balance and bring down as balance due United States at end of quarter.

**Property account.**—After examination of the cash account has been completed, and all the errors and discrepancies noted, the property account is taken up.

The papers comprising the property account are the property return, six abstracts designated A, B, C, D, E, and F, with the vouchers belonging to each, and a return of medical property.

The property return is an alphabetically arranged statement, showing the amounts and kinds of property belonging to the Government in the hands of the agent at the beginning of the quarter, the amounts and kinds received during the quarter, as shown by Abstracts A, B, and C, the amounts and kinds expended for various purposes during the same period, as shown by Abstracts D, E, and F, and the balance remaining on hand. The papers are taken up for examination in the order above indicated.

**Property return:** The property return must be compared with the duplicate return for the preceding quarter, to ascertain whether all the property remaining on hand at the close of such quarter has been correctly brought forward. If a less quantity of any article is brought forward than was on hand at the close of the previous quarter, the error must be noted and the difference charged to the agent. If a greater amount is brought forward than appears to have been on hand, the agent must be requested to explain from whence he obtained the excess.

**Abstract A:** (1) This abstract shows property purchased in open market, and should be carefully examined to see that all the items appearing thereon have been checked during the examination of the cash vouchers for open market purchases.

(2) The various amounts of the different kinds of property appearing on this abstract must be carefully footed, and such footings entered on the proper line and under the proper heading on the property return.

**Abstract B:** This abstract should show the property received during the quarter which was purchased under contract.

(1) It must be compared with the "property book" of the office, which contains an abstract of all the supplies purchased under contract, to see if the amounts taken up agree with the amounts appearing on such book as having been purchased for the agency.

(2) If any differences appear between the book and the abstract, the invoice on file in the office should be compared with the abstract. If there is still an unexplained difference, the transportation claim should be examined to see if any shortage has been claimed thereon by the agent. Where a less quantity is taken up than appears to have been purchased and delivered, the difference must be noted, and charged to the agent. If a greater amount is taken up than appears to have been furnished, the agent should be called upon to explain the source from which it was obtained.

(3) The footings of all items on such abstract should be verified, and carried to the property return in the same manner as prescribed in regard to Abstract A.

**Abstract C.** The agent must report upon this abstract, all articles manufactured or produced in any manner at the agency during the quarter, all increase of agency stock, all property that may have come into his hands from any source, other than purchase or consignment, and all property taken up to correct errors in former accounts.

(1) The abstract must be examined to see that it bears in addition to the certifi-

cate of the agent, the certificate of each employé having charge of any branch of the agency work, showing that it is a true exhibit of all articles received at the agency during the quarter. If no property has been received during such period, a certificate to that effect, signed by each employé above referred to, as well as by the agent, must appear.

(2) The various items appearing on the abstract should be accurately footed and carried to the property return in the same manner as directed in regard to Abstracts A and B.

Abstract D. This abstract shows issues to Indians, and the principal vouchers accompanying it are weekly issues, treaty annuity issues, and occasional issues to the aged, sick, and infirm.

As to weekly issues, the voucher must show—

(1) The kinds of supplies issued, the number of rations issued to each family, the number of persons in each family, the receipt of the heads of families for the supplies so issued, which receipts must be witnessed.

(2) The number of rations of each article appearing as issued on the voucher must be footed and reduced to pounds.

(3) The column headed "Number in family" must be footed and computation made, to ascertain that the amount issued does not exceed the limit prescribed in the table of rations contained in Department Regulations, 1884.

(4) The certificates of the two witnesses on the back of the voucher must be compared with the number of pounds issued, to see that they agree in every particular.

(5) The certificates of the interpreter, witnesses, and agent must be carefully examined, to see that they are correctly filled out and signed.

(6) Where issues are made for a longer time than one week, the examiner should ascertain, from the voucher if possible, otherwise from the office records, whether authority was granted the agent to make such issues.

(7) The total amount issued on each voucher should be correctly carried to the abstract.

As to annuity issues, in the examination of a voucher the examiner should notice—

(1) That no unjust discrimination is made in regard to the quantities issued by giving some too much and others too little.

(2) That where wagons, harness, or agricultural implements are issued, the agent has proper authority for such issue, as required by section 362, Department Regulations, 1884.

(3) That all certificates are properly filled and signed, and all signatures by mark properly witnessed.

(4) That the voucher is correctly footed, and all the footings correctly entered on the abstract.

As to occasional issues the same rules are to be applied to vouchers as to annuity issues.

When the footings of all the vouchers have been verified as correctly entered on the abstract, the abstract itself must be examined to see that all footings appearing thereon are correct, and that such correct amounts have been properly entered on the property return as expended.

Abstract E. This abstract shows the amounts of the various kinds of subsistence sold to employés during the quarter. The examiner should notice—

(1) That the amounts entered at the top of the abstract as "price" and "transportation" are correct as to each article appearing thereon. (This can be ascertained by consulting the contract tables.)

(2) That the quantity of supplies sold each person amounts to the sum set opposite the name of such person.

(3) That the abstract bears, in addition to the affidavit of the agent as to its correctness, the affidavit of each employé, showing that such abstract shows all supplies purchased by him from the Government during the quarter.

(4) That supplies are sold to employés only.

(5) That the quantities sold are correctly footed on the abstract, and properly entered as expended on the property return.

(6) That the total amount received for supplies sold is checked as having been carried to the account current as a charge against the agent. (Such check should be made in examination of the cash account.)

If the amount shown on the abstract to have been received for supplies sold is not as much as the given quantities amount to at the correct prices, such supplies must be charged to the agent until he accounts for the proper amount.

Abstract F. This abstract is the one upon which is reported all property "expended" at the agency, such as stationery, fuel, feed, supplies for farm, mill, shops, and schools; property destroyed by board of survey; stock strayed, stolen, and died; cattle slaughtered for issue, etc. The examiner must see—

(1) That the expenditure of each article dropped is verified by the certificate of

the farmer, miller, or other employé, under whose supervision it was made, and that the disposition made of each article is shown.

(2) That where credit is taken for stock lost, stolen, or dead, the fact of such loss or death is established by the affidavit of one or more disinterested persons, in addition to the agent's certificate.

(3) That where property is dropped by order of a board of survey, the report of the board recommending such disposition of the articles so dropped has been approved by the office,—and that such destruction is verified by the sworn report of the persons who destroyed the condemned property, showing the time when and the manner in which it was destroyed.

(4) That in dropping subsistence supplies issued to schools, the requisition submitted as vouchers are properly filled, dated, and signed, and the table of rations prescribed in Department Regulations, 1884, are not exceeded.

(5) That all articles manufactured or fabricated out of goods or property dropped on this abstract are taken up on Abstract C.

(6) That when property is dropped as worn out or worthless, it is done in conformity with section 387, Department Regulations, 1884.

(7) That where cattle are slaughtered, and the number and gross weight dropped on this abstract, the net beef derived from such slaughter, and also the hides, are taken up on Abstract C, both the gross weight dropped and net weight taken up being verified by the affidavit of the butcher or farmer, or both.

(8) That where beef hides are sold they are dropped on this abstract, and the certificate of the purchaser submitted, showing the number of hides bought by him, and the price paid, the amount being taken up on the account current.

When all the vouchers have been checked upon the abstract the footings must be verified and dropped on the property return in the same manner as directed in reference to Abstracts D and E.

Whenever, in the examination of a property account, an error of any character is found, it must be noted by the examiner. Where the error consists in taking credit for more than the amount expended, the difference should be charged to the agent; where credit is taken for less than the amount shown by the vouchers to have been expended, the agent should be called on to explain.

Closing property return.—After the verified footings of all the abstracts have been properly checked on the property return, the amounts charged to the agent should be deducted from those credited to him and the balance brought down as remaining on hand at the end of the quarter.

Medical property return.—This return must show all medical property brought forward as on hand at the close of the preceding quarter, the amount received during the quarter, also the amount expended for the sick, and others, and the amount remaining on hand.

The amount brought forward from the preceding quarter is verified by comparison with the duplicate return found with the preceding account. The amount received during the quarter is checked from the invoice of purchase on file in the office. The expenditures are verified by the certificate of the physician. Whenever articles are expended otherwise than "with sick," a certificate stating the manner in which each article was expended must accompany the return.

Exceptions.—After the examiner has completed the examination of an account, he passes it, together with his notes thereon, to the reviewer, who verifies the "exceptions" taken, and notes any additional errors that he finds. The exceptions are then written out in full, signed by the examiner and reviewer, initialed by the chief of the accounts division, press-copied, "jacketed" with the accounts, and indorsed as follows:

Cash accounts of \_\_\_\_\_, Indian agent, \_\_\_\_\_ Agency, \_\_\_\_\_ quarter 1890—.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
\_\_\_\_\_, 189—

Examined and allowed, except as noted, and respectfully referred to the Second Auditor of the Treasury for settlement.

\_\_\_\_\_, *Ezr.*

\_\_\_\_\_,  
*Commissioner.*

The duplicate account is placed in office files. The original account is initialed by the chief of the division and the Assistant Commissioner, and signed by the Commissioner, and after the jacket and the exceptions have been copied the papers are sent to and receipted for by the Second Auditor. The press copy of "exceptions" is sent to the agent.

An index record is of course kept, showing all action taken on the accounts and the dates thereof.

# REPORTS OF AGENTS.

## REPORTS OF AGENTS IN ARIZONA.

### REPORT OF COLORADO RIVER AGENCY.

COLORADO RIVER INDIAN AGENCY,  
*Parker, Yuma County, Arizona, August 1, 1891.*

SIR: I have the honor to submit herewith my second annual report of affairs at this agency:

Census.—I have used the utmost care in taking the census and collecting statistics for this report, and I find, as per census of June 30, 1891, that there were on the Colorado River Reservation a population by actual count of 624, divided as follows:

Males above 18 years of age .....	199
Females above 14 years of age .....	202
Children between the age of 6 and 16 years.....	108
Children under 6 years of age.....	115
Total.....	624
Births, July 1, 1890, to July 1, 1891.....	15
Deaths, July 1, 1890, to July 1, 1891.....	32
Decrease since enumeration of June 30, 1890.....	16

The Reservation.—The Colorado River Reservation was set apart by act of Congress March 31, 1865, for the Indians of the Colorado River and its tributaries. It contains 128,000 acres, one-third of which could be made to produce two crops each year with proper means of irrigation. In fact, there is enough good land on the Colorado River Reservation to support every Indian in Arizona.

The agency is situated 200 miles above Yuma, 87 miles below the Needles, California, and about 1 mile from the banks of the Colorado River. The river steamers land here about once a month. The time from Yuma to the agency is from six to fifteen days; from the Needles, one to five days. Mail via Yuma (horseback) twice a week. It sometimes happens that this agency is two months without communication with the outside world, except by means of the mail, which is carried 200 miles on the back of a Mexican pony. There is a small Mexican town about 50 miles distant, otherwise there is no white settlement by land within a radius of 100 miles.

The climate is extremely hot for three or four months in the year, but remaining eight or nine the climate is delightful. There is very little rainfall, and no crops can be raised without irrigation, although the Indians do plant and raise a few vegetables when the river recedes and leaves little patches of moist ground.

Irrigation.—For years every agent that has had charge of this agency has strongly recommended that some means of irrigation should be provided, as the only hope of improving the condition of the Mohave Indians, and still the matter remains the same. But I hope the plans now under consideration by the Department may be settled soon. There is plenty of water in the Colorado River, but its fall is so slight that the water can not be got out on the land by the natural flow, consequently irrigating pumps will have to be used. With an outlay of a few thousand dollars the Mohaves, Chimehuevis, and Hualapais can be made self-supporting, and the children now being educated, would have something wherewith to gain a livelihood when turned out of school. You may as well try to educate a white child with no aim of usefulness in life as to give an Indian child an education with no employment laid out for him.

Under the present régime the Mohaves plant a few melons, squashes, pumpkins, beans, and a little wheat, which is nearly all consumed as fast as it matures. They plant only after an overflow of the river, which does not occur every year. There

has been but little planted this year, consequently by October they will have nothing but screw and mesquite beans to live on through the winter outside of the few rations issued to them.

**Educational.**—I have had no difficulty in filling the school to its utmost capacity during the fiscal year, and the result of the constant work of the superintendent and teachers is commensurate with my most sanguine expectation. The children learn readily and never quarrel amongst themselves. With the new schoolhouse we will have much better accommodations and better facilities for their advancement. The Indians have made no trouble about bringing their children to school, with the exception of a few that live off the reservation, on the California side, opposite Ehrenberg, that will not send their children, but I hope to get them for the coming term, and we are looking forward to a very prosperous school. In the absence of any means of irrigating it is hard to find employment for the boys. So anxious are they to work, that when I call for four or five twenty will respond and ask for work to do. By means of a small pump, that is used here, I succeeded in irrigating a small patch of ground for the school, and the children went wild over the few vegetables that were raised, which goes to show that with proper means of irrigating the school could be made nearly self-sustaining, so far as subsistence is concerned.

**The Mohave Indians.**—They are a peaceable and industrious people, always willing to work when work is offered them. Their natural inclination is for agricultural pursuits. They all love to dress well, and when they can get the means they procure good substantial clothes for themselves and families. They are constantly going and coming from the Needles, where they earn a few dollars by working on the railroad, which they usually invest in clothes. Those who remain at the Needles soon become demoralized through bad whisky and disease, and there is no doubt that a western railroad is the worst place that an Indian can be allowed to go to for the improvement of his morals. I have succeeded, with the assistance of the United States marshals, in having two parties bound over at the Needles for selling whisky to Indians, and it has had a salutary effect.

The Indians that formerly were on the reservation are the Mohaves at the Needles, the Chimehuevis and Hualapais. They could not remain here, as there were no means of irrigation, and consequently had to go where they could procure subsistence.

**Agriculture.**—It is the only hope for the Mohave Indian. He plants little patches here and there where the river recedes, and raises a few melons, squashes, beans, and some corn. The result is small for a large outlay of labor, which goes to show that if they had proper means of irrigating they would raise large quantities of produce.

**Allotments.**—There can be no allotments of land under the circumstances, as the Indians seldom cultivate the same ground two years in succession. They make no improvements, as where they planted last year it is liable to be washed away this year.

**Indian Police.**—In addition to their regular duties, the Indian police have performed a great amount of work in repairing buildings, hauling material, cleaning land, etc. They respond promptly to whatever orders are given them.

**Sanitary.**—The sanitary condition of the school has been good, although all of the buildings leaked badly during the rainy season. They are now under a course of repair. The children have been remarkably healthy with the exception of la grippe, which went through the school, hardly one of the children escaping. There were over forty down at one time, but, with the constant care of the matron, superintendent, and teacher, they all recovered with no bad after effects. The epidemic also went throughout the reservation and quite a number of the older Indians died. A number also died at the Needles. The Mohaves cremate their dead, and formerly burned all the property of the deceased at the same time. That practice has been broken up here on the reservation, but is still kept up at the Needles.

**Religion.**—The Mohaves have their own ideas of religion, but seldom show any outward signs of it. No missionaries ever visit this agency. Every Sunday morning during the school term service is held in the school room by the superintendent and teachers, assisted by the matron at the organ. Bible lessons are read by the scholars, the Lord's Prayer repeated by the school, and several gospel hymns sung. Many of the camp Indians gather around and listen to the service.

**Improvements.**—There have been many improvements during the past year. Sixteen acres of mesquite land have been cleared off, fenced, and sown to wheat; but, owing to the fact that not one drop of water has fallen since the wheat was sown, none came up. I also had a portion of the irrigating canal cleaned out, expecting that extreme high water in the river would flow into the canal and thence onto the field, but the river did not rise high enough. I also had about 3 acres cleared and fenced, where I set out a number of orange, lemon, peach, and apricot trees. I have grapes in bearing this year that I put out in April, 1890. Have also planted a large lot of fig and date-palm trees. Many repairs have been made on the old agency and school buildings, and I am now improving the condition of the roofs with Portland cement. In May I commenced the erection of an adobe building for a schoolhouse. It is now nearly

complete and will accommodate 100 pupils. It is 40 by 80 feet, two stories high; school rooms, hall, dining room, kitchen, and bath room below, while the dormitories, matron's, superintendent's, and seamstress's rooms are above. The lower walls are 20 inches and the upper 16 inches thick. When completed will be a credit to your administration and a blessing to the Indians. An old Indian-trader's store, containing several rooms, has been repaired and turned into a hospital, which answers the purpose very well for the present. Shade trees have been set out around the playgrounds adjacent to the schoolhouse, and many minor improvements made which add very much to the comfort of the school children, the agency, and school employés. Six milch cows have been purchased for the school which, afford more milk than the children use, as some of them are very superstitious about using it. This superstition, however, is fast being overcome.

**Employés.**—With two exceptions the employés have been faithful, competent, and inclined to work for the best interests of the service. It is so hot here during the summer months that the employés sometimes get tired of their positions and suddenly make up their minds to leave. Then the agent has to send to Los Angeles or some other city, not less than 200 or 300 miles away, and take the chances on some stranger. Then it is sometimes two months before a steamer comes up the river. So you see the difficulty of employés getting here and getting away again, as the steamer is the only means of transportation that we have. It usually takes thirty days to get an answer from Washington, and sometimes letters and packages are thirty days on the road.

**Court of Indian offenses.**—There is no court of Indian offenses at this agency, and I see no necessity for one as the Mohaves are peaceable and the agent can settle all difficulties that may arise more easily than to be incumbered with an Indian court. There has been but one crime committed, and that by a Mohave living off the reservation, who killed a cow belonging to a neighboring rancher. The Indian was convicted in court at San Diego and sentenced to the penitentiary for five years.

**Conclusion.**—I have the same recommendation to make that has been made, year after year, by all my predecessors, and that is some means of irrigating these rich lands. The Indians have waited patiently, and it now seems the time has come for them to realize their great expectations. Favorable reports are now on file in Washington for irrigating machinery for this reservation, and it is hoped that the land now grown up to mesquite and arrow weed will soon be irrigated and made to produce all that the poor Mohaves need.

Very respectfully,

GEORGE A. ALLEN,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

### REPORT OF PIMA AGENCY.

SACATON, ARIZ., *September 30, 1891.*

SIR: In compliance with Departmental instructions, I have the honor to submit to you the report of affairs at this agency for the year ending June 30, 1891.

Peace and harmony prevailed during the year, for there was no trouble among the employés or the Indians, and the whites who live near the agency were usually friendly.

I have not been able to complete my plans fully; but, after an experience of two years in trying to assist this people, I am persuaded to believe that the process of development in civilization must necessarily be very slow because of the many firmly fixed erroneous habits. They have little sense of responsibility, even when they have had a three years' course of training in a good school. I do not think that I have yet seen one who could be depended upon to wait on the sick properly, even when the directions were given in detail, or to stay awake and give the medicine and the necessary assistance; they will sleep if the life of the dearest friend depended upon staying awake; notwithstanding, they are not indifferent in regard to the welfare of their people. These Indians make profitable laborers under the directions of a skillful man or woman. To me it seems that their education and training should be chiefly industrial; they are not suited to direct labor, even when they become skillful themselves. When they become educated they can tell and teach fairly, but they fail in the training process; they seem to have the requisite talent naturally, and they can acquire it, but the tact or ready power of adapting themselves to circumstances is almost wanting.

**The agency and reservation.**—This agency is situated about midway between the northern and the southern limits of the Pima Reservation, on the South Branch of the Gila River, 15 miles due north of Casa Grande, our railroad station, on the Southern Pacific. On this reservation there are no cañons for which the Gila and the Colorado

rivers are noted; but, instead, there is a gentle slope from the mesa to the low, sandy river bank. About 40 miles east (above) of the agency are cañons of the Gila; these are known in this Territory as "The Buttes," and, in these, nature seems to have assisted man in providing for an immense storage reservoir, for here the walls of the gulch of the Gila River are more than a hundred feet high, and the cañon is but little wider than the channel, and above this gorge the valley is wide and level. From this natural dam site it is about 70 miles to the junction of the Gila and Salt rivers. The valley is from 2 to 10 miles wide and there are many evidences that it was once irrigated and cultivated by a prehistoric people. It is quite probable that the so-called "South Branch" of the Gila on the reservation was once a large irrigating canal. Well-defined laterals leading from it are the best proofs of this fact. The great number of people who must have lived here, judging from the numerous large ruins (the Casa Grande most noted) made it necessary to have a large acreage in cultivation for their subsistence.

The land is very rich and it is easily cleared, leveled, irrigated, and cultivated. The soil, the character of the river banks and water all seem well adapted to the production of all cereals except corn and oats, and to almost all kinds of vegetables. It seems equal to southern California for fruits.

The census.—The census has not been taken very well, yet I am able to submit the following, which is partially estimated, but it is thought to be correct:

	Pimas.	Papagoes.	Maricopas.
Males .....	2, 238	*2, 500	164
Females .....	2, 148	*2, 500	145
Total .....	4, 386	*5, 000	309
School age .....	984	*500	79
Read English .....	300	80	21
Speak English .....	150	50	10

\* Estimated.

I think that not more than 60 per cent of the children of school age are available, because of the many youthful marriages.

From the results of the enumerators and special agents of the Census Bureau it has been determined that there are about 5,000 Papago Indians, but this result is mainly an estimate, for the various enumerators failed to secure their names. In a few villages the Papagoes refused to tell their names, thinking, doubtless, that the enumerator was trying to secure them for some crime, of which many of them are guilty. I sent five educated Indians into the Papago country to get the census as ordered. They remained there a week and returned to the agency with less than a thousand names. Last fall Special Agents Wood and Snyder made an effort to determine the number of Papago Indians, and their conclusions were as I have above indicated. To make a reliable and accurate census of this tribe is worth \$500, and it can be done only in the winter months, when water can be secured on the plains, and when those people are not roving in search of cactus fruit or pasturage for their cattle and ponies. At this time I think that there are more than 500 Pimas off of the reservation, engaged in gathering fruit for the whites in the vicinity of Mesa City.

The Indians of this agency live much better than they did formerly. They have better clothing and more to eat. Fully 95 per cent of the male population wear citizen's clothing, and about 50 per cent of the females. All Indians who visit the agency wear citizen's clothing, except a few women who have their own peculiar style, which they think is better adapted to the climate.

Power of the agent.—While the power given the agent is by nature monarchical, yet I have been careful to have the Indian duly represented in all cases needing conference; and the result is harmony.

Education and training.—During the past year the teaching and training has been well done, by example as well as by precept. The chief requisites of a good teacher here are patience, persistence, kindness, and a good stock of common sense; a teacher of tact is much better than one of talent. Your decision and action in establishing an Indian industrial training school at Phoenix was timely and humane. The children are within 15 miles of their homes while in attendance at school there, so the Indian parents can visit the schools and see for themselves what is done for their children. The 160-acre farm recently purchased for that school will be an object lesson to many of the parents, and a place which will afford the necessary training for the boys. I say humane, too, because I do not think it quite right to persuade or compel parents to send their children away among strangers for three years or more where

they can not see one another; the feelings of an Indian for his child seem to be akin to those of our own. Experience has taught me this fact also, that it is not well to take these children to a much colder climate to train them. Parents have said to me that it made them feel like putting their children into the ground to send them away where it was probable or liable that they would never see them again; these are parents, too, who are following the American teaching to the best of their ability. Hence, a school in the valleys of the Gila or Salt rivers is fitting because of the climate and the nearness to the homes of the Indian children. Some of the disadvantages are, the child's slowness in learning the English, and the degrading influence of the worst classes of camp Indians.

The "outing system."—In this system of training it is doubtful whether another Indian school in the United States affords more advantages than the one recently established at Phoenix. The farmers and fruit-growers in the vicinity of the school are ready to employ these Indian boys and girls as soon as their labor becomes sufficiently skillful to pay them. They will thus be employed near the homes of their people who will also not fail to get practical lessons from their own children. The alert business men in and about the city of Phoenix made a wise investment when they gave, as an inducement, \$3,000, which paid one-third of the cost of the school farm there.

The Tucson industrial school (Presbyterian).—This school is under the supervision of Rev. Howard Billman, and observation has fully convinced me that it is well managed. The work there is thoroughly systematized, and the children conform cheerfully. The teachers seem to be capable. The best citizens of Tucson indorse the school, and it is growing in popularity.

The Pima boarding school.—The following is the report of the Pima boarding school at the agency:

Pursuant to circular instructions of April 3, 1891, I have the honor to herewith submit, through the agent, my first annual report of the Pima Agency boarding school, Sacaton, Ariz.

History.—No permanent record of this school being on file at this agency my information is necessarily scant. I have gleaned from Report of Indian Affairs and reports of the Commissioner of Indian Affairs the following: During the administration of Capt. T. E. Grossman, Rev. C. H. Cook opened the first day school among the Pimas and Maricopas. The session convened February 18, 1871, and closed May 31, 1871, having an average attendance of 38. Rev. Cook was continued as a day teacher for several years; occasionally, another was employed in his place. Mr. Armstrong, now a resident of Tempe, Ariz., was the first superintendent of the boarding school, which began its work under Agent Roswell G. Wheeler in the year 1881.

#### Enrollment and attendance.

Year.	Months taught.	Number enrolled.	Average attendance.	Attendance.
1882.....	8½	75	67	89
1883.....	6½	52	39	75
1884.....				
1885.....				
1886.....	8	114	86	75
1887.....	8	186	117	62
1888.....	9	166	100	60
1889.....	9	194	24	17
1890.....	7½	24	21	87
1891.....	9	138	118	85

Fire destroyed the school buildings in November, 1888, and for the remainder of the year the school was conducted in the mission church, the south half of the agency dwelling being used as a dormitory. In the following year the school was conducted in the same buildings.

The buildings.—The buildings at this agency now in use by the school are:

(1) The dormitory, situated within 40 feet of the agency offices. Its dimensions are: Main building, 150 by 24 feet, with a wing extending northward from the eastern part of the main building 36 by 24 feet. On the west, south, and east sides are porches 8 feet wide for both floors, the long porch facing the south, on which two flights of stairs lead to the upper floors. On the ground floor, commencing at the west end, passing eastward, are situated the office of the superintendent, facing the south, 11 by 17 feet; behind this is a bedroom 9 by 17 feet; immediately eastward is the dining hall, 21 by 87 feet; the pantry, 14 by 21 feet; the kitchen, 21 by 24 feet; passing northward into the wing is the laundry, 21 by 24 feet, and the two bathrooms, each 10 by 14 feet.

On the upper floor, commencing at the west end of the main building and passing eastward, are situated the sewing room, 18 by 21 feet; employes' room 13 by 21 feet, dormitory 21 by 61 feet; employes' room 13 by 21 feet; dormitory 21 by 39 feet; passing northward into the wing, a dormitory 21 by 34 feet.

This building is in good order except the bathrooms, which will receive repairs this vacation. The material is on the ground to build another wing to extend northward from the rear of the superintendent's bedroom; its dimensions will correspond to the other wing. The lower floor will have two rooms, one for school supplies, the other an employes' room. The upper floor will be a dormitory.

(2) The school building is situated about 150 feet south of the agency dwelling and about 400 feet from the dormitory. Three rooms, with a seating capacity of 125 pupils, is the extent of the school accommodations. The building is in good repair. Desks were placed in the western end of the dining room. where the two advanced grades are taught for one-half day each day by the superintendent.

No inclosure of any kind around any of the school buildings.

Statistics.—Number of pupils who can be properly and healthfully accommodated when the new dormitory is completed, 125; number crowded into it at any time during the past year, 129; number of pupils run away during the year, 13; number returned to school by aid of the police, 13; number of withdrawals: Chronic diseases, 4; improper character, 1; transferred to Albuquerque industrial school, 6; total, 11. Whole number of pupils enrolled during the year: Males, 79; females, 59; total, 138. Number under 6 years of age, 0; average age of the pupils, 13 years.

For further statistical information see copy of Permanent Record of the School. This record gives information regarding each pupil under the following headings: Indian name, English name, age, sex, height, weight, inspiration, expiration, health, residence, grade on entering, name of parent, tribe, full blood, half blood, literary studies, industrial work, date of entrance, and date of withdrawal.

Literary training.—The school has been organized and classified in accordance with the course of study, as per pamphlet received from the Indian Office, as follows:

Grades.	Males.	Females.	Total.	Grades.	Males.	Females.	Total.
At end of first quarter:				At end of fourth quarter:			
1.....	42	33	75	1.....	18	18	36
3.....	6	18	24	2.....	48	19	67
4.....	1	.....	1	3.....	3	14	17
5.....	3	.....	3	4.....	2	.....	5
				6.....	4	.....	4
Total.....	52	51	103	Total.....	75	54	129

The pupils have been carefully and conscientiously taught the requirements (and more in many instances), as outlined in the course of study. Where any doubt existed as to the ability to do the work no promotion was made. There was not a pupil in school but could and did make their wants known in English, asking for articles of clothing, books, tools, and victuals. Nothing but persistent effort accomplishes anything in getting them to speak English. A timidity keeps them from talking English in the presence of strangers. With separate inclosures for the two sexes, where the pupils may be separated from the Indians who come to the agency for annuity goods and other business, much more progress can be made in speaking English. During the last year there has been from 25 to 200 Indians visiting the agency daily; this influence we can not combat successfully without inclosed yards for the pupils.

Moral and religious training.—Much attention has been given to this part of the pupils' culture, by example and precept. Opening exercises for each day's session contained matter for improvement in this direction. Services have been conducted each Sabbath at 2 o'clock p. m. by Rev. C. H. Cook, Presbyterian missionary stationed here, while the Sunday night services have been conducted in English by Rev. Cook, assisted by the superintendent. Singing in these services has been materially aided by the energy of the lady teachers and other school employes.

The services for Sunday night were chiefly upon the International Sunday School lessons, from which the whole body of pupils committed the golden text, repeating each session. During the year the twenty-third Psalm, Lord's Prayer, catechism, an alphabetical list of scriptural quotations, and more than fifty songs have been committed by the entire school.

Industrial training.—Industrial training has been given in regular details to every pupil from twelve years of age and older. The boys and girls were divided into forms, each having a captain whose duty it was to see that every one in his form was ready for each duty of the day, and report cases of sickness, runaways, and all improper conduct.

To their credit it should be said their duties were well performed, while a great degree of willingness was manifested by all the pupils to do as they were directed by the several industrial teachers having them in charge.

Regular details of boys have done the following work during the year: (1) Manufactured more than 2,500 adobes, 4 by 9 by 18; (2) removed, filled in, and leveled several thousand cubic yards of dirt around the buildings and at the ends of the footbridge across the Gila River; (3) cut out and leveled nearly 1 mile of wagon road; cut down the banks of the two branches of the Gila River after two freshets to make it fordable; (4) irrigated about 60 shade trees from one to two times a week; (5) waited upon plasterers and adobe masons; (6) 2 boys have learned to lay adobes in the walls of buildings; (7) 2 boys waited upon paper-hangers and learned how to make paste and hang plain strips of paper; (8) 4 boys worked with the school carpenter, two of whom oiled and painted more than 300 squares of walls and roof; (9) chopped and sawed 200 wagon loads of wood for use in dormitory and schoolrooms; (10) 1 boy worked most of the year with the blacksmith; (11) the smaller boys have cleaned off and hauled away every Saturday morning all the rubbish around the buildings, run errands, and work at light work wherever such was to be done.

Regular details of girls have done the following work: (1) Gathered the dishes after meals for washing, have replaced them on the tables, arranging the victuals upon the table, and replenishing the same at meal time; (2) washed and dried the dishes and all the vessels and cooking utensils belonging to the kitchen whenever it was necessary; (3) washed and ironed all the children's clothing, table and bed linen each week; (4) manufactured 687 separate garments, 380 pieces of bedclothing, and mended all the clothing, both for boys and girls; (5) sweeping the dormitories daily, making the beds, and weekly airing the bedding; (6) smaller girls have swept the porches, stairways, and assisted whenever needed, under the direction of the matrons.

In concluding this topic, I will emphasize the fact that with rare exceptions all the industrial teachers have received suggestion concerning the training of the pupils in their charge in a kindly spirit, and have endeavored to carry the same into effect, and their efforts have been crowned with a good degree of success.

Stock.—As the school farm has no water upon it the school has no stock.

Sanitary.—A regular weekly cleaning and airing have been strictly followed. Considering the number of children and their condition when received, their health has been good, save during the months of January and February, when an epidemic of measles and la grippe raged about five weeks; however, no deaths occurred. The two girls who were sick at the close of the school have since died. They had gone home.

Recommendations.—(1) The school building should have a good strong fence placed around it, having two yards; that a good inclosure be made north of the dormitory for the girls' play and exercise ground; (2) that the necessary funds be allowed for the purchase of a steam pump suitable for the irrigation of the young crops and such vines and fruit trees as may be planted on the farm during the period of time

when no water can be had from the Gila River; (3) that a span of large, strong brood mares, wagon, and harness be allowed the school as soon as water is upon the school farm; (4) that a herd of ten good milch cows be furnished the school as soon as irrigation facilities are completed for the farm; (5) that a new dormitory of brick be erected suitable for the accommodation of 150 children, with sufficient number of employes' rooms that all the employes may reside in the dormitories; a reading room, a sitting room for the pupils, and two additional schoolrooms, and an assembly room large enough to accommodate 350 school children.

Very respectfully,

OSCAR T. DUNAGAN,  
*Superintendent.*

**Indian labor.**—The Indians of this agency earn their living mainly; their chief engagement is farming and stock-raising. During the year I have employed Indians as carpenters, adobe-makers, adobe masons, plasterers, painters, and freighters, in addition to those employed regularly as interpreters, teamsters, cooks, and masons. I have bought all of the fuel, barley, hay, wheat, and beef of the Indians. They have done most of the freighting from the railroad, and would do ten times as much more if they had the opportunity. They do well under skillful direction; hence they make fair assistants.

**Missionary work.**—Rev. C. H. Cook, the Presbyterian missionary, has been here twenty years. He has observed the progress made by these Indians during that long period of time. When he came to them very few indeed had donned citizens' clothing, or clothing of any kind. When he came here he found them subsisting mainly on the berries and mesquite beans of the desert. A fact which manifests some of the good he has done is that the best classes of the people live near his churches and attend the services. These are inclined to follow the ways of the best white people.

**Character of the supplies.**—The goods furnished the schools were of good quality, except the boys' hats, quilts, edge tools, and one grade of overalls. I have some goods which were sent here three or four years ago, and which are absolutely worthless. The knives, chisels, bits, augers, and spoons are almost worthless because of the quality. These seem to be made to sell. The subsistence supplies are usually good.

**The buildings.**—The buildings belonging to this agency and school are in good condition; the walls of each are made of adobe. The exterior walls of the two-story dormitory building, the office building, and the agency dwelling have been plastered and oiled; the 12 rooms of the agency dwelling have been nicely papered and painted; two-story additions to the dormitory, a carpenter shop for Indian apprentices, a room for hardware, and a prison for offenders, have been made during the year. All of this work has been done by the regular employes and Indian assistants.

**Court of Indian offenses.**—This court convenes at the agency twice a month; 21 cases have been adjudicated during the year. The prevailing cases are the following: Adultery, abandonment, assault, drunkenness, and theft. The most of the charges have been compromised, yet several were found guilty as charged, and these were fined a number of days in the prison. These prisoners are worked about the agency during the day and locked in their cells during the night. I have appointed two sub-chiefs or captains in each of the large villages. These captains are delegated to select another, who with them are to settle the difficulties of the village. If the parties are not satisfied with the decision, an appeal may be made to the court of Indian offenses, the decisions of which are final. After an experience of two years, I am satisfied that the plan above indicated is adapted to effect good government among these Indians.

**The Indian police.**—The chief purposes of the Indian police are: (1) To maintain order in the camps or villages; (2) to return runaway children to the schools; (3) to protect the reservation from trespassers; (4) to assist the court of Indian offenses.

These policemen usually do their work well; in fact, in all cases except the prevention of drunkenness they succeed. I regard the Indian police and the court of Indian offenses as effective auxiliaries in Indian government.

**Irrigation.**—To this agency belong almost 10,000 Indians, more than 3,000 of whom live on the Pima or Gila River Reservation. The Indians who live on this reservation have never had any assistance from the Government in providing facilities for irrigation. Without any assistance whatever they produce from 3,000,000 to 6,000,000 pounds of wheat annually, and, in addition, many thousand bushels of barley, as well as some vegetables. For irrigating purposes they make rude dams of logs and brush to raise and divert the water of the river; then they make canals and ditches to convey it to their fields. They have no head gates in their canals, because they are too poor to buy the necessary lumber and too ignorant to make them. When they do not want water to flow into their canals and ditches they make a dam of brush in them. These often wash out and the canal is almost filled with mud and sand, thus necessitating a great outlay of labor before their fields can be supplied with water again. It is difficult to estimate the great amount of damage caused in this way during the past summer. This year, with your permission, I propose to assist these Indian farmers by encouraging them to widen and deepen their canals, and by making head gates to shut off the water when it is not needed. This plan seems to be practicable and economical, and I know of no better.

**Peculiarities.**—(1) *Burials.*—By tradition I learn that a few hundred years ago these Indians buried their dead so shallow that it was necessary to cover the graves with brush and logs, as they do now, to prevent the ravages of the coyote; and, in their tenacity to follow the ways of their forefathers, they yet follow the old custom, although at present it is not at all necessary, for they bury the dead body about 6 feet deep. In burial, with few exceptions, the Pima Indian wraps the body in a blanket and buries it so without incasing it in a coffin. In excavating the earth for the grave they dig as the civilized Americans do, until they have reached a depth of about 6 feet; then they burrow under at one side about 2 feet, where the body is placed with some panola (parched wheat meal) and water, which they think will be needed on the way to the country of eternal happiness. They often bury the saddle, bridle, and the bow and arrows of the deceased with the body; then they burn the “*kea*” (house), after which the Indian neighbors kill and eat the cattle belonging to the deceased. I inquired why they did these things, and they replied that to see the property of their lost ones recalls them in grief, and if the property be put out of sight the memory will not recall them so frequently and painfully; hence it seems they want to forget.

I have been trying to prevent the burial of valuable property and to induce them to bury in coffins; some are inclined to comply while many are not so inclined; this is verified in the fact that more than 90 per cent bury in the Indian fashion. Last spring, while an Indian husband was here waiting for the carpenter to make a coffin for his child, the wife took it to the mountains, about 3 miles away, and buried it; this was an example of a difference of opinion in regard to the proper mode of burial.

The Papagoes bury in a coffin whenever one can be secured, but seldom do they get such accommodations. The Maricopas are cremationists; they always burn the body, and sometimes the property, of the deceased.

(2) *Marriage customs.*—On the subject of Indian marriages, the customs observed, the rites and ceremonies practiced, and the sacredness or looseness in which the marital relations are held, I will say that I have gleaned the following information, which is thought to be true: At some Indian meeting a young man meets what he thinks is a desirable young woman. At this party they talk and laugh, as Indians or young Americans do; after this meeting, the young man calls at the home of the girl very frequently. If he concludes to have the girl for his wife, he asks her parents for her, if he is a good Indian; her parents do not reply immediately, for they must notify their girl of the application. After several hours' or days' conference in regard to the good and the bad qualities of the proposer, they give him an answer, but in the mean time he must stay away. Should the parents of the girl decide that the young man is a fit subject, they make known the decision to the girl, who, it seems, has little to say in regard to the contract. If a favorable decision be sent the young man, he takes the girl to the home of his parents, or to a “*kea*” which he has provided for himself. Without any ceremony whatever, the couple are now regarded as married. These are the steps taken generally, but occasionally there is a runaway match in which no parents are consulted. The Indians, generally, regard the marital relation very loosely; it is a mere farce; this fact is manifested in the many cases in which the husband or the wife is abandoned.

During the year only six Indians secured licenses and were married by the minister; these were students from the Albuquerque schools.

**Recommendations.**—I recommend the sale of the Gila Bend Indian Reservation, excepting sections 8 and 17, which should be allotted to Papagoes who would accept it. The fund thus accruing would buy sufficient water to irrigate 1,200 acres of the allotted lands as it is needed by the Indians. About 15 miles above the reservation there is a company at work in making a diverting dam and canal, which will convey the water of the Gila River to thousands of acres of fertile land; this will make the reservation valuable and salable. (2) That the west half of township 2 north, range 5 east, of the Pima and Maricopa Reservation, on Salt River, be sold in quarter-section lots to the highest bidder for cash; and that the money realized be expended in the purchase of water for irrigating purposes for those Indians, the Indian to take land not settled by the whites anywhere on the public domain where good water rights can be obtained for the lands, and that he become a taxpaying citizen. (3) That the Government assist the Pimas in making a low diverting dam in each of the two branches of the Gila River, on the Pima Reservation, and that a good head gate for each of the canals be made; the expense would not exceed \$1,000 for each canal and dam. I regard this an economical and prudent outlay of public funds. (4) That when water for irrigation as above recommended is afforded, a special agent be sent here to locate Indian homesteads and allot the lands to them.

Very respectfully,

CORNEIUS W. CROUSE,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN CALIFORNIA.

## REPORT OF HOOPA VALLEY AGENCY.

HOOPA VALLEY AGENCY, *August 20, 1891.*

SIR: I have the honor to transmit herewith my first annual report of this agency, of which I assumed charge November 22, last.

As you will see by the accompanying statistics, there are at this agency 492 Indians. All of these wear the dress of civilization, and the majority of them speak English to some extent, many of the younger ones quite fluently.

There are many comfortable houses; but few of the Indians are now living in their native huts, and many of them are fairly good farmers, showing a commendable spirit of industry. While none of them hold land under the allotment act, it has of late years been the custom of the acting agent to set aside a few acres for the use of such as would cultivate the same. All of these I left in possession of the plat given them by my predecessor, and have encouraged others to follow their example. I have also encouraged the planting of gardens, and from all I can learn there are more and better gardens now than ever before, though much of the work in them is done by the women.

The Indian prefers farming to all other occupations, as he has only to put his seed in the ground and wait at his leisure for the harvest. Any pursuit that would keep him busy most of the time, though he might receive more profit from it, he does not like.

In the cultivation of land for their own use I have assisted them in every way in my power. As but few of them own teams and wagons or other implements, I have furnished them with all these, requiring them in return to assist in the cultivation of the land set apart for the use of the agency. The harvesting and thrashing have been done in the same manner.

But few of the Indians have paid much attention to stock raising, though all the younger ones want a saddle horse. A few are learning that stock means money, and are beginning to take an interest in that branch of industry, though they will often sell their hay and grain to buy a horse and then let him and other stock suffer.

A few are raising hogs for their own use, and such is the fecundity of this animal that notwithstanding the poor care he receives, he has become a nuisance on the reservation. I found nearly all the fences in poor condition, and as they were not originally hog-proof, they have been a source of much annoyance to me and of some trouble among the Indians.

From the foregoing it will be seen that these Indians are to some degree civilized, at least in a material sense.

So far as a knowledge of making a living is concerned, many of them are nearly as well qualified as the average laboring white man. In another sense, however, they are far behind what they should be, and this is owing in a great measure to their location and surroundings.

This reservation is situated in the northern part of Humboldt County, Cal., and embraces about 80,000 acres, and is divided into two nearly equal parts by the Trinity River. Along this river is the valley in which is situated the agency, and in which the Indians live. This valley is about 6 miles long, and from one-fourth to one-half a mile in width, and the river meanders from side to side, thus intersecting it several times. A large portion is covered with gravel bars formed by the river, so that the amount of agricultural land is very limited. A careful estimate places it at less than two sections of land. The remainder is rough and mountainous, most of it worthless, except for the timber (which is not valuable), though some portions afford pasturage for stock. The country surrounding the reservation is of much the same character, and is very sparsely settled, consequently the Indians come less under the influence of civilization than they would under other circumstances.

While they all belong to the same tribe, speaking the same language, they are divided into several bands or families, between which there are feuds or jealousies, some of which have come down from their grandfathers. This often proves an annoyance, and members of different ranches sometimes refuse to work or associate in any way with each other, though open hostilities or personal encounters very rarely occur.

They have never had any chiefs or head men having authority over them, though each ranch has some man having more influence than others.

I can not learn that they ever had any form of worship, nor have I ever known one to speak of a Great Spirit or other object of adoration, but they all have a great fear

of the "Indian devil," and have many strange superstitions. In their belief, regarding these superstitions, I find that even the most intelligent are very steadfast. They all cling to their old customs and laws as being far better than any others, and seem to look upon many of them as sacred.

Their loose marriage relations and customs make divorce very easy, and many have taken advantage of this. I have found that a large number of the children are not living with their united parents. Often one child of a family is living with the mother and another man, while another child will be with the father and some other woman. This to me is one of the worst features of affairs here, but when I have endeavored to convince them of the wrong I have generally been met with the reply: "That is all right; it is Indian law."

Years ago there was some missionary work attempted, and I think a minister was stationed here. There is the wreck of a church, which was at one time quite pretentious, but from all I know of those days, coupled with what I have learned since I took charge of the agency, I think I am justified in saying that more harm than good was done by those having the matter in hand. I say this without knowledge of the parties, and with no disrespect for the cause in which they were engaged, for I would most heartily welcome any man who might choose to come here to give these Indians religious or moral instruction.

Notwithstanding the foregoing, I think they are slowly advancing in a moral sense. Many of them take pride in the fact that they can have credit at the store, and are in this respect quite honorable. Some of them are given to gambling, and most of them will drink when they can procure liquor, though but a few are in the habit of bringing liquor upon the reservation. So far as their veracity is concerned, I do not think there is one on the reservation who can be relied upon to tell the truth under all circumstances. Their ideas of right and wrong are often very vague.

If one buys an article on credit, and by his own carelessness loses it, his idea of right would induce him not to pay for it because he has received no benefit from it. In most cases they do right, as we regard right, only as a means of benefiting themselves in the future, or through fear of trouble if they neglect to do so. I have told some of them that they should do right because it was right, that they should feel they were men, and that to do right was the highest mark of manhood. This seems to be a new idea to them.

I am glad to say that a few of them are thinking of these things. One asked me lately if it would not be better if Indians would get a license and be married like white people, and I have strong hopes that this may become the custom in the near future.

There has been a school at this agency for many years, often quite well attended, but I have failed to find much evidence of benefit derived from it. Many of the Indians seem to look upon the attendance of their children as a favor to the teacher, or the agent, and expect some reward for it. If a child goes to school for a short time and does not receive something extra on that account, he is apt to drop out. A few of the Indians object to the school because they wish their children to grow up as Indians, and they say, "School is no good to Indians." As a rule parents exercise little control over their children, simply allowing them to grow up and do as they please. Many of the children attend school until they have a fair start, but usually leave it quite young, and often forget in a few years all they learned.

I have not deemed it advisable to establish a court of Indian offenses, owing to the vague ideas of justice among these Indians and the jealousies that exist. No court could be formed that would look upon the acts of others with any degree of justice. Friends would surely be shielded, while others would be treated with unjust severity. I have no doubt that in time such court may be a benefit, as I am trying to give them some idea of the functions of a court and the duties of its officers.

There is a grist and saw mill and other agency buildings, most of which will have to be rebuilt in the near future. Nearly all the timber in the vicinity of the mill has been cut and it must soon be moved up one of the streams entering the valley.

The material used for fences is not of a durable character, and I found most of them in bad condition. To keep them in repair, affords constant care during a large portion of the year.

The location of the agency is a detriment in some respects, as the distance from any seat of justice makes it almost impossible to procure evidence in case the laws are violated. None of the Indians will acknowledge what they know for fear they will be obliged to go to San Francisco, and often white men living in the vicinity suppress their knowledge for the same reason.

It is almost impossible to get any definite knowledge of how liquor is procured by the Indians. They seem to look upon this as one of the secrets that must be kept sacred. While I have an intuitive knowledge of where much of it comes from, and have been ably seconded in my efforts to obtain some proof of this by the commandant of the post here, Capt. Edmunds, I have not yet succeeded.

The past year has been a favorable one and crops are fairly good.

The valley is adapted to fruit-growing and some of the Indians tell me that if they owned their land they would plant trees and have fruit for sale. While, as I have said, the amount of agricultural land is small, I am of the opinion that a portion of it should be allotted to those who would improve it. Quite a number of the Indians are old and helpless, need constant care, and will no doubt remain about as they are until they are past all need. The younger and more able ones have slight respect for the old and helpless and do but little to assist them.

Owing to certain influences beyond my control, I have not succeeded as rapidly as I hoped in gaining the confidence of some of these Indians and thus helping them to advance more rapidly. The fact that this agency had been for a long term of years under a military agent caused many of them to look upon my advent with great distrust, and some of them have held aloof from me under the impression that I came to remove them to some other locality, or to do them some similar wrong.

Notwithstanding this I know that I am gradually gaining, and believe that in time I shall have the confidence of all of them.

Respectfully, your obedient servant,

ISAAC A. BEERS,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF MISSION AGENCY.

COLTON, CAL., September 10, 1891.

SIR: I have the honor to submit herewith my third annual report of the affairs of the "Mission, Tule River (consolidated) Agency." The commission authorized by Congress, consisting of Messrs. Smiley, Painter, and Moore, have continued their investigation to date, but have made no report to my knowledge. Until their work is completed and the land is divided in severalty I can not hope to report marked progress.

The most careful enumeration we can make gives the following results:

Tule River Indians:		
Male.....	81	
Female.....	81	
		162
Yuma Indians:		
Male.....	501	
Female.....	496	
		977
Mission Indians:		
Male.....	1,437	
Female.....	1,375	
		2,812
Ration Indians upon different reservations.....		28
Total.....		3,999

Affairs at the Tule River Reservation remain as reported last year, with very little change. Everything awaits allotment. The people are nearly self-sustaining and will go forward as soon as their lands are deeded to them. Luther Anderson remains as farmer.

He is doing a good work among the nonreservation Indians in Kern and Inyo counties (back in the mountains about 100 miles southeast from the reservation and within the Independence land district), who have never been on a reservation or received any help from the Government. Complying with office instructions I directed him in June last to locate as many as possible upon Government land, and July 25 he reported having made thirty-three locations, nearly all of 160 acres each. When he went among them they were suspicious, expecting that he came to get their money. He explained that the Government had sent him to give them a title to land; that they need not pay him anything, as the Government paid him, and in this way he soon gained their confidence and many came urging him to locate land for them. This work he is still doing as fast as hot weather will permit, but besides the extreme heat, which has been enough to stop most men, he has had a small Indian war to hinder and annoy him.

The trouble occurred in Kern County, about 55 miles east of Kernville. July 3, Powers, a constable (who was living on unsurveyed Government land, which had long been occupied by Indians), with a posse, followed and attempted to arrest a

"Lone Pine Indian" suspected of burning a haystack. Anderson, knowing the character of the Indian, and believing that he could secure him without trouble, made an arrangement with Powers that he should allow him to make the arrest. To do this it seemed best for him to return and secure his surveyor and interpreter (Jose hCico, who was guide and interpreter for Gen. Fremont) and while he was gone Powers took his posse, went in pursuit and fired upon and killed "Old Kewea," father of the Indian whom he purposed to arrest. The son returned the fire and killed Powers and escaped. The posse succeeded in wounding a 14-year old Indian boy, stripped the clothing from the old squaws, dug up the body of Kewea, which the squaws had buried, and hacked it all to pieces. This was told by one of the posse of white braves, who laughed as he related it, evidently thinking they had done a brave deed. There is no doubt that the constable was the aggressor in this affair.

In spite of all difficulties Anderson has done his work well. He was much delayed in some places where interested parties had moved Government stakes. The stockmen prefer that the lands be left unoccupied rather than deeded to Indians.

We shall push this work as long as land can be found which the Indians want. Their children are beyond the reach of any schools and should be brought out to the training school as soon as it is established.

Yumas.—These Indians are located on the west shore of the Colorado River upon a large reservation. In conformity with Department orders, I drove a well upon the mesa  $1\frac{1}{2}$  miles west of the river, where I had hoped to locate them and by irrigation enable them to make permanent homes and support themselves by cultivating the land. I found plenty of water 13 feet below the surface, and was about to put down a large well as directed, expecting by this time to have the Indian village laid out and water supplied, when I learned that a man had bought a section of school land contiguous to the section upon which I had found water, and that his intention was to locate a saloon near the proposed Indian village. Having no map or survey of the reservation, I did not know that such a section could be purchased. I stopped work, reported this, and now await orders. I feel sure we ought not to attempt to make improvements so near such a neighbor.

The July floods came much higher than usual and drove all the Indians onto the hill around the school buildings. Superintendent Mary O'Neil telegraphed me the condition, asking authority to feed the hungry from the school supplies. I directed her to do so, and telegraphed the Department for authority. This was promptly granted, also authority to expend \$1,000 for food for their necessities, which I immediately purchased in Los Angeles. The railroad was washed away, however, and it was three weeks before it arrived, during which time they were sustained by the school supplies and saved from suffering. Their little huts were all destroyed and many articles washed away. It is to avoid a repetition of this experience and to give all employment that I feel anxious to move them onto higher ground, with irrigating water. They continue to labor for the railroad and river boats whenever they have opportunity.

In September, one year ago, I attended their annual mourning feast, when it is their custom to gather together and for four or five days and nights to mourn aloud for the dead of the past year. On these occasions a great variety of pagan ceremonies are enacted, with dancing, racing, chanting, recounting the virtues and deeds of the dead, etc., and at break of day, to close the festival, they burn the booths which have been used during the week, also all the gifts which they would send to their departed friends.

Heretofore they have killed horses and burned many valuable goods, thus impoverishing themselves, but as at this time no animals were sacrificed and few valuables, we have reason to hope that our efforts to prevent this had some influence. It is customary to allow no white man on the grounds at night, but as I was there to learn all their customs and a friend, I was permitted to remain, and I am pleased to report that I have no reason to suppose there were any liquors on the ground, and in their heathen way their conduct was proper and decorous. Imagine 1,300 savages, of whom 300 were visitors, camped around an open space, sleeping and living upon the ground in open air. At night they sit and lie around the open fires, presenting a strange, weird scene, never to be forgotten.

December 11, 1890, a medicine man was brutally murdered and his body cremated before the next sunrise. All efforts to obtain testimony of the facts were futile, until a stranger from the East induced Father Williams, an old Catholic missionary, to act as interpreter, when the whole details came out. The three murderers are in jail awaiting trial, but Father Williams can not be found, although officers have hunted him for months.

The Government school here at the old fort furnishes school facilities. The Sisters who conduct it are faithful in their duties, which are arduous and unsatisfactory, as it is difficult to compel regular attendance, and when the pupils are old enough to go out and earn a living there is nothing for them to do, and vice and idleness soon destroy all good impressions in a most unfortunate manner.

The school averages about 70 pupils, among whom at my last visit I found 15 English-speaking Mexican children, who had been brought there by Father Williams from Los Angeles and Glendale, a village near Los Angeles. These pupils were all convenient to good schools provided for by the State, and when questioned they replied, "We are not Indians; we did not tell the superintendent that we were. Father Williams said we were Indians, but we did not say so." I can see no good reason why these children should have been taken from Los Angeles, 200 miles away, to be educated in an Indian school, while scores of Indian children on the reservation are left to range in idleness.

I am very anxious that some way may be provided by which these Indians may have land and water supplied, and gradually become self-supporting. There are hundreds of acres of wild hemp growing from 3 to 12 feet high, which, if it could be manufactured by Indian labor, would be of great value. It seems well adapted for the manufacture of cordage.

**Potrero.**—The title to the reserved lands of the Potrero Indians is now being carefully investigated by the commission appointed for that purpose, and should their efforts be successful there will be an ample supply of good land and water.

These Indians are better situated than any of the twenty-one tribes under my charge. They are 3 miles from Banning, a thriving fruit-growing colony, where many of them find employment. Mr. C. O. Barker, the manager of a large fruit-growing company located here, finds them good help and pays men and women alike \$1.50 per day. Some more reliable men get \$2. Much of this reservation land lies from 5 to 6 miles away from the Indian village, and, without water, is only fit for barley. The Indians have sometimes plowed a little of it for grain, but could not do it to advantage, and last year I instructed them to clear and plow all they could quite near their homes, and rented their distant grain lands to white men on shares. From this I saved for them, after paying their blacksmiths' bills, etc., \$1,000. This season I have saved about \$500 and over 2,000 sacks of grain now in the warehouse, as recently reported. Better than this, they have plowed twice as much land as ever before, have better crops, and have worked out more than usual. In this way I have furnished them with all the seed barley and wheat they cared to sow, giving each man all he needed when his land was plowed. My hope is to see their land divided in severalty, and then with the money so saved, to employ them to build a cement or stone irrigating ditch, which shall furnish each landholder with plenty of water, thus benefiting every individual of the tribe.

The more advanced Indians are pleased with their progress, while others cling to their old customs and the advice of the medicine men. The Messiah craze reached us, and a few were influenced by the statements of the medicine men, who said that the white man would be destroyed and that they would possess the land. Only a small number believed this until the Colorado River began to fill up the Salton Sea, when runners visited several villages telling wild stories of the waters to come, which so frightened many good faithful Indians that they fled to the mountains in wild haste; but a few days of fasting reassured them and they returned disappointed. The medicine man told them that the most progressive Indian of the tribe, John Morongo, must be driven out or die. Constant threats are made, and his haystack of 10 tons of hay was burned.

The day school here has been unfortunately reduced in numbers through the influence of a priest, who had charge of the St. Boniface school at Banning, and a new medicine man of the tribe. The priest has been removed and replaced by Father B. Florian Hahn, who deplored the wrong which had been done, and with whom I have only pleasant relations, he finding enough to do without depleting the day schools.

The Rev. William H. Weinland continues his labors at Potrero, the only Indian missionary in southern California.

The segregation of the positions of clerk and physician has been consummated, and will, I believe, be found beneficial. The next important demand is for a hospital at Agua Caliente. I am very anxious that this be established immediately. The location, the abundance of hot and cold water, make this an admirable site for a hospital for all these tribes, and much good can be accomplished.

One great evil which I would remedy, if possible, is the custom of the Indians spying the rumseller, and sometimes sending an Indian to buy whisky, lying in wait to secure the testimony, and then swearing out a complaint, all for the sake of getting the fees as a witness, then getting drunk with the money so obtained. I imagine little good comes from such prosecution. It burdens the courts and county and does the Indians no good. The only remedy I can see comes through severalty and citizenship, and punishment for being drunk; the same for Indians and white men.

Several squatters have been living on this reservation for some years. My predecessor having removed them, they returned, determined to hold the land at all hazards, but have again been removed, and I think will now await the decision of the commission.

Number of pupils enrolled, 21; average attendance, 13½.

**Saboba.**—The event of the year on this reservation is the building of a good schoolhouse, long much needed. It accommodates 40 pupils and has two comfortable living rooms for the teacher, Miss Mary Noble, who has faithfully stood by the Indians and gained their confidence under the most trying circumstances. With the new house neatly furnished, I anticipate good results. Being near San Jacinto, where whisky is sold, these Indians are more or less demoralized, but all are anxiously looking for their land titles. Number of pupils enrolled, 25; average attendance, 16½.

**Coahuilla.**—These people are also anxiously waiting the allotting agent. The school has been well conducted by Mrs. Salisbury who, has shown her adaptation to her work. She now welcomes Miss Fleming, of Riverside, who has recently been appointed to assist her as an industrial teacher. Miss Fleming was sent by the ladies of Riverside and having shown her fitness for the work has now received her appointment by the Department. She spends much of her time in the homes of the pupils, instructing them and the mothers in the arts of housekeeping, and her efforts seem to be appreciated. I believe this a very important branch of the educational service.

These people, being cursed by an old medicine man, ran away to the mountains in spite of their captain, who tried to induce them to stay. Number of pupils enrolled, 41; average attendance, 25½.

**Agua Caliente.** (Hot Springs) now has a post-office called, Warner. And here, as elsewhere, all are waiting for allotment. The Indians have raised more crops than last season, but can not make any permanent improvements until assured of severalty. "Jim Walsh," a trespasser for four years, was finally ordered off, and had agreed with me to go peaceably this time, when last week I was notified of his death.

Mrs. J. H. Babbitt, who conducts the school, is a valuable teacher, and has a strong influence among the people for good. She deserves a new schoolhouse, but the allotment will be likely to change the center of population, which will require a new site for the school. Number of pupils enrolled, 30; average attendance, 20½.

**Mesa Grande Reservation.**—These people continue to increase their stock of cattle, which is their principal industry. Titles to lands will induce them to plant fruit trees. Apples and grapes will do well here, where winter winds are severe.

The school under Mrs. Nickerson's care is making commendable progress, though a saloon, as near the reservation as possible, has caused some disturbances, as usual under such circumstances. Number of pupils enrolled, 25; average attendance, 13½.

**Rincon and La Jolla.**—Two villages on the San Luis Rey reservation are anxiously awaiting allotment, and the needed schoolhouse repairs or rebuilding are delayed, as it is likely the center of population will be changed by new locations of farms.

The Rincon school continues one of the best, under Miss Ora Salmon's teaching. Average attendance, 17; number enrolled, 23.

Miss Flora Golsh, who took the La Jolla school last year, has a good school, and gives all her time, energies, and thought to the welfare of the Indians. There must be a new schoolhouse here also, but until the allotment comes I prefer to wait, that it may have the proper location. Number of pupils enrolled, 54; average attendance, 25½.

**Pachanga Village, Temecula Reservation.**—Mrs. Mary Platt took this school two years ago under most unfavorable circumstances. It had been abandoned for nearly two years, as whisky and low whites had done their worst, and the Indians were very poor, with little good land. Mrs. Platt has changed the habits of the people and made the school one of the best; her temperance society has reclaimed most of the adults, and now they hang upon her words in confidence. July 3 I called at the schoolhouse and found that Mrs. Platt and the school had gone to a cañon near by to spend the day in picnic. I followed and found them, young and old, a very happy people. Within half an hour a messenger came saying the schoolhouse was burning; and it was entirely consumed, with all Mrs. Platt's effects, for she had made this her home, and now family keepsakes, books, clothing, all were gone. She bore the news bravely, encouraged the Indians, and turning to me said, "You will rebuild it at once, won't you?"

I believe these people should be removed to good land (as recommended last year), also that a temporary house be built for the school, that Mrs. Platt's influence may be retained, in the hope that she may go with them to a better location, as this is worthless land and has no water. Number of pupils enrolled, 27; average attendance, 18½.

The many outlying Indian families who are remote from schools remain much as by last report. I hope the allotment may bring some nearer the day schools, but I believe the educational event for them all is yet to come in the establishment of a manual training school at Perris, San Diego County. One year ago, when instructed to select a site for a training school upon a reservation, I felt sure it would be better to locate near some thrifty settlement, where the pupils would come in constant contact with civilization rather than their home influences. I urged the landholders in different places to give land to induce the Government to locate near them, but an Indian school was not popular with the California land-owner.

I finally found a man at Perris who knew of Carlisle, and the result was that the new town of Perris deeded the United States a block of 80 acres of choice land, near the town, and I was much pleased when the honorable Commissioner, Gen. T. J. Morgan, visited southern California and approved the site and accepted the deed. The plan for buildings, costing \$25,000, have been sent to the office, and as soon as approved the contract will be let and the work be pushed to completion. Thanks to the people of Perris who so generously donated the land. The site is in the middle of the San Jacinto plain, 1 1/4 miles from the Santa Fé railroad, on the east side of the main avenue running the entire length of the valley, 100 feet wide; a 60-foot street on three sides, and 80 acres full inside the streets. The outlook is fine. The Bear Valley water is piped to the land. Vineyards and orchards will surround it on all sides, and my ambition is to teach the Indians to cultivate these broad acres and become good citizens. Their labor is needed here and is appreciated. Many are now employed in Redlands and Riverside, 15 to 20 miles away, and many more are needed.

I can see a marked improvement in public sentiment in southern California in reference to the Indians. Prejudice is giving way to reason; and when I say to the average Californian that the policy of the Government is now to give them a common-school education, as much land as we give to a foreigner, and then to let them stand or fall for themselves, he generally replies, "That's right; go ahead."

Yours, very respectfully,

HORATIO N. RUST,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF ROUND VALLEY AGENCY.

ROUND VALLEY AGENCY,  
Covelo, August 27, 1891.

SIR: As directed, I submit the following report as to the condition of affairs at this agency, for the fiscal year 1891.

The Indians living upon this reservation are remnants from seven different tribes, as follows:

Concows, from the Sierra Nevada Mountains, in Butte County; Little Lakes, Redwoods, Ukie, and Wylackies, are natives of this county; Pitt River Indians, from the Sierra Nevada Mountains, in Lassen, Shasta, and Modoc counties; and Nome Lackies, from the east slope of the Coast Range Mountains, in Tehama County.

The last census shows the total number to be 564.

Males .....	275
Females .....	289
Males over 18 years of age.....	203
Females over 14 years of age .....	221
School children between 6 and 16 years.....	83

**Land.**—This reservation is situated in a small valley, nearly round, and about 8 miles in diameter, 65 miles north of Ukiah and 50 miles back from the Pacific Ocean. At the present time it contains nearly 103,000 acres of land, all of which, except about 5,000 acres, is mountainous stock country. The valley land is exceptionally productive, growing three crops of alfalfa each summer without any irrigation, and an abundance of all kinds of fruit and vegetables.

By authority contained in act of Congress approved October 1, 1890, providing for the "reduction of the Round Valley Reservation," the President appointed three commissioners to determine the amount of land to be retained, to appraise the swamp land, and improvements thereon belonging to private citizens.

These commissioners arrived here the latter part of December, 1890, and remained about six weeks, during which time they visited the different "swamp land" claims and improvements of private parties within the retained portion of the reserve, and made a careful and just appraisal of the same. All but one of the swamp-land claimants have signified their willingness to accept the appraisal, and have prepared deeds conveying their property to the United States, which deed (or copies of them) have been forwarded to your office. It is earnestly urged that the survey and sale of that portion of the reservation to be thrown out receive early attention, if it is to be disposed of before the fall rains begin. The Indians are very anxious to have allotments made.

**Farming.**—There are about 3,000 acres of excellent farming land under fence, only a small portion of which has been cultivated—about 300 acres as a reservation farm and 200 by individual Indians.

The grain raised on the general farm is estimated as follows:

Wheat .....	bushels..	3,000
Oats .....	do.....	1,000
Corn .....	do.....	500
Hay .....	tons..	400
By Indians:		
Wheat .....	bushels..	1,000
Barley .....	do.....	200
Corn .....	do.....	200
Potatoes .....	do.....	400
Onions .....	do.....	75
Beans .....	do.....	100
Melons .....	do.....	1,500
Pumpkins .....	do.....	2,000
Hay .....	tons..	75

**Stock.**—At the close of the fiscal year there were on hand 69 horses, 21 mules, and 195 head of cattle owned by the Government, and 100 horses, 200 cattle, 250 swine and 300 fowls owned by individual Indians. Thirty head of cattle, 2 horses, and 2 mules were transferred, by instructions from your office, to the Hoopa Agency, and this, together with the heavy losses during the past two severe winters, has very materially reduced the number of stock belonging to this agency.

**Mills.**—As before reported, we have no gristmill and of course the service is a great loser thereby. I trust that funds from some source will be available during the present year to supply this need.

The sawmill, for want of funds to repair it, cut no lumber during the year, but since the 1st of July I have succeeded in getting it into such shape as to enable me to cut enough for our new hop house. I hope to soon have it in good running order.

**Schools.**—Two day schools, one at headquarters and one at lower quarters, have been in operation ten months during the past fiscal year, with an average attendance of 54 scholars.

**Apprentices.**—I have had four Indian apprentices with the carpenter, one in the blacksmith shop and one in the harness shop.

**Court of Indian offenses.**—None has been established at this agency, and at present I see no necessity for one. The Indians as a rule are quite orderly and well behaved, only occasionally one becoming intoxicated. Last November I reported to the United States district attorney two parties for selling liquor to Indians and a subpoena was issued by the United States district court requiring myself and witnesses to appear before said court on February 27. Owing to severe storms the case was continued until the 4th day of March, and when it was called certain white citizens of this valley appeared as witnesses for the defense, and swore they would not believe any Indian under oath. As a consequence the parties were acquitted.

**Missionary efforts.**—Certain Baptist missionary societies appointed Rev. J. T. Merriam and wife to this field and they have held regular church services and Sabbath school, both at headquarters and lower quarters. But until their lands are allotted, individual homes established, and camp life broken up, very little will be accomplished toward christianizing these Indians.

Very respectfully,

THEO. F. WILLSEY,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN COLORADO.

### REPORT OF SOUTHERN UTE AND JICARILLA AGENCY.

SOUTHERN UTE AND JICARILLA AGENCY,  
Ignacio, Colo., September 21, 1891.

SIR: I have the honor to submit this, my third annual report, of the affairs of the Southern Ute and Jicarilla Apache Agency, for the fiscal year ending June 30, 1891. Statistics as required herewith.

#### SOUTHERN UTE.

The census of June, 1891, shows the total number of Indians of all ages comprising the Southern Ute tribe to be 978, a decrease of 7 during the past year. Males over 18 years of age, 273. Females over 14 years of age, 328. Children between the ages of 6 and 16, 218, consisting of males 95, females 122. Births during the year, 32. Deaths 39.

The Southern Ute tribe is divided into three bands, as follows: Moaches, 266; Capotas; 181, Weeminuchees, 531.

The Southern Ute Reservation consists of a strip of land lying in the southwest corner of the State of Colorado, extending 110 miles from east to west, bounded on the south by New Mexico; and 15 miles from north to south, bounded on the west by Utah. The agency is situated on the Rio de los Pinos, about 34 miles from the eastern boundary, 76 from the western, and nearly equidistant from the northern and southern boundaries of the reservation. The Moache and Capota bands reside almost exclusively in the eastern, and the Weeminuchees, with few exceptions, in the western portion.

The majority of the Indian farmers belong to the Moache and Capota bands, and the principal farming operations are carried on in the valley of the Los Pinos, in the vicinity of the agency.

The condition of these Indians may, in general terms, be described as semicivilized. They live, for the most part, in tents, the location of which is changed from time to time, to afford change of pasture for their horses, sheep, and goats. All of them are at least partially clothed in the dress of the white man, though the majority of the men adhere to the blanket in addition.

Their disposition is generally indolent, but not seriously inclining to viciousness. Quite a number, however, show a considerable inclination to industry and the acquisition of property, as well as a desire for more knowledge of farming methods. In this respect some progress is observable, also in their disposition to pay the debts which they may contract, and their increased regard for the services of the physician and diminishing dependence on their own medicine men.

Gambling appears to be less prevalent than formerly, and drunkenness is rare. They also seem to be giving up their ceremonial dances, none having occurred to my knowledge during the present season.

The year has been barren of notable events. With the exception of the killing, in March last, of Francis Carter, a medicine man, by Nannice, the father of a sick child (who, it seems, accused Carter of practicing "bad medicine" on him, and who subsequently died), the behavior of the tribe, in freedom from turmoil, would compare favorably with that of an equal number of the superior race.

The winter opened mild, with gradual increase in severity and depth of snow, culminating in a storm which began on February 20, and continued for five days, ceasing with at least 3 feet of snow on the ground in the eastern part of the reservation. Another snow storm, accompanied with high wind, began on March 5, and continued for about 2 days, preventing stock from grazing, and leaving the range covered to such a depth and with such a snow crust that the weakened stock, both of Indian horses and beef and stock cattle, unable to obtain food or even to travel through it, perished in great numbers.

The horses of the Indians on the western part of the reserve came through the winter in comparatively good condition. Their flocks of sheep and goats were mostly driven to that region for the winter, and the loss from them was comparatively light. The weekly delivery by contractor of beef cattle for subsistence, instituted at the beginning of the fiscal year 1892, will be a source of great saving.

In regard to the condition of agriculture among these Indians, I regret to say that of those who farmed last year not all could be induced to resume operations this season, consequently the area of land cultivated is somewhat less than last year. But while the area of cultivated land has diminished, considerable hay and pasture land has been inclosed by new fence and a larger and better hay crop than ever before has been protected and secured. Those who have adhered to their farms have shown improvement over last year in diligence and attention to their crops.

The enlarging and repair of the irrigating ditches, giving them a plentiful supply of water, acted as a stimulant. In fact, I am of opinion that the fear of a scarcity of water had a deterrent effect upon some of those who did not farm, as the repairs were not made until after crops were in.

No school has been maintained, owing to the lack of a suitable building for dormitory and refectory purposes. No dependence can be placed on any attendance at a day school. The children must be kept at or in the vicinity of the school in order to insure its success.

No attempt at missionary work seems ever to have been made here.

It has not been deemed advisable to establish a court of Indian offenses as yet.

The industries of the Indians consist, besides farming, of stock-raising, dressing of skins for the manufacture of moccasins, leggings, belts, purses, and similar articles, and of bead work used for their ornamentation.

Cattle are possessed by a few, sheep and goats by many, and horses by most. They manufacture very little for sale aside from the articles above mentioned.

In my opinion it would be useless at the present time to attempt to induce them to accept land in severalty, for some years of patient effort will be required to cause them to appreciate the advantages of such a step.

The unsettled condition of mind prevailing among them for the past three years, in consequence of the failure of Congress to either ratify or annul the agreement regarding their removal, made with them by the Commission, would effectually defeat any such proposition, as it also tends to hinder a more general inclination to agriculture, and to prevent those not already farming from engaging in that pursuit. Further, much success with schools can hardly be looked for while the present condition exists. The Indians can not, or will not, understand why the action of the Commission in making a treaty or agreement with them was not final, and they show very little confidence in any promises made them by strangers. They still express their desire for removal. I would earnestly recommend action leading to the permanent settlement of this question.

At present 32 families are occupying definite, separate, unallotted tracts of land, with more or less fencing and crops.

During the latter part of the winter or early in the spring an epidemic of influenza attacked the Utes and raged during the entire spring. A large proportion of the tribe was affected at one time or another and several cases resulted fatally.

#### JICARILLA.

The Jicarilla Apache Indians, whose reservation lies in New Mexico, adjoining the Colorado line, number 824 souls. They are divided into two bands, as follows: Alleros, numbering 309, and Llañeros, 515. Number of children of school age: Male, 84; female, 97; total, 181.

Nearly all have received and accepted their allotments of land in severalty, and no disputes of importance have arisen among them regarding their allotments. They have a feeling of security that they will not again be moved, and will now give more attention to making improvements and to agricultural pursuits. When allotments have been completed the surplus land should be sold for their benefit.

The Apaches have placed 36 children in the Government school at Santa Fé, N. Mex. They desire the erection of a boarding school on the reservation, and promise to keep the same full. I would recommend the establishment of such a school, believing that the time is ripe for its successful opening and operation.

The attempts of the Jicarillas at farming have been successful, considering that irrigation under present conditions is almost entirely impossible, there being no running streams that can be relied upon. Reservoirs for the storage of water for irrigation are practicable and would greatly increase the certainty of successful agriculture. I would recommend action looking to their construction.

I would also recommend that a supply of breeding ewes and rams be furnished these Indians to start them in the business of wool growing, to which much of their land is well adapted, better in fact than to tillage.

During the past year two murders of Indians have been committed by white men. One of the murderers escaped. The other was captured immediately after the commission of the crime, which occurred on a Saturday night at Amargo, a small hamlet and railroad station near the border of the reservation. I was at the time at the Southern Ute Agency and was promptly notified by telegraph. No train running on Sunday and the distance being 60 miles, it was impossible for me to reach the scene until Monday forenoon. I found assembled at Amargo over 200 armed Indians, clamoring for the blood of the prisoner, threatening the lives of all the people of Amargo and the surrounding country if he was not given up to them for execution, and only restrained from carrying out their threats by the assurance that I would soon be there.

By the use of all the power of argument and persuasion I possessed they were finally induced to return to their homes, with the exception of a squad of five policemen, who acted as guard over the prisoner on his way to the county jail. Although the murder was brutal and unprovoked, the felon escaped with a sentence of one hundred days in jail and a fine of \$100. The Indians are very much dissatisfied with the sentence, which in my opinion was entirely inadequate. Both these murders may be attributed to the effect of whisky.

In this connection I would recommend the appointment of a trader for the Jicarilla Apaches, that they may not be forced to go off their reservation as at present to trade, where they are liable to be surrounded by bad influences and to obtain intoxicating liquors.

One Indian was killed by another as the result of an old family grudge of 30 years standing. In this case the murderer escaped and has not been apprehended. With the exceptions noted the conduct of these Indians has been generally good.

The Apaches, besides farming and the dressing of skins and manufacture of moccasins, etc., are deft workers in willow and clay. They make quantities of baskets and earthen vessels for their own use and for sale.

Their sanitary condition has been good. No serious epidemic has prevailed, and the tribe has increased in numbers by 14 during the past year.

The agency buildings are inadequate and generally uncomfortable. A site has been selected and approved for the agency at a point about 4 miles south of the location of the present buildings, and steps should be taken to remove and establish it at the proposed site.

Very respectfully,

CHAS. A. BARTHOLOMEW,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN IDAHO.

### REPORT OF FORT HALL AGENCY.

FORT HALL INDIAN AGENCY,  
*Ross Fork, Idaho, August 17, 1891.*

SIR: I have the honor to submit the following annual report with its accompanying statistics:

**Population and traditions.**—The Indians of this reservation are of two tribes, namely: Bannacks and Shoshones.

The Bannocks, a wild, restless, and nomadic tribe, originally came from the West. Tradition, supported by many facts, testifies that they once formed a part of the Pah-Yute (Piute) tribe, now in the State of Nevada, and that a great many years ago, under the leadership of a rebellious chief, they withdrew from the main tribe and emigrated to the mountains of the northeast drained by the waters of the Snake, Salmon, Missouri, and Green rivers, where their rights were disputed by the Blackfeet Indians, with whom they were ever at war.

The Shoshones are lower in stature, darker in color, and more docile and friendly in disposition. Before the immigration of white settlers they subsisted principally on roots, seeds, berries, fish, and small game. Grasshoppers and crickets also formed a part of their diet. Originally they were sun worshipers, and had a sincere reverence for the wolf, in which they believed the spirits of their dead were received. Their claim that they originally came from the east, seems to be well founded, as their language is similar to that of the Comanches, many words being the same.

A census taken in June, 1891, gives the following results:

Bannacks:		
Male	.....	224
Female	.....	231
		455
Shoshones:		
Male	.....	491
Female	.....	457
		948
Total	.....	1,403
Number of school age included in the above	.....	192

Of this number at least 30 are unfitted for school, as they are syphilitic, blind, dumb, or too much degraded by vice to derive any benefit from an educational institution.

The above figures show a loss of 90 during the last twelve months, the excess of deaths over births accounting for 34. Of the remainder, 56, a large number have removed to other reservations, either to avoid sending their children to school or for other reasons best known to themselves.

The large number of deaths was due to the ravages of scarlet fever, measles, and la grippe. It was very unfortunate that the first two epidemics originated in the Fort Hall boarding school, as it offered to those opposed to education, including the "medicine men," an opportunity to say, "Didn't I tell you so?"

**Education.**—For full particulars and statistics concerning education, you are respectfully referred to the report of Hon. John Y. Williams, bonded superintendent of the Fort Hall boarding and industrial school.

**Agriculture.**—There has been no material change in the occupation of these Indians during the year. A larger acreage has been planted than ever before and a fair return is promised; but failure of water in certain localities will materially reduce the prospective yield. It is to be hoped, however, that the annoying water question will soon be settled, as the Idaho Canal Company has been granted a right of way across the

reservation as far as the town of Pocatello. This will supply with water a large area of good farming land not utilized heretofore, after which the Indians will have no reasonable excuse for refusing land in severalty. It is very doubtful whether any objection will be offered, as a large number of the more progressive are already prepared and anxious for allotment. Before an allotment can be made it will be necessary to survey the entire tillable and wild hay land on the reservation, as it is questionable whether there is sufficient farming land to give to each Indian the amount named in the Daves bill.

**Stock raising.**—A fact that should not be overlooked is that some of the Indians should become stock raisers. A number of them are already devoting their time to that industry. With the facilities offered, which are unexcelled in the State, it would certainly prove a profitable occupation and would provide employment for those who can not be induced to follow the plow.

With this end in view I would respectfully recommend that \$30,000 or \$40,000 of the funds now to their credit be invested this fall in horned stock, to be held in common for a stated number of years, or until such time as each individual Indian has permanently located upon his own land and is properly prepared to care for his portion of the stock.

**Crimes.**—The only crime of a serious nature committed during the year was the murder of two unoffending white men near Blackfoot (across the border of the reservation) by a young Indian who had become crazed by drinking Jamaica ginger. Being closely pressed by the Indian police, a few hours later, he committed suicide.

The whisky traffic with Indians about Pocatello is still a serious source of annoyance. With the assistance of the deputy United States marshal I have been able to convict several persons of this offense, some of whom are now serving sentence in the penitentiary. But a large number of the offenders are tramps who elude arrest by flight.

**Indian police.**—A few changes in the police force have been necessary during the year, but as a body they have rendered prompt and valuable service.

**Court of Indian offenses.**—Death removed one of the judges of the court of Indian offenses in the early part of the year and his place was filled by one of his tribe. With the experience gained the court is improving in efficiency and is a terror to the wrong doers. Consequently there have been fewer cases for submission to it during the past year.

**Finances.**—The sale of the Pocatello town site, just completed, placed to the credit of these Indians about \$115,000. It being a town of about 3,000 inhabitants, situated in the center of the reservation, while affording a market for the Indians' hay, grain, and vegetables, has also a demoralizing influence. Slaughter pens and food furnished at kitchen doors have induced a number of the more lazy and trifling families to locate there, where they do a little work and a good deal of begging.

**Missionary work.**—The Connecticut Indian Association is constructing a missionary building here at a cost of over \$2,500, to be completed within the next sixty days, and I am happy to state that a portion of the Indians at least are beginning to appreciate the good and faithful work of this association.

**Employés.**—The present force of employés, while doing its best, is inadequate for the increasing work. As the five Indian settlements are widely separated, I would respectfully ask for three more additional farmers, making one for each. I would also suggest that there be appointed from among the Indian youths a carpenter's apprentice. The blacksmith's apprentice is learning rapidly, and will be competent to take full charge of the shop at the expiration of three or four years apprenticeship.

**Messiah craze.**—The ghost dance, or Messiah craze, has subsided here for the present, but is liable at any time to be revived by some weak-brained individual or medicine men. The latter are still a power in the tribe, being ever ready to condemn and discourage anything in the line of advancement.

**Conclusion.**—With water in sight, plenty of good farming and grazing land, and about \$125,000 to their credit, there is no reason why these Indians should not come to the front, notwithstanding the efforts of the old "beef eaters" to pull in the wrong direction. As the latter are being gradually superseded by a younger and more enterprising class, it is to be hoped that a more favorable report can be made one year hence.

I have the honor to be, very respectfully, your obedient servant,

S. G. FISHER,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF LEMHI AGENCY.

LEMHI AGENCY, IDAHO, August 5, 1891.

SIR: In compliance with instructions contained in your letter of July 1, 1891, I have the honor to submit my second annual report and statistical information regarding the affairs and condition of the Indians on this reservation.

Up to July 1, 1891, I have been in charge of this agency fifteen months, during which time I have carefully watched and noted events of things in general so as to be able to make my report as reliable and intelligent as possible.

The agricultural work of these Indians has received the careful attention of myself and the farmer, as I believe this pursuit of industry brings about better results towards civilization and self-support than any other. We have succeeded in getting forty-nine of them to go to farming, some new ones that never tried it before, and have induced the older farmers to enlarge their farms and have succeeded fairly well. As they broke up new ground, they seeded some of their old ground to timothy and clover, as there is no natural hay to speak of on this reservation. They will cut about 100 tons of hay this season, nearly all tame hay, and by having them seed some each year they will soon be able to cut enough to carry their stock through hard winters. One drawback I have with the farmers is to get them to save hay enough to feed their work stock during spring work. The most of them will feed all their hay during winter, sell their oats after threshing time, and have no feed for spring. Their horses are small at best, and when poor and weak they are unable to put in but small farms and patches of grain and vegetables. Their crop this season consists of wheat, oats, potatoes, and other vegetables, and looks exceedingly well and promises fair for a good yield.

This reservation is one of the best stock ranges in this northwestern country, and the Indians take more to stock raising than any other industry, and they should be encouraged as much as possible. They have a large band of horses, about 3,000 head. They have been bred in and in by their native studs till they are nearly run out and small. There are but very few that are large enough to do farm work. I recommend that a couple of stallions be purchased for them, then by picking their best mares they would soon have good work-horses and salable stock. In the near future I shall make this a subject of special communication to your office.

The buildings at this agency consist of both frame and logs. The office, agent's house, physician's house, girls' dormitory and school building are all frame, and I have them in good repair; the store and warehouses are logs; also the boarding school building is a log building, and is 15 or 16 years old. I have it repaired so it is comfortable, but it is ill-arranged and can never be remodeled, and in my judgment should be replaced with a new one as soon as possible.

During the spring I erected a slaughter house with corral, close pen and hide house, a building that has been much needed here for years. I now can slaughter the cattle in a decent, clean, and humane manner. I have it well arranged; can turn on plenty of water to run through the building. I detail what Indians are needed to do the butchering and some of my policemen, and it is done with closed doors, and superintended either by myself or other employes. After the butchering is done the offal is given to the men and women that stand on the outside waiting for it, and the meat comes out fit for any market.

In taking the census of these Indians this year as complete as possible I got 492. Males, 240; females, 252; number of children of school age, 58; number of deaths during year, 16; number of births, 43. I kept a careful record of births and deaths, and I think this is correct. I think if a complete census could be taken of the entire tribe under Chief Tendoy, they would number 550.

My police force consist of 1 captain and 5 privates. They are obedient, faithful, and always willing to do their duty, but their pay being so small it is rather a hard matter to keep first-class Indians on the force, and unless you procure the best material on the reservation you had better have none.

These Indians are generally well disposed. There have been no depredations committed on the reservation, except it was alleged that a half-breed Indian killed a steer belonging to a white man and distributed the beef among the Indians and left the country. He did not belong here and the police were unable to capture him. In a drunken row at Red Rock, Montana, last August, two Indians dragged and choked another one to death, all three drunk. After they committed the crime they both fled, coming to the agency, when I ordered them captured. The crime being committed in Montana, the sheriff took them to Dillon where they were indicted and tried for murder, but there being no witness except themselves they were acquitted. For any little misdemeanors committed I punish the offenders by imprisonment in the agency jail and there has been only two such cases during the year. Chief Tendoy has always been a great and influential man among his people, has always been a true friend of the whites, and has always exerted his best influence to the peace and welfare of his people.

I am glad to report that both agency and school employés have been agreeable, efficient, and faithful, and attended well to their duties.

We have no church nor missionaries. Our circuit minister preaches here every third Sunday, and we have Sunday school every Sunday, and usually Indians and their women attend, besides the children.

These Indians are inveterate gamblers, both men and women. They will some times gamble off the last thing they have. I use every influence I have to break it up, but have met with little success. You might as well talk to the wind as to them about gambling.

They are generally temperate, I suppose for the reason that they can't get any liquor to speak of. What little they do get is at the towns along the railroad, and they invariably get intoxicated when they can get enough, but I have never seen an Indian on the reservation or come on that was under the influence of liquor.

For information concerning the sanitary condition of this tribe see physician's report.

The school at this agency has been running steadily for the past year. I forwarded last year to your office a brief history from the commencement of it, hence it will be unnecessary to mention it at this time. Last spring you kindly granted me authority to build a new fence around the school farm, which I have done. The industrial teacher, with the assistance of the boys, plowed and seeded to timothy and clover 22 acres, which looks very promising, and if nothing happens to it will be able to cut what hay will be needed for school and agency use, which will be a saving of several hundred dollars to the Government. The school garden consists of 1½ acres potatoes, besides peas, beets, onions, carrots, parsnips, turnips, and other vegetables, about 3 acres in all, and promises a large yield. For further information see superintendent's report of school.

There is no allotment of land here, but the Indian farmers have all taken land for their farms, and each man's claim and rights are respected.

I have no courts of Indian offenses; I talked with Chief Tendoy and his leading men last spring and asked if they would like to have such a court established; they concluded they would not.

I will call attention to their clothing. They say that they are sick and tired of the same color; that they never had anything but brown ducking and Kentucky jeans. As far as the material is concerned they are satisfied, and I feel sure that if their clothing could be made up of assorted colors that at least 50 per cent more of them would wear citizens' clothes. They say if they could get for overalls blue denims, it would suit them, and would be a change, and I believe such a change in the colors would be a great inducement for them to wear citizens' clothes.

In conclusion I have to say that it is my desire to bring about as rapidly as possible civilization and self-support; that object should ever be foremost.

Thanking you for the favors and courtesies shown me by your office.

I am very respectfully, your obedient servant,

E. NASHOLDS,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF NEZ PERCÉ AGENCY.

NEZ PERCÉ INDIAN AGENCY, IDAHO,  
*Leviston, Idaho, August 25, 1891.*

SIR: I have the honor to submit my second annual report.

**Agriculture.**—The hot winds with which this section of country is so often visited during the summer months completely devastated the crops last season, although they were well planted in the springtime and got an early rise. Notwithstanding this failure the Indians have been quite successful in saving their horses and cattle through the winter as it proved quite mild. With those who have not large bands of horses or cattle it has become a fixed habit to take up and feed them through the long winter months, consequently the successive years of failure in raising crops have quite disheartened them. Their conversation in regard to the crops and how they should be raised shows that they take a much greater interest in them than heretofore, and but for the drawback mentioned above they would, I am sure, farm their land in a greater quantity.

**Court of Indian offenses.**—The three judges are picked men from the tribe and are elected because of their honesty, integrity, and intelligence, and can generally be relied upon to administer justice without partiality or prejudice. In each and every

offense committed during the past year due and just punishment has been administered to the deserving criminal. This court convenes once a week, and the business that comes up is dispatched in a very dignified manner. There have been 30 cases, which come under the jurisdiction of this court, tried during the year for crimes as follows: Two cases of fighting, 7 of drunkenness, 6 of adultery, 10 of gambling, 2 of polygamy, 2 of wife-beating, and 1 of jail-breaking.

**Schools.**—The school which was opened at this agency late last fall has been in progress ever since and affords the Indians ample means for the education of their younger children. The attendance has been very good, notwithstanding the fact that it is a kindergarten school and it is quite hard to get the parents to let their children attend owing to their youth. For information regarding the Lapwai school I respectfully refer the honorable Commissioner to the annual report of the superintendent, Mr. McConville.

\* \* \* \* \*

**Stock on reservation.**—It seems that it is impossible to keep the stock off of this reservation. The only way I have is to await reports from the Indians and then send the policemen, with orders to remove the animals at once if they are not so removed by those white men who own them. But the loose stock, which have no herder, are the great nuisance, and it would take at least 50 men to act as herders to keep this loose stock off.

**Railroads.**—The questions pertaining to the right of way across this reservation by the Spokane and Palouse Railroad Company have nearly all been settled. The Indians held a council May 1 last, at which an agreement was entered into, between them and the railroad company wherein damages were affixed by them in crossing the tribal lands of this Nez Percé tribe, but it is not known whether the company will build through this reservation this year or not.

**Buildings.**—There are two or three buildings now occupied by employés which are unfit for habitation and should be condemned, as they have proven a detriment to the good health of the occupants. The building commonly called the office, which is only one story high, is occupied by one family and two single employés, besides being used for the office of the agent and clerk. Another, known as the guardhouse, is occupied by two employés and their families, is small, and is also used as a jail for Indian prisoners, which makes it quite disagreeable for the families living therein. I would respectfully ask that the honorable Commissioner take some steps in regard to this matter, as it is highly essential to the health and comfort of the employés. I base the foregoing upon the judgment of the agency physician as to the sanitary condition of this agency.

**Sanitary.**—These Indians as a tribe have inherited for years back, owing to the gypsy life they have led, the diseases so common among the Indians as a race. The principal disease is scrofula, and it seems almost impossible to cleanse their blood of this malady. Aside from this their health, as a tribe, has been very good.

**Crimes.**—No crime of a very serious nature has been committed during the year. An Indian, becoming intoxicated from the effects of whisky, mounted his horse and because it would not go fast enough for him drew a knife and plunged it into the side of the animal so often that it sank down and died. He was duly punished for this display of inhumanity.

**Farming.**—Through the vigilance and instructions of the agency farmer the Indians are becoming more and more acquainted with this industry, and have arrived at that point where they see that it is essential to learn it well. They are therefore dropping that careless don't-care way that has heretofore existed among them, and some have become so well acquainted with the different farming implements that they run them with great accuracy. There have been 2,024 acres broken this year.

**Fencing.**—There have been 6,750 acres fenced during the year; but the fencing can not be called substantial, owing to the fact that the shipment of barbed wire received last fall was of such an inferior quality, in fact was so rotten, that in stretching it as it should be stretched it in a great many instances snapped.

**Improvements.**—The improvements made within the year are quite marked, the most conspicuous being the two-story frame dwelling, which adds greatly to the appearance of this agency. There have also been several dwellings built by the Indians.

**Advancement.**—The advancement made by the Indians in civilized pursuits has been considerable, and quite a number who have never taken any interest in the agricultural industry have been this year induced to farm. Through the skillful management of the school employés the pupils, since the opening of the school, have made advancements which were far beyond my expectations. When they were taken into the school their ideas of the English language were vague, in fact only 9 or 10 out of the 60 could speak a word of English, but upon their leaving they had advanced so far that they could read, write, and speak the language so that they could be easily understood. For this great advancement credit is due to the patience, perseverance, and industry of all the school employés.

**Needs.**—In making the summary of the needs of this agency I do so for the honorable Commissioner's consideration. It is highly essential that a ferry be constructed, as the only means the Indians have for crossing the Clearwater at this point is by canoe, and when the railroad is constructed through here and a station built they will need a means of transporting their produce across the river for shipment. The ferry at Kamiah also needs repairing very much, but I would respectfully recommend that a new one be built, as the old one is dangerous in its present condition and I hardly think if repaired could actually be called safe. Owing to the great distance of Kamiah from this agency and the great amount of work that has to be done there in the miller and sawyer, blacksmith and farmer line, also on account of the amount of sickness in that immediate neighborhood, I would recommend the employment of persons to fill those positions at that place. Those employed in those positions at this agency are not able to do all the work in both places, as they are kept constantly busy here, and therefore can not do justice to those Indians living at Kamiah. I would further recommend that stallions to the number of seven or eight be placed on this reservation to improve the breeding of the Indian horses, as the majority of them are scrubby cayuses.

**Conclusion.**—In closing I would respectfully state that in making the foregoing summary and reviewing the progress made I think I have done remarkably well in promoting the general interest of the Indians, and would also respectfully state that perfect harmony has existed among all concerned throughout the past year. I respectfully forward, in a separate package, the census roll as to number of names obtained, and also estimated number, which is attached thereto. I also inclose with census roll the statistical reports of this agency and the boarding school.

All the employés have been faithful in their duties and each and every one has given satisfaction.

Very respectfully submitted,

WARREN D. ROBBINS,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN INDIAN TERRITORY.

### REPORT OF QUAPAW AGENCY.

QUAPAW AGENCY, IND. T., August 25, 1891.

SIR: I have the honor to submit this my second annual report, which, in my judgment, contains a concise but clear view of all important affairs at this agency.

In looking back over my term of service and remembering the condition of affairs when I took charge, I am gratified to note the steady advancement and the improved facilities for the advancement of the Indians under my charge and to hope that some trace of my labors will live after me. With the hearty coöperation of my clerk and superintendents, early in my term of service I began the erection of schoolhouses and asked for employés to provide school accommodations for every child in this agency. Your office has cheerfully granted me the authorities asked for, and the school buildings will soon be completed. This has been my objective point, and I, at least, feel grateful over the result.

**Population.**—Carefully prepared tables are submitted which will give information not previously furnished in my reports.

Tribes.	Population.	Males over 18.	Females over 14.	Children between 6 and 16.	Number who have taken allotments.*
Senecas .....	260	64	70	84	193
Wyandottes.....	291	80	104	88	238
Eastern Shawnees.....	79	10	29	27	82
Modocs .....	68	19	24	16	68
Peorias .....	166	24	53	44	153
Miamis .....	75	10	26	14	66
Ottawas.....	155	37	37	50	155
Quapaws .....	206	63	65	65	.....
Total.....	1,500	312	408	388	955

\*To August 1, 1891.

**New school buildings.**—During the past year I have asked for and obtained authority to repair the Peoria day-school house, erected a Miami day-school house and also a day-school house for the Modocs. At the Seneca, etc., boarding school I have erected two valuable additions, and now have here nearing completion a laundry, a bath house, a boys' sitting-room, employes' quarters, storeroom, barn, blacksmith shop, cistern, wind-mill, fruit cellar, and girls' dormitory. At the Quapaw boarding school I have erected boys' sitting rooms, employes' quarters, laundry, one addition to girls' quarters, and repaired the school buildings, and now have nearly completed a barn, bath house, bakery, one addition to girls' quarters, windmill tower, and tank. To be sure this is incurring a great responsibility upon myself and nearly doubling the work of my faithful clerk, but I am determined to apply the money which a munificent Government has placed into my hands so that all the Indian children of this agency shall have the facilities to obtain a good English education.

**Modoc day school.**—The average Indian attendance at this school was about 11 last year, and taking into consideration the fact that there are only 16 children of school age in this tribe, seems to me to be sufficient proof to verify my former statement that the Modocs take a deep interest in their school and are fast adopting the white man's methods of living. After 8 years of faithful service the teacher of this school, Miss Arizona Jackson, resigned to take effect June 30, 1891. She is capable and able and is a lady in every sense of that word. Under her this school has been a decided success.

**Peoria day school.**—The Indian attendance was about 13 last year and the school seemed to have given general satisfaction. There were several white children who attended this school, for which their parents paid the tribe a tuition of 50 cents per month. As Mr. A. J. Peery is an Indian and a very successful teacher, I very much wish to continue his service at this school this year.

**Seneca boarding school.**—For full particulars and a historical sketch of this school I refer you to the report of Supt. Andrew Atchison. As the average attendance at this school for the year 1889 was 59 and 69 in 1890, and 103 last year, I certainly have no cause to complain of the patronage of this school. I have a good corps of teachers at this school, and with the accommodations which I shall have in the new buildings I feel sure of an average attendance of 130 this year. The future of this school is very bright, and I ask for it your sympathy and continued support.

**Quapaw boarding school.**—When I took charge of this agency in 1889 the attendance at this school was only 38, and I was advised by some that it would soon be necessary to discontinue this school. After viewing the many natural advantages and the beautiful location of this site, I at once asked the Department to authorize the erection of a new house, and to transfer Harwood Hall to this school. For tact, industry, and perseverance Mr. Hall is unexcelled, and estimates were submitted, which at once received your approval. The new buildings were erected, and for the year 1890 the average attendance was 56. The school continued to grow in numbers and favor, and closed on the 30th of last June with an enrollment of over 100 pupils. The second estimate for new buildings was also authorized, and they are nearly completed. The employes asked for have been approved, and they are all faithful and efficient. The literary and moral culture of the children is excellent. The orchard is loaded, the garden is full, and the corn crop is very good. I anticipate an attendance of 150 at this school during the present year. I call your attention to the report of the superintendent. I indorse his recommendations and ask that they be authorized.

**Missionary work.**—The missionary work at this agency is carried on by the Friends, the Methodists, and the Baptists. The Friends have five societies, the Methodist Episcopal Church South one, the Methodist Episcopal one, and the Baptist one within this agency. The standard of morals has been raised, and the Indians in general seem to be taking a deeper interest in church matters. A union meeting has just closed in which many, including my captain of police, were made to rejoice in the Savior's love. During last year the Friends erected a comfortable church house on the Ottawa Reserve, and the Baptists are building one. There are six Sunday schools within the bounds of this agency, with an attendance of 325 children. Mrs. Julia Hall's work among the Modocs has been good.

Area of reservations—	Acres.
Seneca .....	51, 958
Wyandotte .....	21, 406
Eastern Shawnee .....	13, 048
Modoc .....	4, 040
Ottawa .....	14, 860
Peoria .....	33, 218
Miami .....	17, 083
Quapaw .....	56, 685
Total area .....	212, 296

**Agriculture.**—There has been encouraging advancement in agriculture since I took charge of this agency. The soil is well adapted to the raising of corn, wheat, oats, rye, flax, clover, and the grasses. I feel safe in saying that there is corn enough raised this year to supply our population for two years. For gardening purposes, the soil of this agency is well adapted. In the valley lands here crops are never a failure. Since taking their allotments many of the Indians have fenced and broken out their lands, erected houses, planted orchards, and have homes in which they are deeply interested. In this connection I wish to express my hearty approval of the act passed by the last session of Congress giving the Indians authority to lease their lands three years for farming purposes, since it enables many of them to have their childrens' allotments broken out and made into comfortable homes by the time the children have returned from school and are ready to become citizens of the United States. If a renter proves to be of bad character, I either revoke his permit or refuse to renew it, in which case he must move from the agency.

**Intruders.**—The limited area of this agency and the certainty of these characters being reported, enables me with my vigilant police to keep this source of much trouble to many agents well under control.

**Police.**—My police force consists of 1 captain and 6 privates. They have been quick to report to the calls, and dutiful in the discharge of the duties assigned to them. They have almost entirely broken up the custom of fishing and hunting on Sunday. In many cases a little wholesome advice was sufficient.

**Court of Indian offenses.**—Criminal offenses on the reservations during the past year have been much less in numbers and less serious in character than in ordinary white communities of equal area and population. A large proportion of the complaints reported to this office were disputes which must necessarily arise in the settlement of their new homes. The court consists of three good Indians, who are free from the use of liquor. Their decisions are usually correct, and are accepted without complaint. As well as being great peacemakers the litigation and cost that this court saves to the Indians is certainly very great.

**United States court at Muskogee.**—The United States court at Muskogee should have its powers greatly enlarged. It should embrace original and exclusive jurisdiction over all crimes committed in the Indian Territory. As it is, the higher crimes are tried at Wichita, Kans., and at Fort Smith, Ark., while the court at Muskogee has jurisdiction of all misdemeanors and the civil causes. I am pleased to testify as to the fitness of the present judge and his commissioners as well as to that of the prosecuting attorney and the United States marshal. Their names have become a terror to evil doers.

**Sanitary.**—With the exceptions of tuberculosis and an epidemic of the measles at the Seneca and Shawnee school last winter, the health of the Indians under my charge has been good. As the agency physician has elaborated these two exceptions in his report I deem it only necessary to call your attention to the able manner in which he conducted the epidemic, and to assure you that the Modocs receive due attention in his hands.

**Allotting.**—The difficulties encountered in making the allotments within this agency have been frequent and various, such as petty jealousies, revenge, and greed. The Indians belonging to the several tribes being largely mixed with the whites, or intermarried with them, form the progressive element, while some of the full-blood members continue to cling to tribal ideas, and are more or less imposed upon by the progressive element taking possession of the most fertile spots of the different reservations. Much of the land is covered with hills with the tillable land scattered among the valleys, causing much labor to equalize the quantity and quality of the land for the allottees. Very little attention or respect has been paid to the protection of witness trees or original corners of the exterior or interior lines of sections. Virtually, the work has been almost an original survey. Special United States Indian agent, Maj. Spencer Hartwig, and his efficient surveyor, Capt. J. J. Power, who have so justly accomplished this work, are entitled to great credit for the fairness in which the allotments have been selected and the adjusting of so many complications in this trying service. The Indians are well satisfied with the amendment act of February 28, 1891, since it gives each man, woman, and child equal quantities of land. The Peorias are anxious to have their children, that were not allotted, to be allotted 80 acres of land under the act above referred to.

**Modocs.**—The Modocs are a progressive people, and they have all taken their allotments. Their crops are good, but the acreage is not large, on account of their not having horses to break out their new land. I was enabled to erect 5 new houses for these people last winter, and they are greatly in want of 5 more. In addition to their annual supply of goods, the Department authorized me to purchase 6 wagons, 6 cook stoves, 9 cultivators, and 16,200 pounds of barbed wire; and also to contract for 17 brood mares and 23 heifers for these deserving people. Their prospects are better than ever before, yet their wants are many, and I shall continue to give them assistance.

**Miamis.**—The crops on the Miami Reservation are abundant, and the acreage is at least double that of last year. Nearly all the allotted land is under fence. They have erected 14 frame houses and 8 large barns, at an estimated cost of \$11,000. These people are very intelligent and progressive, and are anxious to become citizens of the United States just as soon as they can dispose of their surplus land and can make a final settlement with the Government.

**Peorias.**—The Peorias have done well this year. Some of the finest farms and the most fertile land within this agency is on this reserve. Rich deposits of lead and zinc are known to be deposited here. As a rule they are applying their payment to the improvement of their homes.

**The Ottawas and Eastern Shawnees.**—These have also all taken their allotments and are doing better than ever before. Some of the full bloods do not willingly support the schools, but as a rule the Ottawas do. Both tribes are making some substantial improvements, and I see no cause why they should not prosper.

**Quapaws.**—For the reason that the Quapaws have a special bill before Congress giving them 200 acres of land each, as has been done for their neighbors, the Peorias and the Miamis on the south and west of them, they have not yet taken their allotments; but they have selected their claims and have them under fence, and many have good houses. Of the 56,685 acres of this reserve, at least 40,000 is now under fence. They have given up their former homes and paid their own money for this, which is the best agricultural land in this agency. Should their bill become a law there will yet be an excess of nearly 17,000 acres. What they ask for has been given to the Miamis and Peorias, and it is only just that it should be given to the Quapaws whose land it is. They are good to patronize the school, and their children are obedient and apt to learn. They have given \$1,000 to erect a schoolhouse at the Quapaw boarding school. They have erected fifteen frame houses, at an estimated cost of \$3,000 in addition to their own labor, and they have received no payment to aid them in this. After much effort I have succeeded in getting them to fence the entire west and the north line of their reserve to Spring River, and thereby shutting off the State cattle from free pasturage, and compelling outsiders to pay for the grazing and hay their stock consumes. This tribe has a large pasture which is yielding them a good revenue. Should Congress pass their bill, the Osage band of the Quapaws could be induced to return to this agency, take their allotments, and make this their permanent home, which would be far the best for them.

**Wyandottes and Senecas.**—These tribes continue to improve. Like all the Indians of this agency, these people are farmers and stock raisers. They make their living at this. Now that the Wyandottes have taken their allotments, and the Senecas are taking them just as fast as the special agent can allot them, we may expect this section to be rapidly developed into a choice farming country. These people are staunch supporters of their school, and many of them are active church members. They are peaceable and, as a rule, industrious.

**Whisky.**—Despite my efforts to suppress this traffic, the dives at Baxter Springs, Kans., and at Seneca and Tiff City, Mo., continue to sell to the drinking Indians, who will not testify who sold it to them. There is none sold within this agency. Were it not for this evil, crime here would be almost unknown. I shall continue to report all cases that come to my knowledge, where the evidence will warrant a conviction.

**Close.**—In all my official duties with the Department I have received the kindest consideration, the most courteous treatment, and a hearty coöperation at the hands of our able and faithful Commissioner of Indian Affairs, for all of which I am very grateful, and shall carry its kindly remembrance to my last day on earth.

Very respectfully,

T. J. MOORE,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF WYANDOTTE, SHAWNEE, AND SENECA SCHOOL.

SIR: I have the honor herewith to submit the eighteenth annual report of the Seneca, etc., boarding school for the year ending June 30, 1891.

**Historical sketch.**—The Seneca, Shawnee, and Wyandotte boarding school was established as a contract school by the joint action of the United States Government and the Friends' Church. The agency in which the school is located was known then as the Quapaw Special Agency, being subordinate to the Osage Agency in Kansas, and presided over for eight years after the establishment of the school by Hiram Jones.

In 1870 the first boarding school in the agency was established for the Ottawa tribe. In 1872 the Seneca, etc., and the Quapaw boarding schools were organized. All were contract schools, under the care of the Friends Church. The Seneca and Shawnee tribes were very reluctant in accepting the offers of education made by both Government and church, but the influence of President Grant's peace policy and the practical kindness of the Friends soon filled the school with pupils.

The first superintendent and matron, Aaron C. Hornor and Sarah Hornor, were appointed June 1, 1872. Before the first school year had closed the positions of teacher, cook, laundress, and farmer had been added to the force of employés at the school. Only two years later two assistant farmers were added to the list. These assistants were soon discontinued, and, with the exception of the addition of a second teacher, no further change was made in the corps of employés for a period of fourteen years. During the present administration this school has secured a third teacher, one assistant farmer, and five female assistants.

During the contract period the superintendents of the Seneca, etc., boarding school were in the order of succession (1) Aaron Hornor, (2) Jerry Hubbard, (3) Alva H. Pearson, (4) Henry Thorndyke, (5) Jacob Hornor, (6) Charles W. Kirk.

In 1884 the school passed out of the care of the church and came under the entire control of the Government. The superintendents appointed since that date were (1) William Morris, (2) Harwood Hall, (3) Andrew Atchison.

Of these nine superintendents eight were of Quaker faith, one of Presbyterian training and profession.

From such a continued line of Christian education we might certainly expect to find many decided results. An examination of the field compels us to admit that education is a slow process, attended by considerable loss and waste; yet the gains are very apparent. The Indian population entirely dependent upon the Seneca, etc., boarding school for primary education during the past nineteen years has numbered 600 and upward. More than 80 per cent of those between the ages of 5 and 35 years can read and write. Six persons have qualified themselves for teaching in primary studies. A larger number of young men are fairly qualified for the management of farm work, and everywhere, in the door yards and dwelling houses and dress of the people, may be seen the evidences of education among the women. Indeed, the education of a girl is worth much more to the cause of Indian civilization than that of a boy. About 15 per cent of the Indian families of these tribes are subscribers for newspapers, and a few families have begun to collect libraries. However, those who now oppose education and Christianity are as few as those who favored them nineteen years ago and the prospect is bright for the future.

Attendance, health, etc.—The average daily attendance for the past year has been 103. For the year 1889 it was 59, and for the year 1890 it was 69.

The average daily attendance for the past year would have been considerably higher had not an epidemic of measles struck the school about the middle of the year. This was a severe trial to the stoutest heart of parent or employé. When I look back over those dark days it brings an involuntary shudder, and well might the tender heart of a mother lose sight of the general advantages of the school in her blinding anxiety for her own offspring. The measles were brought into the school by one of the larger Seneca boys on his return from the Christmas vacation. One hundred pupils had come in promptly after the holidays. Before the end of January we had 60 pupils to treat and nurse in their beds. Those who came in later were soon added to the sick list, until more than 75 per cent of all our pupils were attacked. Class work had to be abandoned for three weeks; the employés were all detailed for special duties in giving medicine, serving meals, and watching in sick rooms by day and night. Thus the work continued till near the middle of February. In several cases the measles were followed by other diseases, chiefly of the lungs and throat. Three of these proved fatal. I wish to speak in the highest praise of the service of my associates; also of the faithfulness and skill of the agency physician, Dr. J. S. Lindley. It was not deemed expedient to allow parents to take their children home either while sick or when convalescent, nor could they be allowed to administer Indian remedies in the sick room. This course aroused some bitter feelings toward the school among the parents, which it will require some time to allay. After the measles many children were afflicted with sore eyes. This was the second epidemic of measles in the school in a period of ten years. The number of deaths was the same each time. After such a trial we rejoice that our spring term showed a fair attendance and a very marked improvement in the behavior of the pupils.

School work.—Class work has proceeded well under the care of three teachers. A noticeable improvement was made in song-singing and declaiming. Letter writing and written examinations were practiced with profit. The older pupils were taught the principal facts concerning the Indian population of the United States and the history and character of the Government industrial schools.

Sewing, cooking, laundrying, housekeeping, and farming were taught by regular lessons each week. A weekly recitation in each of these branches of training was conducted before the entire school during the evening study hour. The details were changed so that all the pupils could study and practice each kind of work. These industries were taught with reference to their use in home life. By this method, with trained employés at the head of the several departments, we can insure every child a thorough all-round practical education.

The school farm.—The land (160 acres) formerly allotted to this school was poor and without any surface water for stock.

When the second Wyandotte allotment was ordered we gave up 60 acres of our prairie land farthest from the school site for the same amount of land adjoining the school premises. Through this addition runs a large creek, near which lies excellent land. It also furnishes a magnificent site for the new buildings, nine in number, which have been authorized and are in course of construction at the present time. This change in the farm we consider of very great importance to the success of the school.

The farm had become a famous failure before I took charge of the school. Last autumn I allowed two Indian neighbors to plant 15 acres in wheat on condition that they should sow the field with clover. The clover failed, but the wheat yielded well. I believe now that there is hope for a fair return for careful cultivation. The past year we raised abundance of early onions, radishes, tomatoes, squashes, pumpkins, melons, etc., and shall have a fair crop of potatoes. The farm must be pushed to the front for the purposes of economy and instruction.

We have set out 6 acres in orchard the past spring, and the trees and vines are growing well.

Thanking yourself and the Department for the sympathy we have received through the labor and sickness of the past year,

I remain your obedient servant,

ANDREW ATCHISON,  
Superintendent Seneca, etc., Boarding School.

T. J. MOORE,  
U. S. Indian Agent.

## REPORT OF SUPERINTENDENT OF QUAPAW BOARDING SCHOOL.

July 6, 1891.

SIR: I have the honor to submit the following report of the Quapaw boarding school, for the fiscal year ending June 30, 1891:

The past year, on the whole, has proven very successful. The pupils have improved and made good progress in educational and industrial work, besides being morally and religiously stronger. Never before, during the six years of my labor as superintendent of an Indian school, have I witnessed more general good feeling among the pupils towards one another and a desire to fill out the wishes of their instructors than has existed at this institution the past year. With sincere desire on the part of the pupils to take advantage of their opportunities, we had an excellent field to do good work.

During the first quarter, 1891, the average attendance was 59; second quarter, 75; third quarter, 88; fourth quarter, 90; making a general average for the year of 79, with an enrollment of over 100. The school has been filled to its utmost capacity the year through, and in numerous cases we were compelled to refuse children on account of the scarcity of room.

Several new buildings and additions were erected during the year, at an expense to the Government of about \$3,000. Contracts were let last May for material to erect bathhouse, addition to girls' quarters, system of waterworks with windmill power, and barn. Work is now in progress. These buildings are insufficient, however, as a new schoolhouse, quarters for boys, and hospital are much needed. Estimates and plans for same have been forwarded to Washington, and authority to erect same will doubtless be received.

The boys have been instructed in the care of cattle and horses and made to feel the necessity of regular care and thoroughness in same. Wood-chopping, bed-making, laundry work, caring for sitting and schoolrooms, assisting in kitchen, farm work, and general choring have been closely attended to. A regular detail of 10 boys is made each day for work in the garden and on farm, and it is due to the industrial teacher and the boys to say that the garden excels anything of the kind that I have ever seen. About 15 acres is used for the garden, and ample vegetables for the needs of the school are now on hand. The orchard (8 acres) was refilled last spring with apple, peach, pear, cherry, and plum trees, and large quantities of strawberry, raspberry, blackberry, grape, and gooseberry plants were set out in the garden. They have all done splendidly, and next year will prove a great help in the way of food for the children.

This year we have about 110 acres planted in corn, 20 acres in oats, and 20 acres in millet. The oats and millet are excellent, but owing to the extreme wet spring, which injured the corn to some extent, I am afraid the crop will not be as bountiful as at first supposed. Sufficient, however, will be realized for the needs of the school. It has been our aim to impress upon the boys the necessity of being prompt and thorough in everything they do and to be on time to the very minute.

The girls have performed all of the housework, such as bed-making, sweeping, tidying rooms, care of dining room, cooking, washing and ironing, sewing, cutting and fitting, and general mending. All of this was done under the supervision of the matron and other employes.

This institution is fortunately blessed with an excellent matron, who has the happy faculty of arousing the girls to a desire to excel in their work, as well as to be upright in general deportment. I am pleased to report that all of the employes have manifested a sincere interest in their respective duties and the girls show it in the excellent progress made.

We have been unable to organize the school wholly upon the basis of the new course of study, but did so far as possible with text-books on hand, as prescribed, would permit.

All of the holidays were appropriately observed. Thanksgiving day was the time for roast turkey, etc., for dinner, and in the evening thanksgiving exercises. Christmas called for a tree with presents hung on for each child. Franchise day was observed with entertainment, patriotic speeches, songs, etc., by pupils, after which Special Allotting Agent Hartwig made a few appropriate remarks. Decoration day was spent in the town of Baxter Springs, Kans. Exercises were also had at the close of the school.

The children made satisfactory progress in their studies, many of them making uncommon good showing.

During the course of the year there have been several new positions created, also a few resignations, which required new employes, and in each instance good selections were made. The best employes are those who have a deep sense of the responsibility resting upon them and who are interested in the work.

The health of the school has been especially good. One very delicate girl was stricken with spinal meningitis. She lingered for several weeks and finally was removed to her home, where she died. Also one boy, a student of Carlisle, was returned to the reservation with consumption; having no home, we admitted him to the school, where he remained for several months, and was finally sent to his sister's, where he died. Outside of these 2 mentioned the health of the school was excellent.

Each night chapel exercises are held and on Sunday the Sabbath school and other religious training. The children manifest considerable interest and are anxious to attend the services.

Agent Moore has been especially interested in the school work at this agency, and has given a helping hand at all times. The success of this school is largely due to the evident sagacity and ability of Maj. Moore to command the respect of the Indians as well as of the children and employes. His frequent visits to the school have helped us to no little extent. The Quapaw school is on a good, sound basis, and with the increased attendance that we will have this year, provided the buildings spoken of in this report are allowed, I feel confident that greater good can be accomplished and more satisfactory advancement be made, should the honorable Commissioner authorize shops to be instituted here, in order that the larger boys be given an opportunity to learn trades.

With grateful acknowledgment for many courtesies and liberal support, I am, very respectfully,  
 HARWOOD HALL,  
 Superintendent.

Maj. T. J. MOORE,  
 U. S. Indian Agent.

## REPORT OF PHYSICIAN QUAPAW AGENCY.

QUAPAW AGENCY, August 25, 1891.

SIR: I have the honor to submit my report for the fiscal year ending June 30, 1891.

It is quite difficult to obtain a correct sanitary report of an agency as large as this, and my record is, therefore, not accurate in regard to births, but the number of deaths, I believe, is correct. Upon the reservation at large there have been 26 deaths, and, so far as I have been able to learn, 23 births dur-

ing the year. Of the 26 deaths, 14 died with pulmonary consumption, a small per cent of the remainder with scrofula and the rest with the prevailing acute diseases. Eight of the deaths from pulmonary consumption occurred in the Modoc tribe. There has been a greater decrease in this tribe during the past year than during any similar period since I came to this agency. Hardly one is exempt from some form of pulmonary or strumous disease. They are an industrious people, but in point of physical strength they are far below the average Indian. Notwithstanding the fact of their great decrease, they yet have confidence in the white man's medicine, and observe his instructions as far as they are able to comprehend.

**Boarding schools.**—In connection with a brief report of the agency boarding schools, I desire to say a few words in reference to an epidemic of measles that visited the Seneca, etc., boarding school last winter. The first case of the above disease appeared in this institution January 5, 1891. Every pupil who had not previously had the disease was attacked, making in all from 85 to 90 cases. This was about 75 per cent of the entire school. The teachers and other employés were assigned places as nurses and every available room converted into a hospital. The faithfulness and the earnest attention given the sick by the superintendent and all of his employés deserves especial mention. They responded willingly to every call both day and night, and labored with an energy rarely equaled. They carried out my directions well, and their great devotion to the sick can not be overestimated.

I desire to speak of the varying severity of the same disease in the two sexes, and point out what, in my opinion, is the cause of this difference.

The sleeping apartments, or dormitories, were used mainly for hospitals. The room used for the males is 40 by 60 feet, being spacious, and will admit of the most thorough ventilation. It is quite favorably located, being entirely detached from the other buildings. That used for the females is quite as large as the other, but is poorly constructed and will allow very imperfect ventilation. The windows are small, the ceiling unusually low and, too, it is located directly over the kitchen and dining hall. The males all recovered without a single pulmonary complication. Among the girls there were at least sixteen cases of well-marked broncho-pneumonia, besides several cases of laryngitis and bronchitis. In spite of the best treatment we were able to give, three of the girls died with the first-named complication.

It is certain, therefore, that the overcrowded condition of the dormitories used for the girls, the location and construction of the same, and the great lack of ventilation or pure air brought on the complications and increased the severity of the disease. If it had been possible to adopt suitable hygienic measures in this epidemic, we would probably have had to record no deaths, and there certainly would have been fewer complications.

My sanitary reports have shown from month to month the condition of the Quapaw Boarding School, and it is not necessary, therefore, to speak of it, except to say that the health of the school has been good.

Respectfully,

Maj. T. J. MOORE,  
U. S. Indian Agent.

JOHN S. LINDLEY,  
Agency Physician.

## REPORT OF UNION AGENCY.

UNION AGENCY,  
Muskogee, Ind. T., September 7, 1891.

SIR: I have the honor to submit the following partial report of this agency for the year ending September 1, 1891, the pressure of important business preventing me from preparing one more complete. A great deal of the substance of annual reports has been heretofore covered, hence I respectfully refer to my reports for 1889 and 1890 as containing matters of importance and recommendations of moment, which, so far as I am advised, are yet unacted upon.

The jurisdiction of this agency is coextensive with the boundaries of the so-called Five Civilized Tribes, viz, Cherokee, Creek, Choctaw, Chickasaw, and Seminole Nations, and covers an area of nearly 31,000 square miles. These nations are occupied by a citizen population of about 17,000 Indians who pass for full-bloods, 34,000 of mixed-blood, and 16,000 or 17,000 intermarried whites and freedmen. There is also a noncitizen population in this country composed of Government employés, employés of railroads and coal mines, claimants to Indian citizenship, farm laborers, mechanics, and others, aggregating with their families more than 100,000 souls. The great majority of this latter class have complied with the laws governing the residence of noncitizens in the several nations, and are honorable and upright. The minor part of this noncitizen population is composed of claimants to citizenship, squatters upon the Indian lands, cattle-grazers, and various other classes of trespassers, who have taken advantage of the existing anomalous condition of affairs to trespass herein.

There is a steady increase in the noncitizen population of this agency, even greater than is the constant decrease of the Indian citizen. There are few pure blooded Indians now living in this country. The white blood predominates in all of the nations; very few full-blooded Indians fill the offices or take part in the management of national affairs. In the Cherokee, and especially the Creek and Seminole Nations, the freedmen citizens are showing a strength which, if united, would practically control the elections and the administration of affairs. The Creek election, just closed, was decided by the votes of the Creek freedmen, who form a third of the citizens. Noncitizens, especially cattle-grazers, are wielding a strong hand in the politics and management of this country by a liberal use of their money.

**Government.**—There has been no marked change during the past year in the government or judicial system over the residents of this agency. As stated in previous re-

ports, each of the five nations has its own constitution and code of laws, with courts to enforce them over their respective citizens, but without jurisdiction as to noncitizens within their midst. The United States Courts for the Indian Territory, the Western District of Arkansas and the Eastern District of Texas, severally and jointly, have jurisdiction in civil and criminal cases where one or more of the parties concerned belongs to the noncitizen element. The agency has also been given large powers for the suppression of the liquor traffic, gambling, and kindred evils, which it is daily called upon to exercise.

There is a growing and most urgent demand for the perfection of the judicial system of this country. Many crimes go unpunished because of a conflicting jurisdiction or a want of jurisdiction. In my judgment Congress should repeal such of the old nonintercourse laws as now retard the progress of this country, should enact a new code of laws adapted to the present day, and confer sole and exclusive jurisdiction over all civil and criminal matters arising in the Indian Territory upon the one court. In these laws the Indian citizen should be privileged to elect for himself, in entering suit, to institute the same in the United States or the tribal courts. To a limited extent the United States court for Indian Territory now has jurisdiction over almost every character of crime known to the law, and there appears to me no reason why full and complete original and exclusive jurisdiction in all legal matters in this country should not be conferred on this court.

In so doing, or even under present laws, Congress should require the appointment of commissioners in every well-settled neighborhood, giving them all the power held by justices of the peace under the Arkansas statute. The people generally believe the last Congress so intended a clause in the court bill, and in this view are sustained by some members of Congress who worked for and voted for the bill; but the court has held otherwise, and we have been constrained to submit until Congress can, in unambiguous terms, declare the law as intended and as it ought to be. The interests of the people demand that there be at least 40 of these commissioners for the five tribes.

**Finances.**—The finances of all the nations, save the Cherokees, are considered first class. The Cherokee Nation is considerably in debt, their warrants are depreciated, and the depression is being felt by the people. Their scrips have sold as low as 60 cents on the dollar during the year.

The Creeks are out of debt, their warrants are going at par, and they have plenty of ready cash to meet current expenses.

The Seminoles are doing well financially, and are probably in the best condition of any of these nations.

The Choctaws and Chickasaws have counted greatly upon receiving the three millions appropriated by the last Congress, and have been sorely disappointed at the delay in its disbursement.

**Individualization of lands.**—Few, if any, subjects have attracted so much general attention from the Indian people during the past twelve months as has the matter of individualizing their lands. As the subject becomes more familiar each year, it gathers an increased force. A number of very prominent and influential Indians of the Creek, Cherokee, Chickasaw, and Choctaw Nations have been strongly advocating measures looking to such a division of their landed estate.

Congress can materially aid in bringing about this progressive step by providing for and authorizing a survey of these lands, and establishing the various section lines with suitable monuments. Then provide that if any Indian shall desire to individualize his land he may appear before a proper officer of the Land Department, make a required declaration, whereupon he shall receive a certificate that all right of the United States in the reversion of his described tract should cease. This would give him a stronger title than under present laws, and would be an inducement of drawing force to bring about the day when these people will be American citizens, with the rights and responsibilities resting upon such a gracious privilege.

Such a measure, being optional with the Indian, could be provided within the letter and spirit of the treaties, and a majority of them would hastily avail themselves of its privileges.

Under present Indian laws and customs the energetic, aggressive citizen has become the possessor of thousands of acres of the good land, until the best lands are now occupied and used by less than one-fourth of the people. There are farms of 500 to 10,000 acres of the best lands, and pastures of many more thousands of acres, and it has become an alarming question to some of the nations where those of their citizens as yet not provided with homes are to obtain tillable lands.

#### INTRUDERS.

Heretofore the reports of this agency upon the number of intruders in this Indian country were based upon official information furnished by the several nations. I now have the honor to present to you a report founded upon careful personal investigations.

In December last I was furnished by the national authorities of the Chickasaw Nation certified lists or rolls of intruders in said nation, said lists aggregating over 7,000 men, women, and children. The complaint in each case was that said parties, as noncitizens of the Chickasaw Nation were subject to the requirements of the Chickasaw permit tax law, and that they had willfully neglected or refused to comply therewith. In other words, that they were in said nation without authority of law. These lists were forwarded to you and by you to the honorable Secretary of the Interior, with proper recommendations in each case.

In April, 1891, and subsequently I was directed to remove from said nation all persons found therein without authority of law or contrary to law, and as soon as I could crowd aside and suspend other important matters I proceeded to carry out these orders. Accordingly, I arranged to begin the work at a point along the western limit of the nation, and working the country eastward between the Washita River and Rush Creek to near the Santa Fé Railway. It was a serious matter to carry out your instructions or the law to the letter. I was forced to make my own rules for determining who were proper subjects for removal, and who should be allowed to remain as having authority of law for their residence, as you are heretofore fully advised.

The Choctaw and Chickasaw treaties provide: "That all persons not being citizens or members of either tribe found within their limits shall be considered intruders," and be removed from and kept out of the same by the United States agent, assisted, if necessary, by the military, with the following exceptions, viz:

Such individuals as are now or may be in the employment of the Government, and their families; those peacefully traveling or temporarily sojourning in the country or trading therein under license from the proper authority of the United States, and such as may be permitted by the Choctaws or Chickasaws, with the assent of the United States agent, to reside within their limits without becoming citizens or members of either of said tribes.

The Chickasaw law providing for "such as may be permitted by the Choctaws and Chickasaws" is as follows:

SECTION 1. *Be it enacted by the legislature of the Chickasaw Nation*, That citizens of any State or Territory of the United States, wishing to hire or rent land or be otherwise employed in this nation, shall be required to enter into contract with a citizen, and after contract has been agreed upon the noncitizen shall place in the hands of the citizen a sufficient amount of money to pay permits, and that the permit collector shall receive no permit money from any other person except from a citizen of this nation, and for each and every violation shall be fined in any sum not less than \$10 for each and every offense by the county judge of the county where the offense was committed.

SEC. 2. *Be it further enacted*, That any citizen who shall employ any noncitizen shall apply, within fifteen days after entering into contract, to the permit collector of the county where said noncitizen wishes to reside, for a permit for every male noncitizen over the age of 18 years in his employ, and for each permit so obtained the citizen shall pay to the permit collector issuing the same the sum of \$5, and the permit collector shall retain for each permit issued 15 per cent for his services, and shall report to the auditor and treasurer quarterly of all moneys received by him for permits, and after deducting out his fee shall pay the balance over to the treasurer for national purposes.

SEC. 3. *Be it further enacted*, That every foreigner that shall come in this nation for the purpose of farming or being otherwise employed, without the proper authority from the United States Government, shall be deemed an intruder by virtue of section 2134 of the Revised Statutes of Intercourse Law.

SEC. 4. *Be it further enacted*, That all licensed merchants and traders (noncitizens) shall in addition to the tax paid on goods be required to procure, from the permit collector in (the county in) which they wish to trade, a permit. And all physicians (noncitizens) wishing to practice their profession shall procure from the governor of the Chickasaw Nation a permit, for which they shall each pay \$5 conditioned upon the faithful observance of the laws of this nation; and the governor shall dispose of the funds in the manner prescribed in section 2 of this act.

SEC. 5. *Be it further enacted*, That no permit shall be granted for a longer time than twelve months, and in case of violation of any law of this nation, the offender shall be ordered out of the limits of the Chickasaw Nation, and any citizen who shall employ any noncitizen for a longer time than fifteen days without procuring a permit for the same shall be deemed guilty of a misdemeanor, and be subject to a fine of \$25 before the county court having jurisdiction; and all fines collected under this act shall go into the county treasury for county purposes.

SEC. 6. *Be it further enacted*, That any noncitizen having entered into contract with any citizen of this nation, and obtained a permit under his employ, and shall leave the employ of said citizen shall forfeit his permit, and no other permit shall be granted any noncitizen forfeiting the same by either permit collector of this nation.

SEC. 7. *Be it further enacted*, That any person living in this nation under permit shall not be allowed to bring into or hold more than five head of milch cows, and shall have no hogs outside of inclosure, but shall be allowed all the work horses, mules, and cattle as may be necessary to work said farm, and shall be allowed to feed surplus crop to beef cattle, under fence.

SEC. 8. *Be it further enacted*, That all freedmen not owned by the Chickasaws and Choctaws, and residing in the nation at the date of the treaty of Port Smith, shall be required to get permits under citizens of the Chickasaw Nation, as other noncitizens.

SEC. 9. *Be it further enacted*, That any noncitizen wishing to remain in this nation for a shorter time than twelve months can do so by paying a monthly permit to the permit collector of 50 cents per month for every month or part of a month, if he wishes to reside in this nation as mechanic (or) farm laborer; and that this act is not to be construed to employ noncitizens as laborers to run stock in this nation.

SEC. 10. *Be it further enacted*, That all monthly permits shall be collected as other permits, and that all acts or parts of acts in conflict with this act are hereby repealed, and this act take effect and be in force from and after its passage.

It will be observed in this law that noncitizens are required to pay to some citizens of the nation the sum of \$5 as a tax for the permission of the Chickasaws; that

the citizen should pay this sum to a national collector, whereupon the noncitizen would be "permitted by the \* \* \* Chickasaws;" that the noncitizen could not be "permitted" without paying the money through some citizen with whom he had entered into a contract, and that permits were limited to twelve months. These are the essential features.

Nowhere in their permit laws do the Chickasaws (or any of these Indian nations) recognize the United States in the granting of their permits, although the treaties expressly provide for the "assent of the United States" to each and all of those "permitted." Though ignoring a portion of the treaty, the Chickasaw governor and delegates were clamorous for the enforcement of other clauses thereof. Thus they hoped to find the Indian Department a convenient cat's paw to draw their chestnuts from the fire. The Chickasaw governor demanded the removal of those whose names were listed as above stated, and also many others whose names had not been obtained for the certified lists. His demand is more clearly set forth in his letter to you of July 8 last:

The duty of the United States Government under the treaties, and of the agent under his orders, is to remove such intruders as the governor or other official representative of the Chickasaw Nation shall orally, or in writing, report at the time and place when and where operations are in progress.

This demand was so unreasonable and unjust that its sanction and enforcement by me would have been inhuman and barbarous in the extreme. Accordingly, in the absence of specific instructions from you as to the construction of law, I was constrained to prepare some system by which to differentiate the classes of persons who were entitled to and received a hearing in this matter. Accordingly, I prepared a set of rules which will be found at a later point in this report.

The governor objected to each and every one of these rules and, as you know, left the work and appeared in person, by attorney, and by letter before you in Washington to protest against the method pursued by me in these investigations. In this very inconsiderate letter the governor assumed such untenable, unreasonable, and absurd positions that his own people could not and would not indorse him, but on the contrary, voluntarily made affidavits which exhibited both his ignorance of the Chickasaw customs and laws and his intolerance of the white man, the noncitizen.

Beginning the active work of removals on Monday, June 22, I continued in the field until July 15, during which time I held open investigations, or "hearings," as they became known, every day, examining into cases involving the rights of several thousand persons. These hearings were generally held under the friendly shade of some spreading oak; at other times while driving along the road, at all hours of the day and of the night, rarely within a house, and altogether under circumstances which can neither be understood nor appreciated except by those who were present. These investigations were open, or public, the Chickasaw Nation (after the governor left) being represented by Capt. Bourland, the parties arraigned appearing for themselves and at times by attorney. Capt. Bourland would enter specific complaint against a party, who would be cited for immediate trial. Few witnesses were called, every man who was removed condemning his own cause. There were no disturbances, no disagreements, no hard words, but quiet determinations to faithfully perform the onerous duties in a spirit of equity toward all concerned, so that there would remain no after sting of injustice done toward a single soul. More than 100 Chickasaw Indians, by blood, who attended these hearings were well satisfied their rights were being upheld. The more numerous noncitizens were satisfied they were being lawfully and fairly dealt with, and even those whose removals were ordered could not do otherwise than and did express themselves as being humanely and justly treated. I did not have a harsh word with any man. There was no resistance, and the people who came to the camp were assured by what they saw and heard that no wrong was being suffered by anyone.

Those persons, to the number of 150, removed by my orders were principally squatters and those who had refused to comply with the permit laws of the nation. I was assisted and supported in the work by Troop F of the Seventh Cavalry, under Lieutenants Wilkinson and Clark. It is merited that I should say that they are careful, discreet, and accommodating gentlemen.

On July 14 the governor arbitrarily and without lawful authority ordered and stopped the issuance of permits. Thereupon the troops of cavalry journeyed to Fort Sill, from whence they came, and I prepared to go to the telegraph office that I might communicate with you. On the 15th of July I received your telegram, to wit:

You are authorized to exercise your own judgment with reference to the further continuance of present effort to expel intruders from Chickasaw Nation. Wire me your decision.

I at once wired you that in my opinion the work ought to be continued, and requested authority to lay the matter anew before you in Washington, that there might not be further interruptions. In the mean time I returned to the agency, leaving a detail of Indian police to effect the removal of a number of persons whose cases had been heard and decided adversely, but who, from various causes, were granted

further time. In your letter of July 17, to Governor Byrd, you so completely covered the ground that when you wrote me to report by telegraph for authority to visit Washington, I deemed such a visit not then necessary. By this time the removal ordered had been enforced and matters were *in statu quo*; there was pressing work on hand at the agency, and thus the matter still stands. I do not know if it will be resumed or not.

I am aware that Congress has not given you sufficient funds to bear the necessary expense of a three months' campaign, and I have advised Governor Byrd that if he and his national legislature desire a continuation of the work that the Chickasaw must foot the bills. The governor writes that he thinks they will do this, and I am now awaiting a notice to meet the legislature with a proposition looking to the complete working of the entire nation. If this is done the work will be continued without military aid and without militia. I can select twenty or more Indian police and have the work performed much better than to use a hundred raw militia, many of whom can not or will not speak English.

Hearsay reports reach me that some who were removed have returned to the nation. I am inclined to believe that a few have returned, while I know others were a few days since seeking new homes in Texas.

As this report is intended for the public as well as your office, I insert your letter to Governor Byrd as covering in a general way many of the salient points and showing the rules adopted by me to govern the work.

WASHINGTON, D. C., July 17, 1891.

Hon. WILLIAM L. BYRD,  
Governor Chickasaw Nation,  
Metropolitan Hotel, Washington, D. C.

SIR: Referring to my letter of July 7, 1891, quoting, for your information, rules adopted by Agent Bennett, of the Union Indian Agency, to govern his action in the execution of the authority of this Department for the removal of intruders from the Chickasaw country, and requesting that you suggest such modifications as these rules, with your reason therefor, as you might deem best, I have to acknowledge the receipt of your letter of July 8, 1891, in response thereto.

The said rules are as follows:

"First. I shall permit those noncitizens to remain who are in possession of permits issued by legally authorized permit collectors.

"Second. Also those who hold permits for their previous years of residence, and hold their 'natives' receipt for money paid for permit of 1891.

"Third. Also those who hold permits for their previous years of residence, and can prove they have paid or offered to pay the money for permit of 1891 to their 'native.'

"Fourth. Also those who hold permits for their previous years of residence and can prove that the permit collectors (as has been the custom) granted to them an extension until crops were gathered to pay their permit tax.

"Fifth. I consider proper subjects for removal those noncitizens who have settled upon the Chickasaw lands, claiming residence under 'squatter' rights.

"Sixth. Those who have refused to pay their permit tax.

"Seventh. Those who are disorderly disturbers of the peace and violators of the law."

With respect to the first rule, you say in your letter that it "may not be objectionable" (objectionable?) if restricted to its plain import and observed in good faith, but that "it has become apparent that this rule is the pretext under which the agent has begun, and if permitted will continue, to honor the so-called 'bogus' permits, thousands in number, by which permit collectors have, and in violation of Chickasaw statutes, and in conspiracy with intruders and other enemies of the Chickasaw, sought to nullify the attempt which the Commissioner of Indian Affairs is now making to remove the intruders from the Chickasaw Nation;" that no permits are valid under the Chickasaw statutes "unless prepared on blanks issued by the national secretary, printed in book form, with stubs attached," etc.; that it is a notorious fact that since the Department "ordered the removal of the intruders certain deputy collectors have procured from different printers great numbers of blanks not issued by the national secretary," and have issued permits on these blanks to intruders, alleging that their object in doing this was twofold, viz, to thwart the efforts of the Government to remove the intruders, and to put money into the pockets of the deputy collectors; that this fact is well known to the agent; that during three days, 22d, 23d, and 24th of June last, you "presented to the agent more than twenty-five cases of intruders who held alleged bogus permits, and the permit collector for Pickens County, being personally present, certified orally to the agent that their permits were fraudulent;" that notwithstanding the certificate of the collector the agent accepted these permits as valid, and refused to remove the intruders who held them; that "it is manifest that this first rule adopted by the agent, if practically applied as he has hitherto applied it, will afford a convenient pretext for refusal to remove hundreds, if not thousands, of intruders;" and in view of all this you suggest that the first rule shall not be construed or applied so as to "exempt from removal any person whose only authority for remaining in the Chickasaw country is a permit which the county permit collector shall either orally or in writing certify to be illegal and fraudulent."

You say in your letter "that the second rule, which provides that persons who hold permits for previous years of their residence in the Chickasaw Nation, and a receipt from the citizens of the nation with whom they are under contract for money paid such citizen for permit for 1891, should not be removed, is wholly undefensible;" that "under the law a valid permit issued by the permit collector authorizes a noncitizen to reside in the Chickasaw Nation, but a receipt for money given by a Chickasaw citizen to a noncitizen confers no such authority;" that "the practical application of this rule will work a great fraud upon the law and will present a serious obstacle to the removal of intruders" by the United States; that "the result will be multitudes of intruders will shield themselves under receipts given, since the removal was ordered, by private citizens whose receipts are of no validity for any such purpose, and will have been given in many if not most cases without any actual payment therefor to the citizens signing the same;" and you suggest that this rule be disapproved by the Commissioner, and that the agent be instructed to give no effect to any receipt which is unaccompanied by a permit lawfully issued by the permit collector.

The third rule, making provisions similar to those of the second rule, with the exception that the non-citizen not having his "natives" receipt may prove by other means that he paid or offered to pay the

money for a permit for 1891 to his native, you say is obnoxious, and subject to objections similar in character to the objections set forth by you to rule second, but very much stronger, and suggest that this rule be wholly abrogated.

The fourth rule describes another class of noncitizens who will not be removed by the agent, and is as follows: "Also those who hold permits for their previous years' residence and can prove that the permit collectors (as has been the custom) granted to them an extension until crops were gathered to pay their permit tax." You say that this rule, as you claim the second and third rules do, substitutes for a law a plan which is wholly the coinage of the agent's own brain; that "the law does not permit the collectors to extend the time for the payment of the permit tax until the crops are gathered," "that no such custom has ever obtained," that you "have never known a single instance of such an extension of time by a permit collector;" "that the law requires the noncitizen shall be provided with a permit and not with an agreement for the future purchase of a permit;" and that "the observance of this fourth rule will obviously make a farce of this attempt to remove the intruders."

In concluding your consideration of the rules above quoted you state that if the first, second, third, and fourth rules, indicating the class of persons not to be removed as intruders, are carried out as the agent has hitherto seen fit to carry them out, they will exempt from expulsion nine-tenths, if not ninety-nine-hundredths, of the intruders. That, on the other hand, the fifth, sixth, and seventh rules, indicating the persons to be removed as intruders, will relieve the Chickasaws of the presence of not more than one-tenth of those noncitizens, who, without lawful right or authority, now reside in that nation, and "submit that there can be neither fairness, nor equity, nor law in the practical observance of this system of rules which has been established, not by statute, but by the determination of the agent himself; that they will fasten upon the Chickasaw Nation great multitudes of intruders, and to whose interests the rights of the Chickasaws will be sacrificed;" that "the agent has much to say as to the tender consideration due to these men, who for their own selfish gain persistently trampled on the rights of the Chickasaws, and defy the laws and treaties of the Chickasaw Nation and of the United States;" that "it is the same tenderness which unwise and unjust juries sometimes exhibit for hard and desperate criminals at the cost of their innocent victims;" and that "it is not the object of intelligent justice to deny itself to the upright and innocent, and waste its benefactions on outlaws and criminals."

With respect to the report of the agent that many of the names appearing on the list furnished by the Chickasaw authorities, through the agency to this Department are Mexican war pensioners and persons on a visit to their children who are married to Chickasaw citizens, you say, first, that you never knew of a single Mexican pensioner residing in the Chickasaw Nation, and, second, that the law does not give the right to permanently reside in the Chickasaw Nation to those white persons whose children have been married with Chickasaws, whether they reside there under the convenient pretext of being visitors, or under any other pretext.

As an illustration of the rights claimed by some of the parties whose names appear on the list of so-called intruders, you give the case of one Randolph, as follows: "Giles Thompson, a white man, married a Choctaw woman. She died and he afterwards married a white woman. By this second marriage the white man Thompson had a daughter who had no Indian blood. A white man named Randolph married this white daughter of the white man Thompson and his white wife, and now occupies without a permit a farm in Pickens County which he claims the right to hold on the ground that Thompson's first marriage to a Choctaw wife invested him with a right to occupy Choctaw land; that Thompson's subsequent marriage to a white wife invested the white wife with the right to occupy Chickasaw land, and that Randolph's marriage to the white daughter of the white man Thompson, and his white wife, entitled Randolph to reside without a permit on Chickasaw land. It is to be added that Randolph employs several tenants who are white men and who are without permits. I demanded that the agent should remove Randolph as an intruder, but he declined to remove him without instructions from the Indian Office."

In concluding your letter you express the belief that it would be better, not only for the Chickasaw Nation, but also for Agent Bennett, that the task of removing the intruders from that nation should be transferred to a man of unquestionable integrity and capacity, who will not be handicapped by his confident predictions of failure.

To recapitulate, you object: First. To rule 1 on the ground that many permits issued by the legally authorized permit collectors of the Chickasaw Nation, but on paper not furnished by the national secretary, will be recognized by the agent thereunder. Second. You object to rule 2, claiming that a noncitizen can have no right to reside in the nation unless he has in his possession a permit regularly issued by one of the permit collectors of the nation, that the receipt of the citizen who has him employed evidencing the fact that such noncitizen had paid him money for procuring the permit, does not relieve such noncitizen of the liability to removal as an intruder. Third. That you object to rule 3, wherein the agent proposes to allow alleged intruders to show by such evidence as they may be able to present that they have paid to the proper citizen of the nation money to apply in the procurement of permits for the year, on the same ground as is based your objection to rule 2. Fourth. You object to rule 4 because the law does not authorize permit collectors to extend the time within which a noncitizen may pay for his permit, and that no such extension as alleged has ever obtained in the nation. Fifth. The fifth, sixth, and seventh rules you claim do not cover all the cases of intruders in the Chickasaw Nation who are liable to removal as such under the law, and for this reason you object to them.

In reply, I have to say: First. That I have carefully examined the laws of the Chickasaw Nation upon the subject of permits, and have given very careful and anxious consideration to the questions that are presented in your letter in the light of those laws.

By an act of legislature of the Chickasaw Nation of September 23, 1887, "creating a permit collector in each county, and for other purposes" (Constitution, Treaties, and Laws of the Chickasaw Nation, p. 197), it is provided in section 1 that one permit collector should be elected in each county at the general election in 1888 to serve for two years, unless sooner removed for misdemeanor in office; in section 2, that the governor shall commission such permit collector, who should give a good and sufficient bond in the sum of \$1,000 to the Government for the faithful performance of his duties, and receive as his compensation 15 per cent of the moneys collected for permits, and who is given the right to appoint deputy permit inspectors to assist him in the work, such deputies to give bond in the sum of \$500 to the governor; in section 3 provision is made as follows:

"Be it further enacted, That the national secretary shall furnish the permit collector in each county with blank certificates, book form, with stubs attached, numbered from one up, that is necessary, and said stubs and certificates shall be printed, and the numbers shall correspond with each other."

Section 4 states the time when this act shall take effect and repeals all acts or parts of acts in conflict with it. I am unable to find any provision of law which requires that the permit collector shall give the noncitizen permits on the blanks furnished by the national secretary, and which nullifies permits given by the permit collector on any other kind of blank.

From the law above referred to the inference would be drawn that the intention of the legislature of the Chickasaw Nation was that permits should be issued on blanks furnished by the national sec-

retary. This system of blanks, however, would seem to have been provided for by the legislature in order to simplify the public record of permits issued, but the permits themselves, while they might be irregularly issued upon other paper, would seem not to be invalid. A permit in the hands of a non-citizen of the Chickasaw Nation is receipt for taxes paid to the nation, and would be taken as primary evidence of that fact. Whether the permit tax had been paid is a question of fact which may be determined, it seems to me, in other ways than by the presentation of a permit receipt; however a permit, if relied upon by a non-citizen to relieve him of the liability of removal from the nation, must have been given by a legally constituted officer of the government, authorized to give such permits. I should hold that if a permit collector of the Chickasaw Nation were to give a receipt for a permit tax received by him wholly in writing, and not upon any blank, such receipt would exempt the holder from removal as an intruder. I am therefore of the opinion that rule 1, adopted by Agent Bennett, properly adhered to, will do no injustice to the Chickasaw Nation, and would prevent the unjust removal of parties in that nation who, having complied with all the requirements of law, are entitled under such laws and treaties to remain in the nation, and to whose removal the authority of the Secretary of the Interior does not, in my opinion, extend. If permits were issued by a permit collector upon other paper than that furnished by the national secretary, the law if violated would be so violated by the permit collector, and not by the non-citizen paying the tax. It would seem that the nation would be bound by the receipt of its officer, and if defalcation occurs the nation must punish its officer for violation of its own laws.

Second. As to Rule 2, I have to say that section 1 of the permit law (constitution, treaties, and laws of the Chickasaw Nation, page 229) provides as follows:

SEC. 1. "Be it enacted by the legislature of the Chickasaw Nation, That citizens of any State or Territory of the United States wishing to hire or rent land or be otherwise employed in this Nation shall be required to enter into contract with a citizen, and after contract has been agreed upon the non-citizen shall place in the hands of the citizen a sufficient amount of money to pay permits, and that the permit collector shall receive no permit money from any other person except from a citizen of this Nation, and for each and every violation shall be fined in any sum not less than \$10 for each and every offense, by the county judge of the county where the offense was committed."

Rule 2, under discussion, provides that the agent will allow to remain in the Chickasaw Nation "those who hold permits for their previous years of residence, and hold their 'natives' receipt for money paid for permit of 1891." In the light of section 1 of the permit law, just above quoted, this rule is eminently fair, for the reason that the non-citizen is required to pay into the hands of the citizen of the nation by whom he is employed sufficient money to pay for a permit. When the non-citizen shall have paid this money into the hands of the citizen, his responsibility under the law ceases, and the matter will have passed beyond his control. It would be improper and unjust for the Government of the United States to remove a party who, so far as it is in his power, has complied with the law and acquired a lawful right to remain in the Chickasaw Nation. The fact that he has not received a permit, as contemplated by the law, is one attributable to the neglect of the citizen of the Chickasaw Nation, and not to any act of the non-citizen. If the non-citizen can show a receipt from his "native," the nation ceases to look to him in the matter further, and must look to such "native" for the payment of the money. The citizen immediately becomes entitled to a formal permit, and the nation should prosecute its own citizens for violating the law when it shall appear that the money has been paid him and he has neglected to apply for and procure a permit as required by section 2 of the permit law.

Third. The third rule provides that the agent will not remove "those who hold permits for their previous years of residence, and can prove they have paid or offered to pay the money for permit of 1891 to their "native". This rule, like the second one, I deem to be just and fair, because, as it would seem proper that a non-citizen should not be disturbed if he has the receipt of his "native" for money paid, for the reasons above set forth, it would also seem proper that the non-citizen should be permitted to prove by other ways that he has paid the money to his "native." He may have paid the money, and complied with the law, but took no receipt therefor, or his receipt may have been lost, yet he would be entitled notwithstanding to remain in the nation and would not be a person residing in the Chickasaw Nation without authority of law, and not covered by the Secretary's authority for the removal of intruders.

If the non-citizen can show that he has paid the money and received permits in accordance with the law for his previous years' residence in the Chickasaw Nation; that he has entered into a contract for 1891 with a citizen; and that he offered money to such citizen as required by law to pay for his permit for 1891, and the citizen refuses to accept it, I can not see that such non-citizen can be held liable under the law to removal, for the reason that it is beyond his power to compel a citizen of the Chickasaw Nation to receive money from him for that purpose. The fact that he has permits for previous years of residence would not of course authorize him to reside in the nation for this year without a permit; but it would be an evidence of good faith on his part, and when he shows that he offered the money to the party with whom he is in contract, and that party refused to accept it after having entered into contract with him, his responsibility in the matter ceases, and the nation must look to its citizen for the money. The non-citizen is required by law to place into the hands of the citizen with whom he contracts "a sufficient amount of money to pay permits;" if that citizen refuses to accept the money it must be presumed that he intends to pay for the permit himself, for it will be remembered that there is none other to whom the non-citizen can pay it, as the permit collectors are prohibited under penalty of fine from receiving permit money from any others than citizens of the Chickasaw Nation. The tender of money for payment of permit made by a non-citizen to a citizen must however be supported by a lawful contract between the parties, not liable to annulment by the Chickasaw citizen for any act of the non-citizen, covering the period for which the permit is required in order to exempt the non-citizen making it from removal as an intruder.

Fourth. This rule proposes to exempt from removal all non-citizens holding permits for their previous years of residence, who in accordance with the custom of the permit collectors shall have been given time until they shall have gathered their crops to pay for their permits for 1891. On this point you say the law does not allow the collectors to extend the time for the payment of the permit tax until crops are gathered; that no such custom has ever obtained; that you never knew of a single instance of such an extension of time by permit collectors, and that the law requires that the non-citizen shall be provided with a permit and not with an agreement for the future purchase of the permit.

It will be remembered that the law does not require the non-citizen employed by a citizen of the Chickasaw Nation to apply for and obtain a permit; that it requires him to pay into the hands of the citizen employing him a sufficient amount of money to pay for the permit, but the citizen of the nation must apply for a permit and pay for it. This office is not advised whether the permit is issued in the name of the citizen of the Chickasaw Nation or to the non-citizen, but it is presumed that the permit is issued to the non-citizen and is held by him as an evidence of his right to remain in the nation.

The object in ordering these removals by this department was to free the Chickasaw Nation from the class of intruders whom this department was led to understand were located upon and using the usufruct from the lands of the Chickasaw Nation, to the exclusion of the citizens of that nation, who re-

fused to comply with the laws of that nation relative to permits and enter into contract in accordance therewith; and who were disreputable violators of the law, and gamblers and other classes, and not to remove persons who have for years complied with the laws of the Chickasaw Nation and entered into contracts required by those laws, made farms for the citizens of the nation, and in this way added to the wealth and advancement of the nation.

I am in receipt of a report dated June 30, 1891, from Agent Bennett, in which he incloses a sworn statement by Harrison McClane, said to be the head permit collector for Pickens County, from which it appears that "it has been a custom among the deputy collectors to allow the noncitizens until fall, or until after he has disposed of his crop, to pay for his permits." Also a sworn statement by W. M. Bourland, captain commanding the Chickasaw militia, stating that he is familiar with the circumstances set forth in Mr. McClane's affidavit, and that the statements made in that affidavit are true. It seems, therefore, that you are mistaken when you say that it is not the custom for the permit collectors to allow the noncitizens time within which to pay for their permits. If the citizen of the United States can show that he has resided in the Chickasaw Nation for a number of years past; that he has for each year of his residence paid for his permit as provided by law, and that he has been given time by the permit collector to pay for a permit for 1891, this department does not deem that the exigencies of the situation are such as to require the removal of such citizen of the United States as an intruder, especially when it is shown that it is a custom with the collectors to allow noncitizens time within which to pay for their permits.

The Attorney-General, in his opinion of December 12, 1879 (16 Opinions, 104), decided that this department, charged with the removal of intruders from the Cherokee Nation in accordance with the treaty, is not bound to regard simply the Cherokee law and its construction by the council of the Cherokee Nation in removing intruders, but must determine for itself under the general law of the land the existence and the extent of the exigency upon which the requirement for the removal of alleged intruders is based.

If citizens of the United States have been permitted in previous years to remain in the nation upon the promise to pay for a permit after their crops are gathered, and have been permitted to put in a crop for this year upon a like promise, this department should not remove such citizens of the United States from the nation as intruders.

I am therefore of the opinion that these four rules adopted by the agent are valid, and should be approved by this department, and if all persons in the Chickasaw Nation not exempt from removal by these rules are removed, it would seem to me that the obligation of the Government to remove intruders from the nation, would have been fully executed.

Fifth. As to Rules 5, 6, and 7 no objection is raised by you except that they do not go far enough. They are as follows:

Fifth. I consider proper subjects for removal those noncitizens who have settled upon the Chickasaw lands, claiming residence under "squatter" rights.

Sixth. Those who have refused to pay the permit tax.

Seventh. Those who are disorderly disturbers of the peace and violators of the law.

Instead of these three rules, one rule would be sufficient, as follows: "I consider proper subjects for removal all noncitizens who can not claim exemption under one of the four preceding rules."

The first four rules seem to me to be equitable and just, and I am of the opinion that the Government will have discharged its obligation by removing all persons from the Chickasaw Nation not covered by them, and they are hereby approved by me.

As to the case of Randolph, referred to by you, and quoted in this letter, I have to say that upon submission of the matter to this Office by the Agent, his case will be considered.

Having decided to approve the rules substantially as adopted by the agent, and inasmuch as you express the opinion that said rules if adhered to would result in rendering the movement ineffective, I telegraphed Agent Bennett, under date of July 14, 1891, as follows: "You are hereby authorized to exercise your own judgment with reference to the further continuance of present effort to expel intruders from the Chickasaw Nation. Wire me your decision."

I can only say now that if the Chickasaw authorities desire to have the aid of the Government in ridding the nation of intruders they must modify its present laws in such manner as will make it possible for the Government to act intelligently in dealing with the matter, and to determine who are intruders, and must submit a list of intruders which can be relied upon.

It is perhaps not to be wondered at that defects were found in the practicable application of your permit laws in view of the various phases, not foreseen by you, which the question of the removal of intruders from the Chickasaw Nation has assumed in the light of those laws, but this experience would seem to render it necessary that your laws be amended, and enforced in such manner as to make it possible for this department, by cooperation with the Chickasaw authorities, to fully identify all persons residing in the nation without authority of law and to make future efforts by this department to remove intruders effective.

I desire, in conclusion, to say that it is hardly to be expected that the United States Government will undertake the work of collecting the permit taxes of the Chickasaw Nation from noncitizens whose residence in the nation is otherwise acceptable to the nation.

Very respectfully,

T. J. MORGAN,  
Commissioner.

The condition above portrayed exists to a greater or less degree in each of the other nations (except the Seminole). In this connection I would renew my recommendation heretofore made: If the Government is to carry out its treaty obligations Congress should provide a penalty which can be enforced when those who are removed return to the country. At present they can only be removed again when returned after removal. This is not only impracticable, but it is an utter impossibility with the present force at this agency.

Licensed traders.—At this time there are probably 300 licensed traders under the jurisdiction of this agency. There are many other persons trading without license, who, according to law, ought to have a license from you. I quote from my last report:

As this is a subject about which there is much inquiry for information, and this report is intended for the public, I will briefly review the laws and treaties thereon. The laws of the United States provide, in substance, that any loyal person, a citizen of the United States, of good moral character, shall be permitted to trade with any Indian tribe upon giving bond to the United States, etc. That the

Commissioner of Indian Affairs shall have the sole power and authority to appoint traders to the Indian tribes, and to make such rules and regulations as he may deem just and proper.

The rules and regulations adopted under this law provide: First. For the good character of the applicant. Second. Prohibit sale of wine, beer, cider, intoxicating liquor or compounds composed in part of alcohol or whisky, and the emblems of foreign powers. Third. Applications must be made through the agent, who must submit his views upon the matter. Fourth. Satisfactory testimonials of unexceptionable character and fitness must accompany the application; limits licenses to one year, and applications for renewal must be made thirty days before expiration. Fifth. Limits trade to place named in license. Sixth. Bond must be in penal sum of \$10,000, executed by persons licensed and at least two good sureties; requires approval of United States Judge, commissioner, or attorney. Seventh. Principals responsible for conduct and acts of their employes, and license may be revoked. Eighth. License may be revoked by the Commissioner of Indian Affairs whenever, in his opinion, there has been an infraction of the laws and regulations, or the conditions of the license.

Blank bonds and applications are furnished at this agency free of cost to any applicant writing or calling therefor.

The rules of the department, regulations of treaty, and Indian laws bearing upon this subject require:

In the Cherokee Nation (except Canadian district) the consent of the national council. In Canadian district no action by the Indian authorities is required.

In the Creek Nation there is a rule of the Indian Office (not observed) that when the council is in session its consent must be had. When council is not in session the consent of Creek delegates (if there be any) is required, otherwise the consent of the Creek chief. The observed rule is to require approval of the chief only, regardless of the council or delegates.

In the Choctaw and Chickasaw nations the trader is required to obtain a permit from the chief of the nation in which he proposes to trade.

The Seminole Nation has no traders, but the requirements are similar to the Creeks.

The tax upon traders varies in the several nations and upon the different classes of business. In some instances it amounts to \$700 per annum.

At present there are many traders in these Indian nations who are not licensed by you. In some instances they pay an Indian to father their illegal traffic; in others the nations recognize them as traders without requiring them to have a license from you. In my judgment, all should be placed upon the same basis; all traders should be licensed by you, or the Indian nations which ignore your licenses should be allowed to manage the matter for themselves.

Under present laws, however, there is no penalty (save removal) for trading without your license. This should be remedied by Congress providing a penalty of, say \$500, to be secured by sale of stock in trade, if necessary, under process from the United States court for Indian Territory.

**Intoxicating liquors.**—There is no question of greater importance constantly arising in the administration of affairs at this agency than that of the suppression of the introduction and sale of intoxicating liquors within its limits. As is the case in other places where the sale of intoxicants is prohibited by law, no effort is left untried, no stone unturned, to overcome the barriers that have been imposed and maintained by the most strenuous efforts against this most demoralizing traffic. Year by year the Territory seems to become a more inviting field to the avaricious venders of the various kinds of intoxicating beverages, and it is with much regret that I have to report that, despite the determined efforts of the courts and this agency, the introduction of intoxicants is increasing.

The most decided boom in the affairs of the liquor men in the Territory was brought about by a decision of Judge Bryant, of the United States court for the eastern district of Texas, recently rendered in the case of the United States *v. Kahn*, who was arrested on the charge of selling at Ardmore, Ind. T., in violation of section 2139, Revised Statutes, United States, a preparation known as malt tonic, which, it is said, contains 1½ per cent alcohol and is alleged to be nonintoxicating. A decision was rendered in favor of the defendant, the honorable judge giving it as his opinion that section 2139 did not cover malt liquors, and that the introduction of beer was not a violation of law.

This decision was encouragement enough for the immediate opening of beer saloons within the jurisdiction of Judge Bryant's court, and the number rapidly increased, being conducted under licenses obtained from officers of the revenue department, no effort being made to secure information as to the views of this agency or the opinion of Judge Shackelford, who holds concurrent jurisdiction in liquor cases.

Serious apprehension for the safety of life and property was felt by thinking people throughout the Territory if this evil were permitted to go unchecked, and many appeals were made to the agency to suppress it. I held that, although under existing laws the introduction of beer or malt liquors might not be illegal, their sale was a violation of section 2129, Revised Statutes, United States, and of section 561 and others of the rules and regulations of the Indian Department, which by virtue of authority conferred upon the honorable Commissioner of Indian Affairs by act of Congress of August 15, 1876, have the force of law in regulating trade with Indians, and that a license from the Internal Revenue Department could not exempt dealers in any form of intoxicants from the operation of section 2149, Revised Statutes, United States, or section 576, rules and regulations Indian Department. See section 3243, Revised Statutes, United States laws bearing upon the collection of internal revenue, which provides that—

The payment of any tax imposed by the internal-revenue laws for carrying on any trade or business shall not be held to exempt any person from any penalty or punishment provided by the laws of any State for carrying on the same within such State or in any manner authorize the commencement or continuance of such trade or business contrary to the laws of such State or in places prohibited by municipal laws.

Acting under this opinion, and after advising you of the situation in agency letters dated August 13 and 18, respectively, I issued orders dated August 22 to the Indian police to close the beer saloons and seize and destroy all intoxicants and remove the dealers therein beyond the limits of the agency. Under later advice from your office these orders were modified and resulted, as shown by my report of August 29, in the closing of 28 saloons along the line of the Santa Fé Road in the Chickasaw Nation, their buildings, goods, and fixtures being turned over to the United States court for the Indian Territory, to be libeled, and warrants issued for the arrest and prosecution of the offenders.

Although beer joints were short-lived, they lived long enough to fully demonstrate the wisdom of the Indian Office rules prohibiting the introduction and sale of intoxicants within the limits of the Territory, and it is not probable that they will be resumed until a decision from some higher court than Judge Bryant's has been rendered.

Nevertheless, this short-lived victory for the saloon element has served to emphasize the necessity for the enactment of a law which shall, in unequivocal and unmistakable terms, exclude intoxicants of every kind from the limits of an Indian reservation or nation; because, under a literal construction of section 2139, and under a ruling made by a court some distance removed from the Territory, where the interests of the Indians are not so clearly apparent, and the necessity for excluding every form of intoxicant so constantly exemplified—in short, a decision rendered in accordance with the strict letter of the existing law could reasonably sustain Judge Bryant's decision.

The officials of the Pacific Express Company have kept their agreements made with this office in good faith, and by the cooperation of their agents and the Indian police, the destruction of a considerable quantity of whisky has been effected, and the introduction of a much larger quantity prevented by their rigid rules relative to the acceptance of packages billed to the Territory by their agents in the bordering States.

While the relations existing between the Missouri, Kansas and Texas Railway Company and this office are harmonious, and it is perfectly understood that the company would not knowingly aid in illegally introducing liquors into the Territory or permit its agents so to do, yet it is a fact that whisky is shipped in as freight over the company's road and under the advice of the representatives of the legal department of the company in the Territory. The agents now object to having their freight inspected by the Indian police. The following is a copy of the attorney's instructions to their agent at Caddo:

Agent HOPSON, *Caddo*:

Indian police have no authority to interfere with freight in your possession unless instructions from Indian Agent Bennett to take some specific package which Indian agent has good reason to believe contains spirituous liquors unlawfully introduced into the Indian Territory.

MUSKOGEE, 8-31.

C. L. JACKSON.

I have no doubt but that a satisfactory arrangement can be made at an early day with the railway company as has been done with the express company, under which the agents of the company, acting under instructions from their superior officers and the Indian police under instructions from this office, can work in unison and very effectually close this avenue of introduction of intoxicants.

I desire to bear further testimony to the cheerful cooperation of the Indian police connected with the agency who are ever ready to do their part in the suppression of the evils of intemperance.

In closing my report upon this topic, I would respectfully call your attention to my letter of August 13, in which I incidentally referred to section 2132, Revised Statutes, United States, whereby—

the President is authorized, whenever in his opinion the public interest may require the same, to prohibit the introduction of goods or of any particular article into the country belonging to any Indian tribe.

Although the several courts having jurisdiction within the limits of this Territory may not concur in an opinion as to the legality of the introduction of malt liquors under existing law, there can be no question that "the public interest" requires the exclusion of all intoxicants of any name or nature, and the exercise by the President of the authority conferred upon him by section 2132 is, in my opinion, the key to the solution of the problem how to keep it out of the country.

Indian police.—The Indian police force is one of the principal factors in the administration of affairs at this agency. It is composed of 3 officers and 40 privates, many of

whom have been on the force since its organization, and whose long experience enables them to render most efficient service as conservators of the peace. It speaks well for the intelligence and ability and general good character of the members of this force that very few changes are made in its personnel, except as it becomes necessary to deprive one locality of police protection to supply another more needy. This is a poor recompense for a faithful performance of duty, but the necessities and the interests of the service demand it. Because of the limited number allowed this agency and their meager pay, which does not warrant a change of location, I am frequently compelled to discharge good men after they have worked hard and faithfully, and succeeded in bringing about a desirable state of peace and quiet in their several localities, and fill the vacancies thus created with new men in places hitherto unsupplied.

I respectfully renew my former recommendation that more men at an increased and fair compensation be assigned to this agency.

**Education.**—Each of the five nations within this agency support and manage their own national schools. The Cherokees closed their seminaries last year under a pretext of not having funds to keep them open. The fact was, however, that owing to political differences the schools were closed in order to make a per capita payment to the people. The neighborhood schools are open and doing a good work. It is generally thought that the Cherokee council of November next will arrange to open the seminaries.

*The Creeks have now taken charge of all schools within the nation, except the three mission schools at Muskogee. The last council provided to cancel all contracts with mission boards in charge of Creek schools, and elected a board of education, who now manage their educational affairs. Under the change a number of Creek boys and girls are being educated in the States, several new school buildings have been erected, and every effort is being made to utilize the \$76,468.40 annually set apart for educational purposes.*

The Choctaws have lately contracted for two new school buildings at a cost of \$40,000, and have increased the number of their local schools. They use something over \$75,000 annually for school purposes.

The Chickasaws stand alone in their disregard for the education of their freedmen. All other nations have given the negro an opportunity to attend school, but the Chickasaws declare them to have no rights whatever, and refuse to provide schools. The Indian schools of the Chickasaw Nation are not equal to those of other nations, having suffered, more or less, from political causes.

The Seminoles are now, proportionate with population, better supplied with schools than any of the other nations. The present chief, John F. Brown, has exerted every energy to provide a good school system for his people, and is meeting deserved success.

The several denominational mission schools are all prospering and taxed to their full capacity with the boys and girls of the nations.

Again I renew my former recommendation that Congress provide an industrial or agricultural college for the young men and women of the five nations.

**Religion and Christianity.**—There has been a healthy progress in the matter of religion, as exhibited by the various denominational reports for the year. Many new church houses have been built, churches and Sunday schools established, and altogether a large increase in church membership is noticeable.

**Agency buildings.**—The Government still owns the old agency buildings and 640 acres of land near Muskogee. The Creek council last October appropriated \$1,000 for the purchase of these buildings, but when I endeavored to negotiate under your instructions, with a proviso that said buildings should be used for school purposes, the Creek committee held that they could not, under the law, thus bind the nation. I have no doubt the Creek council of next month will close a trade with me whereby this valuable property may be secured to the nation for a colored orphan school.

The Rev. Ira Cain vacated the buildings some two weeks ago, since which time I have occupied them with Indian police as a protection against fires and vandalism. The buildings are in bad order, and if not disposed of will need roofing and repairing to preserve them.

I would recommend that if the Creek council refuses to make the purchase, that Congress authorize you to exchange this property for an improved place in Muscogee, thus saving the Government the matter of rent now paid for the buildings occupied by me.

**Per capita funds.**—During the year I have made per capita payments to the Cherokee Freedmen and Cherokee Delawares out of the \$75,000 appropriated by act of Congress of October 19, 1888, disbursing on this account the sum of \$55,039.50. I also paid the Delawares \$55,000 on account of regular semiannual annuity and \$37,412 on account of stolen stock, and as proceeds of the half-breed Kaw lands. I also disbursed \$4,455 to certain self-emigrated Creeks as provided for by act of March 3, 1891.

1891/1/1891

The Creek Indians received a per capita of \$370,000 last spring, it being paid to them through their national treasurer and under the supervision of Assistant Commissioner Belt, Inspector Miller, and Clerk Morris of this agency. The money went through their hands like water through a sieve, hardly being held long enough to count it. Fully half of it went into the hands of traders and the balance disappeared soon after, leaving little of value to remind them of its once presence. In my opinion, and which is generally supported by the thinking people who have watched this payment, the Creeks neglected their crops, their cattle, their homes, and their business, to an extent which certainly cost them much more than the small per capita they were paid. In other words they would now be better off if they had not received this payment.

The Delawares are now anxiously awaiting the payment of their principal fund, which was appropriated by act of Congress of March 3, 1891. It must be said to the credit of the Delawares that they have generally taken care of their per capita, by purchasing stock cattle, horses, or improving homes.

The Cherokees were paid a per capita last March, derived from the lease of the "Strip" to cattle men. This was in the amounts of \$13.80, and was paid to Cherokees by blood only.

**Agent's salary.**—Through a probable error, the last appropriation bill carried with it a reduction in the salary of the agent at this agency. This I have no doubt Congress will rectify when its attention is called thereto. The salary at this agency ought to be at least respectable and not less than \$2,500. This I have no doubt you will bear me out in.

**Railways.**—There is little new to add to my previous annual reports relative to railways.

The Missouri Pacific Railway has completed its bridge across the Arkansas River, joining the Choctaw and Cherokee lands. This bridge cost \$600,000.

The Missouri, Kansas and Texas Railway has passed out of the hands of the receivers and is now being conducted by the owners. This road has been greatly improved, has put in new bridges, one across Red River, in the Chickasaw Nation, costing over \$100,000.

The Choctaw Coal and Railway Company was wrecked by its manager, who squandered several hundred thousand dollars in useless and untimely ventures. Although this manager has been removed, the road still continues to unlawfully occupy Choctaw lands, deal in town sites, and usurp and trespass upon the rights of the Choctaw people. A suit now pends in the United States court wherein the Choctaw Nation is endeavoring to protect itself from further absorption by this avaricious company.

With the exception of a few coal branches and new sidings there has been no track-laying during the year by any of the roads in the Territory.

**Claimants to citizenship.**—If you were to ask what one question of all the complicated ones arising in this country causes the most trouble and annoyance, and is the basis for the greatest trespassing and usurpation of Indian rights, I should answer, without hesitation, the matter of claimants to citizenship. For many years persons claiming to be citizens of one or the other of these Indian nations have been entering upon the common domain and appropriating the usufruct thereof to their own use. At first there were few of these cases, but now there are thousands.

The Glen-Tucker case in the Choctaw Nation has been before the Department some years, and is yet undetermined. These claimants now number fully 500 souls. The Watts case in the Cherokee Nation has also been pending some years, and involves the rights of probably 100 persons. There are many others who claim to belong to what is known as the Cherokee Citizenship Association, an aggregation of claimants, good, bad, and indifferent, banded together for mutual protection and joint prosecution of claims.

I can not too strongly urge the Department to take early steps to terminate these cases. Every day the situation becomes more embarrassing and leads to new complications. Some of them openly defy the Cherokee government and the Department to dislodge them.

In closing I would respectfully renew my recommendation, made last report, that a thorough inspection of affairs within the agency should be made by you or some authorized officer of the Department, combining said inspection with a visit to the several national capitals, and gaining an insight into Indian affairs, as existing at this agency. Such a visit would be of great benefit to the Indians and enable you to acquire information as to their matters not possible to be portrayed in a report.

Thanking you for assistance and encouragement during the year,

I remain, sir, very obediently and respectfully, your servant,

LEO E. BENNETT,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN IOWA.

## REPORT OF SAC AND FOX AGENCY.

SAC AND FOX AGENCY, IOWA,  
Tama, Iowa, August 15, 1891.

SIR: I have the honor to submit my annual report, which is in reality my first, as that of last year was made soon after my appointment.

The Sac and Fox of Iowa, are located in the southwestern part of Tama County, about 2½ miles from the town of Tama, and about 4 from Toledo, the county seat. The post-office and agent's headquarters are at Tama. The Indians own about 1,450 acres of land which they have purchased, from time to time, with their own money.

The Iowa River runs through the reservation from east to west, and two railroads, "The Northwestern" and the "Milwaukee," cross it. As it is situated in the heart of a great State and in the midst of civilization, the backward and uncivilized condition of these Indians naturally attracts a great deal of attention and much unfavorable comment, especially from the lips of strangers who are not fully conversant with all the circumstances. \* \* \*

**Houses.**—The Government has one building on the reservation—a combination residence and schoolhouse—containing six rooms. An addition, 18 by 20, was erected to this building, and other improvements made last October, but it is yet too small for the purpose for which it is intended. The building is in fair repair. There have been nine houses built on the reservation during the year—one two-roomed frame house (for the interpreter, John McIntosh) and eight Indian houses. Two board stables have also been built. The Indian houses are of various sizes, according to the number of people to be accommodated. They are a great improvement over the old bark houses, much more comfortable and civilized like. They are built by placing large corner posts in the ground, putting on rafters up to a ridgepole, boarding up the sides and making roofs out of rush matting.

The ground around the houses is usually fenced in and is kept quite neat and clean. The interior of the houses are on the same pattern of fifty years ago, and I can see no indication of advancement in this respect. The cooking is done over open fires at either end of the room. Some of the families show progress in their eating, having knives, forks, and dishes. Otherwise I find no grounds for encouragement in the "parlor, bedroom, or kitchen." Some of the Indians have told me that they intended to build better houses next year. I think the women show more progress in their homes than the men.

**Dress.**—In the matter of dress the men are far in advance of the women. Many of them old and young, wear portions of civilized dress, and some wear nearly all; on gala occasions they return to the blanket, breech-clout, leggings, paint, and feathers.

The women all dress alike, except that some wear stockings instead of leggings. They wear a garment similar to a man's shirt, a skirt or dress, and a shawl or a blanket.

\* \* \* \* \*

**Agriculture.**—In an agricultural way I can report more progress than in any other, and I think the foundation has been laid for a much larger advancement next season.

As I stated elsewhere, these Indians own about 1,450 acres of land, a large part of which can not be cultivated. If every acre of tillable land was utilized I do not think it would exceed 600 acres, but much of the remainder could be used for various profitable purposes, if the Indians could only understand its value and would take advantage of their opportunities. The men, as a rule, are not so industrious as the women, though they have done very nicely this season, having worked more in the fields than ever before. At a council held during the winter I plainly demonstrated to them that it would soon be a case of "work or starve." I explained to them that they had been getting the difference between the amount of their annuity money and the cost of living off of the merchants who had been trusting them, and because of their inability to pay the merchants were ceasing to trust them, and when "no trust," then starve or work.

I talked to them in a no uncertain tone, and tried to impress on their minds the fact that "by labor we thrive." They promised that they would do more work this season, provided I could get a farmer to assist them. The Department kindly granted the necessary appointment, and the Indians, many of them, have kept their word, and now have under cultivation 250 or more acres of ground, erected a number of fences, and in various ways made progress with their farming. They have at least 100 acres more ground under cultivation this season than ever, and claim that next year they will greatly increase their acreage of cultivation. This year the Indians did much of the work themselves, and in the face of the fact that they had scarcely any tools to

work with—no plows, harrows, planters, harness, wagons, seed, etc.—the farmer and myself did the best we could in procuring implements for them to get along with, but it was slow work. I am of the opinion that if they had had the necessary farming implements they would have cultivated much more land this season. Another thing that is detrimental to advancement in agricultural pursuits is their roaming during the winter season. Many of them go away to adjoining counties, hunting, trapping, chopping wood, etc., and do not get back in the spring in time to properly prepare their ground in season for planting. Two old women, who planted their patches early, have the best corn in this locality. I have used that as an illustration of the necessity for early planting, and also have instructed the farmer to call the attention of the other Indians to those two pieces.

Next year we hope to do much better in an agricultural way, and I think we can induce several more Indians to commence labor at farming. This year I am quite well satisfied with our success in this branch of the work, yet it is not by any means what it should be, and to a still better report for next year we shall direct our steps. Their crops are fine and will give a bountiful yield if nothing happens.

**Schools.**—In this department I can report but little progress from the standpoint of a successful school, for that we have not had, though I think the efforts made in that direction have been beneficial in many ways, the effects of which may be located more definitely at some future time. School was in session for nine months, October 1, 1890, to June 30, 1891, but the scholars were not plenty. Some of the young men and children would come "off and on," but the attendance was too irregular for successful teaching or classification. About all the teacher could do was to try and interest them by drawing on the blackboard, reading to them, explaining the globe, and allowing them to write and figure on paper and slate. The attendance was far from satisfactory at any time, and irregularity of attendance precluded any possibility of successful organization in the schoolroom. Yet it may be that the work done, even if under such disadvantages, accomplished some good; in fact I am of the opinion that it did.

There are several causes leading up to this unsatisfactory state of affairs regarding school work. The schoolhouse is two or more miles from the villages, with the river between. When the river is high, so as not to be fordable, the Indians have to cross on a railroad bridge, necessitating a longer distance to travel. If the weather is wet and the ground muddy, it forms a barrier that would almost prevent a white child from going to school, unless especially desirous of an education.

The most prominent cause for the nonattendance of the children is the intense hatred and antagonism of the older Indians to schools and education. I have done much talking on the school question during my term of office, and at a council, held during the early spring, I succeeded in securing a promise from some of the headmen that "they would withdraw their objection to the school so far as to not interfere with any one who desired to go. If any of the children desired to go to school they were at liberty to do so and would not be molested;" but they would not agree to insist on their going. I thought it was quite a concession at the time and was very much encouraged, but it seems that the withdrawal was not thoroughly understood, was not believed by the Indians, or for some other cause it did not have the desired effect, though the attendance was somewhat better during May and June.

No one who went to the school has been molested or intimidated to my knowledge. But it is safe to say that many of the older Indians do not look with favor on the school or progression, but lean decidedly to the other side of the stream of advancement.

Again, their roaming is a disadvantage. Many of the families go away from home in the fall and do not return until spring, taking their children with them, which greatly interferes with successful school work. Mr. Burge, the teacher in service, was removed June 30 on account of inexperience in school work, and was succeeded by Mr. W. S. Stoops, who has had experience in Indian school work, and who seems to have the necessary qualifications, energy, "heart in the work," and general fitness for successful work, provided the opposition and disadvantages are not too great for us to overcome. I hope next year to report greater success in school work.

In an industrial way there was some better success. At the sewing room there were made about 200 quilts and comforts, and a much larger number of shirts and dresses, though a great deal of the work was done by the teacher's wife and daughter, against my definite instructions. I instructed them to show the Indians how to do the work, but the women must do the work themselves. My instructions were disregarded in this respect, as in others.

After a year's hard work among these people, in which I have tried to work from a scientific standpoint, making the disposition, character, peculiar customs, habits of each individual Indian with whom I had transactions, a study as far as possible, I am firm in the opinion that the only means of properly and expeditiously educating and enlightening these people is by the boarding school and compulsory methods. Such a school should be built here, properly equipped, and in operation at the earli-

est possible time. The whites are agitating the matter somewhat, and I have no doubt but that at some future time active steps will be taken on the part of the people of this portion of the State petitioning Congress to make the necessary appropriation for such a school here for the benefit of these Indians.

School has been dinged into the ears of these people, threats made, etc., for many years that they have commenced to look upon the efforts of the Government in that direction as somewhat of a joke, and with the present instructions and authority I fear it is simply impossible to move them. The chiefs, headmen, and parents generally should be compelled to lend their aid to filling the school with pupils; they should be given to understand, most decidedly, that their children must go to school, here or elsewhere, without any "ifs or ands" about it. Until this is done they simply laugh at our efforts to organize a school. Careful work, persistent effort, and persuasion may bring a very few to school, but not a sufficient number for successful work or to even create the idea that we are accomplishing any headway in the school department.

I have been told that I expect too much, too rapid results, was too eager to move them at one stroke. This may be true, but I can see no object in dallying with a handful of Indians, trying to talk them out of their old ideas, habits, and customs, when a very little effort with a stronger hand would accomplish the desired result within a reasonable time. I believe in a kind, considerate, persuasive, persistent, explanatory, personal work and illustrative platform in dealing with these people, but I also believe that all this should be backed up with the necessary power and authority to demand and compel action if found necessary.

The younger people can be improved, provided they are removed to a certain extent from the influence and fear of the tribal rules, regulations, superstitions, and habits which have existed so many years, and which to-day are as strong and practiced as often among these people as fifty years ago. Many of the older Indians will live and die just as they are to-day; they will only advance in such things as they deem and can see is an advantage to them, and they always look through dark glasses at everything.

There are young men and women on this reservation who would gladly advance in civilized ways and manners if they could be assured beyond doubt that they would not be molested or brought under the baleful and death-dealing influence of the "medicine man," or be subjected to censure and commendation from the other portion of their people. It is this everlasting fear that "something will happen" to them if they get out of the old ways and ruts that is holding them back. The old men should be made to understand that advancement is the order of the day; and if they do not want to get on board the train of progression they must at least keep off the platform, and not get in the way of the passengers who desire to journey towards enlightenment. They should be given a very decided impression that the Commissioner's desires and demands are paramount to their untutored ideas and paganistic notions.

Until this is done matters will drag along in an unsatisfactory way, without credit to the Department, the agent, or the Indians.

**Missionary.**—During the year the Presbyterian Missionary Society have erected a large, comfortable, and commodious building about midway between town and the Indian village. The missionary in charge, Miss Anna Skea, resides in the building and devotes her time to the betterment and elevation of the Indians, though most of them show a very stubborn resistance to the influence of Christian work. I hope the time is not far distant when the Indians can be made to see the great good that could come to them through the instrumentality of the mission. At present the Indians visit the mission in limited numbers, but more will come no doubt as time wears away their antagonism.

**General.**—In the way of general affairs, business, and dealings with the Indians, I can report satisfactory progress during the year. There has been no clashing, bickering, strife between the agent and the Indians, or, so far as I know, among the Indians themselves, and a much better feeling exists all around than was the condition a year ago. All business matters have been transacted promptly and harmoniously.

The payment was made this year nearly two months earlier than last, which was pleasing to the Indians. These people seem to appreciate the business methods which I have instituted in dealing with them and in transacting their business. Last year the payment was made without any trouble or dissatisfaction, which was favorably commented upon by both whites and Indians. They ought to go through the winter this year in good shape, with their early payment and bountiful crops. Last winter they were in a destitute condition, many of them, and often went hungry. I think they will be better off this winter, and that it will have the effect to induce them to greater efforts in an agricultural way next year. Several wagons were purchased this year by the Indians, a slight indication of advancement. In numerous ways I can see that they are advancing in spite of themselves, but the movement is too slow.

**Intoxication.**—There has been some intoxication this year, but nothing like what it used to be. I had three Indians arrested and fined \$10 and costs each. There were others drunk out in the camps, but I could not find who they were. I am trying to arrange affairs so as to give this matter better attention in the future. At the last payment there was no drunkenness, which was generally commented upon favorably. I will do my best to decrease the amount of drunkenness next year. The Indians gamble among themselves a great deal, and I have been told that some whites go to the camps and gamble with them, but I have never been able to locate but one case, a stranger, and he got away before the necessary legal papers could be procured. The women exceed the condition of the whites as to virtue. I find that the Indian women are very modest and well behaved, and very little inclined to talk with white men.

There should be more personal work done among the women, in their homes, in sickness, etc. But they will not accept any attention from me; they will hardly say more than "howdy." They will get in my buggy and ride from town to the reservation, or around the reservation, if I am going the way they desire to go, but will scarcely say a word. I am satisfied that a matron could accomplish a great deal of good among the women of this tribe and I recommend the appointment of a matron for special work among the women.

The general health of these people has been excellent, as they have had but three deaths within a year. Eight births have been reported.

The following gives the totals of the tribe: Whole number, 390; males, 200; females, 190; males above 18 years of age, 99; females above 14 years of age, 118; school children, between 6 and 16 years, 94.

I believe the ground has been covered in this report that is contemplated. I have tried to give the exact condition of affairs at this agency as I look at them, without paint or powder, and have only made such recommendations as in my best judgment would tend to better the condition and elevate these people in the shortest possible time.

Hoping that next year's work among them will show better results, I am,

Yours very respectfully,

W. R. LESSER,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN KANSAS.

### REPORT OF POTTAWATOMIE AND GREAT NEMAHA AGENCY.

#### POTTAWATOMIE AND GREAT NEMAHA AGENCY.

*Hoyt, Kans., September 8, 1891.*

SIR: I have the honor to submit the following report concerning the Indians of this agency, for the fiscal year ending June 30 last.

Having assumed charge the 26th of August last, I feel that my official experience is much too limited for the proper preparation of the exhaustive report contemplated in your letter of instruction. However, my opportunities for observing the condition of and changes in some of the tribes of the agency, for a period of more than fifteen years past, have been good and I shall avail myself of the knowledge thus obtained, particularly as to their moral and educational status.

**Population.**—The names of the five tribes embraced in the agency, the number of each, together with the number of those of school age, as ascertained by a recent census, is embodied in the following table, viz:

Tribes.	Number on reserve.	Males above 18 years of age.	Females above 14 years of age.	School children between 6 and 16 years.
Prairie Band of Pottawatomies.....	517	162	122	126
Kickapoo.....	232	53	71	47
Iowa.....	158	38	46	43
Sac and Fox of Missouri.....	75	15	27	22
Chippewa and Christian.....	79	17	18	28
Total.....	1,061	285	284	267

**Area and location of reservations.**—The reservation of the Prairie band contains 77,357.57 acres of land located in Jackson County, Kans., with the northern boundary line running within 3 miles of Holton, the county seat; that of the Kickapoo contains 19,137 acres located in Brown County, Kans., within 16 miles of Hiawatha, the county seat; that of the Iowas, containing 16,000 acres, is also located in Brown County about the same distance from Hiawatha; that of the Sac and Fox of Missouri, containing 8,013 acres, is located partly in Richardson County, Nebr., while that of the Chippewa and Christian Indians, containing 4,395 acres, is located in Franklin County, Kans., about 9 miles from Ottawa, the county seat.

**Agriculture and stock-raising.**—The reservation of the Prairie band presents exceptionally good facilities for grazing purposes, but is not so valuable for cultivation. The entire surface is covered with a luxuriant growth of prairie grass, but a close examination discloses numerous outcroppings of rock and stone, covering in the aggregate a large area that can not be profitably cultivated, if at all.

There is, however, some fine farming land, which, with even ordinary cultivation, would be productive and profitable. The Indians have utilized a portion of this in the creation of over 120 farms, ranging in extent from 5 to 200 acres, several of the more advanced have inclosed pastures sufficiently large to graze their better class of stock, and in some instances for speculative purposes. The farms are generally inclosed by substantial hog-tight fences of rails and lumber that are quite creditable, and are further improved by small but comfortable dwellings, and in some cases by producing orchards. Corn, potatoes, oats, flax, and nearly all kinds of garden vegetables yield abundantly; wheat not so well.

The Prairie band have not given farm work the attention they should have done, and their failure to do so is due to causes to which reference will be made under other heads.

They own horses and an improved stock of ponies in comparatively large numbers, and ordinarily do not dispose of them except for good prices. A number of them have cattle, and others are purchasing or trading for them as their means or opportunity will permit. They also raise hogs in sufficient number, if they were properly fattened and cured, to furnish them with meat. Notwithstanding the excessive rains during the past farming season, by which corn (in lowlands especially) was injured, they will have sufficient for themselves and stock, and perhaps a small surplus for sale. They will also have potatoes and vegetables in moderate quantities.

The reservation of the Kickapoo Indians, though rolling and in some parts rough, is of rich soil and very productive in grasses and crops of all kinds usually raised in this section of country, except wheat, which yields only moderately owing to lack of lime and clay in the soil. The Kickapoos receive but small annuity payments, and as a result have to depend largely on individual effort for subsistence. From all I can learn this has increased each year until the majority of them have flourishing farms, well fenced, with comfortable houses, outhouses, and orchards.

Their farms are from 30 to 100 acres in size, and are clearly cultivated for profit; they also have inclosed pastures for their stock which consists of horses, ponies, cattle, and hogs in limited numbers. A large proportion of their lands are under fence, and a number of tracts broken during the summer are now being sown to wheat. Their crops this season, though injured by the unusually heavy rains, will be sufficient for their subsistence and leave a very respectable surplus for sale. The Kickapoos have clearly shown as a tribe their capacity for self-support, but while evincing in some respects a love for individual proprietorship seem unwilling to break away from tribal authority by assuming the responsibilities attending it.

The reservation of the Iowa Indians contains a very large proportion of the most valuable farming land, notwithstanding its uneven and broken formation. All the crops grown in Kansas and Nebraska are produced in large yields; wheat, I am informed, is a paying crop, yielding frequently as much as 30 bushels per acre. There is no vacant or idle land, all of it being either farmed or applied to grazing purposes for the stock of the Indians, as but little outside stock is allowed on the reservation. The Iowas are an intelligent community, manage their farms and business with good judgment, and if not prevented by their dissipated habits, would soon place themselves on a footing with their white neighbors in material prosperity.

The reservation of the Sac and Fox of Missouri Indians is perhaps better as a body than that of their neighbors, the Iowas, the only rough lands being located on the streams. There are nearly 6,000 acres under cultivation, out of a total of 8,013, and I am inclined to think that this proportion of cultivated lands is exceeded on few reservations in the United States; that portion not cultivated is all under fence and used for pasturage.

They are the recipients of a large annuity, but it is very doubtful whether this is really a benefit to them, as it is demonstrated at this agency that the tribes receiving the smallest cash payments are the most industrious, the nearest self-supporting, and by far the most self-reliant as individuals. While such funds are due them, and of course must be paid, there is no doubt but that in many cases at least the

system rather impedes than promotes progress, and this is especially true in the case of tribes addicted to intemperance, as are these Indians.

Application has been made to me by a member of the tribe to remove from his premises a white man, who claims to have rented or leased them while the Indian alleges the contrary. I learn, incidentally, that a number of other citizens are renting or claiming to rent these lands contrary to law, as I understand it, and I shall at the first opportunity make an effort to remove all of them from the reservation.

There are a few excellent members of this tribe who exert their influence in restraining and caring for reckless ones, but many of this latter class are so confirmed in their drinking habits that any improvement seems impossible while intoxicants can be obtained.

The reservation of the Chippewa and Christian Indians is, as to quality and formation, the least inviting, yet the Indians with the aid of a small annuity live very comfortably. They are fair farmers, have comfortable houses, good orchards, and many conveniences around them; they all speak English, fraternize and intermarry with their white neighbors, and form a reasonably prosperous community.

**Allotments and occupation of separate tracts.**—The tracts of land held under certificate title were assigned the Chippewa and Christian Indians under provisions of article 1 of the treaty proclaimed July 9, 1860. Under the sixth section of the general allotment act of 1887 they became citizens of the United States, and are now exercising the privileges, as well as the duties, pertaining thereto.

The Sac and Fox of Missouri have all taken allotments under provisions of an act amendatory to the general allotment act, giving to each member of the tribe, regardless of age, sex, or condition, 80 acres of land, and was, I am informed, entirely satisfactory to the Indians.

Pending an approval of the survey of the Iowa reservation those Indians are very anxiously awaiting their allotments; their selections are all inclosed, and with the exception of some possible friction as to who has the prior claim to a few disputed tracts there is nothing to obstruct the speedy accomplishment of allotting to the entire tribe when once it has been commenced.

September 1, 1890, an executive order was issued by the President of the United States requiring the Prairie band of Pottawatomie and Kickapoo Indians to make their selections of land in their respective reservations. Both of these tribes have bitterly opposed the principle of allotments since certain parts or bands of their people agreed to take their lands in severalty, to receive patents therefor, and to receive their pro rata shares of the cash credits of the tribes under provisions of treaties made in 1861.

Twenty-five years ago there was scarcely a member of the Prairie band who did not feel the utmost contempt for his citizen brethren; in fact, the feeling of actual dislike was so strong that Wabsai, the chief of the Prairie band, ruled that no citizen under any circumstances should ever be allowed to reside on the reservation.

While the opposition to allotments has been intensified during the progress of years, and any attempt to discuss the different principles of the more recently proposed methods of allotments was met with the deepest indignation and frequently with threats, the feeling as to the citizens has been greatly modified, and a large number of them have for years made their home among the Prairie band. This changed feeling can be readily understood when it is known that the citizens have constantly opposed and advised opposition to allotments in even more severe terms, if possible, than the Prairie band themselves, who were also shrewd enough to observe that the abject poverty, utter degradation, and total want of self-respect and principle illustrated by the citizen presented a strong argument against allotments.

During the last few years a faction of the Prairie band, calling themselves "braves," have been distinguished by a more threatening attitude on the subject of allotments than the more conservative and larger portion of the tribe cared to assume. Among other things they volunteered to protect the citizens and prevent their removal from the reservation. Different orders had been issued to effect this purpose in 1884, 1886, and other dates, and finally March 3 last, upon which they were notified to leave, and informed if they failed to do so they would be expelled by force, and there seems no doubt that the best disposed of them would have done so had they not been encouraged by the "brave" faction to remain. Finally a detachment of the Seventh U. S. Cavalry, under the command of Lieut. J. C. Gresham, effected their removal from both the Pottawatomie and Kickapoo reservations. This service was humanely performed; but two members of the "brave" party of the Prairie band made such demonstrations and threats that it was thought best to arrest them, and they are yet held by the troops. The authority of the Government, as evidenced by the removal of the citizens and other persons, has had a quieting effect, and will no doubt continue to exercise a helpful influence on both reservations; in fact several persons have taken their allotments who did not feel safe in doing so under the condition of insecurity previously prevailing.

**Grazing and hay.**—Cattle belonging in various parts of Kansas have been grazed during the present season on the Pottawatomie and Kickapoo reservations at the rates of \$1.25 per head for the season. At the close of the fiscal year there had been collected for the Prairie band \$8,295.25 and for the Kickapoos \$1,511.25, and considerable balances due each of the tribes for grazing remains unpaid. The sums named have been estimated for to be paid per capita to the Indians. Owing to unusually heavy rains but little hay will be sold from the grass raised on the reservations.

**Gambling and use of intoxicants.**—From reports made to me I am led to believe that dissipation and gambling have increased in the Prairie band during the year. This is undoubtedly due to the almost unrestricted introduction of intoxicants by citizen Pottawatomies and by the weekly visits of large numbers of white people to witness the dances. The whites may have given but few Indians whisky, but many of them make the trip an occasion for debauchery, and this example tends to familiarize them with drunkenness and to increase it. I shall hereafter cause the arrest of Indians or whites found drunk at these dances, and shall attempt to stop the whites from visiting the dances as well as to prevent their frequent occurrence. It is often difficult to convict white men for selling whisky to Indians on account of their unwillingness to testify against them and thus destroy their source of supply, but I am satisfied that sufficient cases can be made to greatly reduce the traffic.

**Crimes against Indians** consist almost exclusively in the sale of intoxicants by whites. The Indians have committed none against the whites, and the two races mingle in business, and in some instances socially, with increased confidence in and friendliness for each other.

**Religion.**—The Chippewa and Christian Indians have been for many years under the spiritual guidance of the Moravian Church, and nearly all of them are either members of that church or believe in the doctrines taught by it. One member of the tribe is now doing very acceptable missionary work in Alaska under the auspices of the Moravians.

The Iowa Indians are generally Catholics, and it has been observed that those who are making the greatest material progress attach the most importance to a proper discharge of their religious duties.

But few members of the Sac and Fox of Missouri are members of Christian churches, and with the remainder the tendency is to Indian methods of worship. A few only of the Kickapoos belong to churches; a portion of them, however, have religious ideas considerably in advance of the distinctly Indian views, but it is thought that this class are less influential than formerly because of less worthy leadership. The remainder of the tribe have adopted religious ideas introduced from the North some years since, in the expression of which frequent dancing is resorted to. This is not the "Ghost Dance," adopted by the Sioux and other tribes, but it has produced a very strong impression on the minds of the Kickapoos as well as of the Prairie band of Pottawatomies. About one-fifth of the last named people are members of different Christian churches, but principally of the Catholic Church, and a large proportion of the remainder are devotees of the dance religion.

Many of the ideas taught by this religion are of a moral character, but it is in no way calculated to produce any permanent advancement in the moral, spiritual, or material welfare of the Indians. It has in fact gained such an influence over this tribe that a business council is little less than an echo of the dance, and it has been suggested that the Indians hope through a constant and rigid practice of its various forms to so propitiate the "Great Spirit" that objectionable measures may be overthrown.

To their frequent attendance upon this dance is due their lack of attention to farming interests, and also a want of respect for education, as well as a proper support of the school. I am satisfied that the tribe has deteriorated through the intense and absorbing interest this dance has created among its members.

**Buildings.**—With the exception of small offices for the agent and physician there are no agency buildings whatever at the agency. All of them were erected for school purposes with tribal funds, and are inadequate for the purposes for which they are now used. This forces agency employes into the school buildings, and frequently retards the progress of the school by limiting the accommodations of pupils and school employes. I am of the opinion that both agency and school interests would be advanced by the erection of a suitable residence and office for the agent at some distance from the school buildings of the Prairie band. Residence buildings are also required for employes, certainly for the physician. The one recently appointed for the Prairie band has a wife and several children, and there are no accommodations whatever for them, and none for himself except the school mess as a boarding place and a small room in the rear of his office for sleeping purposes.

**Schools.**—Boarding schools are conducted for the Prairie band and Kickapoos separately on their reservations, and for the Iowa and Sac and Fox of Missouri Indians on the reservation of the former. I find that so much has been written as to the

accommodations at these schools that statements from me on the subject, with my short experience, would seem superfluous and perhaps premature.

I am satisfied that the Indians have been greatly benefited by the schools, and can readily understand that their natural resistance to progress prevents that degree of success that the educated white man, gauging the Indian by himself, often thoughtlessly, claims should have been made. Frequently the children are obtained more as a matter of persuasion or custom, or on account of pinching times at home, than through any intelligent expectation on the part of their parents that they may become educated and useful; yet, however obtained, if the influence of education can be exerted the genuine civilization of the Indian commences.

I appreciate very highly the effort now being made to provide a better system of education for Indian youth, as well as to facilitate it, by surrounding them with all possible comforts, and shall certainly contribute to the general purpose to the best of my ability.

Very respectfully,

J. A. SCOTT,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

---

REPORT OF THE SUPERINTENDENT OF THE POTTAWATOMIE BOARDING SCHOOL.

*Pottawatomie Nation, July 2, 1891.*

SIR: In compliance with circular dated April 3 I herewith submit the following report:

I can find no records pertaining to the history of the school, but am quite certain that it has been established and conducted about the same as at present for eighteen or twenty years.

A truthful description of the condition of the school and property belonging thereto will not be very flattering. In the first place some of the Indians are opposed to school, which of course has its influence; others give a grudging support, while a few support it heartily. But I have made a special effort to keep the school filled by visiting the people at their houses, always going with a wagon, in order to bring the children whenever I obtained the parents' consent, and I have had very good success in that particular the past term. Thus you see that the attendance is accomplished by solicitation only. Most parents giving consent consider that they have granted a great favor to the school, expecting to take them home at any time, and if their request is not granted readily and willingly, it requires work and tact to get them back.

The children when first brought here can not speak English, which places them at a great disadvantage, necessitating the medium of an interpreter in order to communicate with them.

The industrial training has received attention, the boys doing the work in the garden under my supervision, helping in the field and repairing, and quite desirous of doing all kinds of team work. The girls are regularly detailed for the kitchen, laundry, and sewing-room, and do their work well and willingly. All things considered, I think the school as a whole has made marked improvement.

I have endeavored to follow the course of study mapped out by the Department, yet have confined myself more closely to the existing requirements, striving to interest and cultivate habits of study and diligence.

The school plant entire consists of a dormitory, schoolhouse, laundry, barn (all frame buildings), and a stone meat and milk house combined.

The dormitory is one and a half stories high, containing nine rooms, including bathing room, beside kitchen and two dining rooms in basement, the walls of which are badly cracked and falling, which makes it positively dangerous during high winds (of which Kansas has had her full share this year). It presents neither a homelike nor respectable appearance. It should be replaced with a new one or thoroughly repaired, the cost of same having been estimated and forwarded to the Department by the agent.

The schoolhouse is large enough to accommodate 75 pupils, and presents a very respectable appearance. It needs a new blackboard, some replastering, and blinds repaired.

The field contains about 70 acres, used for farm and garden purposes, inclosed with an ordinary fence of boards and wire.

Very respectfully,

R. M. COOK,  
Superintendent and Principal Teacher.

The COMMISSIONER OF INDIAN AFFAIRS.

---

REPORT OF SUPERINTENDENT OF IOWA AND SAC AND FOX OF MISSOURI BOARDING SCHOOL.

*POTTAWATOMIE AND GREAT NEMAHIA AGENCY, KANS., June 29, 1891.*

SIR: In compliance with your circular instructions of April 3, 1891, requesting a report and exhibit of school work done in the current year, I respectfully submit the following:

Having just received the instructions, and not having anticipated the receipt of them, I am unable to submit for examination any work done by pupils; nor do I know where to obtain data for a history of the school. At least the first of these deficiencies, and if possible the second, I will make good if called on for any future report of this character.

My connection with the school dates from September 22, 1890, and I will confine this report to what has been done since that date, and the present condition of the school.

The main building at this place contains the schoolroom now in use, and also the school home of the pupils and employes. It is a commodious and handsome frame structure of seventeen good rooms, beside closets, cellars, garret, etc., and is in fairly good condition, though a few repairs are urgently needed. An estimate for these repairs, and also for a few needed outside improvements, will be submitted at the earliest practicable date.

The farm connected with the school contains, I believe, one-half section of land. Of this about 250 acres are under fence; 85 acres are in corn; 50 acres in grass, reserved for hay; about 10 acres in garden, and the remainder is used as pasture.

The barn is small, but perhaps as good as is imperatively needed. There are no sheds nor other important farm buildings. The fences are fairly good. Two small outhouses are about the only improvements costing any money which have been made during the year.

The school attendance has been irregular, especially during the quarter now closing. This has been due to a variety of causes, among them the fact that Indian children, even more than white children, perhaps, find the schoolroom very irksome in warm weather, and that their parents sympathize with that feeling more than white parents are apt to. I believe, however, that in this matter much improvement can be shown next year.

The health of the pupils has been remarkably good during the entire year, there having been no case of serious sickness in the school.

In the schoolroom I have kept the new course of study in mind and have, approximately and as nearly as practicable worked on the lines indicated by it. The principal obstacle to doing so has been the fact that nothing of the kind seems ever to have been attempted heretofore.

My most serious task in the schoolroom has been the forming of habits of study, and this seemed at first almost a hopeless undertaking, but it has been at least fairly successful. Most of the pupils are becoming proud of their progress, and many will be glad to be sent to training schools. These are sentiments which I have tried to cultivate. One pupil who attended during a part of the year has since entered Haskell, and two others, whom I will mention in another report, should be sent to some one of the training schools next year. The remainder, however, of those who have recently been in attendance here should be allowed for the present to remain, I think.

There are no provisions for industrial training at this school except what the farm and garden and the different classes of ordinary house work afford. These are utilized, and are probably all that could be used to advantage in so small a school. The pupils are systematically detailed to their work by the superintendent and matron, and as a rule do it very cheerfully and creditably. A number have small gardens of their own. Whatever may be true of other Indian children, these are, in my opinion, very fairly intelligent and hopeful material for the making of future citizens.

I prefer not to institute comparisons or contrasts. I have had the intelligent and willing cooperation of most of the other employes of the school—of all who are now connected with it—and I believe that at least fairly good work has been done, and a foundation laid for better.

Very respectfully submitted.

FRANK F. AVERY,  
*Superintendent and Principal Teacher*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN MINNESOTA.

### REPORT OF WHITE EARTH AGENCY.

WHITE EARTH AGENCY, MINN.,  
*August 10, 1891.*

SIR: In compliance with the instructions contained in circular letter of July 1, 1891, I have the honor to submit my annual report, with accompanying statistics, for the fiscal year ending June 30, 1891:

This agency headquarters is located about 45 miles east of the Red River of the North and 22 miles north of the Northern Pacific Railroad, Detroit being the nearest railway station.

Red Lake subagency lies about 50 miles north and 40 miles east, whilst Leech Lake subagency is about 70 miles east of this agency.

The Mille Lac Reservation, having been opened up for settlement by the honorable Secretary of the Interior, is no longer held to be a reservation.

Nearly all the agricultural land lies in the White Earth and Red Lake reservations, where considerable farming and gardening is carried on by the Indians. The Leech Lake Reservation being mostly timber land and the soil of very poor quality, but little attempt has been made at farming there.

The following estimate of crops raised by the Indians of the White Earth reservation is submitted:

Under cultivation.....	acres..	6,715
Broken during the year.....	do...	937
Fence made during the year.....	rods..	5,326
Wheat.....	bushels..	72,320
Oats.....	do.....	56,600
Barley and rye.....	do...	3,450
Corn.....	do.....	4,160
Potatoes.....	do.....	12,600
Onions.....	do.....	390
Beans.....	do.....	710
Flax.....	do.....	944

Population.—The following table is respectfully submitted in compliance with information desired:

Band.	Located at—	Males 18 years and upwards.	Females 14 years and upwards.	School age 6 to 16.	Number of males.	Number of females.	Total.
Mississippi Chippewas	White Earth..	293	340	354	605	597	1,202
Do .....	Gull Lake ...	61	89	67	117	160	277

Educational.—There were three Government and six contract schools conducted at this agency during the past year, with an aggregate enrollment of 620 pupils and an average attendance of 408, besides 92 pupils at Collegeville, Carlisle, and Lincoln Institute.

The Government schools are located at White Earth, Red Lake, and Leech Lake. Of the contract schools three are located at White Earth, one at Red Lake, one at Leech Lake, and one at Cass Lake.

The attendance in detail for each school is given below:

Name of school.	No. of pupils enrolled.	Average attendance.	No. of months.	Cost of maintenance.
White Earth Government school.....	160	108	10	9,962.41
Red Lake Government school .....	61	34	10	4,509.01
Leech Lake Government school .....	67	50	10	4,229.44
Contract schools:				
St. Benedict's Orphan School, White Earth.....	25	25	10	2,700.00

	620	408		

\*\$27 per capita per quarter.

† Closed June 6, 1891.

Court of Indian Offenses and Indian Police.—This court consists of three judges, two of them being men of age and experience, the other a young man of education, who acts as clerk and keeps a record of the court proceedings.

All the judges speak English fluently, are men of influence, and believe in the civilization and education of the Indians. They have tried 4 cases of drunkenness; 3 of family quarrels; 2 of gambling; 11 of disputed property, and 1 case of theft.

The police force at White Earth consists of 1 captain and 10 privates, who are quite efficient, always ready to do their duty in preserving order and in arresting offenders and disturbers of the peace. The police force at the subagencies numbers 14 men. One captain and 6 privates at Red Lake and the same number at Leech Lake.

Lumbering.—During the past winter lumbering operations were carried on and the following table exhibits the results of the winter's work:

	Number of feet.	Value of logs.	Advertising scaling and stumpage.	Cash paid contractors.
Red Lake Reservation.....	5,988,310	\$35,929.86	\$3,768.69	\$32,161.17
White Earth Reservation.....	1,281,385	6,406.92	729.21	5,677.71
Winnebagoish and White Oak Point.....	8,234,410	37,875.33	3,993.39	33,881.94
Total.....	15,504,105	80,212.11	8,491.29	71,720.82

The stumpage or poor fund derived from the above amounts to \$8,021.19.

**Sanitary.**—The health of the Indians belonging to this agency has been generally good. La grippe, measles, and whooping cough have prevailed among the children thereby lowering the school averages, to a considerable extent.

**Conclusion.**—In concluding this my third annual report, I can not speak too highly of the corps of employes under my control, always cheerfully and promptly complying with all demands made upon their time, and owing to the largely increased amount of work to be done in and out of the office, they are frequently required to labor early and late to keep up the work.

I am, sir, very respectfully, your obedient servant,

B. P. SHULER,  
*United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF WHITE EARTH SCHOOL.

WHITE EARTH, MINN., July 1, 1891.

SIR: In response to your instructions of April 3, I have the honor to report the work accomplished in White Earth School during the past year. A history of the school has been previously given.

The scholars have all been classified and graded upon the basis of the new course of study, which has been attended with quite a satisfactory degree of success. There have been some hindrances encountered in the way of reaching that perfection which is to be desired, among which an irregularity of attendance upon the part of many, and others getting into school late in the year; also the heretofore ungraded course which has prevailed has resulted in advancing pupils in some studies to the neglect of others. Such ones have sometimes indicated a dissatisfaction when placed in a grade where they of necessity must be put. We believe that all the benefits of a thorough system of grading can not be realized until compulsory education is enforced.

I think it unwise and detrimental to the interests of reservation schools by way of attendance and grading to allow children to be sent away to contract schools at other times than at the commencement of the fiscal year, as it leaves the parents in many instances undecided as to where and when to send to school until the year is far advanced. During the last quarter of the year all the grades in the course were represented but one, and that the third year of the advanced grade.

In my judgment the school has accomplished all that could be reasonably expected. It is gratifying to state that a greater interest has been manifested upon the part of the scholars in their studies than ever before. The agent has taken a great interest in the school, and all facilities at his command have been used to induce as full an attendance as possible.

Number of pupils enrolled during year.....	160
Average attendance during year.....	105
Advanced to higher grade during year.....	80

Much attention has been given to instruction in singing. Some of the evenings during the week are devoted to that purpose, besides regular exercises during school hours. Nearly all of the patriotic songs of the day are sung by the scholars. The employes in most instances have shown a commendable interest in their departments and in the success of the school.

About 7 acres of garden is cultivated by the boys, in which are raised all the vegetables necessary—usually about 1,200 bushels. For beauty and thorough cultivation it is unsurpassed. The boys are required to do all the general work, such as milking, care of stock, etc. Have twenty-eight head of cattle, of which eight are cows.

The girls are instructed in all the requirements of general housework; also in cutting and making garments, mending, sewing, knitting, and crocheting.

About 40 acres of land are inclosed by good and substantial wire fences, a considerable portion being used for pasture.

Buildings are all in good repair. The school building consists of about twenty rooms, three of them being used for study. Should the attendance in the future be as large as during the past year, additional building is greatly needed.

Of the attendance for the coming year it is difficult to predict, as the requirements to fill contract schools have greatly increased, and will be largely drawn from those who would otherwise attend the Government school. Contract schools seem to possess a choice of material, and a requirement of members which often causes a vacancy in Government schools which those in charge find difficult to fill.

Of the necessity of a hospital I can not too strongly urge, as there is no provision in the building for one, and in cases of epidemic such as measles, etc., we are obliged to convert sitting rooms into hospitals to the great inconvenience of the schools.

Very respectfully,

S. M. HUME,  
*Superintendent White Earth School.*

THE COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF RED LAKE BOARDING SCHOOL.

RED LAKE RESERVATION BOARDING SCHOOL,  
*White Earth Agency, Minn., July 16, 1891.*

SIR: In compliance with circular letter of April 3, 1891, I respectfully submit this my second annual report:

The school plant embraces the 17 original acres set aside for school purposes in the year 1877, and 20 acres for a pasture in 1887. Fourteen acres are cleared and cultivated. The land is rich and productive, but worms and bugs of many kinds are very destructive.

**Crops.**—Consist of a prospective yield of not less than 200 bushels potatoes, 1,000 cabbages, 500 squashes and pumpkins, 50 bushels onions, 30 bushels corn, 30 bushels wheat, 75 bushels turnips, 30 of beets, 25 of carrots, 10 of beans, 35 of tomatoes, 15 of cucumbers, and other kinds, as watermelons, radishes, lettuce, parsnips, sunflowers, etc., in small quantities.

**Buildings.**—The boarding house consists of thirteen rooms, as follows: Laundry, 13 by 13 feet; kitchen, 17 by 18; dining-room, 13 by 23; matron's two rooms, one 12 by 13, one 7 by 13; boys' dormitory, 21 by 37; boys' play room, 12 by 15; girls' dormitory, 18 by 31; teacher's room, 11 by 15; cook and seamstress in one, 12 by 15; landress' 11 by 15; two store rooms, 11 by 12 and 9 by 11. We are obliged to use the boys' play or sitting room for a work shop as well, the seamstress her sleeping room for her work. The building was only intended to accommodate twenty children, at most thirty, according to Commissioner's Report, 1877, p. 127. It is, in nearly every particular, poorly planned for a school boarding house, and the worst fire trap imaginable, requiring constant vigilance on the part of employés to prevent its destruction.

The schoolhouse, 20 by 45 feet, is less objectionable, but poorly furnished. The stable, 18 by 24 feet, and wood shed, 15 by 18 feet, are quite insufficient for the needs of the school.

**Repairs, Additions, and Improvements.**—The premises have not been kept in the best state of repair, but since the installment of B. P. Shuler as agent, the buildings and grounds have been very much improved, though many repairs are still needed. The school lands are all well fenced. A root house was built last August sufficient to hold 1,000 bushels of vegetables, and is a valuable acquisition. This spring the school has built 45 rods of picket fence, preparing the pickets from edgings hauled from the mill; cut, hauled, and peeled the posts for the same. Cut and hauled nearly all the posts and rails for fencing and repairs; fenced in a calf pasture. Built large hog yards for pasturage, it being our intention to raise the school pork as fast as facilities are afforded us, though this is an entirely new venture for the school. We have also constructed hen yards and house, a small building for the hogs in winter, and a wagon shed.

A game yard, consisting of croquet, marbles, and an imitation of nine-pins and bowling alley, is another valuable addition of this quarter. These games usually occupy the attention of the children after evening exercise. Aside from the above, swings and other amusements are also provided for the school.

Industries are limited to about the character of work given under the head of repairs, additions, and improvements. It is my constant study to plan diversified labor, that will be interesting as well as instructive and useful to the school and children, to occupy their attention and time.

Besides the usual housework, the girls have assisted in repairing clothing for themselves and the boys in manufacturing 15 bedquills, 99 aprons, 62 dresses, 82 shirts, 37 skirts, 111 drawers, 17 pairs pants, 15 nightgowns, 24 towels, 15 chemise, 6 pairs mitts, 22 wristers, 10 pairs stockings, and taught in the manufacture of sundry articles.

During the winter it became necessary for the boys to assist in cutting and hauling some of the wood and nearly all the fencing material. That is no more than they ought to do every year, but such requirements aroused considerable opposition from the parental population, that being the first time the boys ever had to haul wood. The parents quite generally claim that one hour daily is sufficient work for the children. We rarely ever require more than three hours daily, equally divided between morning and night, save on Saturday, five hours for the oldest boys are usually required, with frequent rests. In the performance of labor the state of health and strength is carefully noted. The greater part of the industrial labor performed by the boys has been under my personal supervision. The customary plan of work is to separate the boys into small groups, the janitor, myself, and one of the boys, termed assistant janitor, working with them. The children also render efficient service in returning children to school.

We would not have any difficulty in the management of the children were it not for the adverse influence of a part of the people, though there have been but few serious (or those that require corporal punishment) violations of the rules. I require on the part of the children and employés, especially with the children, strict obedience to the orders of those in charge, and studiously avoid giving orders save through those in charge of the various departments.

School Stock consists of 1 yoke of steers, 4 cows, 2 2-year-olds, 2 yearlings, 2 calves, 14 hogs and pigs (having killed some this spring and lost some), 19 hens and chickens. The stock of all kinds is very imperfect and of a poor quality.

**Employes.**—The frequent changes during the first quarter and half of this year were a source of much annoyance and injury to the school. These people have but little "thought for the morrow" and resign their positions on the slightest pretext, governed entirely by passion, and exercise but little reason when irritated from any cause. It is extremely difficult to secure Indian employés that will work in harmony with the wishes of the Government. The present employés are very satisfactory for Indians. The cook and seamstress are returned students from Lincoln and St. Joe institutions. Good feeling has existed among us all during the term of service of the present force.

**Course of Study and Attendance.**—For the want of sympathy on the part of assistant teachers the course of study prescribed by the Department has not been as successfully carried out as I have desired it to be. I have held to it in my department as closely as possible, especially by grades.

The attendance of children has not been as regular as it ought and might have been, for there is no possible or reasonable objection to the sending of fifty children to this school at all seasons of the year.

Evening and Sunday Sessions have always been conducted when possible or at all practicable. During the winter months, owing to so much sickness and latterly failure of the supply of oil, evening sessions, for a time, were discontinued. In this work I have only been assisted by the matron, the assistant teacher claiming that the four hours day teaching were as many as her health would admit.

We have always encouraged the attendance of the children at church, according to their persuasion. Holidays, as previously reported, have been observed.

**Sanitary condition and care of the sick.**—The buildings have been kept as clean and in as healthy a condition as frequent fumigations and thorough washing once and twice per week could make them, but with unpainted floors and walls, the plastering falling at all hours or oftener, it is very difficult to keep a clean building. At times we are short of help by sickness or otherwise, and no large girls to assist.

During the *la grippe* attack every child in school was sick. They all nicely recovered that remained at the boarding house, but we sorely needed some white assistance, not daring to trust to the Indian practices.

**Needed improvements.**—First of all a new boarding house ought to be built at once. The present structure is quite inadequate, and unsafe in this windy locality. Any ordinary wind causes it to shake from roof to basement, it being deemed necessary to remove the boys from their dormitory during all strong winds. For further information read under buildings. The probable cost of a new boarding house and essential attachments would be about \$7,000, the intention of the building being to accommodate 100 children, employés, and teaching force; the schoolhouse to be a separate building. The labor for all building purposes could be furnished here, save for the masonry. If the erection of a new boarding house, for either this year or next is impossible, these repairs and additions to the amount of \$1,000 ought to be made before cold weather sets in.

Other Improvements.—A drive well, at a cost of \$50 to \$75, 1,000 strawberry plants, 5 good breeding hogs; uniform suits for boys for Sunday wear. The parents often buy better clothing for their children than we can give them. The girls ought to be furnished with cloaks and hats.

Remarks.—The only complaint that I have heard against the school was made by two chiefs to the overseer, that the boys were worked too hard. We average about three hours daily labor for both sexes.

Our premises, at the time of the visit of Inspector Cisney, were not in the most inviting condition. The snow and ice had just disappeared, the children were just beginning to return from sugar camps; fencing and wood piles were scattered about, ready for use; matron had been in poor health, resulting from overtaxation in caring for the sick, and I had for some little time been busy with reports.

So far as I have been able to determine the management of this school has been in accord with the sentiments of the agent and overseer.

Very respectfully,

H. E. WILSON,  
*Superintendent.*

Maj. B. P. SHULER,  
*United States Indian Agent, White Earth, Minn.*

## REPORT OF SUPERINTENDENT OF THE LEECH LAKE BOARDING SCHOOL.

LEECH LAKE, MINN., July 18, 1891.

SIR: In compliance with instructions from your office, I have the honor to submit my first annual report of this school.

It is impossible for me to give anything like an intelligent history of the school prior to the last year. It was established as nearly as I can ascertain about thirty years ago. From the appearance of buildings, furniture, etc., there have been but few improvements. Those who have been acquainted with the school for a number of years all agree it has been poorly managed.

When I took charge of the work the 20th of August, with my wife as matron, I must say it was very discouraging. The buildings were undergoing the very much-needed repairing; everything was out of place; no one who knew anything about the work to assist in putting things in proper shape to open school. However, we succeeded, and by the 1st of September we were ready for the children.

We found very little clothing for those who came in, the Indians being obliged to buy clothing for their own children. The bedding was entirely insufficient and in bad shape, no sheets, and no material on hand from which to manufacture anything. Dishes were equally as scarce, many of the children necessarily using their fingers for forks. Provisions consisted of flour, pork, and beans, with potatoes from the school garden. Most of these difficulties were remedied when the supplies came in, which was very late. The clothing for the boys is by no means sufficient, only one suit apiece, and not one pair of shoes for the year; none to open school with. Flour and pork, more than is needed; no fruit to speak of, only 100 pounds for the year. The employés we found knew but little about their work, some of them not being able to speak the English language.

On going to the schoolroom I found nothing that might be expected in a first-class school. Books torn to pieces, not enough of any one kind for a class of any number. The school had never been organized or classified, no programme of work had been followed. The opening exercises consisted of calling the roll and repeating the Lord's prayer; not even a song to enliven the work. The old method of teaching had been followed.

We have made a careful study of your "Rules for Indian schools," find them well adapted to the work if we have competent employés and other facilities to aid us in carrying them into effect. We have organized and classified the school according to your rules. We have regular programmes for opening and conducting the schoolroom work. Have singing and mottoes to enliven the school. It will take some time to bring up the neglected branches. There were but two pupils who could work through the fundamental rules in arithmetic.

The attendance has been very good. The overseer has rendered what assistance was necessary in bringing in pupils. The advancement has been remarkable considering the disadvantages under which we have labored.

The boys and girls are regularly detailed to their work and do exceedingly well. The girls, under the supervision of the matron, have been instructed in all the household duties, which they seem very ready and willing to learn. The boys are taught the care of stock, to plant and tend the garden, which consists of about 5 acres under good fence. With the help of the industrial teacher they will raise plenty of potatoes and other vegetables for the school.

The buildings are located in the center of the village very near the lake, with very limited playgrounds. The boarding house consists of a two-story building 36 by 42 feet, with an L 20 by 56 feet one and a half story. The schoolhouse is a one-story building 24 by 40 feet. They have been ceiled in inside. Outside, the roofs, windows, and porches are in very bad repair. We use a building belonging to the War Department for our school. In South Dakota it would be called a "shack." In winter it is very cold; in summer it leaks. I must say, with all the drawbacks and discouragements, in many respects we have had a very pleasant school, and feel that much good has been done.

With the past year's experience, I would respectfully suggest that none but competent persons be employed in the school work; that one qualification be they understand and speak the English language. If these Indians remain here, that new buildings be erected a short distance from the village to accommodate 100 pupils. I am positive that this investment would give the best possible returns for the money expended. If we are to remain in these buildings they should be thoroughly repaired; the boys' dormitory raised; a new school building put up, and everything painted inside and out. Chickens would be a great help to the school, with but little expense. The means of getting water into and out of the building should receive attention, as the carrying of it in and out makes a great deal of dirt and extra work. The expense would be but a trifle. Bath tubs are much needed.

Hoping if we are permitted to make another report of this school it may be a much more favorable one, I am, most respectfully,

J. H. WELCH,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN MONTANA.

## REPORT OF BLACKFEET AGENCY.

BLACKFEET AGENCY, MONT., *August 26, 1891.*

SIR: I have the honor to transmit my first annual report. I took charge of this agency October 1, 1890, relieving John B. Catlin. I found the agency buildings old and in a very dilapidated condition, hardly habitable for man. I can not report any improvement upon these buildings, though the 5,000 feet of lumber you kindly allowed me to purchase made them somewhat more comfortable to live in the past winter. The bottom logs are rotten and some of the buildings are liable to fall down. The roofs leak so that, in a rainstorm or soft snow, the water runs through so that we have to move our furniture and beds from corner to corner; the goods in the warehouse have to be watched so that they are not damaged from the leaking roofs. There will have to be a move towards a new agency in the very near future.

**Agriculture.**—There were no crops raised either upon the agency farm or by the Indians during the past year. At the agency the farm of some 60 acres was cropped, but of this some 9 tons of wheat and oats were cut for hay and 10 bushels of potatoes were stored from this farm. The school garden produced 50 bushels of potatoes for winter use outside of those used during the summer months. This land is covered by an irrigating ditch, and still they made a complete failure of the work by not using the water judiciously, and by the drought that prevailed all over the west. Our farmers claim a crop can not be raised on this land as it is worn out, which I believe to be the case. I did not put a crop in this past spring, outside of a few acres turned over to the school, and this was manured and put, as I considered, in good condition. The season has been all that anyone could wish; plenty of rain and no irrigation required. With all these favorable conditions I must say that the present indications are anything but favorable for a fair yield. I received some 25,000 pounds seed oats, 2,000 pounds seed wheat, and about 23,000 pounds of potatoes. All of this seed was issued to the school and the Indians. The school planted and sowed 8 acres and the Indians 323 acres. On April 13 I put the farmer and the two assistants into the field, camping them in tents so as to be able to move from place to place as their assistance was required, to aid the Indians in breaking new ground, instructing in seeding, etc. This work was continued until the spring work was through with.

You allowed me \$350 for the purpose of paying a surveyor for running and surveying irrigating ditches. I sent the farmer and the laborer with him to run these ditches, and as soon as the assistant farmers were through assisting in getting the crops in I put them with their teams at work breaking the sod and plowing out these ditches, so that any that might not be made immediately would not be lost through the obliteration of the lines of the survey through lost stakes, etc. Seventy-four ditches of all descriptions were surveyed and plowed out; some 6 were cleaned out and completed by the Indians, but having nothing but shovels to perform this work with, very little could be expected. I estimated for and asked that I be allowed to purchase 15 iron scrapers, which was not allowed. Had these scrapers been furnished the larger portion of this work would have been performed by the Indians, as they were fearful of another drought. I can not expect to get them at work again until I am supplied with scrapers. This season has not been one requiring irrigation, but to raise anything here with any certainty these ditches must be completed.

Under the best of circumstances I do not consider that this is a farming country. Oats, barley, and root crops can be raised, but are at any time liable to be injured or ruined by late or early frosts. Still, it is necessary that the Indian be encouraged towards raising what he can and take the chances. The crops put in this past spring are looking very well, and indications would warrant one to believe that there would be a fair return for the amount of labor performed, although they do not so much interest themselves or take pride in this branch of their daily life.

**Stock.**—In regard to this branch of the Indian holdings, I must say that they display more interest in stock toward their advancement in civilized pursuits. The 800 heifers issued to them last August were well provided for, and great interest taken in their care. They put up an ample quantity of hay for their supply during the past winter. From the original number they have had an increase of some 550 calves. They are all anxious in regard to the cattle to be issued this year; putting up all the hay that they can, getting up sheds, stables, corrals, and so on, in readiness for the care of the increased number over and above what they had to care for the past winter.

With the limited number of mowing machines and rakes it is an up-hill business in getting hay for all. As it is, while one party is at work many are looking on, waiting for machines so they can get at work. Under these circumstances it is im-

possible to keep those who are anxious and willing at work. I should have had for this season's haying 25 more machines and rakes. These I asked to be shipped to me by the 1st of July. I have received an invoice for 15 mowers and no rakes, instead of the 25 of each as asked for. This invoice is dated July 27, still no mowers received. Had my request of June 12 been complied with, it would have enabled me to have got several hundred tons of hay in addition to what I will get. The increase in stock, and the 2,000 head of cattle to be issued added to the number, certainly would indicate that these machines and rakes should have been furnished.

You, sir, have the correct view in regard to the outcome of these Indians. The industry of stock-raising is their only salvation. Providing they make a failure of stock-raising, then I can not see what else you can do with them, as they are natural herdsmen. I believe they will work for their care.

**Sawmill.**—I found here a dilapidated sawmill loaned out, but which had not been used for two years for the benefit of the Indians. You kindly allowed my estimate for new parts and repairs, which I bought in St. Louis, Mo., and received the last of July, this year. I have had the mill moved to the mountains into a belt of timber, and have the carpenter and a number of Indians now there at work putting it together and setting it up so as to try and get out some lumber this fall. This has been one of the great drawbacks, having no lumber for any purpose whatever, either for the agency or the Indians. With the lumber that could and ought to have been cut here the Indians could have had comfortable homes, but on the other hand they have the very poorest of little log cabins, poles for roofing, covered with earth. I believe that they will display interest enough to get a large number of logs to the mill this coming winter, to be sawed early next spring. I can not now estimate what will be gotten out before winter sets in, but shall make every effort possible toward pushing this work ahead, although you must bear in mind that this has all to be done by the Indians themselves, outside of the carpenter who runs the mill and is in charge of the work.

**Lands.**—These people are scattering out and locating upon lands and setting up corners for their different claims. They have no idea in the world in regard to the quantity that each one would be entitled to under allotment. I have many complaints made to me in reference to one jumping another's claim. It is hard to get them to understand, which I try to do, that they must build a house, stable, sheds, fences, etc., and then no one can jump their claims, but they must not expect to hold large tracts of the best hay ground without improvements being made. I have worked to the end that they scatter out in this way and break up living in villages, as they can not care for their stock unless they do so.

The lands ought to be surveyed and allotted. There are a large number who are anxious that this should be done; others are opposed to it, believing when the lands are allotted that the balance will be sold to white settlers. This they are opposed to, as they say that they in time will require the whole of this reservation for hay and the grazing of their horses and cattle. This seems to be the only objection—and this by a few—to allotment. The sooner that allotment work can be commenced here, the better. It will have the effect of making them more independent on their individual standing, and less dependent upon community authority; breaking up the influence swayed by the old medicine men and chiefs.

**Whisky** has been the curse and cause of the slow advancement of these people. There apparently had never been an effort for the suppression of the sale of whisky by a lot of the loose men bordering upon this reservation and other white men who run regular saloons who traded and sold to these Indians in any quantity they desired, even over the bar by the glass. This matter I commenced a fight against immediately after taking charge of this agency. I succeeded in procuring the necessary evidence to cause three men to be arrested. After a long fight in the courts I succeeded in having these men convicted and sentenced to state prison, one for four months and \$100 fine, one for six months and \$250 fine, and the other for one year and \$250 fine. This has had a very satisfactory effect. The Indian now when he earns money spends it for the benefit of himself and family. Five have this summer bought mowing machines and rakes. Had this whisky trade been allowed to run as heretofore they would never have accumulated enough to have bought these machines. On October 14 I seized a wagon, horses, 29 gallons whisky, and other property from a party, not upon a regular traveled road, headed right into an Indian village. This is all yet in the hands of the United States marshal, no decision having been rendered by the United States court. Providing whisky can be kept away from these Indians, I think that there are some hopes for their improvement.

**Police.**—The force here is a good body of men; in number 19—captain, lieutenant, and seventeen privates. They are efficient and a great aid toward the welfare of this reservation. They show no favors, are willing, and will, if necessary, arrest and lock up their own brothers. They have been of great assistance in breaking up the whisky traffic, although there are but few who can resist the temptation of drinking if they are so placed that they can get it by purchase.

**Judges.**—We have three before whom I have had all offenses brought; this was never done until I took charge here. They (the judges) say that they were never called upon to try a single case. I believe that all cases should be brought before them so as to teach them self-government, and that it gives better satisfaction in general to have these judges decide than if left to an agent.

**Railways.**—The Pacific extension of the Great Northern through this reserve has caused less excitement and complaint than I had anticipated. The construction contractors have been at work upon the reservation since last November and are still this side of the western boundary, but will by the 10th of September have the end of their track over the divide of the Rocky Mountains. This company has granted the right of cutting 60,000 ties and 50,000 linear feet of culvert and piling timber adjacent to their line from and off the reservation, for which a settlement has not as yet been made.

**Education.**—The schools upon this reservation are the agency boarding and the Holy Family Industrial. In the agency boarding school the accommodations are very limited and altogether inadequate for the accommodation and wants of the number of pupils that have been cared for during the past year, the highest number enrolled being 45 and an average attendance for the year being 34 $\frac{1}{2}$ ; the number employed being 6 whites and 1 Indian. Cost to the Government for maintenance, \$5,232.86. Upon the completion of the two new school buildings now under construction, which will be by November 1, an additional 100 children can be cared for, as well as having the facilities for conducting a well-organized school. The progress of this school for the past year has not been satisfactory. The superintendent in charge \* \* \* having resigned, it is hoped that the next superintendent may be a success.

The Holy Family Industrial School is located about 5 miles away on the Two Medicine. The buildings and furnishings are all new, having opened school the 1st of September, 1890. This school was built by Miss Drexel and donated to the Sisters for the education of Indian children, and is conducted by them. They are under contract with the Indian Office for the care and education of 100 children. They have had 106 enrolled and an average attendance for the ten months of 76 $\frac{1}{2}$ , at a cost of \$8,681.40 to the Government. I consider that this school has made very good progress for the time that it has been in operation. The Indians of this agency do not as a rule take kindly to educating their children. They consider that by placing a child in either school they are entitled to great consideration and really should be paid for allowing the child to remain at school.

**Sanitary.**—The health of the Indians has been very good. The complaints prevailing are such as scrofula and pulmonary diseases. During the winter *la grippe* put in an appearance in a very mild form, causing very few deaths.

**Ghost dance.**—While a large number of other tribes were excited and indulging in the ghost dance these Indians were not affected, taking really no interest in the craze. General Miles sent in December last Lieut. T. L. Farnsworth to this agency to see what the feeling of the Indians was. Again, Captain Baldwin, of General Miles's staff, reached here on the 26th of April last for the same purpose. Neither of these gentlemen could report any way but favorably in regard to them and their friendly feeling.

**Census.**—Total number, 1,953; males, 941; females, 1,012; females over 14 years, 625; males over 18 years, 394. School children between 6 and 16 years, 513; males, 285; females, 228. I have taken as careful an enumeration as possible, taking time and expending a great deal of labor upon this census, believing that there had been heretofore but little regard paid to accuracy, as the returns to your office last year show 2,173 and at the same time the returns to the Census Bureau show 1,811. Why this great discrepancy, when both returns were taken and made up by the same man?

Very respectfully, your obedient servant,

GEORGE STEEL,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF CROW AGENCY.

CROW AGENCY, Montana, October 22, 1891.

Sir: I have the honor to submit herewith my third annual report.

The Crow Indian Agency is located on the west bank of the Little Horn River, about 50 miles south of Custer station, on the Northern Pacific Railroad, and about 11 miles south of Fort Custer.

Few Indians are near or in the vicinity of the agency, their settlements extending along the entire length of the valleys of the Little Horn and Big Horn rivers, of Prior Creek, and other smaller streams. These settlements are divided into five

districts, each in charge of an additional farmer, who instructs the Indians under his charge in all matters pertaining to agricultural pursuits or to grazing and care of cattle. It is a hopeless task for any one farmer, even with the Indian assistant allowed him, to meet the excessive demands upon his time during the spring, summer, and early autumn. The very best he can do is to give each one slight instruction on the many points and then pass on to the next person.

If the societies so interested in the welfare of the Indian could secure such legislation as would admit of sufficient employés on a reservation to perform the labor required by the Department, and to give complete instructions to those Indians who so earnestly, almost prayerfully, request instruction, they might congratulate themselves on accomplishing real and lasting benefit to the Indians on the numerous reservations. Pupils can not receive beneficial instruction to any marked degree without competent and sufficient instructors, and these Indians have never been provided with the necessary number. However, inspectors have informed me that we have a much stronger force of employés than other reservations containing a like number of Indians, and if such is the case, other tribes have my deepest sympathy.

I am greatly pleased to state that our crops have given excellent returns this year. There have been abundant yields of grain and vegetables of every description, and the Indians are feeling decidedly encouraged, as the past three years have been little less than total failures. My statistical report, forwarded herewith, exhibits the following returns in way of crops raised by Indians:

	Bushels.
Wheat.....	2,000
Oats.....	12,800
Corn.....	780
Potatoes.....	12,000
Turnips.....	3,000
Onions.....	90
Beans.....	20
Other vegetables.....	920

Together with thousands of melons, pumpkins, etc.

The Indians have also cut and sold 2,000 tons of hay, the price being \$10 per ton, delivered. Most of this hay, about 1,500 tons, was put in on the contracts for hay for Fort Custer, and the rest was sold to the stockmen, the agency, etc. This affords the largest income from hay ever received by the Crows. The total income resulting from their labor this season, including Government purchases, will amount to slightly more than \$30,000. Quite a large sum will have been derived from a large field planted by the Indians to oats, potatoes, and wheat. This field embraces several hundred acres, and is all under the only irrigating ditch on the reservation, being in the Little Horn Valley, about 9 miles south of the agency. The results of the cultivation of this field have been such that I contemplate enlarging it to quite an extent another year. Such action will, however, necessitate additional employés during planting and harvest, also at the threshing. Without such increase, probably three or four competent men, this work can not be conducted on the extensive scale contemplated. The Indians will, however, be very glad to pay for such employés from their own funds. In my opinion the Crows can, with the assistance mentioned, supply Fort Custer with all the grain required at that large post. I shall certainly make the attempt unless otherwise instructed.

The valleys on this section of the reservation are so admirably adapted to agricultural pursuits, the ground being so rich and deep and the water supply abundant for the irrigation of every available acre, that I am disposed (even in view of the honorable Commissioner's letters of September 12 and 24 and October 1, suggesting the advisability of a change from an agricultural to a pastoral life) to encourage these Indians in the direction of agriculture to a considerable extent, provided our proposed system of irrigation be undertaken and pushed forward with ordinary energy. I consider that farming, under favorable conditions, will advance the Indian in the direction of civilization in all its features with more certainty and with far greater rapidity than a pastoral life, and in this section there will be sufficient profit to satisfy the Indian for moderate labor.

Yet I have always held that the Indian of the Northwest must rely upon his herds, cattle, or horses, but especially cattle, for the greater portion of his income, and to this end my estimates for stock cattle have been made. When the stock cattle now on hand for individual issue are issued to those Indians prepared to receive and care for them about four hundred families will have stock cattle in their individual right—from 10 to 40 head each; and if the honorable Commissioner can authorize two more contracts of 1,000 head each, then nearly, if not quite, every family of this tribe competent to handle cattle will own sufficient stock to form a nucleus of a large herd, provided only the steers are killed or sold. I consider the issue of

stock cattle continued until every family is provided with a few cows or heifers as one of if not the most important feature in the progress of this tribe toward self-support, and I trust that the purchase of a herd to be held in common, as per the provisions of treaty of segregation of December, 1890, will in no wise militate against the continued issue to individuals or to heads of families of stock cattle, as has been customary in the past. If this can be done for two years, until each family is provided with stock cattle, five years from that date this tribe will require no assistance whatsoever from the Government, but will be in each and every respect self-supporting.

Walter H. Graves, superintendent of irrigation for this reservation, and his two assistants, Messrs. Riley and Butler, arrived at the agency last June and since then have been very busy surveying and drawing estimates for the extensive system of ditches required for the irrigation of this reservation. Mr. Graves evidently is master of his profession, and I have, in consequence, high hopes that ere many seasons shall have passed the most fertile and extensive valleys in this section will be under irrigation. I deem it of importance that ere another season at least a small ditch be constructed. A ditch from this agency to the Fort Custer military reservation could be easily built, and it would open up an area of fertile land capable of supporting a large number of Indians. If they can see some direct results in way of irrigation they will be greatly encouraged. I am of the opinion that considering the large area embraced in the valleys of the Little Horn and Big Horn rivers, a more fertile country can not be found after water is brought upon the land, or a country where the yield is greater. There will be scarcely a limit to it.

Our round-up of agency and Indian cattle has been made as usual, but the work has been somewhat imperfect, and I am not at all satisfied with the result. Our horses were worn out last autumn—half of them; then came the severe work of winter, which wore out the remainder so that they were useless for immediate work. They all required rest, and my herders said that they had not the heart to urge even the best horses on hand out of a walk. I immediately applied for more animals to enable me to commence the round-up, and I represented the exigency fully, but was unable to obtain authority for the purchase. Hence I had to commence the round-up of an extensive country, containing several thousand cattle, without a single horse able to keep a gallop for half a mile. There could be but one result even with the help of the Indians. I have now been allowed 10 horses, which, when they are delivered, will relieve those now in occasional use, every one of which "is dead on its feet." The calf crop was good, the whole season being favorable. Over a thousand calves were obtained from the Indian cattle, and next year there should be 1,500 at least. To obtain the best results, the stock must receive care, and cattle can not be protected without horses in ample number. The amount of riding required of my many employés absolutely demands not less than 20 saddle horses in good condition. This represents about 30 saddle horses. I do not expect this number will ever be allowed, but I know that unless they are the demands made upon me can not be met, howsoever great the exigency may be.

In this connection I would state that upon the five grazing districts let to stockmen for three years from July 1, 1891, there are in each instance more or less trespassing of cattle or horses, and I have been instructed to clear the said districts of all outside stock. In two instances complaints have been placed before me charging that excessive injury is done the lessees, and in one case the lessee claims that his beef shipped from District No. 2, whereon are many horses trespassing, actually brought him nearly \$1 per hundred pounds less than other beef shipped from other districts on this reservation or from adjacent ranges. Of course, this is a great hardship and I have made all the efforts I could to clear this range; now I am only waiting for horses for the employés (I shall send in charge of my police and Indians) to ride. \* \* \* I have very grave doubts regarding the possibility of keeping the several districts now leased to stockmen free from trespass of stock. I shall do all that an agent can do, but I am convinced that by fencing the reservation alone can these ranges be protected.

I have already presented the subject in my letter of July 18, 1891, for your consideration, and I will repeat that unless the outer lines of these five grazing districts are fenced the stockmen can not be protected in their rights of grazing the districts that they have paid for. The funds received for the rental of these districts for one year will build a permanent and substantial fence all around the outer boundaries of the districts, and the stockmen renting them will, I am quite certain, bind themselves to keep the fence in perfect repair. This is a very important question and it can be settled in only one way, viz, by fencing. I shall shortly present for your consideration a second communication regarding this most important and vexed question.

Our Indians are now nearly all supplied with implements of every description, with abundant wagons, harness, etc., so that my next annual estimate will present a marked decrease in amount; and I trust that any available funds may be used for

stock cattle. It will be necessary to purchase more mowing machines however, and in this connection I would say that we have half a dozen or more different machines now in use at this agency, and the honorable Commissioner can scarcely appreciate the trouble occasioned this office in attempting to keep these different machines in a pair. An employé must see each machine and part of a machine, as the Indians can not give definite information as to such matters. Some one variety of mowing machine should be selected and invariably purchased for this service year after year. In this way enormous waste of labor and money might be avoided, and benefit to the service would result in many ways.

The dike constructed last year across the Little Horn River proves one of the most substantial works at the agency. The rush of ice and water last winter, when the river broke up, did no harm whatever to the dam. By this dike the water from the Little Horn is thrown to every part of the agency and in inexhaustible supply. Large numbers of shade and fruit trees have been set out this spring, and it is a surprise to visitors to mark the rapid growth the shade trees have made, and these trees are really a great improvement. Next spring I shall set out such numbers of shade trees as will materially change the aspect of this agency and its immediate surroundings.

I have made great improvements in the agency slaughter-house, and now have as convenient, if not the most convenient, slaughter-house in Montana. One hundred and fifty beef cattle can be hung within the building with every facility for cooling. The house can now be kept clean and wholesome with little labor, whereas the old one was but an object of disgust. In the slaughtering of the cattle and disposition of the offal I am following the very excellent instructions from your office, and I find that the Indians do not object to such action, though at first they were disposed to murmur.

A shed 128 feet long has been created for shelter of wagons, implements, and other goods. Also an addition of 50 feet has been made to the issue room, an addition which was much needed. A large granary has also been built. We needed a store-room for grain badly, and this granary is very convenient and is substantially built.

After expenditure of much time and labor I have discovered a vein of coal of excellent quality; it is about 10 feet thick and stretches along the bluffs for probably 2 miles. The supply of coal is therefore practically limitless, and the question of fuel supply on this reservation is settled. I am quite pleased at the result of my efforts prospecting for coal, as most of my associates on the reserve doubted their success.

The ceded portion of this reservation occasions me no slight annoyance. The citizens along the line are very impatient for it to be declared open, and it is a very difficult matter to keep many of them from crowding on the line. Indeed it is impossible to keep them all off, although I have an employé and party of police constantly patrolling that portion of the reserve. Of the allotments made on the ceded portion, I am convinced that many are taken by Indians who have no desire to locate there, but simply take these claims for speculative purposes, and I have no question but that many of these allotments were made later than May 3, 1891, after the expiration of the sixty days allowed the Indians to make their selections. The report of Special Agent Duncan, of the Land Office, will probably throw some light on this question. I anticipate much trouble after the ceded portion is declared opened from the "jumping" of claims held by Indians unlawfully, and there is no doubt but what there are many such.

The new school building which is being constructed under contract is approaching completion and will be very convenient. Is of brick, 70 by 40 feet, with L, two stories. The completion of this building will enable the agent and superintendent to conduct the school with more interest and pleasure than formerly, as the old building has never been fit for the purpose for which it was intended.

I will shortly submit estimates for another school building of about the size of this one, and when that is completed I shall be able to do my part in the educational work now being pushed forward so rapidly and with such energy by the honorable Commissioner. I shall have no difficulty in providing sufficient pupils to fill the two new buildings, and the old building can be used for quarters and storerooms, both of which we lack. I consider the school in the main as on a satisfactory footing. The quarrels that have for years existed between the school employés at this agency ceased about two years since, and there has to this date been no recurrence. There seems to be perfect harmony existing between the employés. I forward herewith a report from the superintendent of the agency school.

The reports of the St. Xavier school and the Montana Industrial will be forwarded in a few days under separate cover, as they have not yet been received, although asked for. These two contract schools are both doing good work. The St. Xavier is under Catholic control. Its sanitary condition is good and the pupils are making commendable progress in their studies. The Montana Industrial school is under Unitarian influence, and is also meeting with fair success in its educational and industrial instructions.

After the new building at this agency is completed there will be no necessity for

increasing the number of pupils allowed in either of these contract schools, as that at the agency will be able to receive all those of school age and in healthy condition. There are quite a number of children in the several camps so diseased that it would be imprudent to admit them to our schools.

The police force continues to increase in efficiency, if not in numbers, and they are as fine a body of men as can be found in any tribe. They perform their duty with such faithfulness, often at great pecuniary loss to themselves (as for instance, the killing of a horse while carrying important messages), that I am really grieved that their compensation is not in some degree commensurate with their labors. They accept every action of the Government as being unquestionably right, and they do not murmur. Yet they often speak of the many years when they were paid, as are the scouts, for the services of their horses at rate of 40 cents per day when actually in use, and they can not understand why (when there is the same abundance of funds for their payment without any further appropriation whatsoever of Government funds) the Great Father does not pay them as he always used to, and they wish that he would do so. And I wish he would, too, as we have an abundance of funds from "sale of beef hides," "miscellaneous receipts, class 2," for the payment for services of horses at the same rates as were ever paid the police until the first quarter 1890. It would put new courage into the force if this act of real justice could be done them.

The experience usual to Indian agents came this year to me; an investigation of this agency having been made necessary by charges preferred by irresponsible and ignorant employes, etc., connected with this service. I was in consequence compelled during a very busy season to devote much time to explanation of charges of such silly nature as to almost nauseate those persons present at the investigation. Even the unhappy creatures making the charges while in the presence of the inspector exhibited shame in every feature and these employes were only too glad to creep away after the investigation closed and their faces have been seen no more.

There have been some improvements of a substantial nature by religious societies and others. The Catholics have built a large and elegant school building at the St. Xavier mission on the Big Horn. It is three stories high and will accommodate 100 pupils. They have commenced the erection of a church at the agency which will be the only church building on the reservation.

A new trader's store has been erected, a substantial neat structure, and the old store has also been greatly improved by the owner. The two traders now at this agency do a moderate business only. They are giving satisfaction to the Indians and the agency people, and are anxious to do what is right in each and every respect.

The Unitarians have also built an addition to their main school building, which improves its appearance to a marked degree. They have also made many minor improvements.

A larger amount of work has been accomplished than during any previous year of my own or my predecessors' administrations; and I feel very grateful to the employes of the agency for the hearty support they have always accorded me. I recognize fully the fact that an agent can do but little in the great variety and excessive quantity of work presented for his action without the cordial support of all his employes.

The office work has run considerably behind, as there has never been such a rush of clerical labor as during the past summer and autumn. My clerk after waiting for more than twelve years for an opportunity when he could take a leave of absence, and without success, was compelled to take a sixty days' leave in August and September. He now regrets such action, as it compels night work until late hours for several months. We are, however, gradually gaining on our office work, and by spring hope to be up with it, unless the flood of clerical work continues. The clerical work at agencies can not be fully understood; only sufficient help has ever been allowed at this agency to perform the usual work, and under the most favorable conditions. What then occurs when instructions for clerical work covering two to four months' constant labor for a clerk are received! Why, something must be omitted, for those months of labor can not be obtained save by omitting many of the usual papers. An agent can not call on any employe for aid, as few of them understand office work. So he can only guess at what papers can best be deferred, and often guesses wide of the mark, in which case censure follows, although the delay may be wholly unavoidable. Some of the best officers ever employed in the English East Indian service have been noted for being continually in arrears with their accounts. We are doing our best, and the whole office force is working late at night, and every night at that. They can do no more, however important additional labor may be considered.

I have to thank the honorable Commissioner for the very kindly consideration given to all my requests. Such action greatly encourages an agent, and encouragement is a commodity which Indian agents generally stand sadly in need of.

Very respectfully, your obedient servant,

M. P. WYMAN,  
United States Indian Agent.

## REPORT OF SUPERINTENDENT OF CROW BOARDING SCHOOL.

CROW AGENCY, MONT., July 10, 1891.

SIR: I have the honor to herewith submit through the agent a report of Crow boarding school for the fiscal year ending June 30, 1891:

Location.—This school is situated at Crow Agency, Mont., on Little Horn River, 10 miles southeast of Fort Custer. The school has been in operation since the location of the agency at its present site in 1883.

Buildings.—The school plant consists of six frame buildings. Their size and condition are as follows:

No. 1. Boarding school building, built in 1884, 40 by 70 feet, two stories, very much out of repair, but as a new brick school building is now in course of construction and the agent will shortly ask for another, no extensive repairs will be made or asked for.

No. 2. Schoolhouse, built in 1886; will be repaired this vacation; size 32 by 56 feet.

No. 3. Laundry, 16 by 20 feet; condition good.

No. 4. Tool house and shop, 12 by 16 feet; condition good.

No. 5. Cow shed, 12 by 40 feet; has board roof; needs new shingle roof.

No. 6. Cow stable, 14 by 72 feet; has poor board roof; needs new shingle roof.

Attendance.—The average attendance for the year, by quarters, was as follows:

First quarter	63 1/4
Second quarter	60 3/4
Third quarter	61 3/4
Fourth quarter	64

The high average attendance for first quarter results from children remaining at school during vacation. The average attendance of boys was 2 per cent more than of girls. The average age of girls is ten years and nine months; that of boys, ten years and six months. This fact should be kept in mind when considering the industrial work performed by the school.

Industrial.—The industrial work of the school consists, for the boys, of gardening, care of cows, care of dormitory and wash room, cutting wood, assisting in kitchen and laundry, and cleaning and keeping in order school grounds and fences. The girls receive instruction and assist in sewing room, laundry, kitchen, care of milk and butter-making, in all housework—in short, in every variety of work necessary to conduct an ordinary household. The seamstress and cook have especially taken pains in requiring the children to do the work, teaching them all the details with the work in the pupils' hands rather than to personally do the work with the pupil looking on. We have no girls 14 years old or over but can make a dress in a very creditable manner with but very little assistance. The following list approximates nearly the work of the sewing room and laundry for the year:

Articles fabricated	690
Articles mended	7, 124
Articles laundered	12, 480

Details of girls and boys for the several departments and divisions of work are made monthly. The school garden comprises 19 acres old ground and 8 acres of breaking, all of which is in crop. Our garden is now under a ditch, but the unusual rainfall this season so far has rendered artificial irrigation unnecessary. The cold weather in April made it necessary to seed garden late, but it is all in good condition now, and barring accidents, I estimate our garden crop to yield as follows:

	Pounds.
Potatoes	100, 000
Turnips and rutabagas	18, 000
Beets	15, 000
Onions	1, 200
Sweet corn	3, 000
Popcorn	1, 000
Parsnips and carrots	2, 000
Cabbage	6, 000
Tomatoes	2, 400
Melons and cucumbers	8, 000
Squashes and pumpkins	12, 000
Peas and beans	600

Stock belonging to the school comprise 42 head of cattle, 9 of which are spring calves. This herd represents 10 cows, purchased in 1888, and their subsequent increase. Five hundred pounds of choice butter have been made during the year.

The school has no carpenter or blacksmith shops, but apprenticeships at the agency shops are filled by the boys from the school, the exceptions being returned pupils from Carlisle. When pupils are appointed apprentices they leave school and are no longer under school discipline or control. During the year six boys have been appointed apprentices or assistant farmers.

Improvements.—In April we set out, in and about the school premises, shade and fruit trees, shrubbery, and plants as follows:

Shade trees (silver leaf maple, native cottonwood, and box elder)	122
Crab apple	96
Apple (Pewaukee and Duchess of Oldenburg)	24
Currants	48
Lilac	8
Strawberry	1, 500

All of the above are in a thriving condition. A flower garden has been planted and cultivated by the matron, teachers, and girls, the beauty and fragrance of which assists greatly in giving to the school a refining and home-like appearance. Laterals from the main ditch to the garden have been built, so the garden can be watered when necessary.

On June 23 ground was broken for a new brick building for dormitory and boarding purposes, with large dining room capacity; when completed we expect to increase the school to 100 or more pupils, using the new dormitory for girls and continuing the boys in the present old dormitory until such time as more suitable quarters can be provided.

Employés.—The employés force consists of superintendent, matron, two teachers, cook, seamstress, laundress, and an industrial teacher. Since April 10, 1891, but one change has been made in the force during the year; entire harmony and unity of purpose have obtained among all connected with the school, resulting in a very beneficial influence over the pupils.

**Literary Department.**—The class work has been in charge of two lady teachers, Mrs. Arkwright, wife of the superintendent, a lady of many years' experience in primary work, and Miss Wyman, daughter of the agent, a young lady of many accomplishments, but with no previous experience in teaching. The work has been prosecuted with untiring zeal and energy, and very marked progress in studies has been made, the class work has happily suffered no interruption whatever during the year.

Upon receipt of your course of study in September last the school was classified and graded to conform therewith as closely as was possible. I submit below a table showing the standing of the pupils in relation to the various grades at the close of the school year:

	Girls.	Boys.
Pupils ahead of grade.....	4	6
Pupils with the grade.....	18	23
Pupils behind grade.....	7	2

Of the nine pupils behind the grade, five girls and one boy have been in school from four to seven years; they are from two to four years behind their proper grade, according to their number of years in school. Of the children that have been received in school since I took charge (October, 1889), but two are behind the grade. I am of the opinion that the school can keep up with the course of study outlined by your office, unless it becomes necessary for the prosecution of industrial work to keep pupils from classes more than one-half of each day.

A reading room has been established for evening study. It has been liberally supplied with papers and magazines by kind New England friends interested in Indian education.

**Holidays.**—All the holidays, as designated in school regulations, have been observed by appropriate exercises, the pupils very readily taking part in the various programmes. On Decoration Day the school accompanied the Grand Army Republic post from Fort Custer to the Custer battle ground, 2 miles distant, and assisted in the memorial exercises, each pupil bringing an offering of wild flowers, deposited them at the base of the shaft that marks the place where Gen. Custer lost his life.

**Accidents, Deaths.**—In January a girl seven years old broke her leg while playing in a swing. When apparently well she fell and broke it again in same place. That gave her fourteen weeks in bed, but she has recovered entirely now.

In September last a boy of 13 died, and in February a girl of 10: Their parents begged to take them home before they died, and their request was granted.

**In general.**—The school year just closed can truly be considered highly successful, and Crow boarding school is in a very prosperous condition. Some of the causes that have assisted in bringing this desirable result are: No contagious or other diseases or serious sickness of any kind have visited us, but, on the contrary, the general health of the pupils has been excellent, so far as the health of Indian children can be considered good, for these Crow children are not of average health—they nearly every one inherit scrofulous or other diseases.

The school in neither class or industrial work has suffered interruption from any cause during the year. No serious breach of discipline has been committed. The children use English entirely in all conversation about the school, and considering the tenacity with which the Indian clings to the native tongue, this triumph must be considered one of no small proportions. The children also very generally play English games rather than Indian, and a very healthy moral atmosphere pervades the school.

A very high average of attendance has been maintained the entire year. The capacity of the building is rated at from 45 to 50, while our actual average attendance was 62.

The force of school employes have shown a very zealous, patient, and persevering spirit in their several departments of labor. There is no doubt but they all have a deep and earnest desire to see the school prosper and the children improve. There is no question but that Indian children can learn everything necessary to make them self-supporting citizens; but the question seems now to be, Can a lasting desire and determination to continue in the ways of civilized life be implanted in the Indian child sufficiently strong to hold them after school years have passed? I trust that ere long the question can positively be answered in the affirmative.

I am, sir, yours very truly,

H. D. ARKWRIGHT,  
Superintendent Crow Boarding School.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF ST. XAVIER SCHOOL.

ST. XAVIER, MONT., November 3, 1891.

SIR: I have the honor to submit this, my first annual report of St. Xavier Industrial Boarding School for the fiscal year ending June 30, 1891.

In taking charge of this school, on the 1st of January last, I am pleased to say that I found it in the most satisfactory condition. I did not venture, therefore, upon any reform in the general management of the school, but concentrated all my endeavors to further and perfect the work in the same manner in which it was so successfully begun by my predecessor.

Great care has been bestowed during the past year upon the children's acquiring propriety and fluency of speech in the English language. To this end it was incumbent on the teachers and employes to extend the English lessons beyond the walls of the class-room into the playground and workshops; it was their duty to mingle with the children, to converse with them upon some interesting and useful topic, making their work and play instructive and pleasant. Thus the forty-first rule of the "Rules for the Indian Schools" was carried out to the letter, and, as could be expected, with marked success. With the exception of six of the larger boys, whose tardiness may be excused, partly by their lack of memory, partly by their want of flexibility in their organs of speech, all the children are at present able to use solely the English language in conversation.

Great proficiency has also been made by the pupils in singing, music, and calisthenics, several girls being already able to accompany on the harmonium the songs of their classmates.

But, the special design of the Indian schools being that every girl shall learn all things necessary to carry on common housekeeping, and every boy that trade or industry which will enable him to become a thrifty citizen, it was principally the industrial training, which has found during the last year a strong and steady support among all, who had any charge in the school. Ample opportunity was therefore given to the boys for farming, gardening, herding, and raising stock, carpentering and blacksmithing; whilst the girls were employed in every branch of housekeeping and taught such work as would be useful to them in after life, viz, to knit, to cut and sew garments, etc.

For these mental and manual exercises sight was not lost of seizing every opportunity to inculcate sound principles, and to model hereby the pupils to be upright and devoted citizens of our nation. In general, the moral training of the pupils comprised all that could root out the depraved habits of the Indian and ingraft love for everything noble and great. Due praise I must bestow on the teachers, who with assiduity and tact succeeded to keep up strict discipline and bring a consoling change about in the social manners of the pupils. The fact that corporal punishments, or any other rigorous measures were never tolerated in this school, and the whole education mainly based on kindness, persuasion and conviction will justify me, if in concluding this paragraph I express my firm hope that the fruit of the training of this and previous years will be true and lasting.

The health of the pupils has been very satisfactory during the whole year, and every effort is made to maintain the school in this good sanitary condition. Abundant and only well-prepared food is served, whilst healthy outdoor exercise, as gymnastics, football, and similar sports, are much encouraged. Every week a half day, and at the end of the scholastic year eight days, were given to excursions. Though the primary end of these recreations was the children's health and contentment, still much has been done on such occasions conducive to their mental and moral development.

Whilst exerting thus every possible influence upon the offspring of the tribe, the St. Xavier Industrial School could not but prove beneficial also to the already grown-up generation. Parents and friends of the pupils were at times invited, and, they came readily to the school, where they were entertained by their children's declamations, singing, and similar exercises; they assisted at these with evident signs of gratification and even delight, thus giving stimulus to the minds of the pupils and receiving in their turn better impressions in regard to education. It is true that this system of training had no results immediately perceptible, but, in my humble opinion, it can not fail to undermine many a prejudice and better dispose the parents to take advantage of those liberal facilities of education which the Government offers to them.

To animate more the Crow Indian to the acquirement of industrial and social habits, it has been the missionaries' long cherished intention to visit with a few Indians some of the more civilized tribes west of the Crow Reservation. The plan was brought to maturity only last summer, when five of the more intelligent and influential members of the tribe, with a missionary at the head, started out on a month's tour to the reservations of Montana, Idaho, and Washington. It was quite a novel sight to see men whose only design in visiting their neighbors was, but a few years ago, to prey on their possessions, now seeking the homes of their former rivals in depredation, to learn there what change industry and training bring about in the accommodations of life and in the habits of social intercourse. The party first reached St. Ignatius Mission; here they were struck with astonishment in beholding the cultivated fields, the multitude of cattle and horses, the comfortable dwellings of the Indians, the numerous houses and workshops of the mission school, with all the various machinery. A similar picture was presented to the travelers among the Nez Percés and Cœur d'Aléne Indians. The latter held a meeting in honor of their guests, and made great impression on them by giving utterance to such noble Christian and patriotic sentiments as could scarcely be expected to flow from the lips of an Indian. But the astonishment of the party changed into amazement at the capitals of Montana and Washington. Here, at every step, they met with fresh, and till then undreamed-of evidences of the handicraft and intelligence of the white man, and were well nigh lost in admiration of the public and private buildings, the electric cars, the market places, and public shows. The exquisite kindness and hospitality which they met with from official and private persons of every rank made them feel proud and conscious that they were men linked by holy ties to a great people, whose achievements they were therefore bound to emulate. To such sentiments they gave vent, when, after their return, they spoke with men of their tribe. They said that they had shaken hands with many white people who were friends of the Indians; white people had big brain, worked much, and were of good heart; Indians should work as the white man, and follow the latter's counsel. Such speeches of the Indians themselves will no doubt efficiently cooperate with the praiseworthy endeavors of the white people on this reservation.

To speak of the material improvements, I note: (1) The completion of a new schoolhouse for the boys. It is a two-story high brick building, with a hip roof, provided with dormer windows, making thus practically three stories, and affording ample room for 150 persons. No work or expense has been spared to erect large, well-lighted, and well-ventilated halls, and to insure the safety of the inmates in case of fire. (2) Two new cellars for the storage of winter provisions, besides some minor improvements at the old school-building. (3) A ditch 2 miles long to irrigate the school farm.

Very respectfully,

R. J. CRIMONT.

## REPORT OF SUPERINTENDENT OF MONTANA INDUSTRIAL SCHOOL.

SEPTEMBER 1, 1891.

To-day marks the beginning of a new year since I have been in charge of this school.

The new part to the building, whose construction was begun a little over a year ago, has been completed, thus affording more adequate conveniences for cistern, laundry, bath room, storeroom, and schoolroom. The dining room has been greatly enlarged by removal of partition, and the kitchen has been repaired and improved in many ways and by several devices. The older portions of the building have been sheathed outside and inside, rendering schoolrooms, sitting room, sewing room, girls' play rooms, kitchen, dining room, and dormitories all more pleasant, convenient, and comfortable. A reasonable amount of paint has been used to make the building assume a more cheerful and homelike appearance.

Farming operations on the ranch have been carried on very successfully during the past year. Under Mr. Benjamin Radcliff's direction the boys have received many useful lessons in farming, gardening, and the care of horses and cattle. Two large stacks of hay, alfalfa, and oats have been put up. Carrots, beets, turnips, rutabagas, cabbages, and squashes have been put in cellar for winter use, and about 500 bushels of potatoes of finest quality have been stored for the year's supply. A generous quantity of pease, string beans, lettuce, radishes, cucumbers, sweet corn, and melons were greatly enjoyed in their season. Several messes of large ripe gooseberries afforded a pleasant relish.

A new well has been dug, affording an abundant supply of pure, soft water for all household purposes, with a generous surplus for the use of freighters, stages, travelers in general, and the horses and cattle kept upon the ranch. By means of force pump, tubing, and hose the water is conveyed from the well to the cistern, laundry, play rooms, kitchen, and dining room. This arrangement adds an element of safety, as well as convenience, to the entire business of housekeeping.

The sewing room department has been ably conducted by Mrs. Delle Radcliff during the greater part of the year, who has given efficient instruction and practice to the girl pupils in sewing, darning, and patchwork.

At the beginning of the school year a kindergarten teacher was employed—a new departure—as an experiment; but it was soon found that the pupils under her charge were too old to greatly profit by the system. So the kindergarten has naturally grown into a simple primary grade; in fact, the distinction between the two departments of the school has been almost entirely obliterated.

Mr. Otis K. Lake proved himself to be a very careful instructor in mechanical drawing and in the making of model designs in wood and iron; but it was found that the boys under his care, on account of their limited knowledge of the fundamental rules of arithmetic, and their utter ignorance of denominate numbers and fractions, could not be sufficiently profited by purely scientific methods of instruction, and that department has been largely changed to actual practice work in carpentry and blacksmithing. What the boys learn by actual doing becomes useful knowledge and a permanent acquisition.

The girls have been taught by careful supervision and practice laundry work, cooking, dining room service and general housework.

The monotony of school and ranch life has been pleasantly relieved by frequent calls and visits received from travelers and friends of the school. The school was officially visited January 5 by J. H. Cisney, United States Inspector, and M. P. Wyman, United States Indian agent, Crow Agency, Mont. These gentlemen diligently looked over the last quarterly report, condition of rooms, shop, school, dormitories, water supply, water closets, and general needs of the school. Miss Ellen B. Bailey, an interested member of our Boston Indian school committee, visited the school for the purpose of inspection during the week, February 22 to 28, inclusive. To her the school is indebted for many kindly suggestions and valuable improvements. Donations for family carriage, dining-room facilities, maple floors, and material for general house repairs quickly followed from her report of the condition and wants of the school.

Rev. W. W. Locke, of the Barnard Memorial Church, Boston, has now spent three months at the school, taking the place made vacant by the resignation of Mr. Lake as industrial teacher. Mr. Locke is a genuine friend of the school, and his training of the boys in industrial habits has been of the most practical and thorough kind.

The health of the school has been good during the whole year. The eye trouble of former years has almost entirely disappeared, the result undoubtedly of each pupil being required to use an individual towel exclusively. One little girl, the youngest of the flock, died of throat trouble after two weeks' illness during the severe cold weather of February last. Not rallying after one week of most faithful nursing, her parents were allowed to take her to camp, where she died at the end of another week.

Several half Indian pupils, whose parents live a more or less civilized life, were allowed, as in previous years, to go home for a short vacation. At present writing, some of them are tardy in returning to the school, as they faithfully promised to do. Maj. Wyman, U. S. Indian agent, has been notified, and I have no doubt but that a word of admonition from him to their parents will insure a prompt return of the delinquent children.

English speaking by the children is a rule rigidly insisted on in all departments of the school. It should ever be borne in mind that the larger the supply of young children that can be brought into the school the greater will be the chances of civilization. The children here of six and seven years of age that have been in school a year speak much better English than the larger ones that have been here three or four years, and that came here at the ages of ten or twelve. Besides there will be no trouble of the small children wishing to return to teepee life. We have had several illustrations of this fact lately. One little girl was allowed to go home to see a very sick mother, and another to see her father who was not expected to live. In one case, the little girl would rather live with "white folk," because "white men don't beat their wives." The other cried all night to go back to school. When questioned why, she replied she "had to eat with her fingers."

I am thoroughly convinced that all schools on this reservation are doing a much needed work in the interests of civilization.

A. A. SPENCER,  
Superintendent.

## REPORT OF FLATHEAD AGENCY.

FLATHEAD AGENCY, MONT., *September 1, 1891.*

SIR: In submitting my fifteenth annual report I have the honor to state that the Indians of this reservation are advancing in agricultural pursuits and in raising cattle. Their herds of horses are also being improved by their efforts in securing better breeds of stallions. The agricultural valleys of the reservation are now dotted by Indian homes with well-fenced farms of meadows, grain fields, vegetable gardens, and several thrifty orchards, where apples, plums, and small fruits grow abundantly when properly irrigated and cared for. With the rainfall and aid of irrigation, good crops will be harvested this season. The Indians are busy in their fields, and it is a hopeful sign to see them engaged cutting grain; a few with self-binders purchased with their own money, others with combined reapers and mowers, while in smaller inclosures the old fashioned grain-cradle is dexterously wielded. Agricultural pursuits can not be successfully carried on in this region without irrigation to supply all the land under cultivation.

This reservation is one of the best watered sections in the State of Montana, and its conditions warrant, physically and economically, the profitable expenditure of money in irrigation. On well-cared for and well-irrigated fields, crops of 40 to 60 bushels of wheat and 80 to 100 bushels of oats per acre are not uncommon, and

where water was abundant even an exceptionally dry season had no effect in diminishing the crops. The comparison, in a dry season, of a sun-scorched field without means of irrigation with that of a neighboring field where irrigation is attainable, with its rich crop of grain, hay, and vegetables, which, perhaps, were never moistened by a shower of rain, teaches an object lesson of the value of irrigation.

After harvest the Indians deliver at the agency mill the wheat they wish ground into flour for home consumption, and their surplus grain and vegetables find ready sale and fair prices. As remarked in last year's report, with ordinary energy they should not only become self-supporting but comfortable and independent.

The tribes or bands under my charge consist of the Pend d'Oreilles, Flatheads, Kootenais, those of Charlot's band of Bitter Root Flatheads, removed since 1884, and Michel's band of Lower Kalispels. The following is the recapitulation from the census of this year, which accompanies this report:

Charlot's band:	
Total number of Indians .....	176
Males above 18 years .....	55
Females above 14 years .....	56
Children between 6 and 16 years .....	39
Confederated tribes, total .....	1,556
Males over 18 years .....	473
Females over 14 years .....	543
Children between 6 and 16 years .....	345
Kalispels, total .....	56
Males over 18 years .....	24
Females over 14 years .....	21
Children between 6 and 16 years .....	5

**Removal of agency, or establishment of subagency.**—In a letter from the honorable Commissioner of Indian Affairs a report dated August 7, 1890, by United States Indian Inspector Gardner was forwarded to me. This report states that a large portion of the Indians of the Flathead Reservation live from 50 to 60 miles distant from the Flathead Agency; that the center of population is near Crow Creek, or Mud Creek; that at present they derive only small benefit from the agency grist and saw-mill, carpenter and blacksmith shops; that the establishment of a subagency would, in his judgment, be a decided advantage and for the best interest of the service; that the present agency was located in one corner of the reservation for convenience of agent and agency employes—being near the town of Missoula—and not for or in the interest of the Indians; that the time has come when the Indians of the reservation should be more looked after and encouraged in civilization and Christianity, and that they are beginning to see and feel and know that they must depend upon themselves to make a living, and for this reason the aid which the Government offers them should be easily accessible, not 35, 40, 50, or 75 miles distant, causing them to travel these respective distances to get a machine, plow, wagon, or harness repaired, or to obtain the services of the agent or physician. Inspector Gardner also states that it might be well to establish or locate an agency at Crow Creek, or Mud Creek, and retain the present agency for the use of the Bitter Root Flatheads and such other of the confederated tribes as are now located and farming in the Jocko Valley; that Mud Creek would be preferable for an agency, or subagency; that the valley there is from 10 to 12 miles wide and from 30 to 35 miles long, and is close to Pend d'Oreille, Little Bitter Root, Dayton Creek, also to the Camas Prairie; that about two-thirds of the reservation Indians live in and near that vicinity; that the location suggested is about 30 to 40 miles distant from present agency and about 24 to 25 miles distant from Ravalli railroad station, 18 or 19 miles from St. Ignatius Mission, and 12 miles from foot of the lake, and as they are industrious and peaceable, the aid offered them should be within easy access.

In connection therewith the honorable Commissioner directed that I should investigate the matter referred to by Inspector Gardner, and submit a full and complete report on same, together with recommendation as to the necessity and practicability of establishing either an agency or subagency. I reported that I considered Inspector Gardner's views eminently correct.

The agency was originally located and is at present situated at the extreme end of the southern habitable portion of the reservation, a fact which will be admitted when it is known that only two Indian habitations are in existence between it and the southern boundary. It is at the immediate foot of the mountains forming the eastern line, thereby precluding settlement in that direction. To the north and west there are Indian homes and farms extending in one direction 40, and in the other a distance of at least 60 miles. Owing to this fact the use of the mills and services of mechanics connected with the agency can not be utilized by the majority of the Indians, except at considerable cost and inconvenience. Consequently the encouragement the Government intends affording the Indians can not be fully realized. This

is apparent in connection with building and grain raising (two matters to which attention is most strongly urged by the Indian Office); for instance, transportation by wagon of lumber or wheat long distances exceeds the value of the article. An argument in favor of the removal is the closer relations in which the agent and employes would be placed with those whom it is their duty to direct and assist. In opposition, no valid objection can be made to removal, except expense.

Should the agency be removed, the grist and saw mills, blacksmith and carpenter shops should be maintained at their present location with a farmer in charge, for the benefit of Chief Charlot's band of Bitter Root Flatheads, all of whom will eventually settle in the Jocko Valley, where those who were formerly removed have made their homes. It would be an injustice to the Indian and half-breed settlers, particularly to the Bitter Root Flatheads, to remove from their vicinity in the Jocko Valley the mills and shops that have been in existence so many years.

When the Northwest Indian commission, in April, 1887, visited this reservation on the part of the United States, they entered into an agreement with the confederated tribes of this reservation, that, as it was the policy of the Government to remove and settle upon Indian reservations scattered bands of nonreservation Indians, so as to bring them under the care and protection of the United States; that in recompense for the consent of the confederated tribes to the removal of such bands to this reservation, the United States would cause to be built for the benefit of the confederated tribes, mills, shops, etc., at or near Crow Creek. This agreement was signed by the Indians of that portion of the reservation described by United States Indian Inspector Gardner. The erection of shops and mills there would be a benefaction to a majority of the Indians of this reservation,

**Chief Eneas's band of Kootenai Indians.**—United States Deputy Surveyor Harrison, under contract dated April 18, 1887, surveyed a line of that portion of the boundary of the Flathead Indian Reservation lying west of Flathead Lake and north of Clark's Fork of the Columbia River. The Indians became excited over the result of that survey, and I reported their views in full to the honorable Commissioner of Indian Affairs. I found that according to that survey the boundary line ran close to the Kootenai Indian village or settlement on Dayton Creek; that it would take from the Indians land which they claimed on that creek ever since the Stevens treaty; also, that it would cut in two a large meadow, where the Indians cut winter's supply of hay for their stock, and which they had claimed since the time the Stevens treaty was made.

In order to prevent discord or trouble upon the border, I recommended in my report that the point designated by Governor Stevens, and understood by the Indians to be half-way in the center of the lake, but afterwards found by actual survey to be a few miles north of the center, be considered the northern boundary, and another survey running from that point be ordered. I stated that if this be ordered, the Indian lands on Dayton Creek and all of the Indians' meadow beyond and claimed by the Indians would be placed inside the boundaries of the reserve, and that a natural boundary of hills would keep the two races from encroaching upon each other.

The honorable Commissioner stated in reply that the treaty of July 16, 1855, which he quoted, described the boundaries, and added:

However indefinitely a portion of the boundaries may be described there is at least one point in the description that can be determined beyond question, that is the point half-way in latitude between the northern and southern extremities of Flathead Lake. Whatever may have been the understanding of the Indians, and whatever mistake there may have been regarding the point where this description would follow, it is impossible to accept other boundaries than those clearly defined in the treaty. From Deputy Surveyor Harrison's plat there appears to be no question but that he carefully determined the point half-way in latitude between the northern and southern extremities of the lake, and that he ran the northern line due west therefrom. \* \* \* It is of course a matter of great regret that the Indians should not have all the land to which they believe themselves entitled.

I was ordered to explain the matter to the Indians as fully as possible and endeavor to convince them that the line is run in the strictest accordance with the provisions of their treaty. This I did as well as I could, but they were steadfast in their claim to the land by all the laws of justice, and, as they understood it, by treaty and occupancy by themselves and their ancestors. I compromised by requesting that Indian claimants proceed to fence in their claims, plow up the ground, and cultivate the soil, and I would do all in my power to secure title to them from the Government through the Land Office. This they did to the number of seventeen heads of families, or men over 21 years of age. The Indians are now engaged in harvesting their little crops on said holdings.

I have made full report to the honorable Commissioner of Indian Affairs, hoping that he may see a way by which these Indians may get title to their land and not be disturbed in their efforts to commence cultivation of the soil instead of leading wandering and vagrant lives as heretofore.

**Chief Charlot's band of Bitter Root Valley Flatheads.**—The history of the negotiations which culminated in the division of the Flathead tribe, part of them on the Jocko

Reservation and part still in Bitter Root Valley with Charlot, is, to say the least, remarkable. In report of the Commissioner of Indian Affairs for the year 1872, pages 109 to 117, will be found this history. In 1855 a treaty was made between the United States and Victor, chief of the Flatheads. By this treaty a large territory, extending near the forty-second parallel to the British line, and with an average breadth of nearly two degrees of latitude, was ceded to the Government. On ceding it the Indians insisted upon holding the Bitter Root Valley above the Lo Lo Fork as a special reservation for the Flathead people. On November 14, 1871, the President issued an order declaring that the Indians should be removed to this reservation and on June 5, 1872, Congress passed a bill appropriating \$50,000 to pay the expense of this removal and to pay the Indians for the loss of their improvements in the Bitter Root Valley. This order the Indians refused to obey, and General Garfield was appointed as a special commissioner to visit the Flatheads and secure, if possible, their peaceful removal to the Jocko Reservation. This resulted in an agreement which was known as the Garfield agreement. A number of heads of families notified the superintendent that they had chosen to take up land under the first section of said agreement, which resulted in the issuance of a certain number of patents, while another party, under Chief Arlee removed to the Jocko and reaped the full benefit of the \$50,000 appropriation, while those who adhered to Chief Charlot remained in the valley in poverty.

In 1884 Charlot, with some of his headmen, and accompanied by myself and interpreter, visited Washington at the request of the honorable Secretary of the Interior. The trip resulted in a failure to induce the chief to abandon the Bitter Root Valley and remove to the Jocko Reservation. In compliance with verbal instructions from the honorable Secretary of the Interior, on our return to Montana, I made certain propositions to individual families of Charlot's band to remove to this reservation, and the result was that twenty-one heads of families agreed to move, and to them I promised each head of a family—

First, 160 acres of unoccupied land on the reservation.

Second. The erection of a suitable house.

Third. Assistance in fencing and breaking 10 acres of land for each family.

Fourth. The following gifts: Two cows, one wagon, set of harness, a plow and other agricultural implements, seed for the first year, and provisions until the first year's crop was harvested. My action met with the approval of the Indian Office, and I was enabled to carry out every promise made to the few families that first availed themselves of the offer. Ten families reported at the agency, and for them I erected ten houses, fenced their fields as agreed upon, and to-day they are harvesting excellent crops with more extended inclosures. Three other families followed after I sent estimates for the first ten, and to them I assigned land, but had no appropriation to fence or build. However, the three families were provided with cows. Twelve families more followed the three mentioned, but I could not do anything for them, except assign them land, as my requisition for houses, etc. (which was granted in the case of the first ten), was ignored; they provided cabins for themselves with whatever aid I could give them. Those fifteen families claim, and I think justly, that they should have been provided with houses, etc., as well as the first ten families that removed.

Gen. Henry B. Carrington, of Massachusetts, was appointed special agent, under act of March 2, 1889, "To provide for the sale of the lands patented to certain members of the Flathead band of Indians in Montana, and for other purposes," to secure consent of the Indians thereto, and to appraise the lands and improvements thereof. Gen. Carrington is now in the field, and it is hoped that he may succeed in selling the land and removing the Indians to the reservation this fall, and thus settle this vexed question.

**Chief Michell's Band of Lower Kalispels.**—This band live at a remote place called Camas Prairie, on this reserve. The chief removed here with his following from northern Idaho, under an agreement made with them by the Northwest Indian Commission in 1887. The terms of the agreement were never ratified by Congress, and this poverty stricken band were cast here without shelter, clothing, or means to do anything for themselves. A limited amount of supplies has been issued to them, and they are doing the best they can to raise small crops of grain and vegetables. Of course they attribute the delay of assistance and the misery caused by poverty to the agent.

**Crime.**—On Friday, the 19th day of December, 1890, Piere Paul and Lal-la-See, members of the Pend d'Oreille tribe, and Pascal and Antela, members of the Kootenai tribe, belonging to this reservation, were executed in the jail yard at Missoula, Mont. They were indicted by the grand jury, tried in the circuit court in Missoula, and sentenced to be hanged for the crime of murdering white men. The execution was not public, but a limited number were admitted. Attended by two Catholic priests, the prisoners ascended the scaffold with unflinching steps; prayers were said by the priests and repeated by the Indians in their own language. Their calm, quiet demeanor never forsook them. The trap was sprung at a few moments to 11 a. m., launching them into eternity. As the last request of the doomed

men, and also that of the Indians of the reservation, I took charge of the bodies and brought them to the reservation on a Northern Pacific train. On the night of the execution the bodies were met at Ravalli station by a large party of Indians and conveyed to St. Ignatius Mission. The following day the remains were interred with the rites of the Catholic church. No Indian demonstration followed, and after the graves were closed all quietly dispersed to their homes.

It is unnecessary to give in detail the history of the murders committed and the manner in which these Indians terrorized the reservation. They had a fair trial, were ably defended, found guilty by a jury of good men, were sentenced and hanged according to the law. Outside of their immediate relatives, the Indians of the reserve feel that they were guilty and deserved their fate.

**Court of Indian offenses and police.**—Owing to jealousy and prejudices among the different bands and tribes of Indians and mixed bloods on this reservation, our court of Indian offenses and our police force are neither efficient nor worthy of any particular praise in discharging their duties. The Indians of Charlot's band of Bitter Root Flatheads removed here are the hardest to control. Raised among the whites in Bitter Root Valley, and, the young men with no restraint upon them, lounging around saloons in various villages of the valley, upon coming to the reservation they thought they could carouse and dance as they did there. Some of the leaders of this band openly avow that they are opposed to having a court of Indian offenses, or police to enforce the regulations governing the reserve, and that on an Indian reservation the Indians should be free from the white men's laws. If the Indian dances are permitted here, the consequence will be demoralization to a great extent. I have taken a determined stand against those dances and expect the Department to sustain my efforts.

**Schools.**—The school for this reservation is situated at St. Ignatius Mission, about 20 miles north of the agency, at the foot of the lofty Rocky Mountain spur known as the Mission range, and one of the most healthful and picturesque spots in the State of Montana. The school is conducted under contract with the Government by the missionaries of St. Ignatius and the Sisters of Providence. As it is the policy of the faculty to keep the children from going to their homes, where in a short time the former teaching is forgotten, and in many cases the parents encourage the children to remain away from school, only a partial vacation is granted in the month of August. It extends only to the suspension of certain studies. The vacation is made attractive by camping out under care of teachers, while hunting, fishing, and rude games born of the forest are indulged in.

A knowledge of such trades as carpentering, blacksmithing, shoemaking, harness-making, tinsmithing, printing business, painting, sawing, milling, matching and planing, engineering, and agricultural pursuits are added to their educational knowledge. I still adhere to my hitherto expressed views that Indian education should be compulsory. Soon as a boy can be useful in herding stock or doing other things to relieve his parents he is taken away from school. As this is a nonissue reservation, the agent can use his influence, but is without power to enforce demands, that the children be sent to school. Thus encouraged to leave studies, and having little prospect of comfortably settling themselves, the teachers have great difficulty in keeping them when they attain a certain age. I think the inconveniences in the way of the proper training and civilization of the young Indian could be remedied by the establishment of a small fund directed to the end of aiding the new families formed by the marriage of the boys and girls of the school when of age. The prospect of this future aid might keep them longer at school.

The girls under the care and training of the Sisters of Providence have improved remarkably in their studies. Indeed this is a model school and would reflect credit upon its managers and teachers in any country. Besides the ordinary education they are taught music, vocal and instrumental, drawing, needlework, and making of their own clothing.

New and commodious buildings have been erected for the pupils, with all of the modern appliances, of bathrooms and heating apparatus. The management of these schools is excellent, and the good work that is being done for the Indians by the Jesuit Fathers and the good Sisters of Providence can not be estimated.

The kindergarten, which was added to the school last year by the faculty, is a marked success, and the teachers now have more applications from Indian parents than they can accommodate. About 60 children, from 2 to 4 years of age, are now being cared for by the Ursuline nuns; and those self-sacrificing, educated, and refined ladies are devoting their lives to the comfort and well bringing up of their poor little Indian charges.

**Sanitary.**—The health of the Indians has been very good, the cases of sickness being chiefly confined to the younger people and to children. At the school there was no sickness to speak of during the year.

PETER RONAN.

## REPORT OF FORT BELKNAP AGENCY.

FORT BELKNAP AGENCY, *August, 1891.*

SIR: In accordance with instructions, I have the honor to submit my third annual report of this agency for the year ending June 30, 1891.

**The Reservation.**—This reservation is occupied by the Gross Ventre and Assinaboine tribes, and its limits were fixed under an agreement made January 21, 1887, and approved May 1, 1888. It contains 840 square miles, or 537,600 acres. Of this amount only about 45,000 acres are fit for farming purposes, the remainder forming a splendid stock range, as fine as any in the entire country. The soil is very rich and yields large crops of cereals and vegetables, where water can be obtained for irrigation, or when the rainfall is sufficient. The general character of the country is what is termed rolling prairie, with narrow valleys of great fertility, everywhere covered with the most nutritious grass. Cattle and horses do extremely well throughout the year without anything beyond what the prairie affords.

**Water.**—This agency is located about one-quarter mile from Milk River and about 4 miles from Harlem Station on the Great Northern Railroad. The location was made by my predecessor and is a very unfortunate one as regards water. The bed of the river is dry nearly every summer from the beginning of July until about the 1st of November. There is no running water during the above period, and the holes and washouts in the bed of the stream are the only places where any can be found. This is stagnant, strongly alkaline, disagreeable to use, ill smelling, extremely detrimental to health, and the well water hereabouts partakes of the character of that of the river.

**Census.**—A careful census taken a few days ago shows that an increase of five has been made in the number of these Indians during the past year. I regret being unable to furnish statistics of the marriages and have endeavored to have them reported, but these people attach very little importance to their marriages and, except among those under the teaching of the reverend fathers at St. Paul's Mission, there is no ceremony whatever. A number of white men who have been living with Indian women for several years, some with large families of half-breeds, were induced by me to marry during the past six months. The following is a summary of the census:

Males over 18 years old.....	418
Females over 14 years old.....	531
School children between 6 and 16 years old .....	400
Children, females under 6 years .....	183
Children, males under 6 years .....	195
Total .....	1,727

**Civilization.**—The inborn reluctance of the old Indians to adopt the dress and manners of our people is very strong and exercises a powerful influence on the younger members of the tribe. Derision is what an Indian fears most, consequently the jeers and sneers of the old people soon cure the ambition of those who attempt civilized dress or manners. However, there is a marked improvement in the conduct of those children who have had an opportunity of attending the mission school even for a limited time, and have thus been removed from the bad influences of the Indian camp. The children should be taken to the schools at the earliest age possible, to prevent them from acquiring Indian ideas, habits, manners, or language, all of which have to be overcome and suppressed, thus retarding their progress and increasing the labor and difficulties of teachers. The younger a child begins to learn our language the more easily and perfectly it is acquired. The filthy habits and customs of the Indian camp are not easily overcome after years of practice, and the older the child the more persistent it is in speaking and clinging to the Indian tongue. The census just taken shows 183 female and 195 male children under 6 years of age. If provision could be made to take these children now, and keep them from camp, their training and education would be simple and easy.

**Schools.**—The new school buildings lately erected are well adapted for educational purposes and are both commodious and comfortable. The houses are built of brick, on solid stone foundations, and finished in a good substantial manner, both as regards material and workmanship. The outbuildings are well designed and constructed for comfort and convenience. The superintendent, Mr. Dieffenbach, and the teachers, matron, and seamstress are now here ready for service at the opening of the schools September 1 next. I have no hesitation in stating that they are well qualified for their respective positions, and I have very strong hopes that the purpose of the Government in establishing these schools will be fulfilled. The education of the children is of paramount importance, as the future of these people depends on the increase of intelligence to be derived from the advantages afforded by a liberal school system. The children show fair average capacity, and when removed from the demoralizing influences of wigwam life a reasonable expectation may be indulged in with regard to their success.

Every assistance in my power will be freely given to insure the welfare of these schools, and I trust that the coming year will be productive of satisfactory results.

The industrial boarding school at St. Paul's Mission, about 40 miles from this agency, has been well attended during the past year, and the pupils have made good progress. They have been well cared for; strict attention has been paid to their comfort and cleanliness; they present a neat appearance, exhibit good manners, are attentive to their studies, and many of them are well advanced. The course of instruction embraces a primary and an intermediate department, and the number of pupils advanced has been quite large. A very satisfactory feature of this school is the utter suppression of the Indian tongue during its sessions, and the consequent acquirement of our language by the pupils.

The day school, taught at this agency by Miss Edith Simons, performed very good service during the year. The average attendance was 11, and at the close of the school, June 30, the children were well advanced in primary studies. Until a child acquires a knowledge of our language its advancement is necessarily slow. However, good results were attained, and the school was quite successful. It is now discontinued, as in view of the opening of the new schools it is not deemed necessary. The children living at and in the vicinity of this agency can attend the new schools, as the distance between is only about one-third of a mile and the road very good. The pupils will be kept in the boarding school, and will not be allowed to absent themselves therefrom on any account. Their parents and guardians will be allowed to see them on proper occasions, but no interruption of study will be allowed.

**Farming.**—The past year has been very discouraging to the Indian farmers on this reservation as many of them had nothing whatever from the fields they planted. The general drought of last year destroyed everything planted except in a few places along the small creek bottoms where a little water could be had for irrigation. This season, I am glad to state, is most favorable. There has been abundant rain and the growth of grain and vegetables is everywhere very fine; the yield of both will be remarkably heavy, but the harvesting is just beginning and I am unable to furnish figures for the present crop. There was a marked improvement in the manner of preparing the land and sowing the seed this year. The land was deeply plowed and finely harrowed and rolled and the seed planted in an even, regular manner, with very few exceptions.

The hay crop is also excellent this year and the Indians are putting up plenty of it both for the use of their animals and for sale. The grass here can not be excelled.

A great many improvements in the dwellings and outhouses of farmers have been made during the year, besides 25 new houses built. As soon as some lumber can be sawed at the mill many more additions will be built and finished.

**Stock.**—The Indian stock is in fine condition and the increase for the past year very good. The colts bred from the stallions purchased last season show a very great improvement over the scrub cayuse of former years, and in a few years these people will have a good class of work-horses fit for farming and freighting. The purchase, this year, of 800 head of young cows with calves by their sides, together with 40 graded bulls, will be of immense advantage, for this country can not be surpassed for stock-raising.

**Lands in severalty.**—None of these Indians have yet taken their land in severalty, though some of them have selected land on which they intend remaining when the allotment is made. A survey ought to be made in the near future. This would establish and confirm the possession of those intending to remain on present locations and give them a feeling of security which would tend to encourage improvements of a substantial character.

**Freighting.**—These Indians have done the work of freighting from Harlem to this agency during the past year faithfully and efficiently, and have also done freighting for outside parties in a satisfactory manner. Their earnings amount to about \$900 for the work.

**Sanitary.**—The sanitary condition of these Indians has been very good for the past year; the successful practice of Dr. Carroll having lowered their esteem for the "medicine men." Scrofula, consumption, and venereal diseases are the complaints from which they suffer most. I regret to state that the moral feeling is very low, excepting among those under the influence of sanitary teaching, and that the prevalence of filthy disease is entirely owing to an utter indifference to virtue on the part of both men and women, with the exception above noted. It is to be hoped that an increase of intelligence and sanitary information may lessen this great evil.

**Police.**—The police force has been attentive to duty. I am pleased to state, however, that there have been but very few cases requiring their services. Their presence exerts a restraining influence which is, perhaps, better than a corrective. The only cases occurring were a few petty quarrels, a couple of misconduct, and one of a small theft. The Indians have been peaceable and have had no trouble of any kind with either their white or Indian neighbors.

Inspector J. H. Cisney visited this agency on the 2d of July and made a thorough examination of its business. He visited the schools at St. Paul's Mission, and informed himself fully in regard to it. He also went to Snake Butte to see the spring there in reference to the advisability of having it brought to this agency. He expressed himself favorable to the project as being the only certain means of procuring a supply of good water for the use of the new schools and the agency. There are nearly \$60,000 invested in agency and school buildings at this place. The houses and improvements are of a substantial character, handsome, and well finished, and any reasonable expense to procure a good healthy supply of water should be favorably considered.

I send herewith statistics for the past year, and beg to express my acknowledgments to the Indian Office for the prompt attention given the business of this agency.

I am, very respectfully, your obedient servant,

A. O. SIMONS,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF FORT PECK AGENCY.

FORT PECK, MONT., *August 3, 1891.*

SIR: I have the honor to make the following report of affairs at this agency for the fiscal year of 1891:

**The reservation.**—The reservation is situated in the extreme northeast portion of Montana. The Missouri River forms the south boundary, Milk River and Porcupine Creek the west, the Big Muddy the east, and the north has no natural boundary, but is 40 miles north from the Missouri River, and extends from the Big Muddy to Porcupine Creek. There are about 4,000 square miles in the reservation. Only a small portion is used by the Indians, as they all live along the Missouri River. The character of the land is the same as all the lands between the one hundredth and one hundred and tenth meridians, which is to say that they are of little value without irrigation. In different localities and in small bands stock of all kinds can be successfully raised; agriculture to a limited extent can also be carried on.

The reservation can never support 2,000 population (which is about the Indian population) of the most thrifty, intelligent, and industrious people, without a vast and expensive system of irrigation. In this statement I include both agriculture and stock-raising. The soil is fertile and everything favorable to agriculture except the rainfall. It is said to require 18 inches of rainfall per annum in any country to successfully carry on agricultural pursuits. Our normal is 5 inches. Grazing is excellent, but hay lands are so scarce and the winters so severe that only a limited amount of stock can be successfully raised. The only exception to this is horses. A finer country or climate for the raising of horses does not exist on the face of the earth.

**The Indians.**—The Indian population consists of Yanktonais, Uncapapa, and Santee Sioux living at or near Poplar Creek, and Assinaboine Sioux living at Wolf Point.

#### The Census.—

Yanktonais .....	1,255	Males .....	980
Assinaboines .....	716	Females.....	991
	1,971	Children of school age.....	374

Nearly all wear citizen's dress. They live in 592 log houses and own 1,160 horses, 596 cattle, and a limited amount of sheep and poultry. They cultivate about 600 acres of land. This is mostly in corn, potatoes, and garden truck. No attempt is made to raise small grain. It would be futile for them to try to do so. Last year 96 good brood mares were issued, and the Department has contracted for 100 for issue the present year. This is a step in the right direction, and will become a source of certain profit to the Indians.

We have 6 good stallions, and the Indians have raised from them during the last year about 250 colts. They take good care of their horses and are excellent horse-men. No stock cattle has been issued to these Indians since 1884. It did not prove a success. I think, however, a limited number should be issued next year. Such stock could not be put in a common herd and run for the general benefit of the tribe, but would have to be issued out to individual Indians—to the ones best able to care for the same.

The present season has been the most favorable one in the last three years. The Indians will have quite a crop of corn, potatoes, and other garden stuff. All their

ground was not planted this year, owing partly to the total failures for the last three years and partly to a lack of seed. Seed corn of suitable kind for this climate I could not procure.

**Agency buildings.**—We have both at the agency and Wolf Point a sufficient number of buildings in good repair, as the needs of the agency require. The only exception to the above is that we need new blacksmith and carpenter shops at Poplar and new police quarters, both at Poplar and Wolf Point. Nearly all the buildings have been extensively repaired during the year. A large amount of work has been done in this line. The four new dwellings for employes mentioned in my last report as being in course of construction are completed.

**Wolf Point.**—The subagency is located at Wolf Point. The Assinaboine Sioux all live there, and all subsistence, annuity, and occasional issues to them are made at that point. It has been recommended by various officials that this subagency be broken up and abandoned. Without entering into any discussion of this matter, allow me to say that I think this would be a very unwise policy. When I took charge of the agency, July 1, 1889, I found matters there in very bad shape. The only white employe was the farmer in charge. The only mechanic was an Indian boy, employed as the blacksmith, and receiving a salary of \$15 per month. He amounted to nothing. A more demoralized set of wagons or agricultural implements I have never seen. No repairs could be made, and as the Indians were obliged to come to Poplar Creek to have work done it was, in many cases, simply not done at all. A large number of buildings were unsafe and about ready to fall down. The only stock for agency use was a mule of uncertain age. I placed the subagency in charge of Mr. J. K. Chase, a practical and reliable man. A competent blacksmith and wheelwright has been employed. All implements have been repaired. All the old buildings have been torn down and the material used in the erection of others in their place.

**The agency boarding school.**—This is the only school on the reservation. Supt. Baker has had charge of it for three years, and has brought it from a very demoralized state to its present standing. A full report by the superintendent is herewith inclosed. Further comment by me is unnecessary.

**Religion.**—The Presbyterian Church have mission property both at Poplar Creek and Wolf Point. Rev. E. J. Lindsay, with a corps of native helpers, has been employed during the past year. Rev. Lindsay has worked in the Sunday school and held preaching service Sunday nights at the school and various services at his own church. A great deal of missionary work has been done in the camp. The results of it are apparent.

**The beef issue.**—Beef is the most expensive and valuable commodity issued to the Indians. In the handling, slaughter, and issue of beef this agency occupies the front rank. The cattle are killed in a painless and dressed in a cleanly manner, are allowed to cool, and then cut up and delivered to the Indians in as good condition as any one would desire. There has been a marked improvement in the way which they handle it after it has been issued to them. The former filthy and wasteful way is rapidly disappearing. Our slaughterhouses have been refloored with matched flooring, and windmills, tanks, pipe, and hose procured for both buildings. A pasture containing about 2,500 acres and good stock yards have been built.

**The police.**—The police force consists of 19 members. I regret to say that I have been unable to make any improvement in the force. Considerable attention has been given to this matter, but the results have been meager.

**Court of Indian offenses.**—We have had no court of this kind during the year. One will be erected the coming year.

**Indian traders.**—There are two Indian trading stores on the reservation, one at Poplar Creek, conducted by W. B. Shaw; one at Wolf Point by S. T. Coggswell. Both carry good stocks of goods, and are conducted in strict conformity to the regulations of the Indian Department.

**Sanitary.**—The health of the Indians has been excellent. In fact it has been steadily improving for the last four years. This is due to their dependence on their treaty funds and not on the "general appropriation bill." They now are assured of a liberal allowance of food and clothing; before, they were at times insufficiently supplied. Diseases are chiefly of a consumptive and syphilitic character.

**The late Indian trouble.**—During the late Indian troubles peace and quietness reigned at this agency. Most of the Indians, while believing and hoping for the coming of their "Messiah," were not disposed to create any trouble. An emissary from the lower agencies came here to preach the "new gospel." He was promptly put off the reservation.

**The military.**—Camp Poplar River is located one-half mile north of the agency and consists of three companies of infantry; one company is composed of Indians who have recently enlisted.

**The Department.**—The Department has aided me in every possible way. Only one of my estimates has been disallowed. Inspectors Gardner and Cisney have visited the agency during the year. From both I have obtained valuable suggestions and advice.

**Employés.**—My sincere thanks are due to the employes, both at the agency and school, for the prompt and efficient manner in which they have discharged their several duties and for the manifest interest they have exhibited in the welfare of the agency and school.

Very respectfully,

C. R. A. SCOBAY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF THE ASSINNABOINE BOARDING SCHOOL.

FORT PECK, MONT., August 1, 1891.

SIR: In compliance with instructions from your office, I have the honor to submit a report of this school for the fiscal year 1891. The school records being very limited I am unable to give a full history of the school from its origin to the present time. In 1831 a log building was partially erected and completed in 1832 under the supervision of S. E. Snider, who organized the school in the latter year with an attendance of 45 pupils. Total number of pupils enrolled during the month of November, 1833, 63; June, 1834, 69; February, 1836, 62; October, 1836, 51; and for the quarter ending July 1, 1837, 202. The number in attendance October 1, 1838, was 131.

Mr. Snider was superintendent in 1832, and the school passed to the control of Mr. Miller in 1833; to Mr. Carpenter in 1834; to Mr. Jeffers in 1835; to Mr. Pope in 1836; to Mr. Doyle in 1837, and to the writer October 5, 1838. Special Agent Heth, who was in charge of the agency, in his report to the Department for the fiscal year of 1835, wrote as follows: "But little progress was made during the year in education, due to bad management or no management at all, and possibly to a change of agents. Two schools were nominally in operation: one at Wolf Point, a day school; one here, an agency boarding school. In addition to the above there were two missionary schools, one here with 9 pupils, one at Wolf Point. They amount to nothing."

The statistics for the last three years are as follows:

	1889.	1890.	1891.
Different pupils enrolled .....	199	241	197
Average attendance .....	131	151	132
New pupils added .....	23	78	44
Advanced to higher grade .....	93	109	107
Transferred .....	.....	43	17
Died .....	3	1	1

The main school buildings in use at present are: A two story frame, 38 by 90 feet, with a one-story addition, 28 by 20 feet. This building contains one school room, an office, girls' reading and sitting room, sewing room, girls' hospital, and dormitories and rooms for employés. A two-story and basement frame structure, 101 by 42 feet, contains the dining room, kitchen, school room, two recitation rooms, boys' reading and sitting rooms, boys' dormitories, and some rooms for employés. These two buildings can healthfully accommodate 175 boarding pupils. The other school buildings consist of an old log building, laundry, tank-house, stables, sheds, etc.

We need a good hospital and by utilizing the logs in the old log buildings one could be erected at a slight cost and the benefits accruing from such an auxiliary would be apparent for the small outlay. In many instances pupils are excused from school on account of sickness, and it is weeks after they recover before they are returned to school.

Another obstacle to success is the disinclination of some parents to send their children at the opening of the school in the fall. At this season of the year many are hunting and picking berries and have their children with them, and do not return until they are compelled by the severity of the weather.

We conform almost entirely to the course of study for Indian schools.

The following is a statement of classification of pupils during the quarter ending June 30, 1891:

	Male.	Female.
<b>Primary grade:</b>		
First year .....	14	12
Second year .....	18	11
Third year .....	31	17
Fourth year .....	26	20
<b>Advance grade:</b>		
First year .....	4	5
<b>Total enrollment .....</b>	<b>93</b>	<b>65</b>

Instruction is given in vocal and instrumental music.

In the sewing room with an average working force of 8 girls there have been made during the year 1,620 pieces of clothing and bedding. The girls make and mend their own clothing and mend that of the boys, and are taught knitting and darning. It is necessary to keep several girls almost constantly employed in repairing boys' and girls' clothing and sewing on buttons.

Owing to the poor laundry facilities and the scarcity of large girls the greater part of the washing has been done by the boys. This has been a matter of necessity and not of choice. The girls have been taught to wash, to starch, and to iron clothes of all kinds.

The children's health as a rule has been good, and it is due greatly to the location of the school, accompanied by a determined effort to keep the children clean, the buildings free from filth and dirt, and the food properly cooked.

During the school term Sabbath school is held every Sunday morning, and services are held in the evening in the assembly room; also prayer meetings Wednesday evenings. On the 11th of last January, 27 pupils were baptized. All pray on retiring at night. We are very much indebted to the Christian people and Sunday schools that have contributed Sunday school papers, lesson leaves, and charts, which have been used and assisted us greatly in our Sunday school work. All holidays were observed with appropriate exercises. One hour each evening, with the exception of Wednesday, Saturday, and Sunday evenings, is devoted to singing and study.

Both boys and girls attend school half of each day, the other half all are engaged in manual labor. Those who go to school in the forenoon work in the afternoon and vice versa. Our working force of white employes numbers 12, of Indians 6.

This country is possessed of a dry climate, and it is useless to try to raise anything with any degree of success without the aid of irrigation. The agent purchased a pump and the school is irrigating 8 acres near the river, which will produce all the vegetables the school will require. The boarding-school farm (about 40 acres) is well fenced in with woven-wire and 9 acres under cultivation. As the school is situated one mile from the river, the farm can not be irrigated and a crop is a rare thing. The crops for the years 1890-'91 were a complete failure. The school stock consists of 2 head of work horses, 15 head of milch cows, and 15 calves.

The children have shown a willing spirit on the farm, in the house, and in the school. They have done a great deal of work and have learned some things definitely. The boys have cared for the stock, painted and repaired some of the buildings and fences, built an excellent root cellar, made gravel walks, and performed all other kinds of work expected of boys on a farm. The girls are taught in all departments of house work, and have the care of poultry and milk.

Omitting the first few months the English language has been spoken almost entirely and the pupils have made marked progress both in the literary and industrial departments.

I acknowledge the kindly manifest interest and cordial support of agent C. R. A. Scobey for the success of the school.

I am, respectfully, your obedient servant,

J. D. BAKER,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.  
(Through the agent.)

## REPORT OF TONGUE RIVER AGENCY.

TONGUE RIVER AGENCY, *August 18, 1891.*

STR: In compliance with instruction from your office, I have the honor to transmit herewith my first annual report of affairs at this agency, of which I took charge Oct. 25, 1890, relieving James A. Cooper, special United States Indian agent in charge.

The season last year had been extremely dry, so that what little the Indians had planted never came up, and as a result I found them entirely destitute, save what the Government furnished them in the way of rations. These had been increased while Major Cooper was in charge, but were afterwards increased farther, until now full rations of beef, flour, sugar, and coffee are issued.

The commission sent here last fall, with Gen. Miles as chairman, unsettled the Indians and shook their faith in the Great Father at Washington. He [Gen. Miles] told them that all those who were settled on Tongue River (which consists of about half the tribe) could not hold their claims, because they were not on the reservation, notwithstanding Capt. Ewers, who settled these Indians here as the agent of the Government, assured them they could have the land.

The reservation lines is a matter of paramount importance. At present it is impossible to locate either the north, east, or south lines, which often leads to perplexing questions when white squatters encroach on the boundaries but claim they are outside. Not knowing where the lines are myself, I can not exercise my authority. No time should be lost in making a correct survey, which will settle this perplexing question once and for all. It will be absolutely necessary to extend the boundary lines if all the Indians are to be located on the reservation proper. The reservation as it now stands is not sufficient to give all of them the regulation 160 acres. The country being so hilly and the valleys so narrow, it will be recognized at once that the only available land for farming is situated along the little creeks and rivers, the larger portion only being suited to grazing.

I would therefore recommend that the eastern boundary be extended to Tongue River so as to take in all the Indians settled there. All the land lying east of the eastern boundary and Tongue River was withdrawn from settlement in 1886, with the idea, it is presumed, of extending that boundary to the river, in case these Indians are to be permanently located here. If the lines were correctly established, considerable revenue could be realized by selling the grazing privileges, as is now done on the Crow Reservation. I estimate that \$20,000 or \$30,000 might be realized from this source, which could be profitably expended in two ways, viz:

(1) In constructing irrigating ditches and putting water on all the land capable of irrigation, thus insuring the Indian a crop each year, which I am satisfied would be the greatest encouragement he could have.

(2) There are about 8 or 10 bona fide white settlers on the reservation and the money might be used in buying their claims, and thus retain the entire reservation for the use of the Indians. As the matter now stands, considerable dissatisfaction is heard on account of the whites occupying the most desirable tracts of lands.

The crops look well where they have received proper attention, this having been an unusually wet year, but the most of them have been neglected at the time when they needed work the most. I learn by inquiry that they will raise more this year than they have ever done in former years, although the crop would sustain them but a few days if left to it alone. They have furnished the agency with 50 tons of hay at \$10 per ton and donated nearly as much more to be used in feeding beef cattle the coming winter. Small stacks of hay may be seen at nearly every Indian house, and some have put up hay to sell if an opportunity is afforded. They have also furnished all the hay for the use of the cavalry horses belonging to the troops now stationed here.

These Indians have this year transported 292,780 pounds of freight with their own teams, and received for the same \$2,195.85.

They are horse fanciers, and if good American mares with good stallions could be furnished them it would not be long until they would have a good number of salable horses. These could be sold to the Government for use by the cavalry, which would be a decided improvement over the present method of raising nothing but small Indian ponies.

The police force has received a thorough renovating and all worthless material weeded out, until now, I think, I have a set of men who will carry out all instructions and obey every order. I have had occasion to try them two or three times recently, and I must say white men could not have acted better. I would respectfully recommend that quarters be erected for them, where they can have meals and lodging while on duty. They now furnish their own horses and feed, both of which, in my judgment, should be furnished by the Government. Also some provision should be made to pay their expenses when away from the agency on duty, and not allow them to go begging through the country.

The Indian houses are abominable, and so long as the penurious policy that is now followed of allowing but one small window and a door to each house, is it strange the Indian prefers his tepee to the dark, dismal dungeon furnished him by the Government? Bedsteads, tables, chairs, dishes, and other articles of household furniture should be issued them, in order to make the house more attractive and inviting than the tepee.

The agency buildings are in bad repair and inadequate to house the Government's stores. The buildings are all log with dirt roofs, and when a hard rain comes, as has happened several times this summer, the buildings leak badly and more or less damage is done. There are but two shingle roof frame buildings on the reservation, viz, the agent's office and residence. In my judgment it would be a wise move on the part of the Government to replace the log buildings occupied by employes by neat and substantial shingle-roof frame buildings. A large warehouse, substantially built, with a shingle roof, is badly needed; also more houses for employes. The interpreter is now living in a tent because of the want of better accommodations.

The agency day school has done better this year than ever before, but a close vigilance had to be exercised to keep the pupils in attendance. Very few Indians live near enough to the agency to send their children, and in very cold weather even those living about the agency will not come out. If a boarding school were established at the agency for 75 or 100 pupils it could be kept full without any trouble.

St. Labres Mission boarding school, located on Tongue River, 22 miles distance from the agency, is managed under the auspices of the Catholic Bureau. They own their own land and buildings, and are well provided with accommodation for 65 pupils. Supt. Father Van der Velden and Mother Superior have used their utmost endeavors to please the children, but it is impossible. Mothers will work all of kind of schemes and tricks to get their children out of school. If they can not get them out by lying they will have them run away, and then tell me that there is too much praying and kneeling; but I have investigated and found it not true, as they are only required to do the same during services, in accordance with the Catholic faith.

I have punished three different families for taking children out of school by taking their rations away from them until they return them. It worked well with two families, but the third I could not bring to time, as friends came to the rescue and furnished the wherewith to keep soul and body together.

Captain of Police White Hawk had strict orders from me to catch all runaways and return them to school, but he played me false by lying and not doing his duty. I discharged him, and he is now running opposition to Porcupine by trying to convince some of the old squaws that he has found a new Christ, and that all the dead Indians are buried under a mountain not far off and will come to life again, which will make them happy when the resurrection comes to uncover the dead, and that the whites will be buried in their place. The delusion that he works on these ignorant people

is to get them into a tepee that he has for that purpose and has them sing and starve until they can go to sleep and dream of the happy hunting grounds. He also has a paint of his own that he marks them with when he gets a new convert. But he can not make it work, as I shall break it up before it comes to a head.

The Court of Indian Offenses has not been tried on account of the inefficiency of Indians to serve, and they are all more or less closely related to each other; also, the men most competent to act are polygamists, which is forbidden in the letter of instructions; but I shall give them a trial in the near future.

There are two sawmills located near the agency and each sawing lumber every day, every foot of which, I think, comes off the reservation. Much of this lumber is going to Wyoming and to points along the Yellowstone River Valley. If the reservation lines are established as indicated elsewhere in this report, this evil can be remedied. It would seem proper—now that I have recommended new buildings and the stopping of the two sawmills referred to, or rather locating the reservation lines, which would result in shutting down the mills—to recommend a Government sawmill in order to give these Indians the advantage of this valuable timber and an opportunity to learn to run it.

The Indian medicine men, the most influential men of the tribe, at times are a source of considerable worry and anxiety. There should be some stringent remedy devised for this evil, by which their influence over the Indians can be abated.

Census Report.—This report, I believe, contains all that it is contemplated to cover. I give below the condensed census required:

Males.....	420
Females.....	496
Total.....	916
Males above 18 years of age.....	218
Females above 14 years of age.....	297
Number of school age (between 6 and 16).....	246
Births during the year.....	33
Deaths during the year.....	29

I am, yours respectfully,

JOHN TULLY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN NEBRASKA.

### REPORT OF OMAHA AND WINNEBAGO AGENCY.

OMAHA AND WINNEBAGO AGENCY, NEBR., *August 27, 1891.*

SIR: I have the honor to submit my second annual report, with statistical information and census of both the Omaha and Winnebago tribes. The entirely dissimilar conditions render it necessary that the two tribes under my charge be reported separately.

#### WINNEBAGOES.

It gives me pleasure to say that during the past year the Winnebagoes have made decided progress towards a better condition; especially is this true of the amount and character of their farming, and the growing conviction among them that their future prosperity depends upon their own exertions.

Reservation.—In my last report the location, extent, character of soil, etc., were quite fully given, and I will here only say that the Winnebagoes have one of the finest tracts of agricultural lands in the country, well located, with good market towns within easy reach. The western portion of the reservation is the most desirable for farming, but has not until within two years been occupied or used to any extent by these people. It has been my aim to encourage and assist allottees to leave the eastern and timbered portion, where at best they can only find small tracts worthy of cultivation, and occupy and improve these splendid lands, and that so many are doing this is a very encouraging feature. I have found it almost impossible to induce allottees to remain on their farms during the winter and not return to live in the timber. This custom is one that is hard to overcome, as the Winnebagoes are naturally a social people, but now that so many are provided with comfort-

able houses they will be able to form a society for themselves, be independent of the timber Indians, and continue to remain on their farms and make themselves homes worthy of the name.

**Agency.**—The agency is located in the eastern portion of the reservation; the buildings are in fair condition and are comfortable, the grist mill being the only one requiring repairs to any extent.

**Aiding Allottees.**—Authority was granted me in the month of April to spend \$3,000 in the purchase of horses, harness, and wagons, and in erecting houses for allottees. The selection of the few, among the many calling for aid, who can be assisted is by no means an easy task, but it has been my aim to single out those who had not been heretofore assisted, and who were now showing a disposition to help themselves, giving special attention to young men returning from school. I believe this policy to be right and just, but we have among the Winnebagoes a class who have in the past been the chiefs and head men and who yet retain some influence, who think that they should receive the lion's share of everything being issued, as has been the custom in the past. To illustrate, only a few days since one of this class asked me why horses and wagons had not been issued him this season, and said that always before when such issue was made he had been remembered. Knowing that what was said was true, I told him that with all the assistance he had received he was in no better condition, that he had not made good use of what had been given him, and that now the policy of the Government was to assist those who were endeavoring to help themselves. This policy will naturally antagonize this class, but of its wisdom there can be no doubt, and each year will reduce the number and influence of this nonprogressive class and add strength and numbers to the new order. With the above mentioned \$3,000 I have purchased and issued twenty horses, ten sets of double harness, three wagons, and at the expiration of the present quarter five houses will have been built.

**Agriculture.**—The acreage cultivated by the Winnebagoes has been increased during the year by 985 acres of new breaking, the most of which is in the western portion of the reservation. The season has been a specially favorable one for almost all kinds of agricultural operations, the wheat and oat crop, which has been harvested, being very fine, both in quality and quantity, comparing favorably with the productions of the white neighbors of this people. It was harvested in good time, and at this date the thrashing is well advanced.

The corn, in common with this entire section of country, is somewhat backward, but with favorable weather for the next twenty days it will mature and be a splendid crop. The acreage is large and has been much better tended than last year. The 500 bushels of flax issued was all planted on new breaking; the harvest has just begun, and from indications the crop will be far above the average. I would here call attention to the especial value of this crop to those just beginning farming, as it is grown on land the same season of the breaking, thus giving returns the first year, where without this crop nothing could be produced. Seed grain was issued as follows:

Wheat.....	Bushels. 1,500	Flax.....	Bushels. 500
Corn.....	500	Potatoes.....	500

Our rules regulating the issue were as follows: Wheat issued only to those who had land properly prepared, which was inspected and measured by the farmers; flax to those who had new breaking; and the potatoes and corn to each head of a family. Thorough, careful, and systematic attention was given by the farmers, all seed issued was planted, and I consider that money invested in seed grain for these people is well expended. In the month of March last an estimate was submitted for repairing 89 houses of allottees, which had been erected during the past years. The repairing of these houses, making them comfortable for winter use, will do much to prevent the custom of congregating in the timber during the winter months. The estimate has now been allowed and advertisements for bids ordered. As soon as possible after the contract is awarded and approved these repairs will be pushed to completion.

**Leasing of Allotted Lands.**—In my last annual report I gave the question of leasing the allotted lands much space and recommended that leasing be allowed, under restrictions, and I am pleased to learn that Congress has passed the necessary law, so that this may now be done. Rules and regulations under this law have not as yet been received at this agency, and I earnestly request that this subject be given early attention by your office, as year by year it becomes more and more complicated.

**Indian Police.**—My police force consists of one captain and seven privates, who as a general rule have been faithful and efficient, and are quite well employed in looking after depredations on Government timber and keeping intoxicants off the reservation. The latter question is one, situated as we are, that is difficult to handle, surrounded by towns all provided with saloons, but I am pleased to say that during

the past year we have brought a number of offenders to justice. Every case coming to my knowledge has been reported to the United States authorities, and Indians coming on the reservation drunk have been arrested, brought before our local justice, and either fined or imprisoned.

**Crime and Offenses.**—There has been but little crime committed during the year. In fact nothing of importance except illegal marriage relations, and owing to a number of prosecutions by our local justice, this evil is on the decline.

**Cash Annuities.**—The more I see of cash annuities the more am I convinced that it is money wasted, seeing as I have young men hanging around the agency for weeks in expectation of a few dollars, which they could have earned many times over while they were waiting, and when received only to be spent in gambling and drinking. I would again recommend that a portion of the moneys coming to these people be expended in the purchase of the proper food for the old and sick, under the direction of the agency physician, and that a larger portion of their annuities be spent in establishing allottees on their land, in the issuing of horses, wagons, farming implements, and the erection of houses; that the issue be made under the strongest conditions possible as to their use, and always, when not properly used, to be taken from the allottees and given to others. I am convinced of the wisdom of such a course and most earnestly recommend it.

**Sanitary.**—For the sanitary condition I would refer to the report of the agency physician, herewith submitted.

**Morals and Religion.**—As to the moral and religious life of this people I can not speak very encouragingly as a tribe. They have, or seem to have, but little conception of what morality really is, or true religion either. There are three very great drawbacks to progress, both morally and religiously. One is the medicine lodge and dance. Whisky is another, and is with them, as everywhere else, a great curse. Again, the customs practiced by white people living in towns near the reservation, who flock to see them dance, bringing horses for racing with them, and by their example undoing what a few are trying to do in the way of Sabbath observance. Until these hindrances can be controlled but little comparatively can be accomplished. These things are not only great hindrances to the Indians, but are very discouraging to those who are laboring faithfully to lift them up to a higher and better life.

There is a neat church edifice here, with resident missionary and regular services. We have Sunday school all the year; during vacation it is quite small, but when the Government school is in session it is very interesting. A few of the parents come to see their children, and by that means they also come to church and Sunday school. They are divided into classes, and teachers assigned to them; all those who can not speak English are taught through an interpreter. A few of the men are also quite regular attendants and are very attentive. I am also pleased to note that this year we have several young men, returned students, who are endeavoring to organize a Young People's Christian Endeavor Society, which it is hoped will be a great benefit to them. This is very encouraging, and we may look for considerable advancement during the coming year in the moral and religious life of this people.

**Education.**—The educational facilities for the Winnebagoes are excellent, with ample accommodations for all, and I am pleased to note an improvement in the matter of sending children to school. By instructions from your office, cash and annuity goods have been withheld from those who refused to place their children in school. We have, however, but few cases where this extreme measure was necessary.

**Winnebago Industrial Boarding School.**—The school buildings are in excellent condition. During the vacation season they have been thoroughly renovated, painted, and whitewashed, and are in excellent shape for the opening of school September 1. With the new ice house and repairs yet to be made little more could be desired. The water supply is not adequate, and I was authorized last season to spend \$300 in sinking a tubular well and finishing windmill and pump. I entered into a contract to have this done, with stipulations that the party taking the contract was to comply with certain conditions, but after working a number of weeks and failing to secure a sufficient supply of water he abandoned his contract. I still think, however, that with an additional appropriation an adequate water supply can be obtained. Under the able management of Superintendent Evans this school has been a success. The employes are faithful and interested in their work, and every thing is in good working order for the coming year.

**School District No. 6, of Thurston County.**—This school is located in the western portion of the reservation, and a good schoolhouse has been erected. Arrangements have been made for all allottees who may wish to do so to send their children to this school.

## OMAHAS.

My facilities for obtaining full and accurate statistical information in regard to the Omaha Indians are not all I could wish, as I have no employes at this agency except those connected with the school. That herewith submitted is as complete as possible with the data at hand.

During the past fiscal year the Omahas have received from the Government \$116,000 of which \$34,000 was paid by Special Agent J. T. Spencer, and \$82,400 by myself. From the best information I can obtain this large sum of money was used in paying debts contracted in anticipation of the payment, in the purchase of horses, wagons, farming implements; and over fifty houses have been erected on the reservation. I consider that in the majority of cases, they have used their money fairly well, but they have depended too much upon it. Many of them have badly neglected their crops, and I am unable to report the improvement in their farming operations that we had reason to expect with their large additional means.

The unsettled condition in relation to the leasing of their allotted lands is one that should be settled at the earliest possible day, as well as what is to be done with the large and valuable tract of unallotted lands. This subject was fully investigated by Special Agent Parker, and I earnestly request that early action be taken.

In the month of February suit was instituted by certain mixed bloods, claiming rights as Omahas, who have settled upon and occupied quite a large tract of the finest of the unallotted lands. Orders had been given by your office for their removal from the reservation, but when suit was brought a restraining order was issued, so that no action looking towards their removal can be taken until the case has been settled by the court. This case has caused much bad feeling among the Omahas, and it is very important that a final adjudication be reached at an early day.

**Morals and Religion.**—There is a neat church building, with resident missionary, regular services, and Sunday school, and a membership of between eighty and ninety. Some of them are good, earnest believers, but it is with them as with the Winnebagoes, dancing and whisky make sad havoc. They also have some very earnest young people, whose influence is felt. There has been but very little crime committed during the past year, and that only of a minor nature.

**Education.**—The educational facilities of the Omahas are ample, and they appreciate them. Few children of school age but are in school, and this without the aid of police or other means.

**Omaha Industrial Boarding School.**—With the repairs allowed this season, the school buildings are in excellent condition, and the painting gives them a neat appearance. There have also been added to this school a carpenter and blacksmith shop, equipped with the best machinery and tools, making it the most complete repair shop in this section of the State. The intention is that this shop is to accomplish the twofold purpose of giving industrial training, so that the Omahas may have among them thoroughly competent blacksmiths, carpenters, and wagon-makers, and at the same time be of the greatest possible value to the Indians by doing their blacksmithing, wagon and machine repairing. The want of shops among them has been one of the greatest drawbacks to their successful farming. The class of work furnished for the shops in this way is of just such a character as is required for instruction, and with satisfactory arrangements for doing the work for the Omahas, these shops are going to be of the greatest value. An additional building is required to be used as a residence for the carpenter and blacksmith. The success of this school during the past year has been good, and the parents as well as the children are taking a great pride in it.

**Omaha Mission Boarding School.**—This school is under the management of the Presbyterian Board of Home Missions. Owing to a change of employes during the year, it has not been as successful as formerly, but with the new superintendent in charge, who has had much experience in this work, I expect the present to be a successful school year.

**Omaha Creek Day School.**—This school was discontinued September 1, by instructions from your office, as not enough scholars could be obtained to justify its continuance.

## RECOMMENDATIONS.

That a portion of the funds coming to the Winnebagoes be used to procure a proper food supply for the aged and sick; that cash annuities be discontinued and the money be used in aiding allottees to open farms; that an additional water supply be obtained for the Winnebago school; that the Winnebago gristmill be repaired; that a dwelling house be erected at the Omaha school for the use of the carpenter and machinist in charge of the shops.

**Conclusion.**—In making a review of the year's work, I can see much to encourage, for in many things that go to make up a prosperous people and good citizens, progress has been made. The most encouraging feature, as I have before mentioned, is the

growing sentiment that in the future, to a large extent, they must depend upon their own exertions. By fostering and encouraging this sentiment, aiding only those who are making an effort themselves, discontinuing cash annuities, using all the means available to assist in opening the farms, I believe the day is not very distant when these people may be self-supporting, possessed as they are of the finest lands, in a locality where with good farming, crop failure is unknown.

Allow me to bespeak for the recommendations here made the same kind consideration at your hands as has been the case in the past.

I am, very respectfully,

ROBERT H. ASHLEY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF PHYSICIAN OF OMAHA AND WINNEBAGO AGENCY.

WINNEBAGO AGENCY, August 26, 1891.

SIR: In comparing the sanitary condition of the Winnebago Indians for the year ending June 30, 1891, with the previous year, I find there is a better condition. There was less sickness, and consequently fewer deaths. The number of deaths as near as I can ascertain was forty-seven; number of births, fifty-four. The latter part of the winter and early spring was marked by an epidemic of influenza, to which directly and indirectly several deaths were attributable. With this exception we had no epidemics or contagions. The mode of living and habits of a part of the Winnebagos, like a great many other Indians, is not conducive to the best of health. Their food is often insufficient, and not of the proper character, and especially is this true in the case of the sick. The want of proper nourishment at the right time is the cause of a great many deaths, and I find this one of the greatest obstacles in treating them successfully.

I can see a marked difference in the sanitary condition in favor of those who are located on their allotments, and who have suitable houses. As a rule they have sufficient of everything necessary to their comfort. The winter season is the trying time for the Indians, but the coming winter promises well for them, as they have abundant crops.

Of acute diseases, catarrh is oftentimes met with. I have had but few cases of venereal diseases to treat. Of chronic troubles, scrofula and consumption are the most prevalent.

From a sanitary point of view, the school building is well located. It has excellent drainage, good ventilation, and the grounds are well supplied with shade trees. The health of the pupils was above the average; but few cases of severe sickness, and no deaths.

W. J. STEPHENSON,  
*Agency Physician.*

ROBERT H. ASHLEY,  
*United States Indian Agent, Omaha and Winnebago Agency, Nebraska.*

#### REPORT OF SUPERINTENDENT OF WINNEBAGO INDUSTRIAL SCHOOL.

WINNEBAGO, NEBR., August 31, 1891.

SIR: I offer the following as the annual report of Winnebago Indian Industrial School for the year 1891.

As stated in the report of last year from this school, there is nothing on file, or as a matter of record, at this school from which its history can be gleaned; but during the year the following facts relative to educational efforts on this reservation, founding of the present school, have been gathered from the better informed Indians: Bradford Porter, in 1866, opened a day school with Chas. Prophet, an Indian, as an assistant. This soon developed into two day schools with one teacher for each. These schools were in operation through the year 1873, when they were discontinued. In the year 1873, Howard White, known here as the Quaker agent, was instrumental in securing the erection of the present school building, and opening it as a boarding school. In the following year a brick building 40 by 25 feet, two stories high, was erected for a laundry and workshop. Other buildings have from time to time been erected, until now we have, in addition to the two brick buildings already mentioned, plans of which have been forwarded to your office, a storeroom, two barns, an ice house, a woodhouse, a chicken house, and the hog house—one of the barns, the chicken house, and the hog house having been built since June, 1890, and the storeroom in October of the previous year. To the foregoing will be added, within two or three months, a granary and an ice house and refrigerator combined, and our present ice house will be used as a root house.

We have asked for an authority to expend \$550 to secure a water supply. If this is granted and the school is successful in obtaining a good tubular well, there should be placed on the top of the hill back and north of the buildings, a large reservoir with a 2-inch main leading to the buildings; hydrants should be placed throughout the building and hose provided, thus affording an ample fire protection and water supply for kitchen and laundry purposes. When this has been done, Winnebago school will be well equipped for her work, needing only steam help for kitchen and laundry.

The school has passed a successful year. The advancement of the pupils has not been as rapid as it might have been, but there is a marked improvement over the year 1890, and I believe over any previous year.

There were but from 15 to 20 children on the reservation between the ages of seven and seventeen, who were not in school during the past year, unless excused for good cause. There has been less disposition on the part of the children to run away from school, and one pupil at least ran away from home to come to school.

The school was graded in 1890, but we did not follow closely the plan laid down by the "course of study," as that would place all of our pupils but 4 or 5 in one room.

The health of the pupils has been all that could be expected. The only pupil that died during the year was taken from the school in good health, to visit his mother; he contracted a severe cold and died ere he could return.

One of the most serious drawbacks to the school is the intercourse between pupils and tribe. Members of the tribe daily visit the school to its detriment in many ways, notably in retarding English speaking by the pupils, in persuading the children to run away, or to refrain from performing their allotted work, and in giving notice of the time of dances and their whereabouts to the pupils.

The cost of operating the school has been materially lessened. In 1890 the total cost, exclusive of repairs, was \$10,907.64. In 1891 it was \$8,350.92, a saving of \$2,556.72, while our average attendance is nearly the same\*, and our salary list has been increased \$280. This reduction is owing to increased farm products, a gathering up of the small odds and ends about the school, and keeping a check on the extravagance of both employes and pupils. Notwithstanding this our pupils are better fed and clothed than ever before.

A pressing want of this school is two more white, not Indian, employes, as assistant matron and assistant cook. Last spring I made a request for these additional employes, and was offered Indian help, which I refused, preferring to do without rather than increase the number of our help without increasing its efficiency. There is not to-day a single Indian woman of which I know, and I know of nearly all, who would want these positions, on the Winnebago Reservation, who would after one month's work in the school be anything but a detriment. I am prepared, if desired by the Department, to take up each and every case and prove conclusively by the best of evidence the truth of the foregoing assertion. I have worked with these Indians for two years. I know them here better than anyone at Washington can know them. I know them better than anyone at a training school can know them after they have left the school and returned to the tribe and reservation. There are four or five boys who have just returned from Carlisle, and who so far have done better than their predecessors, and I am not including them in what I have said and shall say, as they have thus far done well and have been treated accordingly by the school. \* \* \*

Yet these two additional employes are needed here. When employes "must understand that hard work is to be performed, that long hours of service are required that in the nature of things every employe must be willing to work night or day if special emergencies arise." When we have had to work night and day, when we all have more to do than we should, and at salaries ranging from \$400 to \$900—they are needed much worse than are additional clerks working only eight hours per day at salaries from \$1,200 per year up, not by any means because the clerk gets too much or works too little, but because the Department is so niggardly mean of its treatment of reservation school employes. We badly need two more employes, but do not want Indian women. We prefer to bear the ills we have rather than fly to others we know a great deal about. Should we be granted this additional help we would then want our herd of cattle increased.

The grade of our cattle should be improved. During the two years last past we have killed for school beef between 5,000 and 6,000 pounds of beef and yet increased our herd from thirteen to twenty, and although we lost two cows by disease and accident the Government has only purchased two cows for us.

Our increase in swine has been equally rapid.

This school should also have authority to use more than the ration of sugar, fruit, and soap, as the present ration is inadequate to the healthy and cleanly feeding, clothing, and housing of the pupils. In turn the coffee, tea, vinegar, and meat ration could be curtailed.

Our school buildings have been thoroughly repaired, cleaned, whitewashed, and repainted inside, and are now ready for another year's work.

Thanking for the liberality with which you have allowed our estimates for buildings and repairs, I am very respectfully yours,

ROBERT E. EVANS,

*Superintendent Winnebago Industrial School.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF OMAHA BOARDING SCHOOL.

SIR: It being a duty incumbent upon superintendents to report the condition of their respective schools for past year, I therefore have the honor to report the Omaha boarding school briefly, as follows:

The past has been the most successful year in the history of this school; both parent and pupil have taken an interest and endeavored to make the school a success. We opened school September 13, 1890, with a fair attendance of cheerful, happy, and contented children, which attendance soon increased to 79, ranging in age from 5 to 17 years. The same contented, happy spirit prevailed until late in the spring of 1891, when we had a few run away, but were promptly returned by parents. The last quarter of the school year was not as successful as we desired, yet taking the year through the children have done remarkably well and exceeded my expectations, and forever settled in my mind the fact that under proper management the Omaha child will advance as rapidly and sure as his white neighbor.

Another encouraging truth is the deep interest taken by parents in having children learn English. The good condition of the boarding house and dormitories, where they have lived and labored for the past ten months, is another evidence of their progress. Every room under their care and keeping was neat and clean at close of school, and required but little repairing. We have, however, whitewashed and painted for health.

Our water supply is all that could be desired. The drainage is ample.

Outside the school things are in the same prosperous condition. Wheat, excellent and above the average; corn, splendid; garden, consisting of carrots, parsnips, beans, cabbage, sweet and pop corn, etc., is very good, and a credit to the boys who did the labor. We also planted a good-sized orchard, which is doing well, and is inclosed in a substantial wire fence.

Our herd of cattle and stock of hogs have increased rapidly.

In conclusion let me assure you everything is in good condition, and not only a credit to the Indian pupils, but an example to both white and Indian.

Yours, respectfully,

LESLIE WATSON,  
*Superintendent.*

R. H. ASHLEY,  
*United States Indian Agent.*

\*Average for 1890 for nine months, 60.64; average for 1891 for nine and one-half months, 54.2.

## REPORT OF SANTEE AGENCY.

SANTEE AGENCY, NEBR., *August 19, 1891.*

SIR: In compliance with instructions contained in office letter of June 1, 1891, I herewith submit my second annual report of the consolidated Santee, Flandreau, and Ponca Agency, Nebraska and South Dakota.

Location.—Santee Agency, Nebr., is located on the west bank of the Missouri River, in townships 31, 32, and 33, ranges 4 and 5 west of the sixth principal meridian.

Flandreau Subagency is located on the Big Sioux River, in Moody County, S. Dak. Ponca Subagency is located at the junction of the Niobrara and Missouri rivers, upon the north side of the Niobrara, in that portion of South Dakota now annexed to Nebraska.

## SANTEE AGENCY.

The general character of the country is abrupt and hilly, excepting that portion lying along the river and creeks, which comprises about one-fourth of the reservation and nearly all of the tillable land. Much of the bottom land along the river is subject to overflow and is used mostly for hay and grazing purposes.

Farming.—For several years past this country has been afflicted with drought and very little grain of any kind has been raised.

The present season has been an agreeable exception, as a sufficient amount of rain has fallen to mature all vegetables and seeds. The average is not as large as it should have been, as the Indians were rather discouraged by past crop failure, and there having been no farmers allowed the past year, it has been impossible to keep them in their fields. However, this year they will be self-supporting if the corn crop matures and they husband their resources. I have noticed many fields of wheat and oats, comprising in some instances 20 and 30 acres, that will yield 20 bushels of wheat and from 40 to 60 bushels of oats to the acre. Corn, as a rule, is not well cultivated and the yield will not be large. A liberal quantity of potatoes was allowed last spring for seeding, and if the product is properly protected from frost this winter an ample supply of this staple article of diet will be secured for use and planting another year.

There has been no perceptible improvement in the methods of farming or in the manner of caring for their tools and buildings. Nearly every Indian farmer has a good frame dwelling on his farm, and many of them have small barns, which have been supplied from time to time by the Government. The houses, while not large, are ample for the needs of the people and vastly superior to the common tepee or the dirt-roofed houses these people were formerly accustomed to.

There has been more effort made by the Indians to care for and preserve their stock and increase than last year, and I trust the inclination will last. During the past year I have had occasion to reclaim several issued animals that had been disposed of by Indians to whites, and the result has been to make both more careful of buying or selling issued property.

There are no "blanket Indians" at this agency, and one would not realize, in riding over the reservation, that they were in the Indian country were it not for the dark complexion of the people. All have taken land in severalty and take kindly to the change, and would consider it a great hardship to again adopt their old nomadic life. There is still a tendency among the farming class to form "bees" whenever there is a large field to plow, or any task to do which would require several days' work for one man. But I am satisfied that it is gradually growing in disfavor, and each man strives more for individual gain and success.

This year there were 300 hogs and 50 mares issued to the Santees. The issue of hogs will not be of much advantage to them, as there are few that have feed to keep them with. The mares were needed and appreciated, and the tendency is in favor of better care and less useless driving. They have not disposed of as many of the increase of their issued stock as formerly, owing partly to stringent orders against it, and partly to the market being poor, as I have warned several whites who have been in the habit of gathering up young colts and calves that I would promptly prosecute every such case that came to my knowledge.

About 18,000 pounds of wire fence has been erected during the past year and many have large pastures inclosed.

For the present fiscal year two farmers have been allowed, and with their help I desire to get much of the ground plowed this fall, so that seeding may be done earlier in the spring than heretofore. I can not note much, if any, advancement in agriculture this year over other years reported, excepting that brought about by a more favorable season, and further advancement will take place very slowly unless hired farmers are furnished, at least one to every forty or fifty families. I now have two farmers, but when it is considered that these two men have to divide their time among about two hundred families it will be seen that little can be accomplished.

In my last report I urged upon the Department the necessity of allowing farmers here, and have had my request partially granted; but knowing that the self-support of this people depends upon their agricultural products, and having a knowledge of their failings, I respectfully ask that at least two more assistant farmers be allowed at this agency.

**Mechanical Trades.**—There are probably more Indians at this agency that have a partial knowledge of the use of tools than at any other, and a few very good mechanics. Nearly all the carpenter work in building Indian houses, repairing the various kinds of farm machinery, and blacksmithing is done by native labor, and there are several men competent to run a stationary engine and grist mill. They are apt and handy with nearly all kinds of tools, and each year brings improvement. Among the trades represented at the agency are a blacksmith, carpenter, wagon, harness, and paint shop, and a grist mill having a capacity of about 30 barrels of flour per day. The mill has recently been remodeled, the burrs discarded and the new corrugated rolls substituted, new bolter, scalper, etc., put in, and it is now fitted out for making as good a grade of flour as is generally made at the surrounding towns. It has been changed from steam to water power, the artesian well furnishing ample motive power as well as supplying the agency with water for all other purposes.

There is a scarcity of dwelling houses at this agency for employes. Some of them have two families occupying quarters none too large for one. The present year I shall ask the office for a few additions to make the quarters more comfortable. We are in need of a new issue or ware house. The building now used to store merchandise in is old, leaky, and rickety, and should be condemned and a new one erected.

Hon. James H. Cisney paid this agency an official visit during February last and gave it a thorough inspection, and from the many improvements granted soon after I surmised that he recommended many changes beneficial to the agency.

**Census.**—The last census, recently taken, shows at this agency 894 Indians, of which there are—

Males.....	454
Females.....	440
Number of children of school age.....	227
Males.....	125
Females.....	102

**Education.**—The advancement of education among the Indian children has been noticeable. The Santee boarding school has for a number of years ranked among the best reservation schools, and it has been my highest aim to elevate it to the level of the best training institution. In this I have been encouraged and aided in many ways by the earnest cooperation of the office and the faithful attendance to duty of an able corps of school workers. There have been many obstacles to overcome during the past school year, the greatest having been a lack of room for properly conducting a school of this magnitude.

The present year I have assurance that the most pressing needs of the school service at this place will be remedied, and with better facilities the future is assured. The school during the past year shows an increase in attendance of about 10 per cent over any previous year, and the quality of the work done speaks well for the earnestness of purpose and efficiency of those who labor in this branch of the service. There have been harmony and unity of purpose among both school and agency employes that have gone far toward making the work efficient during the past year.

**Santee Normal Training School.**—This institution is conducted under the auspices of the American Missionary Association, Rev. A. L. Riggs, superintendent, and ranks with the best training schools. The plant is valued at about \$60,000, and has a capacity of about 150 boarding and 20 day pupils. During the past year it was not filled to its utmost capacity. It has an able corps of workers in all departments and is a credit to the association.

**Hope Boarding School.**—This school is conducted by Rev. J. W. Wicks, superintendent, under the auspices of the Board of Missions of the Protestant Episcopal Church. It is located at Springfield, S. Dak., about 2½ miles from the agency, and is a most excellent school. It has a capacity of 50 boarding pupils and was well filled during the past year. The buildings are of chalkstone and brick and are admirably adapted to school use.

**Missionaries.**—The spiritual welfare of the Indians has been attended to by Rev. Alfred L. Riggs and son Fred, representing the American Missionary Association. In this work these able and estimable gentlemen have been assisted by several native preachers. Rev. Alfred L. Riggs has devoted his time to the education and civilization of the Sioux for many years, and has done great good among them. He is an honorable gentleman, who understands enough of the vexations of an agent's life not to needlessly add to them.

The Episcopal Church is represented here by Rev. Charles R. Stroh, assisted by several native preachers.

**General Topics.**—Owing to the removal of the Indian police force and the court of Indian offenses, drunkenness and gambling have been more common than in past years. I have prosecuted several cases under the common law, but the court has held that they had no jurisdiction over the Indians. The case has been appealed to the district court and will soon be decided. The prosecutions have had a salutary effect, as it is now understood by the Santees that although the native police and court are removed they are amenable to common law and will be prosecuted according to same.

There are very few cases of violation of the marriage relation, less, I think, than in former years, as several old offenders have been compelled to legally marry in order to escape the penalty of the law.

There seems to be less migration than formerly, and less visiting other agencies.

The Indian homes in the main are nearly as neat and cheerful as would be found in a community of white farmers, all being supplied with stoves and the common articles of housekeeping, and many showing evidences of refinement. Occasionally one will find an organ, a bookcase fairly well filled, while sewing machines are common.

The general health of the community has been good. There has been quite a large percentage of births over deaths.

During the past year the agency has been favored with visits from the following-named officials: George P. Litchfield, special agent; George W. Parker, special agent; James H. Cisney, inspector; Daniel Dorchester and wife, superintendent Indian schools; Mrs. Charles Eastman, *née* Elaine Goodale.

#### PONCA SUBAGENCY, NEBRASKA.

The Ponca Indians, in the main, are an independent and nearly self-supporting people. They are prosperous and industrious, and this year have excellent crops. The acreage under cultivation is quite large, and more grain will be raised than in any past year. They have a greater number of horses and cattle, in proportion to the size of the tribe, than either Santees or Flandreaus. Since Standing Bear and his party returned from the Indian Territory last year there has been a steady improvement, and many of the more restless have settled down and made a start at farming.

The Poncas have taken land in severalty, and take kindly to the change. At my suggestion the police force has been reduced to two privates, and were it not that help is needed to get the children into school these could be dispensed with.

The day school at Ponca Agency is presided over by Rev. John E. Smith, who also acts as overseer. His school, though small, is very efficient. The past year has shown a gain of more than 50 per cent in attendance, all pupils living within reasonable distance from the school attending regularly.

There are Poncas under my charge as follows: Males, 90; females, 106; of these there are of school age, males, 24; females, 27.

#### FLANDREAU SUBAGENCY, S. DAK.

These Indians are a portion of the Santee tribe who several years ago removed from the Santee Agency, Nebr., and formed a homestead settlement in the valley of the Big Sioux, in Moody County, S. Dak. The band comprises 309 persons, as follows: Males, 154, females, 155; of these there are of school age, males 35, females 32. The Flandreau Indians are engaged in farming and are doing well. Excellent crops are assured them this year. Nearly all own land and stock of various kinds, and their condition is better than that of the whites engaged in the same pursuits in the same region.

During the months of May and June this band was paid \$42,000 in cash, which they accepted in lieu of land to which they were entitled under section 7 of "An act to divide a portion of the reservation of the Sioux Nation of Indians in Dakota into separate reservations, and to secure the relinquishment of the Indian title to the remainder, and for other purposes."

The most of this money was spent by the Indians judiciously in buying land, horses, and other stock, and in erecting permanent improvements on their land. Very little was used unwisely. This money and the excellent crops being harvested by this band places them beyond the fear of want for some time to come.

The Flandreau day school is presided over by Rev. Hosea Locke, and is one of the best of the kind. Mr. Locke has had several years' experience in this work, and is thoroughly interested in the spiritual and temporal welfare of the Indians. The settlement being scattered up and down the Sioux valley for a number of miles, renders it impossible for the children to board at home and attend the school. This has

been remedied by the Department making a liberal appropriation for the support of the pupils who live at a distance, by boarding them with Indian families living near the school. It has grown to its utmost capacity during the past year, the attendance being about 15 per cent greater than that of any former year.

Very respectfully, your obedient servant,

JAMES E. HELMS,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF TEACHER AT PONCA DAY SCHOOL.

PONCA AGENCY, NEBR., August 25, 1891.

DEAR SIR: At your request I herewith inclose a short report for the past year.

About a year ago the Poncas were allotted land in severalty, and the remainder of their reservation was thrown open to settlement. The most of this land has been taken by settlers, and the Poncas are now surrounded by and to some extent intermingled with the whites. The intercourse between them and the whites, so far as I have observed, is pleasant.

The day school had a prosperous year. Pupils who could attend were required to do so, instead of being allowed to go to the agency boarding school as heretofore; consequently the school attained more importance in the eyes of the people and more interest was manifested in it. Twenty-one different pupils attended during the year. The school was taught 212 days. The pupil attending the most days was present 203 days, and the pupil attending the fewest days was present only 37 days. The average for the year was 153.

This section is favored with a very fruitful year. Plenty of rain has fallen, and there have been no hot south winds. I was very hopeful that the Poncas would have unusually good crops, but in this I have been disappointed. Their gardens are a failure from weeds. Their corn in many cases is almost smothered with the unusual growth of weeds. Wheat and oats are good.

In the amount of stock owned they have made some increase. In horses there have been an increase of 55. Of these 25 are colts and about 30 are horses, which they begged from the Omahas in July of this year. The horses obtained from the Omahas ought hardly to be called increase, as they will be up in due time to beg them back again. Last year they reported 308 head of cattle, and this year 279, of which 26 have been brought onto the reservation by a Ponca woman who has settled here since the allotment of land was made. They have sold a great many cattle during the year, and some 40 head have died. The number of swine has increased from 63 to 215 head. More families are keeping fowls than ever before, and more have sold eggs.

Some of the difficulties in the way of advancement among them are these. They are lazy. No one can live among them long without being deeply impressed with this fact. And the young men and women, even those who have had the advantages of their best schools, are as bad as any in this respect.

There is a great deal of drinking among them in a quiet way. Many dollars which should be spent for useful and necessary articles are spent in the saloons of Niobrara.

Old habits cling to them very tenaciously. They kill a good many cattle for feasts. They dispose of a great deal of issued property to the whites for chickens and other things which they ought to raise themselves. I am sure the estimate is too small when I say that 50 per cent of everything issued to them is eventually sold to the whites. Stringent regulations ought to be put in force among them to stop this habit.

And yet the opportunities which are before them are many. If they will, they may become wealthy and influential. They are naturally gifted with good abilities; they have farms than which there are no better in northern Nebraska; they are to have their share of all the benefits which for the next fifty years are to accrue from the late treaty with the Sioux. But there is a long and hard road of discipline before them before they attain the character and acquire the energy which assure success in life.

Yours, respectfully,

JAS. E. HELMS,  
*United States Indian Agent.*

JOHN E. SMITH, *Teacher.*

### REPORT OF SUPERINTENDENT OF SANTEE BOARDING SCHOOL.

SANTEE AGENCY, NEBR., August 15, 1891.

SIR: In accordance with instructions received from your office under date of April 3, 1891, I hereby submit my fourth annual report of Santee industrial boarding school. As the history of the school since its foundation in 1873 was given in my last report, I will pass that and endeavor to give a complete account of the work of the past year.

The school plant is located at the agency, on an elevation of about 60 feet and 2 miles back of the Missouri River. The farm contains about 165 acres, 85 of which is under fence, mostly wire; the remainder is hay land located about 5 miles from the agency, and is not fenced. The pasture is on the bottom land and contains 60 acres; is well fenced and is watered by a stream from the artesian well, making an excellent place for stock. The tillable land adjoins the school yard and is this year divided into crops as follows: Oats, 7 $\frac{3}{4}$  acres; sweet corn, 4 acres; peas,  $\frac{1}{2}$  acre; radishes,  $\frac{3}{8}$  acre; cucumbers,  $\frac{1}{2}$  acre; melons,  $\frac{1}{2}$  acre; cabbages, 12,000; tomatoes, 500; beets,  $\frac{1}{2}$  acre; turnips,  $\frac{1}{2}$  acre, and onions,  $\frac{1}{2}$  acre. In addition to the school land we have rented, of an Indian that is unable to work it, 43 acres, on which are 4 acres of potatoes, 7 acres of oats, and 32 acres of corn. The oats are now being harvested, and promise to yield a round 500 bushels. The corn, owing to cold, wet weather in the spring, is not so forward as it should be, but with the present hot and moist temperature will probably yield 1,000 bushels.

In the garden the cutworm did great damage. The turnips, radishes, cucumbers, and onions were nearly ruined, and the yield will be small. Peas there are an abundance of, and the prospect is good for 8,000 sound cabbages, 200 bushels of beets, 2 barrels of cucumbers picked, and several bushels of onions. The bad weather caused many of the seed potatoes to rot in the ground, and the yield will not be enough to supply the demands of the school.

The school stock consists of two good horses, an old yoke of oxen, five cows, one bull, and three head of young stock, besides nineteen head of hogs. Of the cows only three can be milked. I would

say in explanation of this that by authority from your office the old poor stock of our herd was killed last winter, and the agent has just received authority to purchase eight good milch cows for the school.

The buildings of the institution, seven in number, consist of the large or main building used as the boarding house for the pupils and many of the employes; the schoolhouse, used for two class rooms; the industrial teacher's house, a small two-room frame, formerly used as a storehouse; the laundry, barn, hay house, and an old log house 20x90 used for chicken house; storeroom and living rooms for the assistant industrial teacher and night watchman. With the exception of the large building, all are in need of more or less repair, and all in need of paint. However, the work of painting the inside of the main building, schoolhouse, and industrial teacher's house, is well under way and will be completed before September 1. As the need of more buildings has been more fully explained in another communication, I will say nothing of that here. The school grounds are badly in need of a new fence; the one now in use is old and badly out of repair, as it is a woven wire of very poor material. An estimate for a picket fence was forwarded January 1, 1890, but never heard from after. I will in the near future prepare a new estimate for a good fence and forward through the agent.

The number enrolled was 142—74 males and 68 females. The number in attendance at the close of the school was 124. Of the 18 others who were in attendance and then left, 3 were transferred to day school at Rosebud, 3 transferred to Genoa, 1 transferred to Hampton, 2 expelled, 2 appointed to positions in the school, 5 taken home on account of poor health, 1 married, and 1 left to help a widowed mother.

Runaways have not been so frequent as in other years; in fact only two boys, have given any great amount of trouble, and these ran away in order that after a time they might be expelled. However, they were sadly disappointed, for each time they were brought back and compelled to finish the school year here.

The average for the ten months school was in session was as follows:

Month.	Boys.	Girls.	Total.
September.....	44.5	42.3	86.8
October.....	60.45	51.83	112.28
November.....	59.03	54.03	113.09
December.....	52.22	48.58	100.80
January.....	60.80	55.29	116.09
February.....	60.23	55.10	115.33
March.....	59.77	54.45	114.22
April.....	59.46	54.06	113.52
May.....	64.67	56.00	120.67
June.....	64.59	55.63	120.22

This gives a general average for the ten months of 111.30, an increase of nearly 18 per cent over the previous year. To those of us here the above is very gratifying. \* \* I am happy to say that the attendance has increased instead of diminished in the face of difficulties. I would add that the firm stand of the agent in refusing aid—such as issues of rations, clothing, etc.—to those who would not send pupils to school had a good effect on the people, and I believe that they have found out that they are not to be coaxed to obey in that line any longer.

The industrial training has been kept up in all of its branches practicable to teach here. Monthly details are made in all apartments. All larger pupils are required to spend about one-half of their time in the industrial work. The boys are taught farming, gardening, care of stock, shoemaking, and carpentering so far as to make repairs about the school premises. In shoemaking, however, nothing but mending has been taught during the latter part of the year for want of material. The girls have been trained in all branches of housework, such as cooking, washing and ironing, cutting and making garments for both sexes, in the care of the sick, and in fact everything pertaining to a well-regulated household. In regard to the boys, I believe more work for them, such as broom and harness making, or tin and iron work, might be carried on to good advantage.

The work of organizing the school in accordance with the new course of study has progressed fairly, and I think in the course of next year it may be completed. The great difference in Indian pupils makes it difficult to grade as desired. One pupil may be bright in reading and orthography and exceedingly dull in mathematics, or the reverse. Again, owing to the time spent in industrial work by the larger pupils, they do not have time to thoroughly complete the work of their course in the allotted time. In these grades I determined that the same ground shall be gone over again the coming year, and not passed until the pupils are thorough in all the branches.

In addition to class-room work, short literary exercises, compositions, declamations, select reading, music, vocal and instrumental, have been given from time to time. I inclose programme of the closing exercises of the school, held on the 29th of June, which was largely attended and pronounced by all to be better than anything before held here.

Six of the girls have taken lessons on the organ during the term and have made good progress.

The Sabbath has been properly observed, religious exercises consisting of a well-organized Sunday school held in the forenoon and a song service in the evening. In the afternoon the larger pupils attend church or Sunday school at the mission churches near by.

The school has been well supplied with periodicals of different sects by ladies of Peoria, Ill., through the efforts of Miss Sparhawk, and they have been of much benefit to the older pupils in particular.

The work of the school for the year has been satisfactory; in fact, I believe more good has been accomplished than during any previous year of my management. For the first time in 4 years, and I think for many years, the entire school force has been in harmony, and as a result everything has moved in one direction and that in a way desired. The relation with the agent at all times has been pleasant, all favors asked being cheerfully granted. He has shown a deep interest in all the affairs of the school and has labored for its success.

In conclusion, as to the wants of the school I would recommend:

First. That the school farm be enlarged. About 25 acres of good land adjoining the school farm could probably be bought at a reasonable figure.

Second. In the event of another building being allowed us, that better facilities for industrial work for boys be provided. A man capable of teaching both wood and iron work would be a valuable adjunct to our force.

Third. That the boys of the school be uniformed to correspond with mission and other schools near us.

Fourth. That a system of sewerage be laid; for in the present condition a good sanitary condition can not be maintained.

Fifth. That a new barn be built, large enough to accommodate all the school stock. That the old one be torn down and the material be used to construct a wagon and implement house.

Sixth. That several large cisterns be built to hold the soft water from the roof. The water from the artesian well is very hard and can not be used for bathing or the washing of woolsens.

Seventh. That some provision be made for a hospital where pupils could be taken away from the noise and confusion of others when unwell.

Hoping that the foregoing may be interesting and instructive to your office and that the suggestions may meet your approval.

I am, respectfully, yours,

CHARLES F. PEIRCE,  
Superintendent of Boarding School.

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN NEVADA.

### REPORT OF NEVADA AGENCY.

NEVADA AGENCY, NEV., August 17, 1891.

SIR: In compliance with instructions I have the honor to submit this, my first annual report of the Nevada Agency for the fiscal year ended June 30, 1891.

Agency.—I assumed charge December 12, 1890, and my predecessor passed over to my care a neat and tidy place at these headquarters. I found many improvements required and have been endeavoring to make them as speedily as possible to the best interest of the service. This agency comprises two reservations, viz, the Pyramid Lake and Walker River reserves (the former being the agency headquarters), with a total acreage, including the two large lakes, of 640,815 acres, as per survey. Each of these reservations contains much fine tillable land, a large portion of which is still uncultivated.

Population.—The following is a recapitulation of the census of the Indians residing on the two reserves, taken June 30, 1891, viz:

Walker River Reserve:	
Males above 18 years of age .....	148
Females above 14 years of age .....	176
School children between 6 and 16 years of age .....	128
Children under 6 years of age (not classified) .....	63
Total .....	515
Pyramid Lake Reserve:	
Males above 18 years of age .....	162
Females above 14 years of age .....	170
School children between 6 and 16 years of age .....	88
Children under 6 years of age (not classified) .....	67
Total .....	487

Making a grand total of 1,002 Indians living under the jurisdiction of the Nevada Agency, although the tribe proper, Pah-Utes, number something over 3,000.

Indians.—Upon investigation, soon after taking charge, I found many of the old Indian residents occupying large enough ranches, fenced in, for two or three Indian farms, and they were not tilling any of the land, nor had they done so for years. They claimed that they owned the land and seemed to want to keep it "just to look at." When I proposed a division, to allow some other families who had no ranches to occupy a portion of the land and thereby afford them an opportunity for support, they hotly made strong objection. I referred the matter to their court of Indian offenses, and the judges' verdict was that "no division could be made." I reversed their decision and made the divisions, with full explanation as to who owned the land, etc. Then I informed the original ranchers that unless they cultivated the portion left them (it was ample) I would take that away from them also and give it to some one who would till it. For about six weeks I had much trouble in carrying out this plan; with firmness and justice, however, I am now rewarded by seeing fields of waving grain, fine hay fields, and pretty gardens.

I have noticed that former agents have not fully reported what this tribe covers—I mean by this the extent of territory over which they roam—and as to their numbers. The territory is in length north and south about 550 miles by 200 miles east and west, and is inhabited by what was once a powerful tribe; brave to a fault; warlike but not quarrelsome.

Agents' reports have only covered reservation Pah-Utes, which show this year but 1,002 as the number of the tribe, whereas the facts are that this agency has at times direct and at all times indirect charge of over 3,000 Indians. Those not included in

our census live in bands of from 200 to 500 upon the outskirts of the reserves, and these outsiders, as they may be called, are constantly applying to the agent for protection and various kinds of assistance, which is always given cheerfully, if possible. They are an industrious, obedient, and good people. I am endeavoring to induce them to come on to the reservations and improve ranches, and have been successful in several instances. I am satisfied that I can locate from 40 to 50 more families on good land which I have looked up here on the Pyramid Lake reserve, where they can make a good living. I have been partially about the outskirts looking up such possible locations and have found many which need only for the Indians to settle there and be shown what their advantages are, and encouraged by showing them the possibilities.

\* \* \* \* \*

**Agriculture.**—The garden and field seeds which you furnished these Indians last year were gratefully received and used well. Their alfalfa (hay), barley, wheat, and oat fields would do credit to any white farmer this season, and they have raised some potatoes, some fruit, and many have nice little gardens. In the early spring I sent off and procured a large lot of hop roots, which were distributed among and set out by them. These are well started and by another season they will be well advanced in the hop industry, when I propose to teach them how to cure them for the market. Hops always bring a good price on the Pacific Slope. They have never raised potatoes to any extent until this season, and their soil will produce them as fine as anywhere in the world. Their crops this season are fine and I am told by the ubiquitous "oldest inhabitant" that they have never before given such profitable and general attention to their ranches. The Pah-Utes, as a class, are industrious as well as cheerful and good workers, and their shortcomings arise from the want of a head to lead them; they are excellent followers, but need constant showing to enable them to properly apply.

**Industries.**—One of the greatest sources of revenue and support of these Indians is derived from the sale of fish caught in the Truckee River and Pyramid Lake, both of which contain an inexhaustible supply of the finest of trout, weighing from one-half pound to 15 pounds; and during the past fiscal year, in a period of five months, they caught and sold to the trader alone 111,000 pounds of fish, for which they received \$8,305.77 in cash. R. H. Cowles, our trader, is very good to them in all respects, and as soon as they bring their fish to him he weighs and pays them in coin, on the spot, a good price. This industry resulted as above greatly to their advantage, but a reverse has come against this industry which will materially decrease their receipts during the next year.

The Nevada legislature at its biennial session passed a law which will lessen their receipts at least 75 per cent. This law of course would not extend to or interfere upon a Government reserve did it not lay a penalty upon common carriers transporting through the State.

\* \* \* \* \*

If the Indians, with this grievous law in effect, receive \$1,500 for their fish during the coming season it will be well. As the legislature does not meet again until 1893 there is no remedy except the courts.

In addition to the fish industry they have labored with much zeal in chopping wood, for which they receive \$5 per cord; they performed other irregular work, such as repairing dams and ditches, painting and whitewashing, etc., for which they were paid \$1 per day. They were paid \$1,436.46 by the Government for products of their labor, and \$9,545.75 by outside parties.

**Freighting.**—During the past year they have hauled with their own teams 354,251 pounds of freight, for which they were paid \$2,002.67. They are very careful freighters and are always anxious to do this kind of work.

**Cash Receipts and Disbursements.**—The following is a statement of the cash received and disbursed at this agency during the past year, viz: Receipts, \$28,997.26; disbursements, \$24,740.04; amount deposited to credit of United States, \$4,257.22.

**White Settlers on the Reserve.**—This has become a hackneyed subject, but should be settled, which can be done not only to the satisfaction of the Indians but to their very great advantage. My plan would be to cut off a certain portion of the south end of the reserve, the extent to be determined on, where the thriving little town of Wadsworth is situated, whose residents have very many nicely improved homes, with little cottages fenced and improved. I would sell them these lots as well as other lots not now occupied, requiring a cash payment of, say, 50 per cent, the balance in three and six months. This sale would produce quite a fund which could be made of almost incalculable value to the Pah-Utes. With it I would recommend buying them a band of cattle. From their earnings one would premise that most of these Indians were financially full-handed, but such is not the case; they are as improvident as a child and always in debt. Hence, I would give into their hands the care of this herd under certain restrictions, so regulated that they would not be killing them off *ad libitum*; they would care for them well, and cheerfully obey the restrictions, but are like and need the care of children.

Again, the titles of the ranchers who are on the reserve should be settled. Of course I have no idea in what light the Government, through the Attorney-General, will look at or decide the question; but looking at the subject from a standpoint of justice and equity, and also well knowing that our great, good Government does not desire in the least to do a wrong to the humblest of one of its citizens, I should deem it right that those ranchers who settled upon their land in good faith prior to the establishment of the reserve which now takes in their homes, and having made extensive improvements from the earnings of their labor, ought not to be molested, but should be given a title to their lands as speedily as possible, with no other cost than is usual with preëmption.

But those people who have made settlements upon land knowing that they made them upon an Indian reserve should be made to pay for them in a stipulated way, and this money should go into the Indians' cattle or herd fund.

I would recommend that three proper commissioners be appointed, to be selected from the West, who are familiar with such matters, to adjust this matter as quickly as possible, as these Indians are daily losing the great advantage they would reap were it settled. This done, the advance in making them self-supporting will cover that of years. I am reliably informed that there is a movement on foot to have the north end of Pyramid Lake Reserve cut off. Should this be done it would result in a very great wrong to the Indians, and I am decidedly opposed to it. I can and will at the proper time and place give you the best of reasons why it should not be done.

**Lands in Severalty.**—Toward the close of my predecessor's administration, under your direction, he went to Capt. Breckenridge's band of Indians at Stillwater, Churchill County, Nev., and made some fifty allotments. Some time in February last the papers were all returned to me by your office, with instructions for me to go to Stillwater and thence to Carson land office and have them completed. The distance to Stillwater is about 70 miles by team, then by trail about 75 miles more to the station where I would take the railroad to Carson City, and the trip would consume some ten days. Seeing that they could not utilize their allotments this season and having so much to occupy me here and at Walker River, I have not yet attended to it, but will in time for another season. But this land will be a "white elephant" to them without tools to dig their ditches, without wagons to haul their fence posts, or without farming implements to cultivate their lands; all of which I would advise giving them if possible. They are workers and deserving of help. Then they will need some kind of supervision to see that they work to an advantage.

**Sanitary.**—For the sanitary condition of these Indians I respectfully refer you to the agency physician's report, herewith inclosed.

**Police and Court of Indian Offenses.**—The police force consists of 1 officer and 9 privates for Pyramid Lake Reserve, and 1 officer and 4 privates for Walker River Reserve. The officers are paid \$15 and the privates \$10 per month. We have an excellent corps of intelligent and trustworthy Indians on the force, as the photograph of them recently sent you will show. I am pleased to say that I have found little use for our guardhouse. The detail of one of them to Wadsworth has proved very beneficial. The judges are three just, conscientious, and honorable Indians, who act well their part, and all evildoers bow in humble submission to their decisions. Both the police force and judges act in concert with me in breaking up polygamy, little of which is at present practiced and will ere long be entirely weeded out.

**Buildings.**—The buildings have had needed repairs made on them during the year and at present are in fair condition. There should be at least one more small cottage built for agency employes and there should also be a house built for the agent, as he is at present compelled to occupy an old day-school building.

**Stock.**—The stock consists of 15 horses, 1 mule, 12 cattle, and 9 swine. Most of the horses should be condemned and issued to the Indians, and the agency and school supplied with a new outfit.

**Walker River Reserve.**—This reserve needs as much attention as the Pyramid Lake Reserve, and for further details I respectfully refer you to the report of my official visit to it, dated February 26 last, which was made after careful investigation.

The Indians on this reserve by our last census are more numerous than at this (Pyramid Lake Reserve) and they are well advanced in agricultural pursuits, having good ranches fenced in and well cared for. They need a great improvement in their agency buildings—you might say they have none—and a change of the present site is a great sanitary necessity. There is a much better location about a mile north, which is fully explained in my report above alluded to. They have more school children than at Pyramid Lake Reserve and have not accommodation for one-fifth of the number; but of this a more detailed statement will be found in my remarks on "schools."

I regret to say that Walker River Reserve has been sadly neglected in the past and deserves more attention in the future. Indians who are honestly trying to help themselves should be aided. These are such; they show no disposition to make trouble or make a fight for their needed aid, and they are becoming self-supporting.

As per yours of June last, I will soon forward a special report with estimates of what is needed for this reserve.

**Employés.**—The force of agency employés proper for both reserves consists of one physician, at a salary of \$1,000 per annum; one clerk, at \$1,000; two farmers (one for each reserve), at \$840 each; one carpenter, at \$800; one blacksmith, at \$800, and one assistant farmer and issue clerk for Walker River Reserve, at \$720. All of the employés except two have been faithful and efficient, and have given satisfaction in the performance of their respective duties.

**Inspection.**—During the year Inspector Gardner paid this agency an official visit and gave me many valuable hints and suggestions in regard to agency and school affairs.

**Education.**—The schools are three in number, viz, one day school at Walker River Reserve, one day school at Wadsworth, and a boarding school at this (Pyramid Lake) reserve.

The pupils at Walker River day school are advancing well, are tractable, anxious to learn, and attend with cheerfulness. The average attendance during the nine months the school was in session last year was 31 $\frac{1}{2}$ . The total cost of maintenance was \$1,985.33, or \$64.04 per capita per annum. The industries of sewing, cooking, and general housework are taught, and the employés are faithful and efficient.

The Wadsworth day school is a new one, and has only been in operation since last April. You have just authorized and I am now building an addition upon the original building, to be used as a diningroom and kitchen in which to give the pupils a midday meal, which I opine will increase the school to its full capacity. The teacher there has had experience with Indian children, and will, I think, make a successful advancement with her little charges.

**The Boarding School.**—The Pyramid Lake boarding school has now the addition of a nice two-story building, with which we have been enabled to enlarge the schoolroom to the capacity of 60 scholars. I am much pleased with the superintendent you sent me last June for this school, Prof. Erasmus Van Deerlin. I can see that he understands his business, is a good disciplinarian, and an agreeable associate. We shall act in perfect harmony, and I trust that our united work will build the school up to what it should be. We have good material to work on, and I have adopted a plan which I hope will surmount the prejudice of parents and result in bringing all the school children there are here into school. \* \* \*

There was an enrollment of 51 pupils last year, with an average attendance of 35, as shown by the school records, and under the many adverse circumstances I consider the average good. The cost of maintaining this school during the past fiscal year was \$7,519.05, or a per capita of \$214.83 per annum. The industries of sewing, cooking, laundrying, and general housework are taught, and there is a fine garden, which is cultivated and attended to by the boys, under the direction of the industrial teacher. In addition to this the boys are taught to milk and properly care for stock. We have two apprentices, one for the blacksmith and one for the carpenter, both of whom are apt and ambitious to learn.

The school employés, with one exception, have all given entire satisfaction during the past year. They are competent, industrious, and attentive to their duties.

The trees and shrubbery furnished me last year at a cost of \$160 have all been planted on the school campus; they are doing nicely, and in a few years the campus will be an attractive and beautiful spot. This fall the grounds will be sown with clover and rye, and next spring the grass will add a charming appearance to the surroundings. Superintendent Van Deerlin's report, herewith inclosed, will give additional information in regard to this school.

**The Messiah.**—In conclusion I desire to call your attention to the so-called Messiah. The originator of this craze is one of my Pah-Ute Indians. His name is Jack Wilson, and like all such cranks he is a fraud, but a pretty smart fellow. He obtained his notoriety by telling the Indians that he would invoke the Great Spirit and bring rain (after there had been two years of drouth), and it so happened that his promised invocation was in the commencement of our severe winter of 1889 and 1890, during which time it stormed almost incessantly from October to April. His success was rapidly spread abroad, and from that time on he has had many followers. Many Indians from distant tribes have been here and are now visiting him, and from eighty to a hundred have been to see him during the past six months. They generally pass through these headquarters and usually come with letters from their respective agents accrediting them. These visits do no good, and I would suggest caution in agents giving such letters. This is the whole story of the Messiah craze in a nutshell.

Inclosed you will find statistics relative to the school and agency. All of which is most respectfully submitted, and thanking you for the generous and prompt attention you have given my suggestions and recommendations during the past year, I have the honor to be, your obedient servant,

C. C. WARNER,  
*United States Indian Agent.*

## REPORT OF SUPERINTENDENT OF PYRAMID LAKE BOARDING SCHOOL.

NEVADA AGENCY, August 17, 1891.

DEAR SIR: In compliance with your request I beg to submit the following report. As I assumed charge of the school so recently as June 23, relieving Gen. Evans as superintendent, I am unable to give a detailed account of the school work. My report, therefore, must necessarily be brief and meager.

**History.**—I have made an effort to gather facts worthy of record in the history of the school, but have been unable to find sufficient data to help me in this matter. In looking over the old school registers, which unfortunately had been kept imperfectly and carelessly, I gather the information that a day school was opened on this reserve on September 1, 1879, with an enrollment of 52 pupils, and that it was converted into a boarding school on January 1, 1883, with an enrollment of 33 boys and 25 girls, and an average attendance of 33 for the six months ended June 30, 1883.

Number of pupils who could be properly accommodated in the school building, 48; number who have been crowded into it at any one time during the year, 51; average attendance during the year, 35.

**Industrial Training.**—The industrial training of the girls is comprised of instruction in housekeeping, sewing, cooking, and laundry work. The boys, under the supervision of the industrial teacher, cultivate the school garden, which comprises a little over two acres, keep the school grounds in order, and attend to the school stock, consisting of 2 horses, 12 cows, and 9 swine. I would recommend that poultry be raised at the school, and that the girls be taught to care for them.

**School Work.**—The school room exercises include instruction in the most elementary branches. I notice that Indian children are especially fond of music, and several of the pupils, without any instruction at all, play very nicely on the organ, entirely by ear, of course. It seems to me, therefore, that the teacher at every boarding school should be qualified to give instruction in music.

**Buildings.**—There are two main buildings. The old building, which is a one-story and a half structure, comprises the schoolroom, sewing room, girls' dormitory, bathroom, girls' assembly room, two bedrooms occupied by the matron, teacher, and seamstress, school dining room and kitchen, and reading room. The upstairs of this building is only fit for a lumber room. The new building erected this year comprises boys' dormitories, boys' assembly room, bathroom, employes dining room and kitchen, and bedroom for the superintendent.

**Remarks.**—On assuming charge I found that a general lack of order and method had prevailed in the school. The children were allowed to run at large in the village, and were in the habit of running off to the camps for the night soon after supper without any permission and without any reproof. There was no system whatever in the dining room, for they came in and went out at pleasure. No weekly inspection of the dormitories, etc., had been made. The pupils were not expected to appear in a better suit on Sunday; and no pressure had been kept up exacting English speech of them.

I have done what I could to remedy these defects, and I hope during the next year to further systematize the work and improve the discipline of the school. I had a conference with the employes, called their attention to these matters, and urged them to do their part in giving a higher tone to the school. I am happy to say that I have their good will and their hearty support, and that all the employes are in perfect accord with me and with each other. They are all performing their duties faithfully to the best of their ability, and I consider them all qualified for their respective positions.

It is very gratifying to me to know and feel that you are in perfect harmony with me, and that I could always rely upon your coöperation and assistance in all my efforts for the improvement and advancement of this school.

I cannot conclude without expressing my disapproval of the Wadsworth day school, and my regret that it is being made further attractive by the addition of a kitchen and the serving of a midday meal. However excellent the day school may be, the good influence of five hours spent in it is offset by the habits and surroundings of the camp. It is only by complete isolation from its surroundings that the Indian child can be divested of his uncivilized ideas and habits, and be satisfactorily educated and uplifted. With a boarding school so near I can see no reason whatever for the existence of a day school at Wadsworth.

I remain, yours, very respectfully,

C. C. WARNEB,  
United States Indian Agent.

ERASMUS VAN DEERLIN,  
Superintendent.

## REPORT OF WESTERN SHOSHONE AGENCY.

WESTERN SHOSHONE AGENCY, NEV., August 22, 1891.

SIR: In compliance with instructions, I have the honor to submit my second annual report, with accompanying statistics.

**Population.**—From the census just completed there are—

Western Shoshones:	
Males above 18 years .....	109
Females above 14 years .....	126
School children 6 to 16 years:	
Males .....	51
Females .....	42
Children under 6 years .....	39
	— 367
Piutes:	
Males above 18 years .....	65
Females above 14 years .....	81
School children 6 to 16 years:	
Males .....	34
Females .....	23
Children under 6 years .....	20
	— 223
A total population of .....	590

**Industries.**—During the year the Indians have hauled 173,720 pounds of freight, for which they have received the sum of \$3,525.05. They also received \$500 for irregular labor in constructing an irrigating dam across the Owyhee River.

**Agriculture.**—Seventeen families raised sufficient wheat to give them flour throughout the year; eleven more raised partly enough. There was ground at the agency flour mill a total of 46,000 pounds of flour for the Indians. A few also raised some garden stuff, but the Indian is not a success as a gardener. His inclination is to ramble after planting his crop, which generally results in the destruction of vegetables.

**Land.**—The Indians are exceedingly anxious to have their lands allotted to them in severalty. Perhaps 50 heads of families are competent; and I believe that good results would follow.

About 220 acres were sown to wheat and barley in the spring of 1890, about two-thirds of which gave a good yield, the remaining third being materially damaged by the cockle weed, which through some one's carelessness has been sown here with the grain and allowed to spread. The growing crop of the present season consists of about 350 acres of wheat, barley, and potatoes, much of which is being badly checked with cockle. I am dividing the grain-sowed land into convenient-sized lots by backfurlowing, and as soon as it becomes dry shall burn the weeds, with the hope of destroying the seed.

The success of the past year has encouraged them to work and the result is great improvement; and a strong desire is shown to learn how to plant and care for crops. The work of teaching is arduous and the progress slow, but when an Indian asks to be taught and is willing to work there is hope for the future.

**Agricultural implements.**—Under this head I would say that we are sadly deficient, there being no reaping machine here, except one condemned, that I am trying to repair sufficiently to cut the school grain. It is very discouraging for an Indian to contemplate his ripening crop with nothing but a hand sickle to harvest it with. Last year five men who had earned money hauling freight bought good mowing machines and cut hay for a large number by changing work, but they are all dependent on the agency for grain-cutting machinery.

**Irrigation.**—Nothing can be grown here without artificial watering. The streams have their sources in the mountain ranges adjacent to the valley, and receive their water supply from the melting snows that accumulate on their summits during the winter when the snow falls in large quantities and accompanied by heavy winds, which pack it in the canyon. The streams carry a good volume of water late in the season, but when the winter is mild and the snowfall light they cease to flow in the valley long before the time for crops to mature, and this takes place about one season in four, resulting in a partial or a total failure of crops. It is evident from this that in order to farm successfully something must be done to store the water that runs to waste in the early spring, so that it can be used when needed to mature the crops.

To accomplish this will require no costly surveyor. Nature has marked the spot where the storage dam should be located and provided most of the material. The lumber and timber needed for the flood gates, and cement needed for the foundation, together with the necessary tools to erect the structure, will have to be purchased and freighted to this place; for the residue, the inexhaustible bluffs of indestructible granite rock that lines the banks of the stream will suffice, and any practical man "who understands something of water pressure" can build it. It is hard to overestimate the value of this work. Fully 60,000 acres of land that are now practically worthless, with a soil equal to the best and climate that compares favorably with that of Salt Lake Valley, can be made to produce "abundantly" all of the crops of the temperate zone, and at a less cost per acre than it takes to clear forest land under the most favorable circumstances. When the snowfall has been large the previous winter about 2,000 acres can be irrigated by diverting the natural flow of the stream from its channel; some 4,000 to 5,000 acres more from natural meadows at the mouth of Blue creek, but are unfit for cultivation.

It will thus be seen that could the valley be successfully reclaimed one-half (or 30,000 acres) could be sold to white settlers for enough to pay all the cost, and still leave the Indians 15 acres of cultivable land to where he now has one. There are some 12,000 to 15,000 acres more land in the valley that could be watered, but at a very heavy cost, as it lies higher, making in all nearly 80,000 acres of valley land. A small dam was constructed during the year, and the irrigating ditch extended at a cost of \$500, which has done splendid work.

**Indian court.**—Authority was granted me by the Department July 1, 1891, to establish an Indian court. I have delayed the organization in order to fully explain to the Indians the power and work expected of the court, but it will be in operation soon.

**Sanitary.**—During the past year the measles have been epidemic among the Indians here, and owing to the fact that we had no fit place to care for them a large mortality was the result. Every one that died from the disease ought to have been saved, had there been a comfortable place for them while sick. It is useless to maintain

physicians among these people unless they are provided with the facilities to properly care for the sick. A hospital is an absolute necessity.

The medicine man uses his utmost influence to thwart the white man's doctor, and is very successful where the patient lies in camp far away from the agency. Even when the doctor succeeds in finding the sick one, the medicine man does not permit him to take the medicine. Thus the doctor's visit, which has likely cost him a hard day's work, goes for naught, but the patient dies, and because the white doctor visited him the death is promptly charged up against him. Could the doctor take the sick to a room where he could care for them and study the cause of the disease free from the influence or interference of the medicine man in my opinion it would not take long to close the medicine man's career for evil.

**Buildings.** During the past year most of the agency buildings have been thoroughly repaired and painted as far as the paint would allow.

The engine room of the flouring mill needs rebuilding, for which I have submitted estimate.

A substantial building is now being erected in which to store wagons and farm machinery.

A slaughterhouse is a necessity. Killing beef on the ground is not conducive to a high state of civilization; in fact, it is very degrading and demoralizing, and feeds the brutal instincts of a savage people; besides, the meat is often fly-blown before it can be issued.

Ten houses have been erected for the Indians. They vary in size all the way from 10 by 16 to 18 by 24 feet, and are built of logs, the Government furnishing the doors, windows, floors, and roof. I would recommend that the appropriation for building material be enlarged, as the houses that have been built call for a few boards for repairs each year, which makes serious inroads on the lumber and shingles intended for building.

**Education.** The school was in operation seven months during the past year, with an enrollment of 55 and an average attendance of 35. Decided progress was made in the industrial department with the boys, but the girls did not do so well, from the fact that they had no one to teach them; the only female employé around the school being an Indian woman cook who (although the best to be had) was totally unfit to teach the pupils civilized methods of cooking, dressmaking, etc.

The school building is utterly inadequate for the number of pupils here; only one-third were enrolled, and that proved too much of a task for one teacher. I sincerely hope that the day is not far distant when sufficient buildings will be erected to accommodate all the children, or means provided for sending them to training schools already established. All of the buildings have been put in a thorough state of repair; a fine porch has been erected in front of the schoolhouse, the schoolroom has also been renovated and painted, a bell tower, two fine swings, a milk house and a windmill have been erected during the year, also a large commodious cow shed for the use of the school cows.

A Sabbath school has been established and is in successful operation. At first it was hard to secure much of an attendance, but I finally concluded to give all who came (old and young) their dinner. The result was more than a house full, and as it has a tendency to break up the usual Sunday gambling games, I decided to continue it. (See report of superintendent and teacher herewith.)

**Indian Police.**—The police have been obedient and efficient. Some changes have been made during the year with a view of increasing its efficiency, all of which are proving satisfactory to myself and the Indians.

**Dancing.**—The Indians' method of enjoying themselves is to assemble en masse and have what they call a fandango, which consists of public speaking by the head men, singing, dancing, and gambling by all. Sometimes these gatherings have a political and at others a religious significance. During the past year they took a decided religious turn, inspired by the vaporings of a half-idiot named Jack Wilson, a Pah-Ute, who resides at Walker Lake, who claimed to have conversed with the Great Spirit, and that the Indians were going to have a Christ same as the white men. It caused some little excitement for a time, but the Indian is very sensitive to ridicule, and I used the weapon so successfully that they soon stopped the dancing voluntarily.

The worst feature of these gatherings is the indiscriminate mingling of the sexes, and no fandango has been held here since my incumbency that there has not been a large number of cases of domestic infelicity brought to me for settlement.

In my opinion the Indians would readily give up their fandango in the brush if a proper building were provided at the agency, where they could learn to dance to civilized music, and under the supervision of the whites. Some recreation they must have, and the white man's method of dancing is manifestly so superior to that of the savage that I believe good results would follow its adoption.

In conclusion I would say that the past year has been one of hard work on the part of all those employed at the agency, and the progress (on general lines) has

been of the most gratifying nature. Old buildings have been made habitable and new ones erected; an irrigating dam and ditches have been constructed; a fair crop has been put in which promises a good yield, and for what has been accomplished the employés are entitled to the credit; they could not have worked more faithfully had they been working for themselves. To the Department I return sincere thanks for its never varying courtesy in attending to the various wants of the agency.

Very respectfully,

WILLIAM I. PLUMB,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF WESTERN SHOSHONE SCHOOL.

WESTERN SHOSHONE AGENCY, NEV., *July 1, 1891.*

SIR: I have the honor to submit the annual school report. I took charge of the school November 24, 1890, and as there had been about five months of vacation the pupils were thoroughly accustomed to wigwam life, and naturally presented a true Indian appearance. In a few weeks, however, the children, by the efforts of the industrial teacher and myself, were looking more like civilized beings than the offspring of untutored savages.

Some improvement has been made in the school, and as much as could be expected when we consider the obstacles which the children have to encounter. The scoffs and jeers of the old Indians and the very degrading influences of Indian camp life are, to say the least, enough to discourage any children. To be sure, a few have comparatively comfortable homes, but these would be hovels compared with the average dwelling in an enlightened community. So, at best, the children have many drawbacks and barriers on the road to civilization. I think they deserve great credit for what improvement has been made, and the maps and drawings they have made, the songs they sing, the games they play, and the work they have done all go to show that labor for their welfare has not been in vain.

The schoolboys have shown their willingness to work on the farm, and as a result there is a fine prospect for an abundant harvest, and that the school will be self-supporting so far as a subsistence is concerned not far in the future there can be no doubt.

Most of the girls are able to cut and make their own clothes, and have worked in the kitchen and dining room, but they need a matron and would prove apt pupils.

The total number of pupils enrolled during the year was 55, and the average attendance was 35, the greatest quarterly average being 37.

The measles spread all through the school the past winter, and was a drawback to the work in the schoolroom. There should be a way to cancel the belief among the Indians that any sickness among the school children is caused by the head of the schoolroom, and such ideas, if tolerated, would prove disastrous at every session. I have reasons to believe that such a feeling exists among the Indians on this reservation. During the year four deaths among the pupils have been recorded, caused probably by measles and pneumonia.

Whenever an industrial boarding school is established many of the difficulties now prevalent will have been removed, for if the children can be taken from wickiups to dormitories obviously many of the evil influences will disappear.

A Sunday school has been organized, and while many come for the express purpose of eating dinner some are benefited, being for the time away from camp and under the direct influence of the school. The Indian cooks who have been employed here have a most pernicious effect upon many of the pupils, and persist in talking the Indian language to them, and are in no wise skilled in the art of cooking. Hence, I think no person who is not thoroughly civilized should be employed in an Indian school, and the salaries should be such that inferior classes will have to look elsewhere, and all positions be filled by competent, conscientious workers.

The closing exercises of the school consisted of select readings, recitations, and patriotic school and national songs, and all seemed to enjoy themselves. The children all did well. This agency deserves larger appropriations, more school room, and more school employés, and I hope you may be successful in securing everything necessary for the advancement of the school and the benefit of the Indians on this reservation.

Very respectfully submitted,

E. L. STEVENS,  
*Superintendent.*

WM. I. PLUMB,  
*United States Indian Agent.*

### REPORTS OF AGENTS IN NEW MEXICO.

#### REPORT OF MESCALERO AGENCY.

MESCALERO AGENCY, N. MEX., *August 17, 1891.*

SIR: I have the honor to submit this, my first annual report, for fiscal year ending June 30, 1891.

I assumed charge of this agency January 10, 1891. Of the 12 white employés 3 resigned and 9 continued in the service.

The reservation lies partly in Doña Ana, partly in Lincoln County, N. Mex., and contains a little over 462,000 acres, of which only about 4,500 are susceptible of cultivation, and so located that it is impossible to irrigate a portion of it. It is believed that many of the valleys, located higher in the mountains, will produce wheat oats, and millet with the natural rainfall.

The valleys that can be irrigated are narrow but very rich, and in many cases evidently have been lakes and filled by wash from the mountains. These valleys are watered by large springs and in many instances are marshy, requiring some ditching before cultivation. In most cases this can be done very easily by turning the water from the springs on either side of the valleys, which have plenty of fall, and the water can then be used for irrigation at such places as it may be necessary. It has been demonstrated in other localities that when the water has been so turned off from these valleys they need no plowing, and that timothy sown on the moist ground will take root and produce good and continuous crops.

A portion of this low land adjoins the school farm and is known as the Blazer property. A short distance southeast from the agency buildings are located the finest springs on the reservation, but they flow into a branch of the Tularosa River on the Blazer property, so as to be of no utility to the agency. They furnish sufficient water power for the saw and grist mill, situated a mile below. This property is owned by private parties and has been offered for sale to the Government. Should it be purchased, three of the large valleys could be brought under cultivation, with little expense and much benefit to the Indians and the Government. It would also improve the sanitary condition of the agency. Some of the Blazer property is already under cultivation, produces fine crops, and could be advantageously divided among the Indians. The mill could be used by the Government for sawing lumber, as there is an abundance of timber on the reservation; also, the Indians could raise wheat for themselves and have it ground into flour at the mill. At present they do not care to raise wheat as they are furnished flour by the Government. This purchase would also forever settle the question as to the water rights for irrigation.

**The Climate.**—The altitude of the agency is about 6,000 feet above the sea level. The country is considered healthy. The White mountains lie immediately to the north, and are capped with snow almost the entire year, which makes the summers cool and pleasant. Some snow falls in winter, but we have no extreme cold weather. The streams which flow eastward from the White mountains are picturesque, being overshadowed by beautiful spruce and fir trees. They abound with mountain trout.

**Stock-raising.**—The Mescalero Reservation is noted for its water and fine grass. It is also noted for being completely surrounded by stockmen with large herds of cattle, who will kindly do the grazing. Owing to the mountains and the lay of the land it is impossible for the agent to prevent the encroachment of stock, as when driven off they immediately return at some other point. When it is remembered that these herds of cattle number from 500 to 20,000 each, the impossibility of keeping them off the reservation will be easily understood. The following is an estimate of cattle adjacent to reservation lines:

	Head.
The V. V. ranch joins agency on northeast .....	25,000
Mrs. Barber & Co.'s ranch joins agency on northwest.....	20,000
Mrs. Loyd's ranch joins agency on northwest.....	1,500
Charles Armijo's ranch joins agency on northwest.....	1,000
Riley & Rynerson's ranch joins agency on west.....	10,000
Shepherd's ranch joins agency on west.....	500
Maxwell's ranch joins agency on west .....	800
The C. A. Bar ranch joins agency on southeast .....	12,000
Huner & Gerald joins agency on southeast .....	7,000
Gans, near Sixteen-spring Canyon.....	500
Bunches of 400 and under, estimated.....	17,000
<b>Total.....</b>	<b>95,300</b>

With these cattle adjacent to the reservation, neither the agent nor the owners can entirely prevent them from grazing upon it, but the owners of such cattle should be required and compelled to pay pasturage. The Indians can never succeed in stock-raising unless protected in some way from the encroachments of outside stock. Within a week I have driven off 7,000 sheep which were grazing on the northern edge of the reservation.

**Agriculture.**—The Indians were very industrious during planting time. They followed the customs of the Mexicans in plowing in their corn, which leaves the rows irregular and hard to cultivate. I shall try to remedy this next year. The crop this year will be above the average. The garden seeds were distributed among the farmers of the tribe, who were induced to plant them, and have succeeded fairly well with their gardens.

The Indians have in cultivation as nearly as I can estimate:

	Acres.		Acres.
Corn.....	275	Turnips.....	6
Oats.....	70	Other vegetables.....	—
Wheat.....	20		
Beans.....	20	<b>Total.....</b>	<b>400</b>

They have fenced 148 acres of new land, built 3 flumes for acequias, dug 1 mile of new ditch, cleaned and repaired 3 miles of old ditch.

The following is a list of stock owned by Indians:

Horses .....	311	Cows .....	132
Mares .....	157	Calves .....	107
Colts .....	92	Steers .....	26
Mules .....	10	Work oxen .....	15
Burros .....	90	Bulls .....	7
Total .....	660	Total .....	287

The chief herder has branded for the Indians this spring 86 calves and 74 colts.

**Agency live stock.**—The live stock of agency consists of 4 work horses and 2 saddle horses, one of which is worthless. Two of the work horses are old and slow, but will do for farm work. The carriage horses are not matched in gait and are badly lamed with ring bone. Altogether they are a bad lot.

**Agency building.**—The agency building is an adobe, 2 stories, 42x63 feet, 10 rooms, plastered and papered; 24 windows, 21 doors, and 4 fire places. There is a grass lawn in front of building, about 2 acres, well supplied with water and surrounded by a neat picket fence. I have added 150 rods of new fence, and made some other slight improvements.

**School buildings.**—One schoolhouse, superintendent's residence 2 rooms, 1 girls' sewing room, girls' dormitory, boys' dormitory, sewing room, kitchen and dining room, carpenter shop, and school commissary.

**School.**—The school farm and garden have been well cultivated; for details see superintendent's report. The number of scholars has been raised from 5 to 46, and when school is again convened there will be no difficulty in filling it to its utmost capacity. The children appear happy, contented, and playful; show a fondness for music, frequently calling at the agency building in the evenings to listen to instrumental and vocal music.

**Police.**—The police force is composed of Indians—1 captain, at \$15 per month, 1 sergeant, at \$10 per month, and 9 privates, at \$10 each per month. During the past year they have proved themselves to be obedient, faithful, and trustworthy.

Among other duties they have had charge of the beef cattle, which they have herded carefully, not losing a single steer. They are well mounted, but the saddles furnished by the Government are worthless, the trees splitting open with very little hard riding. I consider the pay of the police insufficient for the amount of work performed, and would be glad to see the pay of the privates raised to \$15 and that of the officers to \$20 per month.

**Census.**—The census carefully taken shows—

Males above 18 years of age .....	120
Females above 14 years of age .....	212
School boys between 6 and 16 years of age .....	61
School girls between 6 and 16 years of age .....	49
Children under 6 years of age .....	100
<b>Total .....</b>	<b>542</b>
Girls between ages of 14 and 16 years counted twice .....	11
<b>Corrected total .....</b>	<b>531</b>
Increase over last year's enumeration .....	18

**Morality.**—The Mescalero Apaches are peaceable and kindhearted, not morose and brutal, as they are sometimes represented. They appreciate kindness, are close observers and good judges of character, are honest and temperate as compared with any other community of the same size, either white or colored. I have seen but one Indian under the influence of liquor since I came on the reservation and he was not disorderly.

Tiswin is manufactured by some of the Indian women, but the police are diligent in hunting out and breaking up the camps, which is done with little trouble other than a scolding from the old women.

The Apaches have a few superstitions which they say are founded on reason and necessity. They claim that the rule forbidding an Indian man from speaking and retorting to his mother-in-law prevents family feuds, and they also claim that burning the personal property of the dead tends to lessen the inducements to neglect sick and infirm relatives. The allotting of lands and building of houses will tend to do away with this practice.

**Polygamy.**—I have found thirteen cases of men having two wives; the plural marriages are regarded sacred and binding, but for a man to have more than two wives is considered a disgrace. There is a growing sentiment among the Apaches against

these plural marriages. Formerly the penalty for adultery was to clip off the end of the nose of the woman convicted of this offense. I have found but three cases of women thus disfigured and they are old. This punishment has been abandoned.

Religion.—We are poorly supplied with missionaries or ministers. The chapel is open to all, yet we have had preaching but three times since I assumed charge, and this was by special invitation. If a half a regiment of soldiers is entitled to a chaplain, surely the Apaches should have some care from the religious world. It is a shorter road to the Indians than to India. The employés and their families would be pleased and benefited by religious services, and even the agent is not beyond redemption.

Should we be supplied with a minister to preach at stated times I could easily secure him a good attendance. This would at least be a means of order, recalling home associations and pleasanter days. We have kept up the Sunday school, but this is not sufficient; the mind lags and the heart grows weary. The strict observance of the Sabbath will also help to civilize and elevate the Indians.

Respectfully submitted.

HINMAN RHODES,  
United States Indian Agent

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF MESCALERO BOARDING SCHOOL.

MESCALERO, N. MEX., Aug. 12, 1891.

SIR: I have the honor to submit my annual report for the fiscal year ending June 30, 1891.

The last six months of the fiscal year ending June 30, 1891, have proved a success in the advancement of the boarding school at this agency. It would be a very difficult undertaking to trace the history of this school since its establishment with the records furnished by this office. I will only attempt to state the progress and improvement made since I came here, July 6, 1890.

I found on my arrival an enrollment of 32 Indian pupils, 6 of whom were assistants and apprentices who did not attend school in the schoolroom proper, leaving 26 who attended school and received instructions from the principal teacher.

It was evident that the agent who preceded Agent Rhodes intended to and did break up the school under his charge after he saw that the Senate failed to confirm him. He maliciously assaulted the superintendent and afterward suspended him without a cause, and as he was not allowed to appoint a superintendent to take the place of the one he suspended he allowed the school to go to naught.

When Agent Rhodes came and took charge of this agency, January 10, 1891, he found no school at all, only 7 or 8 Indian children wandering about from agency to camp. He at once restored the superintendent to duty, and brought in the children from the camps where they had gone after the suspension of the superintendent. The school was soon brought to a good working condition, although there was a priestly element working against it. There was a sworn statement made by one of the school apprentices that an employé of a priestly persuasion did advise the boys to take their blankets and leave school, and soon after the advice was given ten of them did as they were advised. After quite a search by the police the most of them were brought back. One large boy feigned sickness and was given a certificate of disability by the doctor, who did not work for the best interest of the school. As many difficulties as I have had to contend with, my records show an average attendance for the year of 34 pupils, and for the last quarter of the fiscal year ending June 30, 1891, an average of 40.

Primary grade:	
Pupils in first year .....	30
Pupils in second year .....	5
Pupils in third year .....	2
Pupils in fourth year .....	5
Advanced grade:	
Pupils in first year .....	2
Pupils in second year .....	2
Total .....	46

It is seen from the above grading that 30 of the pupils are of the first year's grade, requiring much attention and work on the part of the teacher, for it taxes to the utmost his ingenuity, adaptability, skill, and patience to teach young Indian children the rudiments of an English education—especially the English language.

The school farm consists of 45 acres, 30 acres of which were sown in oats from which to produce hay for the school and agency stock; 10 acres were planted in corn, which, at the present writing, looks very favorable for a good crop.

The school garden has received especial attention from the industrial teacher, and has proved a success in the way of vegetables, and would have proved a greater success had our garden seeds arrived sooner, so they could have been sown earlier. As it was, a few of the garden seeds came too late to be planted in their season.

In the way of improvements, I would suggest the building of a new schoolhouse and a new commissary building; also the construction of two cisterns. The present school building is not a fit place to properly accommodate 45 or 50 pupils. The present school commissary building is an old dilapidated building built ten or fifteen years ago of green lumber, and after shrinking left crevices which let in rain, snow, and dust of no small amount. We have built 350 rods of wire fence on the school farm and constructed about 320 rods of new water main or acequias; have also done considerable repairing.

Report of John F. Priest, Industrial teacher at this agency, shows that we have 45 acres under cultivation in the school farm, of which there are 30 acres of oats, 10 acres of corn, and 5 acres in garden. Garden vegetables have done very well, that is, such as are adapted to this climate. Melons, pumpkins, potatoes, and tomatoes do not do well. The corn is in good condition and prospects are for a good crop. We have already harvested 30 tons of oats-hay and will soon cut the second crop, thus insuring an abundant supply for our stock.

The Indian boys have shown a very willing disposition in regard to learning to farm. We allowed some of the larger boys to plant a garden of their own in peas, beans, beets, radishes, turnips, etc., and they were very industrious. When vacation came their garden suffered for want of care. There are but four or five boys large enough to do farm work, leaving the bulk of work for the industrial teacher and what help he can get from the other employes.

The school has 2 work horses, 47 cattle, 3 hogs, and 52 chickens. The cows are compelled to roam over a great amount of territory in search of pasture, as the school farm affords none for them. The school boys take quite an interest in the herd and the larger ones know every one of them at sight. The boys are fairly obedient, as much so as the same number of boys anywhere, and try to please in the work that is assigned to them.

Report of Mrs. J. M. Rhodes, matron and seamstress.—I have taken great pleasure with the little girls under my care and have found them bright, teachable, very amiable, and pleasant. They have been very willing and trusty in the discharge of the light duties intrusted to them, such as care of their rooms and ironing, and have shown great aptitude in doing patchwork.

We lacked time to instruct them properly in sewing, as the 46 children to clothe, instruct, and care for demanded all our energies. I have almost constantly been in the dining room at meal time and have had the children converse in English, which gives them short lessons three times a day. I have noted remarkable improvement in their table manners and in their intercourse with one another at play, and can cheerfully say their affability and kindness on the play ground could be a good example for many white children to follow. One great source of satisfaction has been the complete unity of purpose between the seamstress, Mrs. Crouse, and myself, and in our having the perfect love and confidence of the children.

The Report of Mrs. G. Crouse, assistant seamstress and laundress, shows there have been manufactured in the sewing room 93 aprons, 30 linsey dresses, 20 nightgowns, 43 pillow slips, 22 sheets, 16 towels, 10 underwaists, 19 pair drawers, 14 shirts, 13 curtains, 40 handkerchiefs, besides a bountiful supply of mending done, which is the bulk of the work.

The average attendance of the girls was 9, all of whom were too small and too young to do much work, but just learning to sew. In the laundry department Mrs. Crouse was assisted by two boys, who did very well. The girls, though small, were taught to assist in the ironing and putting away of the clothes, which was well done, oftentimes much better than by white children of their own age.

Yours respectfully.

M. A. CROUSE,  
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF NAVAJO AGENCY.

NAVAJO AGENCY, N. MEX., *August 31, 1891.*

SIR: In compliance with custom, and in obedience to your instructions, I have the honor herewith to transmit my first annual report of the operations of this agency.

The selection of Fort Defiance was most unfortunate on account of the high altitude, being 6,500 feet, and other unfavorable surroundings. Geographically considered, the Navajo Reservation is situated partly in New Mexico and partly in Arizona, the major portion being in Arizona, and it contains 7,942,400 acres. Its surface consists of mountains, hills, and plains, and presents an uninviting appearance. The northeastern portion is cut up by deep gorges and cañons, making portions of that section impassable except by Indians.

From a careful census just completed by the Census Bureau I find the numbers of Navajos to be 16,102, of whom 9,241 are living off the reservation; cattle, 9,188; horses, 118,798, and sheep, 1,583,754. Why are two-thirds of the Navajos off their reservation, and where are they? There is not grass enough in the reservation to supply their flocks and herds, and it is a difficult matter to count them because they are so widely scattered, ranging 300 miles north and south.

The Navajos are a pastoral people, and rich in stock and silver ornaments. Many of the Indians who have horses and wagons have broken small patches of ground which they have planted to wheat, corn, beans, melons, and pumpkins. The crops are as good as could be expected, but will not go far toward their maintenance this year. The products as estimated: Wool, 3,000,000 pounds; corn, 165,000; wheat, 100 bushels; squashes, melons, and a few other vegetables were raised. I think the wool estimate is low. One and a half pounds for each sheep is a small average.

Gambling is the prevailing vice and tends to keep them back in civilized pursuits. If this were to be broken up their progress would be made easier.

The boarding school has been kept up ten months during the year. It has labored under many disadvantages, chief of which was lack of interest by the Indians. It is unfortunate that there are so many children growing up in ignorance. Particularly is this the case now that the parents are beginning to be more interested in the education of their children. The success of Indian schools as well as white schools must depend entirely on the teachers and employes. When suitable employes are once obtained every change thereafter is a hinderance and injury to the school.

The sanitary condition of the tribe for the year past has improved very much, owing in part that they do not crowd together in their hogans. More Indians now resort to the agency physicians for medical advice, and the result is that there is a falling off in the business of the medicine men. I regret to say that there is yet much room for improvement in this respect.

The services of the Indian police have, I believe, generally given satisfaction, having proved very valuable in a number of instances. I think the presence of a well-organized police force has a very good effect upon these people, serving to discourage misconduct which, without the lawful force to bear upon it, would finally produce discord.

Respecting the allotment of lands there is some diversity of opinion among the Indians. Some of the more advanced would preserve their lands should they be allotted to them in severalty and might do well, but the major portion are regardless of the future and live only for the present time. These would sell their lands at the first opportunity, would soon squander their money, and would have to live upon the charities of their friends or that of their more wealthy neighbors.

The sawmill is located in the finest kind of timber, with abundance of water for all necessary purposes, and plenty of good grass during the summer months is found for the logging team adjacent to the mill. What is most needed is a good engine, of about 20 to 55 horse power.

There is now being erected a parsonage and church by the Methodists, and the Ladies Home Missionary Society of New York has selected sufficient land on the San Juan to build both a church and parsonage for the Navajos. We have had the past six months' services in the schoolhouse by the Rev. Wilton.

The agency buildings have been repaired to some extent, but many are in bad condition. The completion of the new school building and the erection of the laundry building, together with the work in the new water supply, have consumed a considerable portion of time, so much so that I could not give the needed attention to these buildings that they should have received.

The Indians are gradually abandoning their old customs; dancing is diminishing, and the heathenish yearly ceremony called the "hish kohu" dance is waning and will soon be a thing of the past. There is a marked increase in the number of Indians who are adopting civilized dress.

I cherish the hope that unless some hidden or unforeseen influence swerves the Navajos from their present course they will continue to grow better; but much is to be feared from the encroachments of the white man, and I would not be surprised if in time the Nez Percés and Sioux affairs were to be repeated on a larger scale with the Navajos. These people will require the very best management in the future. The annual statistical report of this agency is herewith inclosed.

Very respectfully, your obedient servant,

DAVID L. SHIPLEY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF MOQUI SUB-AGENCY.

MOQUI PUEBLO, ARIZ., *August 31, 1891.*

In compliance with instructions received from your office, I have the honor to submit this my first annual report for the Moqui Pueblo Indians for the year ending June 30, 1891.

The Moqui Reservation contains 2,250,000 acres. While it probably has more tillable land than the Navajo Reservation, it has not much more than the people require, for the Moqui are as a rule industrious and raise considerable grain. They have not much stock as compared with the Navajos, but are better farmers. They have their year's supply of corn, beans, etc., on hand, piled up in some of their rooms.

There are 3 mesas upon which they have built their adobe and stone houses, and they are piled one upon the other for 3 stories; some of them can only be entered by means of a ladder and through the roof.

The first mesa contains the villages of Tewe, Ci-tecum-wi, and Wa-ci-pi. The second, Me-shung-ne-vi, Cipoliva, and Ci-motk-pivi. The third, Oribi, is still west of these, about 14 miles, and contains the largest number of people.

There is a fine Indian school of 104 Moqui children at Keams' cañon, and its management can not be excelled, but the buildings are poor and not sufficient to accommodate the pupils properly. It is the intention to erect new buildings. The Government paid \$10,000 for the claim and present buildings. There are only about 30 acres suitable for farming adjacent to this school, and that overflows badly. During the summer the additional farmer has completed about 15 new houses for these Indians in the valleys.

There is much to be said to their credit. They are kind and not quarrelsome, and so far as they understand right from wrong are inclined to follow the right. I have attended but one of their dances, termed the "snake dance," and I can not but think

it is one of the evils that lie in the way of their civilization. The dark superstitions and profane ceremonies of a system as gross as that of darkest Africa still infect them with its poison, which, unless suppressed, must sap their life blood.

The history of these people up to the time of the Spanish conquest is almost a blank. They have a few traditions, but nothing that can be relied on. The ruins in the northern portion, and the remains of ancient pottery found in large quantities not only near these ruins, but on all the plains, prove conclusively that they are the remnant of a race once powerful and populous.

The accompanying statistical report is, much of it, based on estimates. I found it almost impossible to secure correct information concerning the number of sheep and horses owned by the Indians, and the amount of corn and other produce raised, as they possess no idea about these matters themselves, and I had no way of ascertaining these facts. I am quite sure the statements made are not exaggerated.

Very respectfully, your obedient servant,

DAVID L. SHIPLEY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

### REPORT OF PUEBLO AGENCY.

PUEBLO AGENCY, N. MEX., *August 26, 1891.*

SIR: In compliance with instructions I have the honor to submit my second annual report of affairs at this, the Pueblo Agency.

As in past years the Pueblo Indians still pursue their peaceful avocations, chiefly the cultivation of their lands. During the past year new ground has been broken in several of the villages and sown in corn and oats. They are also turning their attention to the sowing of alfalfa for hay. Altogether, the prospect for an abundant harvest this year is very favorable. Though slowly, they are adopting and using modern tools for tilling the soil. At Isleta they have purchased, without aid from the Government, a mowing machine, and some of the Indians of this pueblo have built substantial wire fences inclosing their lands. At Cochiti the Indians have built a wire fence inclosing the bottom lands on each side of the river of about 6 miles in length.

I regret to say, however, that in my opinion, the Pueblo tribe is decreasing in numbers. Smallpox and diphtheria have been prevalent among them the past winter. These diseases have been particularly fatal among the Indians of Acoma and Taos, where large numbers of children and even grown men and women have been carried away by them. The number of deaths in some of the villages I believe exceeds that of births.

There are the following day schools under the management of the Bureau of Catholic Indian Missions: At Acomita (Acoma village), near the Atlantic and Pacific Railroad, about 165 miles southwest of agency office; at Pahuate, a Laguna village, 160 miles southwest of agency office; at Isleta, 12 miles south of Albuquerque, 97 miles south from this office; at Santo Domingo, 45 miles southwest, and at Jemez, 65 miles west of agency office; at San Juan, 33 miles north, and at Taos, 85 miles northeast.

The same Bureau has also an industrial boarding school at Santa Fé and an industrial boarding school for girls at Bernalillo, a small town about 68 miles southwest from agency headquarters.

The Board of Home Missions of the Presbyterian Church are conducting day schools at Seama of Laguna, 160 miles southwest of agency office; one at Isleta; one at Jemez, and one at Zuñi. This board have also an industrial boarding school at Albuquerque.

Another industrial boarding school is being conducted at Santa Fé by the University of New Mexico.

The Government carries on a large industrial boarding school at Albuquerque, N. Mex., under a bonded superintendent, William B. Creager. In this school such industries are taught as carpentry, farming, cooking, baking, shoe and harness making, tailoring, sewing, laundry work, and general housework. At Santa Fé a similar school was opened last year under the superintendency of Prof. S. M. Cart. The attendance has reached 75, and during the present year it is my opinion it will more than double that number.

As far as I am able to judge these schools have been well managed and are doing good work.

There are 4 Government day schools, as follows: One at Laguna, 1 at McCarty (Acoma Village), 1 at Cochiti, and 1 at Santa Clara, the last three having been opened in the course of the last fiscal year.

At all times and places the agent as well as the teachers encounter great difficulty in securing pupils, but I must say that the Indians of Cochiti and Santa Clara exceeded my expectations by sending to school a large number of girls. Over two-thirds of the attendance in these schools is made up of girls. This is the first time, under my observation, that the Indians of this tribe have showed a willingness to send their daughters to school without promises of reward, and the attendance has been as regular as could be desired.

The establishment of these schools in the pueblos or villages will be productive of much good to the Indians, and the benefits derived from them will speedily appear in both the moral and material improvement of these people. Other day schools should be established in villages where a fair attendance can be secured.

I have the honor to be, your obedient servant,

JOSÉ SEGURA,  
*United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN NEW YORK.

### REPORT OF NEW YORK AGENCY.

*SALAMANCA, September 14, 1891.*

SIR: In compliance with instructions contained in your circular letter of July 1, 1891, I have the honor to submit this my first annual report.

I assumed charge of this agency April 29, 1891, and since that date have visited only three of the reservations, viz: The Allegany, Cattaraugus, and Tonawanda. The information I have regarding the others has been secured by correspondence and such other limited means as were at my command, and is not as complete as I would like it to be.

There are six tribes under the charge of this agency, viz: The Senecas, Oneidas, Onondagas, Cayugas, Tuscaroras, and St. Regis. The Senecas occupy three reservations: The Allegany, Cattaraugus, and Tonawanda. The first named lies along the Allegany River, in the county of Cattaraugus. It is 40 miles long and has an average width of about 1 mile. The reservation lines practically include all the bottom land of the Allegany Valley, and there are in it, according to the census taken in June last, 910 Senecas and 60 Onondagas.

It is a peculiarity of the Allegany Reservation that through it run several important railroads. The river division of the Western New York and Pennsylvania Railroad, running from Clean, N. Y., to Warren, Pa., follows the south bank of the river, and traverses its entire length. The New York, Lake Erie and Western Railroad strikes the reservation on the north bank of the river at the eastern boundary, and follows the river to Salamanca, where it diverges to Dunkirk. The New York, Lake Erie and Western Railroad also crosses it at Carrollton, running south to Bradford, Pa., and the coal fields of McKean and Clearfield counties in that State. The Buffalo, Rochester and Pittsburg Railroad strikes the reservation at Salamanca, and follows the north bank of the river east to Carrollton, a distance of 6 miles, where it crosses it southward to Bradford and the coal fields. The New York, Pennsylvania and Ohio Railroad enters on the north bank of the river near Cold Spring, and follows the river eastward to Salamanca, a distance of about 12 miles.

On the Allegany Reservation there are 6 villages occupied by the whites, under authority of act of Congress passed February 19, 1875. These villages, which grew up around the railroad stations, vary in size and population. Vandalia, which lies near the eastern border of the reservation, is a mere hamlet, containing about 240 acres. There is here a station on the New York, Lake Erie and Western Railroad, which is quite a shipping point for bark and lumber. Carrollton is a railroad junction, 5 miles west of Vandalia. The Bradford branch of the New York, Lake Erie and Western Railroad leaves the main line at this point, and the Buffalo, Rochester and Pittsburg Railroad also crosses the reservation on its way southward. Within the limits of this village there are some 2,200 acres, and a population of about 500. There are 2 or 3 hotels and several places of trade, a kindling-wood factory, saw-mill, etc. Great Valley, the next village west, includes about 260 acres. The village proper is mostly off the reservation, but the stations of the New York, Lake Erie and Western Railroad, and the Buffalo, Rochester and Pittsburg Railroad, a store, and 1 or 2 sawmills are within the limits of the village laid out under the act of 1875. Salamanca joins Great Valley on the west. It is the terminus of the New York, Pennsylvania and Ohio Railroad, and a junction of that road with the New York,

Lake Erie and Western Railroad, and the Buffalo, Rochester and Pittsburg Railroad. The Western New York and Pennsylvania Railroad also has a station at Salamanca. Owing to its location as a railroad center it has become a town of considerable importance, with a population of about 5,000 people. Its limits embrace about 2,000 acres. West Salamanca joins Salamanca on the west. It has a population of about 400, and includes about 750 acres. The Salamanca stock yards, one of the feeding points for live-stock shipments from the West, are located here. The village of Red House is 8 miles west of Salamanca. It is only 15 acres in extent, and takes in the New York, Pennsylvania and Ohio Railroad stations and a few houses.

The act of Congress of 1875 provided for leases within the limits of the villages laid out under its provisions for terms of twelve years, beginning in 1880. The act was amended in 1890 so that leases renewed in 1892 shall run for ninety-nine years. These leases are made by the council of the Seneca Nation of Indians, and the rentals under the leases are payable to the treasurer of the nation. The rentals under the leases of 1880 should amount to \$8,000 or \$10,000 yearly, but owing to defective methods of collection and accounting for the funds a much less sum comes into the treasury of the nation.

In addition to the village laid out under the act of 1875 at Red House, a village of 200 or 300 people has grown up around Red House Station on the Western New York and Pennsylvania Railroad. These people are there without any authority of law, under leases or some other arrangement made with individual Indians. Their presence is not objected to by the Indians, except in the case of parties engaged in selling liquor, and up to this date even these parties have been permitted to remain. The Cattaraugus County authorities have agreed to assist in driving the liquor sellers off the reservation, and it is probable that the objectionable residents at Red House will be removed at an early day.

The Allegany Reservation has within its borders 30,469 acres of land, of which no considerable part is under cultivation. The valuable timber, bark, ties, etc., has been nearly or quite all taken off, and the Indians are now at the point where they are being compelled to make their living principally from tilling their lands. There are a few good farms on the reservation and some thrifty people. Just now there is great activity in the lumber regions in the vicinity, and many of the Indians find profitable employment in the forests and in the sawmills.

The descendants of the Chief Cornplanter occupy a reservation just over the line in Warren County, Pa. It is one-half mile wide and two miles long, and they also own an island in the Allegany River containing from 50 to 75 acres. The Cornplanter Indians are Senecas, are enrolled on the Allegany Reservation census, and vote on that reservation. The Cornplanter Reservation was given to Chief Cornplanter in fee by the State of Pennsylvania for his valuable services to the whites. His descendants still own it in fee, and the land is divided in severalty among them.

The Cattaraugus Reservation is located along the Cattaraugus Creek a distance of some 12 miles. It lies principally in the county of Erie, with a small portion in Cattaraugus County and a fraction in Chautauqua. It embraces 20,680 acres of land, and contains 1,545 Indians. Of these 1,315 are Senecas, 160 Cayugas, and 66 Onondagas.

Agriculture is in a much more advanced state on this reservation than on the Allegany. There are many good farms, with good buildings, and a drive through the reservation shows many signs of thrift and prosperity. And yet it must be said that a large part of it is unused and uncultivated, and that a majority of the people have made but slight advances in the art of agriculture.

The Senecas residing upon the Cattaraugus and Allegany reservations are a corporate body, under the name of the Seneca Nation of Indians, by an act of the legislature, and own a common interest in the lands of both reservations. Their officers comprise a president, clerk, and treasurer, and upon each reservation eight councillors, a marshal, overseer of the poor, and three peacemakers, all holding office for one year, except the peacemakers, whose term is three years.

The Tonawanda Reservation is located in the counties of Erie and Genesee, and contains 754 acres, about one-half being under cultivation. A considerable part of the cultivation is done by white men under yearly leases.

The moral, social, and intellectual condition of the Senecas on the Tonawanda Reservation is not up to that of their brethren on the Allegany and Cattaraugus reservations. The marriage relation is not very highly regarded, little interest is taken in the schools, and a large majority of the people can not read or write. There is a good deal of dissatisfaction with the form of government on this reservation. This is by chiefs, chosen according to old Indian customs, and the people have little or no voice in the administration of affairs. There is a large pagan element, which adheres to old forms and customs and strongly opposes any change. The parties here are known as Christian and Pagan. The divisions are not strictly upon religious lines, but rather upon questions of government, the Christian party favoring progress and reform and the Pagan party opposing the same.

The Tuscarora Reservation is located in Niagara County, a few miles north of Niagara Falls. It contains 6,249 acres of land, something over one-half of which is under cultivation, and 450 Indians, nearly all Tuscaroras. The Indians on this reservation are more enlightened and better educated than those of any other reservation under the charge of the agency. They own the larger part of their land in fee, "and while it is not divided in severalty among them, it is believed that their advancement in civilization, wealth, and general prosperity is due in a large degree to the fact that they own their land in fee; the improvements belong to individual Indians, and they feel secure in their possessions." The government of the Tuscaroras is controlled by sixteen chiefs, chosen by the women of the clans in the tribes. Before a chief so chosen can sit as such his election must be ratified by a council of chiefs, who elect from their number a head chief, who is called the president of the council.

The Onondaga Reservation is located in Onondaga County, seven or eight miles from the city of Syracuse. It contains about 7,300 acres of land. There are about 450 Indians, of whom about 350 are Onondagas, 70 Oneidas, and 25 St. Regis and other tribes. About two-thirds of the land is under cultivation, and four-fifths of this is tilled by white men, under a system of leases legalized by an act of the legislature of New York passed in 1886. The moral and social condition of the people on this reservation is represented by parties well acquainted with them as very bad. The government is by chiefs, twenty-six in number, who are elected by the clans of the tribe. Each clan elects as many chiefs as under the form of government it is entitled to, and these chiefs are then accepted or rejected by the chiefs sitting in council.

The Oneida Indians have no reservation, their lands having been divided in severalty among them by act of the legislature many years ago. There are 180 Oneidas residing at Orchard Park, Oneida County, and at Windfall in Madison County. These settlements are about 2 miles apart. They have about 400 acres of land among them, nearly all of which is under cultivation. They are capable and thrifty farmers, and travelers passing through the country are unable to distinguish in point of cultivation the Indian farms from those of the whites. The Oneidas have no tribal relations, and are without chiefs or other officers.

The St. Regis Reservation is located in Franklin County. It contains about 14,030 acres of good land, about one-half of which is cultivated to some extent, and about one-fourth of the whole amount cultivated is leased to white men. The St. Regis number about 1,050 persons.

Their moral condition is said to be in advance of most other Indians of the State, but they make little progress in education. The Indian tongue is generally used, and the teachers in the schools supported by the State meet with many obstacles. Whatever government the tribe has is vested in three trustees, one being elected each year. They also elect a clerk annually. They have no courts among themselves, but rely entirely upon the courts of the State for the trial and determination of differences among them.

Schools.—The day schools in this agency are supported entirely by the State of New York, and are managed by local superintendents, residing near each reservation, who are appointed by and are under the control of the State superintendent of public instruction. Much interest is taken in these schools by the State authorities, and it is their endeavor to make them thorough and efficient. As yet the Indians do not seem to appreciate the efforts that are being made for the education of their children. This is particularly true of the Pagans, but few of whom depend upon cultivating the soil, but roam about from place to place, picking berries, peeling bark, gathering herbs, etc., to gain a support, and their children are in consequence very irregular in attendance upon school. There is also a tendency among the parents generally to take their children out of school at too early an age. There are in the agency 31 school districts. The whole number of children of school age is a little more than 1,550. The total number of pupils enrolled is about 1,100, and the average daily attendance, according to the last annual report, was 429. The expense of supporting the schools last year was \$9,617.87. I have not yet received all the reports from school superintendents, and can not give the figures for this year.

In addition to the common schools upon each reservation, there is also an industrial school at Quaker Bridge, in the town of South Valley, adjoining the Allegany Reservation, and the Thomas Orphan Asylum for destitute Indian children on the Cataraugus Reservation. The former is supported by the Quakers and the latter by the State.

The school at Quaker Bridge is located upon a farm of about 350 acres and has a capacity of 12 boys and 25 girls. The boys are instructed in farming and the girls in sewing and housework besides their usual studies. In addition to the products of the farm the expenses of the school are about \$1,500 annually, which are paid by the Society of Friends. The school is well managed, and the pupils are under an influence that is wholesome and elevating in every respect.

The Thomas Orphan Asylum has accommodations for about 100 children. It is a model institution, and is admirably managed by Mr. and Mrs. J. H. Van Valkenburg, two accomplished teachers and instructors. The asylum farm is one of the best in western New York, and the neat, finely kept grounds and well-tilled fields, must exercise a salutary influence upon the Indian farmers in the neighborhood. In addition to their school work the boys are taught farming and mechanical trades and the girls sewing and house-keeping. The State takes much interest in the Thomas Orphan Asylum, and expends each year \$11,000 in its maintenance. The last legislature made an additional appropriation of \$8,500 for the purpose of building a boiler house and putting in a steam-heating apparatus for warming the entire establishment.

There is a desire upon the part of some of the more intelligent Indians for a better education for their children than can be had in the schools at their command, and it would be well if such could have the opportunities afforded at Carlisle and similar schools.

**Mission work.**—Mission work is being prosecuted with hopeful results. Upon the Allegany Reservation there is a Presbyterian church at Jimersontown, 3 miles west of Salamanca. The church building is a neat edifice with a bell and was built in 1888, at a cost of about \$1,500. The Indians contributed about \$1,000 towards its erection and furnishing, and it has 75 members. There is a Presbyterian church organized at Oldtown, with a membership of 47; services are held in a schoolhouse. The foundations are being laid for a new Presbyterian church at Onoville. There is a Presbyterian church on the Cornplanter Reservation in Pennsylvania, with a membership of 44. The Presbyterian missions on the Allegany, Tonawanda, and Tuscarora reservations are in charge of Rev. M. F. Trippe, of Salamanca. He preaches once a month at Jimersontown, Oldtown, Cornplanter, and Tuscarora. Services on the remaining Sundays at Jimersontown are conducted by Rev. William Hall, and at the other stations native lay preachers carry on the work in Mr. Trippe's absence. There is a Baptist church at Red House of about 40 members, with preaching once a month by Rev. D. J. Austin.

Upon the Cattaraugus Reservation there is a Presbyterian, a Baptist, and a Methodist Episcopal church. The Presbyterian church is in charge of Rev. George Runcieman and has a membership of 110. The Baptist church is in charge of Rev. D. J. Austin and has a membership of 136. The Methodist Episcopal church has a membership of about 70 and is under the charge of the pastor of the Methodist Episcopal church at Gowanda, who is at present Rev. Mr. Cram. In addition to services in these churches, the Presbyterian and Baptist missionaries have each several out stations where regular services are held.

Upon the Tonawanda Reservation there are Presbyterian and Baptist churches; the Presbyterian has a membership of 42 and is under the charge of Rev. M. F. Trippe, but is supplied by Rev. John McMaster, pastor of the Presbyterian church at Akron. The Baptist church edifice is of brick. The church has a membership of about 50. There is no regular preaching by white ministers, but services are conducted by native preachers.

Upon the Tuscarora Reservation there is a Presbyterian and a Baptist church. The Presbyterian has a membership of 25 and is under the charge of Rev. M. F. Trippe, of Salamanca, who preaches there once a month. Native preachers conduct services on the remaining Sundays and during the week. The Baptist church has a membership of about 150 and is under the charge of Rev. Frank McPleasant, a Tuscarora Indian.

The Presbyterian and Baptist missions in the reservations above named are supported by the Presbyterian Board of Foreign Missions and the Baptist Missionary Society. The missionaries are earnest Christian workers and report a growing religious interest.

Upon the Onondaga Reservation there is an Episcopal and a Methodist Episcopal church.

The mission work upon the St. Regis Reservation is wholly under the direction of the Catholics and all but about thirty of the tribe are adherents of that faith.

I have no statistics of the missionary work on the Onondaga, Oneida, and St. Regis reservations.

**Agriculture.**—I have not yet been able to secure statistical reports as to the crops of this year, but think they will be above the average. So far as I can judge the Indians are making slow but steady improvement in agriculture, and are learning how to make their lands bring them better returns.

**Drinking.**—One of the greatest obstacles to progress is the drink curse. In the neighborhood of all the reservations there are cities or villages where the Indians can secure liquor without much difficulty. There are numerous parties, also, living on the borders of the reservations who make a practice of selling them hard cider, and thus secure the money that should go to the support of their families. It is a very difficult matter to enforce the law with reference to the sale of liquor to Indians. If

dealers refuse to sell, white go-betweens are employed who buy the liquor and deliver it secretly to them. Indians taken into court as witnesses in liquor cases are notoriously unreliable, and the officers who have charge of these cases encounter many obstacles to a successful prosecution. An additional difficulty is found in relation to hard cider, from the fact that the United States statutes do not prohibit the sale of cider to Indians, and prosecutions in the United States courts can not be had for the sale of that beverage. In some counties the State courts are lax upon the question of illegal liquor selling and it is difficult to get convictions in those courts for the sale of cider to Indians. The United States statutes should be so amended as to include cider with other intoxicants.

**Division of lands in severalty.**—So far as I can judge a majority of the Indians on the several reservations are opposed to division of lands in severalty. They fear that the result of such a division would be that within a few years a considerable number would be paupers and homeless. They argue that the reservation system with all its drawbacks affords a home, humble though it may be, to every one of their number, but that division of lands in severalty would expose the less thrifty to the danger of losing everything and being turned over to the cold charity of the world. There is an additional objection so far as the Senecas on the Allegany and Cattaraugus reservations are concerned, in the fact that such division prior to the extinguishment of the claim of the Ogden Land Company might cause a loss of their lands altogether.

**Legislation.**—For several years there has been more or less discussion of the Indian problem in the legislature of New York, and various propositions have been made with a view to removing the obstacles to progress which surround the Indians of the State. Mr. Whipple, who has taken an active interest in the matter, has at different sessions of the legislature introduced bills calculated to change the present status of the Indians, but none of these have as yet been enacted into laws. The bill introduced by him at the last session provided for extending the civil laws of the State over the Indians within its borders. This bill sought to make the Indians responsible for their contracts and obligations; it abolished the Indians' peacemakers court, and provided for the settlement of all differences among them in the civil courts of the State, and put the settlement of the estates of deceased Indians into the surrogate courts of the counties in which said Indians were residents. This bill passed the assembly, was favorably reported in the senate, but owing to the senate deadlock was not brought to a vote on final passage in that house.

Very respectfully,

A. W. FERRIN,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN NORTH DAKOTA.

### REPORT OF DEVIL'S LAKE AGENCY.

DEVIL'S LAKE AGENCY, N. DAK., *September 1, 1891.*

SIR: I have the honor to submit the following as my annual report for the year ending June 30, 1891:

**Statistical statement.**—Number of males above 18 years of age, 278; number of females above 14 years of age, 353; number of school children between the ages of 6 and 16—males, 92; females, 117.

**Agriculture.**—The resources of the section of the country in which the Devil's Lake Reservation is situated are solely agricultural, the raising of small grain receiving the almost entire attention of farmers, although the raising of stock to a limited extent is beginning to be very seriously considered. This fact, coupled with the absence of annuity rights, practically makes it a necessity that these Indians prosper in their farming operations, as their only resource in case of failure is the generosity of the Government. Realizing this, it has been my ambition to organize and place on a secure and solid footing their farming operations; but the vicissitudes of the seasons for the past few years and the discouraged conditions brought about thereby have made it very difficult to infuse new life into farm work.

The continued cropping of the land and consequent increased growth of fowl seeds convinced me very early in my administration that the major portion of the cultivated land of the reservation should be rested and summer fallowed. To this end, during the season of 1890 each farmer's field was carefully examined and the amount to be cropped and the amount to be summer fallowed during the season of 1891 designated. Consequently, although the acreage in crop during the present season of 1891 is much reduced, it comprises the best land we have under cultiva-

tion. After 1892, when we will get the first fruits of summer fallowing, it is believed that the farming of these people will compare favorably with that of their pale-faced neighbors, and that if favored moderately by Providence with propitious seasons their self-sustenance will be an easy matter.

Following up the allotments, very considerable time and attention will of necessity have to be devoted to the development of their newly acquired land. Special Agent Joseph R. Gray has exercised so nice a discrimination in the distribution of the natural advantages in his allotment work, that the foundation has been laid for each head of a family to have a valuable estate, consisting, as it will in almost every instance, of some timber, some meadow, and some plow land. With good log houses, with floors and shingled roofs, doors and windows, log barns, a small patch of corn and potatoes, a small field of oats, and a larger one of wheat to furnish flour and some to sell for market, a few cattle to furnish beef, a team of mares for work and breeding purposes, a wagon, plow, and harrow, the ideal of a small farm will be about reached. I am very hopeful of seeing this ideal attained very generally throughout the reservation, and that, too, within a few years.

**Allotment of lands.**—The allotment work on this agency is very nearly completed. The Indians have been favorable to the taking of land in severalty ever since the first objections they made were overcome. The principal ones were that they were afraid they were somehow to lose the tenure to the land they already had instead of gaining a better one; they feared that they would have to pay taxes, to which they strenuously objected, and they wanted 160 acres each for their children. Practically all have taken their land in severalty, and either are now occupying or soon will occupy and improve their several holdings. The whole number of allotments made will be about 1,030; the whole number of acres allotted is about 100,000.

**Court of Indian offenses.**—The court meets every second Saturday in the council chamber. It is composed of the agent, who supervises it; the head farmer, who acts as clerk and makes a report of such complaints as have been made in the interim, and three Indians of age and character, as judges. There is no formal trial of the case. The policeman of the district in which the offense was committed calls up the case and makes a statement, after which the complainant is called on and anyone else who knows anything about it. The prisoner defends himself. No one is sworn. No lawyers perplex the judges, but they gravely confer together, make suggestions, decide what penalty is proper in the case, and the penalty is imposed; it may be a small sum of money, a few cords of wood, tons of hay, or a pony. What is remarkable about the imposing of fines and penalties is that they are almost all paid within a very short time and without question.

The crimes brought into court are mostly of the social character, and the marriage relation is not highly regarded. It is not surprising that the Indian who has hitherto regarded his wife as a servant or laborer should not respect the relation they bear to one another. The Indians of this reservation, though, are monogamists with but a very few exceptions, and these are to be found only among the very old. It would seem to me that some provision should be made for granting divorce to Indians in some cases, as my observation has led me to believe that in many instances a decree of divorce might with great propriety be granted.

The docket of the court shows that of the whole number of cases tried 6 were for damage done by trespassing stock, 1 for stealing, 6 for drunkenness, 3 for desertion by wife or husband, 10 for gambling, 3 for adultery, 1 for medicine making, 6 for assault and battery, 1 for rape, 1 for bastardy.

**Police.**—We have 11 Indians who have been appointed as police, and they are stationed in different sections of the reservation. It is remarkable with what care and energy they perform their several duties. They obey every order with alacrity and dispatch, and do not in any way question it. They are sober and attentive to duty as well as diligent, and no stray cattle or animals are seen on the reservation that are not reported, and taken up; no intruders are suffered to poach on the wood reservation, and no infraction of good order or good morals is permitted to pass without immediate attention from the policeman of the district in which it occurred. It is with pleasure I am enabled to make this favorable report of the men thus employed. They seem to take unusual pride in the office, and the position is held in esteem and respect by the whole body of Indians.

**Schools.**—As for schools, seemingly the Indians in general have not shown much alacrity in securing the advantages of even a limited education. \* \* \* Some feeling of prejudice has been engendered against the schools by the efforts made to teach the necessity and duty of labor. The Indians as a people have seemed to think that labor is not honorable for man and that it is a badge of servitude. They have been accustomed to exact all of these duties from the squaws, and they naturally resented the efforts made to teach the boys manual labor, such as sawing wood, milking cows, caring for work horses, etc. But slow, sure, and steady advancement in civilization, both in mental improvement and skill in manual labor, is going on among

the Indian children of this reservation. For a detailed report covering the attendance, etc., on the schools I have the honor to refer to Supt. William F. Canfield, whose report will embody all the information in detail.

**Miscellaneous.**—During the late outbreak, when many Indians worked themselves up to such a pitch as to become frenzied on continued ghost dancing, the Indians of this reservation remained cool, quiet, and tranquil, although the timidity of some of the settlers near by gave rise to the sending out of sensational and dynamite reports as to their temper and disposition. Not a single Indian from this reservation joined the hostiles.

The settlement of the claim of 64,000 acres of land adjoining the reservation on the west during the last session of Congress was both just and particularly timely, for it has made it possible to follow up the allotment of land with the providing of each head of a family with a team of mares or a yoke of oxen, a cow and calf, some farm implements, house with floor and shingle roof, when the contract is let and work completed. Thus a very great impetus has been given to the improvement of the farmers from the very start, and no time allowed to lapse and break the claim of newly acquired individual possession of property. As a further incentive to industry and improvement rations have been issued only to the aged and infirm, and those who were actually engaged in some specific kind of labor, such as summer fallowing or cutting grain, and the Indians were told that they were given rations because they were at work, and would not be fed unless they did work.

In the way of improvements around the agency, all of the Government buildings have been given a fresh coat of paint; a large and commodious machine shed has been erected, and a system of waterworks put in, with but slight expense to the Government, as the windmill, tank, and tank tower were brought in from the Boys' Industrial Boarding School, now abandoned, and the labor was done by Indians. One very much needed improvement in connection with this agency is a hospital and infirmary. The treatment of the physician would become much more effective, and much suffering and almost certainly some lives would be saved.

It is a matter of congratulation to me to note the absence of dancing and the growing disposition to look upon it with disfavor by the Indians themselves. Another matter for congratulation is the suppression of the liquor traffic with these Indians, which is believed to be total and complete.

An attempt was made to enlist some of our Indians as soldiers under the provisions of the plan made for their enlistment since the recent outbreak of ghost dancing, but was unsuccessful, as they do not seem inclined to go to war. It is pleasing to note the number of young men that have been induced to begin farming for the first time this summer. Of these there are 58.

Summing up, the year has been a prosperous one for these Indians, one in which the Government has been both just and generous to them. They have received food and clothing during the past winter, seed in the spring, the settlement of their claim to 64,000 acres of land, giving them \$80,000, from which they have been already able to get 200 cows and calves, 100 oxen, 200 mares, wagons, stoves, etc., besides the probability of having their houses furnished with floors and roofs. To Providence they are indebted for a bountiful crop, although the acreage was small and some late grain was slightly frosted.

**Sanitary.**—As to matters pertaining to the sanitary condition of the reservation, I have the honor to submit the following report of the agency physician, Dr. A. S.ewart:

As I was not appointed to this agency until November 1, 1890, a report of my work will only apply to the last eight months of the past fiscal year.

During that time I placed on record 146 cases; by these are meant cases requiring some little attention and treatment. Almost every Indian on the reservation has applied at the office some time or other for medicine, but the complaint in most cases was too trivial to be worth recording.

These Indians as a rule avail themselves of the agency physician; some, of course, through sheer laziness, will neglect a sick person until the system becomes alarming, while others again are just the reverse and compel the physician to make a long drive for almost nothing.

The efforts of a physician here must be directed chiefly against tubercular disease, but the many circumstances that facilitate its spread and the difficulty in securing continued and desirable treatment make his work in this respect of very little consequence.

There were 38 deaths and 28 births, a decrease of 5. Of the deaths 12 were from consumption, leaving still 22 under treatment for the same trouble. This is a large percentage and it is showing serious effects on their offspring, for of the remaining deaths 13 were children under 5 years of age.

To control this trouble to any extent two things at least are essential; an improvement in their dwelling houses and the erection of a hospital. The houses are located well, high and dry, but very few of them have shingled roofs; no floors; none of them have more than one room, with very little light and no ventilation. Over part of the dirt floor they spread a thin mattress, sit around on this during the day and sleep on it at night. A consumptive patient living in a dwelling of this sort can not be treated successfully, and other members of the household are almost sure to become affected.

With an improvement in these buildings and the erection of a small hospital where the more advanced cases could be isolated, much could be done towards preventing the spread of this disease. Almost all children of this reservation between the ages of 6 and 17 are in attendance at the school where treatment of the sick can be carried out as successfully as in a hospital, and here out of an equal number of patients treated, namely, 146, there was only 1 death and that was an accident. A boy ran away from school, got lost, and died from exposure. This I think is an evidence of what good might be accomplished with a hospital. The reservation has thus far been free from epidemics.

During the winter the school was visited by an epidemic which I could designate by no other name than la grippe, the symptoms resembling somewhat what is ordinarily termed a "severe cold." There were also a few cases of measles, but this epidemic I understand has been over this ground twice within the last few years and it therefore did not find many victims this time.

The sanitary condition of the agency and school buildings is fair. The drainage from the old school building is defective, and the water-closets should be torn down and new ones built farther from the main building.

All of which is most respectfully submitted.  
Very respectfully, your obedient servant,

JOHN H. WAUGH,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF TURTLE MOUNTAIN RESERVATION.

TURTLE MOUNTAIN RESERVATION, N. DAK., September 12, 1891.

SIR: I herewith transmit the annual census and statistical report of this reservation:

The reservation is located in Rolette County, N. Dak., in township 162, ranges 70 and 71 west, and contains 46,800 acres, divided into farming, timber, and grazing lands.

The census finds 81 families of full-bloods, numbering 266 individuals; 270 families, mixed-bloods, numbering 1,260 individuals; children of school age (6 to 16), males 223, females 191, total 414.

There is in crop this season 1,150½ acres wheat, 613½ acres oats, 9 acres barley, 34½ acres corn, 131½ acres potatoes, 112 acres rutabagas, 33 acres assorted vegetables; total 2,083½ acres. In addition there are 455½ acres summer plowing, 411½ acres breaking, 386½ acres vacant; grand total 3,347 acres.

The following amount of seed was issued: 2,419 bushels wheat, 2,356 bushels oats, 600 pounds corn, 1,880 bushels potatoes, 960 ounces turnips.

There was much land that had become foul with weeds, and in the distribution of seed one-third of the land was left unprovided for, and the people urged to redeem this by plowing in the summer; much of the land reported as vacant has been plowed since the census was taken. The season has been very favorable and the harvest good, exceeding, rather than otherwise, my estimate as given in the statistical report.

There are three day schools controlled by the Government and one by Bishop Walker of the Episcopal church; in addition, there is a boarding school under contract with the Sisters of Mercy. Their statistics are as follows:

	Enrolled.	Average attendance.
St. Mary's boarding school .....	207	153
Bishop Walker's school .....	27	9
Day school, No. 1 .....	35	15.83
Day school, No. 2 .....	51	10.71
Day school, No. 3 .....	52	16

There are also children which are included in the census at the contract schools at the following places: 16 at Clontarf, Minn.; 5 at Van Rensselaer, Ind.; 5 at Morris, Minn.; 6 at Denver, Colo.; 17 at Government school at Fort Totten, N. Dak.

The several day schools have had the services of competent and faithful teachers but the attendance is not as regular as could be wished. The weather in winter is often too cold for the children to attend and to travel the distance that some of them are obliged to do, even were they provided with the requisite clothing, which very few are; and during the summer the parents with the whole family are in the prairie gathering snakeroot, which is an article that finds ready sale and adds greatly to their support. At the boarding school the best results are obtained as the children are permanent and the school is under excellent management. I understand that it is contemplated to give the day school children a midday meal; if this is done it will undoubtedly add to the attendance.

The use of intoxicants has been greatly checked, if not altogether done away with, by the enforcement of the prohibition law. It was a great evil before that, as the reservation is very close to several towns.

There is no court of Indian offenses but the captain of police and the two senior policemen constitute a tribunal before whom complaints and disagreements are taken; as most of the cases are neighborhood quarrels, the parties interested are compelled to make a settlement among themselves. The plan works very smooth and it has not been found necessary to resort to any imprisonments. The only serious case reported was an attempt at rape; the police followed the offender up until he finally fled to Canada.

The reservation is not large enough for the number of people claiming residence; there is not land enough to ever make them self-supporting either by means of farming or stock raising. The people are very anxious to have the Government take up their affairs and make some final disposition of them. They recognize that the present arrangement can not always continue, as it is neither to the best interest of the Government or themselves. Much was expected from the labors of the commission which was here last winter, and the failure to accomplish anything has caused great disappointment.

MIXED BLOODS.

In order to give as near as possible a complete census of the Indians and mixed bloods, who in any way come in connection with the business of this reservation, I submit herewith a supplementary census and statistical statement of mixed bloods who reside in the immediate vicinity.

The people mentioned are located as follows: Township 163, ranges 69, and 70, and the fraction of township 164, south of the Canadian country in the same ranges; also township 162, range 69, and township 161, ranges 69, 70, 71, and 72. This is surveyed land, but the occupants have been reluctant to file their claims, holding that they settled when it was included in the reservation, and that they were entitled

to as Indians. In many cases filings have been placed on the land they occupied which has caused much bad feeling between them and the whites. The General Land Office is making an examination with a view of adjusting the difficulty.

The census finds 134 families: 310 males, 308 females, total 618. Children of school age (6 to 16 years): males 98, females 101, total 199. The following amount of land is in crop this season:

	Acres.		Acres.
Wheat .....	680½	Turnips .....	43½
Oats .....	240½	Vegetables .....	8½
Corn .....	3½		
Potatoes .....	30½	Total .....	1,007

In addition there were 388 acres summer plowed and 364½ acres breaking.

There are issued to the old, sick, and widows, about 150 rations every month, and they received about 2,000 rations during seeding time. The large majority of them are in a prosperous condition, as they engage in wood chopping and hauling in the winter, gathering roots in the summer, and can find some kind of work most of the time, and the crops have been very good.

There are two day schools established for their benefit, one at the town of St. Johns, and the other at the extreme west end of the reservation; these are under the control of the Roman Catholic church. They have only been operated a part of the time. The statistical report, rendered by the Rev. J. F. Malo, gives 93 enrollment, 65 average attendance. Many of the children are also attending the Sisters' boarding school in the reservation, and at the different contract schools in the country.

Means should be taken at an early day, to fix the relation these people hold as Indians and wards of the United States. It is generally believed that but a few are entitled to the benefits of any treaty that might be made between the Government, and the Turtle Mountain Indians; yet they participate in the general councils and would prevent any reasonable agreement that should not recognize them. It is but justice to all parties, and it is also their wish, that some tribunal be selected, and some rules prescribed to settle who the U. S. Government deems competent to participate in a treaty. Their expectations are large, and many who are staying here would go away if they found out that it would do no good. It would imply a saving of supplies; at least place them in the possession of those for whom they are intended.

Very respectfully, your obedient servant,

E. W. BRENNER,  
Farmer in charge.

Maj. JOHN H. WAGG,  
United States Indian Agent.

## REPORT OF FORT BERTHOLD AGENCY.

FORT BERTHOLD AGENCY, N. DAK., August 20, 1891.

SIR: Complying with your circular letter of July-1, I have the honor to submit my second annual report. That of last year having contained a sketch of the topography of this reservation, as well as a brief history of the agency, a description of its location, etc., I shall here confine myself to a summary of the year's work and progress, a statement of the condition of the Indians, and to a representation of the affairs of the agency in general, up to the date of this report.

**Ratification of the agreement.**—The long-looked-for ratification of the agreement made with these Indians by the Northwest Commission, in December, 1886, having been accomplished, a new and a brighter face is put upon the "solution of the Indian problem" at this agency. According to the terms of this agreement, these Indians are now placed in the receipt of \$80,000 annually for the next ten years. This sum is to be used in part in the purchase of the necessary subsistence, and a limited amount of annuity goods, while the greater portion is to be expended in providing the Indians individually with the means of placing themselves upon the road to well-directed effort which shall result in self-support and consequent independence. The chief factor in accomplishing this result will be, beyond doubt, stock raising, though agriculture should be pursued as a collateral branch of industry.

**Agriculture.**—This has been, as formerly, the chief occupation during the past year. If a considerable increase in acreage is to be taken as a sign of progress, then they have progressed perceptibly in husbandry. Notwithstanding little or no plowing was accomplished last fall, the area planted to wheat, oats, corn, and potatoes exceed, at least by one-third, that of any previous year; in addition to which 70 acres were sown to flax, this being the first season the last-named crop has been tried by the Indians. Discouraged by recent crop failures, and secure of at least a subsistence without much effort on their part, very many of them evinced a strong backwardness to increasing the size of their wheat fields, usually mere patches and rarely exceeding 3 acres. To them a field of 10 acres assumed the proportions of a plantation, and the prospect of having to plow and seed such a large tract gave many a decided distaste for farming. There being some very good land in an old Government field just west of the agency, I had a number of Indians living near allotted tracts of from 5 to 10 acres each in addition to the patches near their homes.

So far as possible, all the fields near the houses scattered up and down the river in the Arickaree settlement were planted, and at the location of the Gros Ventre at the Little Missouri (where there is also a large field all of which was planted), all the cultivated land was made use of. Among the Mandans, on the west side of the river, the same course was pursued, so that practically no Indian lay idle this season.

The aggregate of wheat acreage, to a great extent measured, is not far from 550 acres; that of oats, 200; flax, 70; corn, 150; potatoes, 30; garden truck, 30.

The seeding and corn planting was done in good season, and as the summer though dry at first proved favorable, the crop throughout is excellent. The harvest will be entirely finished by September 5, and threshing will begin at the earliest practicable moment.

The quality of the grain and vegetables is far superior to that of last year's product, grain of the wheat and oats being large and plump. While the present year witnessed a marked increase in planted area, that of the coming crop season will be still larger, nearly double in fact, since there will be fully 1,000 acres of summer-fallowed land ready for seeding in the spring, in addition to the land now bearing crop.

As the summer approached it became apparent that the promised survey of the land and the consignment allotment would not be made in time to allow of breaking on the separate farms this year, which was a cause of great disappointment to the Indians as well as to myself. To permit any amount of breaking to be done haphazard, with absolutely no idea of where division lines would come, I deemed wholly unprofitable—indeed, worse than useless—since where Indians are settled near each other the survey must inevitably place a number of families upon the same farm. Where Indians were settled at considerable distances apart, as prevails to some extent among the Gros Ventres and Mandans, a limited quantity of new land could be and was broken.

Since it was impracticable to open up new land on separate farms, and was at the same time necessary to provide more land for the coming year, I decided to utilize the old Government fields lying contiguous to the agency. This comprises over 1,000 acres of weed-grown land, some of it idle for five years, and a portion of it overgrown with a sod tougher than the native prairie—Nearly, if not a thousand acres, however, could be plowed by the Indian teams; and early in June this intention was declared to the Indians and they were shown the advantage of summer-fallowing.

As a rule they gladly received their respective portions of this land, but preferred to do their plowing in the fall, seeing no use nor necessity for such work in the summer. \* \* \* However, they were, by means of repeated admonition and urgings, finally got to work at the plowing, though it was found necessary, in the cases of a few leading men, to resort to a strict interpretation of the rules governing the issue of rations before all were convinced that the white man's way of farming must be pursued. The work was completed during the months of June and July. In allotting this land all Indians who possessed teams able to plow, but who had no plots of their own, were sought out and required to take at least 10 acres. It will be seen then, that with the summer-fallowed land, the Indians will have close upon 2,000 acres to plant to crop next year, which is, all things considered, a pretty fair advance in agricultural development.

In this connection I can not omit to again express my deep regret at the unaccountable and obstructive delay in making the survey and allotments. This work should have been entered upon immediately after the signatures of the Indians to amendments to article 6 of the treaty were obtained. The Indians were anxious to have the land surveyed at once, and such action would have materially furthered the object the Government has in view, inasmuch as the establishment of this people upon separate and systematically defined homesteads must of itself make an important era in their progress, and would serve more than any other single act to emphasize for them the meaning of the new mode of life. At the same time, exact plats could have been laid out for breaking, and fully a thousand acres could have been turned over on the several farms. Not the least of the advantages to be obtained from the allotment system would be the facility it would afford for getting accurately at the statistics of work and products on the farms. At present it is practically impossible to arrive at anything like true data of area and product, since the irregular patches scattered here and there can only be roughly estimated.

I would therefore most earnestly urge the speedy survey and allotment of the requisite amount of territory (about 5 townships), that these Indians may at the earliest date possible begin work upon their own farms. In my opinion nothing will contribute so much to the removal of the tribal elements and associations which still to a great extent influence their actions and modes of thought.

During the past year a much-needed addition has been made to the tool department, there having been purchased 10 seeders, 12 mowers, 6 hay rakes, and 8 reapers.

In contrast to the tone of my report on this subject last year, I am happy to state that the results of this year are highly satisfactory to all concerned as well as encouraging to the Indians. It is generally believed that the conditions of the climate have changed from extreme dryness to that degree of moisture necessary to make agriculture a success in this region. Considering this and the fact that the Indian will be spurred to increased activity by the fortunate outcome of this year's husbandry, it is to be hoped that every encouragement and facility will be afforded them, in order that no obstacle to their uninterrupted progress may lead to a loss of interest on their part.

Herewith I submit what I consider a conservative estimate of the crops for this season. The same will also be found in the statistic blank accompanying this report.

Crop.	Acres.	Bushels per acre.	Number bushels.
Corn .....	150	*20	3,000
Flax .....	70	10	700
Oats .....	200	40	8,000
Potatoes .....	30	150	4,500
Wheat .....	550	20	11,000
Onions, turnips, and other vegetables .....			500
Total .....	1,000		27,700

\* Shelled.

**Stock.**—In this department I am able to record little beyond the fact that there is now some hope of a systematic effort being made to encourage these Indians in the occupation they seem most suited to. In my first annual report I strongly urged the attention and aid of the Department in this direction, and in subsequent correspondence strove to show the importance of this branch of industry could it once be set well under way. In response to estimates furnished, contracts were awarded for the delivery at this agency during the month of September next of 400 cows, 16 bulls, 2,500 sheep, 128 rams, 80 brood mares—50 of the latter with colts by their sides—and 50 work oxen. \* \* \*

**Trespass of stock.**—Last December, learning that cattle belonging to ranchmen on the south side of the Little Missouri were grazing on the reservation, I took a number of Indian police and made a tour of that region, which lies some 75 miles west of the agency. The reports proved to be true, and stock in considerable numbers was found on Indian territory. The ranchmen disclaimed having driven it over the line, asserting that the feed being somewhat better on the reservation the cattle had gradually worked across. They were, however, disposed to pay for the privilege of grazing their herds undisturbed until spring, and as it was manifestly very doubtful if they could be successfully prevented from occupying parts of that difficult region, and it being of no use to the Indians, the case was laid before them and they readily consented to an arrangement. It was accordingly agreed that the stockmen should pay at the rate of 50 cents per head for the grazing of approximately two thousand head of stock until spring, the amount to be paid, so far as practicable, in beef cattle.

In pursuance of the above, 27,000 pounds gross beef were delivered to the Indians by those stockmen present, and representatives of other ranchmen owning trespassing herds arranged to pay \$300 in cash in the spring. This amount was received in July.

The above matter was fully reported to the Indian Office and approval of my action requested. This, owing to the indeterminate nature of the law in such cases, was not given, but certain sections of the Revised Statutes bearing upon stock trespass upon Indian lands were quoted for my guidance in general, according to which absolute proof that the stock was "driven" or "conveyed" is necessary, in order to make a prosecution in due form.

This proof it is always impossible to obtain. At a later period, while in Washington, the case was laid before the honorable Secretary of the Interior, and my action received his approval. The honorable Secretary also authorized me, in a personal interview, to use my judgment in making terms with neighboring stockmen for the use by them of those parts of the reservation useless to the Indians. Said terms to be satisfactory to and in the best interest of the Indians, but not to be in the nature of a permanent agreement. The Secretary caused to be prepared instructions to this effect, and I was informed that the same would reach me through the Indian Office. Up to this date no such instructions have been received, although the attention of the Department has been called to the matter. It is to be regretted that the instructions have not been received, since, as the land is of no use to the Indians, to make a business of guarding it would be labor thrown away; whereas, by making a definite agreement with those who desire to use it the Indians might receive an appreciable sum annually. \* \* \*

**Education.**—The educational facilities consist of three schools, viz: The Government school, at Fort Stevenson, 17 miles below the agency, having an attendance of 120; the Home Mission School, conducted by the American Missionary Association, Rev. C. L. Hall, superintendent, located about 1 mile west of the agency, with an attendance of 44, 42 of this number receiving tuition, board and clothing under contract with the Government; St. Edwards School, located at the Little Missouri Bottom, 25 miles west of the agency, under the auspices of Rt. Rev. Bishop Shanley,

of North Dakota, with an attendance of 28. This latter is conducted as a day school at present, but I am informed that it will be opened as a boarding school early in October, with a corps of Indian sisters as instructors. I believe all these schools to be doing good work, and that they are effective factors in the civilization of the Indians.

I endeavor to use every effort to the end that they shall secure the attendance of each child of school age on the reservation, the Government school receiving the first consideration according to the ruling of the office. My aim in this respect has been fully realized, since there are now but 2 children of school age out of school, and those are physically unable to attend.

**Sanitary.**—The report of the agency physician is forwarded herewith and attention is respectfully called thereto. I desire to especially refer to one feature of said report, viz, the suggestion that a small hospital be established at this agency.

In this connection I can do no better than to refer to the report of Agent Gifford in 1888, the conditions remaining practically the same. (See Annual Report of Commissioner of Indian Affairs, for 1888.) \* \* \*

A point which should not be lost sight of is the long distances which the agency physician is obliged to make in visiting patients. Among the Gros Ventre and Mandans there are families living more than 50 miles from the agency, and a serious case in either tribe requiring daily or even triweekly visits must invariably receive scant treatment should there be general sickness among the Indians.

**Indian Houses.**—Since there is scarcely a moderately decent or healthy habitation in any of the Indian settlements, all being of log and pole construction, daubed with mud, and with dirt roofs and floors, one of the most needed reforms is in the line of house building. When allotments are made new houses will be required, as it will be impracticable to remove old ones, even where they are habitable in their present location.

Excellent building material can be obtained by sawing native timber, great quantities of which exist at the mouth of the Little Missouri. The location of the agency sawmill in proximity to this timber, as has been repeatedly urged, would afford means for converting logs into lumber in sufficient quantities to entirely renew all Indian buildings, and at the same time furnish great aid in rebuilding the agency, which is imperative at an early date. The sawmill in its present location is entirely useless, being more than 20 miles distant from timber suitable for working into lumber. To haul green cottonwood logs that distance is simply out of the question, and this fact alone prevents the Indians from doing their part of the work necessary to securing an abundance of building material.

To remove the mill would also open the way for the employment of a number of Indians, especially those young men returning from school, to whom no occupation aside from farming offers and for which some seem to have acquired a distaste. Action in this matter should be taken early, since much time will be consumed in the preliminaries incident to removal, and the latter would occupy some weeks. Since it is only when the logs are free from frost that cottonwood can be successfully manufactured, the mill should be ready for operation in the spring. During the winter the Indians could be profitably employed in getting logs to the mill to be sawed for their own use. Outside of work of this nature there is very little for them to do during the winter season. In this connection I would recommend that at least 50,000 feet of logs be purchased for use of the agency, and for such Indians as are unable to procure logs for themselves.

**Census.**—The census taken during the month of June shows a total population of 1,112, divided as follows:

Tribe.	Males.		Females.		Total.
	Over 18.	Under 18.	Over 14.	Under 14.	
Arickaree .....	119	71	174	54	418
Gros Ventre .....	85	65	118	45	313
Mandan .....	72	45	101	28	246
Knife River Gros Ventres .....	37	39	40	19	135
Total .....	313	220	433	146	1,112
Total males .....					533
Total females .....					579
Total .....					1,112

The above figures indicate a falling off of 71 from last year's census, but I have every reason to believe that this enumeration is as correct as it is possible to obtain, as great care was exercised in taking it.

**Recommendations and Conclusions.**—Sometime since estimates for the cost of erecting new agency buildings were asked for and furnished, and later inquiry as to the feasibility of opening a brickyard in which to make brick for building. This latter question was answered as fully as possible, and I hoped that here was a prospect of getting some new industry under way. Nothing has been done in this direction, however, and I would recommend that the matter receive attention.

I find it necessary to again refer to the shabby and ram-shackle condition of the agency buildings generally. The new office built last fall is the only thoroughly-constructed building here. Not having been built by contract it was honestly put up and is all that it purports to be, substantial and comfortable. It is the only agency structure on a stone foundation. The five wind-shaken and barn-like structures termed dwellings are a disgrace to the service. They can not be made habitable this winter without much repair, an appropriation for which has been asked. They are also insufficient in number, as there are eight white employes at the agency and but five houses.

Like the reorganizing of the Indian dwellings the renewal of agency buildings is a very necessary affair. It should be done speedily, and when done the agency should be located in a spot as central as possible to the Indian population. I would recommend that the Little Missouri Bottom be selected as a site on account of its central location, nearness to excellent timber, good water, and large area of fine farming land. \* \* \*

It is to be hoped that with the present condition of the funds available for this agency purchases for the Indians will be made early and shipped so as to arrive sooner than has been the case heretofore.

The arrival of plows and cotton socks in December and wool socks and mittens in March is somewhat inopportune in the region of the forty-eighth standard parallel.

The foregoing recommendations are respectfully submitted in accordance with the invitation contained in your circular letter of July 1.

Having had the selection of my employes I class them with regard to a fitness for their respective positions. They evince great interest in the work in hand, and my relations with them are most pleasant and satisfactory.

The results of the past year have been measurably satisfactory, and with the consciousness of having a sincere interest in the welfare of the Indians and being satisfied that they are more than ever awake to the necessity of improving the opportunities presented to them, I enter upon the labors of another year inspired with the belief and determination that it can and shall be made to mark a notable advance in the history of this people.

I have the honor to be, sir, very respectfully, your obedient servant,

JNO. S. MURPHY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

#### REPORT OF PHYSICIAN AT FORT BERTHOLD AGENCY.

SIR: I have the honor to hand you herewith my annual report for the fiscal year ending June 30, 1891.

I arrived at the agency October 28 and assumed my position November 1. I began my work by visiting the Indians at their homes, in order to see their sanitary condition, find out who were ill, and become acquainted in general.

I found the sanitary condition of the houses very poor. With a few exceptions all had dirt floors, which in wet weather are damp and foul, and hardly any ventilation; cooking and sleeping in one room, which is certainly not conducive to good health.

An epidemic of *la grippe* appeared during the winter months with disastrous results. Nearly all the employes and Indians on the reservation were attacked by the disease, and the mortality was very great among the Indians; the three tribes being separated so far from each other, one tribe living across the Missouri River, that although the agency physician traveled continually during the epidemic, it was impossible to visit all who were ill.

**Hospital.**—The various epidemics that visit the Indian tribes year after year, and the poor facilities that an agency physician has to combat disease, is a very strong argument in favor of an agency hospital being erected at this place. One is needed very badly. We have a large field for eye surgery, but for the want of a suitable place to perform the operations in not much can be done, as it would be dangerous to attempt any delicate operations in an Indian house.

Also, a great many cases that do not come under the notice of the physician until they have passed into the chronic stage, or death has set its seal already upon the patient, would be seen and treated in the first stages, as I am sure the Indians would avail themselves of the great benefits they would derive from a hospital; and I feel that I can speak intelligently on this matter, having spent four years among the Indians as physician. An agency physician must necessarily be physician, surgeon, dentist, druggist, chemist, and nurse, and in the scattered condition in which the Indians live, his work is unsatisfactory to himself and not justice to his patients; for, the moment that he is attending one case, he is called 15 or 20 miles to see another case, and so on. Consequently, a great deal of time is wasted which could be utilized if there were a hospital, and I earnestly call your attention to the importance of this matter.

There is no trouble with Indian medicine men, as I have only met with one, and his influence is on the wane, and the older ones have gradually died off.

The sweat house is a great drawback, nearly every house having one, and the practice of indulging in these enervating sweats have, and are, being discouraged as much as possible.

There are a great many cases of constitutional syphilis among the Arickaree tribe, but I am glad to report that I have not met with any primary cases.

Thanking you for the courtesy and help in the furtherance of my duties that you have always extended, I am, very respectfully,

THOS. H. CHATTLE,  
*Agency Physician.*

JNO. S. MURPHY,  
*United States Indian Agent.*

## REPORT OF STANDING ROCK AGENCY.

STANDING ROCK AGENCY, N. DAK.,  
*August 26, 1891.*

SIR: In accordance with the requirements of the Department, I have the honor to submit this, my tenth annual report as agent for the Indians of this agency.

**Location of Agency.**—Standing Rock Agency is situated in North Dakota, on the west bank of the Missouri River, in latitude 46° 11' north, and longitude 100° 34' west, 60 miles south of Mandan on the Northern Pacific Railroad, which is the nearest railroad point and where nearly all agency supplies are now delivered by transportation contractors and thence transported in wagons by Indians to agency. Bismarck, the capital city of the State, is 65 miles north of the agency up the east side of the Missouri River. Fort Yates, N. Dak., is the post-office address of the agency.

**Bands and Population.**—The Indians belonging to the Standing Rock Agency are the Yanktonai, Hunkpapa, and Blackfeet bands of the Dakota (Sioux) Nation, and those now on the reservation number 3,960 persons, of whom 282 are mixed bloods.

The following is a tabular list of the respective bands:

Name of band.	Families.	Males over 18 years.	Females over 14 years.	Males under 18 years.	Females under 14 years.	Total of all ages.	Males between 6 and 16.	Females between 6 and 16.
Yanktonai.....	500	469	647	354	311	1,781	207	153
Hunkpapa.....	448	433	589	307	248	1,577	147	116
Blackfeet.....	164	162	214	125	101	602	68	56
Total.....	1,112	1,064	1,450	786	660	3,960	422	325

There are also 39 men, 37 women, 20 boys, and 13 girls, a total of 109 persons of the Hunkpapa band who stampeded during the Messiah craze in the month of December last, and are now at Pine Ridge Agency, who are not included in the above list, which accounts for the decrease in population as given in my last year's report.

**Occupation.**—These Indians are engaged in farming and stock-raising, and whilst the soil of the reservation is excellent, the recurring droughts, hot winds, hail-storms, and early frosts prevalent throughout this section of country, makes farming so precarious and unprofitable that stock-raising (for which the locality is better adapted) is now being made the leading industry. The Indians are, however, required to do some farming, which keeps them more constantly occupied than is required in stock-raising, and constant employment of any people is more conducive to contentment than idleness. Having had abundant rains throughout North Dakota this season, farming has been reasonably profitable.

About 5,000 acres have been cultivated by Indians of this agency, and 110 acres by the pupils of the two boarding schools. The crops, which are not yet all harvested, are estimated as follows: Wheat, 5,225 bushels; oats, 21,000 bushels; corn, 15,150 bushels; potatoes, 10,600 bushels; onions, 650 bushels; beans, 660 bushels; turnips, rutabagas, beets, carrots, etc., 11,300 bushels; melons, pumpkins, and squash, 53,500 bushels, and the hay cut and stacked will approximate 5,000 tons.

There were about 5,000 cattle owned by Indians of this agency at the end of the fiscal year and since that time 500 cows with calves by their sides and 500 2-year-old heifers and 50 bulls were received from contractors which makes 6,550 head of cattle now on the reservation. The grass on the ranges is excellent this season and the cattle will go into the winter in good condition, and if the coming winter is not unusually severe the next year will show a marked increase of cattle, as the Indians are now manifesting an interest in stock raising that is very gratifying.

During the past year these Indians transported 1,023,200 pounds of supplies from Mandan to agency, a distance of 60 miles for which they received \$7,254.85. They sold 749,460 pounds gross of beef cattle to agency, receiving \$21,134.76 for same. They cut and delivered at the several schools of the reservation and for use of agency

931½ cords of wood for which they received \$3,850; sold oats and hay to the agency amounting to \$148.39; and hay, wood, and farm products to other parties to the value of \$6,750 approximately, being a total of \$39,138 thus received by Indians of this reservation for their industry the past year.

The Indian traders have paid the Indians during the year \$8,454.50 for beef hides.

**Education.**—There were two Government boarding and seven day schools and one mission boarding school conducted at this agency during the past year with an aggregate enrollment of 612 pupils and an average attendance of 371, which with 42 in schools off the reservation gives a total of 654 who have been enrolled in schools during the past year and an average attendance of 413 for the time the respective schools were in operation.

The agricultural boarding school located 16 miles south of the agency was in operation the entire twelve months of the year, except that during the months of July and August, class studies were discontinued whilst the industrial work and regular discipline of the school was maintained. The total number of pupils enrolled at this school from July 1, 1890, to June 30, 1891, was 123 (80 boys and 43 girls) with an average attendance of 81 (56 boys and 25 girls) for the twelve months, and the progress of the pupils has been very satisfactory. A farm of 105 acres is conducted in connection with this school where the boys are instructed in farming and the care of stock; the yield from this farm is estimated at 225 bushels of wheat; 150 bushels of corn; 750 bushels of oats; 400 bushels of potatoes; 75 bushels of turnips; 100 bushels of onions; 45 bushels of beans; 150 bushels of other vegetables, and about 4,000 melons, pumpkins, and squashes, and the hay secured will approximate 50 tons.

The industrial boarding school located at the agency has also been maintained throughout the entire twelve months of the fiscal year, the pupils being permitted to go to their homes during vacation but the majority returned to the school after remaining away a few days. Class studies were not kept up during vacation months but all other school duties and discipline were maintained. The enrollment at this school was 128 pupils with an average attendance of 94 for the twelve months, and the advancement of the pupils has been all that could reasonably be expected.

The Cannon Ball day school, located 25 miles north of the agency, was conducted ten months of the fiscal year with an enrollment of 83 pupils and average attendance of 45.

Grand River day school, 40 miles southwest of the agency, was conducted only seven months of the year, it being discontinued for three months owing to the troubles in that settlement growing out of the Messiah craze. The enrollment at this school was 70 pupils with an average attendance of 30, for the seven months maintained.

No. 1 day school, located 18 miles north of the agency, was conducted ten months with an enrollment of 44 pupils and average of 30.

No. 2 day school, located 3 miles north of the agency, was discontinued for two weeks during the Indian troubles of last December and was therefore in operation nine and a half months of the fiscal year, with an enrollment of 33 and an average attendance of 21 pupils.

No. 3 day school, located 15 miles west of the agency, was also discontinued for two weeks during the Indian troubles, and was in operation nine and one-half months with an enrollment of 25 pupils and average attendance of 14.

No. 4 day school located on Grand River, 50 miles southwest of the agency, was, for the same reasons as above stated, discontinued from December 15 to March 31, and was therefore in operation only six and one-half months. The enrollment was 35 pupils, with an average attendance of 15.

Marmot day school, located on Grand River 30 miles south of agency, was also discontinued from December 15 to February 1, and was in operation eight and one-half months of the fiscal year, with an enrollment of 36 pupils and average attendance of 13.

These day schools have all done good service and the small average attendance in proportion to the numbers enrolled is owing to the time lost by Indians living at distant points of the reservation in coming to the agency for their biweekly rations and bringing their children with them. But this excuse for irregularity in attending day schools will be, to a great extent, overcome by the two subsistence stations that are now being erected, one on Grand River 40 miles southwest of agency, and the other in the Cannon Ball settlement 25 miles north of agency, where the Indians of these settlements will, after October 1, be able to leave their homes in the morning, receive their rations and return the same day, which will enable the children of those distant settlements to attend school regularly in future.

St. Elizabeth's boarding school, located at Oak Creek 38 miles south of agency, under the auspices of the Protestant Episcopal Mission, conducted by Rt. Rev. Bishop Hare, was opened for pupils on September 1, 1890, and has been in operation throughout the school year with an enrollment of 35 pupils and average attendance of 28 for the ten months. The teachers, 5 in number, were maintained and paid by

the mission, and all expenses connected with the school were also borne by the mission, except that certain annuity clothing and the established school ration were issued from agency supplies for the pupils. I attended the closing exercises of this school on June 25 and was much pleased with the evidences of careful training and progress of the pupils.

I inclose herewith a list of the names of teachers, with length of service during the fiscal year with salaries paid to each in the several Government schools of this agency, which list forms part of this report.

In addition to the three boarding and seven day schools that have been in operation here the past year as above set forth, there have been two new day schools with industrial cottages for the teachers erected this summer, each school with a capacity for 30 pupils, which will be opened for scholars on September 1, making eleven Government and one mission school with an aggregate capacity for 580 pupils, that will be in operation on this reservation the ensuing school year.

**Missionary.**—The missionary field is occupied by the Roman Catholic, Episcopalian and Congregationalist denominations and the missionaries are all earnest workers for the christianization of the Indians. The Roman Catholic Mission reports the expenditure of \$8,900 for missionary purposes the past year, in the erection of one new church, a large addition to the church at the agency, addition to the Indian Christian Society's building, and support of missionaries.

The Episcopalian missionary is now absent attending the convocation of his church at Rosebud Agency and I am therefore unable to give definite figures, but approximate \$1,000 is expended by that denomination for missionary purposes and \$3,000 for educational purposes.

The Congregational missionary reports \$4,046 expended in his superintendency by the American Missionary Association for support of missions, including a hospital at their central station.

The Roman Catholics report 107 marriages the past year and 586 adult communicants. The Episcopalian missionary reports 15 marriages and the members of that denomination will approximate 80 adults. The Congregationalists report 12 marriages and 20 full members. This gives a total of 134 marriages solemnized by missionaries here during the past year. There are now but few Indians of this agency who do not affiliate with one of the three christian denominations engaged in missionary work among them.

**Sanitary.**—The sanitary condition of the Indians of this reservation is good, and no epidemic was prevalent during the past year; yet, as will be seen by the report of Dr. Brewster, agency physician, which is transmitted herewith, 1,716 individual Indians have received medical treatment, and 141 deaths occurred, chiefly from consumption and scrofula. During the same period 168 births were recorded.

**Indian police.**—The regular police force of this agency numbered 27 men for the past year, with an additional force of 20 Indian scouts from December 6, 1890, to the end of the fiscal year. I can not speak too highly in praise of these men who have rendered such valuable services to the Government throughout the troubles of last autumn and winter, when they proved themselves an efficient and well disciplined organization, loyal to the Government in maintaining order and obeying its mandates, and by their conduct and splendid bearing through that trying ordeal elicited the admiration and gained the esteem and confidence of all persons, citizens and soldiers, who were familiar with the condition of affairs. They are firm but kind in executing orders, are invaluable in administration of the affairs of the agency, and should in justice receive more substantial compensation in recognition of the services they render the Government.

**Court of Indian offenses.**—The court of Indian offenses has held triweekly sessions at the agency (each session usually of two days duration), and it has aided very much in bringing about a good state of discipline among the Indians of the reservation. One hundred and six cases came before the court for adjudication during the past year, the nature of the offenses being as follows: Bigamy, 6; adultery, 12; assaults on women, 2; larceny, 2; selling annuity goods that had been issued to them, 30; gambling, 12, and minor cases 42, the minor cases being disputes over claims, meadows, timber cutting, horse trading, etc., which the court adjudicated to the satisfaction of all concerned, and those found guilty of the greater offenses had such punishments imposed upon them as would tend to deter others from violating the code in similar respects.

The court of Indian offenses has a salutary effect in adjustment of disputes among the Indians and is gradually preparing them for the white man's laws, and should be continued until the code is eventually merged into and superseded by the statutes of the States in which the Indians reside. In the meantime the judges should receive better compensation as from a pecuniary standpoint a salary of \$10 per month does not bring much dignity to this judicial position.

**Ghost dance or the new Indian Messiah.**—So much has been said and written in the public press on this subject and the means taken to suppress the "craze"—a great

deal without foundation of fact—that it would perhaps be advisable in this report, which is intended for publication, to give a full history or explanation of the dance from its first inception, and the results of efforts of suppression, so far as this agency is concerned.

The following copies of correspondence will probably best serve this purpose:

On June 7, 1890, I was informed by the honorable Commissioner of Indian Affairs that a communication had been received from a citizen of Pierre, S. Dak., in which it was stated that private information had reached him that the Sioux Indians, or a portion of them, were secretly planning and arranging for an outbreak in the near future. I was directed by the Indian Office to report on the subject which I did as follows:

STANDING ROCK AGENCY, June 18, 1890.

HON. T. J. MORGAN,  
*Commissioner of Indian Affairs:*

SIR: I have the honor to acknowledge receipt of office letter dated the 7th instant.

In reply I desire to state that in so far as the Indians of this agency are concerned there is nothing in either their words or actions that would justify the rumor, and I do not believe that such an imprudent step is seriously meditated by any of the Sioux. I have been nineteen days of the past five weeks engaged in visiting the Indians of this agency at their respective homes, remaining over night in Indians houses in distant settlements wherever night overtook me, and I found a warm welcome everywhere and the best possible state of feeling prevailing among them. I possess sufficient knowledge of the Indian language to understand and converse fairly well in the vernacular of the tribe and no sign, word, or act was noticed during my recent tour among these Indians that would lead me to suspect any discontentment among them. There are, however, a few malcontents here as at all of the Sioux agencies who cling tenaciously to the old Indian ways and are slow to accept the better order of things, whose influence is exerted in the wrong direction, and this class of Indians are ever ready to circulate idle rumors and sow dissensions to discourage the more progressive; but only a very few of the Sioux could now possibly be united in attempting any overt act against the Government, and the removal from among them of a few individuals (the leaders of disaffection) such as Sitting Bull, Circling Bear, Black Bird, and Circling Hawk, of this agency; Spotted Elk (Big Foot) and his lieutenants of Cheyenne River; Crow Dog and Low Dog, of Rosebud, and any of like ilk of Pine Ridge, would end all trouble and uneasiness in the future.

By far the larger number of the Sioux are well disposed and there are at this agency some very reliable and trustworthy Indians whose sincerity and truthfulness is of a high order, and in my investigating what grounds, if any, there were for the rumor of a contemplated outbreak, I talked with several confidentially in regard to the matter and each replied that any fears of an uprising were entirely groundless and assured me that if such was being meditated by even a few it could not be kept a secret from them. There are also, on our police force, some excellent men upon whom I can implicitly rely, and I have instructed them to be doubly vigilant and report to me everything learned at home, or from other agencies, and should anything of importance come to my knowledge I will advise you promptly.

I have, however, every confidence in the good intentions of the Sioux as a people. They will not be the aggressors in any overt act against white settlers, and if justice is only done them no uneasiness need be entertained.

I am sir, etc.,

JAMES McLAUGHLIN,  
*United States Indian Agent.*

On October 17, 1890, I wrote the following letter:

STANDING ROCK AGENCY, October 17, 1890.

HON. T. J. MORGAN,  
*Commissioner of Indian Affairs:*

SIR: Referring to the subject of office letter "L" dated June 7 last, and my reply of the 18th of same month relative to rumors of a prospective outbreak among the Sioux, I have the honor to state that there is now considerable excitement and some disaffection existing among certain Indians of this agency.

I trust that I may not be considered an alarmist and believe that my past record among the Sioux will remove any doubt in this respect, and I do not wish to be understood as considering the present state of excitement so alarming as to apprehend any immediate uprising or serious outcome, but I do feel it my duty to report the present "craze" and nature of the excitement existing among the Sitting Bull faction of Indians over the expected Indian millennium, the annihilation of the white men and supremacy of the Indian, which is looked for in the near future and promised by the Indian medicine men as not later than next spring, when the new grass begins to appear, and is known among the Sioux as the return of the ghosts.

They are promised by some members of the Sioux tribe, who have lately developed into medicine men, that the Great Spirit has promised them that their punishment by the dominant race has been sufficient and that their numbers having now become so decimated, will be reinforced by all Indians who are dead; that the dead are all returning to inhabit this earth which belongs to the Indians; that they are driving back with them as they return immense herds of buffalo and elegant wild horses to have for the catching; that the Great Spirit promises them that the white man will be unable to make gunpowder in future, and all attempts at such will be a failure, and that the gunpowder now on hand will be useless as against Indians, as it will not throw a bullet with sufficient force to pass through the skin of an Indian; that the Great Spirit had deserted the Indians for a long period, but is now with them and against the whites, and will cover the earth over with 30 feet of additional soil, well sodded and timbered, under which the whites will all be smothered, and any whites who may escape this great phenomena will become small fishes in the rivers of the country; but in order to bring about this happy result the Indians must do their part and become believers and thoroughly organize.

It would seem impossible that any person, no matter how ignorant, could be brought to believe such absurd nonsense, but as a matter of fact a great many of the Indians of this agency actually believe it, and since this new doctrine has been engrafted here from the more southern Sioux agencies, the infec-

tion has been wonderful and so pernicious that it now includes some of the Indians who were formerly numbered with the progressive and more intelligent, and many of our very best Indians appear dazed and undecided when talking of it, their inherent superstition having been thoroughly aroused.

Sitting Bull is high priest and leading apostle of this latest Indian absurdity; in a word he is the chief mischief-maker at this agency, and if he were not here this craze, so general among the Sioux, would never have gotten a foothold at this agency. Sitting Bull is a man of low cunning, devoid of a single manly principle in his nature or an honorable trait of character, but on the contrary is capable of instigating and inciting others (those who believe in his powers) to do any amount of mischief. He is a coward and lacks moral courage; he will never lead where there is danger, but is an adept in influencing his ignorant henchmen and followers, and there is no knowing what he may direct them to attempt. He (Sitting Bull) is bitterly opposed to having any surveys made on the reservation, and is continually agitating and fostering opposition to such surveys among his followers, who are the more worthless, ignorant, obstinate and nonprogressive of the Sioux. He has announced that those who signed the agreement ratifying the act of March 2, 1889, opening the Sioux reservation, will be compelled to accept a small corner to be set apart and subdivided into small tracts for them to settle upon, where they will be obliged to remain and support themselves, but those who have refused to ratify the act, or who have ratified will now oppose surveys and refuse to accept allotments, will have all the unoccupied portion of the reservation to hold in common and continue to enjoy their old Indian ways and former freedom, and therefore will have to be rationed by the Government for all time to come, and it is not to be greatly wondered at that, among an uneducated and ignorant people, he finds supporters and admirers. He is an Indian unworthy of notice, except as a disaffected intriguer who grasps every opportunity to maintain his power and popularity. He is opposed to everything of an elevating nature and is the most vain, pompous, and untruthful Indian that I ever knew. His word is not believed by the more intelligent Indians of this agency, but he has unfortunately a tribal reputation gained by the generalship of others, and is therefore the idol of the disaffected and worthless element of the Sioux. He has been growing bolder and more aggressive throughout the past year, and it is undoubtedly only a question of time (a few months at the most) until it will be necessary to remove him from among his people, and I believe that if we can ever side over the present craze without removing him from the reservation it will be necessary to deal with him in a summary manner as soon as the survey of this reservation commences. He is such an abject coward that he will not commit any overt act or open offense himself, but does the intriguing and directs the mischief to be done by his less cunning followers.

In this connection I would respectfully invite attention to my letter of June 18 last, wherein I referred to the character of Sitting Bull and certain others of his supporters and suggested that, should their future conduct justify it, they be removed from among the Sioux, giving the names of Sitting Bull, Circling Bear, Black Bird, and Circling Hawk, of this agency, as fit subjects for such discipline, and I am forced to the belief that to insure peace and promote the welfare of the Sioux people such removal will sooner or later be found necessary.

Sitting Bull is a polygamist, libertine, habitual liar, active obstructionist, and a great obstacle in the civilization of these people, and he is so totally devoid of any of the nobler traits of character, and so wedded to the old Indian ways and superstitions that it is very doubtful if any change for the better will ever come over him at his present age of fifty-six years. He has been a disturbing element here since his return from confinement as a military prisoner in the spring of 1883, but has been growing gradually worse the past year, which is partly to be accounted for by the presence of a lady from Brooklyn, N. Y., who came here in June, 1889, announcing herself as a member of Dr. Bland's society, the Indian Defense Association, and opposed to the Indians ratifying the act of March 2, 1889, demanding of me permission to pass through the Sioux Reservation to Cheyenne River Agency, and to take Sitting Bull with her. The Sioux Commission being then engaged negotiating with the Indians of the southern Sioux agencies, I, as a matter of course, refused to permit her either to pass through the reservation or allow Sitting Bull to accompany her, and compelled her to cross the Missouri River at this point and travel over the public roads outside of the Indian reservation, in consequence of which she was very hostile toward me and wrote several letters to different parties in condemnation of my course and action. While here she bestowed numerous presents upon Sitting Bull, considerably being money, which had a demoralizing effect upon him, inflating him with his importance. After her departure she kept up a correspondence with Sitting Bull until early last spring, when she again returned and located on the north bank of Cannon Ball River, just outside of this reservation and about 25 miles north of the agency. Sitting Bull has been a frequent visitor at her house, and he has grown more insolent and worthless with every visit he has made there. Her lavish expenditure of money and other gifts upon him, enabling him to give frequent feasts and hold councils, thus perpetuating the old-time customs amongst the Indians and engraving, with their superstitious nature, this additional absurdity of the New Messiah and return of the ghosts, and in this coming, Sitting Bull, whose former influence and power being so undermined and tenure so uncertain, asserts himself as high priest here, and like a drowning man grasping at a straw, is working upon the credulity of the superstitious and ignorant Indians and reaping a rich harvest of popularity.

On Thursday, the 9th instant, upon an invitation from Sitting Bull, an Indian named Kicking Bear belonging to the Cheyenne River Agency, the chief medicine man of the ghost dance among the Sioux, arrived at Sitting Bull's camp on the Grand River, 40 miles south of this agency, to inaugurate a ghost dance and initiate the members. Upon learning of his arrival there I sent a detachment of 13 policemen, including the captain and second lieutenant, to arrest and escort him from the reservation, but they returned without executing the order, both officers being in a dazed condition and fearing the powers of Kicking Bear's medicine. Several members of the force tried to induce the officers to permit them to make the arrest, but the latter would not allow it, but simply told Sitting Bull that it was the agent's orders that Kicking Bear and his six companions should leave the reservation and return to their agency. Sitting Bull was very insolent to the officers and made some threats against certain members of the force, but said that the visitors would leave the following day. Upon the return of the detachment to the agency on Tuesday, the 14th, I immediately sent the lieutenant and one man back to see whether the party had left or not, and to notify Sitting Bull that his insolence and bad behavior would not be tolerated longer, and that the ghost dance must not be continued. The lieutenant returned yesterday and reported that the party had not started back to Cheyenne before his arrival there on the morning of the 15th, but left immediately upon his ordering them to do so, and that Sitting Bull told him that he was determined to continue the ghost dance, as the Great Spirit had sent a direct message by Kicking Bear that to live they must do so, but that he would not have any more dancing until after he had come to the agency and talked the matter over with me; but the news comes in this morning that they are dancing again and it is participated in by a great many Indians who become silly and like men intoxicated over the excitement. The dance is demoralizing, indecent, and disgusting.

Desiring to exhaust all reasonable means before resorting to extremes, I have sent a message to Sitting Bull by his nephew, One Bull, that I want to see him at the agency, and I feel quite confident that I shall succeed in allaying the present excitement and put a stop to this absurd craze for the present

at least; but I would respectfully recommend the removal from the reservation and confinement in some military prison, some distance from the Sioux country, of Sitting Bull and the parties named in my letter of June 18, last, hereinbefore referred to, some time during the coming winter and before next spring opens. With these individuals removed, the advancement of the Sioux will be more rapid and the interests of the Government greatly subserved thereby.

I am, sir, etc.,

JAMES McLAUGHLIN,  
*United States Indian Agent.*

To this letter I received the following reply:

OFFICE OF INDIAN AFFAIRS, October 29, 1890.

JAMES McLAUGHLIN,  
*United States Indian Agent:*

SIR: Your report of October 17, concerning the present attitude of some of the Sioux Indians on the Standing Rock Reservation has been submitted to the honorable Secretary of the Interior, who directs me to instruct you to inform Sitting Bull and the other Indians named by you as engaged in encouraging the ghost dance and other like demoralizing conduct, and inciting and fomenting dissatisfaction and discontent among the peaceably disposed Indians, that he is greatly displeased with their conduct, and that he will hold Sitting Bull to a strict personal responsibility for the misconduct, acts of violence, or any threats, actions, or movements to which any of the Sioux Indians may be guided, influenced, or encouraged by him or as the result of his bad advice and evil councils; that any misconduct by him personally or by others through his incitement or encouragement will be visited by severe punishment. And further, that he must show his good intentions and his submission to the authority of the Department and its agent by prompt obedience to and compliance with all regulations of the Indian service, and by doing all in his power to restrain any of the Sioux Indians who may be disposed to acts of disobedience or violence, threats, etc., and that he should exert whatever influence he may have over any of the Indians to turn their backs upon the medicine men who are seeking to divert the Indians from the ways of civilization.

Very respectfully,

R. V. BELT,  
*Acting Commissioner.*

After receipt of this letter I kept well posted on the occurrences taking place on the reservation and especially in Sitting Bull's camp, and about the middle of November I visited the latter, as detailed in the following communication of November 19, at which visit the letter of October 29 from the Indian Office was fully explained to Sitting Bull.

About this time I received the following telegram:

WASHINGTON, November 14, 1890.

To McLAUGHLIN,  
*Agent, Standing Rock Agency:*

The President has directed the Secretary of War to assume a military responsibility for the suppression of any threatened outbreak among the Sioux Indians, and that an officer of high rank be sent to investigate the situation among them. He suggests that the agents separate the well-disposed from the ill-disposed Indians, and while maintaining their control and discipline, so far as possible to avoid forcing any issue that will result in an outbreak. You will exercise wise discretion in carrying out the President's suggestion, carefully observing the caution he directs and avoiding publicity of these instructions.

R. V. BELT,  
*Acting Commissioner*

The following is the letter of November 19 referred to above:

STANDING ROCK AGENCY, November 19, 1890.

Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs:*

SIR: Having just returned from Grand River district and referring to my former communication regarding the ghost dance craze among the Indians I have the honor to report that on Saturday evening last I learned that such a dance was in progress in Sitting Bull's camp and that a large number of Indians of the Grand River settlements were participants. Sitting Bull's camp is on Grand River, 40 miles southwest from agency, in a section of country outside of the line of travel, only visited by those connected with the Indian service, and is therefore a secluded place for these seances. I concluded to take them by surprise and on Sunday morning left for that settlement accompanied by Louis Primeau, arriving there about 3 p. m., and having left the road usually traveled by me in visiting the settlement got upon them unexpectedly and found a ghost dance at its height. There were about 45 men, 25 women, 25 boys, and 10 girls participating (a majority of the latter, boys and girls, were, until a few weeks ago, pupils at the day schools of the Grand River settlements), and approximately 200 persons, lookers-on, who had come to witness the ceremony either from curiosity or sympathy, most of whom having their families with them and encamped in the neighborhood. I did not attempt to stop the dance then going on, as in their crazed condition under the excitement it would have been useless to attempt it, but after remaining some time talking with a number of the spectators I went on to the house of Henry Bullhead, 3 miles distant, where I remained over night and returned to Sitting Bull's house early next morning where I had a long talk with Sitting Bull and a number of his followers.

I spoke very plainly to them, pointing out what had been done by the Government for the Sioux people, and how this faction by their present conduct were abusing the confidence that had been reposed in them by the Government in its magnanimity in granting them full amnesty for all past offenses, when from destitution and imminent starvation they were compelled to surrender as prisoners of war in 1880 and 1881; and I dwelt at length on what was being done in the way of education of their children and for their own industrial advancement and assured them of what this absurd craze would lead to and the chastisement that would certainly follow if these demoralizing dances and disregard of Department orders were not soon discontinued. I spoke with feeling and earnestness and my talk was well received and I am convinced that it had a good effect.

Sitting Bull, while being very obstinate and at first inclined to assume the role of big chief before his followers, finally admitted the truths of my reasoning and said he believed me to be a friend to the

Indians as a people but that I did not like him personally, and that when in doubt in any matter in following my advice he had always found it well, and that now he had a proposition to make, which if I agreed to and would carry out, it would allay all further excitement among the Sioux over this ghost craze or else convince me of the truth of the belief of the Indians in this new doctrine. He then stated his proposition, which was that I should accompany him on a journey to trace from this agency to each of the other tribes of Indians through whom the story of the Indian messiah had been brought and when we reached the last tribe, or where it originated, if they could not produce the man who started the story and we did not find the new messiah, as described, upon the earth, together with the dead Indians returning to reinhabit this country, he would return convinced that they (the Indians) had been too credulous and imposed upon, which report from him would satisfy the Sioux, and all practices of the ghost societies would cease; but if found to be as professed by the Indians, they be permitted to continue their medicine practices and organize as they are now endeavoring to do. I told him that his proposition was a novel one, but that the attempt to carry it into effect would be similar to the attempt to catch up the wind that blew last year, but that I wished him to come to my house where I would give him a whole night, in which time I thought I could convince him of the absurdity of this foolish craze; and the fact of his making me the proposition he did was a convincing proof that he did not fully believe in what he was professing and endeavoring so hard to make others believe. He did not, however, promise fully to come into the agency to discuss the matter, but said he would consider my talk and decide after deliberation.

I consumed three days in making this trip and feel well repaid by what I accomplished, as my presence in their midst encouraged the weaker and doubting, and set those who are believers to thinking of the advisability of discontinuing the nonsensical practices they are now engaged in. I also found that the active members in the dance were not more than half the number of the earlier dancers and believe that it is losing ground among these Indians; and while there are many who are half-believers, I am fully satisfied that I can keep the dance confined to the Grand River district.

Desiring to use every reasonable means to bring Sitting Bull and his followers to abandon this dance and to look upon its practice as detrimental to their individual interests and the welfare of their children, I made the trip herein reported to ascertain the extent of the disaffection and the best way of effecting its discontinuance.

From close observation I am convinced that the dance can be broken up, and after due reflection would respectfully suggest that in case my visit to Sitting Bull fails to bring him in to see me in regard to the matter, as invited to do, all Indians living on Grand River be notified that those wishing to be known as opposed to the ghost doctrine, friendly to the Government, and desiring the support provided in the treaty, must report at the agency for such enrollment and be required to encamp near the agency for a few weeks, and those electing to continue their medicine practices in violation of Department orders to remain on Grand River, from whom subsistence issues will be withheld. Something looking towards breaking up this craze should be done, and now, that cold weather is approaching, is the proper time. Such a step as here suggested would leave Sitting Bull with but few followers, as all, or nearly all, would soon report for enrollment and thus he would be forced in himself.

There are not many firearms among these Indians, still there are a few, and as a pledge of good faith on their part they should be required to turn in all their arms to the agent and get a memorandum receipt for the same.

Knowing these Indians as I do, I am confident that I can by such a course settle the Messiah craze at this agency, and, also, thus break up the power of Sitting Bull without trouble and very little excitement; this will be sustained by public sentiment and conform to the discipline approved by the better-disposed Indians.

It is true that it would unsettle the Indians of that district in their home life for a few weeks, but after which all worry and uneasiness would cease, whilst with the ghost practices continued, all the participants being Indians regularly rationed by the Government without any appearance of withdrawal of this support, anxiety among the well disposed, and the greater temptation for many others to join is increased.

A reply as to the suggestion herein contained is respectfully requested.

I am, sir, etc.,

JAMES McLAUGHLIN,  
*United States Indian Agent.*

The following telegrams were received and sent by me:

WASHINGTON, November 20, 1890.

To McLAUGHLIN, Agent:

If condition of affairs now and for future requires that leaders of excitement or fomentors of disturbances should be arrested and confined to insure quiet and good order among Indians telegraph me names at once so that assistance of military while operating to suppress any attempted outbreak may be had to make arrests.

R. V. BELT,  
*Acting Commissioner.*

STANDING ROCK AGENCY, November 21, 1890.

To COMMISSIONER OF INDIAN AFFAIRS:

Replying to office telegram of yesterday, Sitting Bull, Circling Bear, Black Bird, Circling Hawk, Iron White Man, and Male Bear, being leaders of excitement and fomentors of disaffection, should be removed before next spring, but everything being quiet here at present with no snow and the weather summer-like, do not think it prudent to make arrests now. My letter of 19th suggests plan of settling matters and suppressing craze at this agency.

McLAUGHLIN, Agent.

STANDING ROCK AGENCY, November 25, 1890.

To COMMISSIONER INDIAN AFFAIRS:

William F. Cody (Buffalo Bill) has arrived here with commission from General Miles to arrest Sitting Bull. Such a step at present would be unnecessary and unwise, as it will precipitate a fight which can be averted. A few Indians still dancing, but does not mean mischief at present. I have matters well in hand, and when proper time arrives can arrest Sitting Bull by Indian police without bloodshed.

I ask attention to my letter of November 19. Request General Miles' order to Cody be rescinded, and request immediate answer.

McLAUGHLIN, Agent.

WASHINGTON, November 23, 1890.

To McLAUGHLIN, Agent:

Have handed your telegram concerning Cody's commission to Secretary, who will see President and Secretary of War immediately on subject. Copy of your letter referred to was submitted to Secretary immediately on its receipt.

R. V. BELT,  
Acting Commissioner.

I also give letter written me by the Indian Office on November 22 and my reply thereto.

WASHINGTON, November 23, 1890.

JAMES McLAUGHLIN, *United States Indian Agent:*

SIR: The prevailing excitement among the Sioux Indians connected with the ghost dance renders it highly important that this office be kept advised as to the condition of affairs at each agency, with a view to the adoption of all proper precautionary measures to prevent an outbreak of the Indians.

You are therefore instructed to keep this office fully posted by letter, or telegraph if the emergencies require it, of the condition and temper of the Indians under your charge, showing whether the excitement and spirit of disobedience to orders and regulations of this bureau are growing, whether serious results are likely to ensue therefrom, and what is your opinion on the best steps to take to avert trouble, etc.

Very respectfully,

R. V. BELT,  
Acting Commissioner.

STANDING ROCK AGENCY, November 29, 1890.

Hon. T. J. MORGAN, *Commissioner of Indian Affairs:*

SIR: I have the honor to acknowledge receipt of office letter "L" dated the 22d instant, directing me to keep the office fully posted of the condition and temper of the Indians under my charge as to the prevailing excitement connected with the "ghost dance." In reply I respectfully invite attention to my correspondence with the Department on the subject, from which the following quotations are made:

My letter of October 17 states: "I do not wish it to be understood as considering the present state of excitement so alarming as to apprehend any immediate uprising or serious outbreak. \* \* \* It is undoubtedly a question of time only (a few months at the most) when it will be necessary to remove him (Sitting Bull) from among his people, and I believe that if we can tide over the present craze without removing him from the reservation it will be necessary to deal with him in a summary manner as soon as the survey of this reservation commences," and in the conclusion of that communication I recommend "the removal from the reservation and confinement in some military prison some distance from the Sioux country of Sitting Bull and the parties named in my letter of June 18 last thereinbefore referred to, sometime during the coming winter and before next spring opens."

The monthly report of this agency dated November 15 informs the Department that the greater number of these Indians are loyal to the Government and the disaffected well in hand, and further that the excitement was subsiding at this agency, and that Sitting Bull could be arrested at any time by the Indian police when they were so ordered. This arrest I stated was not deemed advisable or necessary at the present time, but that it should be carried into effect before spring opened.

Later I visited the camp of Sitting Bull and witnessed the dance, which I reported to the office in letter of the 19th inst.; such report contains an account of my interview with Sitting Bull and its results. My views with regard to the dance are fully set forth in the report as well as my conclusions that the craze was losing ground and would eventually die out. I also suggested a plan which it was proposed to adopt for securing this end.

In telegram of the 21st inst. (November), in reply to one from the Department, I gave certain names of leaders in this excitement as the proper parties to be arrested before next spring, but that on account of the extremely fine weather I did not consider it prudent to make arrests now.

I again telegraphed the Department yesterday, protesting against the action of Gen. Miles in ordering the arrest of Sitting Bull, who I believe is the only party mentioned in his (Gen. Miles) commission to Mr. Cody (Buffalo Bill), and stating that such a step at present was unnecessary and unwise.

I have quoted in these communications to show that my action in the premises from the first has been consistent, and also to show to what extent the orders and regulations of the bureau are disobeyed by certain Indians of this reservation, and also that the fact of my never asking for military assistance in making arrests and my protests against military interference shall go on record.

I deplore the widespread reports appearing in the newspapers, which are greatly and criminally exaggerated, and in a majority of instances without any truth whatever in so far as this agency is concerned. For they have caused an unnecessary alarm among settlers in the vicinity, who have fled from their homes panic-stricken to places of supposed safety on false rumors that the Indians had broken out, the reports besides having the tendency to excite the Indians to hostility and disobedience of orders rather than to allay the excitement among them, and I feel quite confident that the interference of the military at this time will result in resistance and probably precipitate a fight and consequent bloodshed, for the weather is suitable to Indian hostilities, while cold weather is not.

I have not, as questioned by the newspapers, lost control of my Indians, and if the military do not interfere I yet feel confident to handle them, and am confident of success in quelling the excitement at this agency in case the Department authorizes me to adopt the plan I suggested in my letter of the 19th inst.; the adoption of this plan at the present time, and the arrest by Indian police of Sitting Bull and others named, when the proper time arrives, will accomplish the end sought for, viz:

The disappearance of the ghost dance, peace and safety in the vicinity of the reservation, and a recognition by Indians of the determination of the Government to punish evil doers and leaders of disaffection, encourage industrial pursuits and stimulate civilization.

While recognizing the importance of suppressing this craze and the punishment of all the leaders, which is necessary to protect and encourage the well-disposed Indians, I know, at the same time, that there are many now believing in the "ghost dance" who are ignorant and therefore dupes of the more cunning leaders; and while the conduct of some might seem to warrant the harsher measures, still the milder course will be as salutary and in a short time bring many of the deluded to see the absurdity of the false doctrine, and thus brought to appreciate the magnanimity of the Government in tolerating for so long a time that which has had such a demoralizing effect for a time, which tolerance was only to save bloodshed and loss of life of those ignorant fanatics who in their unenlightened state and with their inherent superstition fell easy victims of the more wily medicine men of the tribes.

I am, etc.,

JAMES McLAUGHLIN,  
*United States Indian Agent.*

Col. Cody (Buffalo Bill) with 8 civilian companions left the agency at 11 a. m. on November 29 for Sitting Bull's camp, which was 40 miles distant, and four hours after his departure a dispatch was received by the post commander of Fort Yates from Army headquarters directing the suspension of the arrest of Sitting Bull and other Indians, and couriers were at once sent after the party to notify them of the fact. Cody and party returned to the post the following morning and immediately left for the East, and the following telegram was received by me the following day:

WASHINGTON, December 1, 1890.

To JAMES McLAUGHLIN, Agent:

By direction of the Secretary during the present Indian troubles you are instructed that while you shall continue all the business and carry into effect the educational and other purposes of your agency you will as to all operations intended to suppress any outbreak by force cooperate with and obey the orders of the military officers commanding on the reservation in your charge.

R. V. BELT,  
Acting Commissioner.

From the active movements of the military I foresaw that the arrest of Sitting Bull was liable to be ordered at any moment and such order might come at an inopportune time, so to avoid trouble I contemplated making the arrest on Saturday night, December 6, when everything was most favorable for it, and on December 5 sent the following dispatch. Other dispatches on the subject are also given:

STANDING ROCK AGENCY, December 5, 1890.

To COMMISSIONER INDIAN AFFAIRS:

Everything quiet at present; weather cold and snowing. Am I authorized to arrest Sitting Bull and other fomentors of mischief when I think best?

McLAUGHLIN, Agent.

WASHINGTON, December 5, 1890.

To McLAUGHLIN, Agent:

Replying to your telegram of this date Secretary directs that you make no arrests whatever except under orders of the military or upon an order from the Secretary of the Interior.

R. V. BELT,  
Acting Commissioner.

ST. PAUL, MINN., December 6, 1890.

U. S. Indian Agent JAMES McLAUGHLIN:

Referring to telegram sent Colonel Drum, which he will show you, is there any change of condition recently which makes present action specially necessary? As you know I am disposed to support you. Some prior movements I would like to see completed.

RUGER,  
Brigadier-General, Commanding.

STANDING ROCK AGENCY, December 6, 1890.

To Gen. RUGER,

St. Paul, Minn.:

No change in condition except for the better. Sitting Bull can be kept on reserve by Indian police without fear of escape before arrest is required, which can be made by Indian police, but in my judgment there is no necessity for immediate arrest. Postponement preferable, as every day of cold weather cools the ardor of the dancers. This is beef-ration day and everything is quiet.

McLAUGHLIN,  
Agent.

HEADQUARTERS DEPARTMENT OF DAKOTA,  
St. Paul, Minn., December 12, 1890.

To COMMANDING OFFICER,

Fort Yates, N. Dak.:

The division commander has directed that you make it your especial duty to secure the person of Sitting Bull. Call on Indian agent to cooperate and render such assistance as will best promote the purpose in view. Acknowledge receipt and, if not perfectly clear, repeat back.

By command of Gen. Ruger.

M. BARRE, *Assistant Adjutant-General.*

(Copy furnished by commanding officer, Fort Yates.)

The following report of the occurrences following the date of Gen. Ruger's dispatch, made by me to the Indian Office December 24, 1890, will show what action was taken upon the receipt of that telegram, and its results.

"Seeing in the public press of the country so many absurd reports and ridiculous accounts regarding the arrest and death of 'Sitting Bull,' I feel called upon in justice to the Indians of this agency, 90 per cent of whom are loyal and well disposed, and in justice to the police force in particular, to give the following statement of facts which I desire given to the Associated Press or some of the leading journals of the country. By way of preface I desire to say that 'Sitting Bull,' who was constitutionally a bad man without a redeeming quality, has been growing worse during the past year, so that his aggressiveness had assumed proportions of open rebellion against constituted authority, notwithstanding that every honorable means to change him from his imprudent course had been resorted to.

On or about the 15th of October last, while Kicking Bear, who came from Cheyenne River Reservation upon an invitation from Sitting Bull to organize a ghost dance at his camp, he (Sitting Bull) broke his pipe of peace, which he had kept in his house since his surrender as a prisoner of war in July, 1881. When asked why he had broken that pipe, he replied that he wanted to die and wanted to fight.

For some reason best known to himself, Sitting Bull had absented himself from the agency on the biweekly ration days (he had usually been present) since October 25 last, and I made a special trip to his home, 40 miles from the agency, and remained in the settlement over night, to make a last effort in trying to bring him to see the evil of his course, and was somewhat encouraged by the promises then made by him; but he failed to come to the agency, as he had partly agreed to do.

I would have arrested him at his home on Saturday, the 6th instant, as the police officers had arrangements perfected and everything appeared favorable for it at that time, but an office telegram was received the previous evening which forbade the arrest until further orders.

On Friday afternoon the 12th instant an order to secure the person of Sitting Bull was received, but as I desired the arrest to be made without bloodshed, and knew the temper of his followers in their blind religious craze, the wisdom of attempting it at that time was contrary to my judgment, and in consultation with Col. Drum, post commander of Fort Yates, it was concluded to defer the matter until Saturday, the 20th, on which date the major portion of his supporters would be at the agency for the biweekly issue of rations. In the mean time I had him kept under close surveillance by Indian police specially detailed for that purpose.

It was a well known fact here that Sitting Bull was contemplating leaving the reservation to visit the southern Sioux agencies to consult with other leaders of disaffection, and his every movement was therefore closely watched by loyal Indians and trusty police, and as the War Department had assumed a military responsibility for the suppression of any threatened outbreak among the Sioux Indians, I regularly reported to the post commander of Fort Yates everything of a suspicious nature pertaining to the Indians, under my instructions to cooperate with the military.

I will here digress to say of Col. Drum, the post commander of Fort Yates, that there can be no person better fitted and more competent for this present important command; he is an officer of keen perception, excellent judgment, just in discernment, and level-headed.

Col. Drum, as commander of the military post, and the writer, as the agent for the Indians here, understood the responsibility devolving upon them and cooperated to prevent Sitting Bull's escape from the reservation and took every precaution to guard against it.

For some weeks prior to the arrest I had been gradually increasing the police force in the Grand River settlements, getting them within supporting distance of those residing in Sitting Bull's camp, which is 40 miles southwest of agency, so that when the order for arrest was received there were 21 policemen on duty in that neighborhood.

The police officers and others of the progressive Indians had been urging me for several weeks to permit them to arrest Sitting Bull and other leaders of disaffection who were engaged in fomenting mischief and participating in the ghost dances, they, the ghost dancers, having become so aggressive that the peaceably disposed Indians could not remain in that district or pass through the settlement without being subjected to insults from Sitting Bull or his followers.

Henry Bullhead, first lieutenant of Indian police of this agency, lived on Grand River, about 3 miles west of Sitting Bull's house, and was given full charge of the detachment which was keeping the latter under surveillance.

Lieut. Bullhead was an excellent man and very progressive, and even when not a policeman was a strong advocate of law and order, and also obedience to all regulations issued by the Department for their government, and as an officer of police could not brook with patience the indifference with which the magnanimity of the Government was regarded by Sitting Bull and his followers. The lieutenant was a cool, brave man, possessing good judgment and a kind heart, but very determined in carrying out anything he might undertake, and in feeling the responsibility intrusted to his care of preventing Sitting Bull escaping from the reservation he was exceedingly watchful and anxious. Bullhead selected as his chief assistant Shave Head, first sergeant of the force, who was as brave as a lion and had the respect of every Indian of the agency—of the progressive and well-disposed through love, and of the evil-doers through fear.

When the final order for Sitting Bull's arrest was received on the afternoon of the 12th instant I sent a courier for Shave Head and communicated it to him and directed that he take such of the other policemen as he deemed proper and report to Bullhead at Grand River as early as practicable, but not to attempt to make the arrest until further ordered, unless it was discovered that Sitting Bull was preparing to leave the reservation, which must be prevented if possible.

The policemen on duty in the Grand River settlements were engaged in procuring logs and forwarding them by teams to a point where the road crosses Oak Creek, about half way between the agency and the principal settlements on Grand River, where a shelter station (house and stable) was being erected for accommodation of persons passing over the road during the winter months, and on Saturday, the 13th, Sergt. John Eagleman left the agency with a detachment of 8 police for the Oak Creek Station to commence erecting the buildings referred to, also to be within supporting distance of the force operating on Grand River if necessary. It was then the intention of the police not to make the arrest until Saturday morning, the 20th instant, as above stated, which was believed to be the most practical way to obviate excitement and trouble, as at that date most of the Indians would be in at the agency for rations; but on Sunday, the 14th instant, at 4 p. m., Special Policeman Hawkman No. 1 arrived at the agency from Grand River with a letter to me from Lieut. Bullhead, written by Mr. John M. Carignan, teacher of the Grand River school, dated at Grand River, December 14, 12:30 a. m., containing the information that Sitting Bull was preparing to leave the reservation, and that they (the police) wanted to arrest him without further delay, giving as their reason that he (Sitting Bull) had been fitting his horses for a long and hard ride and that, being well mounted, if he once got the start of them they would be unable to overtake him.

I had just finished reading the letter referred to, and commenced questioning the courier as to the disposition Lieut. Bullhead had made of the additional force of police sent him, when Col. Drum, the post commander, came into my office and I showed him the letter. Col. Drum remarked that, under his orders received the previous Friday, the arrest must be made without further delay, and upon further consultation we concluded that it should be made the following morning, and for the salutary effect that it would have upon the Indians I desired to have the arrest made by the agency police, with the troops to make a night march to Oak Creek, so as to be within supporting distance of the police, if needed, and to aid in bringing Sitting Bull safely to the agency if pursued by his followers; also to let the Indians understand that the troops were ready to cooperate with the Indian police and assist in putting down any lawlessness among them when necessary; but above everything else I desired to have the arrest made without bloodshed, which I believed the police would be able to effect.

Before Col. Drum left my office I wrote two letters, one in English and a translation of it into the Sioux language, both of which I sent to Lieut. Bullhead by Second Sergt. Red Tomahawk, a very cool and reliable policeman, with orders to make the arrest. I made known to Sergt. Red Tomahawk the plan of arrest, and also gave him verbal orders to take Sergt. Eagleman and his detachment from Oak Creek along with him and report to Bullhead with all possible dispatch. I had previously impressed upon the lieutenant and first sergeant the importance of having a light wagon with them when they went to make the arrest, so that they could put Sitting Bull into it as soon as they had made him prisoner, and to drive out of the village as rapidly as possible before his followers (crazed ghost dancers) had time to assemble, which would consume but little time; whereas if too much time were wasted, it would give them an opportunity to assemble round the house and a disturbance might be created. But upon receipt of permission to make the arrest the enthusiasm among the police was so great that they neglected to take the wagon along, but went on horseback and rode boldly through the camp and up to Sitting Bull's house, where they dismounted just as daybreak began to appear.

Sitting Bull had two log cabins a few rods distant from each other, the wagon road passing between, and 10 policemen entered one of the houses and 8 entered the other, so as to make sure of finding him. They found him in the larger building of the two and announced the object of their mission, which was that he was their prisoner and was to accompany them to the agency (the police also took possession of 2 rifles and 4 hunting knives, found in the house). Sitting Bull said: "All right; I will go with you; I will put on my clothes," and then sent one of his wives to the other house for some clothing that he desired to wear; he also requested that his favorite horse be brought from the stable and saddled for him to ride, which was done by one of the policemen. While dressing, Sitting Bull caused considerable delay, and commenced abusing the policemen for disturbing him; all of which abuse they bore patiently. During this time his followers began to congregate, and when he was dressed and brought out of the house the followers had the police entirely surrounded and pressed in close to the building. Sitting Bull then became very much excited and positively refused to go with the police, and called upon his followers to rescue him. The police force, in the mean time, were reasoning with the crowd to let them pass out unmolested and at the same time gradually forced the Indians back so as to get Sitting Bull away in safety.

Lieut. Bullhead and Sergt. Shavehead stood one on each side of Sitting Bull, with Second Sergt. Red Tomahawk behind him, to prevent his escape. At this juncture, with the excitement at its height, Catch the Bear and Strike the Kettle,

two of Sitting Bull's main supporters, dashed through the crowd, and Catch the Bear fired and the ball struck Lieut. Bullhead on the right side. Bullhead then fired at Sitting Bull, the ball striking him on the left side between the tenth and eleventh ribs (there was no exit). Sitting Bull also received a gunshot wound in the right cheek just below the eye, and Sergt. Shavehead was at the same moment shot by Strike the Kettle, and all three fell together. Catch the Bear, who shot the lieutenant, was immediately shot and killed by Private of Police "Alone Man," and the fight then became general, in fact a hand to hand conflict. 39 policemen and 4 volunteers against 150 Indians. The police soon drove the Indians from around the building, then charged and drove them into the woods, about 20 rods distant; after which the police returned to the building and carried their dead and wounded into Sitting Bull's house and held the buildings, without further casualties, from about 5:30 a. m. to 8:30 a. m., when the cavalry command of 100 men under Capt. E. G. Fechet, Eighth United States Cavalry, came in sight, when the ghost dancers who were hid in the adjoining woods fled up Grand River, but after going up a short distance turned south across the prairie and through to the Moreau River and Cherry Creek, on the Cheyenne River Reservation.

A fact worth mentioning is that during the fight a number of women of the Sitting Bull faction attacked the police with knives and clubs, and the latter in every instance simply disarmed them and put them in one of the houses under guard until the troops arrived.

In contradiction of the statement which is going the rounds of the press that Sitting Bull was murdered and that the shooting was commenced by the police, everything proves to the contrary; first, the clear and corroborated statement of Red Tomahawk, also of Bullhead who detailed the facts to me before his death, and second, the presence at the scene of the rescuing party, armed with guns of all descriptions, the Winchester in the majority.

To appreciate the wonderful distances traveled by some of the policemen on the day preceding the arrest, a knowledge of the country is necessary, and in order that it can be better understood I transmit herewith a rough sketch of the reservation, which shows the roads leading from the agency to the different settlements along Grand River.

Lieut. Bullhead, anticipating an order for the arrest, from the letter he sent me 12:30 a. m., December 14, had all the policemen then on Grand River, 28 in number, assemble at his house on the evening of that day; and my letters to him sent by Sergt. Red Tomahawk left the agency at 5:45 p. m. This policeman, being unacquainted with the roads running to the Grand River settlements (his farm being at the mouth of Cannon Ball River, 65 miles north of Sitting Bull's settlement), got on the wrong road and missed the crossing at Oak Creek, where the detachment of police were encamped, which detachment he was to have taken through with him. Fortunately he took a road that led to Bullhead's, and as it was the only building where a light could be seen he went to it, reaching there about 10 p. m., having covered a distance of 40 miles in four hours and fifteen minutes. Bullhead then sent from his house the lightest policeman in the force (Iron Thunder, who weighs 135 pounds), mounted on the fleetest horse, back to Oak Creek, a distance of 18 miles, for Sergt. Eagleman and his party, with instructions to meet Bullhead and party at Sitting Bull's house at daylight, but Eagleman, after ordering his men to get their horses ready, ordered the same courier to return to Bullhead at full speed and tell him that he (Eagleman) did not want another Little Big Horn affair by going in two parties, neither knowing what the other was doing, but would join the main party as soon as the horses could get them there. In the mean time Hawkman, who had carried Bullhead's letter into the agency, had returned to Oak Creek, and lest there should be any mistake in Bullhead's instructions to concentrate his forces at the Grand River school,  $4\frac{1}{2}$  miles east of Sitting Bull's house, which this message by Iron Thunder seemed to indicate, Eagleman sent Hawkman direct to said school to notify Bullhead, if by chance he should be found there, of his departure for his (Bullhead's) house, and if not found at home he would proceed down the river to the school. Bullhead, expecting Eagleman to go direct from his camp to Sitting Bull's camp, left his house about 4 a. m. with a police force of 28 men and proceeded down the Grand River about 2 miles to the house of Gray Eagle, whose two sisters are the wives of Sitting Bull. They remained in Gray Eagle's house but a short time. When Eagleman with his detachment from Oak Creek reached Bullhead's and found that the police had left for Gray Eagle's a few minutes before, he continued on and joined the main body about 4:30 a. m., and a few minutes later Hawkman arrived from the way of Grand River school, thence up to Bullhead's and down to Gray Eagle's, having accomplished on horseback 100 miles in the preceding twenty-two hours. At Gray Eagle's the police force, numbering 39 men, was augmented by 4 volunteers, making 43 men who were engaged in making the arrest, which number left Gray Eagle's about 5 a. m. that morning (December 15), proceeding down the main road and crossed the Grand River into Sitting Bull's camp, which they entered about 5:30 as before stated.

The fight did not last to exceed half an hour, and all casualties except that of Policeman John Armstrong (who was shot by an Indian believed to be Flying Horse, secreted in a clump of brush near by), occurred in the first few minutes.

It was a great consolation to all the friendly Indians, and especially to their families, that Bullhead and Shavehead lived to be brought from Grand River to the agency hospital where they met their relatives and conversed rationally with them. Shavehead lived twenty-five hours after he was wounded and seven hours after he reached the hospital. Bullhead died on Thursday at 4 p. m., eighty-two hours after he was wounded.

It has been stated in the public prints that the police would undoubtedly have been annihilated for want of ammunition in case the cavalry had not arrived at the opportune moment. In contradiction of these statements I desire to say that 210 pistol cartridges and 260 rifle cartridges were in the possession of the police at the close of the fight.

The following are extracts from the report of Capt. E. G. Fechet, Eighth Cavalry, commanding the detachment of cavalry, to his superiors with regard to this affair:

I can not too strongly commend the splendid courage and ability which characterized the conduct of the Indian police commanded by Bullhead and Shavehead throughout the encounter. The attempt to arrest Sitting Bull was so managed as to place the responsibility for the fight that ensued upon Sitting Bull's band which began the firing. Red Tomahawk assumed command of the police force after both Bullhead and Shavehead had been wounded, and it was he also, under circumstances requiring personal courage to the highest degree, assisted Hawkman to escape with a message to the troops. After the fight no demoralization seemed to exist among them, and they were ready and willing to cooperate with the troops to any extent desired.

The facts contained in the following extracts from reports of this affair are herein repeated:

A total of 43 imperfectly armed police opposed to about 150 Indians of Sitting Bull's followers, whom the police routed, driving the Indians from the field and into the adjoining woods; holding the battle ground with all the killed, and women and children, also Sitting Bull's corral, which was filled with horses prepared for his flight, and which the ghost dancers made extraordinary efforts to secure, but it was held by the police with great courage and coolness. After having been fighting for about two hours and securing possession of all the buildings near by and the attacking Indians being driven from the field at all points, the police carried their dead and wounded into Sitting Bull's house and splendidly maintained their organization. When the detachment of cavalry came in sight on the hill overlooking Sitting Bull's camp about 1,500 yards distant, the police raised a white flag from the corral to show where they were, but notwithstanding this, a shell was thrown from a Hotchkiss gun, which struck and exploded a few rods from them, upon which Red Tomahawk paraded his men to show who they were, but their identity could not be established by the officers from that distance, and the latter believing them to be hostiles caused another shell to be thrown, which exploded about 4 rods from the police, whereupon Red Tomahawk mounted a horse and taking a white flag rode out to the command to save further mistake, and when Lieut. S. H. Slocum, Eighth Cavalry, arrived on the ground, Sergt. John Eagleman, then in charge, paraded the policemen, aligning them directly in front of the dead, advanced to the front of his column and saluted on the approach of the command.

There were one lieutenant and four sergeants of the police force in the engagement, and at the first fire Lieut. Bullhead and First Sergt. Shavehead were severely wounded and Fourth Sergt. Little Eagle killed. Red Tomahawk then assumed command, which he conducted with great skill and courage throughout the remainder of the fight. He was ably assisted by Fifth Sergt. Eagleman, who remained near him, and by Gray Eagle, a volunteer, who took charge of the party holding the corral filled with horses belonging to the Sitting Bull Indians. In a word, every man did his duty unflinchingly and the battle of the morning of December 15, 1890, on Grand River should form a prominent record in the annals of the appropriate Departments of the Government to be passed down to posterity as showing the fidelity and loyalty of the Indian police in obeying orders and maintaining the integrity of the Government against their own people, some having fathers and brothers in the ranks opposing them.

A large majority of the Indians of this reservation are loyal to the Government and universal satisfaction at the result of the fight is expressed by them, obliterating as it does the seeds of disaffection sown by the ghost dance."

Extract from my official report to the honorable Commissioner of Indian Affairs, dated December 16, 1890, as to the affair on Grand River:

"The details of the battle show that the Indian police behaved nobly and exhibited the best of judgment and bravery, and a recognition by the Government for their services on this occasion is richly deserved and should be promptly given with a substantial allowance for the families of those who are dead, and also for the survivors, to show them that the Government recognizes the great service that has been done for the country in the result of yesterday's fight.

"I respectfully urge that the Interior Department cooperate with the War Department in obtaining Congressional action which will insure to these brave survivors, and to the families of the dead, a full and generous reward. Besides the Indian police there were four volunteers, viz, Gray Eagle, Spotted Thunder, Otter Robe, and Young Eagle, who participated in the fight, rendering good service and deserving like recognition. Gray Eagle (Gabriel Wamdihotah) is one of the judges of the court of Indian offenses, and his two sisters are Sitting Bull's wives. Until about seventeen months ago he was Sitting Bull's main support."

To this the office replied:

WASHINGTON, December 30, 1890.

TO JAMES McLAUGHLIN,  
*United States Indian Agent.*

SIR: Your communication of 16th is received, wherein you report in detail the arrest and subsequent death of Sitting Bull; speak of the bravery and good judgment of your Indian police; recommend that the noble services of the survivors receive substantial recognition; that the families of those who were killed be amply provided for, and that this Department and the War Department join in an effort to obtain Congressional action to that end, if necessary.

In reply, you are informed that this office will do all in its power to have Congress recognize and reward the praiseworthy and valuable service rendered by these men and to provide for the needs of the families of those who were killed, and, in the mean time, you will see to it that they do not suffer for the lack of any supplies or other requisites for their sustenance and comfort; and any specific recommendation you may make in regard to them pending legislation in their favor will be carefully considered and promptly approved by me if practicable and proper.

I also desire you to publicly commend, in my name, the bravery and fidelity of the force and inform the survivors that, while I sincerely regret that the taking of any life was necessary, it is very gratifying to me to know that I have such reliable assistants in my efforts to promote the welfare of their people, and that their noble conduct has been highly praised wherever spoken of.

Respectfully,

T. J. MORGAN,  
*Commissioner.*

On March 3, 1891, I suggested to the honorable Commissioner that a pension of at least \$15 per month be given to each of the families of Bullhead, Shavehead, and Little Eagle, and \$10 per month to each of the families of Paul Akicitah, Hawkman No. 1, and John Armstrong, who were killed and also \$10 per month to Alexander Middle, who was severely wounded and will probably lose his foot. Also that each of the 33 policemen and 4 volunteers, survivors of the engagement, receive a medal commemorative of their fidelity, and a payment of the rate of \$50 per head for the ponies they had killed and those that stampeded during the fight.

No information has been received that this suggestion has been acted upon or that anything has been accomplished for the relief of the parties named; and I would respectfully recommend that the matter be placed before Congress early in the approaching session.

In conclusion, I venture to say that had the suggestion contained in my letter of November 19, and afterwards repeatedly referred to in my correspondence, been adopted as to the separation of these Indians and the suspension of rations to the evil-disposed portion of them, that the dancing would have been broken up, and Sitting Bull arrested without bloodshed.

No uneasiness or disaffection now exists among the Indians of this agency. All appear anxious to forget the late unpleasantness and progression is manifest among all classes.

I am, sir, very respectfully, your obedient servant,

JAMES McLAUGHLIN,  
*United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

---

CASUALTIES IN THE AFFAIR ON GRAND RIVER DECEMBER 15, 1890.

1. Henry Bullhead, first lieutenant; died eighty-two hours after the fight.
  2. Charles Shavehead, first sergeant; died twenty-five hours after the fight.
  3. James Little Eagle, fourth sergeant; killed.
  4. Paul Akicitah, private; killed.
  5. John Armstrong, special; killed.
  6. David Hawkman, special; killed.
  7. Alexander Middle, private; wounded; will lose his foot.
- 
1. Sitting Bull, 56 years old; killed.
  2. Crow Foot (Sitting Bull's son), 17 years old; killed.
  3. Black Bird, 43 years old; killed.
  4. Catch the Bear, 44 years old; killed.
  5. Spotted Horn Bull, 56 years old; killed.
  6. Brave Thunder, 46 years old; killed.
  7. Little Assinaboine, 44 years old; killed.
  8. Chase Wounded, 24 years old; killed.
  9. Bull Ghost; wounded; entirely recovered.
  10. Brave Thunder; wounded; recovering.
  11. Strike the Kettle; wounded; recovered.

## REPORT OF SUPERINTENDENT OF STANDING ROCK AGRICULTURAL BOARDING SCHOOL.

STANDING ROCK AGENCY, N. DAK., July 30, 1891.

SIR: In compliance with a request contained in a circular of the honorable Commissioner of Indian Affairs, addressed to United States Indian agents and school superintendents, dated April 3, 1891, I herewith submit my annual report of the agricultural boarding school, Standing Rock Agency, N. Dak.

The history of the school has been given in last year's report. Being established in the year 1879, it was at times conducted as a contract and then again as a Government school. Having undergone different modifications and transformations, changes and transfers, it was partly reorganized when I took charge of it in the year 1884 (November 1), and ever since carried on as a regular Government boarding school.

The present plant consists of a male and female department, extending chiefly north and south. The buildings of the two departments are separated by an open space of about 50 feet, which affords a splendid facility in the work of keeping up the proper separation between boys and girls. The female department, which is to the north, contains in its southern extension (from north to south), a one-story frame building, 26 by 100 feet long, with parlor, sitting and sleeping rooms of the female employes, employes' dining room, bakery, and kitchen. Joining this is a two-story frame building, 26 by 52 feet (extending east and west), with dining room for the pupils on the first floor, and girls' sitting and sewing room in the upper story. Joining this, as the extreme northern extension, is a two-story frame building (extending from north to south), 28 by 70 feet, with two very commodious school rooms, separated by movable panel doors, which can be opened into one large room very suitable for exhibitions and entertainments. The second floor is occupied by a large dormitory for girls. West of the female department is the laundry (24 by 48 feet), with wash, ironing, and bath rooms on the first floor and drying room in the upstairs. In the male department, extending from north to south, the first building, commencing from the open space, is a one-story frame building 20 by 50 feet, containing principal's and other male employes' rooms, four in number. Joining this is a two-story frame structure, 26 by 52 feet, extending east and west. It contains two dormitories for the boys, occupying the whole length of the building, one dispensary, one room for the overseer of the dormitories, and one closet for bedding, etc. About 40 yards from this there is another frame house one and one-half story, 20 by 44 feet, containing boys' wash and assembly rooms and a storeroom for clothing, material, etc. In the upstairs, in connection with these boys' quarters, are the carpenter and blacksmith shop, 16 by 40 feet, with an attic, also used for storeroom purposes. Farther west of the school are the stables (one for horses and one for horned cattle), granaries, tool houses, and wagon sheds, etc.

As a plant of waterworks was put up in connection with the school two years ago the water can be conducted to all the different departments and also to the stables.

The buildings are all in good condition. The boys' assembly room will need a new floor and other repairs. More and better hospital facilities and accommodations would be very desirable, especially in case of any contagious disease.

The health of the pupils during last school year was exceedingly good. There were some cases of "la grippe," which, however, did not have any injurious effect; there was no case of death. Every possible care was taken in the line of personal cleanliness, and diet, and otherwise, to avert disease and discomfortableness.

The total enrollment for the twelve months of the year was 123, 80 boys and 43 girls; for the ten months of the school year proper, 103, 70 boys and 33 girls, with an average attendance of 79, 55 boys and 24 girls, who averaged according to age thirteen years. Almost all the children of school age in our neighborhood attended school and in order to have a larger attendance pupils would have had to be enlisted from the more remote settlements on Grand River, which, however, were at the beginning of the school year and for some time later on in a rather unsettled condition on account of the Indian Messiah craze. But, as the trouble on our agency ended with the death of Sitting Bull, it had at least no further effect on our school, and, although, as naturally could be expected, excitement over the event and a certain uneasiness prevailed for a time, yet no children ran away and none were demanded by their parents. Our Indians conducted themselves all along in a very edifying and exemplary manner, and altogether it must be said that the Indians of this whole reservation deserve great credit for the good and firm stand they had taken during those trying times, in favor of Christianity and civilization, so that it was really a pleasant surprise to notice that there were more loyal and friendly Indians here than even the most sanguine prognosticator could have expected, which fact clearly reveals the good work which has been done among them for the past years and the good control exercised over them.

This being an agricultural institution the work is carried on according to the half-day division of academic and industrial work. The boys work under the supervision of the industrial teacher, in the field, garden, at the stables, prepare the fuel for the school, and do other outside work for which they are detailed every day, as also weekly for milking, taking care of the stock, of the dormitories, playrooms, etc. From 10 to 12 milk cows were always kept and the children well supplied with butter and milk. One hundred and ten acres are under fence, everything in good condition and repair, and the farm implements are well taken care of. We had in oats 25 acres, wheat 15, corn 20, potatoes 10, squash 2, melons 2, millet 8; the rest is used for pasture. Everything promises a good yield and the boys work excellently in the harvest which is going on at present. The garden comprises 23 acres and will furnish a good supply of beans, beets, cabbage, carrots, cauliflower, sweet corn, cucumbers, endive, kale, kohlrabi, leek, lettuce, melons, onions, parsnips, peas, radish, spinach, squash, tomatoes, turnips, and other vegetables which already by this time improve the bill of fare a good deal.

Mr. Edward C. Meager, whose services as mechanical teacher were secured after Benedict Rieger, the former incumbent, a very faithful employe, was drowned in the Missouri River on Christmas Eve, when he was on the point of crossing said river to get the Christmas goods for the children from the opposite shore, imparted very useful knowledge to the boys in the carpenter and blacksmith shops. They were principally taught the fitting and taking care of tools. They were instructed in saw-filing, in the use of the measures, rules, square, etc., in the proper use of tools, saws, planes, chisels, augurs, and carpenters' tools in general. The work proper consisted of planning and the making of different articles and acquiring a knowledge of general repairs. The blacksmith work was commenced with fitting up the shop and learning the proper use and making of tools. Instruction was given in the different methods of working the harrow and the more fusible metals. Repairing was done on machinery, farm tools, wagons, plows, tinware, etc., and also horseshoeing. About thirty-four boys have a fair knowledge of the tools which they had to handle in the works and repairs just mentioned. Order and careful use of tools were especially inculcated also in this department.

Two schoolboys received the benefits of the positions of night watchman and teamster, and likewise two girls as assistants in the kitchen and sewing room, and rendered good services.

The girls received instruction in the different branches of housework, cooking, baking, washing, ironing, sewing, cutting, and fitting garments, knitting, etc. They did all the mending for the boys.

The pupils were classified as carefully as could be done according to the new course of study, which has already proved to be of the greatest benefit for the school. To those branches in which individual

pupils or whole classes might have been deficient more time was devoted. Progress of pupils was satisfactory, in some branches very good, as the closing exercises, consisting of songs, declamations, and class recitations, proved, which elicited a special praise from you for the proficiency of some classes in geography and arithmetic.

The proper inspections required of the superintendent were regularly made. Regular programmes for school and industrial work were arranged, and each pupil and each employé occupied to the best advantage. The rules and regulations for Indian schools were faithfully observed. The evening sessions were mostly devoted to singing, studying, and moral and disciplinary instructions. Lesson from Gow's Morals and Gentle Manners and Emma Ballou's Lessons in Right-doing served as guides and helps.

All instruction was given in English, and every effort made to enforce the English language also in conversation outside. Among the girls it proved to be a perfect, complete success, as no Indian word is heard in their department. Among the boys it was harder work; nevertheless the English was freely used in the schoolroom at the intermissions, etc., and the teachers made the observance of this rule in particular a point of honor and conscience, so that also with them a good beginning toward success has been made, and I hope the next year will be able to record complete success all over. All employés are well able to speak English fluently to the pupils and among themselves, as English is the language of the place. Singing exercises were held by the whole school and two boys and four girls received instruction on the organ.

Everything was done in both departments to enforce and form exact habits of personal neatness. The provisions were well cooked, the meals regularly and neatly served, and as much variation in the bill of fare allowed as could be from what is furnished by the Government and raised on the farm, and the table about as well looked after as any white boarder could desire it. Proper order in coming and going from the dining room was always scrupulously observed, all marching together from and to the assembly room; one or two employés supervised the table manners during each meal.

Clothing was furnished according to regulations and the requirements of circumstances and climate. The grounds were ornamented with trees, grass, and flowers.

The boys and girls have separate playgrounds and sitting rooms, and separation of the sexes was strictly observed, but due respect and consideration for each other always taught. Sufficient provisions for outdoor sports and indoor amusements were made, swings erected, and also climbing ropes, horizontal bars, etc. The pupils amused themselves at times with baseball, croquet, marbles, dominos, checkers, word and letter games, dissected maps of the United States, toy money, toy buildings, etc. The girls spent many a patient hour of their free time in knitting, netting, crocheting, drawing and painting, in which they take special delight, having thus prepared many pieces of very creditable work for the display charts, which are often admired by visitors.

The holidays were appropriately observed and the purpose of the celebration was duly explained.

Corporal punishment was very seldom resorted to; corrections by word or some extra work had mostly the desired effect. A permanent record of pupils is kept, according to rule 55.

In the schoolroom, objects, pictures, kindergarten helps, word and letter games, busy-work cards in arithmetic and other branches, numeral frames, toy money, reading charts, blackboards, and slates were used to the greatest extent and advantage and satisfactory results obtained. Marching, action and motion songs, and recitations brought a delightful variation into the order of exercises. Regular instructions in the drill of the elementary military motions and exercises were given to the boys and particular attention paid to erect walking, standing, and sitting, all very important things for the physical development and polite bearing of the Indian youth. Lessons on form, color, health, physical and mental culture, were embodied in the general exercises. In geography and history special attention was paid to the United States, reference to the civil duties and virtues, social and Christian, enumerated at the end of the course of study, was made as often as possible and the encouraging results thereof could often be noticed in the conduct of the pupils and the general contentedness which they manifested.

Considering that all the other schools, day and boarding, have a full two months' vacation, I nevertheless succeeded in retaining almost half of the pupils at the school during this present month to assist in harvesting, and I experienced not the least difficulty in keeping them here; all remained willingly and worked cheerfully.

The much appreciated remark which you were pleased to make at the closing exercises, that not a single complaint was made by the Indians against the school during the whole school year and that the contentedness of the children was always very noticeable whenever you visited the school, is certainly the best testimony in favor of its work, considering that the school is located in the midst of Indian settlements, where the patrons of the school would have all the chance in the world to find fault and express their complaints freely, if they had any reason, real or imaginary, to do so, especially as human nature is very apt to do that too often even where there is no apparent cause for it at hand.

In conclusion allow me, respected sir, to express my sincere thanks for your kind coöperation in the work, your well-known courtesy and kindness towards the employés, and the truly fatherly interest, care, and love you at all times manifested to the children of the school.

I have the honor to remain, yours, very respectfully,

MARTIN KENEL,  
Superintendent.

Maj. JAS. McLAUGHLIN,  
United States Indian Agent.

## REPORT OF PHYSICIAN, STANDING ROCK AGENCY.

STANDING ROCK AGENCY, N. DAK., August 24, 1891.

I have the honor to submit this my second annual report from this agency, for the fiscal year ending June 30, 1891, giving the number of cases treated in the hospital, industrial and agricultural boarding schools, and on the reservation. Hospital, 120 cases, with 6 deaths, 2 of which were from gunshot wounds; industrial boarding school, 33, with 1 death; agricultural boarding school, 89, with no death; and on reservation 1,474, with 134 deaths.

Total number of cases treated during the year, 1,716; total number of deaths, 141. This number represents the actual cases of sickness and does not include the vast number of responses for medicine only.

I have had two cases of amputation of the thigh, with success; one was made in September last, the other in June last. In no case has any surgical operation resulted in failure.

Births, 168, exceeding deaths by 27. There has been no homicide or suicide during the year. The general sanitary condition of this agency is good.

JAMES BREWSTER,  
Agency Physician.

UNITED STATES INDIAN AGENT.

## REPORTS OF AGENTS IN OKLAHOMA.

## REPORT OF CHEYENNE AND ARAPAHO AGENCY.

CHEYENNE AND ARAPAHO AGENCY,  
*Darlington, Okla., September 30, 1891.*

SIR: In compliance with regulations and instructions of your office I have the honor to submit the following report of affairs at this agency and of the Indians under my charge for the fiscal year ending June 30, 1891.

The population, as shown by the enrollment, is as follows:

Cheyennes:		
Males .....	990	
Females .....	1, 142	
Arapahos:		2, 132
Males .....	537	
Females .....	600	
Total .....		3, 269
Number of school children between the ages of 6 and 16 .....		685
Number of males above 18 years of age .....		833
Number of females above 14 years of age .....		1, 061
Number of Indians at school off reservation .....		66
Number of orphan children .....		65

In addition to the above, 15 children are reported born since April 25, the date of enumeration, and before June 18, the date enrollment was closed, not enrolled for the reason they were not reported until after the date of the closing of enrollment.

Indians from other agencies visiting at this, and otherwise, not enrolled for payment are:

Pawnee .....	1
Ute, married into the Cheyenne tribe .....	1
Digger Indians .....	4
From Tongue River Agency, Mont .....	6
From Shoshone Agency, Wyo .....	12
From Pine River Agency, N. Dak .....	8

The Indians from the three agencies named claim relationship with Cheyennes and Arapahos of this agency, and came here with the expectation of participating with them in the payment of money and allotment of lands under the agreement ratified by Congress March 3 last.

There was also one nondescript named "Kiowa Dutch," claimed by the Cheyennes and Arapahos to have been captured by the Kiowa Indians more than thirty-five years ago and sold a slave to Robert Bent, a squaw man of the Cheyenne tribe; has lived with these Indians the past thirty-five years, who now refuse him any tribal rights so far as payment of money is concerned.

**Negotiations for cession of lands.**—On the 7th of July, 1890, the Cherokee Commission, consisting of the Hon. David H. Jerome, of Michigan, Judge Alfred M. Wilson, of Arkansas, and Hon. Warren G. Sayre, of Indiana, arrived at the agency for the purpose of negotiating with the Indians. Due notice having been given the Indians when the Commission would arrive, a full representation of the chiefs and head men of both tribes assembled in council to meet them. After friendly greeting had been gone through with, Mr. Jerome chairman of the Commission, addressed the Indians, informing them of the purpose for which the Commission visited them and the authority under which they were acting. Mr. Sayre followed, portraying the benefits that would accrue to them if they accepted allotments of land and disposed of the surplus to the Government for money and articles with which they could improve their allotments and make comfortable homes for their families.

With the exception of Cloud Chief, Little Chief, Little Bear, Starving Elk, and Wolf Robe, a very strong and bitter opposition to any consideration of the proposition by the Commissioners was made by the leading Cheyennes, while the Arapahos, led by Left Hand, Row of Lodges, White Eyed Antelope, Bull Thunder, Scabby Bull, Black Coyote, White Snake, White Buffalo, and Black Wolf, were practically in favor of it. During the negotiation considerable enmity was made manifest by the opposing element, and threats of punishment and destruction of property to Indians who favored the proposition of the Commission were freely made.

After forty days of negotiation, the prospect of an agreement being reached in a

reasonable time not appearing probable, and the extreme hot weather affecting the health of some members of the Commission, it was considered advisable by them to take a recess until cooler weather.

The first week in October the Commission returned and resumed negotiations with the Indians. I had provided convenient and commodious quarters in the vacant trader's building and invited the Indians to meet the Commission there. The opposing element, led by Old Crow, Whirlwind, and others, refused to do so, and gathered in the grove of the Arapaho school grounds. The Commission refused to meet them there, which action ended negotiations so far as this element was concerned. The elimination of this element from the council room rendered it comparatively easy for the progressive Indians to reach a conclusion. By advice of their attorneys, Messrs. Crawford, Reynolds, and Miles, the proposal of the Commission was accepted.

An agreement was then prepared by the Commission and submitted to the Indians for their signatures. Left Hand, principal chief of the Arapahos, arose and addressed the Commission, saying that the opposing chief had issued an edict that the first one who signed an agreement would be killed. He said he did not propose to be intimidated by threats from doing what he considered to be for the best interests of his people. He then affixed his mark to the agreement and was followed by Little Chief, Row of Lodges, Cloud Chief, White Eyed Antelope, Little Bear, and others of the chiefs and head men. Signatures were rapidly obtained the first two weeks, but sufficient to accomplish the agreement were not obtained until the middle of November.

The agreement was approved on the 3d day of March last, and secured to each member of the Cheyenne and Arapaho tribes 160 acres of land, to be allotted in severalty, one-half to be grazing land, the titles thereto to be held in trust for the allottees for the period of twenty-five years, when titles in fee simple are to be given to the allottees or their heirs, free from all incumbrances; also \$1,500,000, as follows: \$250,000 cash to be paid per capita, \$250,000 to be paid out for said Indians under the direction of the Secretary of the Interior, and \$1,000,000 to be retained in the Treasury of the United States, placed to their credit, to draw 5 per cent interest per annum, interest to be paid them per capita annually.

In obedience to instructions contained in office letter dated April 6, 1891, I notified the Indians to assemble at headquarters in their respective ration district Saturday, the 25th of April, at 10 o'clock a. m., for the purpose of enrollment preparatory to payment of \$250,000, per capita, provided for in the seventh article of the agreement.

The Indians who opposed the agreement objected to being enrolled for such purpose; said they would not take the money nor allotments of land; that the Government could divide the reservation by a line running from the Cimarron River on the north across the Red Hills to the Canadian River on the south, and those Indians who signed the agreement could have the money and take allotments east of said line and they would occupy the country west of it. I informed them that an enrollment was made every year, and the enrollment now ordered would answer the purpose of the annual enrollment; that if they did not present themselves for enrollment on the day set their names would not appear on the list for rations and issue of annuities. They finally, very reluctantly, consented to be enrolled. The enrollment was made on the date fixed, under protest of the opposing element, without serious trouble.

Upon receipt of the enrollment sheets from the different districts, I immediately proceeded to make a revised enrollment, grouping the families. I found this to be laborious and difficult of accomplishment from the fact of their mixed relation and the custom of loaning children for rations. I took up each tribe and district separately, sending for the chiefs and head men of that district to assist in the work. Those who accepted the agreement responded cheerfully and rendered valuable assistance. I accomplished a correct enrollment of all the Arapahos and of the Cheyennes residing within the limits of the agency district. The Cheyenne chiefs and head men of the Cantonment and Seger colony districts refused to assist me or permit any of their following to do so. I had, therefore, to rely upon the chiefs and head men residing at the agency to verify the enrollment at these places. They were well informed as to heads of families, but were not as regards the children, and the result was that many children who were loaned by their parents to other families, uncles, aunts, and grand parents for rations and enumerated as their sons and daughters, were stricken from the rolls as frauds.

When ration tickets were made from the revised rolls nearly all of those so treated were produced in the flesh. When payment began the opposing chiefs and head men could not hold all their following, many of them presenting themselves for payment and producing children who had been stricken from the rolls by the chiefs and head men as frauds were, upon satisfactory identification, restored by adding the name to the pay roll as son or daughter of (giving the number of the parent), and increasing the aggregate of numbers on the pay roll one.

Payment commenced on the 19th day of June, each person receiving 75 silver dollars. To date there has been paid 2,835 persons \$212,625. Four installments of \$50,000, weighing about 3,000 pounds each, was shipped by the United States Express Company from the United States subtreasury at St. Louis, Mo., to Darlington, Okla. The funds were in canvas bags said to contain \$1,000 each. In counting out, two bags were found to contain but \$999, leaving actual amount paid to date from Government funds, \$212,623.

When the fourth installment was exhausted the Indians were so slow in presenting themselves for the payment I decided the expense of shipping in the \$50,000 unnecessary; besides, large sums of money on hand necessitated a military guard at the agency office. I therefore made arrangements with the Stock Exchange Bank at El Reno, Okla., to furnish funds as required.

I am pleased to report that in the expenditure of the money paid them the Indians have shown most excellent judgment. A very large proportion was expended in the purchase of mules, work horses, harness, wagons, saddles, blankets, and household articles. A few of them purchased expensive carriages, and when remonstrated with for so doing said the Commissioners advised them to spend their money like white men, and white men bought carriages. Very little drunkenness or gambling was indulged in by them, and no disturbance of any serious nature occurred among them during the payment. Instructions in office letter bearing date June 4 was strictly enforced. Unauthorized persons were prohibited from coming on the reservations to trade with the Indians. This action on my part appears to have given offense to citizens of Oklahoma, who were apparently sympathized with by some of the highest officials in the Territory.

In the payment of this money I desire to acknowledge the valuable services of Inspector Jenkin and members of the allotting board, the latter assisting in counting and stacking in piles of \$25 each 150,000 silver dollars. In explanation of the services rendered me by the allotting agents I have to say that the Indians would not take allotments until those of them who signed the agreement had been paid their per capita of the \$250,000.

**Agriculture.**—Owing to the religious excitement, the anticipated receipt of money and the payment thereof during the farming season, the Indians neglected to properly cultivate their crops. They plowed about 3,600 acres and planted 3,496, realizing therefrom 3,590 bushels of wheat, about 8,700 of oats, 215 of barley and rye, 23,840 of corn, 1,285 of potatoes, 115 of turnips, 250 of onions, 135 of beans, 164 of assorted vegetables, 16,800 melons, 7,400 pumpkins, and cut 930 tons of hay. Had their corn been properly cultivated, in my judgment the yield would at least have been doubled. In justice to the Indians I must say that the continuous rains in the early season prevented the use of the cultivator to advantage, and the weeds got such a start of the corn it was difficult to eradicate them. A few of the Indians with their squaws and children did good work with the hoe, cutting the weeds down and pulling them out.

I believe this country to be much better adapted to raising small, rather than the larger cereals. More wheat was sown and harvested this than any previous year. And now that a market is brought near their door by the railroad, and less labor required in the production, the Indians farming all want to sow wheat. Notwithstanding the fields were grazed continually during the winter months the average yield was about 23 bushels to the acre.

**Court of Indian offenses.**—Owing to the excitement under which the Indians were laboring during the past year, occasioned by the agreement made by them with the Cherokee Commission, and the difficulty of securing the services of suitable persons who would perform the duties of the office without prejudice, I decided it would be for the best interests of all concerned not to organize a court. I am of the opinion a very important and successful factor toward the civilization of the Indian will be introduced when they are made amenable to the laws of the land.

**Crimes.**—United States *vs.* Harry McDade, indicted by the grand jury for furnishing whisky to an Indian on the reservation, plead guilty before court at Wichita, Kans., and fined \$1.

United States *vs.* Frank Jones, charged with introducing whisky in the reservation; tried at El Reno at a term of the United States court; found guilty; when called for sentence could not be found.

United States *vs.* Silas Warner, charged with furnishing beer to Indians on the reservation; found guilty; escaped from custody of officer at Elreno, Okla.; returned to agency at night and committed an assault upon an old Indian woman who had testified against him in court; escaped; arrested in Caldwell, Kans.; taken before court at Kingfisher, Okla., and sentenced to two years' imprisonment in the penitentiary at Cleveland, Ohio.

United States *vs.* John Pike and Joe Dowling, arrested by Indian police on reservation for horsestealing; tried, found guilty, and sentenced to terms of five and three years in State's prison.

Laura Mercer, alias Laura St. Clair, alias Mrs. George Little Bear, a woman about 20 years old, fair complexion, and prepossessing in appearance, claimed to be one-eighth Chickasaw Indian, was arrested for stealing horses from the Indians. A clear case was proven against her of having in possession and disposing of five head of horses, the property of Big Belly, Cheyenne Indian. She testified in her own behalf that on the night Big Belly claimed his horses were stolen she dressed herself in Indian costume and accompanied by a white boy (whose name she could not remember) rode horseback into the reservation from Elreno, Okla., the boy carrying several bottles of whisky; that she visited a camp of Indians about three miles from the agency; met Big Belly and other Indians at the camp; gave them whisky to drink until they were pretty well under its influence, and then proposed a horse race; the Indians consenting, she raced with Big Belly until she had won five of his horses; that Big Belly assisted her and the boy in driving the horses off the reservation. Big Belly and other Indians denied that any such occurrence took place. The jury acquitted her.

Thomas Hall, Cheyenne, arrested for stealing a horse from Whitt Mathews, Arapaho; indicted by grand jury; awaiting trial.

White Buffalo, Arapaho, arrested by deputy United States marshal for stealing a horse from the butcher at Fort Reno; on examination before United States commissioner, discharged.

Two Kiowa Indians arrested for stealing horses from Indians of this reservation; indicted by the grand jury; awaiting trial.

Arrests were made for numerous other offenses, trivial in character, which were disposed of by confinement in the guardhouse at Fort Reno, or by fines inflicted and paid to the complaining witness.

**Whisky drinking and gambling.**—I am pleased to report a growing sentiment against both these vices; very little of either has been indulged in by the camp Indians. Drunkenness is almost wholly confined among the scouts and educated Indians. It was reported to me that several young Indians in the Kingfisher district were occasionally getting drunk on flavoring extracts purchased in the town of Kingfisher. I reported the matter to the United States marshal of Oklahoma, who has apparently given the matter his attention, as further complaints of drunkenness among the Indians of that district has not been made.

**Allotments.**—Allotments under the agreement ratified March 3 commenced about the middle of July and continued without serious trouble or interruption until the 30th of September, when, the appropriation made for the purpose becoming exhausted, the work stopped. The Indians without exception, so far as I am informed, will accept and select their allotments. Some few of the chiefs objected to allotments in severalty, and demanded that only one line be run designating the quantity and boundaries of land his band was entitled to receive. When explanation was made that each person might select his or her allotment contiguous to each other, in conformity with the agreement making their lands practically in one body, the conditions were accepted without further trouble. They do not want white settlers in their midst, fearing trouble with them.

The following table, giving the weekly report of allotments made to the Cheyenne and Arapaho Indians, will acquaint you with the number of allotments and by whom made:

Date.	N. N. Parker.	John Kelly.	A. L. McPherson.	W. E. Catlin.	M. D. Tackett.	D. L. Wright.	J. C. Robinson.	Total.
July 18	8	8	10	10	8			44
July 25								
Aug. 1	41				9			50
Aug. 8	25	44	25	24	10	8		139

Total	363	311	*270	†197	‡223	240	204	1,808
Days worked	82	82	92	87	82	61	45	

\* To October 10. † To October 5. ‡ Agent Scholl, reservation office work in addition.

**Sanitary condition.**—The general health of the Indians has been bad. Owing to the exceedingly wetspring, followed by unusual dry and hot weather during the summer months, malaria was engendered to an epidemic condition, affecting whites as well

as Indians. But one death occurred among the whites; Mr. E. J. Sudumann, a very exemplary young man employed at the agency Mennonite mission school. The death rate among the Indians during the months of July, August, and September was very great. Owing to the reticence of the Indians the number can only be approximated. I place the number at 150 during the months named. For further information see physician's report herewith submitted.

Agency police.—With very few exceptions the police have performed the duties required of them in an acceptable manner. They perform more service than any other class of Indian employes, oftentimes riding many miles during the nighttime, furnishing their own transportation and receiving the least compensation. Their services are deserving of more liberal recognition.

Schools.—There are four boarding schools on the reservation—the Cheyenne school at Caddo Spring, about 3 miles north of agency, Arapaho school at the agency, both Government schools; Mennonite mission school at agency and at cantonment, 60 miles west of agency, supported in part by Government and church. With the exception of Cheyenne school at Caddo Spring, the schools have maintained an increased average of attendance over last year. All the schools show marked improvement in their school work.

I attribute the diminished average of the Cheyenne school to the feud existing between those of the Cheyennes who favored and signed the agreement with the Government, ratified March 3, and those who opposed it, the opposing element in many instances refusing to permit their children to attend school, or to associate with children whose parents favored the agreement. Also the retirement of Mrs. Anna C. Hoag from the school had its adverse influences. Mrs. Hoag had been associated with the school as teacher for many years, was an estimable Christian woman who had the confidence of and was beloved by the pupils and Indians. Her retirement was, in my opinion, a great loss to the service.

There has been expended in repairs to buildings at the Cheyenne school, \$940.72; at the Arapaho school, \$1,122.27. For further information in regard to schools, see reports of superintendents and annual school statistics.

Missionary work.—The Y. M. C. A. of the State of Kansas is represented at this agency by Mr. F. F. Caruthers. His work is more particularly in behalf of the young men of the tribes and returned students. Weekly meetings are held, and Mr. Caruthers visits them in camp, and is doing what he can to hold the returned students up and prevent them drifting back to camp life and customs of their people. A pleasant reading room is furnished where the young men have the benefit of Christian and secular publications and literature.

The principal missionary work is under the charge of Rev. H. R. Voth, who represents the Mennonite Church. This church has two mission schools, one at agency and one at cantonment, and a mission station on the Washita River some 13 miles west of Seger Colony headquarters, and in that district. They are doing good work among the Indians.

The past year has been one of unusual care and responsibility; the consummation of the agreement ratified by Congress March 3, with the determined efforts of the wild Indians of the western part of the reservation to defeat it, created a situation of uncertainty as to the outcome. I am greatly indebted to Cloud Chief, Little Chief, Little Bear, Wolf Robe, White Antelope, and Buffalo Meat on the part of the Cheyennes, and with but two exceptions all the leading chiefs of the Arapahos for their loyalty and judicious conduct throughout the whole affair. They are entitled to the greatest credit for the favorable result accomplished without an outbreak.

I regret the attitude taken by some of the prominent officials of Oklahoma relative to the conduct of affairs at this agency. All I now have to say on this subject is that I have striven to conduct affairs according to law and the regulations, protect the interests of the Indians, and the credit of the administration.

Returning thanks to the Department for courtesy and consideration extended to me during the past year, I am,

Very respectfully,

CHARLES F. ASHLEY,  
*United States Indian Agent*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERINTENDENT OF CHEYENNE INDUSTRIAL BOARDING SCHOOL.

CHEYENNE AND ARAPAHO RESERVATION,  
Caddo Springs, June 30, 1891.

SIR: I have the honor herewith to submit my annual report of Cheyenne School for the fiscal year ending June 30, 1891:

Summary of attendance.—Highest enrollment at any one time during year was 91, in second quarter; lowest enrollment, 80, in third quarter; highest average attendance was 79 $\frac{3}{4}$ , in second quarter; lowest average was 72 $\frac{1}{4}$ , in third quarter. Total and average attendance by quarters is as follows:

Quarters.	Total.	Average.
First.....	83	74 $\frac{1}{2}$
Second.....	91	72 $\frac{3}{4}$
Third.....	80	72 $\frac{1}{4}$
Fourth.....	88	75 $\frac{1}{4}$

Total number of days' attendance during the year, 22,468; number days school was in session during year, 297; average attendance for 297 days, 75 $\frac{1}{3}$ , almost equally divided as to sex.

In reviewing our work for the past term I must say that in five years' experience as superintendent of Indian schools I have never passed through a period of so many trials, vexations, and discouragements as have beset us in the conduct of this school throughout the last ten months.

While a comparison of the statistics for that period shows a fairly uniform enrollment of pupils for the year, yet the attendance during the fourth quarter was maintained only by constant worry and the almost continual detail of some one employé or other to search for runaway pupils. And while by such means we have made a respectable showing in the aggregate number of pupils, the progress and efficiency of class-room work have been seriously interfered with by so frequent absences and the consequent distraction of mind and attention on the part of the pupils. In like manner also has the industrial work of the school suffered, but, of course, not in the same degree.

This unfortunate condition of things was the result of influences and circumstances entirely beyond my authority and control; and chief among them may be mentioned the "ghost dance," the conferences of the Cherokee Commission with the Cheyennes and Arapahoes in regard to the allotment of their lands and sale of surplus of same; the subsequent special enrollment of the tribes for that purpose, and the final payment to the Indians of the first installment of the purchase money. The restlessness and excitement among the Indians consequent upon these innovations can perhaps be imagined by people not personally cognizant of them, but can be fully realized only by eyewitnesses. Considering all the facts in the case, it is rather a matter of surprise that we have been able to hold the Indian children so well as we have done. Nor is it to be inferred that good has not been done and valuable results achieved, both in the class rooms and on the farm and in the other industrial departments of the school, for a very great deal has been accomplished in all these; only much more might have been realized under other and more favorable conditions.

Corps of employés.—I take pleasure in testifying to the general efficiency and fitness of my assistants in the work and to the very satisfactory manner in which their duties have been performed. In the class rooms the work of the teachers has been intelligent, patient, untiring, and thorough with those pupils whose attendance was sufficiently regular to permit of good results. The work of the sewing room, laundry, kitchen, dining room, in the dormitories, and on the farm has been done by regular details of pupils, under the direction of the various employés in charge of these departments; and I am pleased to report that with very few exceptions the pupils, male and female, have done their work cheerfully, diligently, and progressively, all employés speaking in high praise of their details.

On the school farm have the results of the year's work been especially gratifying. The season thus far has been unusually favorable to all growing crops, and the yield of all field and garden products is heavy and of good quality. Our farm crops are diversified as follows: Thirty acres oats, 22 acres wheat, 25 acres corn, 11 acres millet, 4 acres Irish potatoes, 1 acre sweet potatoes, 4 acres in garden vegetables of various sorts, and 3 acres of peach and apple orchard. Wheat and oats are now cut and in the shock; the former will probably yield 20 bushels per acre and the latter 50 bushels per acre. Corn is a very heavy growth and well eared. Potatoes of both varieties are very good. The millet is nearly ready to harvest, and all garden "truck" is abundant and of good quality.

Besides the regular work of the farm and in the buildings, the industrial teacher, assisted by the school boys and by the male teacher, has performed a great deal of labor on the school premises, such as hauling rock for the foundation of the new water tower and for repairing the well and milk house at the spring, digging about 2,000 feet of trench for pipes of our new water service, and filling same after the pipe was laid; building and repairing fences, hauling fence posts, and repairing roads.

Two thousand of the 2,500 fence posts purchased for the school during the last two months are now set, ready for the wire. When our new fences shall be completed we shall have sufficient pasture inclosed to hold our stock cattle, and also all the beef cattle needed for the use of the school during any school year; and these should be turned over to us and handled and slaughtered by the school. One new pasture field is already inclosed by wire, enabling us to graze our milk cows separate from the other stock cattle, a decided improvement upon the old way of pasturing all stock in common.

Water service.—During the year the Department purchased and had erected for the school a new wind engine and a new 1,100-barrel water tank, with new pipe connections between the spring and the tank and between the tank and the house, giving us an abundant water supply for all purposes. A new double-acting railroad pump also forms an important part of this new water system.

School reservation.—A generous reservation of five sections of farm and grazing land and park has recently been set aside by the Interior Department for the exclusive and permanent use of this institution, which will now justify the planning of our stock-raising and farming operations on a much more extensive scale than has been done heretofore.

The breaking out of 50 additional acres of farm land the present season, as was sanctioned by the Indian Office last spring, has not been accomplished, because the contract had to go to some Indian, and no Indian has yet been found anxious to do the work, although a dollar per acre more was offered than a white man would have been glad to do it for, and would have done a much more satisfactory job.

Projected improvements.—Contracts were let recently for the erection of a new brick dormitory build

ing for this school and to provide an improved system of heat and ventilation for the new building and also for the present building after it shall have been extensively remodeled and repaired, as already arranged for.

With these repairs and additions to our school quarters we shall be able easily to accommodate 200 Indian children, with but a slight increase of the ordinary force of employes. This additional room is demanded by the fact that now there are in the camps of the Cheyennes and Arapahos on this reservation more than 300 children of school age for whom there is no room at the agency and mission schools as now equipped.

**Indian employes.**—Of those Cheyenne boys and girls who have been employed at this school during a portion or the whole of the past year, in the capacity of helpers or assistants, I can honestly speak in terms of general praise, while some almost deserve special mention on account of their fidelity to duty and the cheerfulness and activity they have shown in their work. The assistant laundress, the dining-room girl, the assistant seamstress, and the industrial-teacher's assistant have all so comforted themselves as frequently to earn the hearty praise of those employes to whom they are responsible.

But of the young Cheyenne men who themselves are answerable for their own departments—the tailor and the disciplinarian and shoemaker—I am sorry to say I can not speak so highly. Their service has been very indifferent. Their real interest has not been enlisted in the work, and I am constrained to say there is reason to believe their influence with the pupils has not been for the best. One great trouble with these young people is that they have no continuity of purpose, no stability of character sufficient to keep them from the camps and in the line of duty. It is my opinion, based on experience and observation, that it is neither profitable nor desirable to employ Indians in the positions last mentioned, but that white men, of proper character and ability, should have charge of these industries, with Indians as assistants if need be. In this matter my feelings and judgment have during the past year undergone a radical change.

**Visitors.**—At various times throughout the past year parties of strangers have visited our school, coming from many different parts of the country. The close proximity of the Rock Island Railroad to the buildings makes it convenient for them to do this. On the 10th day of May last (Sunday) a delegation of forty-two gentlemen, representing the general freight department of the Rock Island, disembarked from a special train and joined us in the exercises of our Sunday school, then in session. These gentlemen represented their company in the principal cities of the country, from Boston to San Francisco and from St. Paul to New Orleans. These all expressed their surprise at the brightness and intelligence of our pupils, and especially at their performance in repeating, without prompting, every "title" and "golden text" for the entire Sunday-school year. The gentlemen spoke in highest praise of the cleanliness and order prevailing in the building, and before taking their leave left a substantial proof of their interest in a generous donation of nearly \$24 to the school. And in exchange I am sure these busy, brainy business men carried away with them a broader view and a more correct knowledge of Indian-school work than they ever before possessed.

In marked contrast with this experience was that with a prominent politician on the same day. This gentleman (a member of Congress) and party visited us for the professed purpose of learning our needs and our present condition, apparently with a desire to render any assistance to the cause he might be able. This gentleman then went to a neighboring town and in a speech to its citizens condemned the entire Indian-school system as extravagant and spoke in favor of reduced appropriations and a diminished force of employes for all schools, and for this school in particular. Nor did this honorable gentleman leave any donation to our Sunday school, either.

**Compulsory measures needed.**—To sum up this report of our school I will say that the most serious, indeed the only serious obstacle to thoroughly successful work here is presented by the dislike of the Cheyennes to sending their children to any school, and the inadequate authority in the hands of any one on the reservation to enforce a steady attendance at the schools and to keep the old Indians away from them. Give us our pupils every day of the school year and we can show results equal with those accomplished at schools most remote from the reservation. Until we can so have our pupils, success in agency schools can be only comparative. With pupils continually running away and camp Indians constantly hanging about the school in dirty camp dress and filthy persons, how can unqualified success be reasonably expected?

There should be one set day in each month on which camp Indians may visit their children at the school, and the pupils should be restrained from going to camp except at rare intervals, or in emergency. But what authority has the school superintendent to enforce these measures? His authority obtains only on the school premises and does not comprehend police functions.

A guardhouse of stone or brick should be provided at the school for the restraint of the unruly larger pupils, and a rigid system of discipline be enforced, both for the correction of pupils and the restraint of parents who incline to interfere with the regulations of the institution. Simply cutting off the beef and other rations of the individual family to force the return of children to the school is useless, as has been demonstrated repeatedly on this reservation. Nothing short of withholding the beef ration of an entire band or of a whole community of Indians will ever be successful as a means of filling our agency schools and keeping them filled. The remoteness of the homes of many of our pupils from the school makes it impossible for us to look them up and bring them back to school at the beginning of the term, or if they run away during term time.

I earnestly urge that this matter of compulsory measures be taken up specially with the honorable Commissioner of Indian Affairs, to the end that this, the greatest embarrassment to our work, be removed, if possible, before the beginning of the next school term.

An outline of the history of Cheyenne school was submitted with my last annual report, and according to the instructions of the honorable Commissioner none is required at this time.

I remain, sir, your obedient servant,

L. D. DAVIS,  
Superintendent.

CHAS. F. ASHLEY,  
United States Indian Agent, Darlington, Okla.

## REPORT OF SUPERINTENDENT OF ARAPAHO BOARDING SCHOOL.

ARAPAHO BOARDING SCHOOL,  
Darlington, Okla., August 5, 1891.

SIR: In compliance with instructions I herewith submit my first annual report of the Arapaho Boarding School. I have delayed my report in order to obtain the required historical information, and am now compelled to rely upon the statements of agency employes, as there are no early records to be found.

The school opened September, 1872, with 12 scholars, in the main part of the present school building, which was intended to accommodate 35 pupils. Joshua Trueblood was the first superintendent, and the average attendance the first year was about 12. The roll ran up to 35, children coming for clothing, but leaving after a week's attendance to go with their parents on the buffalo hunt. Mr. Trueblood becoming discouraged, resigned after a few months' service and was succeeded by Walter Moorland, and he by Henry King, each serving a short term. In 1874 it was difficult to secure a superintendent on account of the warlike demonstrations of the Indians, when Mrs. Miles, wife of the agent, observing J. H. Seger's (plasterer) pleasant relations with the Indians, also the excellent influence he exerted over them, said to her husband, "why not appoint Mr. Seger superintendent?" Mr. Seger was at once appointed, and though not a teacher by profession, he *knew good teaching*, and very soon had competent teachers and employes in all departments.

Up to this time no industrial work had been performed by the boys. The Indians considered it a disgrace for a boy to chop wood, work in garden or field. The employes of the school did all the work properly belonging to the boys, even to carrying in the wood and keeping up the fires. Mr. Seger inaugurated a system of industrial teaching and employment for both boys and girls. He took the school under contract the second year and adopted the plan of sharing the proceeds of school industries with the boys who did the work. There were 3 milch cows bought and the calves given to the 3 boys who milked the cows. The second year 600 bushels of corn and \$150 worth of garden vegetables were sold and the money used in the purchase of 35 head of cattle. Another year corn to the extent of \$1,100 was exchanged for 100 head of young cattle. The girls were also remunerated for their work, a few of them buying cows and turning them into the school herd. Mr. Seger remained in charge of the school 5 years, enlarging the building to its present size and crowding it to its utmost capacity. Good progress was made in school-room work and in all domestic industries; the advancement of the school, morally and materially, showing the great possibilities for Indian boys and girls under proper encouragement. Pupils of the Arapaho school in the fall of 1878 received premiums from the Wichita fair for nicest work done on sewing machine and best-made shirts and children's dresses; also on preserves, jellies, and bread. When Mr. Seger left the school in 1879 the pupils were personal owners of 400 head of cattle.

Mr. Seger's successor held his position but a few months, three changes in the management of the school taking place in one year, and frequent changes occurring thereafter, it being the exception rather than the rule to continue the superintendent a second year. The incompetent superintendent remained long enough to do much harm and the competent man not long enough to do much good. So the school suffered, losing its former excellent standing with the Indian Office, until pronounced by Supt. Dochester a school of very low rank.

Under Superintendent Ashley, my predecessor, advancement in the right direction was begun, but with a bitter feud among employes, the majority of whom had no real heart in the work, little could be accomplished.

I assumed charge of the school September 1, 1890, and after one month's work visited Cheyenne school for the purpose of learning what Indian children *can do* and *are doing* under proper care and training. The Cheyenne school was found to be in advance of the Arapaho in all its departments. I inquired the reason of our slow progress. One said, "The Arapaho children are not so strong, healthy, and bright as the Cheyenne," another, "That our location at the agency, near the Indian camps, was very unfortunate, and interfered with school work." One of my employes, voicing the opinion of others, remarked that little advancement ever had been made in the Arapaho school, and it was useless to expect anything different. While I gave some credit to the reasons assigned, I ascribed the real cause of the low rank of the school to lack of "faith and works." Without faith in the successful outcome of Indian education there can be little earnest effective work. After three months' careful study of the situation, I found it necessary to request the resignation of four employes. Their places were at once filled by earnest, faithful, hopeful workers, and harmory was restored among employes.

Before there could be real life and progress in the schoolroom, improvement was needed in other departments. The children must be better clothed, the dining room made more inviting, the food cooked and served so as to be more palatable, and greater personal care and attention given the pupils. All this was done with a keen interest on the part of nearly all employes, and while the improvement has been slow it has been very apparent, bringing to the pupils many unsolicited compliments from the people of the agency. Better clothed, better fed, better cared-for children become better children in every way, healthier, brighter, happier, more frank, honest, and ambitious to do well. There is very marked improvement in English habits, English speaking or conversation, and in English methods of work. Schoolroom teachers have been faithful and efficient, but advancement in class work has been slow. Pupils had first to learn to respect our civilization, to see and feel that our efforts are worthy and helpful, before any aspiration or laudable desire for education could take possession of their minds. This has been accomplished, their pride awakened, ambition aroused, and the last quarter's school work was very satisfactory—the last month the best of the year.

**Attendance.**—The ghost dance caused frequent runaways during the fall. The attendance for the month of January was low, pupils being slow to return after the Christmas vacation. The snow and heavy roads made it difficult for those living at a distance to reach the school. From the first of February to the end of the year the attendance was regular. In November 2 girls were transferred to Chilocco, and 1 married; 3 married during Christmas vacation and 2 later in the year; 1 girl permanently disabled by loss of eyesight, making a loss to our school of 9 girls, reducing the average attendance for the year.

Whole number of pupils enrolled during year .....	86
Average attendance for the year .....	69.25

**Sanitary.**—The school has escaped epidemics, yet can not be said to have been in a healthy condition. The Arapaho children are very scrofulous—there are few who have not been under medical treatment at some time during the year, and 7 boys and 3 girls received a long course of treatment. The agency physician is faithful, and nearly all pupils were in a healthier condition at the close of the year than at the beginning. There were two cases of pneumonia, both recovering. One death occurred the latter part of September, that of a young man, who was sick when school opened, and who died of quick consumption in less than one month. An open drain has been the source of great annoyance, and provision is made for proper sewerage; the pipe is now being delivered, and will be laid soon.

**Industries.**—The farm and garden have been properly cultivated with the following results:

10 acres of wheat, yielding .....	bushels..	270
10 acres of oats cut for hay or coarse feed, yielding .....	tons..	18
Potato crop estimated at .....	bushels..	100

The garden furnishes for the school vegetables in abundance except potatoes, which are not yielding well this season.

The boys learn to do all kinds of work belonging to the farm, the garden, and the home, and do it usually cheerfully and creditably. Thirteen cows were taken in from the school herd, and with a great deal of patience on the part of the industrial teacher and the boys tamed and made to furnish milk for the school. There should be purchased for the school ten milch cows of better grade.

The girls are taught cooking, baking, laundering, sewing, and general housework. Nearly all do well, and some are very nice housekeepers.

**Improvements.**—The school building has been reroofed, the floor over about one-half of the building relaid, thirteen new doors put in, and the house furnished with screen doors and windows. A new orchard has been planted with 750 fruit trees and 330 raspberry and grape plants. A woven wire fence has been put up in front of the park, the front yard graded, the grass in park kept closely mown, keeping back and crowding out the weeds, making a very attractive lawn of native grass. Estimates have been made for well and water works, new laundry building and dining hall, hospital, and repairs to present buildings, with other minor improvements, for a part of which appropriations have been made, and we trust all are forthcoming.

**Sabbath observance.**—We endeavor to give the children of the school the same opportunities on the Sabbath day that the church gives to our children of the public schools. Sunday school in the morning and preaching in the evening, or occasionally preaching in the morning and song service in the evening. Easter and Children's Day were observed with appropriate exercises by the children, to the delight of many visitors and to the profit of all. The pupils like the Sunday services on the Sabbath, and during the week they eagerly hear and receive the lessons of the Divine Teacher.

In conclusion, I am pleased to report progress in all departments, harmony among employes, and attribute whatever success we have achieved to the earnest united effort of employes.

Thanking you for the courtesies and support of your office,

I have the honor to remain, very respectfully,

ISAAC W. DWIRE,  
*Superintendent.*

CHAS. F. ASHLEY,  
*United States Indian Agent.*

#### REPORT OF PHYSICIAN, CHEYENNE AND ARAPAHO AGENCY.

In looking over the sanitary rolls for the fiscal year ending June 30, 1891, we find there were treated at this agency, during that period, a total of 1,228 cases. Of this number 729 were males and 499 females; 54 were half-breed males and 44 half-breed females, and 16 were white males and 27 white females. Many of these cases were, of course, of a trivial character, but they all called for treatment and all received the attention of the physician. Many of them were at a remote distance from the agency, and when it is taken in consideration that besides prescribing for these patients the physician has to prepare the medicine for them, make out sanitary and property reports, instruct the school children in physiology and hygiene, make out estimates for medical supplies, etc., it will be seen that his time is pretty fully occupied.

La grippe, mumps, and whooping cough were all epidemic with us during the year. There were no fatal cases in the schools, but there is no doubt that influenza helped to swell the mortality among the camp Indians.

But notwithstanding these visitations of epidemic diseases, and the large percentage of sickness among the Indians, the mortality among them was not as great as the year previous. This falling off in the death rate has been largely due to the mildness of the weather and the absence of severe storms. The Indians have not been subjected to sudden and great changes of temperature, nor have their bodies been exposed to wet and chilling storms, a very potent factor in the production of colds, pneumonia, and other diseases. After a severe storm the increase in sickness among them is very marked. This is not surprising when we recollect how insufficient is their clothing, and that they are often compelled to go hours and sometimes days clad in wet garments, and either barefooted or in moccasins that afford little or no protection to the feet.

While there has been a falling off in some diseases, noticeably itch and conjunctivitis, there has been an increase in others, and especially is this true in regard to consumption. Not only is there an increase of the disease among the camp Indians, but there has been a larger number than usual of returned school children afflicted with tuberculosis.

The sanitary condition of the schools, with the exception of the Arapaho, are good. Tiling is on the ground for the construction of a sewer, and bids have been advertised for putting in a wind-mill and tank at the Arapaho school. These are much needed improvements, and when completed the sanitary condition of the school will be greatly enhanced.

There is not much to be said as regards the advancement made by the Indians during the year just closed. It is true they have made some progress, but it is so slight that to a casual observer it would hardly be perceptible. There is a continually increasing demand for medicines, but it is hard to discern any diminution in the influence the "medicine men" exert over them. Among the Indian children the improvement is more marked, and especially is this true with regard to school children, and it is difficult to understand, in view of the kind treatment and the care and attention that is shown them, why there should be any trouble in filling up the schools. Compulsory education is the only hope of their salvation and ultimate civilization.

GEO. R. WESTFALL,  
*Agency Physician.*

#### REPORT OF SUPERINTENDENT OF MENNONITE MISSION.

CHEYENNE AND ARAPAHO RESERVATION,  
*Darlington, Ind. T., October 15, 1891.*

DEAR SIR: Complying with your recent request, I herewith respectfully submit a brief report about our mission work among the Cheyennes and Arapahos, which is carried on by the Mennonite Church at three places, Darlington, Cantonment, and the Washita.

In connection with the stations at Darlington and Cantonment we have boarding schools which accommodate 45 and 75 pupils, respectively. Besides these schools we have an industrial boarding school at Halstead, Kans., for 85 children. This school is supplied with children almost entirely from our mission schools on the reservation.

The past year was not a very favorable one for missionary work. The unsettled condition of the Indians in consequence of the allotment contract, the payment of the \$250,000, the ghost dances, etc., seemed to absorb their attention to such an extent that there seemed to be very little room with them for missionary work. The matters referred to have also more or less interfered with the success of the schools. We have not been able to get and to keep the desired number of pupils during the whole school year. For the average and total attendance, as well as for other statistical matters concerning our missions, I respectfully refer to the statistical reports already remitted to your office.

As one of the encouraging features in our work may be mentioned the fact that we have again been able to employ in both our boarding schools several Indian girls as assistants in the various departments. With a few exceptions they did well. One acted as assistant teacher and gave good satisfaction; but before the year ended she was taken away by that terrible disease which lays so many of these people into an early grave, consumption.

As soon as the school was out these girls went home and in a few weeks several of them, and also some of the other schoolgirls, were married. In some cases the "marriage contract" seems to have been made "in good faith;" in other cases the girls seemed to be entirely too young, and were, perhaps, victims of undue influence. In several cases such a union did not last long and another one was soon formed.

We hope for two things: First, that the time may soon come when the hundreds of young men, educated and uneducated, who are now leading a life of idleness, where they are almost constantly engaged in planning and carrying out some mischief and sin, will be compelled to work for their living.

Secondly. That the Government will soon apply to the Indians the marriage laws of our country, and thus put a stop to the only too frequently practiced method of "taking" and "throwing away" a wife (or a husband) according to the caprices or momentary impulses of the parties concerned. If for some reason it should be impracticable to apply the laws and regulations concerning the marriage relations to the uneducated Indians, it would seem to me that at least the educated Indians, upon whom the Government and Christian missions have spent so much money and time, and many of whom are members of Christian churches, ought to be made amenable to those laws. Many of the young people leave the schools well equipped and with the best intentions for the future; but, stepping generally from the school into a life of idleness, they soon begin to think about getting married; and, knowing that they can separate again if they should be disappointed in the choice of their "companion," they are often not very careful in this choice, and the result often is a separation and another choice. Of course the young people know very well that their teachers or other white friends can not approve of their course, and hence they soon become estranged not only to them but also to what they have learned from them, and try to evade and rid themselves of the restraining influence of their Christian friends. And as far as the Indian customs are concerned, they may once have been quite strong in protecting youth, innocence, and virtue, and in regulating in a wholesome measure the marriage relations; but they are now too much undermined and weakened to lay an effectual restraint on the Indian youth, who in these matters seems to have entirely his own way and give very little heed to any restraining influence that may be in existence among the Indians yet.

The work of our missionaries among the camp Indians had to be mostly individual work. The unsettled condition of affairs among the Indians made it impossible to have, for instance, regular meetings at certain places in their camps. We have visited them as much as we could in their homes, cared as much as possible for their old and sick, and spoken to them, where opportunity offered of the "one thing needful," and have often found very attentive listeners.

The Indians know and feel that they are bankrupt with their old customs and religion, but they are of course not ready yet to give up everything old and accept something entirely new. They are unsettled. Many bring forth the accusation that they have given up too much of the "old." Others see very clearly that, especially if they want to keep their young people, they have to make concessions to civilization and Christianity, which has more or less gained an influence over the rising generation, hence the desperate effort in the ghost dances, on the one side, to revive many old customs, and on the other side to give due consideration to the ways of the whites and mix into the old religious customs as much as possible some of the customs of the whites and even of the truths and methods of the Christian religion.

I have tried to study the ghost dance. Lately I was present at a dance for several days and nights (in company with several other missionaries and Christian workers), and I am thoroughly convinced that the ghost dance affair is more and more assuming the nature of such a "compound medicine," and as soon as the Indians have given it a fair trial and have found it to be a failure they will, I think be ready to accept the white man's civilization and the Christian religion.

Thanking you for your kindness and assistance, I am, very respectfully, yours,

H. R. VOTH,  
*Superintendent Mennonite Missions.*

C. F. ASHLEY,  
*United States Indian Agent.*

## REPORT OF KIOWA, COMANCHE, AND WICHITA AGENCY.

KIOWA, COMANCHE, AND WICHITA AGENCY,  
*Anadarko, Okla., August 20, 1891.*

SIR: In compliance with the instructions of the honorable the Commissioner of Indian Affairs I have the honor to submit my second annual report, together with statistics, for the fiscal year ending June 30, 1891.

While I can report no great reforms or radical changes in habits, condition, etc., during the past year, there has still been perceptible progress and improvement among our people. There is a growing respect for the white man's medicine and the white man's "road." Since the visit of the honorable Commissioner of Indian Affairs, elsewhere referred to, even the school children discuss the future, and seem to realize that they must be prepared for the changes the next few years will bring. Around the camp fires and in the tepees there is much discussion as to the future of the tribes, and the near approaching time when treaties will be no more seems to cast the shadow before.

**Sanitary.**—Until radical changes are effected in manner of dress and life there must necessarily be but little improvement from year to year in the general sanitary condition of these people. The training of the children in the schools is slowly but surely effecting improvements in this direction. Our schools have had fine gardens, and the children are becoming accustomed to a vegetable diet, and will be spared some of the sickness that comes from the constant and almost exclusive use of beef. There has been improvement in the general health of both schools.

The excessive dancing practiced by the Wichitas and Caddos has undoubtedly had a bad effect physically, some deaths being traceable to this cause. At the present writing the sickness among our Indians is terrible. The floods of this summer, overflowing as they did the valleys, brought malarial influences which are just now making havoc among our people. It is our good fortune to have a most efficient physician in Dr. Hume, and it is most earnestly hoped that he may be able to stand the strain under which he is now working.

**Agriculture.**—Had it not been for the high water, which destroyed many Indian homes and crops, I could make a very favorable report under this head; even as it is I am sure we can make a good showing.

In February last I issued the farming implements, garden seeds, and so forth. The seed oats arrived too late for planting, and I have them on hand carefully stored for next season. I tried to favor the young men who seemed anxious to make homes for themselves, thus departing from the former custom of giving out the farming implements to the chiefs and head men of the tribes. Many new farms have been opened up, and many of the nation's wards have had gardens, with a variety of vegetables and good, healthy looking crops of corn and other produce, as the result of their labor.

The superintendent of Chilocco Industrial School must infuse a spirit of energy into his pupils. Five of his boys, in company with several others from different schools, who are now home during vacation, are working in the field putting up hay for the use of the Government stock. They are succeeding beyond my expectation, having already put in some 35 tons, with good prospects of finishing the work with credit to themselves and their schools.

**Schools.**—No branch of agency work has been more encouraging during the past year than that accomplished in the schools. Encouraged by the visits of the honorable the Commissioner of Indian Affairs in November last, both Superintendents Haddon and Gregory made a good record for the year.

The repairs at the Kiowa School have added greatly to its success and efficiency. The Wichita school, being greatly overcrowded, calls for additions to the building in the near future. The Indians seem to have a growing confidence in the management of the schools, and even the ghost dances failed to break into a good attendance.

It is to be regretted that we have lost both Superintendents Haddon and Gregory, the former taking charge of the new school at Sill, and the latter being transferred to the Osage school. Judging by their success in the past, these two gentlemen will not fail to accomplish good work in their new fields.

The loss of the three boys who ran away from the Kiowa School and were frozen to death in the snow was an occurrence which might have been productive of most serious results. It speaks well for the Kiowa Indians that it not only was passed without such consequences, but seems to have left no prejudice against the school. It has been most gratifying to me, on several occasions during the year, to note the growing spirit of self-control among these people and their desire to stand by lawful authority. I find reasoning more effectual and threatenings less necessary as the months go by.

**Missionary.**—The missionary work upon the reservation has been put upon a much more solid basis amongst the Wichitas. The Baptist minister, Rev. J. W. Hicks, has completed a new church and home, 3 miles from the agency, and has carried on a small but highly successful school. Mr. Carithers, the minister of the Reformed Presbyterian Church, is well established on Cache Creek, about 20 miles from the agency, and seems to be gaining the confidence of both parents and children in his work among the Apaches and Comanches. Rev. J. J. Methvin, among the Kiowas, has kept up constant services, and under the care of the Methodist Episcopal Church South has had also supervision of the boarding school near the agency. Rev. S. V. Fait, the Presbyterian minister, has gotten his plant into good shape and hopes to begin school work as soon as he can procure the necessary buildings.

**Court of Indian offenses.**—The court of Indian offenses was reorganized on February 28 last, with the following Indians as judges: Qanah Parker (Comanche), John Chaddlekaungky (Kiowa), and George Parton (Caddo).

This court has proved to be a power for good and is highly respected by every Indian on the reservation. Numerous cases have been tried before this court, covering such offenses as theft, bigamy, etc. Several have been incarcerated and others fined for their misdeeds. Many cases that would necessarily have gone into the

Texas and Oklahoma courts have been happily adjusted by the Indian court. It is of great advantage to the Indians that they have the adjustment of these minor affairs with themselves.

**Ghost dance.**—This has been a disturbing occurrence throughout most of the year. This form of dancing has been indulged in mostly by the tribes north of the river. The Kiowas sent some of their number to the north to investigate the matter. Ah-pe-ah-tone, the leader in this journey, returned in the early spring and brought such a report with him as thoroughly convinced the Kiowas of the falsity of the so-called Messiah. They have danced little or none since his return. The Wichitas and Caddos have clung to the superstition and danced until spring. They were led to greater excess by the visit of Sitting Bull, the Arapaho prophet from the North, who is becoming rich in stock through the gifts of his followers. He has been absent in the north, but has now returned to the Cheyenne and Arapaho Agency and will probably repeat his performances of last year. Our Wichitas have already commenced to dance again and the Comanches seem to be feeling the craze, and unless decided measures are taken we will probably have a repetition of last year's scenes.

**Crimes.**—The reservation has been remarkably free from intruders during the past year, and but few crimes have been perpetrated. There was one case of gambling among the Indians by white men, and they were both brought before the proper authorities. No whisky peddlers have been discovered on the reservation during the year.

**Population.**—

I desire to sincerely thank the honorable Commissioner for the courtesy, kindness and assistance extended to me.

With great respect, I have the honor to remain, your obedient servant,

CHAS. E. ADAMS,  
*United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF OSAGE AGENCY.

OSAGE AGENCY, OKLA., *September 1, 1891.*

SIR: I have the honor to submit the following as my tenth annual report of this the Osage and Kaw Agency.

The reservation is bounded on the north by the State of Kansas, on the east by the Cherokee Nation, on the south and west by the Creek Nation and the Arkansas River. The Kaws occupy a tract of about 100,000 acres in the northwest corner of the reservation. The reservation contains 1,570,195 acres, and is occupied by the Osages, Kaws, and a part of the Quapaw Indians.

This is a hilly country, with comparatively small valleys, about 80 per cent of the land being unfit for cultivation, the greater part of it, however, producing grass, which is valuable for stock during the summer months. The valleys are generally rich and productive. The crops, however, often suffer from the hot winds that are frequent in July and early August, often destroying in a few days all growing vegetation and immature crops.

The Osages purchased this reservation of the Cherokees about 1869, paying therefor 70 cents per acre in cash; it formerly being a part of what is known as the Cherokee Strip. It being the agreement that the Osages should have a deed in fee for this land, they sold to the Kaws 100,000 acres of the same soon after their pur-

chase, at the same price they paid for it. In compliance with an act of Congress of 1883 or 1884, the Cherokees made a deed to the United States in trust for this reservation, for the benefit of the Osage and Kaw Indians, a copy of which is held by each tribe. The Osages have never been satisfied with the conveyance, and have repeatedly asked that a deed be made to them direct; and for this purpose have endeavored to seek the aid of attorneys a number of times.

During the year the Osages have increased in numbers from 1,500 to 1,563. A part of this increase has been gained by Osage citizens that have lived away from the tribe for generations returning and proving up their rights of citizenship. Quite a number of such cases are now pending before the national council and the Interior Department.

Every Osage family has a claim or home, and large numbers of them have secured and improved a claim for each member of their family. So rapidly has the selection of claims progressed the past year that it is now quite difficult to secure a good one. These claims and improvements are often sold and transferred from one member of the nation to another at prices ranging from \$100 to \$2,000, owing to the quality of the land and value of the improvements. All of the mixed bloods and most of the full bloods have comfortable houses and many of them good ones. They all do their own building, generally through some licensed trader who furnishes the material and puts up the building for a stipulated amount. Every family has ponies or mules and some means of conveyance, and many of them carriages and single buggies.

It is not singular that the wealth that has come to them through the force of circumstances, without an effort, has made many of them indolent and careless and content with an easy life. Such circumstances make possible a marvel of thrift and prosperity or profligacy and debauchery, with many of the natural tendencies to encourage the latter.

The Osages, by the adoption of a code of laws in 1882 providing for the election of officers and dividing the reservation into representative districts, established a local government, consisting of governor and assistants as executive officers, a council composed of three members from each district as a legislative body, and a court, presided over by three judges—all of the officers being either elected by a vote of the people or appointed by the governor and confirmed by the council and holding their positions for two years. Through this local government all the business of the tribe is transacted, and all offenses between members, of a civil or criminal nature, are settled, with the right of appeal to the agent, or through the agent to the Department. Although the effort may have been a feeble one, yet their experience has done much to familiarize them with and cause them to respect law.

During the past year among others they have passed a law, with a heavy penalty, prohibiting the marriage of any citizen under the age of 16, thus practically breaking up the practice of young marriages, which has existed for generations. To my knowledge it has been effectual in many cases that have been contemplated.

Since the establishment of the Territory of Oklahoma, numerous conflicts have arisen in regard to the jurisdiction which the Oklahoma local courts claim to have over the persons and property of the citizens of this nation, which will likely call for an adjustment in the near future.

We have at Osage a Government boarding school which will comfortably accommodate 100 children. The school has been reasonably successful the past year, and I hope that with the additions that are to be made it may be brought to a high standard.

The Catholics have a school for girls near the agency with an average attendance of about 35 during the past year, and a school for boys on Hominny Creek, about 15 miles southwest of the agency, with an average attendance of about 30 for the past year.

The Methodists have a school for girls at the agency, with an average attendance of about 45 for the past year.

In addition to the above schools, 34 children were at Haskell Institute, 15 at Carlisle, 2 at Osage Mission, Kans., 2 at Lincoln Institute, Philadelphia, 5 at the Kansas Normal at Fort Scott, Kans., and 3 at Baker University, Baldwin, Kans. All the children have done well at school, and especially those who through their own choice have attended schools outside of those maintained exclusively for Indians, and I can not conceive of a stronger incentive for an Indian child to put forth his or her best energies than to place them alongside of our white children in proper institutions of learning.

In addition to the schools for Indians, by an order from this office, confirmed by the Indian Office, requiring all white persons (renters, leasers, or others) residing on the reservation having children of school age to keep them in school for a specified time during each year or to remove from the reservation, day schools have been established at different points on the reservation, 6 in number, the teachers being required to report at this office. A number of Osage children have attended these

schools. It has been the intention to compel the attendance at school of every child of school age, both Indian and white, on the reservation, and I think we have been reasonably successful.

The practice of renting farms to white persons, which has been in existence at this agency for a long time, has greatly increased since the opening of Oklahoma. From the demand for places it would seem that these whites think there is a mine of wealth awaiting them if they can only obtain a location in the Indian country, and with these reasonably commendable citizens have come many loafers and hangers-on who would rather sell a pint of whisky than to do a month's work. To control this element requires the constant efforts of the agency police and sheriffs of the nation; and notwithstanding the vigilance of all these, they are sometimes unable to preserve complete order.

The Catholics have a church near the agency, and a priest located at the agency and one at Hominy Creek. Quite a number of the mixed bloods are members of this church. There has been a Methodist church erected during the past year, largely through the influence and aid of citizens of the nation. This church organization and pastor has been well sustained. The full bloods generally cling to the faith peculiar to themselves, and are very devoted in their search for a passport to the "happy hunting grounds" through the mode prescribed by their teachers.

The Kaw Indians, numbering about 200, have been less fortunate financially than their cousins, the Osages. The full bloods, however, maintain quite as much individuality as Indians; both work and dance more, and from necessity are more energetic, but no more frugal, than the wealthy Osages. Their crops last year were almost a failure from two causes, first, an exceedingly dry season, and second, for want of proper care. This year the prospects are much better. Most of the mixed bloods have good farms, and are in a fair way to prosper.

All the children of school age have been in school regularly during the past year. On the school farm they have raised a good crop of corn and vegetables, and have plenty of peaches from the orchard from which they have made a good supply of peach butter. There has been erected an addition to the boarding building at a cost of about \$1,800, which will greatly increase the comfort of both pupils and employes.

I can not say that I am fully satisfied with the past year's work, as the progress made in the service has always seemed slow. While there is much to encourage and strengthen to renewed energy, yet there is much to discourage, and I have often thought that the results were very meager for the amount of labor performed. Whatever measure of success has been attained I feel is largely due to the hearty support I have ever received from the Indian Department and the faithful performance by the employes of the agency of the duties assigned to them, with the blessings of an all wise Heavenly Father who continually watches over us for good.

Very respectfully,

L. J. MILES,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF PONCA, PAWNEE, OTOE, AND OAKLAND AGENCY.

PONCA AGENCY, OKLA.,  
*August 20, 1891.*

SIR: I have the honor to submit this my second annual report of these agencies for the fiscal year ending June 30, 1891, in compliance with circular letter dated Washington, D. C., July 1, 1891, and in harmony with that letter I have the honor to report that the affairs of the different agencies under my care are gradually improving in industries, and the Indians are beginning to realize the value of the white man's dollar. I shall proceed to consider the situation of each agency separately, and shall commence with Ponca Agency.

### PONCA AGENCY.

This agency is the headquarters of these four consolidated agencies; has 2 clerks, 1 carpenter, 1 blacksmith, 5 Indian employes, and 1 farmer. There is a school at this agency with 1 superintendent, 4 teachers, 1 cook, 1 baker, 1 seamstress, 1 industrial teacher, 1 matron, and 6 Indian employes.

There has been some drunkenness the past year among the Indians, but it has been dealt with promptly and kept in check. But I find that as long as there is an Indian he will occasionally get his fire water; and yet I still think he is susceptible of improvement in this direction. These Indians still cling tenaciously to their dance,

and yet they yield to control when told that their work needs to be done. They have come to the point of realizing that work means profit to themselves.

The practice of running horses at the death of a member of the family and tribe is still practiced to a considerable extent, although they are careful to keep the practice as secret as possible, which shows their advancement, as heretofore it was done openly. There has been no pony choked to death at the grave of an Indian this year to our knowledge, and if such a case had happened we would have been likely to have heard of it. On the contrary, the missionary has been called upon for the burial rites in several cases.

The Indians have planted, the last spring, of corn 700 acres, and sowed 515 acres of wheat and 80 acres of oats, and built 3,000 rods of wire fence, and broken 167 acres of prairie; so this season has been a busy one. Work has been the motto upon all these reservations, and especially so on the Poncas. On account of the drought of last year there was no harvest of corn, and I was obliged to ask rations for the Poncas, which were obtained, and we commenced the issue of rations early in December and continued up to June 30, 1891, the rations consisting of flour, sugar, coffee, and fresh beef.

This encouraged the Poncas and enabled them to pass through the winter and spring in good shape. This season has been seasonable, only too much rain has fallen to enable the Poncas to properly care for their corn crop, and yet the fields are moderately clean, considering the wet weather, and the corn promises a good crop. Wheat and oats were heavy, and the Poncas have stacked in good shape, and the stacks looming up here and there make one think of some New England settlement. The yield of wheat will be 10,300 bushels, of oats 2,400 bushels, and corn will make, from present indications, 20,000 bushels. Grass is heavy, and in all departments of agriculture prosperity has been apparent everywhere, owing partially to the diligence of the farmer, A. J. Peverlin, whom we transferred from Otoe Agency to Ponca in December of last year, the other farmer having left the service.

The carpenter reports 10 new houses built the last year. The Indians have hewed logs and had them sawed at the mill, making 150,000 feet of native lumber. This has done much to assist them in opening new farms and causing improvements in other ways. The houses of the Poncas need much repairing, and we hope the coming year to materially assist them in this direction.

One notable case the last year is the absence of the annual sun dance, without a word of protest from them. There has been no annual dance the last year. The Poncas have asked for the privilege of visiting occasionally, but in all cases we have refused, and although they seemed disappointed, they quieted down and remained at work. The Indians have been glad that they were allowed to lease their grass lands, but were much crestfallen when they learned that the proceeds would have to be deposited to the credit of the United States for their use. The Poncas have had no visiting Indians the past year; only once a portion of the Pawnee tribe came up and staid a few days. We are glad we can note improvement in this direction.

The Ponca reservation consists of 101,894 acres, of which about three-fourths is fairly fit for cultivation. The Poncas now number, according to the census taken June 30, 1891, males, 274; females, 301; total, 575; school children between the ages of 6 and 16 years, 156; members of the tribe wearing citizens' dress, 400. Number males above 18 years, 141; females above 14 years, 178; and 175 wear citizen's dress.

On May 30, 1891, Decoration Day was fittingly observed, the entire tribe being out to witness the ceremonies.

**Marriage.**—The condition of the marriage relation in this tribe is still deplorable, although we have been called upon to perform the nuptial rites for four couples, who wished the blinds to be down during the ceremonies. Reports claim that the tribe threatens to kill all who leave the Indian customs in this direction. Supt. Meserve, of Haskell Institute, sent down two marriage certificates, neatly framed, for two couples, a part of which had been to Haskell Institute. The certificates still hang in my office, although I have frequently asked the parties to receive them, but in all cases they have said, "We are afraid to have them."

Some cases of plurality of wives have occurred, but in such cases we have done what we could to stop such practices. The Indian in this particular clings tenaciously to what he claims as his right.

**Courts of Indian offenses.**—This branch of the business of this agency is not as progressive as we would desire. The disposition seems to be to fill the requirements only; no advancement can be written in this respect. The judges assess a fine in most cases, and I have overruled and caused work to be done for the service. The Poncas are not as enterprising as we would wish. Frank La Floeche, one of the judges, is now 51 years old and has been in continuous service for the past two years and is a very intelligent Ponca. His character is good and the tribe respect him, and he generally wears citizen's dress. He does not speak English, but is favorable to the white man's ways. Paul Rough Face, aged 44, and Frank Standing, Buffalo, aged 59, who has been appointed in the place of George Cheyenne, who became infirm, con-

stitute the remainder of the court. These men are capable and command the respect of their people. They all want a uniform and ask about it frequently.

**Indian police.**—We have at this agency 8 good policemen, who try to do their duty and use their influence for the advancement of the tribe, act like white men, and are opposed to the liquor traffic and Indian customs, and invariably bring to the office intelligence of any crimes committed upon the reservation.

**Missions.**—The missionary work has been supplied by Rev. Smith G. Bundy for the Woman's Home Missionary Society, Mrs. Bundy having been drowned in November of the past year. Rev. Mr. Bundy is now in New York on a visit. This branch of the work moves slowly, owing partially to the Indians neglecting to attend and take part in the services.

**Employees.**—There have been some changes in employés, but in every case it has been for the good of the service and in all cases more competent men have been found, which insured harmony and success to the service. The employés we now have are consistent, genial, industrious men, and have done good service the past year.

**School.**—The school farm consists of 162 acres under fence, of which 55 acres have been sown or planted. Ponca school has been a success the past year. The school was in session ten months. One new teacher was added, which lightened the burden of the overworked teachers and rendered life more bearable. There were 99 pupils enrolled the fourth quarter of 1891. Of this number 53 were males and 46 females; school being in session ninety-one days, and average attendance 93. The school was graded as follows:

Year.	Primary grade.		Grammar grade.	
	Male.	Female.	Male.	Female.
First.....	15	11	8	10
Second.....	11	9	11	6
Third.....			6	3
Fourth.....			2	7
Total.....	26	20	27	26

Total number of pupils, 99.

An increase is shown over last year in attendance and in grade. The pupils speak better English. Too much praise can not be given some of the employés for the way they have performed their duties.

There have been some additions made to the school farm. A nice orchard has been planted—of apples and peaches, 450; catalpas, 200; Russian mulberries, 250; currants, gooseberries, plums, pears, cherries, and grapevines, 225. Wheat has been sown and will yield 240 bushels; oats, 120; corn, 600. Hay has been cut to the amount of 20 tons. There were 8 cows purchased the past year, which adds much to the dairy of the school. In short, the school year has been very prosperous the past year.

I would respectfully call the attention of the Department, for consideration and action to the following statements in reference to returned school boys and girls: When these school boys and girls return from Carlisle and Haskell or Chilocco they show good manners and impress one with the belief that education has done much for them in stirring up the mind and adding a pleasing address and refinement which you do not see in a common Indian. I have talked with such as these in reference to their future life among their relations and they have all told me they would maintain in their character what they had learned at school. I have encouraged such as these, and have told them I would do all I could for them, and defend them, if necessary, in maintaining themselves among the old customs of the tribe. Such have gone out among the tribe, and in a few short weeks the girl has on a dress like a squaw and her hair hanging loosely about her shoulders and neck; and if asked about it there is no reply, or, if a reply, it is in the dialect of her people. The boy, as soon as nature has done its work, has long hair and braided scalp locks and wears a blanket or sheet. I have a young couple now in this agency who are educated, and yet all that I have mentioned are theirs and others to enjoy, if enjoyment it is; these also like the dance and the frequent trading of wives. Can not some method be adopted to prevent all this, so an agent will know he has the approval of the Department? It would be far better if these children were never allowed to return, which I know is impossible. Then can not some course be adopted to open farms and set up to housekeeping all those who desire to perpetuate the teachings they have received, and when they depart therefrom to be dispossessed?

**Land in severalty.**—This tribe became greatly excited when it became known that

Miss Helen P. Clark, special allotting agent, had arrived to commence allotting their lands, but became reconciled when they learned that she would allot the Tonkawa lands first. There appears now to be much opposition, yet I believe that when the time comes to allot these lands they will cheerfully accede to the requirements of the Government and move on and out into the high plane of civilization.

**Sanitary.**—The physician for the Poncas, Otoes, and Tonkawas, Dr. W. McKay Donagan, reports as follows from his headquarters at Otoe:

In compliance with your request for my first annual sanitary report, I have the honor to state that the Otoe Indians as a class are the cleanest personally, and physically the strongest Indian people whom it has been my pleasure to know. Putrid animal food seems to be no part of their living, and but little scrofula and consumption prevail among them. Venereal diseases are almost unheard of among them. They all take "white man's medicine," and Indian medicine too.

The Ponca Indians will not compare favorably with the Otoes in point of physical excellence. Like some other tribes, they eat the carcasses of dead animals, whether the animal died as a result of disease, accident, or age, and after decomposition has made considerable progress. They are cured with scrofula, consumption, syphilis, and everything else which usually afflicts heathen Indians. They use "white man's medicine" and Indian medicine freely, but without judgment.

The Tonkawa Indians of Oakland Agency number less than 100, and do not often call upon me. They are so remotely situated that I can not seek them at their homes, whether sick or well, to make inquiries, as I would if within reach, and as a consequence I know but comparatively little of the nature and habits of these people. I do know, however, that their medicine men have great influence with them.

Ever since I became acquainted with Indian habits and Indian nature I have felt the importance of suitable hospital facilities for each tribe. All Indian tribes within my knowledge can be induced to avail themselves of hospital advantages, and in the hospital the power of the medicine man can not be felt, and there the full-blood Indian would appreciate the better way.

## OAKLAND AGENCY.

This agency is located 15 miles northwest from Ponca. The reservation consists of 90,711 acres, the greater portion of which is susceptible of cultivation. The Tonkawas number—

Males.....	30
Females.....	38
	<hr/>
Total.....	68
	<hr/>
Children from 6 to 16.....	14
Males above 18 years.....	19
Females above 18 years.....	29
Number who wear citizen's dress.....	65

Miss Helen P. Clark, special allotting agent, came in April and soon commenced to allot their lands, giving to each member of the tribe 160 acres of land. They seem to be satisfied with the new order of things and are settling down to work in earnest, each for himself.

Their houses have been repaired the past year, and 6 miles of 4-wire fence has been purchased for them.

A school has been granted them the past year, and has been conducted with success, having a daily attendance of 12; enrolled, 17 scholars. These Indians prize this school very highly.

Allow me to say that these Tonkawa Indians did good service during the late war and bear many scars which were made for the defense of this Government, and should have favors granted them abundantly in their declining years. There are but a few of them now left—what was once a large and powerful people. These Indians speak English moderately well.

There has been an interpreter and two policemen appointed the last year, which were greatly needed on account of the public business and protecting property and insuring harmony.

The missionary work has been conducted the past year by a good Presbyterian lady, the wife of the general mechanic at Oakland Agency. A Sabbath school is held regularly and the Indians take great pride in the exercises.

There was 130 acres of wheat sown the present year, which will yield 1,800 bushels. There was planted of corn 100 acres, which will yield 4,000 bushels; 5 acres of potatoes were planted, and will yield 300 bushels, and 1 acre of onions, which will yield 100 bushels. There is under cultivation 236 acres.

These Indians love to dance, and on account of not having a physician near they practice largely the theory of medicine men. If a physician were located at Ponca he would be comparatively easy to obtain and would assist them materially in taking care of the sick. If a quantity of the land not allotted could be appropriated for these Indians and then sold and placed to their credit as a permanent fund upon which 5 per cent interest could be drawn and paid to them per capita annually, it would materially assist them in opening their farms. Without such a fund, opening

their farms will be slow work, indeed, unless they are allowed to lease. Allow me to say that the Tonkawas displayed a commendable spirit when they put forth effort and purchased themselves one self-binder, and with it cut their wheat and saved their grain, which otherwise might have been lost.

## OTOE AGENCY.

This tribe numbers .....	377
Males .....	187
Females .....	190
Males above 18 years of age .....	104
Females above 14 years of age .....	113
Children from 6 to 16 .....	80
Number who wear citizen's dress .....	180

This tribe has manifested more of a genial spirit the past year than formerly, and has shown a spirit of yielding to control. The ancient bitterness formerly exemplified seems to have departed. The drinking of liquor is kept under such control as to almost entirely exclude it from the reservation. We have at this agency a clerk, physician, farmer, carpenter, blacksmith, and two Indian employés.

We also have a school with a superintendent, two teachers, laundress, matron, industrial teacher, cook, seamstress, and two Indian employés. The school is a potent factor in civilization and has been highly prosperous the past year. Some important repairs have been made which render the school much more efficient than formerly. Harmony has seemed to exist under an adjustment of employés. The children have been contented and happy. Their bright faces denote advancement in their studies. All the employés have done well the past year.

The Otoe Reservation consists of 129,113 acres, of which about three-fourths is fit for cultivation. They have planted 444½ acres of corn, which will yield about 15,565 bushels. They have sown 66½ acres of oats, which will yield 1,330 bushels. They have sown 182 acres of wheat, which will yield 3,640 bushels. The Otoes have broken 258½ acres of prairie, which gives them 1,234½ acres under cultivation. Thus the Otoes have been engaged and have made advancement in their work during the past year.

Early in June Miss Helen P. Clark, special allotting agent, came to the agency and commenced the allotment of land. The Otoes soon told her to leave, to which she paid no attention, and she commenced to survey the land. They threatened to kill the one who took his allotment first, and then commenced to tear up the stones which had been set to establish the lines. Report was made to me and I at once called a council and fully explained to the Indians the penalty for such action as per statute, and told them plainly that the law for allotting their land had been passed by Congress, and that the President had signed the bill and ordered their lands allotted and they would have to submit, and that such as continued to intercept Miss Clark's work would be punished. Since that time there has been no trouble.

The greater part of the Otoes live in houses; a few in tepees. There are 59 houses upon the reservation. The Otoes are like other Indians—love to dance and visit other tribes.

**Court of Indian offenses.**—Joe John, White Horse, and Way-hon-nar-yea are still judges. These Indians, like the Poncas, have not made much advancement in conducting judicial tribunals, but are pressing on, and if they continue to consult lawyers we think they will yet be connoisseurs in the art.

**Indian police.**—We have 6 Indian police at this agency the past year, and they have been effective. Some changes have occurred for the benefit of the service.

**Missionary work.**—There has been no missionary work at this agency the past year. A resident missionary of the right spirit would do much to render more harmony and increase their joy.

**Employés.**—The employés have done good work the past year, and unanimity of action has been apparent everywhere, and much has been done at Otoe the past year. We have noticed some dereliction of duty, but not sufficient to cause removals or to give it a place in the report.

**School.**—The Otoe school has been fairly prosperous and has had an attendance of 62. The average attendance during the quarter ending June 30, 1891, was 59½, of whom 31 were male and 31 were females.

There were 50 acres of land cultivated the past year; 11 acres were in wheat, which will yield 187 bushels; 10 acres of oats, 400 bushels; 20 acres of corn, which will yield 800 bushels; beans and other vegetables were an abundant crop. The Otoes dislike very much to send their children away to other schools.

**Lands in severalty.**—The Otoe tribe seems very much unsettled upon this question. A part are willing, but afraid to move, and a part are obstinately opposed; but Miss Clark is marching on in her work and will yet succeed.

The Otoes displayed much interest in their work when they took up a subscription

among themselves and purchased one self-binder and cut their wheat with it and thus saved it in good shape. The Indians love modern improvements as well as the whites, and are moving on. Decoration day was observed and a full attendance of the tribe was had and impressions were made of a lasting nature.

## PAWNEE AGENCY.

## The Pawnees number—

Males.....	385
Females.....	426
Total.....	811
Males above 18 years of age.....	290
Females above 14 years of age.....	267
School children between the ages of 6 and 16.....	151
Number who wear citizen's dress.....	540

The Pawnees are divided into four bands. The Skeedes are the farther advanced; the Chow-ee and Pe-te-how-e-rat bands care more for the dance and the game than they do for work and the beauties of civilization. Many of them live in houses; a very few in mud lodges. There has been 486 acres of prairie broken this year; of old ground there is 2,064 acres, giving as a total on the Pawnee reserve of land in actual cultivation, 2,550 acres. They sowed to wheat 393½ acres, which will yield 14,560 bushels. Potatoes, 175 bushels. The rain has been so constant that the corn has not been plowed as much as it ought to have been. They sowed 215 acres of oats that will yield 4,300 bushels. They have been very clear of drunkenness the past year. One of the Pawnees enlisted in the regular Army and committed suicide on account of no other one going with him. The reservation consists of 283,020 acres, of which about one-third is fit for farming. The balance is rocks, hills, timber, and ravines.

Decoration day was observed in form by this people.

**Marriage.**—What we said under this head last year is true also of this. They want certificates of marriage. One couple has been married who have several children. Not a single case of selling girls for ponies has come to my notice the past year. The Pawnees are marching on in this direction and looking higher.

**Court of Indian offenses.**—At this agency the court has appointed a clerk and a high sheriff, and they execute the law and enforce it, showing considerable zeal in self-government. Sun Chief and Brave Chief and Harry Coons are now the judges. They dress like white men and as they understand self-government they adopt it. What I have said in my first report as to this court among the Pawnees is true this year. There has been no backward step taken in this direction.

**Indian police.**—There are eight Indian police at this agency. All are men of spirit and daring, but more strict obedience to orders would be well. One policeman, James Running Eagle, was shot in the discharge of duty.

The Pawnees assembled in June for a dance, much to my surprise. As soon as I learned of it I ordered it stopped, and told the Indians to go to their homes and attend to their work, which some of them did. A greater portion of them remained, neglecting their crops, greatly lessening the yield for this fiscal year. They were finally dispersed in July, but too late to do their crops any good.

**Missions.**—This work has been supplied by Rev. H. H. Cronk, of the Methodist Episcopal Church, and Mrs. M. A. Bowden, of the Women's Home Missionary Society. This branch of the work moves slowly, owing partly to the Indians neglecting to attend and take part in the services.

**Employés.**—At this agency there has been a want of harmony a part of the year among the employés and between employés and the Indians, but this has been adjusted and all is well.

The school was taken out of our hands and made a bonded school during the past year, and placed under the hands of T. W. Conway as superintendent. As far as I know the school has prospered.

**Lands in severalty.**—This tribe is still in a condition to have their lands allotted, although when it was denied to them to have the privilege to lease their land for grazing purposes many declared against the allotment. The subject of taxes being collected after allotments are made has created a great deal of anxiety with these Indians. Otherwise not much trouble may be anticipated.

**Sanitary.**—The agency physician, Dr. G. H. Phillips, reports as follows:

The Indians employ my services more generally than they did last year. The general health of the tribe is greatly improved and is still improving, due to their building and occupying houses, having wells sunk, and paying more attention to sanitary conditions. Venereal troubles are less frequent. I think that the vitiated condition of the Pawnees is largely due to the *unknown* paternity of many of them, by reason of which many marriages are between those of close blood relationship, which union gives offspring diseased in mind and body.

In conclusion, I am gratified, from a medical and sanitary stand, with the result of this year's work among the Pawnees.

Thanking you for the favors extended and courtesy shown by your office the past year, I have the honor to be, sir,  
Very respectfully, your obedient servant,

D. J. M. WOOD,  
*United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SAC AND FOX AGENCY.

SAC AND FOX AGENCY, OKLA., *July 1, 1891.*

SIR: In compliance with circular letter from your office I have the honor to submit herewith my report of affairs at this agency for the fiscal year ending June 30, 1891.

**Agriculture, occupations, trades, etc.**—At the outset it is very gratifying to state the radical change being inaugurated in the way of settled occupations and industrial habits. Among the tribes who have taken their lands in severalty the doctrine is growing into an accepted belief that the day will soon be at hand when they must depend upon their own exertions and the products of the soil for a livelihood. That the disintegrating effects of contact with the homesteaders about to settle the reserve will destroy the remnant of tribal customs and semicivilized practices, the enlightened head men do not doubt. They confront the fact that they are soon to be placed upon an equal footing with the whites, with a fair field and no further favors.

This season for growing crops has been all that could be desired, and suitable for any variety of agricultural products adapted to this climate. Corn is made and almost hard enough to gather, with a prospective yield of over 50 bushels to the acre. Small grain, cotton, millet, and vegetables are the principal other staples. Oats, long since harvested, have produced an average of about 40 bushels. The millet yield was very heavy. Vegetables of the finest quality were raised in abundance. In the Pottawatomie Reservation considerable wheat and cotton were raised, and these, like all other farm products this season, have been excellent. The cotton on this reservation is the finest I have seen this season. There will be melons in profusion of the finest variety. The natural wild grass is luxuriant both on the uplands and bottoms, growing from 18 inches to 3 feet in height and very thick on the ground. It is no uncommon thing for 2 or 3 tons to be cut from a single acre. Large quantities are being cut and stacked by the white renters and Indians, in anticipation of the demand upon the opening of this country to settlement.

It is well demonstrated that at all times this soil is good for all varieties of fruit, also cotton and small grain. Corn is an uncertain crop, except in the bottoms. This has been an exceptional farming season and crops were never finer anywhere. The acreage is small, but the yield immense. However, this country is subject to droughts during the months of July and August, and a considerable portion of the upland is rough, broken, and poor soil. For this reason I do not believe that in the main it is adapted to agriculture, and I fear there will be much dissatisfaction among the horde of homeseekers now preparing to come here upon the opening of these reservations to settlement. The principal and about the only occupations are those of farming and grazing. Some few have opened up small stores or trading posts.

The soil along the Cimarron River on the north is a sandy loam; upon the Deep Fork of the Canadian and Little rivers, a red clay; and upon the North Fork and South Canadian rivers, a black sandy loam. Most of the bottom lands are first rate, the upland generally second rate. The timber along the streams consists of pecan, cottonwood, ash, elm, hickory, oak, box elder, hackberry, and walnut; about three-fourths of the upland is covered with a scattering growth of black jack and post oak. The soil is usually thin, and I would consider rather uncertain for agricultural purposes. To insure success, crops should be planted very early, so as to mature by July 1.

**White intruders.**—At present the reservations occupied by the five tribes under the jurisdiction of this agency are comparatively free from obnoxious intruders, permanently located. At the date of the treaties for sale of surplus lands in the Sac and Fox and Iowa reservations there was a number of white persons then occupying tracts upon the reservations under this Agency and cultivating the same on shares by virtue of verbal leases with the Indians. When the order of the honorable secretary of the Interior appeared, dated February 26, 1891, several of these tenants, desiring not to impair their homestead qualifications, relinquished their leases and moved off of the reservations. Since it became generally known that the lands were soon to be opened to settlement, and especially for a short time during and preceding the recent per capita payments to the Sacs and Foxes, there have been a number of car-

penters, farmers, and laborers of various kinds seeking and finding employment among the Indians. In all of these cases the ostensible object was the pecuniary benefit derived from the labor; however, in some instances I became satisfied upon investigation that the real purpose was to secure an unfair advantage with regard to knowledge and location of the country, and such parties were promptly and summarily ejected.

The most troublesome element I have had to deal with has been the migratory class of "poor whites," who seem to owe allegiance to no State or country and whose home is wherever night overtakes them. Equipped with a small quantity of live stock, a wagon, and camping outfit, these nomads traverse the country, camping in the bottoms or on the wooded uplands. Owing to the dense vegetation, the scope of country, and the small police force at my disposal, it is extremely difficult to locate them at this season of the year. When found they are always on the move or express a willingness to go out at once. Their tactics are then to hover on the border for a short period and then to strike back into the forbidden country. Oftentimes, after being driven out or warned off, at intervals of a few weeks, the same outfits are encountered in different portions of the reservations. Every pretext imaginable is sought by people to remain upon the reservations. Many claim to be of Indian blood or homeless Indians, who to all appearance are either white or negro, and have no proof of ever having sustained tribal relations. Unless the Department furnishes sufficient military force to summarily evict all classes of intruders before the opening of these reservations to settlement, I am satisfied that their numbers in hiding will be sufficient to occupy, and will so do, a large portion of the choice land. My present means of expelling them and keeping them out are entirely inadequate. The Pottawatomie country is especially infested with this class of riff-raff whites.

There are also a number of tenants and laborers, of fair character, employed by the Citizen Pottawatomes and Sacs and Foxes to whom I have not considered the order of the honorable Secretary of the Interior was meant to be applicable, although they are upon the reservations without authority of law.

**Disbursements.**—I have disbursed during the last year the sum of \$193,837.99, \$132,000 of this being a per capita payment to the Sac and Fox Indians. This amount was paid them out of the proceeds arising from the sale of their surplus lands under the late treaty with the Cherokee Commission, and is in excess of their regular annuities. By the terms of the treaty this tribe was to receive \$185,000 in cash; \$45,000 of this sum is to remain in the United States Treasury, and is not to be paid out to the beneficiaries, according to the terms of the agreement, until after the approval of the schedule of allotments. The balance (\$300,000) will be placed to their credit on interest, at 5 per cent. per annum, in the United States Treasury, interest to fall due and be included in their yearly annuities.

General order and decorum has existed throughout these payments. The Indians are quiet and well disposed, respectful, and obedient in their demeanor. Considerable wonder was manifested as to what use they would make of this money, as the sum is far larger than any paid to them before. I find that although some has been squandered in cards, baubles, and the purchase of liquor at the adjacent white settlements, a large portion has been consumed in the purchase of good, sensible articles of subsistence and convenience and serviceable implements and machinery for use on their allotments—horses, mules, wagons, farming implements, cooking utensils, etc. The traders have sold to them three or four carloads of wagons. There is probably not a greater portion spent for foolish and useless purposes than would have been by an equal number of whites indiscriminately selected.

**Live stock.**—The growth of grass this year has been thick and luxuriant, and stock on the reservations is universally in fine condition. Some of the Indians own large herds of cattle, which are now being rounded up and placed on the market, as it is foreseen that the opening of the country to settlement will destroy their range.

**Marital relations.**—Perhaps the most obvious indication of the advancement of these tribes during the last fiscal year has been their growing tendency to regard the marriage relation as a sacred and necessary institution. There are no cases of polygamy among the Iowas, and but a single instance appears upon the roll of the Sacs and Foxes. The Rev. William Hurr, an Ottawa Indian and Baptist missionary at this agency, has solemnized a number of marriages in due form. Rev. Charles W. Kirk, a white man and superintendent of the Society of Friends' missions for the Indian Territory, located at Shawneetown, in the Pottawatomie Reservation, has also officiated frequently in this ceremony among the Shawnees and Pottawatomes.

There is no tribunal with powers to hear proceedings and grant divorces, and consequently such a decree is unknown among the full bloods. When two persons find that they can not live together amicably they make a verbal agreement among themselves, sometimes witnessed by other members of the tribe, to live separately. Where there are children as the fruit of the union and a division of their annuities to be drawn can not be decided upon between the parents, it is left to the general council

of the nation or to the business committee, which bodies consider the settling of such disputes a proper function of their office.

**Climate.**—The climate of this latitude during three seasons of the year, fall, winter, spring, and a part of the fourth, is delightful. The heated term comes upon us during the months of July and August. At that time wild vegetation is so dense and rank as to impede the free circulation of air, and with the thermometer ranging from 90 to 100, the heat is oppressive. As a usual thing, however, the temperature falls rapidly late in the afternoon, until by sundown the atmosphere is cool and comfortable for the night's rest. The winters are not severe. Only a light fall of snow is ever known, which usually passes away in two or three days. Cattle live through the winter and appear in the spring in fair condition—having had only the native grass or naturally cured hay standing on the ground for subsistence.

The health of the Indians, outside of their hereditary diseases, for the last year has been good.

**Intemperance.**—The old canker in the civilization offered to the Indian here makes its appearance with all its accustomed ravaging effects. The habit of imbibing strong drink seems with all Indians to be hereditary in its transmission, and those residing upon these reservations are no exception to the rule. I have instructed the United States deputy marshals and the Indian police to find and arraign, and asked the United States commissioner to hold for punishment to the fullest extent of the law, all parties connected with the illicit trade of introducing or selling liquor to any Indian under my jurisdiction. Many have been captured and punished, yet they continue to infest the country.

The opening to settlement and formation as a Territory of Oklahoma proper, with no statutory provision against the sale of liquor, has brought this contraband article to their very doors and made the chief enemy of their progress easy of access. Only a rigid vigilance and strict enforcement of the law enables me to retard, not check, the growth of drunkenness among them. Indians do not voluntarily furnish evidence to convict and punish whisky peddlers, and I would recommend the enactment of a law to punish drunken Indians by imprisonment until they should give such information as would convict the party who sells the liquor. The opening of the residue of this land to settlement under the present statutes will be equal to placing liquor in every Indian's home, and it will be the absolute ruination of many, in spite of care and watchfulness, unless the Department of Justice increases its vigilance and lays a heavy hand upon every offender.

**Indian police.**—The present force of Indian police is very inefficient for the service required. The main difficulty in the way of securing an effective police is the small amount of pay and little incentive offered. Ten dollars per month is no inducement to offer for the entire services of a really valuable Indian for this position. The number now in the service is 9; 8 privates and 1 captain.

#### ALLOTMENTS.

**Sac and Fox.**—The Sac and Fox of the Mississippi Indians have readily taken up the idea of allotments. The three special agents appointed to set aside their lands in severalty have just completed their work. Their schedules show a total of 549 allotments made. Only 526 names appear upon the annuity roll. By the terms of the treaty of June 12, 1890, all members of the tribe dying between that date and the date when the schedules of allotment were closed (since determined July 23, 1891) should be entitled to an equal allotment and share of the funds arising from the sale of surplus lands with the living members, to be set aside for the benefit of the heirs of the deceased. Twenty deaths have occurred in that period; three were allotted land not on the rolls and pending the action of the Department.

Actual field work by the special agents was begun March 23d. The treaty provided four months from date of commencement to conclude voluntary allotments. At the expiration of that time if any remained who had not of their own free will selected land, the allotting agents were instructed to set aside 160 acres of land each to the dissenters.

At the outset some difficulty was experienced. That part of the tribe known as the Kansas Sacs (so called from their previous residence in Kansas) living in their village near the Cimarron River, in the northern part of the reservation, refused to have anything to do with the allotting agent who was assigned that portion of the reservation as his division of the work.

Through their chief, Paw-she-paw-haw, and head men they entered formal complaint at the agency against the work. The chief stated that his people had never had any voice in the treaty and they were therefore not bound by anything contained therein; that they wished to dwell together in common, as one people, and neither desired to take up lands in severalty nor to sell the unoccupied residue. This objection was overcome by counsel. The suggestion was made to them that if they did not desire to become scattered and have white people settle among them, they take adjacent quarter sections. This plan they concluded to adopt. The site selected is the vicinity of their present village on Uetchie Creek, and the soil is

chiefly a rich, sandy loam. Of necessity, in taking the land in a body, some of inferior grade was included, but this matter was clearly presented to them and they decided that they would prefer to sacrifice the quality of some of the soil for the sake of maintaining and continuing their life in common. The allotments proceeded to a finish, the chief waiting until all his people had been provided for before selecting his own. This band numbers about one-fourth of the tribe. No other friction arose in the Sac and Fox allotments.

The work was completed on the 14th of July, ten days before the date fixed by the treaty arrived. The schedules were held open the stipulated time to provide in case of births. Most of the land allotted lies along the North Fork of the Canadian and Cimarron Rivers and Uetchie Creek. In the main it is well adapted for agricultural purposes. Eighty-seven thousand eight hundred and forty acres of the reserve have been consumed with the allotments, leaving a residue of about 385,000 acres to be opened to white settlement.

A majority of these Indians are equipping themselves with implements of agriculture and husbandry. A large portion of the recent per capita shares of funds arising from the sale of surplus lands paid them was expended in the purchase of mules, horses, wagons, plows, machines, and various implements used upon a farm. In my opinion many of this tribe look forward to the settlement of the residue of this reservation by the whites as a new era in their method of living, and expect themselves to settle down upon their allotments, profiting from the knowledge their white neighbors will introduce in the arts and methods of agriculture, and become industrious and prosperous citizens.

**Iowas.**—On the 20th day of May, 1890, articles of agreement were made and entered into at the Iowa Village on the Iowa Reservation by the Cherokee Commission and the Iowa tribe of Indians. By the terms of this agreement the Iowas relinquished all their right, title, and interest in the tract of land known as the Iowa Reservation, lying west of the Sac and Fox Reservation and east of Oklahoma proper, between the Deep Fork of the Canadian and Cimarron Rivers, provided, however, that each member of the tribe was to receive certain annuities, therein specified, and also should be entitled to make selection of 80 acres of land from the reservation to be allowed as an allotment in severalty. This land, after being held in trust by the United States for a period of twenty-five years, should belong to and become the property of the allottees, free of all trust and incumbrance.

February 13, 1891, this contract was approved by act of Congress, and in April John C. Robinson, special agent, began work assisting in making selection and setting aside lands in severalty to these Indians. He found no small amount of obstacles in his way. The previous winter had caught them all in very straightened circumstances. Failure of crops on account of drought, together with the scarcity of game, killed off by the Oklahoma settlers, had reduced their circumstances to the minimum. Several were old and infirm and dependent upon Government aid. All of which combined to sow a feeling of discontent and cause them to look with distrust and ill favor upon the Government and its emissaries.

It was talked among them that they had not received sufficient compensation for the residue of their lands. It was pointed out that the Government had been more liberal in its dealing with neighboring tribes; an example offered was the Sacs and Foxes.

On account of their small annuities they desired to receive their additional consideration in money to be expended at their own discretion in the purchase of live stock, implements, and necessaries, instead of by the Department. This latter I agreed to recommend, and so urged upon you by letter of April 23, to pay a part in money.

The work was slow and tedious during the entire period and the sixty days' time in which to receive voluntary allotments expired leaving 41 allottees still not having made selection. According to the terms of the treaty and instructions from the honorable Secretary of the Interior, Mr. Robinson proceeded to make choice of land for those remaining unallotted. This was accomplished in three days and the schedule closed. One hundred and eleven allotments were made in all, amounting in total to 8,880 acres of land.

An estimated area of the reservation places it at 225,000 acres, and there thus remains about 216,000 acres for white settlement. The allotments almost all lie in the Cimarron River Valley, some few being located in Deep Fork Valley and in the vicinity of their old village. The land selected is chiefly bottom and best suited for farming purposes.

Most of the members of this tribe can speak English and understand considerable about farm work. The proximity of the Oklahoma settlers has been a constant and valuable source of education for them in this line. This year they have several small patches of ground in cultivation and crops were never better. The acreage is small, however, since the drought last year blasted the crops and the small annuities did not enable them to provide themselves with sufficient implements and seed for this season's planting.

**Mexican Kickapoos.**—This is a restless, suspicious, and stubborn tribe of Indians. They will sacrifice all comforts and benefits allowed them by the Government rather than deviate from their own nonprogressive notions, for fear of putting themselves in jeopardy of being civilized. They, like Big Jim's band of Upper Shawnees, refuse to patronize schools or allow themselves to be enrolled or enumerated.

The past year, owing to the failure of crops from drought, they were almost in a condition of famine, several of them actually starving to death. On representation of the facts I obtained authority to purchase for them seven months' rations out of the funds appropriated for the support of Kickapoos. After the provisions were purchased they actually refused to enroll for the purpose of drawing the same, notwithstanding their starving condition, and the rations had to be sold. The cause of this was their fear that the enrollment might in some way serve to force an arbitrary allotment upon them.

It is extremely difficult to get them to accept any innovation into their customs and usages of living. Especially has it proven a tedious process in the case of allotments. The Cherokee Commission met this tribe in council twice in 1890 and once during the present year, at all of which councils the common result was reached—the Indians absolutely refusing to treat for the sale of the residue as surplus lands.

At the last meeting with them the argument was presented that they were situated on their present location merely by executive order—a clemency that might at any time be revoked and the same power used to remove them to other lands; that they should take advantage of the present opportunity to secure permanent homes and a good competence arising from the sale of the surplus. To this they replied that the reservation was no larger than sufficient for their needs; that to become definitely located would be to destroy their visiting, feasts, and dances; that if they did not own the reservation it would not be right to dispose of that which did not belong to them, and if it was theirs they did not wish to sell. The Commission could do nothing further with them, and here the negotiations for the present were ended.

In my opinion these Indians will ultimately accept the proposition of the Commissioners. They are by nature so suspicious that they are slow to comprehend meaning and grasp situation. But that the opening to settlement of the adjoining reservations already treated for and the influx of white settlers will illustrate the error of their present ways and show them that their old tribal relations and savage instincts are no longer best or tenable, I feel confident.

**Absentee Shawnees.**—The Absentee Shawnees are located north of Little River and south of the North Fork of the Canadian River, in the Pottawatomie Reservation. They are composed of two elements, the Upper Shawnees, or Big Jim faction, with Big Jim for head man and counselor, and whose instincts and precepts heretofore seem to have been to oppose everything that tended toward the civilization and advancement of the Indian. The Lower Shawnees constitute the other element and with White Turkey (a liberal, progressive, wide-awake full blood) as chief, are rapidly acquiring the ways and methods of the white man in manner of living, mode of agriculture, dress, religion, and government.

As was foreseen at the outset, Big Jim and his following were utterly opposed to the plan of allotment. They stubbornly refused to listen to or act upon the advice of Maj. N. S. Porter, special allotting agent. Special Agent Porter and myself, acting under instructions from your office, dated February 27, 1890, caused to be surveyed and assigned allotments to 195 Absentee Shawnees (Upper), who refused to make selections for themselves, as provided for under act of February 8, 1887. They have not as yet expressed any intention of asserting proprietorship in the tracts so set aside. The land was allotted them, however, so as to cover all their improvements.

Having no annuities and being thrown upon their own resources several of this band have small tracts in cultivation, and their farming operations are meeting with a merited success. These people are very good workers, and notwithstanding their stubborn and nonprogressive ways, are above the average Indian in morals, honor, thrift, and industry.

The Lower Shawnees were quick to see and not slow to take advantage of the opportunity offered them to secure good farms and grazing lands and permanent homes in a country admirably situated and richly endowed with natural facilities for instituting and carrying on the arts of agriculture and grazing. Under act of Congress approved February 8, 1887, 363 allotments, the voluntary selections of the Lower Shawnees, were made and set aside for the use and benefit of these Indians. Work concluded April 14, 1891. This division of the Shawnees are law-loving, tractable, and well disposed. They patronize the schools and are following the example of their chief in becoming educated in English and figures and raising live stock and farm products.

**Citizen band of Pottawatomies.**—Here again, although considerable difficulty was experienced in the beginning, and of somewhat extended duration, it was finally met and cleared away, and the work of allotment proceeded to conclusion. The opposition and the prejudices here encountered probably arose from the fact that among these Indians, under the act of May 23, 1872, the scheme of allotment was first at-

tempted to be made practical and put into execution in the Indian Territory. The idea was new and the band was slow to receive it. Much time was spent in debate and council among the head men. Special Agent Knox was sent among them to allot lands. But little was accomplished until after the passage of the Dawes bill or act of February 8, 1887. Maj. N. S. Porter was then made special agent and assigned to this locality, and the Indian agent instructed to cooperate with him in the work of allotment. It was discovered that most of those (there were only a few in all) assigned land by Special Agent Knox had abandoned their allotments. The work proceeded from year to year until near the close of the present fiscal year, when all entitled having received allotments the schedules were closed.

Their allotments are chiefly located on the south valley of Little River, and along the South or Main Canadian River in the 30-mile square tract. Those having improvements north of Little River prior to the passage of the act of February 8, 1887, were allowed to take their allotments in that location, otherwise they were required to select south of the river, in order not to conflict with the Shawnees. Considerable bitter feeling had already been kindled between these tribes on account of dispute as to the boundaries of their reservation. Another difficulty confronting us here at first arose from sections 16 and 36 being reserved for school purposes. In several instances members of the tribe were living and had improvements upon this reserve. Instruction from your office obviated this trouble by allowing all persons so situated prior to the passage of the act to hold as allottees.

A total of 1,363 received allotment in accordance with the act of February 7, 1887, and 106 under the act of May 23, 1872, making a grand total of 1,469 Citizen Pottawatomies, or 2,032 Citizen Pottawatomies and Absentee Shawnees receiving allotments in the Pottawatomie reservation.

The Citizen Pottawatomies, as signified by their name, are citizens of the United States. They are sufficiently educated in figures and computation to take care of their business interests, and most of them read, write, and speak English. They have followed the pursuits of agriculture and grazing for many years, and some have acquired considerable wealth. They wear citizen's clothes, and in many ways are copying and carrying out the characteristics of civilization.

This reservation contains in the aggregate 575,000 acres, a little over half of which has been taken up with the allotments, leaving over 275,000 acres for white settlement. The upland is mostly second class, largely covered with a growth of black jacks and scrub oaks; cottonwood, pecan, walnut, elm, ash, and hickory is abundant along the streams. The country is fairly well watered. The upland is best suited for grazing, while the bottoms contain some as fine agricultural land as there is in the world.

**Number of allotments made.**

Lower Shawnees .....	368
Upper Shawnees .....	195
Citizen band of Pottawatomies .....	1,469
Iowas .....	111
Sac and Fox .....	549

2,692

**Religion.**—Here, too, the year just closed has witnessed some advancement. The leavening power exerted by the missionaries is not barren of results. There does not seem to be much progress among the full-bloods and uneducated members in the way of attendance upon Christian ceremonies, etc., but there is gradually a dissatisfaction arising with the fetich dances and barbarous practices. The universal ghost dance among the tribes last winter has made its appearance here, but in a very mild and peaceable form. No disturbing or inflammatory proceedings of any kind were held.

Below I append the statements of the Christian workers in the field.

SAC AND FOX AGENCY, OKLA., June 30, 1891.

Sir: In accordance with your request I herewith submit a brief statement of the mission work of the Baptist society under my charge.

The Sunday morning and evening meetings have been regularly held during the past year, except in vacation months, when the morning service has been omitted—likewise the Sabbath school. The attendance at all our meetings has been very good, and somewhat better than last year, from which we are encouraged to continue the work and to hope for better things. The Sabbath school was quite prosperous during the entire year, and by our labors with these young minds we expect to accomplish much good.

I believe that some change for the better in respect to morality is perceptible among the older people of the tribe. The marriage relations are better observed than heretofore. Six marriages among the Indians have been solemnized by me during the year. The membership of the church remains about the same in number.

I take this opportunity to express my thanks to yourself and others who have assisted me in various ways and have thus encouraged me.

Very respectfully,

SAMUEL L. PATRICK,  
United States Indian Agent.

WM. HURB,  
Baptist Missionary.

SHAWNEETOWN, OKLA., *June 30, 1891.*

**ESTEEMED FRIEND:** Complying with your request, I have the pleasure of herewith submitting statement of missionary work of the Society of Friends in the limits of your agency.

We have continued to occupy the grounds reported last year. At our station on the Iowa Reservation we have supported a school for the children of the tribe about eight months of the year under the management of an efficient teacher. Number enrolled, 16; per cent of attendance, 76. In the changes incident to the allotment of lands to these Indians, though they seem to have drifted somewhat from under the direct care and influence of the missionary, they quickly return for help in time of sickness, and many are now eagerly inquiring when school will again commence for their children. Provision is made for boarding several of these in the missionary's family the coming year.

Though we have not yet been able to secure the permission of the Mexican Kickapoos to build a house and open a school for their children in their reservation, a minister has visited them regularly and is being received with some favor by many. The chief and two other families have consented to place their girls in school under our care. During the year we erected a house for their accommodation on our allotment at Shawneetown, and have had 5 girls in the home and school thus provided for about seven months past.

Able assistance in hearty coöperation by Prof. Harvey, superintendent of the Shawnee Indian boarding school, and other Christian employes, has brought the children of the tribe regularly to the Bible school and church service during the year.

Our improvements consist of three dwellings and two houses for church and school.

Amount expended for support of missionaries, teachers, and helpers, \$2,000.

With thanks for uniform kindness and official courtesies extended in promoting our missionary efforts, I am,

Very respectfully, your friend,

CHAS. W. KIRK,  
*Superintendent Friends Indian Missions.*

SAMUEL L. PATRICK,  
*United States Indian Agent.*

**Employés.**—The force of employés at this agency includes 2 physicians, 2 blacksmiths, 2 additional farmers, 1 clerk, and 1 laborer. The duties incumbent upon me during the allotments and recent payment of treaty funds made it necessary for me to request the employment of additional clerical service, which was allowed. This extra service is needed at the agency office and should be continued. In the main the persons holding these positions are well qualified, sober, capable, and industrious, and are a credit to the service.

**Education.**—The educational advantages offered the children under the jurisdiction of this agency are entirely inadequate to the demand. The census shows a total of over 600 children of school age between the years of 6 and 16. The two Government schools for the Sacs and Foxes and Absentee Shawnees, only, located upon the reservations, have had an average daily attendance of something like 120 pupils. This number crowds the quarters to their utmost capacity. The attendance during certain portions of the year ran as high as 150, but at such time, on account of the crowded rooms, there was no such thing as administering to the wants of the children with comfort or convenience. A number of those who have never seen the inside of a school-room express a willingness, and a large number of others could be induced, to attend schools upon the reservations if proper facilities were provided. At the present time the Pottawatomies and Kickapoos have no provision for reservation schools. The Pottawatomies are very anxious to be provided for. I would respectfully recommend that reservation school facilities be offered these tribes by the Department, and that compulsory attendance be imposed upon the Kickapoos, who are opposed to education.

About 40 children from this agency will attend school at Chilocco, the Government Indian school in the Cherokee Strip, during the coming school year. Various others are in attendance at Haskell Institute, Kansas; Hampton, Va.; and Wabash, Ind.

**Sac and Fox of the Mississippi school.**—The Sac and Fox of the Mississippi Government boarding school is situated at this agency on the reservation by that name. The corps of instructors I consider are well selected and qualified for the work before them. The average attendance for the year has been 52. Many have applied themselves with diligence to their books, and the results are shown accordingly. In the industrial department much has been accomplished. About 85 acres of land were put under fence, 500 rods of which was made hog-tight. Fifty acres were planted to crops, about 25 acres of which were broken out at the beginning of the season; several acres have been grubbed ready for planting this season. In the way of buildings and improvements at this place for the year there have been erected a laundry and bath rooms connected, 20 by 50; also a woodhouse, 16 by 30.

The school buildings proper are small, poorly arranged and ventilated. The Sac and Fox of the Mississippi national council have just appropriated out of interest accumulated upon the money to their credit from sale of surplus lands, \$13,000 to be used in the erection of a new school building, which should be ample accommodation for the children of this tribe. They also appended a resolution to such action requesting Congress to set aside a certain tract of land therein described contiguous to the present school section reserved, and containing 560 acres, to be used as a site for such building, title to vest in the Sac and Fox nation. This request in my opinion

should be allowed. The land is needed for the purpose mentioned, and a favorable indorsement by the Department would be equal to a public commendation by the Government of the act of the council.

The Absentee Shawnee Government boarding school.—This institution is located at Shawneetown, in the Pottawatomie Reservation, about 40 miles southwest of this agency. It also has been crowded during the past year. The entire patronage comes from White Turkey's band of Lower Shawnees. The Upper Shawnees, Big Jim's band, represent the nonprogressive element, and steadfastly refuse to send their children to school. The average attendance here for the fiscal year ending June 30, 1891, has been 69 as against 58 for the preceding year.

The farm in connection with this school contains 320 acres, 100 acres of which are poorly fenced and 70 in cultivation. There is a very fine prospect for crops. The fences are very imperfect. Posts have been made and set to fence 80 acres with barbed wire, but the estimate for the wire has not yet been allowed.

There have been several improvements added about the buildings during the past year. A barn 40 by 50, laundry 20 by 50, and two porches 8 by 80 and 12 by 20 have been built new. Two wells have been sunk; one 63 feet and one 162 feet deep. The latter is supplied with pump, tower, tank, windmill, etc., with the necessary piping to convey the water to laundry, bath rooms, and kitchen.

Sacred Heart Mission.—The Sacred Heart Mission is a contract Catholic school, consisting of St. Benedict's College and St. Mary's Convent, two separate schools, the college for boys and the convent for girls, both under the supervision of the Benedictine Fathers. It is located about 65 miles south of this agency in the Pottawatomie Reservation. Good and ample buidings are provided and the results of the management are very satisfactory.

In conclusion.—I desire to express my thanks to the Department for the attention shown the tribes under my charge during the year just closed, and for the speedy action taken upon the many requests made and measures presented consequent upon the administration to their needs.

Very respectfully, your obedient servant,

SAMUEL L. PATRICK,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF ABSENTEE SHAWNEE SCHOOL.

SHAWNEETOWN, OKLA., July 18, 1891.

In accordance with general circular from Indian Office, dated April 3, 1891, I submit the following report:

History of school.—There are no records in the school from which I can learn its history. It seems to have been started some twenty years ago as a mission school, a portion of the children attending as day pupils and others as boarders. The parents of these latter paying \$2.50 per week for board and instruction. Several years later the Lower Shawnees counseled with the Quakers, who were in charge of the school, and the agent. They promised to furnish the children, but required that the school should support them. The school was granted some further Government aid. Since then it has come to be entirely supported by the Government.

School farm.—The farm contains 320 acres. The half section marked "S" is school lands. The strip "b" is occupied by the Friends' church; also "d" is occupied by Mr. Bourbonnais's barns and yards.

S			S
S	2	1	S
d	S	S	S
	3		
	b	S	

The forties numbered 1 and 2 with a part of 3 are under fence, about 100 acres in all. The fence is "Virginia rail," old and rotten. About 70 acres are under cultivation, mostly bottom land. Ten acres is an orchard, which last fall yielded 250 bushels of apples and 10 bushels of peaches. The rest of the farm is covered with a thick growth of brush. There is an insufficient pasture, not supplied with water. The bottom land should be drained, the entire farm grubbed, and barbed wire furnished for a seven-wire "hog" fence.

**Buildings.**—The main part of the house is 36 by 100 feet, two stories. The "L" is 28 by 50 feet, also two stories. In one of the upper halls two rooms were temporarily partitioned off for employes. Including these, there are twenty-five rooms and four halls in the house. There is a barn 40 by 50 feet, a wood house 15 by 30 feet, and a laundry 20 by 50 feet. This latter contains laundry, bath room, and ironing room.

**Repairs and additions.**—During the year the barn, laundry, wood house, a porch 8 by 80 feet, and one 12 by 20 feet, have been built new. The old laundry was moved against the house and fitted up as a girls' play room. The old barn was moved, reroofed, and fitted up as a shop. A well was dug 68 feet deep, but this failing to furnish water, a well was bored 162 feet, which yields abundantly. A windmill and an elevated tank are provided for this well. The water is piped from this tank to the laundry, bath room, and kitchen.

**Industries.**—Last year some 65 acres were planted to corn, but drought ruined the crop; 50 bushels of potatoes were raised, and a large supply of garden vegetables. Our wood was cut in the woods, hauled from 3 to 5 miles and prepared for the stove, and 1,000 posts made and set to fence an "80," but the wire failed to come. For nearly the entire year water was hauled for all but cooking purposes, and our supplies for the school hauled from the agency, 38 miles. In the house, rags were prepared for 125 yards of carpet, which is now partially made up and laid. In the sewing room 2,619 yards of material have been fabricated into 777 articles for wear and household purposes. Thirty-five bushels of apples were dried for winter use and 40 gallons apple butter put up.

**Course of study.**—The school has been graded according to the new course of study and reasonable progress made. The obstacles are those always noted in graded schools; pupils are not equally apt in the different branches. This is overcome by allowing the pupils to recite in more than one grade. The greatest difficulty is found in the fact that the "Grube method" of numbers does not seem suited to the needs and minds of these children. They "get all mixed up."

**Attendance.**—The average attendance was—

First quarter .....	51
Second quarter.....	74
Third quarter.....	78.5
Fourth quarter.....	72.5

The drop in the last quarter was due to an epidemic of sore eyes, which the physician was entirely unable to control. Until this time our school was *full*. We refused some for lack of room. The average attendance for the year was 69, against 58 for the preceding year. Persuasion has been our only means for securing attendance, the police having been used but twice during the year. The most noticeable lack is a suitable wagon and team for gathering in children. It is not good economy to have to take heavy draft horses and a lumber wagon for a 40-mile drive for perhaps one child.

Better facilities should be provided. These people are ready for compulsory school attendance. I would respectfully request that the Commissioner give the necessary directions that the agent may announce it to the Indians before September 1. The police have never been used here for bringing in children for their first attendance. There are about 140 children of school age among the Lower Shawnees. With increased facilities and an order for compulsory attendance, subject to excuse by the agent, we should be easily able to secure their attendance. We can do no more, however, now till we have more room.

In conclusion allow me to thank the Commissioner and yourself for the many improvements of the year which make the work more satisfactory and congenial. I hope a full school and a pride in keeping it in good condition have already expressed my appreciation better than this does.

Respectfully submitted.

G. I. HARVEY,  
Superintendent.

S. L. PATRICK,  
United States Indian Agent.

## REPORT OF SUPERINTENDENT OF SAC AND FOX SCHOOL.

SAC AND FOX AGENCY, OKLA.,  
June 30, 1891.

DEAR SIR: In compliance with your circular letter of April 3, I herewith respectfully submit the following report of the Sac and Fox mission school. I am not able to give you the early history of the school, as I can find no record of the same.

**Industries.**—I am glad to say that this school has made considerable advancement in the last two or three years. The children are cleaner in their habits, more obedient, and easier disciplined. Many of them take pride in presenting a neat appearance in dress, etc.

The parents of late have expressed a desire to have their children taught to work as well as to speak English, while in the past they often complained that they were compelled to work. Since January 1 the boys of the school, under the direction and assistance of the industrial teacher and laborer, have assisted in making and setting 1,100 fence posts, made and trimmed 1,200 rails at the ends, so as to nail them to the posts, completed the fencing of 40 acres, posts set 8 feet apart, 3 rails at the bottom and 4 wires at the top, making an excellent fence against hogs, besides fencing another field of 45 acres, using posts set 8 feet apart and 6 wires. The boys grubbed 5 acres of thick underbrush from the fields fenced. During the winter months the boys cut all the fuel used in the school, equaling about 160 cords.

We have in cultivation 35 acres of corn, 5 acres of oats, 5 acres of millet, and about 3 acres of garden, all of which was put in and cultivated largely by the boys.

Aside from the field work the boys have been regularly detailed to do the ordinary chores about the school, such as milking cows, feeding and watering horses, policing the school grounds, carrying in wood, and swill to the pigs. Another laborious task they have regularly and uncomplainingly done has been to draw from wells 50 feet deep all the water used in the kitchen and laundry, equaling from 3 to 5 barrels a day.

The girls have likewise been taught to work, regularly detailed to the various departments of the school. Many of them are able to make cakes, pies, and bread, and are valuable assistants in the

dining room and kitchen. Perhaps one-third of the larger girls are able to cut and make plain garments. There have been manufactured in the sewing room this year 107 aprons, 83 pillowcases, 10 tablecloths, 82 drawers, 186 napkins, 186 dresses, 19 pants, 120 shirts, 27 towels, 5 waists, 33 skirts, and 12 pieces of underwear, besides the repairing. All the largest girls are able to use the sewing machine. The small girls were sent to the sewing room one hour each day, where they were taught plain hand sewing, such as tacking carpet rugs, quilting, etc.

There has been received from the weaver 70 yards of carpet, the result of their work. The girls have also done excellent work in the laundry and dormitories.

Condition of buildings.—You will observe from the accompanying plat of the school buildings that the house is very small, poorly ventilated and lighted. We are not able to accommodate more than 50 children, and not that many well. Immediate provision should be made to accommodate 100 children at this place, as there are 160 children of school age in this tribe, 60 of whom have never attended school at any place.

The buildings not represented on the plat are: One brick structure of one room, large enough to accommodate 40 pupils; it is in very fair condition. One small brick smokehouse, now used for a storeroom, but it should be removed from the ground. One new building, just completed, 20 feet wide by 50 long; it is divided into three rooms, two 12 by 20 and one 20 by 22, the larger intended for a laundry, the two smaller for clothing and bath rooms. One barn, 36 by 44 feet; this is in good condition; one side is cut off for stalls for horses and cows, and will accommodate eight head; the other side is divided into three parts by walls and used for cribs and tool rooms. There is one small frame building 14 by 16 feet, used for an ironing room; one woodhouse, new, 16 by 30 feet, which has been needed here for many years. Besides these there are three small outhouses in good condition.

In conclusion, concerning the buildings I desire to say the principal building now in use is too small, rooms poorly arranged and ventilated. It would be a waste of time and money to make additions; two have already been added, which makes the condition worse. I think a new building upon a different site at a cost of \$10,000 should be erected without delay.

Grading of school.—I experienced very little trouble in grading the school, the principal one being in the uneven advancement, some able to read in second reader and not know anything in numbers.

The attendance during the year has been very regular. Two or three boys who have not been in school before this year gave us some trouble by running away.

I send you a list of the children of this tribe who have never attended school. There are 60 of an average of nearly ten years. Also a list on a separate sheet of those I think should be sent to Chillico; but unless your office assists in effecting this transfer it will not be made to provide room for those who have not had the benefits of the school.

Stock.—We have 4 head of horses, all in good condition; 3 cows, 1 yearling, and 2 calves; some hogs. These are of a very poor quality; for the want of hog fences and feed they have been permitted to run outside, and have mixed with the wild hog until the grade is very low.

Crops.—The garden has been excellent this year, the children being able to have beans, onions, peas, lettuce, and potatoes. The oats, millet, and corn promise an excellent crop if the season continues favorable.

Employés.—As to the employés I have for the most part been pleased with the selections made by Col. Patrick, agent; they are competent, willing workers and should be retained with perhaps one exception.

The agent, Col. Patrick, has given me his hearty support during my administration, and I believe is doing all he can to impart better the conditions of the Indian. This, I think, with the accompanying plats, schedules, etc., covers the requests of your letter.

I am, obediently yours,

JAMES K. ALLEN,  
Superintendent.

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN OREGON.

### REPORT OF GRAND RONDE AGENCY.

GRAND RONDE AGENCY, OREGON,  
August 1, 1891.

SIR: In compliance with your instructions I have the honor to submit the following as my report for the year ending June 30, 1891, being my first report as Indian agent at this agency from the 26th day of January, 1891.

Population.—The annual census as required by law was taken by myself and agency physician going from house to house, and I am satisfied that it is correct, showing every individual man, woman, and child on this reservation. The census roll herewith transmitted shows 179 males and 182 females; total 361 Indians and mixed bloods.

The census as required by law shows

Males above 18 years of age.....	116
Females above 14 years of age.....	135
Males from 6 to 16 years of age.....	44
Females from 6 to 16 years of age.....	31

Making 75 school children between the ages of 6 to 16, whether attending school or not. Out of the whole number of Indians I think 300 of them can use English enough for ordinary conversation, though nearly all understand the English language more or less, but seldom try to speak it. They all wear citizen's dress wholly. The Indian of song and romance is dead and gone so far as the Indians on this reservation are concerned.

**Sanitary.**—We have had considerable sickness among the Indians, but I am happy to state that the old "medicine men" have lost their influence. Much credit is due to Dr. Andrew Kershaw, agency physician at this place, for the success with which he has treated them. They all seek his services of their own accord, and quite a number have called on him in obstetrical cases who never before thought of calling on the agency physician.

**Land in severalty.**—All the Indians on this reserve have been allotted land in severalty, but we have never heard a single word from the Department regarding their patents, and a great many of them are very uneasy about the matter, as it has been two years since the special agent allotted them the land, and up to this time they do not know whether his action will be approved or not; and as a great number of the surrounding whites take much pleasure in annoying and causing the agent trouble, they tell the Indian that he will never be given his land; that the Government is waiting to see how much they can sell; and when it is known that the whole reservation can be sold, then the Indians are to be moved to some other country and the land sold to the whites. Of course the Indian tells his friends what he heard, then they wait on the agent, and I care not how carefully he explains the matter the majority will go away with a lingering doubt in their minds regarding it. The fact is that in justice to the Indians this land matter should be attended to, and I earnestly hope that in the near future I will be able to tell the Indians that the land is theirs and present them with their patents.

**Indian industries.**—The Indians of this agency are, as a rule, very industrious. Their industries consist principally of farming, cutting wood, grubbing, and clearing land for themselves and the neighboring whites. They all have some stock, some have quite a number of cattle, and some have both cattle and sheep, whilst all have from two to eight or ten ponies. Since assuming charge I have used my best efforts towards influencing them to have less ponies and more cattle and sheep, and think that by another year I will be able to show an improvement in this matter. I have also bent all my energies from the beginning of my taking charge (last January), to do all I could towards inducing them to improve their farms, do more and better plowing, building fences, etc.

**Farms and lands cultivated.**—I estimate 8,000 acres of tillable land. Of this I estimate 1,069 acres actually cultivated by Indians; there was also 109 acres new land broken during the year. Of the tillable land I estimate 5,010 acres under fence, and 2,000 rods of new fencing made during the year.

**Crops, hay, etc.**—Of wheat there was threshed 4,329 bushels; oats, 15,451 bushels; barley, 50 bushels; these amounts were not estimated, but were actually taken from the machine measure, and furthermore, the threshing machines, three in number, were owned and all the work done by Indians. Of other produce raised by Indians, estimated, 908 bushels of potatoes; 79 bushels of turnips; 56 bushels of onions; 43 bushels of beans; of other vegetables, 620 bushels; also, 705 tons of hay were cut.

I have induced quite a number to summer fallow considerable land, and I shall furnish them with fall grain, and from my own experience in farming in this country I am satisfied they will have larger and better crops next year.

**Employés.**—An efficient and experienced force of employés is a *sine qua non* to the successful work of an agent in the advancement of Indians, and believing that none of the positions could be properly regarded as offices to be filled with reference to the employé's politics, and not desiring to secure places for personal friends or relatives, I decided to keep the force at hand and make the retention dependent upon individual merit rather than outside influence. The present force consists of regular whites, physician, 1; miller and sawyer, 1; blacksmith, 1; total, 3. Regular Indians, carpenter, 1; additional farmer, 1, and apprentices 2—1 in the carpenter shop, the other in the blacksmith shop.

**Education.**—The boarding school connected with this agency, and situated within 300 yards of the agency dwelling and office, has been in successful operation during the year. The employés consist of a superintendent and principal teacher, matron and seamstress, cook and laundress, assistant cook, industrial teacher, and 2 assistants, Indian girls.

The large appropriations for school facilities, for feeding, clothing, and instruction of Indian children shows that education is regarded as the great factor in civilizing the Indian. The school at this agency has done a great deal of good, but I must say that I find plenty of openings for improvement; especially is this the case in teaching the boys industrial pursuits.

When I assumed charge I found an Indian filling the position of industrial teacher—at least he was drawing the salary for that position. He seemed to have the idea that his duties consisted of taking 10 or 12 of the boys and ordering them to do a certain piece of work, after which he would go to the shops or wherever he could rest the best. As soon as I learned the state of affairs I called him to the office and told him that it was his duty to be with the boys and instruct and show them how

to work by working himself. This he did not like, saying he was doing as all former industrial teachers had done. I told him I did not care how former teachers had done, it was he that I had to deal with, and that he must do as I said. He at once told me that he would not do that and if I insisted on it he would resign. I told him all right, and accepted his resignation. At the close of the fiscal year I presented these facts by letter to the honorable Commissioner and asked that the position be changed from Indian to white. This, I am happy to say, was granted.

**Police.**—The Indian police force, 1 captain and 5 privates, have given me entire satisfaction. They are very efficient in the duties of their office. They have been selected from the most intelligent, orderly, and influential men of the tribes, and are willing at all times to perform duty when called upon. They are obedient to orders and also feel the responsibility which they have assumed. They have preserved good order throughout the past year.

**Court of Indian offenses.**—There are regular sessions of the Indian court held at what is termed the court-house, an old building set apart for that purpose, and the importance of this court is now such that it would seem almost impossible to do without it. Offenses of every character committed at the agency are brought before this court for adjudication, and it has relieved me of much annoyance in trivial matters and aided materially in the more important cases.

**Saw and grist mill.**—We have here a good water-power saw and grist mill, which is operated by a competent and careful miller, Mr. J. B. Trullinger, who reports to me that he has sawed the past year 169,463 feet of lumber. Of this 114,000 feet was sawed for Indians and 48,000 feet of same dressed. The balance, 55,463 feet, was for Department use; of this 35,000 feet was dressed. He also reports 1,500 bushels of wheat ground for Indians, and 220 bushels for Department. All this time he has kept the mills in good repair.

**Agency buildings.**—All the buildings at this agency, with the exception of the physician's dwelling and the blacksmith and carpenter shops, are old and in a dilapidated condition. Especially is this true with the barns; in fact, the agency barn is even dangerous, and I doubt very much its standing until next spring. Should there be much more snow this winter it will certainly collapse. I have examined it carefully, and to make an attempt to repair it would simply be a waste of time, lumber, and money. The other barns and some of the dwellings are very nearly in as bad a condition. I have submitted estimates for new buildings, but am told that the appropriations have been exhausted, so will have to get along for the present with the old buildings.

**School buildings.**—The school buildings are spacious and well arranged and afford ample accommodation for over 70 pupils. This year I have had a laundry erected, 40 by 44, two stories high, but have not quite completed the inside work. This building was greatly needed and will be of great benefit to the school.

**Indian marriages.**—A large proportion of the heads of families on this reservation are living with their women, married according to Indian custom or by the priest, and I am sorry to say that in neither case is the tie at all sacred, nor does it hold the parties together whenever the man by caprice or because of his fancy to another chooses to sever it. There is, however, a growing disposition to be lawfully married, as I have explained to them the conditions their children would be in towards obtaining their parents' land and other property in the future.

**Conclusion.**—In looking the ground all over, I am free to say that these Indians are moving forward. It is true that there are some laggards and men of bad influence among them; but there is apparent among them a great number of those who desire to help themselves and become self-sustaining, and I think with the right kind of training, firm and judicious, that they will become self-supporting and commendable citizens.

I am, sir, very respectfully,

E. F. LAMSON,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

#### REPORT OF SUPERINTENDENT OF GRAND RONDE SCHOOL.

GRAND RONDE, OREGON,  
*August 26, 1891.*

HONORED SIR: In compliance with instructions from your office, I have the honor to submit the following report for the scholastic year terminating June 30, 1891:

The progress in general has been very satisfactory. Our school averaged throughout the year 60 pupils, about 70 being enrolled. Work in the schoolroom was carried on without intermission from October 1 to June 30. The progress, especially of the elder ones who already understood English, has been very encouraging. Several of the pupils, however, were new from their homes, in which case the

lack of civilization and want of knowledge of the language rendered them doubly a charge; but these obstacles gradually succumbed to the patient endeavors of teacher and matron. It is gratifying to notice how even eager our Indian children are to give up their native dialect, the pleasing result being that at the close of school every child could converse in English without any need of taking refuge to "jargon."

The conduct of the pupils during the past year has been excellent and they have exhibited a trustworthy and industrious spirit. In the schoolroom they have been respectful, studious, and attentive; quick to grasp an idea, eager for advancement. The generality of our Indian pupils show great talent for penmanship, drawing, and music. During the past year two Indian girls have learned to play the organ sufficiently to accompany their companions, all of whom learn singing.

Our school closed this year with the usual entertainment, the programme consisting of recitations, a drama, songs, and interludes of instrumental music by the Indian girls who play, also by Indian boys' brass band, to whom much praise is due. Our audience pronounced the whole a success and remarked that the pupils deported themselves with courage and politeness—the fruits of their lessons in etiquette and moral conduct.

Earnest endeavor has been made to organize the school on the basis of the new course of study, but the lack during about six months of an assistant teacher for the boys offered a very serious obstacle to its complete realization. I experienced that a teacher in a schoolroom of 60 pupils must conform to circumstances much more than is desirable. The drawback caused to all pupils by this want of a male teacher for the boys is to be regretted, and it is hoped that with the aid of an efficient male teacher we can in the coming year organize our school entirely according to the plan recommended by the Department.

The larger girls who have been in regular attendance during the past two or three years have become quite proficient, not only in the work of the class room, but also in that of the laundry, kitchen, and sewing room, where they cheerfully devote themselves to the work at hand, and really enjoy the acquirement of habits of industry, frugality, and domestic economy. They have learned to cut, make, and mend boys' and girls' clothing. We have endeavored to awaken in them a taste for decoration of school and home and as a pleasing result they have voluntarily spent many recreation hours on pieces of simple and attractive fancy needle work and crocheting which would compare quite favorably with similar efforts of girls in civilized life. Each girl was allowed to take home these products of her labor. Our flower garden, made and cared for by the Indian girls, does them credit.

The larger girls deserve praise for their kind and devoted attention in assisting the matron in caring for their sick companions. I am happy to say there was, however, not very frequent call for these services, as the health of the pupils has been exceptionally good. Only one death occurred at the school in the course of the year. The school is admirably situated for health and the climate is very agreeable.

The boys deserve special mention for good conduct and faithful application to their various duties of gardening, farming, caring for stock, milking, and cutting and splitting wood. As the boys were mostly young, average age about 12, none were placed for apprenticeship with the tradesmen, but besides the regular attendance at school they performed throughout the year all the chores, morning and evening.

Great improvement was made this summer by the building of a two-story laundry. Estimates for repairs and new buildings have been forwarded.

It is with much pleasure that I hereby record my appreciation of the noble moral character and sterling qualities of the school employes, who have so faithfully coöperated with me in our every effort to make this school a practical lasting success and to extend its good results even to the squalid homes of the reservation Indians.

Extending my thanks to the Department for its courteous consideration and treatment, I am, honored sir, very respectfully,

Your obedient servant,

ROSA BUTCH,  
Superintendent.

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF KLAMATH AGENCY.

KLAMATH AGENCY, OREGON,  
August 4, 1891.

Sir: In compliance with office instructions, I have the honor to submit my annual report for the year ending June 30, 1891. I assumed the position of agent here on the 1st day of January, 1891. \* \* \*

Tribes represented on reservation.—The Indians composing this reservation represent the tribes of Klamaths, Modocs, Snakes or Piutes, and there are quite a number of Pitt River Indians on the reservation, who were captured and made slaves by the Klamaths in the combats between these tribes many years ago.

The Pitt River Indians mentioned were many of them captured when they were children, and they have grown up on this reservation and speak the Klamath language very fluently, many of them having forgotten their native tongue. The Pitt River Indians here as a general thing are quite prosperous and energetic, having learned how to work while slaves for the Klamaths.

The Piutes or Snakes were formerly very obstinate and difficult to control, but of late they seem very quiet and give but little trouble. They manifest a disposition to wander more than either the Modocs or Klamaths.

The Indians of the different tribes are so interblended by marriage that it is very difficult to separate them on the census reports. The tribal distinctions among the Indians of this reservation are rapidly fading away, and the general name of "Klamaths" seems to be superseding all other distinctions.

I find by the census just completed, which I think is very accurate, that there are

975 Indians, old and young, on the reservation, which shows a net gain of 140 over the number reported by my predecessor last year. There are 458 males and 517 females, showing an excess of female population on the reservation of 59 over that of male.

The number of Indians who receive subsistence from the Government I do not think exceeds about 5 per cent, and they are the old, decrepit, and sick.

**Location of reservation.**—This reservation is located in southeastern Oregon, and contains near 1,000,000 acres of land; probably three-fourths of it are mountainous, valuable only for grazing purposes and the timber contained on it, which consists principally of pine, cedar, and juniper, with some cottonwood and quaking asp. There are some very fine pine forests on the reservation and they are quite extensive, and, under the present wise policy of the Indian Department of prohibiting the sale by Indians of lumber cut from green trees to parties outside of the reservation, it will be many years before the grand forests are exhausted. The altitude here is about 4,500 feet.

**The climate.**—It is not to be wondered at that at this great altitude the climate should be dry and frosty. We have frosts here more or less throughout the summer months, rendering it almost impossible to grow any but the hardier vegetables.

**The snow fall.**—The snowfall here is usually very great during the winter, averaging 2 or 3 feet on the level. Last winter was an unusually mild winter; snowfall about 2 feet, and the mercury only during the coldest weather indicating 8° below zero.

About one-fourth part of the area of this reservation is composed of valleys, plains, and marshes. Much of the lands of the plains is covered with sage brush and has a poor ashy soil, very little if any grass growing on it. Thousands of acres of the marsh lands are covered with water from 2 to 5 feet deep throughout the year. The pond lily thrives in these marshes, the seeds of which (woos the Indians call it) are gathered by the Indians, mostly by the women, in great quantities for use during the winter, and the Indians are very fond of them, being a good substitute for wheat or corn and usually parched before eating.

**Grazing country.**—This is more of a grazing than an agricultural country. The stock do splendidly on the fine grass through the summer, and when the snow is not so deep they find plenty of feed in and around the marshes during the winter.

**Wheat, rye, oats, etc.**—Wheat, rye, and oats make good crops on Williamson River and in the country near Modoc Point on Klamath Lake; there is also some barley grown there, and it does quite well. Rye can be successfully grown over nearly all the reservation where there is tillable land. The acreage of grain sown by the Indians this season (1891) is quite large, about 2,900 acres, much of which, especially of the rye, is cut for hay and fed to stock without thrashing.

In many places north of Williamson River frosts have ruined the wheat crop, so that there will not be any yield of grain to speak of where the frosts have prevailed. The people at this writing (August 4) are busy cutting hay, which promises a fine yield and of good quality. The wheat and oat crops are not ready to harvest yet. Some of the Indians have good gardens; they can successfully raise onions, beets, cabbage, turnips, and some potatoes, though the frosts frequently ruin the crop.

**Indian houses.**—Many of the Indians have good comfortable dwellings. Some few houses are painted up, and look quite tasty. Occasionally there is an old-fashioned "wik-e-up," which is occupied by very old people, they preferring to live in it rather than in a good house.

**Horses and cattle.**—The raising of stock is the principal source from which the Indians derive their revenue. They are of late years improving the breed of their stock, both horses and cattle. They have some good American horses, and now when they sell a horse they receive from \$50 to \$75 for it, instead of \$10 to \$15, the amount formerly received for a pony. Their cattle are also of much better stock than of former years, and they realize very fair prices when they sell.

There are probably about 2,400 head of horses owned by the Indians of the reservation and about 1,500 head of cattle. The people are just now beginning to recover from the almost total loss of all of their stock during the hard winter two years ago.

**Boarding schools.**—There are two boarding schools on the reservation. One, the Klamath boarding school here at the agency, and the other the Yainax boarding school, located 40 miles east of here. Both are Government boarding schools. Klamath school has 110 pupils enrolled, with average attendance of 99½. Yainax school has enrolled 90 pupils, with an average attendance of 86½.

The Klamath school has been unfortunate in having had many changes in the position of superintendent. The Klamath school contains good material, and under proper and competent control is capable of accomplishing a great deal.

The Yainax school has been blessed with good, practical, common-sense superintendents since its organization, and has had but few changes in that position. Mr. J. W. Brandenburg, the present superintendent, has held that position for about four

years, and while he is a man of quite limited education, he is a man of good practical common sense and good administrative ability. He maintains good discipline in his school and has the respect of the scholars. The Yainax school is one of the best schools under control of the Indian Department.

**Shops and tools for apprentices.**—With an expenditure of a few hundred dollars in building shops and furnishing them with tools at each one of the schools, the boys might be instructed by some competent persons, so that they could do much mechanical work, and when they should return to their homes they could assist their people greatly in building houses and other mechanical work. At the schools here we have not the facilities for instructing apprentices to any great extent.

**Taking care of the old and decrepit.**—We have on this reservation many old and decrepit people who are not able to provide a living for themselves, quite a number of whom are blind and suffering physical infirmities. These people should be cared for by the Government. There should, I think, be a home provided for them at the agency where they could be made comfortable, and rations sufficient for their subsistence issued to them. The stronger ones might do some work, such as providing wood and keeping the premises clean and in good condition.

**Indian police.**—I feel that I can not commend the police too highly for their efficiency and their loyalty to the agent and the Government. Indeed, I think that it would be quite difficult to conduct the affairs of the agency successfully without the assistance, and coöperation of the Indian police.

The police are of great assistance to the agent in settling little business difficulties that come up among the people, which they frequently do without bringing it before the agent to take up his time, vex, and annoy him.

**Indian judges.**—So far as the system of Indian judges has been tried here under my supervision it has been satisfactory, and their decisions have met the approbation of the agent and are generally eminent just.

**Civilization and morals.**—Dr. Dorchester, superintendent of Indian schools, in a letter addressed to me under date of March 4, 1891, makes use of the following language: "I consider the Klamath Indians as among the very best, with some of the largest possibilities. The importance of that reservation has been underrated; it should be lifted and magnified; larger and better accommodations should be furnished for the schools," etc. This was written after he had visited the reservation and carefully noted the condition of affairs. The Klamath Indians are probably as thoroughly civilized and law abiding as the Indians of any reservation in the United States. When we consider the fact that twenty-five years ago these same people were wild savages, roaming over the country, wearing blankets when they wore anything, with long hair, and contrasting that with their present condition, occupying comfortable homes, with well-tilled fields surrounding them, wearing the garb of civilization, and law-abiding citizens, I feel that they deserve much credit.

Very respectfully submitted.

DAVID W. MATTHEWS,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SILETZ AGENCY.

SILETZ INDIAN AGENCY, OREGON, *August 12, 1891.*

SIR: I have the honor to submit this, my annual report, for the fiscal year ending June 30, 1891:

I find but a slight difference in the population from last report, there being a decrease of 11 in the total number, according to the census just completed, the number of Indians on this reservation being as follows:

Males over 18 years of age .....	191
Females over 18 years of age.....	183
Males and females between 6 and 18, inclusive.....	115
Children under 6 years of age.....	71
<b>Total population.....</b>	<b>560</b>
Number of mixed bloods .....	30
Number of deaths during the year.....	22
Number of births during the year.....	12

**Reservation.**—This reservation contains 225,000 acres of land, and is bounded on the west by the Pacific Ocean, and extends east 12 miles into the coast mountains; is about 20 miles long. A small stream, called Salmon River, parallels the northern boundary, finding its source well up in the coast range of mountains, and at the

mouth, where it empties into the ocean, has been established the northwest corner of the reserve. A much larger stream, called Siletz, from its source near the summit of the mountains and a little south of east of the northern boundary, flows in a southwesterly direction to within 2 miles of the southern boundary, where the agency is located, and then breaks off to the northwest and finds its confluence with the ocean 8 miles south of Salmon River.

Along these two crooked streams is located the largest portion of the good agricultural lands of the reservation, and upon which the Indians are mostly settled. These streams abound with trout and salmon, besides an abundance of clams and mussels can be procured at their mouths, which afford a large percentage of the subsistence of the Indians, especially the old ones.

**Civilization and agriculture.**—It would be quite impossible to express in a few words understandingly the character of these people except to say that they are to be found here in every degree of advancement, from the old salmon eater, who hasn't a care apparently except to fill his stomach, on up to the thrifty, intelligent farmer, mechanic, and schoolboy. The understanding of each is generally confined to his immediate surroundings. One or two designing parties can influence a large number either for good or bad, so at times it requires all the moral force that an agent can command to harmonize these different influences; hence the importance of perfect harmony of action among all officials and employes who come in contact with these people.

I can not see that, outside of the school, there has been any very great advancement during the past year, owing to the dissemination amongst them by a misguided official of opinions and ideas entirely foreign and contradictory to the instructions and policy of the Indian Office. The old people especially, with few interested parties, have spent much of their time in councils and discussions, when they should have been at home at work. In cases of this kind the agent is powerless and unable to harmonize them, for all his acts are called in question. This is very discouraging to an honest effort to improve their condition.

These people all wear citizen's clothes, and the middle-aged and younger class take about the same pride in their personal appearance as their white neighbors.

They are very fond of riding in hacks and buggies, and many of them will work hard and trade around to get hold of a vehicle of this kind, and depend upon the Government to furnish the wagon. This custom has grown to such an extent that I have been compelled to issue an order to the blacksmith not to repair at Government expense any hack or buggy where the owner has a wagon, and not even then if there are wagons at the shops for repairs. These old hacks and buggies obtained in the above manner are generally about worn out and in a short time are brought to the shop for repairs.

There has been some less potatoes planted this year than last on account of the scarcity of seed. The old people, as a rule, do not lay away any seed, and potatoes were so high last spring it was very difficult for some of them to procure seed. Oats were also high, and the farmers sold off so closely that in consequence I had to loan them from the Government oats over 200 bushels. I also exchanged about 200 bushels of clean seed oats for their foul wild oats. By so doing they were enabled to sow about an average acreage, and I made use of the wild oats for feed. Without this assistance the crop this year would have been far below last.

The authorities granted for the past year have enabled me to distribute a reasonable amount of money among them in the cutting of saw logs, millwork, and especially carpenter's work; also the building of a wagon road down the Siletz River, upon which has been expended about \$500. The brush and logs were cleared for a space of about 20 feet in width on about 9 miles of this road; besides considerable grading was done and a trail opened the rest of the distance to the ocean. But to complete this road so that teams can travel all the distance will require about \$500 more. And as so many of the Indians are taking land along the coast it becomes a matter of great importance to them that this road should be completed at an early day.

Along the coast and at and near the mouths of Siletz and Salmon rivers is by far the best stock country on the reservation, and I have great hopes, since there has been communication opened up, of seeing the stock interest developed more extensively in the near future.

There is but one school upon this reservation, and that is under control of the Government. For a very complete history of the same down to the present time, with a concise statement of its present condition and plant, I beg to inclose herewith a letter upon the subject from Supt. L. C. Walker to myself, dated July 20, 1891.

There has been harvested this season from the school farm, and from 40 acres leased from an Indian, 60 tons of hay; besides we have 40 acres of oats which look well; and have in  $3\frac{1}{2}$  acres of potatoes, and fully 2 acres of garden. There will be a plentiful supply of garden vegetables, consisting of peas, beans, cabbage, carrots,

parsnips, onions, etc., for school use; also a large amount of carrots and turnips to feed to milch cows during the winter. There should be at least 400 bushels of potatoes. The schoolboys are milking six cows, which afford an ample supply of milk, also a small quantity of butter from time to time.

**Improvements.**—During the year authority has been granted and a contract let for constructing a system of water works at the school by the erection of a tower and tanks to be supplied by windmill. This work is nearing completion and will supply the laundry, kitchen, and bath rooms with both hot and cold water. Besides this there has been built a large brick bake oven which will be ready for use when the school opens in September next.

**Missionary.**—Early in the year the Methodist Home Mission sent the Rev. C. R. Ellsworth to this agency. He has been an earnest worker, and soon had sufficient funds and work subscribed to procure lumber and build a church and parsonage; but, owing to some delay in securing a location, has not been able to build.

Father Lynch, of the Catholic Church, has held services here a few times during the year.

**Allotment of lands.**—An allotting agent has been at work here on the reservation since about the 1st of May last, but inasmuch as he will have nothing to do whatever with my office—having set up a little administration of his own—I am unable to report what progress he has made. This I do know, however, he has caused more dissatisfaction, dissensions, and trouble among the Indians in the short space of three months than has been known for years before. These people all want their lands allotted, and there need be no trouble or confusion about the same if properly managed by a business-like official.

**Court of Indian officers and police.**—This court seems to answer every purpose at present. The Indians generally have respect for it, and are, as a rule, satisfied with its verdicts, which are in the main just. Yet from observation I have discovered that while it is a satisfactory means of settling trouble in civil cases, its penalties in criminal cases in no way deters others from committing the same or like offenses. The police are both trusty and efficient.

Thanking you for favors rendered during the past year, I am,

Very respectfully,

T. JAY BUFORD,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF SILETZ SCHOOL.

BOARDING HALL, Siletz, Oregon, July 20, 1891.

**SIB:** In accordance with instructions contained in circular of Commissioner of Indian Affairs, dated April 8, 1891, I have the honor to submit the following annual report:

**History of educational work at this agency.**—The large portion of the Indians on this reservation were brought here as prisoners at the close of the Rogue River war and were kept in subjugation by a body of soldiers. During the administrations of Agents Metcalf, Newcomb, and Biddle, as far as I can learn, nothing was done towards their education. But ten years after their arrival the first effort was made under Agent Simpson.

Capt. Clark, late of the U. S. Army, in 1865 began a boarding school in an old hospital building which stood near where Robert Metcalf now lives. His school consisted of 4 boys and 2 girls. The school was continued under substantially the same circumstances by Lucius Frasier, W. R. Dunbar, W. J. Shipley, and F. E. Dodge. The attendance probably never exceeded 10 at one time. I understand that attendance was purely voluntary. With Dodge the boarding school was closed. For the number reached the good accomplished was certainly very great, as nearly all who were educated at this school became leaders and supporters of every movement for the good of their people.

Under Agent Palmer a day school was opened. I have been unable to find any record of the school, but from information derived from employes and the older Indians I learn that Rev. John Howard conducted a day school. This school was continued under Agent Fairchild, with Rev. W. C. Chattin as teacher. The Rev. T. F. Royal, who was principal during Bagley's term, planned and erected a large two-and-a-half story boarding hall and opened school in it. This building stood near where the agent's residence now stands.

E. A. Swan was agent from 1879 to 1883, and took an active interest in promoting the civilization of the Indians. The following were successively principals under his administration: Rev. W. D. Nichols, Rev. J. T. Wolf, S. A. Starr, Rev. T. B. White. In November of 1882 the boarding hall was burned and with it most of the records of previous administrations. Agent Swan immediately set to work to obtain authority to rebuild; the authority was not obtained until the close of Swan's administration. In the meantime school was maintained under Principals Starr and White in an old log house, an abandoned mill being used as a boarding hall. Judging from all reports, the most important personage and the one wielding the most lasting influence under Swan's administration was his matron, Mrs. Matilda Taft. Full of religion and good nature, she was also firm and full of business. She was respected and obeyed by all from the biggest boy to the smallest "tot."

F. M. Wadsworth entered upon his duties as agent in May, 1883, and set vigorously to work to construct the present boarding hall and school building. Instead of rebuilding on the original site, which would have been more convenient, he selected the present site, which was the original location of the blockhouse and soldiers' quarters in the old war times. The change was most happy and no one regrets that it was made. Standing on a level plateau overlooking the agency plain, the course of the

Siletz River may be traced for 5 or 6 miles. With good natural drainage, a good water supply, there seems nothing to be desired as far as nature could do the work.

The present buildings were first occupied in May, 1884, Rev. T. B. White being principal. In September, 1884, the school was reopened, Rev. J. S. McCain being principal. The following, I believe, is a complete list of superintendents and principal teachers from that time to the present: Rev. J. S. McCain, from July 1, 1884, to July 18, 1886; H. H. Royal, from July 19, 1886, to February, 1887; Dr. F. M. Carter, from February, 1887, to June 30, 1888; Rev. J. S. McCain, from March 9, 1889, to June 30, 1889; W. E. Norton, from October 1, 1889, to June 30, 1890; L. C. Walker, from July 1, 1890.

During the latter part of Agent Lane's term the boarding school was practically abandoned under an arrangement made between Col. Lee, superintendent of Chemawa school, and Agent Lane. When Col. Beal Gaither was appointed agent in March, 1889, he appointed Rev. J. S. McCain superintendent and reopened the school. The effect of Agent Lane's policy was certainly very demoralizing on the school and, like every step backward, has required much time to regain the lost vantage ground.

History during the past year.—When I assumed charge here, one year ago, I found the school in a good state of discipline, and, while I flatter myself that I have made some improvement, I am also aware that I assumed charge under much more favorable auspices than my predecessor.

There were retained here during the summer about 20 pupils—some orphans who had no homes, others larger children, who were retained to do the harvest work and cooking. School began in the primary grade September 1, and in the advanced grade at the completion of the harvest, about two weeks later.

Fourth of July, Thanksgiving, Christmas, New Year's, Franchise, Washington's Birthday, and Arbor Day were duly celebrated. Owing to our own sickness and the fact that nearly half the school were suffering from the prevailing influenza, the weather being very unfavorable, there were no special exercises Decoration Day.

The year's work closed with literary exercises entirely given by Indian children. While there has been a determined effort on the part of some white people on the reservation to prejudice the children against us, I am happy to say that the effort was successful only for a time and that the order and discipline for the last two weeks was good, and that the children acquitted themselves in a creditable manner.

The health of the school has been unusually good as a rule. The mumps, in a very mild form, went through the school during the month of October, and the influenza about the last of May. Two children suffering from constitutional disease were removed at the suggestion of the physician; one died in a few weeks; the other has died since the close of school.

Present plant.—The present plant consists of about 170 acres, all under fence. About 80 acres are used for pasture; 80 are in cultivation, in oats, rye, potatoes, meadow; remainder comprises the school grounds and brush land. The fences, of which we have several miles, nearly all need rebuilding.

The school buildings consist of a two-story boarding hall, 40 by 50 feet, with 84 by 20-foot L on north and 54 by 20-foot L on south, a laundry, 18 by 30; a schoolhouse, 30 by 50; a wood shed, 24 by 42; a stock barn about 50 feet square, including sheds just built; several small outbuildings, including smoke house, stock shed, night watchman's house, chicken house, etc.

Changes made during the year.—About three-quarters of a mile of fence have been rebuilt; the stock shed, nearly destroyed during the previous winter, was straightened and strengthened. A good chicken yard was built. The work of building the laundry, making a 30-foot extension to the boarding hall for girls' dormitory and storerooms, reroofing dormitory, begun during previous year, was completed. This work was all done by the Indians or employés. An orchard of over 300 trees was set out, but I am sorry to say was badly injured by a late spring frost. Our wood shed and laundry building being not in convenient locations were moved to their present locations, and a good well was dug.

Work is well under way on an extensive sewage and water system which, when put in, will be conducive to health and convenient in work. A large bake oven has been built. The work on all these was greatly hindered by the late June rains.

Industries taught.—One boy has worked about six months in the blacksmith shop; outside of this the only industries taught the boys has been general farm work. The girls have been taught sewing, patching, and general housework.

The new course of study.—As far as practicable the school has been organized on the basis of the new course of study, the main hindrances being the lack of text-books of the kind prescribed. With one exception those employed here were entirely different from those suited to the new course of study.

Attendance.—By your assistance the school has been kept up to the average of past years. I think I am correct when I say that every child on the reservation between the ages of 9 and 18 years, whose health would permit, has been in school. Some few under that age (and over 6 years) who were in good homes and were receiving instruction at home have been excused. The total enrollment for the year is 77. Out of this number 11 were sent to the Chemawa school, 2 were withdrawn on account of ill health, one of whom died before the close of the year. One day pupil under 6 years was also withdrawn by special arrangement as soon as the rains set in. The remainder, 63 pupils, were all present at the last day of school.

Harrison Institute.—While we would take pride in building up here an institution of high grade we realize that the work of civilization and education can be much better accomplished at the institute, and hence we have put forth every effort to persuade those whom we thought could be most benefited by it to go to Chemawa. The result of this effort on our part has been to cripple our industrial force and to necessitate an addition to our working force of Indian employés.

The average age of the 64 pupils enrolled during the last quarter is 11½ years, only 3 boys being over 16 years. Total attendance for year, 19,092 days; average for year, 52½ pupils; total attendance for ten months' school, 17,314 days; average for ten months' school, 57½ pupils. The largest number enrolled was in the month of April, 1891, namely, 64—39 boys and 25 girls.

Very respectfully,

L. C. WALKER,  
Superintendent and Principal Teacher.

T. JAY BUFORD,  
United States Indian Agent.

## REPORT OF UMATILLA AGENCY.

UMATILLA AGENCY, *Pendleton, Oregon, July 21, 1891.*

SIR: I have the honor to submit my third annual report of this agency for the fiscal year ending June 30, 1891.

**The reservation.**—Umatilla reservation is situated in the southeastern part of Umatilla County, Oregon. The reservation contains about 270,000 acres of land; about two-thirds is farming and the balance pasture and timber lands. This reservation, in my opinion, is the most fertile and possesses more natural advantages than any other reservation in the United States. The fertility of the soil is something phenomenal. Fall-sown wheat on the highest plateaus actually yield from 30 to 40 bushels to the acre without any irrigation whatever, whilst the rich bottom lands, along the numerous streams that meander through the reservation, yield on an average from 60 to 70 bushels of oats and barley and from 40 to 50 bushels of wheat to the acre.

**The agency.**—Umatilla Agency is located 5 miles from Pendleton, Oregon, a growing town of 3,000 inhabitants. The buildings of the agency consist of four good frame residences occupied by the agent and employes; one frame commissary, 30 by 75 feet, and several log buildings used as blacksmith, carpenter shops, etc.

**Agriculture.**—There has been a remarkable increase in the acreage sown this year as compared with former years. The Indians have now realized the fact that hereafter they must till the soil in order to obtain a livelihood, as stock-raising as a paying investment will in a few years be an industry of the past.

**Crops.**—I estimate this season's production as follows:

Wheat .....	bushels..	600,000
Oats .....	do .....	30,000
Barley .....	do .....	100,000
Corn .....	do .....	1,000
Turnips .....	do .....	1,000
Onions .....	do .....	3,000
Beans .....	do .....	2,000
Other vegetables .....	do .....	30,000
Melons .....	number ..	20,000
Hay .....	tons .....	10,000

**Allotments.**—On the 14th of May Messrs. Bushee and Eddy, special agents appointed to all lands in severalty to the Indians of this reservation, reported for duty and called a council of the Indians for the purpose of submitting to them the provisions of the special act of last February, in relation to allotments, and explaining the difference between it and those of the special act of March 3, 1885, which relates especially to this reservation. The two acts were thoroughly explained by the agents and discussed among the Indians, consuming several days. The Indians finally determined to take their lands under the provisions of the act of March, 1885.

For the most part the rank and file of the Indians take kindly to the allotment and seem to be pleased with the idea of possessing a particular tract that they can call their own. The chiefs, however, have been resorting to every device they can conceive to delay the work, but the reason for this is found in the fact that as soon as the Indians are allotted they become citizens, their tribal customs and usages will become a memory of the past, and the authority of the chief, who now attempts to dictate to and direct his people without consulting their wishes, will be broken. The scepter he has swayed for ages and used as though it were a rod of iron must be laid aside; all that pertains to chieftainship will fall into "innocuous desuetude." The so-called head men and chiefs, who have heretofore been the autocrats of the reservation, as a natural sequence feel very much depressed, owing to the fact that their power has now virtually ceased, but there is a corresponding elation among the Indians generally, as they understand that each will be the chief of his own household, "a man among men." One intelligent Indian recently remarked: "There will be but one chief, and that is the Government at Washington."

At first, a small number of the Indians signified their intention to leave the reservation rather than to take land in severalty and settle down to the ways of civilization, but they are changing their minds and will remain with perhaps a very few exceptions. About 100 of the Indians have taken lands in severalty, their lines run out and permanent corners established. In many instances the old corners have been plowed up and obliterated, so that the allotting agents find it necessary to trace out the lines and establish new monuments. Some of the Indians will occupy and improve their lands; others prefer to lease for a cash rental if allowed to do so, reserving sufficient for gardening purposes. About 400 Indians occupy separate tracts which can scarcely be deemed definite, as many of the lines were run and the fences built before the survey was made. As soon as the commissioners reach these

people, their lines will be designated according to the survey and the fences placed on them.

**Sale of reservation lands.**—On the first of April last, the residue lands of this reservation were offered for sale as provided for in the act of March 3, 1885, and all the agricultural lands, which consisted of about 25,000 acres, were sold for the total sum of about \$210,000. About 70,000 acres of ceded lands remained unsold. This is accounted for by the fact that the rules of the Department regulating the sale prevented many persons from purchasing timber lands who otherwise would have done so. For instance, no person who was not a purchaser of untimbered land could purchase timber land, and then only in tracts of 40 acres. As there were less than two hundred subdivisions of untimbered lands of 160 acres each that could be strictly deemed agricultural, upon which persons could reside and make a living, and something near one thousand subdivisions of timbered land of 40 acres each, the surplus of unsold timber land is easily accounted for, especially when few of the purchasers of untimbered land desired to avail themselves of their timber privileges.

There are also large tracts of these residue lands classed as untimbered, which are not strictly agricultural. These consist of high rolling hills between the prairie and the timber line. The soil is very rocky and produces only bunch grass. This is an excellent pasture, but a quarter section will sustain but a few head of stock, and if closely pastured will soon die out. Its only value is for range and it will never sell except in tracts of a section or more, and then only for pasturage purposes. In this way it would sell readily for \$1.25 per acre or more and net a nice sum for the Indian fund.

If it is the object of the Department to sell the timbered lands which now remain unsold, the restriction of purchasers to untimbered lands must be removed. It is my belief that if the timbered land was offered to cash purchasers in 40-acre tracts, patent to issue forthwith, it would all sell readily at the appraised value.

The Indians are anxious that some provision be made that these unsold lands may be disposed of and the proceeds placed to their credit or else that the unsold portion adjacent to the diminished reserve be restored to them.

**Umatilla Industrial School.**—Located one mile east of the agency. On the 12th day of May, 1890, under authority from the Interior Department, I entered into contract for the erection of one brick industrial building and one frame school building; the total cost of the same was \$17,740. In addition to the above there were a barn, brick cellar, water closets, fence, etc., subsequently built, which makes a total of about \$22,000 expended this year for school improvements. The school buildings were completed about the 30th of October last; however a great deal of work remained to be done before the buildings were ready for occupancy, as the furniture had to be moved in, stoves put up, shelving made, etc. The whole agency force was immediately set to work and on November 8 school was opened with a competent force of employes.

Owing to an epidemic of measles which broke out in the school last winter, the average attendance was much less than was anticipated, only being 48 for the year.

The school farm contains 640 acres, and the superintendent with the assistance of the employes and pupils has inclosed the whole tract with a good substantial fence. An orchard was planted in the spring and the trees are growing finely. There was also a garden planted which is doing well and an abundance of vegetables raised to supply the school. Twenty acres of wheat for hay was also sown on the old school farm, which is now being cut and will produce about 2 tons to the acre.

The employes have all been faithful in their work and attentive to their duties, and during the epidemic of the measles they all had extra labor to perform in nursing and caring for the sick, and each and every one of them was always found ready and willing to perform this extra work cheerfully and without a murmur. Two deaths occurred from the effects of measles, one a boy aged ten and one a girl aged thirteen.

**Catholic boarding school.**—Located 4 miles southeast of the agency. This school opened on the 1st of September with a competent force of teachers and employes. The average attendance for the year has been about 45 pupils, and I understand that the expense of running the school has thus far been borne wholly by the Church. I visited the school several times during the year, and always found the class rooms and dormitories looking neat and tidy, and the children well clothed and provided for and making rapid progress in learning.

**Sanitary.**—The general health of the Indians during the year has been good. During the winter and spring there was an epidemic of measles and la grippe, which finally disappeared, only a few deaths occurring. The Indians living along the banks of the river are more or less affected with malaria during the summer months, and there are also a few cases of pulmonary complaints, which are usually cured in a short time by the efficient treatment of the agency physician. These Indians are remarkably free from venereal diseases, only a few cases having been treated during the year.

**Court of Indian offenses.**—This court is a great benefit to the agent in the matter of enforcing the law on the reservation. The judges are dignified and conduct the proceedings of their court in a very impressive manner. A great many trivial cases are settled by the court in the course of the year, which if brought before the agent would consume a great deal of his valuable time. The decisions of the court are as a general rule fair and impartial and are rarely ever appealed from.

**Indian police.**—The police force at this agency consist of 1 captain and 9 privates. They are easily controlled and are always ready and willing to obey orders. The captain receives \$15 per month and the privates receive \$10 per month for their services.

**Missionary.**—There are two churches on this reservation, Presbyterian and Catholic. They both have a large following and are doing a great deal of good among the Indians. Services are also held regularly during the school term, under the supervision of the Rev. George L. Deffenbaugh, superintendent, assisted by the school employes in the dining room of the industrial school building.

**Census.**—The census for the fiscal year 1891 shows the population of the tribes of Indians on this reservation to be as follows:

Walla Walla.....	408
Cayuses.....	414
Umatilla.....	175
<b>Total.....</b>	<b>997</b>
<b>Males over 18 years of age.....</b>	<b>248</b>
<b>Females over 14 years of age.....</b>	<b>416</b>
<b>School children between the ages of 6 and 16.....</b>	<b>195</b>

Respectfully submitted.

LEE MOORHOUSE,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT UMATILLA SCHOOL.

UMATILLA AGENCY, OREGON, August 5, 1891.

SIR: In accordance with number 18 of rules governing reservation schools, I have the honor to report as follows concerning the Umatilla Agency school for the last seven and one-half months of the fiscal year ending June 30:

##### Statistics—

Number of pupils who can be properly accommodated.....	75
Number of pupils enrolled.....	78
Largest number in attendance at any one time.....	58
Number of months school was in session.....	7½
Average attendance during that time.....	47.5
Number of pupils expelled.....	2
Number of pupils who died.....	2
Number of pupils who ran away.....	5
Number of pupils withdrawn (on account of work or sickness).....	24
Number of pupils present on closing day.....	45

**Buildings.**—When I arrived on the grounds November 8, 1890, there were two buildings—the main school buildings—one brick and one frame, new and unfurnished, each one a very good structure of its kind. Afterwards there were erected two water-closets, one roof-house, and a stable. Additional buildings needed: House containing two recitation rooms and one assembly room (latter to be used for recitation room when needed), laundry with storeroom, under one roof, woodshed, henhouse, and pigsty.

**Instruction.—Literary.**—The pupils present on opening day were examined, classified, and graded according to the course of study prepared in your office. Afterwards pupils were examined and placed on entering school. Each of the four years in the primary grade had numbers and the first and second years of the advanced grade, the first year of the primary grade receiving the largest number. No pupils were advanced during the term, but after the closing examinations it was decided that twenty-six promotions could be safely and properly made. To some extent this fact indicates the progress made by the pupils, and also the activity of the faithful teachers. On the whole this progress was fair, but along certain lines it was not entirely satisfactory. In the absence of a suitable room for the purpose no literary or rhetorical exercises were held, hence this very essential part of their school training was necessarily omitted. English composition and declamation are very important factors in furthering the education of Indian children, and every facility for advancing them along these lines ought to be provided. Again, both teachers and pupils proceed under difficulties amidst such a jumble of textbooks as prevailed here last term. It will be a day of rejoicing when the new books arrive and a course of study can be systematically arranged.

A liberal supply of first-class juvenile literature furnished by Miss Frances C. Sparhawk aided very materially in awakening and sustaining an interest in literary work.

**Industrial.**—Inasmuch as the buildings, grounds, farm, etc., were new and “without form,” industrial training held a very prominent place from opening till closing day. While transforming the buildings into habitations the girls were introduced to the methods of home-making, and in our efforts to reclaim and beautify the surroundings the boys received some practical lessons in farming. A barbed-wire fence was thrown around a large portion of the school farm as well as around various small inclosures in the neighborhood of the buildings for garden and other purposes.

Last spring an orchard was set out, including apple, pear, peach, and plum trees, 185 in all, furnished by the Department. Nearly all of these trees lived and are now growing nicely. Unfortunately this can not be said of the forty ornamental trees planted in the school yard. These did not promise well from the first, and notwithstanding they were properly cared for, fully two-thirds of them have died. The planting of these trees gave us a splendid opportunity to carry out your recommendations in reference to Arbor Day, which was improved on the 25th of April. The members of the several classes planted and named the trees, this exercise being varied with singing and recitations. A programme of the day's doings was forwarded to your office.

**Summarizing.**—Industries taught during the term were for the boys, garden and farm work, tree culture, care of stock, milking (no facilities for butter-making), wood-sawing and splitting, yard-cleaning, sweeping and care of dormitory and certain parts of kitchen and laundry work; for the girls, baking, plain cooking, serving meals, waiting on table, dish-washing, washing and ironing, cutting and making boys' pants and waists, cutting and fitting dresses, etc., hand and machine sewing, knitting, crocheting, and other fancy work, house-cleaning, making beds and keeping dormitory in order.

**Moral:** In the earlier days of the term, it was easily noticeable that profanity prevailed to a shocking extent, especially among the mixed-blood boys; but by improving every opportunity to correct this terrible habit, I had the satisfaction of observing that it very perceptibly diminished as time passed by. Regarding moral training as a very essential part of education, I paid particular attention to the matter of correcting loose and objectionable habits practiced by the children and of leading them to the realization of the fact that one's comfort, enjoyment, and success depend on a pure life.

In this, as in all other particulars, I was ably sustained by the entire school force, every member of which was strictly exemplary in character and life. From first to last the children had before them, in the persons of the several employés, examples of the refining and ennobling influence of Christianity. This is as it should be, and is a cause for special gratitude.

There being no other suitable meeting place, all religious services were held in the dining hall, resulting in not a little extra work in that department of the school.

While it is not altogether relevant, yet in this connection, I will make the statement that both the matron and myself paid very close attention to the dining-room service. After seeing that the tables were supplied with a variety of well-cooked food and plenty of it, we took especial pains to have the children preserve at every meal such decorum as would be required at the dining table of the most respectable family. True, we were not successful in every instance; nevertheless, instruction in table manners was unweariedly given.

**Discipline.**—Discipline was not of the harsh and arbitrary kind. Obedience to the rules of the school was required in every instance, but it was only when other means failed of securing that result, that the rawhide was brought into use. Believing that respect is more potent as a factor in controlling a school than fear, I aimed to conduct all matters of discipline in such a way as to secure the respect rather than to arouse the fear of the pupils. In this direction, my management of the school may be open to slight criticism. I am inclined to believe, however, that it is better to err in a mild rather than in a rigid restraint, so long as the best interests of the school are conserved. If nothing else will answer, it is proper to administer a severe whipping with a rawhide; but any harsher mode of punishment is, in my judgment, "cruel and degrading."

And yet the question arises, in the event such punishment will not subdue a refractory pupil, then what? In two instances I had to meet that issue near the middle of the term. In both, I decided on expulsion, the agent concurring. Both pupils were half-breed boys, 12 and 13 years of age—young in years but old in general depravity. In the case of children just emerging from savagery, manifestly it would be doing them an injustice to deprive them of school privileges for any degree of insubordination; but when boys get so far along (as was the case with those just referred to) that they prefer to personate a vile cowboy, rather than improve their time in study or submit to wholesome restraint, it is but justice to the school, and no injustice to them to expel them. Two or three bad boys can vitiate the atmosphere of a school to an extent incredible almost, and according to my experience it is but a matter of right and justice to send them away. After we were rid of those two leaders in mischief and insubordination the other children, both in and out of the schoolroom, were more easily managed by half and made far more rapid progress than before.

**Health.**—In general, the health of the pupils was very good. There were some mild cases of sore eyes which were easily controlled, and a few light attacks of influenza. The latter part of January and through nearly all of February there was a run of measles. About an equal number of boys and girls, twenty odd in all, were down with this disease, some very sick. Two deaths resulted. A boy died of pneumonia superinduced by measles, and in the other case, that of a girl, measles brought on quick consumption, to which she was predisposed. At the close of school all of the children were enjoying the best of health.

**Attendance.**—While from first to last 78 names were enrolled, 58 was the highest number of children present at any one time. Of the number withdrawn, 6 were taken away by parents dissatisfied with the school, 5 of these belonged to one family. They objected to our requiring their children to assist in doing the usual kitchen, laundry, and other work of the school. Six others were withdrawn because of sickness in their respective families, and 12 more were taken out of school to assist in doing the spring work at home. In this way we lost an unusually large number of pupils. For the good of all concerned, parents ought to be prohibited from taking children from school after once entering them, except in extraordinary cases. Five runaways were not returned. Deducting in addition to the above, the 2 who died, and the 2 who were expelled, there were 45 remaining in attendance on the last day of school.

**Closing exercises.**—The last day (June 26th), some 200 of the friends and patrons of the school came in to witness the closing exercises. These consisted of singing, speaking, drills (flag and broom) and calisthenics. The hall (dining) proved too small to accommodate the audience. Those who could not get inside, stood at doors and windows until the close. All seemed pleased at the progress the children had made, while some expressed surprise at what they beheld. If all's well that ends well, then we have reason to thank God and take courage.

In conclusion, I take great pleasure in commending all my assistants for their cordial and constant support and for the willing and faithful manner in which they have attended to their respective duties. Owing to inadequate equipment, we all labored at a great disadvantage, and it was only by "a long pull, a strong pull, and a pull altogether," that we were able to conduct the school with any degree of satisfaction. I desire to make special mention of the matron, to whose wise and efficient management of her department much of the success of the school is due. I am persuaded that next to that of superintendent the position of matron in an institution of this character is most onerous in its duties and responsibilities, and should be rated accordingly.

I am also under great obligations to Agent Moorhouse for his uniform courtesy and prompt attention to all my requests, as far as lay in his power to grant them.

Very respectfully,

The COMMISSIONER OF INDIAN AFFAIRS,  
Through U. S. Indian agent.

GEORGE L. DEFFENBAUGH,  
Superintendent.

## REPORT OF WARM SPRINGS AGENCY.

WARM SPRINGS AGENCY, OREGON,  
September 1, 1891.

SIR: I have the honor to submit the following as my report for the year ending June 30, 1891:

**Population.**—The census for the present year gives but 900 as the total Indian and mixed-blood population, or 23 less than last year, due to excess of deaths over births and removals from the reservation. There are a number of Indians who have never made the reservation their permanent home but spend most of their time at The Dalles, or other points along the Columbia River. Also the uncertainty of raising crops on this reservation makes it necessary for quite a number of Indians to find work on the outside.

**Grain crops and garden products.**—These will be a partial failure, owing to the ravages of countless numbers of crickets early in the season. This is very discouraging and the fear that they may make their appearance next season will tend to limit the acreage sown for next year's harvest. What grain fields and gardens escaped the crickets and late frosts will do fairly well. The schools both had quite an acreage planted to potatoes, all of which was blighted by several frosts between June 9 and July 6, so there will be no crop to harvest to speak of. The rainfall in this section can never be depended upon to insure a good crop.

There is not as much grain raised now with more Indians engaged in farming as there was fifteen to twenty years ago. The reasons, as far as I am able to learn or to judge, are that the first lands cultivated were along the creek bottoms, the soil being a rich loamy deposit. Successive freshets have either carried off much of this soil or cut deep ditches which leaves the land cultivated high and dry. Again what land is still worked has been cropped so many years that it may be said to be "worn out." Then the agency gristmill is so old and the machinery so worn out that good flour can not be made, and hence there is not the inducement to raise wheat there would be were there a good mill to make good flour. The Indians prefer to work off the reservation and earn money to purchase flour in outside markets, and thus tons upon tons of flour are brought in and money spent that should go towards securing needed comforts and improving and building up pleasant homes.

**Irrigation.**—In my report a year ago I called attention to the necessity for some system of irrigation; that there were fine streams of water running across or past the reservation but the country was so broken that it would take much time and money to provide sufficient irrigation. Most of the tillable land is "arid land" and that in patches. No one person or set of persons have enough of this land to justify the necessary outlay in order to bring water upon their lands; much less have they the means, hence there should be at least \$1,000 appropriated for an irrigation fund as a commencement of a more extensive system.

As far as I have seen or can learn these Indians have the poorest, driest reservation in the Northwest, if not in all the United States. They have always been loyal to the Government, have furnished more scouts to assist in Indian wars than any other tribes, and now, when they ought to be reaping a rich reward for their bravery and loyalty and building up as beautiful homes as is possible in such a rocky wilderness, they find themselves compelled to devote time and thought in providing for the actual needs of to-day, leaving the morrow to take care of itself.

For some twenty years after the treaty of June 25, 1855, went into effect they had free access to the Columbia River fisheries and could secure all the salmon they were a mind to salt down or dry. Game was abundant on every hand, and fields yielded more bountiful crops. The mill was new and a regular white miller was employed. Also the annual appropriations were much larger than now, though of course everything to be purchased was much higher. Still the appropriations should now be for not less than \$8,000 per annum in place of \$6,000.

The future of these Indians is a serious problem. The range is lessening every year, and in a few years at farthest will be all virtually eaten off. There is not the market for their ponies there was years ago, and outside of agency and school needs no sure remunerative market for beef cattle.

They are now denied access to the fisheries, the game is nearly all killed off, hence their main dependence must be in more extensive farming and stock-raising of all kinds. There is then urgent need of an extensive system of irrigation in order to secure the growth not only of crops, but of tame grasses. Also a thorough overhauling of the gristmill, and the putting in of new and improved machinery.

Also a large appropriation for the "confederated tribes and bands of middle Oregon," so that all may be helped, and the old and blind and indigent, many of whom in the prime of life helped in the Snake and Modoc wars, or lost property or kinsmen in those wars, or by the inroads of the Snakes, may now be comfortably provided for.

**The sawmill.**—This mill, built eleven years ago, has seen its best days. Besides, all the good timber within a radius of several miles has been cut down and hauled in to make lumber. One of two things needs to be done, either to move the mill to a new locality, and necessarily further from the settlements, or else to procure a suitable portable steam engine, and saw the lumber near by where it is needed. For instance, with an engine, plenty of good lumber could be sawed for Sinemasho and vicinity, within not to exceed 2 miles of that place, whereas they now have to go 14 miles to the sawmill, and much further should the mill be moved. Then the engine, etc., could be taken to the Mutton Mountains, east of Sinemasho and lumber furnished for that part of the reservation, but few having to go more than 3 miles to get what they needed. Then for agency and surrounding settlements an abundance of timber can be had within 9 to 10 miles in place of going 15 miles as now or about 20 should the present mill be moved. More than that, a 20-horse power engine would cut more lumber in three months than the present mill will in six, unless considerable expense is gone to, getting a new water wheel, etc. More lumber and a much less distance to haul it over a rough and hilly country will be a great inducement for the Indians to build more and better houses, barns, etc.

**Allotments.**—The work of making allotments of lands should be completed as soon as possible. Nothing has been done for over two years towards this work. When it shall be completed, and the plans I have suggested all carried out, there will be more incentive to labor to adopt civilized habits and yield to Christian influences. To work and come under the influences of civilization and Christianity is not the normal condition of the Indian, as we well know, so that a larger success and more encouragement is needed to bring them under these conditions than to stimulate a race already so situated as is the white race.

**The north boundary line.**—One reason why the allotment of lands was not completed two years ago was on account of the unsettled dispute over the north boundary line. Since that time the Department settled the matter by designating the McQuinn line as the boundary line, but hardly was this action taken ere the matter was again opened to change. The commission authorized by Congress, after spending several weeks of last winter and early spring in taking testimony, both of whites and Indians, and going over only a part of the two surveyed lines, have decided, as I am informed, upon the Handley line. This will not be satisfactory to the Indians. Had the commission passed over the entire length of the two lines there could not be so much fault found with their decision. It is a pity that white settlers living on broad prairie farms should begrudge these Indians any part of this rocky, hilly, mountainous, broken country, even counting it all up to the McQuinn line.

It is plain to my mind that the wording of the treaty naming the boundaries of this reservation was not fully comprehended by the Indians, if it was understood at all. There was evidently not a definite idea in the minds of the writers of the treaty as to the true topography of the country, and the Indians on the other hand did not understand the full meaning of our language, translated into their own, even if they heard the treaty read, of which there seems to be some doubt.

If the Department approves the decision of the commission and adopts the Handley line, then give these Indians several thousand dollars, not only to have them feel that the loss has been made up in some degree, but also make up what they have lost by the fraudulent treaty, as they claim, by which they lost their fisheries and then lost a large part of the consideration then received by the taking of the oxen and wagons by Supt. Huntington to the Klamath Agency and never returning them. If what they claim is true, they have been shamefully, outrageously treated, and that while they were giving their hearts' blood to make possible the settlement of this country.

**The reservation schools.**—The reports of the superintendents of the two boarding schools upon this reservation, forwarded some weeks since, give a fair outline of the work, etc., for the school year, but I think best to allude to matters in general and also give some items as embraced in the statistics accompanying this report.

The agency boarding school is the larger of the two. There were enrolled during the year 76 scholars, or 40 males and 36 females. School was in session ten months, with an average attendance of nearly 524. The first month there were but 12 scholars, which cuts down the average for the year. As for the succeeding nine months the average was over 55. The showing for the year is better than for previous year, there being a higher average in proportion to the number of scholars than there was then. More than all, there was better discipline and better attention to studies and more willingness to take hold of the varied work to be done or the industries taught in the school.

The school can be made still more successful by providing new and more commodious buildings. While it is convenient in some respects to have the school located almost in the heart of the agency, it would be better for the children to have the buildings located at least 80 rods from the agency buildings. I trust an appropriation can be secured before the close of the fiscal year to erect new buildings, and, if

secured, I desire that a special agent may be sent to assist me in determining the location and making arrangements to secure the land, should the site selected be upon allotted land. There is little inducement to add onto or improve the present patchwork style of buildings. They are neither convenient, adequate, nor healthful. The schoolrooms proper are too small and lighted from only two directions, the main room from east side and south end, the smaller room from east side mainly and one window in west side. As now standing these conditions can not be changed, at least for main room. I have no heart to submit estimates for much improvement or repairs, for it seems a waste of funds to more than make the present buildings reasonably comfortable for the coming winter.

They never can be made what boarding-school buildings should be; never can be made a credit to our great and world-famed Government and Republic. Now would be the golden opportunity to take a decided step towards elevating the wisely planned school system you have inaugurated in the minds and hearts of these Indians. New buildings, with pleasant walks, shade and fruit trees, flowers and lawn, and ample playgrounds surrounding them, will make an attractive home to which the children will more willingly come than they now do to this school. As now situated it seems more like a prison pen to them, and their teachers as well, than like a pleasant, not to say a beautiful, home.

The Sinemasho boarding school, located some 20 miles north of this agency, is a much more healthful and pleasant location. That school had 52 scholars enrolled, with an average for the 9 months' session of 46 $\frac{3}{4}$ . The buildings are much more commodious than those at the agency, and with some additional outlay can be made convenient and adequate for all probable needs. The greatest drawback now is the water supply, more of which is needed. The past three years have been unusually dry and once so-called perennial springs are dry or nearly so. There are two ways to bring in more water, either to put in a windmill and pump about one-half mile away, in the valley south of the school, where there are never-failing springs; or a well can be dug, and force the water up to the buildings; or else to lay a pipe to a spring on the mountain side about one and three-fourths miles west of the school. In the long run this would, I believe, be the best plan, as it would always give pure spring water and give fall enough to throw the water over the highest buildings, as I am quite sure could be done. So much has now been expended at Sinemasho that it hardly seems best to think of consolidating the two schools, and more especially as the United Presbyterian Board of Missions are contemplating the location of a missionary at that place and the erection of a missionary home and a church building.

**Moral and religious work.**—There was a missionary at this agency for only about eight months of the year. The total cash outlay was \$1,070 for salary of missionary and helpers. In addition to this, however, there was sent here in the way of donations some twenty-one boxes or barrels of clothing, groceries, etc., all contributed by the United Presbyterian Church of North America. Regular Sabbath services were kept up, and also a Sabbath school at each place, but these schools were discontinued the last Sabbath in June until the boarding schools should again fill up. At Sinemasho the religious work was mainly carried on by the school employes, as the missionary made but few visits, the work at the agency mission demanding most of his time. As there were but comparatively few crimes to punish, it would seem to indicate that the moral and religious tone was kept fully up to that of the previous years of missionary work.

Hoping that there may be more of help and encouragement along all the lines of improvement, labor, and teaching I have called attention to, I submit them most earnestly for your consideration.

Very respectfully, your obedient servant,

J. C. LUCKEY,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF WARM SPRINGS SCHOOL.

WARM SPRINGS AGENCY, OREGON, *July 14, 1891.*

SIR: In compliance with your instructions of April 3, 1891, I have the honor to submit the following as my report of the school work under my charge for the year ending June 30, 1891:

**Past history, etc.**—As I gave quite a full account of the history of this school in my report of August 26, 1890, I deem it unnecessary to repeat that part of its history.

School opened September 9, 1890, with but 6 scholars, 4 boys and 2 girls. By 30th of the month this number was increased to 8 boys and 4 girls, in all 12. Average attendance, 10 $\frac{3}{4}$ . By December 31, the number was increased to 31 boys and 33 girls, 64 in all. Average attendance, 44 $\frac{1}{2}$ . March 31 there were 70 scholars, 35 boys and 35 girls. Average attendance, 60 $\frac{3}{4}$ . June 30 there were still but 70 scholars, but only 34 boys to 36 girls. Average attendance 61.

**School industries.**—There was commendable progress made in all the common industries taught in Indian boarding schools. All the boys were regularly detailed about once a month for some special duty

each day, as wood-carrying boys, milking boys, stable boys, sloop boys, washhouse boys, school-room and sitting-room boys, etc. Aside from this they were nearly all detailed every morning for the general or irregular industrial work, as sawing wood at the wagon-shop "buzz saw," run by water power, cleaning up around the school and agency buildings, making repairs to buildings, fences, etc. During the winter they put up quite a nice lot of ice. When springtime came they did the plowing, making and hoeing the gardens, etc., under the direction of the industrial teacher, who usually superintended all their other work. They did no regular shopwork, but most of the larger boys are quite handy with tools, especially in the carpenter line.

With our present facilities the girls have the advantage of the boys in learning school industries. Quite a number are now excellent bread-makers; can do out a nice washing and iron clothes neatly; do good plain sewing and knitting; cook good meals, and set an inviting table; in fact, with no more training, could even now make neat housekeepers. The special monthly detail for daily work of girls is as follows: Dormitory girls, 2; sitting-room girls, 2; cooks, 2; dining-room girls, 4; dishwashers, 4; sewing-room girls, 2; hair-combers, 4; weekly washhouse detail, about 10 of the larger girls; ironing day, about 15 girls. All scholars were required to attend schoolroom exercises at least one-half of each school day.

Comparison between 1890 and 1891.—June 30, 1890, there were 76 scholars—41 boys, 35 girls—but average attendance was only 54. June 30 last (as previously given), 70 scholars—34 boys, 36 girls—but average 61. This is the first year in the history of the school in which the number of girls exceeded that of the boys. Total number enrolled 1889-'90 was 83; total in 1890-'91 was 76. The falling off from previous year was mainly due to quite a number of the larger boys, now young men, not coming back to school. Number of scholars added who had never been in school was 7 boys, 5 girls—in all, 12—and all from 5 to 10 years of age, and who rapidly learned to use English from older scholars and employes. In every other respect, save in point of numbers, the school year was a marked success over the previous year. There was better discipline, more willing obedience, better attention to studies, more marked results from teaching and good example than during the previous or any past years. It was with sincere regret that we bade the children good-bye, June 30, for their vacation season. It is pleasant, however, to think that the year ended with no unhappy recollections of unworthy or disgraceful conduct on the part of either scholars or employes. It is evident that we have a deeper hold upon the affections and had gained more of the respect of the scholars than ever before, and, better still, they have more love for God and His word.

Hinderances to the work.—For all there was gratifying success, there might have been much more advancement had there been more favorable conditions. The school buildings are located within a stone's throw of the agent's office, the blacksmith and carpenter shops, and gristmill. One of the main traveled roads leading to the agency passes right by the school buildings; hence every wagon that rattles by attracts attention. Even a horseback rider can scarcely pass without being noticed. To expect scholars to properly apply themselves to their books in the schoolrooms and to their other duties in and around the school buildings is out of the question.

Then there are always more or less Indians hanging around the agency and mingling and conversing with the scholars in their native tongue. It has taken constant watchfulness night and day, especially over the girls, to secure the good results I have indicated. True, boundaries are marked out to keep boys and girls each to themselves, but the location and surroundings are such that there always has been and always will be more or less conversation and commingling between the scholars themselves on the one hand and scholars and outside Indians on the other. No one can conceive the constant annoyance we are subject to until they endure it for a time in person.

Average attendance.—While the average attendance was good it might have been much better. First, many of the Indians were slow about sending in their children. Then there is no hospital building, and in several instances, where the scholars were sick and the constant noise in and around the buildings during the day annoyed them as they lay in their dormitories, their parents were allowed to take them home for a season. Another thing that interferes somewhat is the practice that has obtained thus far to let some of the larger boys go home in the spring to help put in crops, gather up and brand stock, etc., and sometimes the girls to help put in gardens, etc. I have reason to think this privilege is abused, and scholars are taken out under this pretext when they are not really needed. I often wish there were positive instructions from Indian office touching this point, so that when application is made to take out children a refusal could be backed up by a "Thus saith the law."

Grading of the school.—As soon as the school filled up sufficiently the scholars were assigned to different grades, consisting of four in the primary and two in the advanced grade. As there are but two schoolrooms, which have to be used both for study and recitation, and but two teachers, it followed that I had four grades in my room, while two were in my assistant's room. Of course the work could not be as successful as it would be where each grade had a room to itself, as in many large schools. Besides, the studies marked out to be pursued in each grade can not be fully complied with until the text-books, etc., named in course of study are received.

Number of scholars, etc.—The number of scholars enrolled could be considerably increased by using more firmness with parents or friends of the children, and in some cases coercion might be necessary; but, as long as no more accommodations are furnished, it would be almost a positive wrong to allow more pupils to come in. From 30 to 35 girls sleeping in a dormitory 17 by 35, in which there is room for but 12 double beds, is neither healthy nor wise. Remarks also apply to 30 to 33 boys sleeping in a dormitory 20 by 32, with room for but 11 double beds. Crowding 35 girls into a sitting room 14 by 25, in one corner of which is a wash sink, another an organ, and another the head of stairs, is not healthy or convenient. Crowding 60 to 70 scholars into a schoolroom 20 by 32 for singing or other exercises can not be healthful or fully enjoyable.

On every hand we are crowded, circumscribed by narrow limits. The buildings are set back hard by the foot of a hill which rises some 50 feet above the ground floors, and from this hillside in summer time the sun reflects back with almost unbearable heat; hence the almost urgent necessity for turning out all the scholars during the vacation season. The agency itself is down in a cañonlike valley, where the heat would be more intense than it is were it not for the clear mountain stream that courses through the valley and tempers the heat with its cool waters and tree-lined banks. All the unfavorable conditions might be improved upon, and thus a fuller attendance secured, better health prevail, and larger success be obtained in discipline, scholarship, and a more contented spirit. And this brings me to more fully speak of

The school buildings.—Since I gave, over a year ago, a full statement regarding size, character, and quality of our school buildings I will not again go into the same details. The matter of a new school building has been "on the tapis" for fully six years. In 1885 the matter was almost to that point that we were about to secure \$5,000 for a new building, but for some reason it was dropped. The subject again came up in 1876-'77 and plans were submitted to Indian Office and different plans sent out by Indian Office, but there the matter rested. Last of all estimates were given a year ago as to probable cost of material, etc., but no new building as yet; and very little improvement made to old buildings, as most of the appropriation sent for school repairs went to make some necessary repairs to sawmill,

etc., and to help the Sinemascho school, so that but little was spent in fixing up our school buildings. To be plain, the Warm Springs Agency boarding-school buildings are a mass of patchwork put up for only temporary uses. Nearly all the work upon them was performed without direct expense to the Government, as it was done by school employes and unskilled boys.

In going through the buildings and entering all the rooms, one has to go up or down seven different levels, two on ground floors and five in going up to and on second floors. Roof over girls' sitting and dressing rooms is so poor and flat that it leaks badly every shower of rain. All the floors are uneven, and, not being "tongue and groove," this water and, unless great care is taken, the water used in scrubbing second floors leak down into lower rooms.

I have been at or near this agency fourteen years, and, though there has been considerable improvement during that time, especially the last six years, I long to see better school facilities provided. I have been more discouraged in my work on account of our cramped quarters and playgrounds than for any other one thing. All at the agency, except it be myself, have quite given up ever seeing any new buildings. I mean to keep "pegging away," and hope yet to see them ere I gaze for the last time upon this "rim-rock" bound valley.

The least that should be done, if no larger appropriation can be secured and the school must always remain at the foot of the cobblestone hill rising back of it, is to build a wing eastward from the school-room building, to be about 30 by 60 feet and correspond with the west wing in looks, but be better in every other respect. For this building and necessary repairs and improvements to old buildings, not less than \$1,000 should be appropriated. In the new building provision should be made either for new schoolrooms or a boys' sitting room. They have no regular sitting room; "camped" last winter in an old agency building, and during coldest weather were allowed the use of schoolrooms. We all are willing to work and feel a strong desire to deservedly earn the liberal salaries to be paid us, but we want also to see the best possible results follow our labors. We feel that these can never be secured under present conditions. May we not hope for a speedy response to our desires?

Very respectfully, your obedient servant,

C. H. WALKER,  
Superintendent Agency Boarding School.

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF SINEMASCHO SCHOOL.

SINEMASCHO INDUSTRIAL SCHOOL,  
Warm Springs Agency, Oregon, July 15, 1891.

SIR: In compliance with office circular dated April 3, 1891, I have the honor to submit my second annual report.

In my report last year I gave the history of this school from its foundation.

Schoolroom work.—The scholars, 56, which was the largest number enrolled at any time during the year, were graded as nearly as possible in compliance with circular, and seemed to have made a fair degree of progress, taking more interest in the work and being better contented than ever before.

Industrial work.—The industrial work for the year has been preparing the wood for stoves, carpentering, blacksmithing, farming, and care of stock. The boys have not been required to work as hard this year as before, as this school was furnished with 200 cords of wood for the first time. The carpentering done was repairs made on the girls' dormitory, school kitchen, addition to commissary, and some repairs on the boys' sitting room. But the latter was not completed, owing to the supply of lumber being exhausted and not being able to obtain any more. It is very necessary that this agency should be supplied with a better sawmill or the old one repaired, and a planing machine suitable for making rustic and flooring be supplied, in order to supply the scholars with suitable lumber for building and repairs. And, again, there are many Indians desirous of building houses, and good houses are one of the first and great steps in civilization.

The farm.—There are about 50 or 60 acres inclosed with wood and wire fence, 15 acres in wheat for hay, 6 acres of potatoes, and about 1½ acres in garden. And notwithstanding the cold and frosty spring the crops, although backward, are looking well for this mountainous place. There has been 5 acres of new land broken up for next year's crops.

The stock.—The school stock that is up consists of one pair horses and seven milch cows, three of which were bought since April last, and the school has been supplied with all the milk that the children could use, and the matron, with assistance of girls, has made 104 pounds of butter for the school during the last quarter, which the children seem to appreciate.

Industrial training of girls.—The industrial training of the girls has been cooking, butter-making, washing, ironing, sewing, knitting, general housework, and some fancywork. The girls seem happier, better contented, and take more interest in keeping their rooms in order and in trying to learn than ever before.

Condition of school.—The general condition of the school has been greatly improved during the last year, but there is still chance for a great improvement.

Last year I made a diagram of grounds and buildings, giving location and size of rooms, and forwarded the same to your honor through Agent Luckey. The size or location of buildings and rooms has not been changed, except those before mentioned in this report.

Needs of school.—I would respectfully recommend that this school be supplied with a laundress and washing machines. The necessity of same will be readily seen when I state of 56 scholars 22 are females and only 9 of those are over 12 years old; also that hereafter the estimates for school supplies be made on separate sheets, and the goods for this school be marked and delivered direct.

Very respectfully,

F. T. SAMPSON, Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN SOUTH DAKOTA.

## REPORT OF CHEYENNE RIVER AGENCY.

CHEYENNE RIVER AGENCY, S. DAK.,  
*August 17, 1891.*

SIR: I have the honor to submit this my first annual report of this agency for the past year. Cheyenne River agency, S. Dak., has until recently been located on the west bank of the Missouri River, about 40 miles from Pierre, the terminus of the Chicago and Northwestern Railroad, and about 10 miles south of the Big Cheyenne River. The agency property and buildings are now being moved about 55 miles north of present location to a point on the Missouri River opposite Forest City, S. Dak. The post-office address has been Fort Bennett, and Fort Sully, 7 miles down and across the Missouri River, has been the nearest telegraph station. The post-office address for the new agency will be Forest City South, S. Dak. A post-office should be established at new agency. Telegraph station will be at Gettysburg, S. Dak.

**Allotment of land.**—Under the terms of agreement of the Sioux commission of 1889, all Indians living on the ceded land were entitled to an allotment in case application was made prior to February 28, 1891. Nearly all the Indians living along the Bad River filed their application for an allotment and the special allotting agent has just completed the allotment of land to these Indians. Nearly all the land on both sides of the Bad River was claimed by and allotted to Indians, and, as the river affords the only water supply, much trouble is experienced on account of the large herds of stock owned and controlled by white men, who are jealous of or have no regard for Indian rights. A State law recently passed (for this section of South Dakota only) requires the fencing of crops, and no damages can be recovered for destruction of crops not fenced. Unless some means can be devised whereby these Indians can be protected, they will leave their allotments and move on the reservation. The facts are, Indians can not live and prosper with white men for neighbors, especially where stock-raising is the only industry. The land office records will show very few homesteads on the ceded land, and yet nearly the entire country is occupied by stockmen, many of whom do not own any land. As this class often annoy the Indians in many ways, the attention of the Department is wanted in this direction. Nearly all the Indians on the reserve are anxious to have a survey of their land made at once, so as to enable them to take their allotments. About 60 have already filed their application.

**Occupation of the Indians.**—The Indians devote their attention to stock-raising, freighting, and farming. They have been very successful with stock, nearly every family having a few head of cattle and horses, and many of the more progressive have large herds ranging from ten to one hundred cattle. They supplied the agency with one-half the beef cattle required for issue during the past year, and will be able to furnish the full amount required for this fiscal year. The cattle are well cared for in most cases. We have five farmers assigned to the five districts into which the reservation is divided, and who reside near the center of their district and spend nearly their entire time among the Indians, instructing them in farming and the care of stock, only coming to the agency to assist at issues and such special duties as are required of them.

The raising of crops on this reserve has not been a success with the Indians, nor has it been a success with their white neighbors along the borders of the reserve. Year after year the Indians have prepared the ground in good shape and planted the seed in the right season, and in most cases cultivation has been well done, but very little or nothing has been harvested for the past four years. The crop has not been as much as the seed planted, and this year will not show any improvement on the past. The fact is, this country is not a farming country, and never will be until some means of irrigation is devised or some means by which the hot drying winds can be overcome. Again, the greater part of the reserve, especially along the streams, is barren gumbo hills, upon which nothing will grow, and the greater part of the valley land will produce nothing but sage brush and cactus. It would seem that time and money are wasted in attempting to farm in this country under the present conditions. Stock-raising seems to be the only industry that can be successfully followed on this reserve, and it is in this that the Indians are being carefully instructed.

Mowing machines are the only farming tools absolutely needed by the Indians for some time to come, and they should be more liberally supplied than heretofore, so that sufficient hay can be stored for winter use. Many of the Indians have bought mowing machines with the money paid them for beef cattle and seem proud of their independence in this direction. More cows and hay-making tools and less plows and corn-planters in the future are earnestly recommended.

The Indians have transported all the supplies from railroad terminus to agency during the past year in a very satisfactory manner.

**Education.**—There are two boarding and eight day schools on this reserve. One of the boarding and all of the day schools are maintained by the Government. The second boarding school is supported by the Domestic and Foreign Missionary Society of the Protestant Episcopal Church.

With the exception of a few of the unprogressive, the Indians are very much interested in schools on and near the reserve, but they oppose sending their children to the Eastern school on account of the climate.

*The boys' boarding school.*—This school is located about one mile from old agency. It has been in successful operation during the entire school year, but owing to the effect of the "ghost dance" the attendance was small during the first half of the year, the attendance being only 44. After the ghost dance subsided, however, very little trouble was experienced in filling the school to its utmost capacity, and the class room was used as a sleeping room to accommodate some of the pupils, and the office was in turn used as a class room. Sixty-nine pupils were thus crowded into the school. The class-room work extended over a period of ten months. Owing to the fact that the crops on the school farm were ruined by the hot, drying winds, none of the boys, except the orphans, have been kept at the school during vacation, and all but one of these have been given a leave of absence. The total cost of maintaining this school, exclusive of repairs (amounting to \$15), has been \$7,628.48 and the average attendance has been 55.54.

The removal of the agency demands that this school should also be moved, the building being entirely unfitted and unsafe. During a recent storm the building was struck by lightning and nearly all the window-glass on the north side was broken. Only slight damage was done by the lightning, but the building is very frail and was badly shaken by the storm. A new school at the new agency is contemplated and is very much needed.

*St. John's William Welch Memorial School.*—This boarding school for girls exclusively is conducted under the auspices of the Domestic and Foreign Missionary Society of the Protestant Episcopal Church, under the supervision of the Right Rev. W. H. Hare, D. D., Bishop of South Dakota, and has been in the immediate charge of Mr. and Mrs. J. F. Kinney, jr., for the past twelve years. The average attendance has been 47.13, and the cost to the Government of maintaining the school has been \$1,981.01 for subsistence and other supplies issued. This amount represents but a little more than would have been expended for the children if at their homes. The salaries of teachers, fuel, lights, as well as other expenses, are paid by the church. During the year this school has maintained its former high standard for excellence. Many pupils applied for admission who were turned away for want of room. The best practical results are obtained at this school.

*Day schools.*—No. 1 school is located at the mouth of the Moreau River, about 72 miles north of present agency, and has been under the charge of Mr. and Mrs. William Holmes. The school was in session ten months and had an average attendance of 27.14. The total cost of maintaining the school has been, exclusive of repairs, \$1,041.46, of which William Holmes, teacher, was paid \$600, and Rebecca Holmes, assistant, \$360 salary. Both Mr. and Mrs. Holmes have gained the confidence of the parents as well as the children; they are doing excellent work.

No. 2 day school is situated about 25 miles from the old agency. This school was discontinued December 18, and the teacher, Miss Goodin, was transferred to No. 7 day school, and the pupils were sent to other schools. The total cost of maintaining this school for the time it was in session was \$358.76, of which Miss Goodin was paid \$333.33. The average attendance is 10.05. This school building is situated on the ceded land. Most of the children in the camp coming from the reserve are compelled to cross the Cheyenne River. It is not deemed expedient to continue this school. The school building might be given to deserving Indians who will take it down and utilize the lumber in the construction of house and stables. All the children in this camp will be in school at Pierre or the boys' school.

No. 3 day school is situated about 1 mile from site of new agency and has been in successful operation during ten months of the school year. The average attendance has been small, only 11.03, but all the children in the camp have attended the school. The total cost has been \$679.87, of which Agnes J. Lockhart, teacher, has been paid \$600 salary. All the Indians in this camp take great interest in the school. Sewing and housework are taught the girls. Miss Agnes J. Lockhart is an excellent teacher.

No. 4 day school is situated in Swift Bird's camp, about 7 miles from new agency. This is also a small camp, but excellent work is done in the school. The teacher, Viola Cook, is among the very best teachers of Indian youth. The total cost of maintaining this school from September 1, 1890, to June 30, 1890, has been \$676.01; of this the teacher has been paid \$600. The average attendance has been 11.24. This school will be discontinued when a boarding school is located at new agency.

No. 5 day school is located on the Moreau River, about 50 miles from its mouth, and about 55 miles from the new agency. Oscar D. Hodgkiss was in charge of this school from September 1 until November 15, when he resigned and Mrs. Elizabeth Claymore was placed in charge. The average attendance of this school is 17.85, and the total cost of maintenance has been \$686.19, of which Oscar D. Hodgkiss was paid \$225 and Mrs. Elizabeth Claymore was paid \$375. Mrs. Elizabeth Claymore is a half-breed Indian, was educated at St. John's Mission School on this reserve. The result of her labors has been very satisfactory, and I regret very much that her health does not permit of her continuance in the school service.

No. 6 day school is situated in Four Bears' camp, on the Missouri River, about 17 miles from the new agency. Miss Annie Brown has taught in this school for several years. The average attendance is 16.37 and the cost of maintaining this school has been \$693.14, of which Annie Brown, teacher, has been paid the sum of \$600. Sewing and housekeeping are taught the girls.

No. 7 day school is situated in White Horse's camp, on the Moreau River, about 45 miles from the new agency. The people in this camp are very much interested in education. Miss Rachael D. Carlock has been teacher at this school for several years, but notwithstanding this is one of the best camps on the reserve the attendance was small. The teacher had very little interest in the school and seemed to care very little about educating or civilizing the children. She was relieved from duty by order of the Commissioner of Indian Affairs January 1, 1891, and Miss Goodin was placed in charge of the school, after which a very decided improvement was noticeable. Miss Goodin has been in the Indian school service for several years and is an excellent instructor of Indian youth. The total cost of maintaining the school for the entire year was \$681.68, of which the salary of \$600 was paid the teachers for their services. This school or camp furnished a number of pupils to the Pierre school. After Miss Goodin took charge all the children in the camp attended school. The average attendance for the year was 16.24. The highest number after Miss Goodin took charge was 27 enrollment. Ill health prevented Miss Goodin from continuing in the service and she resigned at the end of the fiscal year.

No. 8 day school building is on the ceded land, on Plumb Creek, about 65 miles from old agency. As all the Indians have moved away from the camp the school was not open at this place, but the school furniture was transferred to the farmer's residence, located on Cherry Creek, about 15 miles distant from the schoolhouse, and a school opened on November 11, by placing Mrs. Mary Dupree in charge. This school is near the ghost-dancing camp, and little progress was made, notwithstanding a great effort was made on the part of the teacher and the farmer in that district. This school was closed a short time while all the Indians in the camps were detained at the agency. Mrs. Mary Dupree resigned April 14, and John F. Carson was placed in charge, after which the building was very much crowded, and the attendance was increased to 36. I shall be very much mistaken if Mr. Carson does not prove one of the very best teachers. The average attendance during the one hundred and twenty-six days that school was in session was 18.47, and the total cost for maintenance was \$450.03, of which \$399.44 was salary paid teachers.

**Indian police.**—The force consists of 1 captain, 1 lieutenant, and 25 privates, and the best men that can be induced to join the force are selected. The compensation is not adequate for the work required and many of the best men will not serve. The only inducement to many who do serve is that it is considered an honorary position. During the year the force has performed its many duties in a very satisfactory manner and have proven themselves faithful and trustworthy. During a portion of the past year the duties of the police have often been dangerous and difficult to perform. During the month of November and December the services required often kept them in the saddle 24 hours without rest, and 150 miles was often traveled by them in that time, and during all those troublesome times no complaint was made. They have been faithful and trustworthy under all circumstances. The pay of the force should be very materially increased, as they are required to furnish the horses used and to furnish forage for them without extra pay.

**The court of Indian offenses.**—This court has been in operation during the entire year, the judges receiving a compensation of \$10 per month since October 1. The judges have been White Swan, William Charger, and Abraham No Heart. All three of the judges represent the civilized or Christian element, the first being a member of the Roman Catholic Church, while Charger and No Heart are members of the Protestant Episcopal Church. Swan has secured an allotment of land under the agreements of the Sioux Commission and Charger and No Heart have selected lands on the reservation and have asked for allotments whenever the reservation is surveyed. All the judges wear citizens' dress and are strong advocates of education. About 125 cases have been tried by this court during the year, with 73 convictions, such as theft, disorderly conduct, infidelity to marriage vows, slander and scandal, resisting police authority, libel, killing or selling cattle without permission, for

illegal marriage, for encouraging the ghost dance, for contempt of court, etc., for which offenses punishment is inflicted by confinement and labor in the agency prison for periods varying from two to ninety days, as may seem just and proper in each case. All cases of dispute over the ownership of stock, the settlement of claims for debt, etc., are brought before this court, and in nearly every case a satisfactory settlement is effected. All cases are reviewed by the agent immediately after each session and a final disposition made of them. Whenever a case is reported to the agent requiring the action of the court it is referred for trial at the next session. The court issues the summonses for the principals and witnesses in the Dakota language and the summonses are served by the police. The witnesses are examined in the presence of the accused. One witness at a time only is allowed in the room. Order and decorum are observed at all times. The sentence imposed by the court is duly carried into effect by the police, after receiving the approval of the agent. In a number of cases fines have been imposed payable in the delivery of a gun, all cash fines having been abolished. A record of each case is kept in the Dakota language, and a record referring to each case is kept in the office files. With good judges there can be no doubt of the great usefulness of such a court, and that it has a good influence in preserving order and in educating the Indians in the ways of civilization. As these judges often incur the ill will of many of their people and are subjected to annoyance and loss it would seem that the compensation is very small for the services rendered.

A clerk should also be provided with proper compensation for work, which should be not less than the pay of judges at the present time.

The late outbreak.—Much has been written, and reports, official and otherwise, have been sent to the Indian Office, the War Department, and to the various news depots of the country, regarding the cause which led to the late trouble with the Indians at many of the agencies, and which seemed to center at the Pine Ridge Agency. The real cause which led to the trouble is very difficult to determine, judging from the reports sent out by the representatives of the different bureaus, societies, associations, and the various interests, public and private, political and sectarian. Very many, and it might be said nearly all the reports of hostile demonstrations of the Indians, the raiding of ranches, and the driving offstock, have been without foundation; in fact, the Indians alone have been the sufferers so far as relates to the Cheyenne River reserve, and the parties doing the damage are believed to be white men. Whatever may have been the cause, or who should be accountable for the late trouble, the settlement or result of the trouble and the present condition of the Indians is the only matter of interest. As regards the ghost dance of itself very little significance would be attached had not a spirit of insubordination been coupled with it which for a time seemed to defy all authority of the Indian Office. It was finally subdued by counsel and argument, by the faithful and excellent service of the police, and by the untiring efforts of agency farmer, Narcisse Narcelle, who remained in the hostile camps, under the direction of the agent, during all the troublesome times, and finally succeeded in inducing the Indians to come to the agency and to submit to the authority of the Indian Office. The Indians affected by the ghost dance were living distant from the agency, from 50 to 90 miles, the camps known as Big Foot's band living farthest away. All had started and Big Foot's band had traveled one day in the direction of the agency. At this critical moment the killing of Sitting Bull occurred, and the refugees from Sitting Bull's camp began to arrive at the different camps along the Cheyenne River. A halt was made by Big Foot, and a council held.

It was at this time the military under Col. Sumner took Big Foot's band in charge and started them back towards Fort Meade, stopping at Big Foot's home. The Indians, however, evaded the troops for reasons which, in all probability, will never be known, and started for Pine Ridge Agency, near where they were again intercepted by the troops, and near where occurred the Wounded Knee affair, as to the cause and details of which there are conflicting reports. As this band of Indians were on their way to the Pine Ridge Agency headquarters it is not probable that any hostility was intended.

The Cheyenne River Indians from all the other camps kept faith with the agent and came to the agency, where they remained until the trouble at the Pine Ridge Agency was in a measure settled, and in token of their loyalty to the Government, and the desire to keep inviolate their promise of good behavior in future, they delivered their guns to the agent for safe-keeping. I earnestly repeat the recommendation that these guns be returned to the Indians, or that they be compensated in some way for the value of their guns, as many of the guns were taken from the Indians who were in no way affected by the ghost dance, and who had rendered good service in convincing their people of the error of their ways, and who gave their guns as an incentive to others.

Population.—The census of this reserve was taken June 30, 1891, all the Indians

except the sick and infirm and those left to care for the camps being at the agency. At that time the result shows—

Males .....	1, 210
Females .....	1, 355
	2, 565
Males over 18 years .....	682
Females over 14 years .....	903
Males between 6 and 16 .....	311
Females between 6 and 16 .....	309
	2, 205

The count was made in the best possible method with the limited force, and will vary but little either way from an accurate count. It has been impossible thus far to get anything like a correct statement of the survivors of the Wounded Knee affair who still remain on the Pine Ridge Reserve. Occasionally a few return, and it is believed ere long all will come back to their homes. A close estimate places the number yet at Pine Ridge at about 70, a large proportion being women and children.

**Rations and supplies.**—Congress failed to make the necessary appropriation to enable the Indian Office to comply with the agreements of the treaty of 1877, and the reduction of subsistence was the result. Very little complaint was made by the Indians of this reserve on account of short rations, as the Indians were paid about \$30,000 for beef cattle, which enabled some of them to provide the necessities of life which the Government failed to supply. Much complaint was, however, reported at other agencies, and the attention of Congress was called to the starvation condition of some of the Indians, and on January 19, 1891, the Commissioner was authorized to comply with the treaty agreements, since which time Indians have received full rations.

This report has been somewhat hastily prepared amidst the work of transferring the agency headquarters to the new site, and it has not been possible to give the proper attention required in the preparation of such a report. The statistical reports required are herewith transmitted.

Very respectfully, your obedient servant,

PERAIN P. PALMER,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF CHEYENNE RIVER SCHOOL.

CHEYENNE RIVER AGENCY, S. DAK., July 6, 1891.

SIR: In compliance with the request contained in your circular of April 3, 1891, I submit the following as my report for the school year ending June 30, 1891. As a full and detailed history of the school was given in my report for 1890 it is considered unnecessary to repeat it here. \* \* \*

The only repairs made during the year was the putting down of a new floor in the hat room. The buildings generally are well kept, care being taken to promptly repair any and all damages wrought by accident or wear.

There are about 65 acres of land under a good and substantial wire fence, and which are cultivated as a farm and garden. This farm at present contains corn, oats, potatoes, millet, alfalfa, melons, squashes, and the vegetables usually grown in a well cultivated kitchen garden. Under favorable conditions of soil and climate the products of our farm would more than suffice for the needs of the school. Up to a week ago our prospects for a good crop were excellent. The early season was favorable, the sowing and planting had been intelligently performed, and the subsequent cultivation was thorough and complete; but for two weeks no rain has fallen, hot, dry winds have blown nearly every day, and now the outlook is anything but flattering. Until both soil and climate in this section change for the better—they can not be much worse—farming here will be largely a matter of chance.

There are also about 40 acres under a good wire fence which are in native grass and used as a pasture for calves. The water from our spring flows through this lot, furnishing the animals with an abundant supply of pure water.

The industries carried on at our school are necessarily very limited in number. There are no shops of any description, and all we can do is to teach the boys how to farm, to care for cattle, horses, and hogs, to milk and make butter, and to do a little rough carpentry. They are also trained in various household duties, such as baking, sweeping, washing and ironing clothes, and similar work, all of which they have, under lively protest on their part, learned to do with remarkable proficiency.

The school and class room work of the past year have been prosecuted with zeal, industry and success. Thirty-five new pupils were added during the session, most of whom came from the tepee, with all the environment of savage life. During the term nearly all of these were transformed into English speaking and English writing lads, observing the rules of decency and decorum. If nothing else had been done this work alone would justify the outlay necessary for its accomplishment; but the entire school has prospered and advanced in a like degree. A visit by an intelligent Eastern man or woman to this school is a pleasant and totally unexpected revelation. To hear distinct and correct English

spoken, to see really elegant penmanship, and to listen to intelligent recitations in grammar, history, geography, physiology, and numbers—all the work of boys who but a few years ago were ignorant of all save the use of their native tongue—all these must needs be a source of great surprise to the visitor. Yet these things may be seen and heard at any time in this school.

I attribute much of our success to the fact that I early in the year reorganized the school on the basis of the new course of study. About the only obstacle worth mentioning was the difficulty of adapting the present text books to the prescribed course. So I am able to predict that with the use of the books to be furnished this year there should be nothing in the way of realizing all you hope for in the matter of placing all the schools on a uniform basis.

The attendance during the early part of the year was small. Several causes contributed to this. One of the employés (since removed) was highly objectionable to both children and parents, and the mutterings of the cloud which finally broke over the whole Sioux Nation were already beginning to be heard. Parents were reluctant to send their children away from home, not knowing at what moment they themselves might be required to fight or to fly. But as the session advanced and no trouble occurred on this agency, and the agent kindly yet firmly insisted on the attendance of the children at school, our numbers increased until 65, the utmost limit, were contentedly and quietly learning the *better white man's way*.

My earlier quarterly reports show more than the usual number of truancies. I attribute this largely, if not altogether, to the utter unfitness of the then industrial teacher. He was absolutely destitute of every quality necessary to win and retain the confidence and regard of a child, and knew of no way of enforcing a command except with a harsh word or a blow. He was discharged in March, and since that time no boy has attempted to run away. The present industrial teacher is liked by the pupils, and will no doubt be successful in his department.

During the year 7 of our boys were transferred to other schools, 6 to Genoa, and 1 to Pierre. It should have been mentioned when speaking of attendance that Agent Palmer has been untiring in his efforts to keep the school full to its utmost capacity. I believe that if we could have accommodated 100 pupils he would have obtained that number of boys. In all things looking to the welfare of the school he has been zealous and untiring.

It is only justice to say that with the exception above noted the school employés, notably the assistant teacher, the industrial teacher, the matron, and the seamstress, have performed their respective duties with commendable fidelity. I have but one complaint to make, and grounds for this complaint will be found in all Government boarding schools so long as the various subordinate employés know that they do not look to the superintendent for place or promotion. I refer to occasional acts of insubordination. Employés, especially females sometimes become imbued with the idea that they are vastly more competent to manage affairs than is the superintendent, and act accordingly. When this state of affairs exists one or the other should go—the superintendent if he is incompetent, the employé if she is merely insubordinate. I respectfully submit that superintendents should have at least the power to suspend until the matter is adjusted by the agent or the commissioner.

During the entire year the health of the pupils was exceptionally good, no serious illness of any sort appearing in the school. Dr. Z. T. Daniel, agency physician, made frequent visits to the school in the capacity of lecturer, and the boys evidently profited by his instruction.

I again earnestly call your attention to the necessity of providing at least four suits of rubber or other waterproof clothing for the use of the boys who haul the water and herd the cattle belonging to the school. When our storms do occur they are apt to be sudden and severe, and as the cattle range is a large one, and all the water used by the school must be hauled from a distant spring, you can easily see how the boys who attend to this work get frequent wettings. In cold weather the water boys are encased in ice so long as they are hauling the water from the spring. Rubber overalls and coats would prevent this discomfort and risk to health.

Very respectfully, your obedient servant,

G. W. WROTEN,

*Superintendent Boys' Boarding School, Cheyenne River Agency.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF PHYSICIAN, CHEYENNE RIVER AGENCY.

CHEYENNE RIVER AGENCY, S. DAK.,  
1891.

SIR: I have the honor to submit this my third annual report from this agency.

The general sanitary condition of the reservation from July 1, 1890, to June 30, 1891, has been very good. We have had no epidemic of the diseases of childhood, and no visitation of zymotic diseases. This reservation is probably exceptionally free from the usual physical conditions favorable to the development of the latter class of afflictions.

Of the enthetic diseases we are also fairly exempt, especially those of a venereal character. This is due to two main causes, viz, the remoteness of our Indians from the white settlements, and the reasonable virtue of the Sioux.

We have had some constitutional diseases, mainly rheumatism, dropsy, consumption, and scrofula, the last two of which are the great destroyers of the Sioux, more dying of these diseases than all others combined, *i. e.*, in the absence of an epidemic. There has been a considerable proportion of parasitic diseases, but as a rule they are quite amenable to treatment.

Diseases of the nervous system claim an important notice, especially chorea, epilepsy, neuralgia, and paralysis. The latter is almost always fatal, particularly where it assumes the type of hemi or paraplegia. Facial paralysis yields to treatment.

Diseases of the eye and ear are widespread, conjunctivitis and atorrhea being the principal forms.

Diseases of the organs of circulation are infrequent, but phlebitis and varicose veins attract some attention.

Of the diseases of the respiratory organs, catarrh, bronchitis, and laryngitis are most noticeable, a few cases of pneumonia and asthma occurring now and then.

Diseases of the digestive organs, such as colic, constipation, dyspepsia, piles, and ascites from cirrhosis are most common.

Urinary diseases and those of the genitalia are mainly confined to Bright's disease, inflammation of the bladder, varicocele, and incontinence of urine.

Diseases of bones and joints are frequent; periostitis, caries, necrosis, inflammation of joints, and ankylosis. All the principal integumentary diseases are seen, except whitlow, which is rare.

Violent diseases, such as burns and scalds, bruises, sprains, dislocations, frostbite, fractures, incised, punctured, and lacerated wounds, occur in respectable frequency.

There has been no homicide or execution of sentence. Two women committed suicide.

The mode of cooking among the Sioux is far from what it ought to be; their bread is hardly worth the name; they boil or make into pot soup all their meats. I have never seen them fry, broil, bake, roast, or smother. A reformation in their cooking would be of incalculable benefit to them. They have no regular hours for meals, generally eating when their appetites prompt them, and after fasting to an inordinate extent. Their bill of fare is extremely limited, consisting mainly of a few articles such as their bread, beef, potatoes at intervals, salt pork, and coffee, the latter without cream or milk. They cultivate few, if any vegetables, and have no fruits, save those indigenous to the country. Apples, pears, peaches, ripe watermelons, grapes, bananas, oranges, lemons, are usually unknown among them.

Their cooking utensils, too, and tableware, are not thoroughly nor persistently cleansed. Their houses are untidy, their window panes are almost never washed, woodwork rarely scrubbed, bedding rank and foul and loaded with vermin, and insufficiently sunned and aired. One or two rooms accommodate a whole family for all purposes of housekeeping; and the sputa and excretions of a consumptive or scrofulous inmate is desiccated on the unwashed and nondisinfected floors, which permeates the atmosphere and is breathed continually by all its occupants. There is no place for the deposition of garbage, nor for the reception of excrementitious matters, such being disposed of here and there about the premises.

The most of their time is passed in eating, sleeping, lounging, visiting, and performing in an inefficient manner only those duties that if neglected result in immediate and palpable distress. Their personal cleanliness is a matter plainly neglected. It is not so apparent to a casual observer as to the agency physician, who is frequently brought into closer relation with him. They have no bath houses, and as a rule their persons are covered with unctuous, dusty accretions, which disgust the eye and offend the nostril. Is it any wonder that they are sickly! That they have skin diseases, consumption, scrofula epidemics, and what not? The above does not apply to every Indian family, but as a rule it is applicable to them as a class.

Their intermarriage, too, works them great detriment as a people. I have heard more than one intelligent observer of the Sioux say that they were all related. We all know the ill effects of breeding in too much of cattle, hogs, sheep, horses, chickens, dogs, etc. As a physiologist I believe the same rule holds good with the human race and is fully demonstrated in the Indian tribes of North America. Their consumption and scrofula are not due to tuberculous beef issued to them by the Government, as has been alleged, for they had these diseases in their wild state, before they ever saw an ox; but their mode of living, habits, ignorance of the laws of health, and particularly their tribal intermarriage and love of the warpath are the explanation of their steady decrease. I believe that if the different tribes would intermarry more there would be less mortality, in spite of their ill-conditioned mode of life, that their constitutions would be stronger, in obedience to the law of crossing, and afford them greater powers of resistance to disease.

The mixed bloods show an improvement on the above picture. They are healthier, more intelligent, enjoy life better, are physically stronger, have cleaner, larger houses, and approach the domestic condition of the white man. I could name many half-breed women who keep neat, tidy houses, who can prepare a palatable meal, whose beds one can sleep in, whose children are washed and are seen with clean clothing on; but it is the exception to find one such full blood.

Mortality.—The total number of all decedents from disease as far as can be ascertained is 34. Of this number 5 occurred under my observation. Number of male adults, 8; female adults, 6; males under 21, 13; females under 21, 7; 10 males died from consumption, 4 from whooping cough, 2 from scrofula, 1 from hemorrhage from bowels, and 5 from unknown diseases in camps; 7 females died from consumption, 1 from scrofula, 1 from inflammation of the bladder, 1 from chronic bronchitis, 1 from inflammation of the brain, 2 from unknown diseases in camp, and 2 suicidal; making 36, total number of deaths from all causes.

We lost a large number of killed at Wounded Knee Creek, but, as that catastrophe occurred off the reservation and did not come under my observation, it will not be noticed here.

Births.—Total number births, 100; Indian, 91; half-breed, 9; male Indians, 45; female, 46; male half-breeds, 4; female, 5. The Indian women do not seek the assistance of the agency physician in this class of cases, unless dystocia is present, in which event they readily put themselves under observation. Less than a decade ago even this was not thought of. This is one proof of their advancement. When they become educated up to the point of having the accoucheur on all these occasions the agency physician will have to get around pretty lively.

Schools.—The boys' school accommodates from 60 to 65 pupils. Number of cases treated in this school September 1, 1890, to June 30, 1891, 20. Consumption was developed in a scholar at this school, and after his removal from the school he died. He had passed the remedial stage of the disease prior to his removal. The conduct of this school under the superintendence of Dr. G. W. Wroten has so far as sanitation is concerned been without criticism. His subordinates have been assiduous in their attentions to the sick children, and faithfully enforced the instructions of the medical adviser. I consider the services of a physician as superintendent of any school remote from civilization peculiarly opportune, as by his professional attainments he is equipped for emergencies and is competent to secure adequate medical or surgical treatment in the absence of the agency physician.

I again call attention to the necessity of supplying the chore boys of this school with rubber boots, overalls and coats, fur caps and fur mittens. Exposed as they are to the most intense cold while hauling water, herding, feeding stock, etc., this recommendation should not go unheeded.

The school of the Protestant Episcopal Church for girls accommodates 46 scholars; number of cases treated in this school during the same period, 18. No death occurred in this school, but one case died of phthisis, following scrofula, after leaving school. It would be difficult to improve on the administration of this institution. Its sanitary condition has been good; it is sweet, clean, and healthful in all its parts.

To each of these schools I have delivered a course of lectures on the subjects of anatomy, physiology, hygiene, nursing, cooking, treatment of wounds, etc., the pupils taking great interest in them. I would respectfully suggest the purchase of some simple charts, by which lectures on anatomy, physiology, etc., could be illustrated. I find that making figures with colored crayons occupies too much time for profit.

The total number of all cases treated on the reservation is 926, against 1,051 last year, a slight decrease. The deaths this year, 36; last year, 79; decrease, 43. Total male Indians treated, 425; female, 337; total male half-breeds, 66; female, 58; total male white, 18; female, 22. The death of no half-breed has been reported and no white person has died. The number of miles traveled is estimated at about 2,500. Number of surgical operations, 16. From the above it is plainly seen that their adoption of our methods of treatment is no longer a question.

There should be erected at this agency a small hospital, where surgical cases and curable medical patients could be cared for. After undergoing operations and before complete recovery they become

restless and want to return home; this should not be; they should be kept under the surveillance of the surgeon until complete recovery.

The agency physician should have an intelligent pharmacist for an assistant, at a salary commensurate with the duties to be performed. When visiting in the camps from 20 to 60 miles from his office he can not travel back and forth to compound his prescriptions. His work is more than he ought to do regardless of the constant drudgery of the dispensary; and in surgical operations of any magnitude he can not properly perform without an assistant of decided intelligence. Heretofore I have had the assistance of Drs. Ferguson, Cline, and Wroten in such cases, but now we are to be removed some 40 miles up the river and their coöperation will be denied. I therefore strongly urge the appointment of a pharmacist and assistant to the agency physician, for these and other obvious reasons. If it befits me, I desire to say that the Department is under some obligations to Drs. J. B. Ferguson and G. L. Cline for assistance rendered the agency physician during my two years' association with them, and the separation which will be necessarily caused by our removal will be very sensibly and keenly felt by myself.

I again suggest the revision of the official nomenclature and the extension of the list of medical property, for the reason that the profession is far in advance of those at present in force.

In conclusion, I desire to thank the medical gentlemen mentioned above, personally, for valuable services rendered to the sick of this agency during the past year; also the agent for his assistance in the prosecution of my duties, and the employes generally for their uniform courtesy and affable demeanor.

Very respectfully, your obedient servant,

Z. T. DANIEL, M. D.,  
*Agency Physician.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF CROW CREEK AND LOWER BRÛLÉ AGENCY.

CROW CREEK AND LOWER BRÛLÉ AGENCY, S. DAK.,

*August 28, 1891.*

SIR: Following out the instructions of your circular letter of July 1 last and in compliance with regulations of your Department, I have the honor to submit herewith my second annual report of affairs at this, the Crow Creek and Lower Brûlé Consolidated Agency for the fiscal year ending June 30 last, and to forward in connection a statistical record covering fifty-five heads of information pertaining to Indians of each reservation, together with school statistics covering the information required in application separately to the industrial boarding schools located at each agency, the Immaculate Conception and Grace Mission Contract Schools, located on the Crow Creek Reservation, and the day schools under my supervision, located respectively at the mouth of White River and at Driving Hawk's camp on the Lower Brûlé Reservation.

**Consolidation defined.**—This agency, as the name signifies, is consolidated and comprised of what was formerly two separate and distinct agencies, the Crow Creek Agency and the Lower Brûlé Agency, with an agent for each, and the only significance of which I am aware that the term has in application to this agency, at the present time, is the consolidation of the work, duties, and responsibilities of two agents performed by one with a corresponding salary.

**Difference of Indians.**—All the Indians of both reservations are Sioux, but there is a wide difference between the Crow Creek and Lower Brûlé Indians in everything that would indicate unity.

The agency headquarters for each are 30 miles apart and on opposite sides of the Missouri River and maintained by two separate and complete sets of employes, all records of public property and accounts of cash being submitted as for two agencies, and shipment of all supplies made direct to each, except mailable matter, which should pass through the main office located at the agent's headquarters and addressed to the Agent, Crow Creek and Lower Brûlé Agency, Crow Creek post-office, Buffalo County, S. Dak. Messages sent by telegraph should read "via Chamberlain, S. Dak."

**Relative location of reservations.**—The lands set apart in treaty stipulation as permanent reservations for them are unconnected and belong distinctly to Indians drawing rations at each agency, nothing being held in common. Great inconvenience is caused in traveling from the one to the other, on account of the distance over very rough and hilly country and the barrier formed by the treacherous Missouri River, which is crossed only at one point opposite the city of Chamberlain by a steam ferry. I am compelled to make visits from one to the other averaging once a week and to cover the territory occupied by both as often as practicable. In the performance of this small part of my duty I have been provided with one heavy double conveyance. Your Department informs me that nothing but "buckboards and light wagons are furnished for the Indian service." Thanks to my constitution, I can ride on horseback and, if it could be clearly shown to me wherein it benefits the service, I would be willing to cover long distances on foot.

### GENERAL REMARKS.

With the differences above pointed out there are, however, general remarks pertaining alike to the separate reservations and Indians belonging to both tribes

which, with a view of brevity, are considered first, after which the condition of affairs at each agency is clearly set forth.

**Climate.**—The climate of this latitude is the most peculiar of any to be found, and the temperature is subject to the greatest variation in the shortest length of time. As a rule we have five months which could be called nothing but winter, and seven months of a mixed state of weather, with a range of temperature during the year from 40° below zero to 120° F. above, with an average temperature during the summer of 80° and winter of 5° above zero.

The seasons, if favorable to any industry which Indians can at present pursue, would be that of stock-raising, and with sufficient moisture abundant crops of grain, hay, vegetables, and fruit could be raised; but, owing to the continued droughts that have visited this locality in years past agriculture has been pursued with discouraging results to South Dakotans, and stands, with two river valleys excepted, practically as a failure.

I have lived here for the past sixteen years, each year as a farmer. During that time not more than five seasons have been favorable to vegetation of any kind, owing to the lack of moisture, and some years have been nearly total failures, including the last two years, during which not sufficient grain was raised for seed. The soil of this and surrounding country is very rich, and where moisture is regularly supplied at seasons when needed is wonderfully productive of all kinds of cereal grains, corn, every variety of vegetable, shrubbery and the hardy fruits.

I shall not at this time take up the subject of irrigation further than to say that everything pointing to success in agriculture would be in favor of it. The cost is against it.

**Timber on reservations.**—Native timber on these reservations is practically exhausted, and, since the allotment of lands in severalty is confined to the ownership of a few Indians, who manage to barely supply the demand for wood of the schools and agency, for which they are paid \$5 for hard and \$3.50 for soft wood per cord. There is no timber sawed or sold as lumber; none is available for that purpose.

**Industries.**—The occupation, if any, followed by nearly all Sioux is that of farming and agriculture, necessarily so because of the lack of opportunities to engage themselves in other industries and lines of business. Their prosperity and happiness are likewise measured largely by the favorable seasons through which they pass and amounts of grain raised. It will be seen from statistics that the endeavor of Indians to advance themselves by farming has been met with failure, owing to the severe droughts which seldom fail to visit this locality during the growing season, all of which has been the most discouraging to Indians; for, if there is one class of people who expect more for labor actually performed than any other class, I believe it to be Indians.

I have used every possible endeavor to encourage them in the purchase and protection of stock, especially cattle, and to properly care for the increase. There are but few Indians of this tribe who are not anxious to possess stock, and who are not capable of caring for the same. I consider stock-raising, under present conditions, to be the most favorable and profitable of any industry which Indians can pursue.

With a fair return for labor performed, I am satisfied that these Indians would be greatly more industrious than at the present time, and would add largely to their self-support if such opportunity for them should be offered. They seem willing to perform labor for remuneration, even to work hard; are anxious for positions of salary and trust, and disappointed if lost the opportunity to haul freight and other means for money-making, which means are limited to a few. They have nothing to sell except what is raised in favorable seasons. The money paid them for industry, labor, and produce is not as a rule squandered, but expended largely for additional supplies to eat. The advantages offered for training in industrial pursuits at the boarding schools are limited to garden and farm work for the boys, and general household duties for the girls. The few positions allowed at the agency shops are eagerly sought after and readily filled by industrious and progressive Indians at salaries for assistants of \$240, and apprentices at \$180 per annum.

Their favorite pastimes of hunting, trapping, and fishing are lost. The day when these Indians could go out on their own territory and in a short time return with a buffalo, deer, and antelope for subsistence, and the hides for sale, has long since passed away, until now absolutely nothing remains in its wild state.

It seems to be the policy of the Indian Department to let by contract, as nearly as possible, everything furnished for Indians; the wisdom for such action I am unable to comprehend. There must be profits to the contractor in every article furnished and no doubt in many instances large profits over and above the cost of production and delivery. Immense quantities of wooden handles for tools of every description, varieties of tinware, brooms, boots and shoes, harness, etc., articles simple in manufacture and cost of machinery necessary for manufacture comparatively small, are required and purchased annually for the Indian Department. Is it possible that certain articles can not be manufactured at the different agencies as required by the

service, giving employment to Indians, at a cost which would compare favorably with the price at present being paid, taking into the consideration the benefit which would in this manner be afforded to repair and make good such articles which are otherwise worthless?

**Encroachment on rights of Indians.**—With one exception at Crow Creek and one at Lower Brulé no encroachment on rights of Indians has been permitted. The case at Crow Creek is one concerning which the Indians are not a little exercised, and is due to an error claimed by them to have been made by the Sioux Commission in omitting from their reservation in treaty stipulation that part of section 25 lying on the east side of the Missouri River, in township 109 of range 76, South Dakota, and it would seem that their claim in this regard is based upon fact of error or misunderstanding on the part of the Indians, judging from their version of the case and the irregular manner with which the boundaries of their permanent reservation are now defined and adjusted. The omission in reservation of the tract of land in question and the transfer of the same to public domain would tend to defeat at once the object of pasturage for which the "Big Bend" in which this tract is located was clamorously retained by Crow Creek Indians and by their treaty included in their permanent reservation.

You will understand that the Government has constructed a substantial fence of three strings of barbed wire attached to cedar posts, extending across the entire neck of this river bend, a distance of  $9\frac{1}{2}$  miles, so as to completely inclose by fence and river the whole tract of land therein contained, about 50,000 acres, together with the section in question claimed by the Indians, but upon which a white settler named Harris has located and already made quite extensive improvements. The Indians are jealous of this settler, and justly so; himself located on land inclosed by their pasture fence, thus allowing him the inestimable advantage of a range for an unlimited number of cattle, horses, and sheep, or the abridgment of such advantage by incessant legal proceeding, which, to say the last, is annoying and ineffective in such cases. The removal of this settler may seem as a matter of little consequence, but one to which I am aware the Indians attach the greatest importance. They hold their lands dearer than all else, and any encroachment thereon arouses a feeling of rebellion to a greater extent than any other cause for dissatisfaction which I have been able to observe.

My predecessor, Maj. W. W. Anderson, informs me that he distinctly remembers of Indians belonging to this agency who claimed the tract of land where Harris now lives long before he located on the same, and that those Indians recorded their intention with him to take the same in severalty, and he names those Indians as Oliver White Dog and Fearless Hawk, who now claim the land and are anxious to have their allotment for the same recorded.

It is evident that the Indians up to the time of settlement by whites considered the section in question as included within their reservation and belonging to them, consequently the notification of the Indians' selection in this instance was never received by officers of the proper land office and the entry of land as a homestead by Harris allowed.

The case referred to at Lower Brulé is that of Fool Hawk, Bobbed Tailed Crow, and Smoke Woman against white settlers on lands claimed by the Indians named.

United States Special Agents Armstrong and Litchfield during the past year have made investigation of the claim by Indians in this instance, as has also Special Agent Solomon of the Land Office, the reports of whom all tend to show that the Indians are in rightful possession.

**No depredations committed by Indians.**—I claim the greatest pride in not having a single case of depredation to report having been committed by Indians belonging to both reservations under my charge, and not a single claim for damages to others done by Indians which they themselves have not amicably adjusted. I think few communities of civilized whites can show a better record in this than Indians of the Crow Creek and Lower Brulé reservations. They are not allowed to roam about, they do not care to do so, and no large numbers of marauding and wandering Indians are permitted to stay long here. Our police simply camp on their trail until satisfied that they will not return.

**Habits.**—I claim for these Indians ways and customs that are more nearly those of whites than few persons unacquainted with them are aware. There are but few male Indians on either reservation to-day who do not wear citizen's clothes and take some pride in presenting a respectable appearance and who are not neat.

Their idea of morality and chastity is creditable, and the practice of the same in everyday life is remarkable, taking into consideration the familiarity and close contact between males and females of all ages, necessarily brought about by their mode of living. Unwarranted familiarity is not the custom, and looked upon as disgraceful, and the punishment dealt out by the Indian judges for this offense is oftentimes severe. Formerly it was a common and tolerated condition of affairs for a buck to take to himself one or more wives; to-day it is not allowed, and there are

only 12 men among Crow Creek and 7 among Lower Brulé Indians living in polygamy, and these are individual cases of long standing.

Their obedience to law and order is all that could be expected and their respect of instructions coming from myself is seldom compelled. No punishments for statutory offenses by any civil authority have been made, and not a single conviction for crime has been rendered against any Indian under my charge.

**No whisky sellers.**—I believe the opportunities for obtaining whisky by Indians are now entirely removed. I have yet to see the first Indian under the influence of any intoxicating liquor, neither has any been found in their possession. No punishments have been made for intoxication by any authorities.

**Sanitary condition.**—I can not speak in such favorable terms of their mode of living as regards cleanliness. They live as a rule in a dirty condition, oftentimes filthy; their food, usually unprepared for eating, is invariably dirty and unfit for use. It can not be longer claimed that Indians are a healthy race; on the other hand, they are the most generally afflicted of any I have met, due largely I judge to the uncleanliness in habits of life and the unwholesome food they eat. There are but few families on either reservation free from disease, scrofula and consumption being the most prevalent, the one growing out of the other. They are consequently not even a hardy race, easily exhausted, and their power of endurance small, not to be compared in physical ability with Caucasian or even the negro. Indians must be forced in conditions more favorable for the continuance of life. There is wide room for the improvement of the sanitary condition of these Indians, and with the assistance of your Department in furnishing suitable conveniences with help for killing and issuing to Indians only clean, dressed, wholesome beef, I hope to be able to note the desired improvement as time advances.

**Dancing.**—Last fall, during the trouble among the Sioux, I deemed it my duty to stop the dances then going on with frequency among Indians under my charge, and with considerable difficulty and little friction succeeded in so doing, to the extent of dancing of all kinds being discontinued. Upon the return of the chief Indians from their visit to Washington they informed me that they had mentioned to yourself their desire to continue the innocent (†) dances, and that you had signified your willingness to the same. In order to avoid their knowledge of any conflict in estimation of the results growing out of excessive dancing, existing between their agent and the honorable Commissioner of Indian affairs, I gave them my permission to resume the social dances only.

I am aware of no harm growing out of social gatherings among Indians, where dancing is participated in to a moderate degree, but the habits of Indians, as I observe them, are such as to crave variety and excess. I have watched closely the result of our permission for dancing among Indians, and my observation is that they dance excessively, oftentimes three and four nights of each week, continued the greater part of the night, greatly to the injury of their physical body and health, and necessarily to the neglect of their work and farm, owing to their fatigued condition. I am unable to observe a single benefit to them growing out of the practice, or any reason why their dancing should not be prohibited except that Indians would naturally think that such order was a discrimination between the tolerated practices of the whites and themselves, to the abridgment of their personal liberty and freedom of action.

**Election among Indians.**—I introduced, at the beginning of the year, for the first time among these Indians, the right of franchise to them in electing by private ballot persons for the positions of judges of court of Indian offenses and interpreter. They seemed highly amused with the proceeding and the election pleased them very much. They voted intelligently and elected men acceptable for the positions who were nominated by me, the interpreter, Mark Wells, elected by them being particularly deserving and qualified, and probably the most efficient interpreter among the Sioux.

**Education.**—When we remember that only a few years back there was only now and then an Indian among the Sioux who could speak and fewer who could read or write the English language, the progress in this respect may be said to be very encouraging. There are 392 Indians here who can use English enough for ordinary conversation. Experience and practical demonstration has taught us that the Indian can be educated capable of high mental and moral training. The commendable liberality of appropriations made by Congress has been the greatest assistant in every effort for Indian education and advancement. They seem awake to the fact that it is less costly to educate than to fight Indians and in the end attended by immeasurably better results.

I have ascertained with no small amount of inconvenience the condition of pupils of these reservations who have been to eastern schools, principally Carlisle and Hampton, and while I find much to commend as indicative of their advancement while at the schools there is much more to be deplored in the condition in which they are placed after returning. The prominence of eastern training-schools has

made the returned students conspicuous, and much is expected of them. Many are doing well where opportunities and encouragement are at hand for them to continue in advancement in the occupations for which they have received training, or where they are given positions of salary or chances for money making. The Government is not attempting, I apprehend, by means of its Indian-school system, to prepare Indian youth to live in the midst of the worst influences. It certainly is poor policy, when pupils are taken from their reservations and tribal relations and educated at great expense, to return them to the same influences and conditions from which they were taken for the purpose of advancement. Few are strong enough in principle, without support, to act as missionaries or helpers among others in such conditions, and as a rule are drawn the other way, and soon found to be not much better than before the attempt at civilization. It seems hardly consistent with our American idea of progression and liberality that these young people, girls especially, should be placed at so great a disadvantage in maintaining their civilized ideas on their own soil. Educational work going on here is further considered at each agency under the head of schools.

**Indian Police.**—The allowance of police positions at Crow Creek is 1 captain and 8 privates, and at Lower Brulé, 1 captain and 14 privates, a sufficient number for all requirements of the service at present, and an increase of 2 privates at Lower Brulé over last year. They have served effectually in removing intruders, preserving peace, guarding Government property and funds, and in many other ways performing arduous and oftentimes dangerous duties in going on long errands and missions of responsibility, for which they are required to furnish and feed their own horses. The Government expects of them to be men of character and sterling worth, examples for other Indians to follow, subject at all times for duty, and fearless in the execution of orders. By law I am permitted to pay officers \$15 and privates \$10 per month, and no more, a mere pittance, not what the services of their ponies are worth. A blush of shame ought to arise to the cheek of every member of Congress, knowing the duties of Indian police, who is guilty of such exactment. I consider the pay of interpreters at \$300 per annum also inadequate, and not commensurate with the duties required.

**Benefits to Indians.**—During the present year full rations of bacon, beans, beef, baking powder, coffee, flour, salt, soap, and sugar have been issued weekly, and occasional issues made of all goods and supplies delivered or contract, together with all articles of annuity goods and clothing provided for in treaty stipulation. The annuity issue was made during the first week of February last, and long after the clothing was in pressing need to the Indians. The annual issue will be made much earlier this year.

In May last, 16 head of young American horses, sound, serviceable, and well broken, were purchased in open market at \$94.50 each, and issued to Indians to replace those diseased with glanders and killed.

**Cash payments.**—Weekly issues of 806 hides, corresponding to the number of beef cattle received during the year, have been made, netting the Indian \$2 per hide. They have received for labor and services \$7,465.47, for freighting \$995.90, for wood \$920.25, for produce \$2,315.45, in all \$13,309.07 cash payments from the Government, in addition to the value of products of their labor sold otherwise.

**Religion.**—It is generally understood that there can be no permanent or substantial progress in civilization unless accompanied by Christianity, and in no community is this more to be observed than among Indians. The dividing line between the Indian heathen and the Indian Christian is clear cut, the one representing that class of people progressive in spirit, anxious to learn and adopt civilized ways, to work in harmony with their Government, and withal more intelligent than the other class, who are loath to give up their tribal ways and relations, are disaffected at being controlled, and, generally speaking, that class which causes the trouble that arises from time to time with the Government. The religious work going on here, mention of which is hereafter made under the head of missions, is taken principally from reports obtained by the several missionaries representing different religious societies, and if one occupies more space, or seems to be given more prominence than another, it is because of the more complete presentation of information by the parties most interested.

#### CROW CREEK INDIANS.

**Description of agency.**—Crow Creek is located in the western part of Buffalo County, S. Dak., about 25 miles northwest from Chamberlain, the present terminus of the Chicago, Milwaukee and St. Paul Railway. It is located in a picturesque vicinity, between hills on the east bank of the Missouri River, adjacent to a most beautiful grove of about 100 acres, used by the families of employes and others for recreation in summer and by the Indians as protection for camps in the winter.

The agency is reached from Chamberlain by private conveyance, by boat, and by triweekly stage leaving Chamberlain Tuesday, Thursday, and Saturday, of each

week, arriving at Crow Creek the same day, and returning Monday, Wednesday, and Friday; by semiweekly stage from Highmore, S. Dak., on Monday and Friday, returning Tuesday and Saturday of each week.

The agency has a white population of 85. The society here is not to be improved, and is of a wholesome example for Indians.

**Agency buildings.**—Forty-four substantial buildings are contained on the agency grounds, sufficient for all requirements of the service, as follows: Four school, 16 employes' dwellings, 4 barns, 2 coal houses, 2 traders' stores, 2 iron houses, 3 machine sheds, 1 church, parsonage, office, warehouse, issue house, blacksmith shop, granary, carpenter shop, gristmill, trader's dwelling, ice house, hotel, agent's residence, and jail, nearly all of which are in good repair.

**The Reservation.**—The permanent reservation for Crow Creek Indians is located in Buffalo, Hyde and Hughes counties, S. Dak., lying to the east of the Missouri River, and containing about 445 square miles of land, of which 96,250 acres is first-class tillable land, 92,411 acres second-class, and the balance mainly valuable for grazing. Three thousand acres were cultivated by Indians this season, nearly all inclosed by wire fence. Including the Big Bend of the Missouri River about 50,000 acres of pasture are inclosed; 257 dwellings, not including huts, brush or mud houses, occupied by Indians, are scattered over the entire reservation.

**Census.**—The population of Indians belonging to Crow Creek Agency taken June 30 last, by actual enumeration, shows a total of Yanktonais Sioux, and mixed bloods,

Male.....	523
Female.....	576

Divided under heads as follows:

Males over 18.....	238
Females over 14.....	362
Between 6 and 16:	
Males.....	140
Females.....	132

**General condition of Crow Creek Indians.**—It is estimated that 80 per cent of the adult Indian population of this reservation is actually engaged in agriculture and other civilized pursuits, 10 per cent dependent, and 5 per cent doing nothing, or loafers. There are 226 families out of a total of 384 families living on land allotted in severalty. The tribe is possessed of 1,001 horses of all ages, 500 cattle, and 150 domestic fowls, a decrease from the figures furnished last year by ex-Agent Anderson of 31 horses, 941 cattle, and 2,350 fowls. I am satisfied that an increase has been made as to each, and that the decrease, as apparent by the figures, is not real.

Indians have raised during the last year, from the 3,000 acres farmed, 4,500 bushels of wheat, 4,000 bushels of oats, 200 bushels of rye, 1,000 bushels of corn, 800 bushels potatoes, 300 bushels turnips, 4,000 pumpkins, 2,000 heads cabbage, 6,000 melons, and a quantity of other vegetables. They have constructed 20,000 rods of fence, with the wire and staples being furnished by the Government. Two thousand tons of hay have been cut and gathered without cost to the Government, except for oil and machine repairs. Indians have cut during the past year 200 cords of wood from their own land, 137 cords being marketed. They have constructed, mostly out of logs, 49 houses, at a cost to the Government of about \$5 each for nails, windows, and doors.

**Courts of Indian Offenses.**—I have watched closely during the past year the operations of the Indian court, and I am well pleased with its workings. Its usefulness can not be questioned.

Indians have a well-defined idea of right, wrong, and justice, and great interest and pride is taken by them in holding and conducting their sessions, which have convened on Friday of each week. The satisfaction of the accused with the verdict passed by the court is something peculiar, though sometimes severe and the punishment too great for the offense. In one instance respite of the sentence imposed by the judges from twenty to ten days in jail was offered to the convicted Indian, who refused to take advantage of the commutation of sentence, and served the full twenty days as passed by the judges. Since establishment of the court but two appeals have been taken to myself, and one of the cases was that of division of property. The judges elected by the tribe and appointed are: Surrounded, aged 48; With Tail, aged 59, and Homer Clark, aged 28, the latter a returned Hampton student, who, outside of the court, has done good work as a missionary among these Indians.

**Schools.**—Crow Creek Indians are well provided with schools of sufficient capacity to accommodate nearly every school child on the reservation. The schools are equipped with competent and devoted employes, and the educational work going on in each has been fairly good, with much more expected during the coming year.

The industrial boarding school located at Crow Creek Agency leads them all in usefulness, and is the just pride of Crow Creek Indians. The school is sustained in

an admirable manner entirely by the Government, and was in session ten full months during the year, with an average daily attendance of 75 pupils. Besides regular school-room exercises five days of each week, the school has cultivated 80 acres of farm and garden, from which has been raised 750 bushels corn, 200 bushels oats, 225 bushels potatoes, and a quantity of other vegetables. A sufficient amount of hay has been cut and gathered for school stock.

The report of Superintendent Davison, accompanying, is further descriptive of the work in this school during the past year.

**Grace Mission School.**—The only day school on the reservation is run in connection with the contract school, under the immediate supervision of Miss Grace Howard, located about 13 miles southwest from the agency. The school was maintained ten months during the year, with an average attendance of 2 day scholars and 17 boarding pupils. Miss Mollie V. Gaither is employed by the Government as the day-school teacher, and salary paid, \$600. Miss Grace Howard is the contracting superintendent of this school, and the good work accomplished by herself both in the school and in the missionary field can not be overestimated. The large building occupied for school purposes was constructed through her endeavor, and an addition costing \$400 lately built, increasing the capacity from 19 to 32 pupils who can be properly cared for at the school.

**The Catholic Mission.**—The Immaculate Conception Indian Mission School, located northeast of the agency 16 miles, is sustained by the Roman Catholic Church by contract with the Government. Large and commodious buildings have been erected at a great expense, with a capacity for accommodating 150 boarding pupils, together with the 18 persons now employed at the school as teachers and missionaries. The school is provided with 13 horses, 140 cattle, 30 hogs, and 75 domestic fowls. The amount of work in its line accomplished by this institution demands more than a passing notice, and the devotion displayed by the persons in charge of the school is something remarkable. The progress made in educational and industrial work I must confess to be equal to any school I have ever visited, owing to the untiring devotion and attention of the teachers and others connected with the school. The school was in session nine months of the school year, with an average daily attendance of 95 pupils, all boarding. The buildings occupied by this school and church are the most extensive and costly of any on the reservation, and when the donated labor is considered, is carried on with the greatest expense. The school has in its connection 640 acres of land, and the farm tilled is a model one, from which was raised this season 250 bushels of wheat, 1,800 bushels of corn, 900 bushels of oats, 530 bushels of potatoes, and sufficient amounts of other vegetables for the use of the school. From the 23,528 quarts of milk consumed at the school 1,375 pounds of butter has been made, all of which is a most gratifying showing.

The manner in which the large amount of missionary work is accomplished by the Roman Catholic Church in connection with this school I believe to be deplorable.

The school and church training is carried on hand in hand, with that of the church always paramount, and the education of every Indian child at this school means the education of that child in Catholic faith and membership of that church, all of which seems radically wrong to me. It can not be denied that the mental and industrial training accomplished in this school is equal to any I have ever seen, and the church work much greater. I believe church sectarianism carried along with school and educational progression to be wily and pernicious, and the number of converts to such society to be directly proportionate to the number of young children who enter a school of such character and over whom their influences are extended.

**Missionary work.**—The missionary work among these Indians is carried on in an extensive manner by three different church societies—the Presbyterian, Catholic, and Episcopal—with 1, 4, and 6 active missionaries, respectively. Six church buildings are located on different parts of the reservation, 4 being substantial buildings used exclusively for religious service, 3 belonging to the Protestant Episcopal Society, the largest of which is located at Crow Creek Agency, with Rev. H. Burt as pastor and his estimable wife as co-worker and laborer, to whom great praise is due for the Christianizing work done in their field, assisted by Daniel Fire Cloud, David Tatyopa, and Samuel Hawk, all full-blood Indians. The contributions brought forth by this church are large, \$3,130 having been spent during the last year for religious and educational purposes.

Rev. Daniel Renville (Indian) is the Presbyterian missionary and pastor of their church, located on the southeast part of the reservation. The number of communicants as yet is small, but I judge good work is being done.

The operations of the Catholic Church in this field is characterized by the greatest zeal and determination, and as a result the church membership numbers larger than all others combined.

**Allotments of lands to Indians.**—At the beginning of the year 259 allotments had been made to Indians of the Crow Creek Reservation under the treaty of 1868 and approved by the Secretary of the Interior. During the past year the work of allotting

the remaining lands was begun, and has progressed under the supervision of Special Allotting Agent A. Austin Braddock in a satisfactory manner to the Indians. Two hundred and fifty allotments were made by Agent Braddock up to June 30 last, making 509 in all. This is a very important work for Indians. They are anxious that their selections should be properly recorded and approved and the land set apart for each with boundaries clearly defined. Great interest is manifested in the work and the individual ownership of a tract of land by Indians. Mr. Braddock informs me that few disputes of ownership have arisen, and that all has been satisfactorily settled by Indians and himself. The employes necessary to carry on the work are one efficient surveyor, Mr. J. C. Barton, and four Indian assistants. The work is now somewhat more than half accomplished, and will probably yet require ninety days in which to complete the survey.

#### LOWER BRULÉ AGENCY.

Lower Brulé is constituted as the subagency, and situated in Lyman County, S. Dak., about 3 miles south from Chamberlain, on the opposite side of the Missouri River, a short distance from its banks. The new town of Gladstone is located adjacent to the agency grounds and promises soon to be a growing town, which will greatly enhance the value of the buildings and ground, and in the event of the removal of headquarters would be of easy sale. The agency is reached by steam ferry, making two regular round trips daily during the season of navigation from Chamberlain, by daily mail except Sunday, and by private rowboats at any time. A full corps of employes conduct the affairs of the agency the same as at Crow Creek.

No improvements of any extent have been allowed at this place for some time past, and as a consequence it presents a somewhat dilapidated and run-down appearance. The buildings for nearly every branch of the business are inadequate as to room, and in some cases dangerous of use.

**Reservation.**—The tract of land set aside by the Sioux bill in accordance with their treaty as a permanent reservation for Lower Brulé Indians lies to the west of the Missouri River on the opposite side of the river from the Crow Creek Reservation, and contains about 738 square miles, mainly valuable for grazing land, or 160 acres to each person belonging to and drawing rations at Lower Brulé. Notwithstanding that the Lower Brulé Indians have, in treaty stipulation, reserved the tract of land above described as a permanent reservation, the majority of the tribe reside at present elsewhere, on the ceded land contained in the great reservation thrown open to settlement, and the improvements made on the ceded land are much more extensive than on their reservation. The total amount of land under cultivation this season by Indians is 1,503 acres; 1,876 are under fence, not including the Little Bend, containing about 18,000 acres of pasturage inclosed by river and fence.

**Census.**—The population of Indians belonging to Lower Brulé June 30 last showed 1,043 Lower Brulé Sioux and mixed bloods, divided under heads as follows:

Males.....	500
Females.....	543
Males over 18 years.....	315
Females over 14 years.....	366
Between ages of 6 and 16:	
Males.....	127
Females.....	113

**General condition of Indians.**—No allotments of land to Indians have been made on the Lower Brulé Reservation, but the time for so doing has now arrived. The 118 families now living on the ceded land have made their election to have the tracts upon which they live allotted, and are now holding the same in severalty, as is nearly every head of a family located on the permanent reservation. At least two-thirds of the adult population are engaged in agriculture or other civilized pursuits. They own 1,110 horses and 1,080 head of cattle, not including the 372 head now on hand to be issued soon. The improvements made during the year have equaled those made at Crow Creek, with amounts of grains, vegetables, etc., raised about the same.

**Courts of Indian offenses.**—The court has been equally successful in operation as that of Crow Creek, and I find it of great assistance to me in the amicable settlement of difficulties which otherwise would require considerable of my time to attend to. Complaints have reached me, forwarded through your office, of partiality shown by the present judges, but I believe them to have done well in the consideration and judgment of the diversified questions that came up for settlement, and I am not yet prepared to experiment with any improvement on the present judges. They are: Big Mane, aged 52; Joseph Eagle Star, aged 49, and John De Soniet, aged 45, all influential men of their tribe.

**Schools.**—Lower Brulé Indians are not so well supplied with school opportunities as Crow Creek; on the other hand, the advantages are very incomplete and inadequate for accommodation of the school children, who number 240, and not more than one-half of that number can at present be cared for.

The industrial boarding school located at Lower Brulé Agency, is the only one with accommodation for any number of pupils, and the regular work has been interrupted during the past year on two occasions by change in the position of superintendent which added for the time confusion, and the expected work under the circumstances could not be accomplished. Prof. Geo. W. Nellis took charge of the school late in the winter term and his endeavors since that time have been commendable. Through his efforts and those of his assistants a very successful and interesting exhibition was given at the close of the school year, and was indicative of what had been accomplished during his short time with the school.

The school is sustained entirely by the Government.

About 70 pupils can be healthfully accommodated in the buildings, although 80 were in attendance during the spring term, with an average daily attendance of 60 during the 10 months school was in session. The farm in connection with the school has been very successfully cultivated and sufficient of vegetables for school use has been raised.

Estimates for material and cost of construction of an addition to this school, necessary for the accommodation during the winter months of the number in school at the close of the year, was forwarded to your office, but not allowed, and reason given that agency headquarters must be moved. The attendance during the winter months must, as a consequence, be reduced at least 15, with a view of maintaining a healthful condition among the scholars.

I have the pleasure to accompany this with a report from Superintendent Nellis, in which the work at present being done in the school is clearly set forth.

**Day schools.**—The White River day school, located 8 miles south of the agency, is provided with one teacher, Miss Hettie Rouze, salary paid, \$600, and one Indian assistant, Zedo Rencountre, salary, \$300. School was maintained during the year with a varying attendance, and the expected advancement in the school work has not been made.

The day school at Driving Hawk's Camp has been even less successful than the White River school, owing to the trouble among Indians of other agencies and its location on the frontier in close proximity to Rosebud territory. No regular school work was accomplished until late in the spring term; George M. Hollenback was appointed as teacher and salary paid, \$150. Since that time school has been regularly attended and a creditable showing made by Mr. Hollenback, who has cultivated quite a garden in connection with the school, and withal a good influence extended. The vacation for this school will be taken in December and January, months when attendance will be difficult and irregular. I believe such a provision to be a good one in all day schools where Indian children have far to go.

**Missionary work.**—Religious work among Lower Brulé Indians is not by any means neglected, though not so extensively carried on as among the Crow Creeks. Four churches are built in different parts of the reservation, owned by the Episcopal and Presbyterian societies, with three and one missionaries, respectively. Rev. Luke Walker is pastor of the Episcopal church located at the agency, and Rev. Rogers, pastor of the Presbyterian church located south of the agency on White River, both full-blood Indians, very intelligent, and doing a splendid work.

**No trader.**—There is no licensed trader at present among Lower Brulé Indians. The opening for public settlement of their reservation threw the trader's store on ceded land, no license being required to operate there.

#### CONCLUSION.

**Visits of inspectors and special agents.**—This agency has been numerously visited by inspectors, special agents, and commissioners during the past year. United States Special Indian Agent George P. Litchfield was on the ground when I assumed the duties of agent, and remained for sometime after in business connected with the protection of rights of Indians on the ceded land. He had the Sherman town-site complication well in hand, and at the time of being called away expected to have soon reached a settlement in the matter, and an agreeable adjustment of rights of Indians and whites brought about.

Special Indian Agent E. B. Reynolds has made this agency three profitable visits during the year for the purpose of ascertaining the names of Indians at this agency who were dismounted, and ponies taken by military authority at Standing Rock and Cheyenne River in 1876, and on business connected with the practicability of sinking an artesian well at this point. The work was accomplished in a most rapid and complete manner, as was also his work in an impartial manner of the investigation of charges preferred against Government employes doing work at this agency.

Soon after my advent here I was visited by Indian Inspector R. S. Gardner on personal business and otherwise, to whom I am indebted for many valuable suggestions in the performance of my newly assumed duties, and whom I claim to be indebted to me for the toleration of considerable eccentricity and individuality, mention of which is not made here as a complaint, for I believe every visit of Inspector Gardner to any Indian agency to be attended by benefit to the service, even if brought about by his unmistakable peculiarity.

Recent trouble among the Sioux.—Cause of the trouble: In dealing with this question I desire to confine myself to the cause of the trouble among these Indians, for my opinion of the causes leading to the outbreak at Pine Ridge and elsewhere might be misleading and could not be founded upon as reliable information, which is obtainable from those in immediate contact with the several tribes at war. It is without doubt that there existed previous to the outbreak among the Sioux and among the Indians at this agency a feeling of dissatisfaction growing out of failure to receive regular and full rations and the delay in shipment of supplies and annuity clothing, owing to the dilatory manner with which the Indian appropriation bill was handled by Congress, all of which was explained to the Indians but imperfectly understood by them. This state of mind rendered them susceptible to outside influence, which was extended from their near neighbors, the Rosebud and Pine Ridge Indians, to participate in the so-called "ghost dance," and they were fast becoming impregnated with the pernicious belief and the evil consequences attending. The attempt to suppress this practice, and the refusal of the Indians to discontinue these dances, was the immediate cause of the hostility at this agency, and the consequent arrest, by agency force, of 22 Indians and the incarceration of 17 prisoners at Fort Snelling barracks, Minnesota, for a period of 8 weeks. There was no indication at that time that the dissatisfaction above described, and growing out of causes affecting themselves, would assume a hostile attitude, had it not been for the "Messiah craze," which had taken root elsewhere and spread to this agency. The arrest of the 22 Indian dancers was accomplished in an admirable manner by the efficient corps of Indian police, acting with Capt. J. F. Sisson, clerk at Lower Brulé Agency, and all other measures for quelling the disturbances that seemed likely to arise here, were taken and maintained without assistance from the War Department, and no troops were found necessary to be furnished at any time.

You will understand that the foregoing remarks and all following concerning any hostility among these Indians pertains to the Lower Brulé tribe, as there has not been manifested and is not now any extended feeling of discontent among Crow Creek Indians, and little notice was paid by them to the "ghost dance," and no desire to adopt or participate in it. It easily follows that the causes which produced the trouble above pointed out have been entirely eradicated. There are no complaints from Indians against the regularity and amount of rations at present being issued, and the desire to participate in the "ghost dance" being one of adoption and not their own creation, was easily thrown aside.

I have taken the fullest steps to inform the Indians specifically as to what legislation has been enacted recently in view of carrying into complete fulfillment the condition of agreement and promises made by the commission, and of the work of your office to carry into practical effect the provisions of this legislation. Information for Indians contained in office communications has invariably been imparted to them, by reading in council and the contents fully explained to and understood by the leading men of both tribes. The Indians generally are aware of the stipulations entered into by treaty with the Government. They know well what part has been performed and what conditions remain to be fulfilled of benefit to them. It is about these only they inquire, and I always give them such encouragement as the facts at hand suggest. I have informed them that those worthy will receive and are now receiving the benefits to them contemplated by section 17 of their treaty, approved as the Sioux bill, consisting of a yoke of oxen or a span of mares, 2 milch cows, agricultural implements, \$50 in cash for improvement of their allotment, etc. They all want these articles, but not much disappointment here will follow the distribution, for they well know that not until they put themselves in a position will they receive them.

I will state that it has been my policy to satisfy as best I could all complaints and inquiries coming before me from Indians, to suggest nothing new of benefit which they are likely to receive, knowing that the present officers of the Indian Bureau are not confining their acts to the strict fulfillment of treaty stipulations only, but are going further and doing everything possible with the means at hand to advance these people to a state of civilization in every direction, and prepare them for citizenship and self-support. It has been my endeavor to follow in this line; I exact of them a most strict observance of rules laid down for their government. I think it noticeable that it is with greater satisfaction and more conducive to their happiness to receive a benefit, even though it may come as a surprise than the realization of a long expected promise. With this end in view I am able to show them daily that the Department is helping those who are not lazy and trying to help themselves,

and assistance comes regularly as a reward to those who are industrious and show by their actions that they mean to progress.

The general effect, as I observe it, left upon the minds of the Indians at this agency of the recent outbreak, the severe losses which have been suffered by Indians belonging to other agencies, and the destruction of life which has ensued, is of good tendency. It is noticeable that a very dear lesson has been taught them; that while comparatively few delight in claiming that the legislation in their behalf, enacted since, could only have been brought about by war, the majority, and even those referred to, will be slow to again take up arms.

So far as I can ascertain there is no cause at present existing among Crow Creek Indians likely to produce any serious trouble or a growing discontent. I am well pleased with the good feeling that prevails among them. They are no doubt disappointed in the failure of Congress to make the appropriation recommended by the Indian Bureau, of \$187,039, to compensate them for the loss sustained in receiving less land per capita in their diminished reservation than is received by the Indians occupying other diminished reservations. They are unable to comprehend clearly the distinction between Congress and the Government Department officials, and unable to recognize with satisfaction just why Congress should have a different opinion in regard to this claim than that recommended by the Indian Commissioner, as promised them by the Sioux commission, consisting of Gen. Crook and Messrs. Warren and Foster. I have explained to them that the commissioners did everything promised in recommending that this difference be paid, and the failure of Congress to make the necessary appropriation must be regarded as unavoidable. United States Senator Pettigrew, now visiting this agency on official duty, has heard the claim of the Indians in this matter, and says, "That he does not understand why the sum mentioned for this purpose was not appropriated during the last session; that it was passed upon favorably twice by the Senate, but in some unknown way to him was cut off in the House." He promises to reimburse them for this loss by an appropriation during the next session of Congress.

I hope the attention of the honorable Secretary of the Interior may again be called to this matter at the proper time, and his assistance extended to secure an adjustment of this right to loyal Crow Creek Indians.

The condition of affairs among Lower Brulé Indians is much different than at Crow Creek, and remains in the same unsettled condition. The dissatisfaction with location of boundaries of their diminished reservation, as established by their treaty of 1889, at first narrowly confined, has spread under pernicious and selfish leadership, so that it now assumes a most complicated if not serious aspect. Without doubt a large majority of Lower Brulé Indians are satisfied with their permanent reservation as now established, and are very anxious that agency headquarters be moved thereon. In contemplation of this move a large number of the leading men of this tribe have made their election to receive land in allotment on their permanent reservation, and are busy making comfortable homes and improvements there. They have been opposed in this purpose by certain Indians living on the southern bounds of the great reservation, who reside either south of White River, or are persistent in their intention to go there and take land in direct violation of treaty stipulations well known to them. They are influenced in this movement by a scheming, selfish leader, whose design for power the light of recent developments has made plain. The necessity of my presence among those Indians is almost constant, and two-thirds of my time during the past eight months has been devoted to their troubled condition.

The uncertainty which seems to surround the removal of their agency headquarters has been a further cause for dissatisfaction as no definite time has been known when this move may be expected, and the prospects just at present for a settlement of their differences are not encouraging.

They have just been visited by the Sioux commission, consisting of Messrs. Pearce, Appleman, and Harries, who were in council with the tribe two days. I was constantly present with them, and while they did everything consistent to bring about a better state of feeling, they had very little or nothing to offer in that direction for those Indians who had made settlement south of White River in whose behalf they had labored. They reported that Rosebud Indians were unanimously in favor of not permitting the Lower Brulé Indians to locate on their reserve. Of course, this action on the part of the Rosebuds causes great dissatisfaction and disappointment to those of the Lower Brulé Indians, who are now located on the Rosebud territory, and those intending to do so in anticipation of favorable consent being secured by the Pearce commission above referred to. I do not judge, however, that this dissatisfaction will develop into any serious trouble or outbreak, as it is balanced by Indians, the most progressive in the tribe, who are anxious for the whole tribe to locate on their permanent reservation, and that agency headquarters be moved thereon. I am anxious that the gentlemen of the commission make their report at the earliest possible moment, and soon thereafter to be instructed just what may be

expected by the Lower Brulé Indians as a final result of the present endeavors in their behalf.

**Summary.**—It will be seen from the foregoing that a steady progress has been maintained in every direction by Indians of both the Crow Creek and Lower Brulé reservations, and that the past year has been the most prosperous and satisfactory through which they have ever passed, with much in favor of the condition of Crow Creek Indians.

**Recommendations.**—First. I believe it to be of the greatest importance to Lower Brulé Indians that the report of the Sioux Commission, as regards their endeavors on behalf of those Indians, be made at once, and the rights of the Indians clearly set forth; that as soon thereafter as possible the agency headquarters be removed to site already located and agreed upon on their permanent reservation.

Second. That a substation be established for the issue of rations to those of the Lower Brulé Indians residing on the ceded land and along White River.

Third. I recommend that the money appropriated yearly by Congress and expended for agricultural implements be used instead mainly for Indians belonging to this agency in the purchase of stock cattle.

Very respectfully, your obedient servant,

A. P. DIXON,  
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF CROW CREEK SCHOOL.

CROW CREEK AGENCY, S. DAK.,  
July 22, 1891.

SIR: I have the honor to submit my annual report of industrial boarding school for the fiscal year 1891.

School opened September 1, 1890, with 19 boys and 11 girls in attendance. The day was occupied in arranging classes and dividing the school, as about one-half are out for industrial work; also making details for the different branches of work.

About the 1st of October the children began having sore eyes, 43 being thus afflicted. The general health of the school has been good. In addition to sore eyes we have had cases of sore throat, hoarseness, and a few sprains, but nothing of a serious nature.

The school did not fill up so rapidly as the year previous, I think, owing to a change of administration about that time. We finally got our full number of pupils the latter part of November. We were somewhat interrupted in our school work, having had to stop evening session twice on account of coal oil giving out, and once on account of no coal. The supplies were all very tardy the past year, and some have not arrived yet, viz: dried apples and peaches. These were very much needed and sadly missed, as we had no vegetables of our own raising from last year's crop, having only potatoes that were bought by the agent.

Shoes that came for girls were pliable, and, we thought, a prize; but they certainly were of poor quality, and did not last well.

The schoolroom work the past year has been a grand success, better work being done, I think, than any since I took charge of the school. It is surprising how quickly these little girls and boys learn the names of different objects. One great drawback in this department has been trying to follow the "course of study" without having the books, materials, etc., as laid down in that course to work with. Last winter I was asked to make out estimates for books and other schoolroom materials for present use. I did so, at once, thinking we would get them right away, but they did not come. Consider the course of study a good one, but one can not strictly follow it without the necessary materials to work with. Notwithstanding all this, I consider it a prosperous year in the department.

The sewing-room department has, as usual, been a very busy one. During the past year the articles manufactured are as follows: Aprons, 268; pillowcases, 91; chemise, 118; curtains, 29; drawers, 246; dresses, 108; nightdresses, 32; boys' shirts, 46; skirts, 54; sheets, 150; tablecloths, 4; towels, 104; waists, 80; and ration sacks, 10. A large amount of repairing, necessarily, has been done weekly. The kitchen, being one of the most important factors of a school, has been well conducted and deserves credit. The girls have made rapid and marked improvement in the culinary art. The preparation of food for the table I consider has been in advance of previous years. The girls have also done well and progress has been noticed in the laundry department.

The farm and garden is one of the crowning features of the school. The approximated acreage put in is as follows: Corn, 25; clover alfalfa, 12; oats, 12; millet, 10; potatoes, 5; turnips, 3; sweet corn, 4; squash and pumpkins, 2; and garden, 6; making a total of 80 acres. Up to present date we have a very fine prospect for an abundant crop, except our sweet corn, not over half of which came. The boys have worked faithfully and well, and from present prospects will have raised for the school potatoes, turnips, onions, squash, pumpkins, cabbage, and cucumbers, enough to last through their season. We do, and may, feel proud of our farm and garden this year.

Some very much needed improvements have been made by additions to our buildings—one on boys' and three on girls' building—which will make it much more convenient and will be better for the health of the children who are subject to scrofula, which leads to consumption. One thing, in this connection, is very desirable, and that is that the agent be authorized to issue all the double bedsteads and obtain single ones for the use of the children. It certainly would be better for them, owing to their diseased condition.

I think it a serious mistake in allowing the parents of these children to send them to any school they choose, as they are changing nearly every year. Last year, during vacation, 21 of our pupils were permitted to enter other schools. All had been to this school the year previous. Three were in this school who had the previous year been at another school. My judgment is that when children enter a school they should remain in same school till ready for some training school. Children having a change of teachers nearly every year certainly can not advance so rapidly as they otherwise would.

A good barn is very much needed at this school. Waterworks of some kind we certainly need. We are still following our old vocation of hauling water twice a week for school use. If a fire ever started in any of the buildings it certainly would be folly to expect to stop it with our supply of water. Three cisterns, if well built, would be a great convenience, and are much needed.

A poultry house and poultry should be at every school. This one is no exception. I have asked several times, "Where are our Stars and Stripes to float in the breeze from the top of our school buildings?" Echo answers, where?

The success of the past year is largely due to the efficient corps of employes. Allow me to say a word for each of them. M. E. Blanchard, the matron, is an exemplary Christian lady, a true mother to these girls, and is faithful and willing in the performance of every duty. Ella Taylor, teacher, is a Christian lady, one of character, a thorough teacher, and is competent in every respect for the position she holds. N. E. Davison, teacher, is my wife. Modesty forbids me saying more. Mary Coady, seamstress, was engaged in sewing and dressmaking for several years before entering the Indian service; is thoroughly competent for the position she holds, is a lady of good character, gets along well with the girls in her departments, and has always been willing, cheerful, and faithful in all her duties. Hannah Lonergan, cook, it is not necessary for me to speak highly of. The fact of this being her eighth year at this place as cook, and no fault ever being found with her is sufficient guarantee of her worth. Joseph Sutton, industrial teacher, is a man rarely to be found for the position he holds; has good judgment, a thorough worker, faithful and willing, and thoroughly competent. The four Indian assistants are all that can be asked for. The assistant Indian teacher and seamstress were both educated at this school; can talk English and understand all that is said to them. Both have made excellent records the past year, and are willing to do the same the coming year. The assistants, cook and laundress, are good and faithful, understand nearly every thing that is said to them, but do not talk much English. In my judgment they are thoroughly competent for their positions.

As the school buildings have been enlarged, and we are expected to have more children another year, and they necessarily will be small and untaught, there will be a great deal of extra labor in all the departments; and as we have already had to detail girls for laundry, kitchen, sewing room and other departments that were not large or strong enough, and as Merial A. Dorchester, special agent Indian school service, says, "More employes should be put in so that the girls will not be overworked," I recommend that three additional Indian assistants be allowed for the sewing room, laundry, and kitchen, at a salary of \$10 per month, said places to be filled by returned girls from training schools if they can be had.

I am, very respectfully,

WM. R. DAVISON,  
Superintendent of School.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERINTENDENT OF LOWER BRULÉ SCHOOL.

INDUSTRIAL BOARDING SCHOOL,  
Lower Brulé Agency, August 20, 1891.

SIR: In compliance with instructions contained in a circular letter from the honorable Commissioner of Indian Affairs, I desire to submit through your office the following report of the Lower Brulé industrial boarding school for the fiscal year ending June 30, 1891. I assumed control on the 13th day of March of this year, and my connection with the school having been of such short duration my report must of necessity be very incomplete. I am informed that one of my predecessors, Mr. T. E. Knott, in his annual report for the year 1890 gave a very full history of the school from the beginning, so that it is unnecessary for me to attempt anything of the kind at this time.

Buildings.—With the exception of the building of an addition 10 by 16 feet, to be used as a wash room for the boys, and some painting in the interior of the buildings, there have been no repairs or improvements of any amount on the school buildings, so that they remain practically the same as described in the last annual report. These buildings are in very poor condition and will need considerable repairing to be made comfortable during the winter.

However, even if they were in the best condition, they are by far inadequate for the accommodation of the children of school age belonging to this agency. The census recently taken shows that there are 240 children between the ages of 6 and 16 years. Of these we have had in our school about 80, the two camp schools have had not to exceed 20 each, making a total of 120 children who are enjoying school privileges, and leaving at least an equal number who are not receiving these privileges, but most of whom could be induced to attend school if we had buildings of sufficient capacity. There are quite a number of others who are beyond school age who could be brought into school if a little effort were made in that direction, but we are prevented from doing so from lack of room.

When I took charge of this school there was an attendance of only about 55. However, after some rearranging so as to make more sleeping room the attendance was increased to 80. This number crowded the buildings, and while, by thorough ventilation, we were able to get along all right during the summer, we can not healthfully accommodate that number during the winter under the present condition of things.

This increase in attendance was accomplished with very little difficulty. I notified the clerk in charge that we could take in 25 new pupils, and at the same time handed him a list of names of children of school age, to be banded to the police with instructions to bring them in in case their parents were unwilling to send them. The clerk at once spoke to the people in regard to the matter, and in less than three weeks we had all the children we could possibly accommodate. Nearly all of them were brought in voluntarily by their parents, and in only one or two cases was it necessary to do any urging, and in no case were any coercive measures used. The Indians seem to be very favorably disposed toward the school and take great interest in the education of their children. I think that nearly all of our old pupils will return, and I have heard of some new ones who expect to attend the coming year. I very much fear that unless the capacity of this school is increased we will be obliged to refuse admittance to quite a number. I am thoroughly convinced that, in order to do the work that ought to be done at this agency, we should have buildings that would accommodate at least 150 pupils, and with the favorable sentiment that at this time exists among the people toward this school, I do not think we would have any difficulty whatever in obtaining that number.

I appreciate the fact, however, that the unsettled condition of things in regard to the permanent location of the agency, and the allotment of lands to the Indians, stands in the way of any very exten-

sive improvements, and can only deprecate that such is the fact, and hope most earnestly that the matter may soon be definitely settled.

**Industrial.**—The school farm comprises 31½ acres. The crop consists of 20 acres of corn, 5 acres of potatoes, 3½ acres of beans, and the balance in cabbages, onions, and other small vegetables. The garden is a great success. The corn, potatoes, and beans are looking well, but we can not yet tell what the yield will be. The work of putting in and caring for this crop until school closed was done by the school boys under the direction of our very efficient industrial teacher.

The boys haul the water, cut and haul the wood, milk the cows, and take care of the horses. They also make their own beds, sweep and scrub their own dormitories, as well as their play room and both schoolrooms, carry all the water for all purposes, and assist in the more difficult work in the laundry.

The girls do the sewing, cooking, and the laundry and dining-room work. They have also been carefully instructed in taking care of the milk and in making butter.

For the regular routine work of the school, a biweekly detail is made, and especial care being taken to avoid any appearance of partiality, and that the more difficult work is not imposed on one oftener than another; the work has been very well done, and with practically no complaint on the part of the children.

**Schoolroom work.**—The results obtained in the schoolroom during the year have on the whole been very gratifying. The school has been supplied with better appliances than heretofore, and consequently the work has been more varied, and has been characterized with more earnestness and enthusiasm on the part of the pupils than ever before. As a rule the children like to go to school and are apparently very anxious to learn.

The course of study outlined by the Commissioner has been closely followed but has not been fully completed. The work accomplished in the lower grade under my assistant teacher, Miss Ada B. Sisson, has been highly satisfactory. The higher grade, however, which has been taught by the superintendent, has suffered somewhat from so many changes during the year, and from the further fact that there are so many demands made upon the time of the superintendent that it was absolutely impossible for him to give to his schoolroom work the attention it should have received. I have been advised by the Commissioner, however, that it has been decided to allow us another teacher, so that we may look for better results next year.

Especial attention has been given during the last quarter to the teaching of vocal music. The children have learned a great many school songs, and can sing most of the gospel hymns. At our entertainment given at the close of the school several solos and duets were rendered by both boys and girls. Their advancement in this respect is very gratifying indeed.

The total number of pupils enrolled for the year was 93; the average attendance was 60.

**Sanitary.**—The general health of the school has been fairly good. At the beginning of the year there were quite a number of cases of eczema, but under the careful and painstaking treatment of Dr. I. N. Hughey, the agency physician, this form of disease has entirely disappeared. During the last quarter we had several cases of "la grippe." One little girl 6 years of age died in the school. In this case "la grippe" developed into pneumonia and from that into lung fever. Everything possible was done for the child; the employes were with her night and day, and the doctor was almost constantly at her bedside; but the child had always been subject to lung trouble, and when her sickness finally settled into lung fever she had become so weakened by her long siege with "la grippe" that she was unable to recover.

It was feared that this death occurring in the school would do us a great deal of harm, but that has not been the case. When the child became dangerously ill we sent for the parents, furnished them a room and gave them their meals. They were allowed to be present in the sick room most of the time. They saw for themselves that everything that could be done for the little sufferer was done, so that when the end came they expressed themselves as entirely satisfied with the treatment and care the child had received, and thanked us many times, saying that had they been allowed to take her home as they had at first requested they could not possibly have given her the care she received at the school, and that she must have died much sooner. To-day this school has no firmer friends than that father and mother.

Two other school children have died during the year, but had both left the school more than three months previous to the time their deaths occurred.

**General deportment.**—The general deportment of the children has been exceptionally good. They are very obedient to the teachers and are uniformly kind and considerate in their treatment of each other. They are, I think, remarkably truthful, and I have yet for the first time to hear anyone of them utter an obscene or a profane word. There was considerable running away during the third quarter, but this was undoubtedly caused by the excitement naturally following so many changes in the office of superintendent.

We have also been troubled somewhat during the last quarter on account of the children speaking their native language, but this was due in a great measure to the fact that we had admitted so many new children who could speak no English.

**Recommendations.**—I would respectfully recommend that there be purchased for the use of the school four new milk cows. We now have eight, but it is impossible with this number to raise the calves and still have left enough milk for the children.

I would also recommend that two washing machines be provided for the use of the school. The laundry work as it has been done is much too hard for the limited number of girls in the school who are large enough to do this kind of work. If we had washing machines, the most of the work could be done by the boys.

I respectfully submit that the soap ration is much too small, and would recommend that it be increased one-half.

I further recommend that a shoemaker's bench with tools, leather, etc., be furnished to the school, so that the boys can be taught to mend their boots and shoes. A great many dollars are wasted in the course of the year because there is no way provided by which boots and shoes can be repaired.

Finally, I can not close this report without calling to the attention of the honorable Commissioner of Indian Affairs the unsettled condition of affairs among these Lower Brulé Indians. This uncertainty as to the permanent location of the agency and as to the place of their future home keeps them roving around and is the great impediment to their progress, and I would very respectfully but with the utmost earnestness submit that in my judgment the highest welfare of this people imperatively demands an immediate and final settlement of these matters. I have attended many of their councils and have had numerous conversations with men representing both sides of these questions, and although I have not one particle of interest in these matters other than my interest in this school and the progress of these Indians generally, I am firmly convinced that if the Government would move the agency upon the reservation, begin to allot the land, and to expend for each Indian as soon as he had taken his allotment the \$50 to which he is entitled for the erection of a house, it would be but a short time till nearly every Lower Brulé Indian would be living on the Lower Brulé Reservation.

With grateful acknowledgment of your very active interest and cordial support in all matters pertaining to the welfare and advancement of this school,  
I remain, very respectfully,

A. P. DIXON,  
*United States Indian Agent.*

GEO. W. NELLIS,  
*Superintendent and Principal Teacher.*

### REPORT OF PHYSICIAN, CROW CREEK AGENCY.

CROW CREEK AGENCY,  
*September 1, 1891.*

SIR: I respectfully submit the following report of medical work done at this agency for the year beginning September 1, 1890, and ending September 1, 1891:

There have been 450 Indians treated and 521 cases—49 half-breeds and 22 whites; births, 34; deaths, 33. Fifteen of the cases were from consumption and 10 other from a complication of scrofula and lung trouble, 1 from suicide, the remaining cases being from other diseases.

The school children at the Government industrial school have been healthy, only a few cases of sickness being among them. Two little girls were taken sick during the winter with consumption, and were taken home. One of them has died since, and the other one is very low. These were the only cases of a bad disease.

The sleeping rooms were crowded during the term, but now that additions have been built there will be plenty of room.

We have great need of a hospital to put the curable cases in, so that they can have proper medical treatment, it being impossible to give the sick the attention they need. With a good hospital and the proper nurses much good could be done. It seems as if more attention should be given these people from a sanitary standpoint.

The agency physician has very little to encourage him in his work. He can see but little good from his exertions; gets around to visit the sick the best way he can. After he does make a visit all he can do is to leave medicine and tell them to take it; sometimes they take it and sometimes they don't.

These people are very careless in regard to their health, and expose themselves to all sorts of weather.

The medicine man has a good deal of influence among a certain class yet.

I have a good many calls to visit the sick at their homes, and I find these people try to do what they are directed to do in the manner of taking care of their sick.

Thanking you for the help and many favors I have received from your office, I respectfully submit

C. A. MAY,  
*Agency Physician.*

A. P. DIXON,  
*United States Indian Agent.*

### REPORT OF PINE RIDGE AGENCY.

PINE RIDGE AGENCY, S. DAK.,  
*September 1, 1891.*

SIR: In compliance with instructions, I have the honor to submit the following annual report of this agency for the past year:

The following table, showing the number of Indians at this agency, is furnished in accordance with section 211 of office regulations, 1884, taken from the census rolls, prepared by me under instructions from your office dated June 6, 1891, viz:

	Ogalalla Sioux.	Brulé Sioux.	Mixed bloods.	Northern Cheyennes.	*Total.
Number of families .....	1,165	205	126	22	1,518
Number of males over 18 years .....	1,060	288	127	22	1,497
Number of males under 18 years .....	1,032	124	142	21	1,319
Number of females over 14 years .....	1,361	251	175	20	1,807
Number of females under 14 years .....	825	148	102	26	1,101
Total of all ages .....	4,278	811	546	89	5,724
Number of males and females between 6 and 16 years .....	1,059	181	87	27	1,324

\* Exclusive of those Indians absent from the reservation with shows, medicine companies, and attending the nonreservation schools.

\*Additional farmer. †Estimated. ‡Purchased. §Twenty-two colts purchased.

The foregoing data are taken from reports made to me by the several farmers from each district, and are, I suppose, very nearly correct. The amount of grain and vegetables raised is not given, for the reason that Indian farming in a country like this, and especially among these wild Sioux, is only in theory and not in practice. The season is too dry for the soil to produce and the Indian too tired to cultivate the land if it was suitable and there was plenty of rainfall.

The material salvation of these Indians will be found in stock-raising if they are to retain permanently their present reservation. The country is fit for nothing else, and is none too much for their needs as a pastoral people if they are to become self-supporting. The reservation should not be opened to settlement, and these people should not be required to take their land in severalty. They should be encouraged to make small farms and garden patches along the streams, and all the rest of their reservation should be kept as a grazing ground for their herds forever.

**Indian police.**—The Indian police force at this agency consists of 5 officers and 60 privates. The officers receive \$15 per month each, and the privates \$10 per month each. Each policeman is allowed one suit of clothes during the year and forage furnished for 16 horses belonging to the police during the year. The police force is inefficient and unreliable, and would prove an utter and complete failure in case of an emergency. I have repeatedly set forth my remedy for this state of affairs, in my various communications to your office.

**Court of Indian offenses.**—Authority was granted by the Indian Office for the appointment of three judges of Indian courts. I have no recommendations or appointments for the reason that it does not appear that any real good can result from such a court. All matters which would come before the court would finally have to be decided by the agent whatever the findings of the court might be. Indian judges would not be granted any respect by the Indians themselves, nor would they, in my opinion, merit any such respect, as the Indians are not, in any sense, judicially minded.

**Schools.**—Very little progress is making in the school service at this agency. The disturbed condition of affairs last winter among the Indians, the burning of three of the day school buildings, and the failure of the Indian Office to supply a sufficient number of competent teachers and other employes at the proper time, before the opening of the school year, and the many changes that have taken place since the beginning of the school year, have all tended to retard progress and cripple efficiency. As the appointment of employes and the general management of the school business is reserved by the commissioner, I do not feel myself at liberty to criticise the methods in vogue, nor to indicate the remedy which should be applied. The appointments and the general scheme are beyond my control.

The appointment of employes at the agency on account of political influence or bias tends to cripple the service and put it out of the power of the agent to secure the best service possible. I have had occasion to discharge an additional farmer for incompetency, and was positively required to reinstate him; and I understand that

his reinstatement was brought about through political influence. This state of affairs can not be productive of anything but inefficiency and poor service. It should be stopped, and only capacity and ability should be regarded as fit qualifications for employment.

Much justifiable discontent exists among the Indians by reason of the delay in forwarding the annuity goods, and the poor quality of the same when received. It is now the 23d of October; the annuity goods should have been here not later than the 1st of the month, and should by this time have been issued. Not more than half of the annuity goods are here, and no one can tell how soon the remainder will arrive. Probably it will not be possible to issue the annuity goods until severe winter weather has set in.

I have repeatedly requested that a master of transportation be authorized for this agency, and I now renew that request. The services of such a man are indispensably necessary to the proper carrying on of the affairs of the agency. He is required to take charge of the means of transportation, superintend the laborers, have charge of the corrals, shops, workmen, etc., about the agency; to attend to the details of freighting, hauling supplies to the outside districts, looking after distribution and return of agricultural implements, see to the public buildings scattered about over the agency, and to perform in general the duties of an overseer, under the orders of the agent. A large amount of building is in progress, and the services of a competent man should be supplied.

The Indians are gradually getting into a better state of feeling, and the restoration of confidence is beginning to appear. There is a considerable number of very conservative Indians, medicine men and others, who still insist upon a revival of the Messiah craze and the ghost dancing. However quiet and peaceful these Indians may appear to be, it is by no means a fact that permanent peace has been established. The influence of this conservative element depends upon their keeping alive the spirit of turbulence and resistance to law and order; and until a number of years of peace and quiet, just and upright administration of affairs, and the fulfillment of the promises of the Government to these Indians has been practiced, it will be folly to consider the Indians as permanently settled and as being entirely peacefully disposed. The sparks of disaffection have been smothered, but the fire is not quenched.

The Brulés and Indians from other agencies, recently transferred here on the recommendation of the commission, of which Maj. Charles E. Pearce was chairman, are a particularly bad element—restless and discontented—and will serve to retard progress at this agency very considerably.

I have requested the ministers of the different denominations having charge of the missionary stations on the reservation to make reports, but they have not thus far complied with my request. Should their reports be sent in, I will forward them.

I am, sir, very respectfully, your obedient servant,

CHAS. G. PENNEY,

*Captain Sixth Infantry, Acting United States Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF ROSEBUD AGENCY.

ROSEBUD AGENCY, *August 27, 1891.*

SIR: In compliance with instructions, I have the honor to submit herewith my second annual report as agent for the Indians of this agency:

**Agency and Indians.**—This agency is located among sand hills in the southwest portion of the Rosebud reserve, about 100 miles west of the Missouri River and 40 miles from Fort Niobrara, the nearest military post, and 35 miles from Valentine, on the Fremont, Elkhorn and Missouri Valley Railway, from which point all agency supplies are forwarded.

The Indians, known as Brulé Sioux, are located on various creeks scattered over this reserve, which embraces the country from the Missouri River west to Black Pipe Creek, and from the Nebraska State line north to Big White River, and at distances to the west, north, and east of the agency varying from 10 to 100 miles, averaging about 30 miles from the agency.

A census taken June 30 last of Indians at this agency aggregated 4,723, which does not include 597 recently transferred to Pine Ridge Agency. This census was taken, as heretofore, in one day and in such manner as to insure correctness and prevent duplication by Indians, a desirable object on their part, as by so doing their supplies would be correspondingly increased.

The ages and sex are:

	Males.	Females.	Males over 18 years of age.	Females over 14 years of age.
Brulés, No. 1 .....	554	642	302	385
Brulés, No. 2 .....	335	381	182	224
Loafer .....	491	534	266	332
Waziahziah .....	515	538	285	336
Mixed .....	359	374	143	181

Between the ages of 6 and 16 years (school age) there are 578 boys and 584 girls, a total of 1,162.

**Health and sanitary.**—The health of these Indians during the past year has been generally good, there having been no epidemic diseases among them. There have been, as near as can be ascertained, which is at best uncertain, 155 births and 82 deaths.

Dr. A. J. Morris, agency physician, has added to a commendable degree in securing the confidence of these Indians in the use of "white man's medicine," and is untiring in his work of relieving the suffering when made known to him. He reports that he has treated 384 cases, the majority of which were those of a scrofulous nature and those originating from derangements of the digestive organs, and which does not include the large number applying for medicine for local cases at the dispensary.

I venture to repeat my suggestion of last year and assert that many lives could be saved during the year if a hospital was established at this agency where obstinate cases could receive proper care. At least one assistant should be allowed the physician, now expected to properly care for these people scattered over so large a country, making it unsatisfactory to himself and in many cases fatal to the patient, who thinks one prescription should cure, which failing, he turns to the native medicine man, who, after obtaining all property available, leaves his victim to pass to the happy hunting grounds.

Frequent trips are made by the doctor to the various day schools, where medicines and directions are left with teachers, by which means many Indians are benefited, who otherwise would be neglected.

The ghost dance, which caused such widespread agitation among the Sioux, began at this agency in September last, under the leadership of "Short Bull," who was absent from the reserve all of the preceding winter, and on his return in March, 1890, began his preaching to the Indians regarding the coming of the "Messiah," etc., when he was called to account, and after hearing his explanation admonished not to continue. He desisted until the following September, at which time he renewed his preaching and started the dance in camps of the most nonprogressive and disturbing element of Indians, which attracted the attention and curiosity of nearly all on the reserve.

After visiting the scene and studying the nature of the proceedings, the Indians were informed that such dances must cease, causing, as they did, a general demoralization among them, attracting Indians from all parts, interfering with schools, and causing a total neglect of stock and all belongings, to partake in the wild excitement, until completely exhausted physically, morally, and intellectually.

Criticism has been made by alleged friends of the Indians that no interference should have been permitted in this "religious exercise;" but no reasonable intelligent person, with the welfare of Indians at heart, would indorse it, after having been a witness to the superstitious proceedings, which later proved a means to create excitement, making the participators reckless and defiant.

About this time, and while the majority of Indians were congregated at the agency to draw supplies, it was reported that troops were on the reserve, which created wild excitement, and in an incredibly short time no Indians could be found, all having gone to meet the incoming force. Going immediately to the scene of the gathering I found a large number of Indians congregated, clothed only in paint and ammunition, on horses, armed with rifles and waiting for developments. After considerable time and effort, Indians were persuaded of the falseness of the report, finally quieted, and induced to return to their homes.

The following day all were informed that rations would be withheld until they had returned to their homes and ceased dancing, which had the desired effect and the dance was confined to the few originators, to be more gradually suppressed.

Complications arising, necessitating the agent to leave the agency for a time, a special agent was temporarily placed in charge. The Indians taking advantage of the change in authority, soon again started the dance with renewed vigor, receiving encouragement from the adjoining agency, killing stock for feasts and defying all

control. No Indians left this agency, however, until the arrival of the troops, when the leaders immediately departed for Pine Ridge, accompanied by a large number, aggregating 1,800, including women and children. They committed depredations en route, first destroying property in their own houses before going, being wild with excitement. Their actions while at Pine Ridge are well known.

In February last about 700 of these Indians returned here, under control of Capt. J. M. Lee, U. S. Army, who was appointed and acted as military supervisor at this agency, until April 20, when he was relieved and succeeded by Capt. C. A. Earnest, U. S. Army, who was relieved from duty July 31, at which time the military supervision was withdrawn.

During the winter two troops of United States cavalry and six companies of infantry were stationed here, although no active service was performed, except guarding the agency, and all Indians remaining at home were in every way submissive to the agency authority.

**The real cause of disturbance.**—Many theories have been advanced and much written concerning the causes which lead to the recent trouble. In regard to this agency, to one familiar with the situation, the explanation is not difficult.

Since the time of recent treaty, whereby these Indians disposed of a large tract of land to the Government, which the old nonprogressive chiefs opposed, and which, notwithstanding their opposition, was accepted by the majority of all Indians and ratified, this element, who heretofore considered themselves as the authority of the tribe, could not be reconciled to the fact that the younger element now assumed equal authority. The recognized leaders in the whole trouble are found to be those who are and always have been opposed to progress. Crow Dog, White Horse, Two Strike, and Lance may be mentioned as most prominent. While these men afterwards represented the cause to be short rations, delay in receiving benefits of recent treaty, and starvation by reason of the drought, it is a noticeable fact that not one progressive Indian participated in the trouble, but remained loyal to the authority (with the exception of a very few, who were corralled and compelled to join the procession, but took no prominent part), and who were equal sufferers by the drought and other causes.

The above-named leaders have never made much effort in agriculture or anything else for the advancement of the people or their own benefit. They have been the instigators and leaders in all trouble under different agents for years, Crow Dog being the assassinator of Chief Spotted Tail, since which time he has not lost an opportunity to impress upon others his importance. Had he been removed from this agency, as so often and urgently recommended, I do not hesitate to say the trouble at this agency would not have occurred, and had the others named, who were the recognized leaders of disaffected Indians, been taken away, such action would have received the approval of all loyal Indians and insured peace on the reservation for the future. No one familiar with the situation and these people can say that any leaders of the Indians from this agency were taken or sent away. Short Bull (who was taken away and sent abroad), while he posed as a religious prophet, was not a chief or leader, and known only as a "Medicine Man." He was used as the instrument in the hands of the others. During my eight years' association with these people this Indian has scarcely been known and had no following whatever. His associate Mash the Kettle, who accompanied him on his trip to see the "Messiah," and who was equally as prominent in the dance, was also removed as a dangerous man and taken to Europe. He has recently been sent home for some unknown reason (alleged sickness), and is at present at this agency.

It is to be regretted, and the fact will never be overlooked among these Indians, that the instigators and leaders in this trouble were not only permitted to return home unmolested, but were rewarded with increase of rations, while those who remained loyal feel with good reason that their orderly conduct was not appreciated. Life in any civilized community would be considered of small value if such course was pursued against ringleaders of crime.

Nevertheless the collision and results at Wounded Knee, while to be regretted and unfortunate in many respects, will not soon be forgotten. Indians have learned that it is dangerous to oppose by force, the law of the Great Father.

The boundary line between Pine Ridge and this agency having been changed by last treaty from Pass Creek, 20 miles east to "a line due south from the mouth of Black Pipe Creek," at White River, has caused considerable commotion among Indians residing on the territory thereby transferred to Pine Ridge Agency, many of whom went to Pine Ridge with others and were recently transferred there by the Sioux Commission appointed to settle the difficulties arising from this change of boundary; also to make arrangements with these Indians in reference to allowing Lower Brulé Indians located south of White River and near the Missouri River to take land on this reserve.

In council with the Commission here the Indians requested that the dividing line be changed back to Pass Creek, in which event they would consider the question of

providing for the Lower Brulés and desired that the Pine Ridge and Lower Brulé Indians meet with them here, in general council, later in the season, to settle the matter; in which condition the matter was and is now left.

The enlistment of a troop of United States cavalry from these Indians, consisting of fifty-five able-bodied young men, in March last, had a good effect, as they were largely selected from the disaffected element. This troop has been stationed at Fort Niobrara, where they have made commendable progress in army tactics, they having thus far been especially fortunate in being commanded by an energetic officer, untiring in his efforts in their behalf. As soldiers I am convinced they will soon rank well with the average enlisted man.

It may be questioned if giving these Indians all the privileges of United States soldiers in permitting the use of beer and other intoxicants is for their advantage, or if it will not have a demoralizing effect on themselves now and especially after the expiration of their terms of service, and also upon those of their friends who are frequent visitors at the post and who will be very likely to partake with them and be more discontented and troublesome under restraint on the reserve.

**Farming.**—Considering all circumstances the Indians have made as favorable progress during the past season in their agriculture pursuits as could be reasonably expected, particularly on the east portion of the reserve, in the direction of the Missouri River, where considerable small grain has been sown and gathered, showing fair results. Although this has been an exceptionally favorable season for farming, in some sections rain has not fallen for from four to six weeks during June and July, which has materially injured all crops in such sections. Local hailstorms and recent frosts have in places totally destroyed crops of good promise.

About 325 families of Indians belonging to this agency have homes on the east side of the reserve. The majority, having their separate tracts of land of good quality, have had fair returns, and many will have sufficient potatoes to last during the winter and other crops to dispose of.

The Indians generally have cultivated and worked their fields to a commendable degree. It is hoped that considerable corn and oats can be secured from Indians on the reserve for agency use; several have planted wheat this year, securing a fair crop. The acreage under cultivation this year, by measurement, aggregates 3,790 acres, which practically is the work of 800 families of Indians, those returning from Pine Ridge not being able to do much by reason of the large loss of stock during their maneuvers last winter and others by the lateness of their return.

**Additional farmers.**—Three farmers in addition to the agency and assistant farmer, together with eleven Indian assistants, have been allowed during the past year. A total of seven farmers for this year will prove of inestimable value in instructing and assisting Indians in farming and stock-raising. Thorough, practical men have been selected and assigned to districts where they live and over which each can travel once a week, supervising Indians and having an Indian assistant in various camps.

While, in my opinion, and in that of those conversant with the climate and nature of this country, Indians will never become self-supporting by agriculture, the amount of labor which they may be induced to perform in this direction for some years to come will result to their benefit, however little may be the return. Their natural disposition to rove can only be broken up by occupation in one locality, and must be recognized as important. The importance of this work, therefore, is apparent.

**Issue houses.**—Two district or subissue houses are now being constructed; one to the east, the other to the west of the agency, where rations will be issued to Indians living within a certain radius, instead of compelling all to travel to and from the agency, which has heretofore necessarily consumed much of their time. A third issue house is much needed and urgently requested by a colony of Indians located near the Missouri River; 100 miles east of the agency, who are among the most progressive and where by far the best land is found.

**Stock-raising.**—The stock belonging to these Indians suffered materially during the past winter by reason of the disturbance. Indians who remained at home were for a time required to camp about the agency, during which time their stock suffered for want of attention. Cattle taken or driven away by Indians who left the agency were not returned, while many horses were lost on the road, and many that survived the winter campaign died of starvation during the succeeding severe weather.

Special attention is now being given by the farmers to this industry, as experience has demonstrated that stock-raising must be largely depended upon by Indians to become self-supporting. Several hundred beef cattle were purchased from Indians and others located on the reserve during the past summer by contractors for delivery to the Government, and the benefits thereby gained fully explained to Indians. This purchase will serve as an incentive to many in the future.

One thousand head of stock cattle recently received for issue are being held until Indians shall have secured hay for their support. This number will provide an animal to each head of family. None will be issued to any who has not sufficient hay for its

keep. I am pleased to note that at present all are industriously engaged in procuring hay, that they may not be disappointed. This action does not indicate further intended disturbance. The farmers in districts have instructions to see to it that cattle are cared for and not disposed of, and endeavor to develop greater interest among Indians in this all-important industry.

**Freighting and Labor.**—The hauling of freight from the railroad, 35 miles distant, for agency and traders' stores, has been done by Indians in an entirely satisfactory manner, and aggregates about 3,137,263 pounds, which has netted \$15,686.31 in cash. It has been practically demonstrated to all in position to judge, by experience and observation, that these Indians will work when money is held out as the inducement. They are at present delivering 250 cords of wood at the agency at \$6 per cord; the wood is scarce and difficult to get, and is hauled from 5 to 8 miles over heavy roads. They also cut and deliver all wood required at the various schools. All wood required by the military while stationed here during the past winter was furnished by Indians, aggregating 386 cords. In agriculture and, as yet, in stock raising, he sees no money; neither is sure of immediate return.

With their daily wants supplied, "to be supported until able to support themselves," what incentive is there to work? The life heretofore of an Indian can not be compared with people who have been required to work or starve. The labor troubles all over the country demonstrate that men do not work for ambition or recreation, and is more forcibly demonstrated by the results of the agitation last winter. The Indian's highest ambition is to pose as a chief, and by other methods than following the plow and labor, obtain an increase of supplies, which methods do not serve as an inducement or incentive for their younger men to labor or encourage those who are earnest in their endeavors in their own behalf and comply with the law.

There should be devised, by every means possible, an incentive for them to work and preventive against idleness by seeing the money as the result—to establish shops of various trades at the agency in which to employ young men under competent mechanics, either at a monthly salary or piece work, purchase from them the results of their labor for cash, and issue the same to Indians under treaty provisions instead of from contractors. A foundation and inducement would thereby be given the Indians to labor and the benefits to be gained realized by him.

**Land in severalty.**—I am advised that several townships of the most desirable portions of the eastern part of the reserve, where Indians are located, will soon be surveyed to enable Indians to take their separate allotments and become permanently located. If stock, implements, etc., then guaranteed are forthcoming, many other Indians, who are as well prepared now as they will be five years hence, can be induced to scatter out on separate tracts, which would do much toward preventing organized trouble in the future, as it is invariably in camps where Indians are grouped together in large numbers, and idleness, that trouble originates.

**House building.**—Nearly if not all Indians live in log houses of their own construction; the large majority have dirt floors and roofs, through which the rain and snow penetrates. Could lumber for floors and shingles for roofs be furnished, better houses would doubtless be built and the health of the occupants improved and aid materially in their permanency and cleanliness.

**Indian police.**—During the past year there has been a force of 40 privates and 3 officers, which has been increased to 50 privates and 4 officers. They have proven themselves worthy of confidence and during the past winter rendered valuable service in detecting and stopping roving Indians and promptly reporting any actions or sayings of fractious ones.

As these men are constantly on duty, either at the agency or in camps, required to provide themselves with one or two ponies, with necessary equipments (all of which are furnished to those enlisting in the Army), and perform double the amount of service of soldiers, it would appear but reasonable that they should receive at least as much pay, and should be as well armed as the Indians, to command respect and obedience in carrying out orders.

Considerable improvement has been made in their personal appearance while on duty at the agency, where they are required to present a neat appearance. A force of 18 men is kept on duty at the agency, changing alternately to camp duty each two weeks. One hour is spent each day in drill by those at the agency and all are brought together twice a month for company drill, which will compare favorably with any company of men receiving the same amount of instruction.

**Court of Indian offenses.**—No court has been organized at this agency and at present all matters are disposed of by the agent. Under ordinary circumstances, could intelligent and reliable Indians be secured, doubtless much annoyance would be saved the agent, but owing to there being two factions among these people, whose relations are somewhat strained at present, it is not deemed advisable to inaugurate a court and thereby keep alive this feeling.

The missionaries on this agency represent the Episcopal, Presbyterian and Roman

Catholic churches. Each are rendering good service to these Indians and have at all times been ready and active in giving the agent all assistance in their power for the welfare of this people. Too much credit can not be accorded these earnest workers, who persevere in their endeavors under difficulties hard to realize by those not acquainted with the surroundings.

The Catholics have recently built a large and commodious church in connection with their boarding-school building, capable of accommodating 300 people.

**Educational and schools.**—Notwithstanding the interruption of school work during the past winter, necessitating the closing of nearly all schools for a time, the results under the circumstances are satisfactory. There are thirteen Government day schools (twelve in camps and one at the agency). Two of the camp-school buildings belong to the Episcopal church and are loaned to the Government for school purposes. All camp-school buildings are frame, one-story, with teacher residence (consisting of three rooms) attached. All have been put in thorough repair during the past year and are in good condition; each is provided with a large bell which can be heard a considerable distance.

There are two mission boarding schools (Protestant Episcopal and Roman Catholic) on this reserve.

St. Mary's Episcopal is located on Antelope Creek, about 15 miles east of the agency, on a fine site of prairie land. This school was built to accommodate 50 pupils, is under charge of Rt. Rev. W. H. Hare, bishop of South Dakota, and supervised by Miss Amelia Ives, assisted by three lady teachers. The enrollment has been 52 with an average attendance of 45, and is supported entirely by the church, with the exception of supplies and clothing for the children, which are furnished by the agent, to which scholars are entitled. Much praise is due to the self-sacrificing work of the ladies in charge of this school, isolated and situated as they are, far from civilization and its comforts and advantages. That their efforts for the past year have been highly successful, was evidenced by the closing exercises in June last. Three hundred and twenty acres are set apart for this school, all being under fence, with about 60 acres under cultivation, in charge of an industrial teacher, assisted by the older boy pupils.

St. Francis Roman Catholic contract mission school is located about 8 miles southwest of the agency, in charge of Rt. Rev. M. Marty, and under supervision of Rev. Father Digman, assisted by two brothers and eleven sisters of the order of St. Francis. The building was erected for the accommodation of 100 pupils, and during the past year has had an enrollment of 104, with a daily average attendance of 95. Fifty dollars per capita, together with supplies and clothing for children has been furnished by the Government heretofore. For the ensuing year contracts have been executed for paying \$108 per capita, the school to furnish all necessities.

The closing exercises of this school for the past year, which were highly satisfactory and appreciated by the many present, demonstrated the fact that their labor had not been in vain. There are at present 160 acres under fence at this mission, about 100 acres being under cultivation. Their garden, consisting of about 10 acres, has furnished a large quantity and endless variety of vegetables. The older boys have a separate garden for their own working; they also assist in the farm work.

The agency day school, which has been conducted by one lady teacher, assisted by an Indian young man, formerly at Carlisle, was not closed at any time during the past troubles; has had an enrollment of 43, with a daily average attendance of 33. By reason of the few families located about the agency, who constantly change between camps and agency, much time and labor is required of the teacher to keep pupils properly clothed and neat in appearance.

The twelve camp day schools are located in different directions from the agency, varying in distance from 10 to 50 miles, and requiring about two weeks' time to visit them. The departure of a large number of these Indians to Pine Ridge Agency during the past winter from the western reserve has materially interfered with the day schools of that section. Two on Black Pipe Creek have not since been reopened, the Indians not having returned to these camps, and whose status can not be determined until the dividing line between the two agencies is definitely and finally located. All camp schools except three (White Thunder and Oak Creeks and the Agency school) were closed on November 20, by order of the special agent temporarily in charge of the agency, and reopened February 8, since which time the attendance at several has not been as large as heretofore, by reason of several families not returning. No superintendent of schools having been allowed during the past year, their supervision has added largely to the duties and labor of the agent.

The enrollment at all Government schools has been 356, the average attendance 285. Adding those at mission boarding schools on the agency, together with those at schools off the reserve, make an aggregate of 609 children of this agency in school during the past year, which, according to the last census, leaves about 553 children of proper age unprovided for.

The teachers employed are in nearly all instances man and wife, have given good

satisfaction, have taken an interest in their work and supervision of their camps, which has largely aided in their success. The man is employed as teacher, the wife (the assistant) having charge of clothing for the girls, who do their own sewing under her instruction.

A midday lunch of coffee and hard bread is provided, without which these schools could not be maintained, many children coming a distance of from 3 to 6 miles, riding their own ponies, which are left picketed until the time to return home. An outside vestibule is attached to each school, provided with the necessary toilet articles. All children are required to present a clean and neat appearance before entering the school. The girls are not permitted to wear shawls during the session and the boys are required to have their hair cut short.

**Attendance.**—The average attendance of the schools, considering the fact that children return home each day and that while in many instances parents are beginning to realize the benefits and compel their children to attend others are indifferent, and still others, of the old nonprogressive type, opposed to civilizing influences, may be considered good, as the following figures show:

	Enrolled.	Average attendance.
Agency school.....	43	33
Ring Thunder camp.....	30	17
Pine Creek.....	20	18
Little White River.....	25	22
White Thunder Creek.....	29	24
Oak Creek.....	31	27
Little Oak Creek.....	35	31
Pass Creek.....	24	20
Corn Creek.....	21	19
Black Pipe Creek.....	17	11
Cut Meat Creek.....	28	25
Lower Cut Meat Creek.....	33	26
Red Leaf camp.....	20	12

Policemen, when released from agency duty, carry a notice to the teachers of their respective camps advising them of the length of time they are to serve on camp duty, during which time they are required to report at the school each morning and, after a reasonable time is allowed, bring in tardy pupils, and when returning for agency duty bring to the office the notice previously taken to the teacher with appropriate remarks, thus reporting to the agent the standing of both school and policeman. All children of proper age living within a reasonable distance are enrolled and required to attend. It is rarely necessary now to send policemen after absentees; the majority of Indians taking an interest in school work, the knowledge of the policeman's presence is sufficient.

The influence of these day schools can not be understood by parties never having seen them in operation, or their importance. They are forming the foundation for the work of civilizing the Indian, if they are to be civilized at home, as it carries civilization into their very midst, where it is taught by the home life of the teachers, an example ever before them and from which they can not escape.

But to insure their successful operation it requires the untiring efforts of those having the work in charge. The teacher need not only be efficient in educational capabilities to pass any required "civil-service examination," but must be possessed of broad common sense, good judgment and tact, and make an honest effort to assist and advise the people of the camp, who look to them for counsel and copy from their example.

A school convention or exhibition, consisting of a class from each school, accompanied by the teacher, was held at the agency at the close of the school year, which proved entertaining and instructive to both teachers and pupils, who were thus enabled to compare notes and to stimulate all interested to future efforts. About 100 children were present, and the exercises would have done credit to children of the same age in any locality. These exercises were witnessed by parents and friends of the pupils and schools from every part of the reserve, manifesting much interest in the progress made by the children and in all the exercises. The audience was larger than could be accommodated, though we were kindly allowed the use of the Protestant Episcopal Church. If those interested in this work, who are loth to admit the successful operation of reservation schools, could be present at one of these exhibitions, held at the end of each year, they would be better able to form intelligent opinions from actual observation.

**New schools.**—I am advised that authority has been granted to construct four additional day schools on this reserve, which can be located to advantage and where Indians have repeatedly asked for them.

**Boarding school.**—There is no Government boarding school on this reserve. I am advised that it has finally been decided to erect one, which has been asked for and promised to these people for the past ten years. The site recommended for the building is about 40 miles east of the agency, where all requisites necessary for a good school are obtainable, except fuel, for which coal must be depended upon. The only objection to this proposed site is its distance and isolation, being from 40 to 45 miles in every direction from all points of intercourse with civilization, a privation to both teachers and scholars. A site nearer the agency would for these reasons be more desirable.

**Traders.**—There are two licensed traders at this agency, who have conducted their business in a satisfactory manner, so far as known, no complaint having been made against them. As Indians frequently go to the railroad for supplies and visit other towns along the border of the reserve, they are not so dependent on the agency trader as formerly, therefore "fortunes" made by traders among those Indians are a thing of the past.

**Conclusion.**—The work accomplished during the past year, which under existing circumstances has been difficult and arduous, has been by the assistance of teachers and employes, who have labored faithfully and harmoniously in attending to duties assigned to them, without interfering with the work of others. For this assistance and the support received from the Department at all times I desire to acknowledge my appreciation.

Very respectfully, your obedient servant,

J. GEO. WRIGHT,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF ST. FRANCIS MISSION SCHOOL, ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., *August 26, 1891.*

DEAR SIR: I have the honor of submitting my third annual report of St. Francis Mission Boarding School:

In spite of the excitement caused by the ghost dance and following troubles we succeeded in keeping our pupils at school with a few exceptions. They even seemed to be more at home than ever before. We had comparatively very little trouble with runaways. The health of the children, too, was upon the whole very good. Only 3 of them had a slight touch of the grip, though this troublesome guest visited almost every house in the neighborhood.

The schoolroom work was carried on successfully, as the examinations at the close of the year and little entertainments on several occasions during the year proved to the observer. In speaking English the pupils made a decided progress this past year, though much is to be desired yet to overcome their natural bashfulness and aversion in this regard.

The boys were, as heretofore, taught and employed in farming and gardening; and it was gratifying to notice in them an increasing interest for work. Besides their helping on the farm, they have a garden of their own to raise different kinds of vegetables. Two were working with the blacksmith and tinner, 4 in the carpentershop, and 2 in the bakery.

The girls are taught in all that is required to make of them good housekeepers: cooking, sewing, darning, laundry work. The specimens of their needlework submitted to the visitors of our last commencement did honor both to pupils and the sisters that teach them.

Very respectfully,

P. F. DIGMAN,  
*Superintendent.*

J. GEO. WRIGHT,  
*United States Indian Agent.*

#### REPORT OF PRINCIPAL OF ST. MARY'S SCHOOL, ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., *July 30, 1891.*

SIR: I herewith submit the following report of St. Mary's School for the year ending June 30, 1891: St. Mary's School reopened the 1st of September, but the school teacher engaged was taken ill and her place was filled by others for a month.

The school filled up quickly, and many applicants had to be refused for lack of room.

The work progressed favorably, in spite of the disturbances about us, until after active hostilities ceased. Then 2 of the ladies of the school and 2 children were quite ill, and, owing to previous disturbances, it was impossible to get necessary assistance, so the children were given a vacation of two weeks. Before the expiration of the time a blizzard blocked the roads, and it was six weeks before our children from distant points could return. Since that time the children have done remarkably well. They have done their work well and cheerfully.

The older boys helped to plow for and seed about 18 acres of small grain, 8 acres corn, 5 of potatoes, and 1 of garden. The corn is a failure, but the rest, though late, promises well.

The quality of rations issued has been satisfactory, and the quantity sufficient, with vegetables, etc., supplied by the school by purchase.

The agent and physician have been kind and prompt in rendering any assistance requested.

The confidence of the people in the school seems to be increasing, and the children showed a more

pleasing spirit. We have many more applicants for the coming year than we can accommodate. Forty-five is all we can do justice to, but we have crowded in 53. Our average was nearly 47.

Slight repairs to the buildings have been and will be made to keep them in order, but no extensive changes.

Respectfully submitted.

J. GEORGE WRIGHT,  
*United States Indian Agent.*

AMELIA IVES,  
*Principal of St. Mary's School.*

---

### REPORT OF MISSIONARY, ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., *August 26, 1891.*

MY DEAR SIR: Missionary work during the year has been trying and often discouraging. The disorder and confusion of the year, the entire failure of crops of every kind, the change in the line of the reservation to Black Pipe Creek, have all resulted in making the Indians restless, uneasy, and suspicious. They have been, therefore, rather unresponsive of moral and religious teaching. If my work during the year were measured by the baptisms and the number received into the church it would be but a poor showing of what I believe has been the real missionary work.

During the disturbance commonly known as the outbreak our regular work of preaching and instructing was continued unbroken. Our place of meeting was transferred from the mission station to the tents of our Indian church members. In this way we were enabled to allay much suspicion and to keep quiet those who remained here.

Our work at Burrell station, among Swift Bear's people, has continued without interruption, and is quite promising. Our stations on White River and Black Pipe Creek are now discontinued, as most of the people have moved from the vicinity of these stations. I hope at an early date to rebuild these stations and continue work as before.

The year has not been one of progress among our Indians. So many have been engaged in depredations and have been unpunished, that there has sprung up a spirit of lawlessness to an unusual degree. However, the Indians, so far as I have been able to observe, are quiet and well-disposed.

The great obstacle to the moral improvement of the Indians is a lack of any occupation which will reward their efforts. The demoralizing influence of the present system is so great that the result of missionary work is almost lost.

I am firmly convinced that the people here will receive gladly and will readily respond to religious instruction.

Very sincerely, yours,

JAMES F. CROSS,  
*Missionary of American Missionary Association.*

J. GEORGE WRIGHT,  
*United States Indian Agent.*

---

### REPORT OF MISSIONARY, ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., *August 26, 1891.*

MY DEAR SIR: With regard to our mission work during the past year I may state briefly that we have, despite all disturbances, continued as far as possible to occupy all our old stations and chapels, holding services frequently and encouraging educational work everywhere. We are called upon now to build new chapels and provide services at new points, so that we find the outlook on the whole very encouraging.

During the past year I have recorded 12 marriages, 110 baptisms, and 10 burials.

During the winter there was naturally some temporary breaking up of regular work, but since April 1 the interest of these people in the church and in Christian faith and life has been as great as ever. The coming convocation will, I am sure, give evidence of the truth of this statement.

Respectfully and faithfully, yours,

AARON B. CLARK,  
*Missionary in Charge.*

J. GEORGE WRIGHT,  
*United States Indian Agent.*

---

### REPORT OF SISSETON AGENCY.

SISSETON AGENCY, S. DAK., *September 30, 1891.*

SIR: I have the honor of submitting this, my third and last, annual report as United States Indian agent at Sisseton Agency, S. Dak.

This reservation, which is known as the Lake Traverse Reservation of South Dakota, contains about 918,000 acres of land, is triangular shaped, with its point near Watertown, S. Dak., and extending north 90 miles or more, covering a small part of North Dakota. It has an average width of about 20 miles, and is mostly prairie, with some timber around the large lakes and in the deep ravines on the east slope of the coteaux. The allotments to Indians cover nearly 250,000 acres, leaving for homestead settlers some 668,000 acres. The soil is rich, and will produce large crops in any season when the rainfall is sufficient.

Agency.—Sisseton Agency is located on the east slope of the coteaux, 12 miles west from Brown's Valley, Minn., with buildings as follows: One large warehouse

(in which the clerks' and agent's offices are kept); seven employes' residences, carpenter's shop, blacksmith shop, one trader's store, stable, jail, and an abandoned mill. Four of the seven employes' residences are known as Indian houses, and of but little value. The buildings are all suffering for paint, and some need repairs very much to prevent them from falling down. Brown's Valley, Minn., and Wilmot, S. Dak., are the two nearest railroad towns. The former is 12 miles east on the Manitoba railroad, and the latter is 16 miles southeast on the Chicago, Milwaukee and St. Paul Railroad. Stages connect with the daily trains from each place.

Census.—The summary of census, herewith inclosed for June 30, 1891, shows as follows:

School children between the ages of 6 and 16 .....	377
Females over 14 years of age .....	516
Males over 18 years of age .....	410
Total population.....	1,730

The great increase since the last census comes from the return of Indians who have been away temporarily at other agencies, and have not appeared in the census of former years. Such Indians have been attracted to this agency by the annuity payment just paid, and have succeeded in having their names placed on the roll and have received their annuities as members of the tribe. In reality there has been only a small increase in the past year, not more than fifty at most.

Schools.—There are two schools for the Indian children of this reservation. One is a contract school, conducted by the Presbyterian Board of Home Missions, with W. B. Robie as superintendent. This school is located 2 miles northwest from the agency; has accommodation for 115 pupils. The girls and boys have separate homes, both some distance from their schoolhouse. The reports for the last year show an average attendance of 94, with an enrollment of 130. The school is well conducted, and the pupils are well cared for, and if the speaking of Dakota was restricted more, or less used, it would be one of the best of schools.

The other school is a Government boarding school, located  $1\frac{1}{2}$  miles from the agency. This school, with the new addition, has accommodation for 150 pupils. Reports for the last year show an average attendance of 88, with an enrollment of 127.

It will be seen by reference to the superintendent's report that there have been unusual and unfortunate events the past year, which have greatly embarrassed school work. The annuity payment coming to these Indians, which has just been paid, gave them a credit at the stores and all over the country that so elated them that it has been impossible to keep their children at school, or to persuade them to pay attention to anything else. Fine horses and harness, fine clothes, and children must come home and take part, and thus the schools have been depleted until reduced to less than one-half of the usual attendance. It is now the third week of school for the school year of 1892, and the attendance is less than one-half what it usually is at this time. As poverty returns the pupils will return. When supplies at their homes are exhausted then they will come in to school; and in some cases they have already come to this.

Attendance and enrollment for fiscal year 1891 is as follows:

Average attendance:	
Government boarding school.....	88
Good Will Mission .....	94
Total.....	182
Enrollment:	
Government boarding school.....	127
Good Will Mission .....	130
Total.....	257
Pupils away at school.....	33
Total at school .....	290
Total of school age shown by census .....	367

Improvements at the Agency School.—An addition to the school building, extending west 60 feet and 30 feet wide, with walls 24 feet in height, has been built by contract the past season at a cost of \$3,600, and is now occupied. This structure gives a grand school room on the lower floor that will seat 150 pupils, with ten good bed rooms over the school room, and with height of walls same as old building, and windows corresponding, painted all alike. This addition certainly improves the appearance of the whole structure, and is all that it was designed for.

A building for a laundry and bakery has also been built by contract at a cost of \$3,400. This building is located 60 feet north of the school building, and such a distance from all other buildings that there will be little or no risk from fire in case any one of the buildings should burn.

The size of this building is 36 by 60, with 18-foot walls, and arranged for a bake oven and bakery, laundry, and two bath rooms on lower floor, with drying room for laundry in upper part. This building is not yet occupied, but is completed and ready for use.

A large drain pipe is located so all surplus water is carried from this building, and its use must add much to the comfort and convenience of the school.

**Missionary work.**—Rev. M. N. Adams, in charge of work for Presbyterian Board of Home Missions, reports as follows:

Church buildings.....	6
Missionaries.....	7
Church communicants.....	450
Contributions for Home and Foreign Missions.....	\$941.34
Marriages not yet reported from missionaries in charge.	

Rev. John Robinson, in charge of Protestant Episcopal Church, reports as follows:

Church buildings.....	3
Missionaries.....	1
Communicants.....	142
Contributions Home Mission work.....	\$150.00
Contributions from abroad for destitute.....	\$700.00
Marriages solemnized.....	13

**Indian houses.**—There have been three new frame houses built by the Government for Indians the past year, and the Indians have built and completed some eight or ten and have many more well under way, which will be completed before severe cold weather. The delay of the annuity payment has deferred action in building in many cases, and I fear the winter will get so near soon that many buildings will be postponed to another uncertain time.

Frame houses.....	81
Log houses, dirt roof.....	103
Log houses, shingle roof.....	33
Total.....	217

Dirt roofs are very unwholesome for man or beast.

**Police.**—A captain and five privates constituted the police force up to July, when I found that number entirely inadequate to meet the additional troubles and carry out new regulations brought about by the money payment to the tribe, and by application the force was increased by a sergeant and three privates for a period of three months. It required the vigilance of all the police, both night and day, to keep order and carry out instructions while the payment was being made, and several mornings I found the jail well filled, and generally with Indians and mixed bloods cooling off from a drunk, but sometimes a white man or two would be mixed up with the happy party. The police force have rendered good service, and have been highly complimented by United States officers whom they have assisted in making arrests.

**Issues.**—In November last authority was given to expend a sum not exceeding \$5,000 in the open market purchase of flour, pork, beef, and beans for the relief of the destitute and starving Indians. This amount was expended early in the winter, and the last issue was made about April 1, and since that date credit upon the annuity payment has been given by merchants and others, and there has been no want for food in general. In April and May I issued 2,000 bushels of seed wheat, 1,200 bushels of oats, and 245 bushels of potatoes. All the provisions and seed were of the best quality and issued with great care and with the intention of doing justice to all.

**Crops.**—Rain is always wanted, and often there is no crop for want of it. In the past season, however, a fair quantity of rain has fallen, and would have been sufficient if the ground had not been so very dry from previous droughts, and a fair crop has been grown on all lands properly seeded and cultivated. But farm work has been sadly neglected, and the yield will not be one-half what it would have been if proper work had been done. The whole tribe have been so elated over their prospects of wealth that anything like industry or economy were far in the background and but little considered. No satisfactory estimates can be given.

**Polygamy.**—New cases of polygamy are not allowed, but as there is no satisfactory way of reconstructing families who have practiced and lived in polygamy for a score of years, propriety must allow the evil to run until the nine polygamists are through their career. The limited number of cases of polygamy and the fact that there has been little or no increase in this criminal habit, gives assurance that a few years

will terminate this evil. The census shows one man with three wives and eight men with two wives each.

**Crimes and litigation.**—There are four Indians and one white man, now under arrest for offenses. One of the Indians is held for the reckless discharge of firearms among the camps while drunk. The other Indians and white man are charged with bringing whisky on the reservation. All will be tried at the next term of the United States district court for South Dakota. This constitutes the crimes of importance so far as known.

Many complaints have been made, but prosecuted no further than a hearing before the agent. Civil cases from all troubles have gone no further than the agent, with the exception of two divorce cases, which are on the calendar of the county court.

The Indians as a tribe have been entirely civil, and are entitled to much credit for their civil and respectful conduct while unusual events and occurrences have taken place in which they were directly interested.

The killing of Sitting Bull and many others at Pine Ridge, some being near relations of Indians here, caused some feeling, but no demonstration of any kind further than much talk and comment upon the history of parties and a general disapproval of the hostile course insisted upon by Sitting Bull and his followers.

**Traders.**—Up to July the licensed traders here were J. W. Hines and David Fari-bault, both carrying small stocks and doing but little business, sales not amounting to over \$150 per month at either store. In July E. M. Cooley obtained a license and opened up a large stock of goods. The payments to the Indians commenced about the middle of July, and since that time trade has been lively. I have visited these stores often, and watched their sales to the Indians and as yet I have discovered no unfair dealing. Their lists of prices are properly posted and licenses on file. Trade is not confined to these stores and prices must be as low at these stores as that at the stores at the near towns to hold the trade of the Indians. A license to trade here is no big privilege.

**Taxation and government.**—The provisions for government and the arrangements for taxation to pay the public burdens of Indians holding allotments are not satisfactory, and some further act of Congress amending the severalty act must be had. By one section of the severalty law an Indian, after taking an allotment, is given all the rights and privileges of a citizen, and by another section of the same law his real property is exempted from taxation for a period of twenty-five years and longer if the President so directs. Thus the Indian has every privilege of government, and is exempted from paying an equal and just proportion of the public burdens. In Roberts County, S. Dak., there are near 200,000 acres of land covered by allotments of some 1,200 Indians. These 1,200 Indians constitute about one-third of the population of the county. Therefore the few white settlers of this county have to bear the public burdens of 1,200 Indians. It may be said that a personal tax can be realized from these Indians, but nothing can be so realized from the fact that their personal effects are very limited, and the State exemptions would always, nearly if not quite, cover their personal effects. Expenses arising from minor crimes and civil suits, such as board of prisoners, pay of jury and witnesses, sheriff's fees, etc., all have to be paid by white settlers' tax, and unless some provision is made to create revenue, there are several districts of country so well taken up by allotments that it will be impossible to establish and maintain town governments for want of revenue to pay the expense.

When these privileges and exemptions are well considered, and you stand at the pay table and see some of the same Indians receive and walk away with \$2,000 cash payment of back annuities, and holding allotments of himself and family to the amount of at least 800 acres of land, you must be forcibly reminded of Lo! the poor Indian, who is so abused.

**The agent's bed of roses.**—If two Indians fight and cut each other with knives, the agent is called on. He arrests the parties with his police; then he has to call witnesses and interpreter, and move all hands to Wilmot, 17 miles distant, for trial; when there all must be fed and taken care of. The sheriff informs the agent that the expenses must be advanced, for hotels and livery stables will not charge up any such expenses to the county as board of Indian prisoners and witnesses. Now, the agent must advance the expenses or the case falls. Often, after 17 miles' ride over the prairie on a cold day, the agent finds the county attorney away, and an adjournment must be taken; and after several cold rides and several dollars advanced, the agent gets his two criminals bound over to the district court, and they, not being able to give bonds, remain prisoners at the expense of the county. The county officials, realizing that Indians pay no taxes, do not relish the idea of sure and safe imprisonment of Indians at the expense of the county, and the criminals escape. Thus the efforts to maintain law and order have been of no use, and such must be the case until the property of Indians is made to pay tax the same as that of the white settlers.

**Conclusion.**—I retire from the Indian service knowing much more than I did, and

shall always hereafter have much charity for the man who has United States Indian agent affixed to his name; and my experience and information leads me to the conclusion that the Indian agents of the several agencies, with low salaries, carry nearly all the hazards of the Indian service, and are made targets for everything human to shoot at from an Indian to the honorable President of the United States. An Indian agent gains or obtains his position by effort, but the further affixes of thief and boodler comes as a consequence, and all alike are so reputed.

Respectfully,

WILLIAM MCKUSICK,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF SISSETON SCHOOL.

SISSETON AGENCY, S. DAK.,  
July 6, 1891.

DEAR SIR: I have the honor to present my first annual report of the Sisseton Indian industrial boarding school. I took charge August 21, 1890, and hence have had over ten months' service. The school commenced September 8 with 27 pupils.

	Enrollment.	Attendance.
October 1 .....	81	74
November 1 .....	103	86
December 1 .....	118	93
January 1 .....	115	88
February 1 .....	119	87
March 1 .....	127	98
April 1 .....	116	97
May 1 .....	117	49
June 1 .....	127	82
June 30 .....	132	76
Average daily attendance .....		88
Largest attendance January 7-12 .....		112

It will be noticed that the enrollment is reduced at the beginning of each quarter. I did not carry the names of those who were not present and not likely to be during the quarter.

During the year there were three special causes which worked against a good attendance:

1. Early in April a court was held by Special Agent Reynolds to decide the status of a prominent Indian who claimed to belong to the Sisseton tribe. The parents and friends of the pupils were gathered about the agency and school for several days, to the great discontent of pupils, many of whom went home with their friends, some by permission and many without.

2. In May, work incident to enrollment under Disbursing Agent Elrod caused a repetition of the same scenes.

3. During the early days of June sore eyes attacked the boys, reducing their number from 49 to 20; the number present on the last day. These things have acted almost disastrously upon those who were most subject to them. Even those who remained in the school were constantly kept in a state of commotion very unsuitable for good school work.

Yet, after the school was thoroughly graded and the pupils held to business, many made commendable progress. This is noticed, not so much in advancing from lower to higher grades, as in thorough acquaintance with the lower branches.

The industrial work of the boys has been considerably retarded by frequent changes of employes. Barring the irresistible inclination on the part of some to beat the pigs, they have shown commendable proficiency in the care of stock. Their work in the fields, shops, wood shed, laundry, and in the care of their rooms has been very satisfactory.

The matron speaks in unmeasured terms of praise of the spirit and letter of the work done by the girls and their lives generally. The work in the sewing room has been greatly increased on account of the introduction of night clothing among both girls and boys, and also the fact that the estimate for boys' clothing was insufficient, making it necessary to cut and make boys' clothing. Many of the larger girls have been taught to do this kind of work. They have made gratifying progress in the care of their rooms, being permitted, after about the middle of the year, to have access to their rooms at all times of day. They have been placed at the heads of tables during meals, and have developed a good degree of ease and grace in serving dishes.

The discipline has noticeably improved. The esprit de corps is better. There is more respect for superiors and a greater sense of honor and individual responsibility. While we have insisted upon strict obedience, we have encouraged the greatest personal liberty consistent with good order. Early in the year 4 were expelled, 2 young men for entering the girls' rooms at night and the 2 young ladies who received them. This was quite a shock to the school and all concerned, and with subsequent watchfulness and precept has done much to abolish this practice, which has been a source of much evil in the past.

With many thanks to you and your office for your universal kindness during the year, I remain, your obedient servant,

J. H. METEER.

WILLIAM MCKUSICK,  
*United States Indian Agent.*

## REPORT OF YANKTON AGENCY.

YANKTON AGENCY, S. DAK.,  
August 20, 1890.

SIR: In compliance with your instructions the thirty-second annual report of this agency is respectfully submitted.

**The Dakota Indians.**—The Dakotas, or allied nations, usually called the Sioux tribes, when they were first discovered by the whites were divided into three principal tribes, known as the I-san-ya-tis or Santees, the I-hank-ton-wans or Yanktons, and the Ti-ton-wans or Tetons, each of these names signifying the place where the most prominent village was located. These three divisions still continue to exist as distinctly as ever, and all the various bands or tribes of the Dakota or Sioux Indians are subdivisions of one or the other of them. The same language is spoken by all of them, yet there is a patois or vernacular, easily detected, peculiar to each tribe, indicating that, although originating from the same primitive stock, yet they have been separated into these tribes for many years.

There was an uninterrupted commerce or communication between the members of these tribes, a constant friendship, and a powerful alliance, which bound them together as allies in war and friends in peace. Notwithstanding this close relation and friendship, marriage between them or permanent removals from one tribe to another was a rare although an occasional occurrence.

The Dakotas inhabited the country between the Mississippi River on the east nearly to the foothills of the Rocky Mountains on the west, and from the Assiniboine on the north to the Council Bluffs on the south; the Santees occupying the eastern, the Yanktons the center, and the Tetons the western part of this great region. The Santees were the first of the Dakotas to come into contact with the white race, and having also had the advantages of living in a country where the methods of supporting life were not so restricted as that on the great buffalo ranges farther west, they were better prepared than the other tribes to accept the advantages of civilization.

**The Yanktons.**—This tribe occupied and claimed as their territory, to the exclusion of all other tribes, the country lying west of the Red River of the North, the head waters of the Minnesota, and the waters of the Big Sioux or Calumet River, including also the Red Pipestone quarries, and extending westward to the Missouri River, reaching northward as far as Winnipeg—the Assiniboines are rated as a branch of the Yankton tribe—and southward into Iowa and Nebraska. The earliest white explorers were the French Canadians, who came by the Great Lakes through the Chippewa country and met the Dakotas, whom they named the Sioux, on the Upper Mississippi. These early explorers noted the distinction between the Santees and Yanktons and reported the latter as inhabiting the Upper Minnesota River country.

These Indians were never permanently settled in any one place, but were constantly on the move, always hunting for buffalo, whose meat was their only food and whose skin was their only shelter. One old Indian, in telling me of their wanderings, said they were "like a pack of wolves," always on the hunt.

**His first white man.**—Another intelligent Indian tells me that the first white man he ever saw came into the country where his band was camped, western Iowa, with a handcart, about fifty years ago. The Indians stopped him and were about to kill him. When he showed them some corn and other seeds, they allowed him to build a house and plant seeds. They watched his little field, and later in the season the man gave them a feast of watermelon, the first they had ever tasted. He says what astonished the Indians more than anything else was to see that man open a book and read, and sometimes while reading he would burst into a hearty laugh. They pronounced him crazy, and were too superstitious to kill him, so he was let alone.

**Subdivision.**—The Yanktons were originally divided into six bands, each designated by the name of its chief or headman. In a general way they were known as the three upper and the three lower bands. The upper bands occupied the northern part of the territory and the lower bands the south. After trading posts were established at Prairie du Chien and St. Paul the whole tribe would sometimes go en masse to trade or exchange their peltries, pipes, etc., for goods sold by white traders. It was estimated at that time that there were 250 lodges, or about 2,500 Yanktons, all told.

Soon after this trading posts were established all along the Missouri River at points convenient to each of the bands, and consequently there was less assembling together. The whole tribe came together at the time of the ratifying of the treaty—1858—and two new bands were then formed, so that the tribe is now made up of eight bands.

**The Reservation.**—After some years of earnest effort on the part of the Interior Department to induce the Yanktons to cede a portion of their territory, finally, in the fall of 1857, Capt. J. B. S. Todd, trader at Fort Randall, at the request of the Secretary of the

Interior, with the assistance of Charles T. Picotte, a Yankton half-breed, the present interpreter at this agency, persuaded the Yanktons to send a delegation to Washington to confer with the Government. Capt. Todd, Mr. Picotte, Theophilus Brughière, with Padaniapapi and several other Yankton chiefs and headmen, arrived at Washington in the early part of the winter 1857-58, and on the 19th of April, 1858, a treaty was negotiated, by which the Yanktons ceded all their lands except their present reservation and the Pipestone Reservation in Minnesota.

The reservation as finally surveyed consisted of 672½ square miles of land. It is situated on the east bank of the Missouri River, having a river frontage of over 30 miles, and extending into the interior for a little less than 20 miles. It is on the extreme southern border of South Dakota, about on the same latitude as Milwaukee, Wis., or Buffalo, N. Y. In addition to the Missouri the reserve is watered by several never-failing creeks and lakes of fresh water. The surface is smooth and level except along the river. The soil is a rich clayey loam, capable of producing, when sufficiently supplied with moisture, the most luxuriant growth of grain and grasses, as well as root crops, that can be found in the world.

There are many varieties of wild fruit to be found in the various ravines and hillsides along the river and creeks. It is believed that all kinds of fruit can be grown in these protected valleys as surely as along the shores of Lake Michigan.

Along the river bluffs and underlying the country back to an unknown distance there is an immense deposit of remarkable substances called chalk rock and alumina. These substances, when properly mixed, ground, and roasted, form the Portland cement of commerce. Plants for the manufacture of this cement have been established at the city of Yankton, some 60 miles below here, within a recent period, and experiments have proved that the cement made is superior to any of the imported Portland cement. There are excellent opportunities to open similar works here.

**The Agency.**—Immediately after the ratification of the treaty A. H. Redfield, of Michigan, was appointed agent for the Yanktons, and he arrived with a steamboat load of stores early in the fall of 1859. The Indians met the boat near the mouth of the Big Sioux River, and followed along the shore of the river until all arrived at this place. Here the cargo was discharged, many cattle were slaughtered, a big feast was kept up for many days, and an extensive distribution of all sorts of articles was made. Everybody was satisfied, and the Indians became the sworn friends of the whites and the Government.

The agency is located on a beautiful plat of ground on second bench above the river. Both above and below here there is a wide river bottom, which at that time was covered with an excellent growth of large cottonwood trees. A sawmill was established and a large farm was broken up and fenced by the Government; considerable money was paid out in erecting buildings, purchasing tools, teams, and improving the land for the Indians to make homes upon.

The Indians, attracted by the novelties and by the prospects of high living, such as the chiefs had been treated to at Washington the previous winter, seemed to have entered heartily into the spirit of civilization, which was to give them a perpetual picnic and a constant merry-go-round.

The Indians also did some work, for they broke prairie sod, opened up farms, and built houses from logs and lumber cut at the mill. From all accounts we may conclude that the Yanktons made great progress in the two or three years that followed the establishment of the agency, but when the season of no rain came, and the hot winds burned up their crops they also wilted; and, with the convenient charge that the Great Spirit was offended at them for cultivating the soil, they soon retrograded back to their life of indolence. Their work oxen and cows were soon in the soup, farm tools and wagons were soon thrown aside to rot, their clothing was cast off, and the whole nation went off on a buffalo hunt. They were gone several months, and on their return in the fall of 1862 found the Santees, their old-time allies, had opened up a horrid frontier war against the whites, and that emissaries from the hostile bands were waiting to counsel with them to engage the Yanktons also in hostilities against the Government.

These were perilous times on the Northwestern frontier. Prompt and decisive action was required to restrain the hot-blooded warriors from plunging the tribe into a bloody war. Padaniapapi, or Old Strike-the-Ree, as he is usually called, was a man of wonderful eloquence and great persuasive abilities. He, supported by his band, opposed war; the upper bands were, however, strongly pressed by the war party and favored a conflict. Dr. Burleigh, the agent, sustained Old Strike, and cunningly enrolled quite a number of the Yanktons as scouts, and when Gen. Sully arrived there was a company of 50 ready to join in the fight against the Santees. This tribe then openly declared their allegiance to the Government, and so the scouts under Agent Burleigh guarded and protected the frontier settlements of Minnesota and other borders against assault. They killed quite a number of Santees, destroyed villages, and recaptured stolen property. The Yanktons have been loyal to

the Government ever since, and it is their boast now that the blood of a white man has never stained their hands.

**The Yankton scouts.**—When the scouts were enlisted they were promised that they should receive \$300 each, to be paid when discharged. They remained in the service nine months, furnished their own equipments, horses, provisions, etc., yet were turned adrift without pay when they were disbanded. They were not regularly enlisted, no muster roll was ever made of them, and they have no discharges, yet they performed faithful and valuable service and ought to have been paid in full. The matter was before the country for some years in reports from this office, and in 1887 there was paid to each of them \$75. This amount, however, has never been satisfactory; they continue to ask for the remaining \$225, which they claim to be still due. The Government ought to have paid this just debt many years ago.

**Progress.**—The advancement from a savage, indolent life, to a condition of civilization, where a man is expected to support himself in a decent manner, is necessarily slow and difficult. \* \* \* Yet now nearly all of them are clad decently, have comfortable homes, observe the family relation, respect virtue, and submit to law. Many of them have good homes with pleasant surroundings, fields of grain, pastures with horses and cattle, barns, wells of water, and other conveniences. When we notice these changed conditions we can perceive there is a silent, steady, but sure revolution going on which must ultimately carry the Indians to a higher plane.

**Farming industry.**—A succession of failures in crop-raising from the same cause for a series of years can not be otherwise than discouraging to the farmer. Thirty years or more of crop-raising on this reserve has proven this country is quite frequently subject to excessively long and severe droughts. The soil is extremely rich and very productive, but without sufficient moisture during the hot months there is always danger of loss.

The experience of 1890, like that of many previous years, was disheartening. The Indians had in crop, on about 420 separate farms, some 2,250 acres of wheat, 1,500 acres of corn, and 400 acres of other crops. The yield of the wheat was not over 6 bushels per acre. Corn and root crops were a failure. This was partly owing to bad cultivation, but mainly to the dry, hot weather. Their wheat had to be sold to pay debts due merchants in adjoining towns who trusted the Indians with provisions, etc.

The season of 1891 has been much more favorable; timely and abundant rains have fallen. The consequence is a good yield of all grain and root crops, and the hearts of the people are made glad. Next year they will add considerable to their acreage.

Last year there was famine in the land. The Government issue of subsistence amounts to about 25 per cent of a ration, which is distributed among them all. This, with the meager earnings of the Indians in freighting, etc., was about the only means they had to prevent famishing. Much suffering ensued; starvation was prevented only by sales of clothing and household conveniences and by charitable contributions. The Government also increased to a limited extent the issue of subsistence, which had to be dispensed with great prudence.

The prospect for next winter is much brighter. The Indians are not so deeply in debt. All crops are good and good prices will be paid for their wheat. Some families will have over 400 bushels of wheat to sell, besides bread for themselves, which will command from 60 cents to \$1 per bushel.

The following is an estimate for this year's crop:

	Acreage.	Amount raised.	Value.
		<i>Bushels.</i>	
Wheat .....	2,300	40,000	\$30,000
Oats .....	500	20,000	5,000
Corn .....	1,400	35,000	14,000
Potatoes .....	100	5,000	1,250
Garden crops .....	100		5,500

There is a certain and practicable remedy against poor crops in this country; it is artificial irrigation. Through the means of artesian wells any amount of water can be obtained to moisten the land and make it the most productive country in the world. And if this could be brought about I can see no reason why these Indians would not become thrifty and self-sustaining.

The farm machinery purchased by the Government for the use of the Indians proved to be of no account this year. The Junior reapers were too light for the heavy crop, and the Peerless mowers are a failure in our grass. Individual Indians this year purchased 10 or 11 self-binders, several mowers and rakes, and other tools.

Mr. Hough, the agency farmer, has worked hard and faithfully to systematize the farming industry. His report is annexed hereto.

**Other industries.**—Farming is the only industry that is followed on this reserve for profit, but there are maintained at the agency carpenter, blacksmith, tin, shoe, and harness and wagon repair shops. With the exception of superintendent of shops, the employes are Indians. The shops are maintained by the Government. All raw materials used is purchased and all employes' wages are paid by the Government. The work is done for the Indians without charge. A large part of the work is repairing wagons and farm implements, making hay racks, cupboards, window and door frames, tables, and coffins; also repairing harness, boots and shoes, tinware, and all household articles. Most of the farm machinery that the Indians purchase is second-hand, which adds largely to the work at shops.

There were dug on the reserve the past season some 80 wells of water. All of them were walled substantially with stone.

The Indians belonging to this tribe are as follows:

Families .....	547
Males:	
21 years and over .....	436
17 to 20 years, inclusive .....	49
6 to 16 years, inclusive .....	179
5 years and under .....	137
Females:	
21 years and over .....	496
17 to 20 years, inclusive .....	58
6 to 16 years, inclusive .....	106
5 years and under .....	155
Total number of inhabitants .....	1,716
Of these there are:	
Mixed-bloods .....	432
Full-bloods .....	1,284

The population for a series of years is as follows:

1859 (estimate) .....	2,600	1876 (count) .....	1,992
1865 (count) .....	1,530	1881 (count) .....	1,998
1871 (count) .....	1,947	1886 (count) .....	1,776

Of the total population there are:

Absentees attending nonreservation schools .....	98
Present on the reserve .....	1,618

The rapid decrease in population at certain times is attributable more to removals than other causes, although there is evidently a gradual decrease in population. The vastly greater amount of subsistence and other property issued by the Government at the Teton agencies operates as a strong inducement for the indolent ones to "go west."

**Buildings.**—Since the last report the houses then under construction for dwellings for agent and employes have been completed and are now occupied. These houses, although small and inexpensive, are convenient, attractive, and substantial.

I have not yet succeeded in obtaining authority to build shops or to repair them; the horrible condition of these things has been too often alluded to to necessitate a description here.

Some of the Indian employes also should have new and decent houses built for them. The warehouses and farmer's dwelling authorized at White Swan are partially built, but not yet ready for occupancy. A small appropriation has been asked for to complete the work, the material being on hand.

**Missionaries.**—The American people can not be too often reminded of the good work performed by the zealous missionaries on our western borders; how patiently they have toiled among the savages, who have no appreciation of earnest zeal or benevolence; how they have deprived themselves of homes, friends, and conveniences of life to instruct a class of heathen whose only expression of gratitude is to beg another favor and to growl if it is not forthcoming.

It is by their long suffering, their faithful and earnest work, their patience and forbearance that has raised these people from their vagabondage to their present improved condition more than any other cause. Rev. J. P. Williamson, of the Presbyterian Church, has been at this agency for more than twenty years thus engaged; and Rev. J. W. Cook, of the Episcopal Church, has been here nearly the same length of time. These gentlemen are still here. I call attention to their reports hereto annexed.

**Morals.**—The Indians generally respect the law, obey the decisions of the court, seldom quarrel with each other, and the committal of a theft is an extremely rare occurrence on this reserve. The use of liquor is unusual also. I will mention an incident that occurred last summer in illustration:

A policeman drove me over to an adjacent town. While there a dissolute white man induced the Indian to go to a retired place, where he was offered a bottle to drink from. The Indian asked what it was. The answer was whispered, "Whisky." The Indian's reply was, "Go to — with your — whisky, I don't want it." The white man sneaked off.

**Schools and schoolhouses.**—The missionary societies of the Presbyterian and Episcopal churches established schools on this reserve thirty years ago, and have kept them up ever since. These missionary schools have been sustained by philanthropic people without material expense to the Government.

The Episcopal Church maintains a boarding school for about about fifty boys, which is a modal institution for the young. The larger portion of the inmates are mixed-blood, or children of white fathers. Mrs. Johnston, the superintendent, is a woman exceedingly qualified to conduct such an institution; her report is attached hereto.

The Government boarding school now has a capacity for 75 boys and 50 girls. The sexes occupy different houses, and are kept entirely separate. Prof. Matson, aided by able and experienced teachers and other employes, brought this school to a high plane of excellence. This school now ranks among the best of institutions of its class. The interesting report of the superintendent is in detail and is made a part of this report.

The farm of 65 acres connected with the school has been very productive this year, sufficient garden truck having been produced to supply the school. Over 1,000 trees were planted; also considerable small fruit, all of which have grown finely.

The Presbyterian mission school is a day school in charge of Miss Abbie L. Miller. It has an average attendance of about 12 pupils. This is a valuable auxiliary to the great work of Christianizing and educating the Indians.

**Pipestone Reserve.**—The Red Pipestone Reservation in Minnesota, embracing the celebrated Red Pipestone quarry, the spot which the Yanktons regard as the center of creation, and which gave them a supremacy over other aboriginal nations, was reserved by the Yanktons in the treaty of 1858, and was subsequently confirmed to them by act of Congress, also Executive Department, in causing a survey thereof and designating it upon the plats of public surveys as Yankton Indian reserve. Questions involving the title to this property have frequently been before the Government, and the uniform decision has been that it is the absolute property of this tribe.

It need create no surprise, then, to know that the Indians were greatly astonished and alarmed when they learned that Congress had directed that an Indian school should be erected there without consulting them. They do not object so much to the school, although it is of no benefit to them, as they are already provided with schools; but they regard this action as an attempt to invalidate if not extinguish their title to this property peremptorily and without compensation, and say that if one of them should be guilty of such an act he would be punished as a thief.

**Ghost-dancing.**—The dance excitement that broke out at the western agencies during the winter was communicated in some degree to the Indians here. The Yanktons did not dance in the ghost dance, but they manifested no little interest in the final outcome of the turbulence and disorder that prevailed among the Tetons.

Soon after the military occupied Pine Ridge and Rosebud, a sly old Teton came over from Rosebud and commenced to preach the "New Messiah" doctrine to these people. He assured them that he had shaken hands with the new Savior; that he had accepted of him, and had eaten of the ghostly buffalo meat; that he had danced within the circle of the blessed, and he had had visions of the happy times to come when the white race was exterminated and the Dakotas again restored to their former supremacy. He was chanting the angelic song of a resurrected cherub when the brawny hand of a live policeman was laid on his shoulder and he was compelled to yield up his hopes of a life-long buffalo hunt for the dreary reality of sawing wood under guard. He afterwards returned home "a sadder if not a wiser man." The Yanktons did not really regard last winter's struggle as a matter in which they had any special interest.

**Sanitary.**—There has been no epidemic or unusually serious illness among the Indians during the past year. Consumption and scrofula continue to be the active cause of the greater part of the deaths. The most serious cases are the young pupils from nonreservation schools. Several of these came home sick this season and died very soon afterwards.

Among others this season the death of a woman at the advanced age of 106 years occurred.

The Yanktons have been specially fortunate this year in having with them an efficient and skillful physician in the person of Dr. W. L. Brown, through whose efforts sickness and death have been much reduced. Dr. Brown has kept an unusually accurate record of births and deaths on this reserve. Attention is called to his report herewith, which contains information of much interest.

**The police.**—The police force at this agency is one officer and seven privates, which was increased temporarily last winter during the troublesome period by ten addi-

tional men. Besides the ordinary duties of patrolling the reservation, making arrests, etc., the force is used to keep the public buildings and grounds in order. The police are required to cultivate their own allotments, and therefore only one-half of them are on active duty in the busy farming season.

**The Indian court.**—This branch of the service is quite an important one. The influence exerted by the judges of the court is remarkable. Every one who is tried and sentenced seems to give cheerful obedience to the decisions. The decisions are always just and equitable. Some trials were had last winter where young educated Indians were engaged as advocates before the court. On these occasions there was a conspicuous display of eloquence.

**Lands in severalty.**—Allotments in severalty were completed under the act of 1887, on this reserve over a year ago. Special Agent Hatchett is now equalizing allotments under the act of last winter. When he gets through this time all the Yanktons will have lands in severalty; one-half of the reservation will be allotted.

The following is a statement of cash disbursements at Yankton Agency, S. Dak., during the fiscal year ending June 30, 1892:

Agent's salary.....	\$1,600.00
Regular employes.....	\$21,555.68
Irregular employes.....	3,051.19
	24,606.87
Open-market purchases.....	13,429.80
Transportation Indian supplies.....	760.28
Digging wells on Indian allotments.....	1,500.00
Per capita to Yankton Sioux for railroad right of way.....	1,657.26
Traveling and miscellaneous expenses.....	308.89
	43,863.10

Paid of the above to Indians as follows:

Regular Indian employes.....	9,960.37
Irregular Indian employes.....	701.08
	10,661.45
Total.....	10,661.45
Open-market purchases—hay, wood, corn, oats, fence posts, stone, sand, chalk, rock, and trees.....	2,619.13
Transportation, Indian supplies.....	760.28
Digging wells.....	1,500.00
Yankton Sioux Indians, per capita.....	1,657.26
	17,198.12

I wish to extend my thanks to the Department for uniform courtesy and prompt consideration of business matters, and to the employes of the agency I wish to acknowledge my great obligations for faithful performance of duties.

I have the honor to be, very respectfully,

E. W. FOSTER,  
*United States Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF YANKTON SCHOOL.

YANKTON AGENCY, S. DAK., *September 15, 1891.*

SIR: I have the honor to submit herewith the annual report of the Government boarding school at this agency for the year ending June 30, 1891:

**History.**—While previous mention had been made of the need of an institution of learning having better educational facilities than the ordinary day school, the written history of this school begins with February 8, 1882, at which time the building was first opened to receive pupils.

Tradition says the heathen Indians interposed great opposition to the construction of the building, going so far in their resistance as to several times drive the workmen from the grounds; but through the strenuous efforts of some of the more enlightened and friendly Indians the help was rallied as often as dispersed, until finally the higher forces prevailed and the building was completed. \* \* \*

From a total attendance of 63 pupils and an average attendance of 47 during the first year, there has been a gradual advance through the years succeeding, until the total attendance of last year reached 146, with an average attendance of 113.

The amount of land cultivated by the school has increased from 40 acres at the beginning to 72 acres at present; school grounds, from 10 acres originally to 20 acres now; school buildings, from 1 to 6, including industrial teacher's residence and the barns; horses, from 2 to 5; cattle, from 1 to 19; hogs, 32. There was a time when the number of cattle and hogs on the school farm exceeded considerably the present number; also when domestic fowls were kept.

As nearly as I can learn the labor bestowed upon the farm has not been remunerative in the quantity of grain and vegetables produced. Of course the boys have had the benefit of the industrial training

in seeding and cultivating the land, but even that would have been more profitable if the results of their efforts had been more encouraging. The want of more ample returns from the soil may be attributed to the wash of the river, which has cut away some 40 acres of the best land in the original allotment, and unfavorable weather conditions. When the crops have been good a lack of help when help was needed most, in harvest, has been a grievance from the beginning. With the harvest plenteous, as it was this season, and the boys all at their homes, there must be loss before it can be saved.

Nothing in all the past history of the school has been more an occasion of solicitude than the insecurity of the building and the consequent danger to its occupants. Before this noble contribution by the Government to the cause of Indian education had been in use six years its dilapidated and unsafe condition became a matter of grave concern to its occupants. Complaint was made to the Department, renewed and emphasized year after year, resulting in repeated failure to procure needed repairs and improvements until the beginning of the fiscal year just closed, when the long-desired authority came and the building took on a new lease of life. It is matter of surprise to-day that, under the storm pressure to which it had been exposed, the entire structure did not go down, carrying the lives of the affrighted and shuddering inmates along with it. That the frequent and amusing allusions to the building as a rendezvous for rats and rattlesnakes are not without warrant, was evinced last year by the numerous runways, nests, and dens brought to light and the killing of reptiles in the basement as the work of repairing advanced. The same is true of the almost incredible stories one hears of the insufferable stench which pervaded the building at times in the past. In removing the basement floors and partitions the sewerage was found to be incomplete. The building could hardly have been otherwise than foul.

**Present plant.**—The school is pleasantly situated on the east side of the Missouri River, at the foot of a range of hills which overlook the country for many miles in either direction. The present plant consists of 172.40 acres of land, two substantial and imposing school buildings, built of wood on stone foundations, and four minor buildings.

The land as described by Special Allotment Agent J. G. Hatchitt is the NE.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  and the NW.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$ ; 30 acres of the NE.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$ , and 20 acres of the SE.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$ ; 31.50 acres of the SW.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$ ; 10 acres in lot 2, and 90 acres in lot 3; total, 172.40 acres, T. 94, R. 64, S. 35. Of this land about 110 acres are inclosed with wire fence and divided into school campus, 20 acres; grain fields, 87 acres; orchard and garden, 5 acres; pasture, 13 acres; stock yards and hog lot, 5 acres;

The old school building, occupied by the boys, is 48 by 48 feet, 2 stories high, with frontage projecting 36 by 27 feet, full height; basement and mansard roof. In the basement are located the dining-room, kitchen, bathroom, furnace, refrigerator, and general storeroom. On the first floor are the entrance hall, reception room, three living rooms, one school and two recitation rooms. On the second floor are hall, four living rooms, and two dormitories. On the third floor are hall, two storerooms, and two dormitories.

The new school building, girls' department, is 64 by 39 feet, two stories high, with frontage projecting 40 by 30 feet, full height. On the first floor are the reception room, two living rooms, one school and one recitation room, dining room, kitchen and bathroom. On the second floor are three living rooms, sewing room, storeroom, and five dormitories. On each floor is a hall extending the full length of the building. Under a portion of this building is a cellar used, principally for housing fuel and storing heavy wares.

Among the smaller buildings are the industrial teacher's residence, 18 by 24 feet, one and a half stories high; laundry, 20 by 20 feet, one story high; horsebarn, 18 by 24 feet, with lean-to 12 by 24 feet; cow barn, 18 by 36 feet; hog house, 18 by 30 feet; root house, 11 by 30 feet; shed connecting cow barn with hog house, 12 by 42 feet.

**Improvements.**—During vacation the old school building underwent a renovation and course of repairs as thorough as the means at command would warrant. The cracked and crumbling soft-brick wall, which for several years had been cause for alarm, was entirely removed, and in its place was built a solid stone wall, 2 feet thick throughout. Every part of the building under strain was stayed with beams and posts, buttressed with rock. The floors were raised to their proper level, from which they had sunk for want of adequate support under the partitions. The sewer pipes were readjusted, stench and grease traps suitably placed, the entire basement floor concreted, new floors laid in kitchen, dining room, schoolroom, recitation rooms, and halls; concrete steps were made for the basement doorways, over which stormhouses were built; concrete slabs were placed at the bottom of the ground windows on the inside; close drawers, chests, and cupboards were placed in the pantry in lieu of open boxes and musty flour-barrels; plastering repaired; wainscoting, whitewashing, and painting done. Thus was the building improved in appearance, rendered free from offensive odors, and made more convenient. The mischievous rat, finding his subsistence out off, took his departure. No fears were entertained for the safety of the children in the event of storms.

In the new school building the storeroom, dining room, kitchen, and pantry were provided with clothespresses, wardrobes, shelves, cupboards, drawers, chests, tables, sinks, etc., as their several needs required. A new Spence heater, with bath tubs and hot-water fixtures complete, was placed in the bathroom. Incandescent globe lamps were procured for lighting the building, and a good quality of shades were hung at the windows. Two cisterns, from which the kitchen and bathroom are supplied with water, were built.

In connection with the farm there were made about 200 rods of wire fence and five good farm gates, by which improvements the yards were so arranged that the cattle were at hand morning and evening, and the hogs not only subsisted upon succulent food during the spring and early summer, but had free access to the river.

**Classification of pupils and class work.**—The school buildings not being in readiness to receive pupils September 1, the opening was postponed until the 1st of October. To novices in the Indian educational work the hindrances in the way of organizing were not trivial. For the first five days only five pupils were enrolled, and the enrollment, continuing through all the intervening months, was not completed until the 25th of March. The parents of these children have no appreciation of the worth of time. The thought of being late never worries them. It is hard to get them to perceive how a child can be advantaged by being in school early. If for any reason it best suits their convenience to have their children in when school opens they will bring them, but if they are in the least inconvenienced by an early attendance it requires a stimulus, usually in the form of police compulsion, to fill up the school. Some of the excuses made are plausible, such as needing the help of the larger boys until after haying, but in many instances they are specious pretenses.

Another obstacle in the way of organizing was present in the dearth of information obtainable as to the previous standing of the individual pupil and the grade of study established for the year preceding. Nothing whatever that would serve as a guide in classifying pupils could be found. The only thing that could be done was to ply the pupil, with a view to "drawing out" the intelligence desired. The undertaking was not a brilliant success. A stranger can not easily discover what an Indian child may know. Naturally shy and sensitive, the confidence must be won before the attainments can be ascertained. Besides, some of the older pupils were found to be crafty. Apt to see and quick to take

advantage of whatever may have been wanting in the teacher by way of experience and knowledge of the Indian character, they would elude by deception with a facility truly startling to one interested in their welfare. Their aversion to anything that requires effort being stronger than their ambition to excel in learning led some to prefer to remain in a lower class than to "go up higher" if the advance involved harder work. Owing to these two things—slowness of the pupils in coming in and the fact that a knowledge of the individual must be acquired before he can be classed to advantage, some time elapsed before the classes were so arranged as to meet the demands of the school.

Notwithstanding these embarrassments, the teachers took up their work with an aggressive enthusiasm born of a belief in the possibilities of the Indian child and a will to surmount difficulties and reach permanent results in the mental training of the boys and girls who were here to be shown "the way wherein they must walk and the work they must do."

As nearly as could be, the school was graded in conformity with Department directions. The pupils ranging in age from 6 to 24 years, there was such diversity of acquirements that when the classes were well defined the course of study extended from the first year in the primary to the third year in the advanced grade of the outline furnished by the Department.

The class work was commendable in a high degree. Good opinions were won from all who "looked in upon us," officially or otherwise. The reading and responses in recitation were prompt and distinct, and the progress made in study reasonably good. Like most Indian children, these excel in penmanship, drawing, and spelling. In map and free-hand drawing their skill and accuracy were pronounced superior by competent judges from other schools.

Many of the children have excellent voices and are apt students in music.

Strict attention was given to the health, manners, and morals of the pupils. After chapel exercises in the evening short talks were given on healthfulness, cleanliness, obedience, behavior, truthfulness, temperance, physiology, and anatomy. The girls had thorough, painstaking drill in calisthenics and the boys in military tactics.

The closing exercises consisted of songs, recitations, declamations, dialogues, doll-drill, free-hand gymnastics, dumb-bell exercises, essay, etc. A large number of pupils from both departments participated and acquitted themselves grandly, eliciting many flattering encomiums from the large audience present. Agent Foster made an enthusiastic and stirring address at the close, which was followed by very encouraging talks to the children by some of the parents, of whom there was a large representation.

**Industrial training.**—Recognizing that the best education for the Indian child is that which accords with his needs, the aim was to train the mind to think and the hand to act simultaneously. Mental and moral instruction went hand in hand, accompanying as nearly as could be an equal division of time. The industrial feature of the school is largely domestic. During a portion of the year 7 boys worked in the agency shops at blacksmithing, tinsmithing, shoe and harness making, and carpentry. With this exception the outside training of the boys was mainly under the direction of the industrial teacher, and consisted in cultivating the school farm, garden, and orchard, caring for the stock, repairing the school buildings and fences, keeping a supply of water on hand, sawing and splitting wood for fuel, and keeping the school grounds in order.

The farm was well worked and will show good results. The field corn, 10 acres, is of fine quality, and 60 bushels to the acre is not an improbable yield. The hog pasture, 5 acres, was sown to barley, which subsisted 35 hogs up to harvest, when that which matured was put into stack and will yield 100 bushels of grain. The 10 acres of oats, now in stack, at a fair estimate, will turn out 600 bushels. The 10 acres of drilled corn made a rapid growth, and when harvested will make a superior quality of feed. From the 27 acres sown to millet about 70 tons of hay will be taken. The potatoes were planted on the sod, 4 acres of new ground having been broken for that purpose. The quality is good, but the quantity will not meet expectations. There will not be to exceed 150 bushels. Of beets, cabbages, onions, turnips, and other garden truck a fair amount will be put into the cellar, notwithstanding the school began drawing on the supplies as soon as they were fit for table use.

Last spring an orchard was started. Upward of 700 fruit trees and some 3,475 small fruit slips were put out, most of which, except the strawberries, promise well at this writing. Arbor Day was appropriately observed, when about 100 shade trees and ornamental shrubs were planted about the buildings and along the walks. From the planting and care of these trees the boys received suggestions that will be of value to them in the future.

In the sewing room the following articles were fabricated: Aprons, 214; blouses and pants, 17; bonnets, 47; cloaks, 6; drawers, 90; drawers combinations, 101; dresses, 170; nightdresses, 22; pillowcases, 51; sheets, 118; skirts, 127; tablecloths, 36; towels, 111; whole number of pieces, 1,142. Under the supervision of the seamstress and her assistants the work in this department was done by the girls of the school regularly detailed for that purpose. Here they were taught to mend and darn, cut and fit dresses, and make their own clothes. On the whole, their work was good, while some of them were capable of doing fine needlework.

A force of girls and boys equal in numbers and divided into two sections, forenoon and afternoon, was assigned by detail to work in the laundry. A competent woman was in charge, and the work, though enormous, was very creditably done.

The cooking for the two departments of the school was done separately. Two good women were in charge of the two kitchens, one in each building, who, with their assistants and details from the school, prepared well-cooked food for the tables and kept their kitchens and dining rooms in good order. No musty, sour, or otherwise unwholesome bread was placed before the children. The diet consisted of wheat bread, beefsteak, boiled beef, baked beans, bacon, biscuit, cornstarch pudding, cookies, coffee, gingerbread, gravy, hash, hominy, meat pie, milk, onions, potatoes, roast beef, rice, soup, sauce, sirup, and tea. These articles of food were so arranged with respect to meals as to give as much variety to the bill of fare as possible.

Under the eye of the matrons and cooks the dormitory and dining room work was done by the pupils, the boys and girls being separated, each doing their own work. The boys did not at first take kindly to the idea of scrubbing the floors and washing the dishes. Not being strongly impressed with the dignity of labor, work of this sort had too much the appearance of "educating them out of their sphere." But there was no other alternative, no other way of getting on with the work. Yielding to the inevitable, they were helped by the experience to more correct notions of civilized life, and found it easier to submit to the general government of the school.

**Sickness and mortality.**—Considering the diseased condition of these children, we were fortunate in that our sick list and death rate were not larger. Scrofula and consumption are a prominent part of their inheritance. Sore eyes appeared early in the year, and continued at intervals throughout the term in mild form mostly, though some cases were aggravated. Signs of scrofula and consumption developed later, the glands beginning to show tubercular formations as spring approached. Because of sickness in such form and degree as to disqualify for either class room or industrial work, 11 pupils were dismissed before the year closed.

One of the older boys died of pneumonia after an illness of four days, and a little girl after lingering

or three months with consumption was taken home at the close of school, where she died within a few weeks.

**Additional remarks.**—Without an exception, every pupil that ran away—all in all—was brought back. Not one escaped in this manner during the year, and what is remarkable in this connection, those who came to us from other schools with the reputation of being incorrigible runaways not only gave us no trouble in this respect, but proved themselves worthy to be rated among our brightest and best.

The needs of the school are many, only a few of which I will mention.

There should be better water facilities. All the water used by the school during the greater part of the year is hauled in tanks from the river; a wet, cold, and tedious task in winter. The cisterns, two at each building, serve their purpose well when the rainfall is sufficient to keep them replenished. This, however, was far from being the case last year. Accordingly they were used as receptacles for river water, in consequence of which they were soon defiled with sediment, and required frequent cleaning. In case of fire there is practically no provision. An artesian well is greatly needed.

The table fare might be very much improved if the cooks could have what milk and eggs they could use in the kitchen. There ought to be kept on the school farm not less than 12 good cows and 200 domestic fowls.

A larger laundry is a necessity, while as a matter of economy there should be a wagon and machine shed, workshop, toolroom, wood and coal houses. Appreciating what the Department has already done for us of late, and realizing that others are still more needy, we are disposed to be patient under many trials and do the best our circumstances will allow.

The event of the school year was the coming of Dr. Dorchester, our worthy superintendent. Arrived in the early spring of his contemplated journeyings westward, his visit was awaited with interest. It was a case of hope long deferred. Expectation had well-nigh perished. The school work had closed, and the children were ready to go home when word came that the doctor was only 30 miles away.

The pupils, induced to remain until he could get here, were richly rewarded for their patience. The presence of the general superintendent not only gave character to the school in the estimation of the adult Indians whose children were in attendance, but his genial face and spirits were an inspiration to employes and pupils. His questionings in the class room and words of wisdom and cheer at the evening session were helpful to the workers and of profit to the children. Even at this writing they are heard to repeat his words: "stick to it," "keep at it," "hold on," "don't give up," "persevere," etc. Such visits should be frequent—not less than once a year.

I think I can safely say, in conclusion, that the early prediction that the school would prove a source of great good to this people, and the hope expressed that the seed sown in Americanizing the boys and girls would bring forth abundant fruit, are being realized.

Respectfully,

W. H. MATSON,  
Superintendent.

E. W. FOSTER,  
United States Indian Agent.

## INSTRUCTIONS TO FARMERS, YANKTON AGENCY.

YANKTON, S. DAK., May 26, 1891.

*To the agency farmer, the additional farmers, and Indian assistant farmers of Yankton Agency, S. Dak.:*

**GENTLEMEN:** The following instructions are written for your information and guidance, and you will be expected to comply with the same in good faith and with a determination to serve your Government honestly and sincerely.

A material deviation from these rules, or a habitual neglect of your duties as laid down herein, will be deemed a sufficient cause for immediate removal from office.

Respectfully,

E. W. FOSTER,  
United States Indian Agent.

The Yankton Indian Reservation is hereby divided into six farming districts.

### THE AGENCY FARMER.

The agency farmer is selected for his supposed superior acquaintance with and knowledge of the business of farming in this country, as well as for his practical skill, experience, and foresight in the management of a diversified establishment.

The duty of the agency farmer is to have charge of all farm machinery, wagons, fencing materials, etc., kept for agency use or to be issued to Indians. He will properly brand all farming tools and machinery, see that the same are kept housed when not in use, and repaired, painted, and made ready for use.

He will also have charge of and be responsible for all Government live stock, the Government barn and warehouse, and everything kept or contained within said buildings. Government horses will be used in the public service only, except by permission of the agent. All forage and feed procured for the agency is for keeping Government stock only, and must not be diverted to other uses.

The agency farmer will inspect all grain, seeds, farm machinery, wagons, fencing material, building material for Indian houses, live stock, beef, flour, and other subsistence received here for agency use, or to be issued to the Indians, and he will make prompt return with proper certificates. He will keep a property list, closely posted, showing all receipts, expenditures, issues, and balances on hand, which must be verified at the close of each quarter by an actual checking up of his property list and an inventory of the property itself.

He will exercise a general supervision over all the district, assistant, and additional farmers of this reserve, require them to be thorough in the discharge of their duties, and prompt in making weekly reports; these reports he will receive, examine, brief, and file, calling the attention of the agent to matters of particular importance contained therein. He will assemble the assistant and additional farmers at the agency on the last Saturday in each month and discuss with them such subjects as may be deemed proper. Malfeasance or neglect of duty on the part of any employe under the agency farmer's charge must be reported promptly.

The aim of the agency farmer will be to encourage an active and spirited competition in each of the farming districts, keeping constantly in mind that the great object to be accomplished is to make successful, prosperous, and thrifty farmers of the Indians, not only in the cultivation of the soil, but in the raising of horses, cattle, sheep, hogs, and poultry, and in other enterprises that tend to make farming profitable. He must appreciate the fact that not only this office, the Indian Department, and Congress are expecting progress, but the people of the country, who are bearing the burden of maintenance, are anxiously looking for the day when the Indian will be so far advanced in arts and in agricultural pursuits, and their habits of thrift and their judgment so far developed, that they will be self-supporting and on the same plane with the white man.

At the proper season the agency farmer will direct the Indians in building or repairing dwellings and outhouses, so as to make their homes comfortable and attractive.

The agency farmer is expected to subscribe for one or more of the agricultural journals of the country, and to keep himself posted thoroughly in all improved methods of farm work.

He is required to be strictly temperate in habits, very patient and forbearing with the Indians, diligent, careful of all property intrusted to his care, and thorough in the performance of every duty. He will be expected to lead off in all new enterprises, and to encourage, by example, early rising, steady work, and regular habits.

The agency farmer, with the assistance of the other employés, will hold a farmers' institute at least once each quarter, and encourage the discussion of agricultural topics among the Indians.

Also a general supervision over the agency proper will be exercised by the agency farmer. He will see that the public grounds, park, streets, alleys, stables, corrals, ice house, water works, etc., are kept clean and orderly. He will have the general care of the roads and bridges of the reserve, and see that the same are kept in order. He will superintend the putting up of hay for use of the Government stock.

The agency farmer will be furnished with a horse, in order to make frequent visits to different parts of the reservation.

Special orders in respect to new subjects will be given from time to time.

#### THE ADDITIONAL FARMER.

The "additional farmer" is selected because of a well-established reputation as a thrifty, practical farmer, as well as because of his ability to communicate this knowledge to others.

Each additional farmer will have in charge one of the divisions of the reserve; and his time will be spent and his services performed in his own district and without intermission. He will not be allowed at the agency, except when actually detailed on some special service, or when making reports.

The additional farmer is expected to visit every Indian's farm and house in his division at least once a month during his term; and he will endeavor by advice and by example to stimulate and encourage the men in diligent, steady, and persevering labor.

He will be intrusted with articles specified under the head of "Articles for occasional issue to deserving and industrious Indians," such as hay forks, axes, knives and forks, files, kitchen furniture, etc., which he will deliver as instructed, taking receipt therefor. Such issues may encourage a belief that frequent visits to the agency are neither wise nor profitable. However, judgment must be used in distributing such articles, as one duty is to encourage Indians to purchase farm tools and household utensils from their own resources.

In teaching Indians the correct use of all farm tools and machinery; the time for seeding, cultivating, and harvesting; the necessity of fall plowing and preparing ground for seed; the planting of trees in proper season; the value of milch cows; the profit from keeping poultry, pigs, etc.; the advantages of summer fallow; the *absolute necessity of preserving seed for the following season*; and above all the great value of time, and the advantages of being prompt, the additional farmer will be patient and persevering. He will not simply drive to a man's house, look around and ask a few questions, and then drive off; but if anything needs attention, he will remain with the man all day, if necessary, working in the field and rendering all the assistance possible, both outdoors and in the house.

The additional farmer is expected to learn, to some extent, the vernacular, though he should encourage so much as possible the speaking of English by the Indians.

He will advise how and where to erect dwellings, dig wells, build barns and other outhouses, plant orchards, fruit trees, shrubbery, etc.

Sometimes he will be expected to remain over night with Indian families, and then by his own example he may teach that early rising, diligence, and steady, intelligent work usually rewards the laborers. He will, at all times, conduct himself in a discreet and honorable manner; and by kindness and consideration, he will endeavor to secure the good will and confidence of the Indians.

It will be the duty of the additional farmer to encourage a spirit of loyalty to the nation and respect for the American flag, and to help these Indians understand that they will soon be compelled to assume the responsibilities and privileges of citizenship.

The general duties prescribed for the agency farmer will apply to the additional farmer in a more specific manner and with respect to the individual property of the Indians.

He is expected to subscribe for one of the agricultural journals of the country. He will meet with the agency farmer and others at the quarterly institute, and is expected to take part in the discussions.

From the office records he will inform himself thoroughly in regard to the live stock, farm machinery, fencing materials, building materials, wagons, etc., that heretofore have been issued to Indians in his division; and also in regard to such as may be issued hereafter. He will report and prosecute any man who may have illegally disposed of such articles, or made a wrong use of them.

It will also be the duty of the additional farmer to warn all young Indians of both sexes who are living in illegitimate relationship with each other to conform to the laws of the land by taking out a marriage license and having a legal marriage ceremony performed. For the proper enforcement of these rules he is authorized, when necessary, to call upon the police force for aid.

The additional farmer will keep a property list, showing all his receipts and expenditures of Government property, which will be subject to inspection by the agent or agency farmer at any time.

He will supply himself with a vehicle to travel in, and the Government will furnish a horse and feed for it; but the additional farmer will be held responsible for the care and safety of this horse and its feed.

He will also supervise the work of the Indian farmers in his division.

He will keep a daily memoranda of all transactions, and report the same weekly in such form as may hereafter be prescribed.

#### THE ASSISTANT FARMER.

The assistant farmer is of Indian blood, and is appointed to this honorable position upon his reputation for activity, industry, veracity, honesty, and fidelity, as well as for his experience and knowledge, and the interest he takes in agricultural pursuits and in the prosperity of his race.

He is expected to reside within or near the boundaries of his district, to furnish an example to the Indians of industry, thrift, economy, and good management, and to encourage and direct them to adopt similar habits.

He will be guided by the following instructions:

Inform yourself from the records of this office as to the allotments within your district, and be prepared to settle all questions of boundaries between individual lands.

Take pains to urge upon the Indians the great necessity of increasing the size of their cultivated fields, and of cultivating thoroughly their crops. Urge the importance of harvesting promptly when the season arrives, and of caring for their products. If possible, allow no family to have less than 40 acres under cultivation, with no foul or noxious weeds permitted to grow. Urge deep plowing and clean cultivation, and the early plowing of stubble ground after harvest.

Carefully follow the instructions given agency and additional farmers, which will also be your guide so far as they can be applied. Visit the house of every Indian (except those known as squaw men) in your district, as often as twice a month; and urge upon them the importance of steady, diligent, intellectual work. Be watchful of their interests in the care of all farm implements, wagons, harness, etc.

Always discourage them from applying to the agent for trivial helps, and teach them to depend more and more upon their own resources.

Encourage the discussion of farm topics and assist in such discussions.

Advise and aid in house-building, well-digging, tree-planting, road-working, and other permanent improvements. See that fire brakes are kept around every place of any value; and take every precaution against prairie fires.

Show by example the profits from keeping milch cows, of having diversified garden crops, and raising poultry.

Urge the Indians to build, whenever possible, comfortable houses from the native rock, and preserve growing timber.

Encourage the use of English whenever practicable, and urge upon parents the importance of educating their children. Never lose an opportunity to instill into the minds of this people the great value of time, steady work, and economic habits. Explain how by these means they can become prosperous and even wealthy.

Ask each family to procure a blank book into which you will enter the dates of your visits, any directions you may have given, or any other facts.

Make a weekly report to the agent of work accomplished. Attend to the advice of your additional farmer, and be guided by all his legal orders.

Conduct yourself in an honorable, discreet, and creditable manner at all times.

Take every pains to protect the Government from loss of property by theft or waste.

It is expected that the assistant farmer will furnish a horse and that the Government through the agent will supply feed for said horse while in the service.

Special instructions will be given from time to time on special matters.

Each assistant farmer must have a farm of his own within his district, and he must endeavor to make the same a model Indian farm.

#### REPORT OF PHYSICIAN, YANKTON AGENCY.

SIR: I have the honor to submit the following as my annual report:

My commission took effect October 1, 1890, at which time I commenced my duties. I am ready to confess that many ideas I had when I came here have undergone a material change. I find that even under the most aggressive policy the transition from barbarous habits and superstitions to that of national and civilized methods is so slow as to be almost discouraging.

There are many improvements that ought to be made in the conditions and surroundings of these people, with special reference to the maintenance of health. Their houses are extremely small. Rarely that a house has more than one room. They sleep, cook, and eat all in the same room, which is hardly large enough for sleeping purposes. The roofs of most of the houses are made of sod or gravel, and in a hard storm leak badly and remain damp for many days afterward. Most of the houses have no floors. The Indians have no ideas of ventilation; but will heat a house to the verge of suffocation, and when it gets so hot that they can stand it no longer will go out doors and stand in the wind until they get cool, and then repeat the operation. Most of the houses are very dirty, the occupants sleeping on the ground.

These people are scrofulous in the extreme; in fact, were I to list the whole population on my report as "scrofula" it would not be much out of the way. I have observed since our school opened that those who to all appearances were the cleanest and freest from disease need but a slight cold or some aggravating cause to set the glands about the neck and face to enlarging.

These people have married and intermarried among themselves until there is a blood relationship existing between nearly all of them, which I consider as one of the causes of this condition. Another cause is the social custom, which prevails universally, of passing the pipe if any number sit down together. It makes no difference how rotten one may be with disease, he will fill the pipe and pass it from one to the other until all have smoked. Still another cause is the lack of cleanliness in the houses. In many cases they will allow the pus from scrofulous ulcers or the sputa from a tuberculous lung to saturate bedding, clothing, etc., until the house becomes diseased and every breath of air inhaled is charged with dust which contains the dried particles of these discharges. One trouble in connection with the treatment of these scrofulous cases is that they will not persist in the long months of treatment necessary to eradicate from the system a disease of that nature. The cases of scrofula reported cured are in my judgment only temporary, and will at some future time give trouble.

The death rate from consumption among these people is alarming. During the last year there have been thirty-three deaths from consumption of the lungs, and I now have on my list twenty-nine cases still under treatment, and it would be hard work to estimate the number of cases that now exist where the disease is in its incipency.

Sore eyes in some form are very common; many cases of acute inflammation and more of chronic. There are a variety of causes which contribute to such a condition: 1st, their scrofulous diathesis; 2d, their habit of living a part of the time in a lodge (cloth tent) with a fire in the center and a small opening at the top for a chimney, which allows the smoke to become so thick that it irritates the eyes; and 3d, the lack of precautionary measures to prevent transmitting the disease to other members of the family.

I am of the opinion that these people would be healthier if their houses were heated with fireplaces. They love an open fire and will have one a part of the time, if not in the house in the tent. It would be hard work to overheat with a fireplace, and would furnish a system of ventilation that would much improve the present condition. This matter I have talked over with many of the Indians, and all want a fireplace instead of a stove.

While I am in favor of a hospital, still I am not as enthusiastic over the matter as when I first came here. I am satisfied that it would be some time before we could make the Indians avail themselves to any great extent of such, for when we have a sick child in school and are giving the case all the care and attention that we could a child of our own, still it is a constant warfare with the parents, who are determined to take the child home.

I am happy to be able to report these people free from venereal diseases. Have not had a case of syphilis or gonorrhoea during my nine months here.

I have had no surgery of any importance. One fracture, one case of concussion of brain, a few cases of incised wounds, and one or two cases of lacerated wounds constitute the injuries. One case of suicide by hanging.

Have had but little trouble with the native medicine men. As a rule the people at this agency employ the Government physician.

There is all the business at all times that a physician can attend to; in fact, there is a part of the time that I can not give the sick the attention they ought to have. We have here (whites and Indians) about 1,800 people that the doctor has to look after. They are scattered over an area of 430,000 acres. These people are chronic medicine takers, and when you consider that a doctor has to be his own druggist, do all his own compounding and dispensing, and in many instances act as nurse, you can realize how impossible it is for a doctor to visit a patient every day as he would the same case if doing business among white people. Another great drawback to the doctor's success is the fact that most of these people have no timepiece of any kind—have no idea of time—and a doctor must arrange his medicine so as to have them give it three times daily, as you can make them understand morning, noon, and night. A few Indians have clocks and have learned to tell the time of day. I have had two cases of severe sickness in such families, where I am satisfied that recovery would not have taken place had it not been for the minute directions which the clock enabled me to give and them to follow. I think it would materially lessen the death rate among these people if they were provided with timepieces and taught how to use them.

I regard the list or nomenclature furnished the physicians for the purpose of reporting diseases as incomplete, as is also the list of drugs from which we estimate for supplies, and should be revised so as to put it on a level with the present status of medical science.

I will now briefly recapitulate what has been, in the past at least, transmitted through my regular monthly reports:

Total number of cases treated during the year.....	519
Male .....	245
Female.....	274
Total number treated by me during my nine months services .....	386
Male .....	178
Female.....	208

This does not include the trivial cases that get medicine at the office, but only those cases that are serious enough to be entered on the record book.

The deaths for the year are as follows:

Males:	
From consumption .....	18
From other causes .....	15
Total .....	33
Females:	
From consumption .....	15
From other causes .....	6
Total .....	21
Total deaths, male and female.....	54
Number of patients visited during the nine months.....	217

Some of these I have visited many times.

The total number of births are as follows:

Males .....	21
Females.....	18
Total .....	39

I think I have got a record of every death that has occurred on the reservation since I came here, but I have not recorded all the births, as I got but very few until the last four months, at which time we adopted the plan of making the parents get an order from the physician before the issue clerks would put them on the issue ticket.

In regard to the Government school I have but little to say that has not been already reported. Considering the number of pupils and their predisposition to disease I think we have been very fortunate, as we have had but very little sickness in the school. Several times we have had an outbreak of sore eyes which I see by the records of the past has at times been nearly universal, but by prompt measures we have succeeded in corraling it. Have had but one death at school, and that from pneumonia.

The school buildings are much in need of a few extra rooms which could be used as sick wards. With the present arrangements, if we have a pupil that is seriously sick, some employé must give up his room or the sick one must remain in the dormitory, the latter of which is objectionable for obvious reasons.

Respectfully submitted.

W. L. BROWN,  
Agency Physician.

#### REPORT OF PRINCIPAL, ST. PAUL'S MISSION SCHOOL.

Sir: The progress of the St. Paul's school has been very satisfactory during the past year, 1890-'91. All the children have been instructed in reading, writing, and numbers, the more advanced pupils in geography, United States history, grammar, composition, and physiology. The children have been in constant drill in exercises in the English language and their progress has been very marked. The health of the children has been remarkably good; only one severe case of illness. The year has been one of encouragement and pleasure to those in charge.

The usual industrial work has been carried on by the boys; they have been instructed in gardening, cultivation of corn and potatoes, the use of tools commonly used in such work, also in the use of simple kinds of carpenters' tools, care of horses, cattle, hogs, and poultry.

At the closing exercises in June Hon. E. W. Foster, the Rev. J. W. Cook, and other white people who were present expressed much pleasure at the proficiency of the boys in schoolroom work.

Respectfully,

JANE H. JOHNSTON,  
Principal, St. Paul's School.

REPORTS OF MISSIONARIES, YANKTON AGENCY.

YANKTON AGENCY, S. DAK., August 28, 1891.

DEAR SIR: I take pleasure in making this my twenty-third annual report of missionary work among the Yankton Indians. In these years there is visible a notable change in the religious conditions of the Indians. When I came here there was not a Christian in the tribe, now there are over 600 communicants in the different denominations. Then there was no church building of any kind. Now 6 churches dot the reservation. Then heathenism was rampant. Its imprints were seen in the altars on almost every hilltop; in the offerings of food laid under the scaffolds of the dead; in the sacrificial penants flying before the tepees of the sick; in the medicine roll elevated in the back of the tepee, or swung outside between three poles; in the charms attached to the blanket, the breech-cloth, the scalp-lock, or the quiver which then swung upon every man's back; in the rattle and the drum whose music rose from every camp. Now Christianity is ascendant, civilized habits and dress preponderate, the Sabbath is generally observed, and devout worshipers crowd the churches. Every philanthropist must rejoice in this change of religious observance.

That the internal change of heart has been as great we are not prepared to assert; God knows. We are sure there has been a great revolution; we believe very many are true followers of Christ. The truth is doing much to improve their hearts and morals. This is the great work of the missionary—to bring the truth to bear on the hearts of the heathen, for "the truth will make them free." We find the Indian heart a good soil for the reception of the truth.

We present the following statistics of the Presbyterian mission:

Missionaries: Male, 1; female, 2 .....	3
Native preachers .....	1
Church organizations .....	3
Church buildings .....	3
Communicants .....	321
Communicants received during the year .....	39
Adult baptisms during the year .....	25
Infant baptisms during the year .....	41
Christian marriages .....	7
Contributed by Indians .....	\$621
Aid received from the Presbyterian Board of Missions .....	\$1,800

Yours, respectfully,

JOHN P. WILLIAMSON,  
Missionary of the Presbyterian Church.

E. W. FOSTER,  
United States Indian Agent.

YANKTON AGENCY, August 20, 1891.

DEAR SIR: In accordance with your request please find report of the work of the Protestant Episcopal church on this reserve from June 1, 1890, to May 31 of the current year:

	Church of the Holy Fellowship, Yankton Agency.	Chapel of the Holy Name, Choteau Creek.	Chapel of St. Philip, White Swan.
Number of families .....	103	58	51
Whole number of souls .....	333	230	182
Baptisms:			
Infants .....	20	15	6
Adults .....	4	.....	3
Confirmations .....	36	2	13
Present number of confirmed persons .....	172	73	82
Communicants on register this year .....	188	57	77
Communicated during the year .....	158	49	58
Christian marriages .....	6	4	.....
Burials .....	18	4	6
Sunday-school teachers .....	11	4	.....
Sunday-school scholars .....	117	39	.....
Average attendance at chief service .....	*100-†200	*58-†100	*60-†100

\*Summer.

†Winter.

One white missionary in charge, one native deacon, and two catechists.

Amount of aid received:

From the Board of Missions, Protestant Episcopal Church .....	\$1,620.00
Evangelical Educational Society .....	150.00
From various individuals and societies for relief of distress the past winter .....	446.20
Contributed by the three congregations for incidental expenses and various objects at home and abroad .....	526.97

Total receipts .....

2,743.17

This report does not include St. Paul's boarding school for boys, which is a part of our work here. The principal will furnish a separate report.

The above figures compared with previous years show no very remarkable growth in any direction, yet I think there is a steady, although slow advance. One exception, possibly, is the considerably larger amount which out of their poverty they have given. And when it is taken into consideration that the past year was one of great scarcity, when they often went hungry, it is the more remarkable. The abundant harvest of the present summer is a great relief.

Respectfully, yours,

E. W. FOSTER,  
*United States Indian Agent.*

JOSEPH W. COOK,  
*Missionary of the Protestant Episcopal Church.*

## REPORT OF AGENT IN UTAH.

### REPORT OF UINTAH AGENCY.

UINTAH AGENCY, UTAH, *August 21, 1891.*

SIR: In compliance with office circular of July 1, 1891, I have the honor to herewith submit this, my second annual report.

#### UINTAH AGENCY AND RESERVATION.

Having been in charge of this agency a little over one year, I trust I can speak advisedly upon some of the leading characteristics of these Indians, and must say that they, as a tribe, are yet low in the scale of civilization. This may be accounted for, not by any unusual inaptitude of their natures, but by the fact that no missionary efforts have ever been made among them, nor have the schools heretofore maintained been conducted with or been given any distinctive religious character. This I hope to change under the present superintendent. A Sabbath school has been regularly maintained since last December.

The common Indian superstitions cling to them with dogged pertinacity—such as the abandonment or destruction of property at the death of any member of a family, and the shooting of ponies at the graves. They love the dance and the horse race. The burning of houses I have strictly forbidden and warned my police to prevent it, which they have done with the exception of one case that I am aware of, and that house was an old and rather worthless one, burned after my police had guarded it for two days. Such is their deep-seated superstition in that regard that they will plead in extenuation of their action that the house was worthless, or that the horse killed at the grave was blind or otherwise useless; others will remove those whom they expect to die to some temporary home, in order that they may not have to destroy their houses. But to prevent them from abandoning their houses when a death occurs is, as yet, impossible. They will just gather up their effects and go to some other locality on the reserve, while their houses stand unoccupied.

**Location.**—This reservation is located in the beautiful Uintah Valley, and was set apart as such by Executive order, under authority of Congress, and is occupied by two tribes—Uintah and White River Utes. The former tribe came here from various parts of Utah, from 1861 to 1863; the latter came in 1881, by direction of commissioners, who executed a treaty with all the Ute tribes of Colorado just after the Meeker massacre, in 1879, settling the White Rivers at Uintah, the Uncompahgres at Ouray, and the Southern Utes in the southwest corner of Colorado.

The Uintahs are the more industrious and more inclined to send children to school. There is considerable tribal jealousy between the two tribes, which has resulted in causing many of the more industrious and independent of Uintahs to withdraw to more distant portions of the reserve. About 150 of those are located on the Upper Duchesne, along with old Chief "Tabby," the greatest chief of all the tribes, now quite old and totally blind. He seldom visits the agency, having been here only three times in the past year. He is very conservative, always talks for peace, and is promptly at hand if any subject comes up that he considers vital to the interests of his tribe. The above-mentioned camp is about 65 miles from the agency. Many others are located on farms at intermediate points, while a majority are located near—from 2 to 6 miles from the agency.

#### Statistics.—

##### Uintahs:

Males over 18 years .....	128
Females over 14 years .....	134
School children 6 to 16 years .....	135

## Statistics—Continued.

## Uintahs—Continued.

Males.....	245
Females.....	213
Total.....	458

## White Rivers:

Males over 18 years.....	113
Females over 14 years.....	111
School children 6 to 16 years.....	90
Males.....	209
Females.....	173
Total.....	382

This reservation contains about 2,000,000 acres. About a third or less is available for farming, mostly by irrigation; the remainder is all good grazing land. Much of the farm land is easy of access to water and is being used for farms, but other thousands of acres of excellent land can only be utilized by a more expensive system of ditches than the Indians can or will afford. A moderate outlay wisely invested in canals and ditches on these reservations would go far toward the civilization of these Indians and rendering them self-sustaining.

It was believed by nearly all who read it that the law of 3d of March last which allowed the crossing of "Government reservations" by canals and irrigating ditches in certain cases where water was abundant, applied to Indian reservations. If it is so construed it would be of great benefit to this reservation, by taking water across large tracts of first-class farming lands (Indian), supplying them with abundant water, in order to reach and bring water on public lands adjacent. There is now formed in this vicinity a company, under the laws of Utah, having the above object in view, viz, to carry water in a canal from White Rocks Creek across 14 miles of reservation lands and on to public lands east of the reserve, furnishing free water to all intervening lands. It will readily appear how greatly this would benefit the Indian lands.

**Issues and annuities.**—Regular issues (weekly) of flour and net beef are made to these Indians, also irregular issues of sugar, salt, baking powder, soap, coffee, and occasionally bacon, amounting to possibly half their subsistence; clothing and blankets, consisting of gingham, flannels, shawls, shoes and hose, pants and vests, coats, overcoats, duck suits, boots and socks, for men and boys.

An annual annuity payment in cash is made, derived from the Ute trust fund, known as 4 per cent and 5 per cent funds, which is divided pro rata between the confederated bands of Utes, and paid out to each per capita, the Uintahs receiving \$13.87 and the White Rivers \$6.06 per capita. The difference between the two is owing to the fact that what is known as the Meeker pension, amounting to \$3,500 annually, is deducted from the aggregate portion paid the White Rivers, to which they submit with a surprisingly good grace.

**Farming.**—Next to the school, the farming must, in my opinion, rank as a civilizing agency. For many years wagons and farm implements have been issued to these Indians, and at this date their progress in farming shows the wisdom of the measure. Many are quite industrious and skillful, and raise excellent crops of wheat, oats, lucerne, and garden vegetables, sufficient for their families and a good surplus for sale. I distributed among them last spring 10,000 pounds wheat, 21,000 pounds oats, 2,000 pounds lucerne, 200 pounds timothy, 10,000 pounds potatoes, besides quantities of garden seeds, and the fine harvest now being cut will make a good account of the same.

In this connection I wish to say that the farmers have too much outside duty, such as accompanying freighters, visiting distant parts of the reserve to attend to trespassing stockmen, the weekly butchering and cutting up of the meat, etc., to give that time to the Indian farms that the case demands, and I am persuaded that the money invested in at least one additional farmer, whose time should be devoted entirely to Indian farms, would be well and wisely spent.

My Indians haul all the agency and traders' freight from Price Station, on the Denver and Rio Grande (western) Railroad, distant 115 miles, for which they are paid \$2 per hundred weight. They like the freighting, and it is a source of considerable revenue to them. They will cut and haul any amount of cord wood, but the hauling of logs requires more skill and heavier horses, and they do not succeed so well; hence it is a difficult matter to get our annual allowance of logs cut and hauled by them.

**Improvements and repairs.**—In obedience to office letter and circular of July 22, 1890, in regard to butchering, I immediately began repairing and refitting

slaughterhouse and corrals, and soon had an outfit where our killing is done as neatly as it is anywhere; the carcass hangs over night and is cut up next day and issued from the block. Later I asked and obtained authority to bridge two of these turbulent streams, and in December completed two good bridges, both neat and safe.

The wood-working machinery consisting of planer and flooring mill, lath mill, shingle mill and molder, for ten years standing idle in a shed at Ouray, I have brought up here and set it all up in good order in the agency sawmill. In this work my engineer has shown exceptional skill and workmanship.

Last winter I asked and obtained authority to purchase quite a bill of nursery stock, of many varieties: One hundred apple trees, cherry, pears, prunes, apricots, plums, crabapples, grapes, gooseberries, currants, blackberries and raspberries. I made my purchases in person while in Salt Lake City, of the Salt Lake Nursery. Upon arrival I immediately had them set out in the school grounds, giving the work my personal supervision. With few exceptions among the small fruits, all are doing well, and with care will soon yield an abundance of fine fruit. This is an innovation on this agency, to which I refer, as I trust, with pardonable pride. The Indians are so well pleased with the apparent success that they wish to try it for themselves next spring.

I have also bought, by authority, wire and fenced in an additional pasture of about 70 acres for school cows and agency horses; have laid neat board walks on both sides of the plaza, added kitchens to two agency dwellings, besides many minor improvements, as sheds, gates, outhouses, etc. The carpenter has in addition made floors, windows, and doors for twelve Indian houses, twenty-five bedsteads and thirty hayracks, cupboards and other household conveniences.

**Industries.**—The effect of a year of activity is most marked among the Indians. Every man has some active employment; absolute idleness is almost unknown. Farming and herding are the chief occupations, but if any chance of working for wages, freighting, wood hauling or other labor is offered there are always plenty to avail themselves of it. I have found none as yet who have proved steady at learning a trade.

No allotments in severalty have as yet been made. At a council held by Special Agent Parker, on his recent visit here in July last, the subject of "severalty allotments" was considered, the Indians claiming that they were not ready to answer, did not quite understand its effect, and said they would talk it over with Chief Tabby. That was made the occasion of the recent visit of that dignitary to the agency, when he expressed his entire disapproval of the matter, seeming to fear the contraction of their territory and the probable sale of the surplus if they took their lands in severalty. Notwithstanding this affair, I see a strong inclination on the part of the more enlightened to own their own farms and homes, and I would strongly recommend that an effort be made by the special agent early next spring. Not less than 150 heads of families are occupying definite tracts of land, though unallotted.

**Cattle grazing** on the reservation early occupied my attention. I found the business in an unsettled and exceedingly unsatisfactory condition; no definite bargains with anyone, but any who chose drove cattle onto the western end of the reserve, where summer range is fine; nor could definite numbers be ascertained, a sort of "go-as-you-please," "catch-you-as-catch-can" way of doing business, which was calculated to foster dishonesty in counting for cattle, and endless suspicions of dishonesty on the part of the agent, and troubles between cow men and Indians.

At a council held last fall (October) the Indians unanimously requested me to drive all stockmen off the reserve. I immediately laid the matter before the Indian Office, and was promptly directed to move them all off before April 1, 1891. A petition of numerous cattle men to Department led to the extension of the time for removal until August 1, 1891. I, as before, promptly notified all stockmen by letter of such order and to be prepared to move off at the specified time. I followed up such notice by attending in person as the time approached at the several ranches, to see to it that the order be strictly complied with. Just so soon as they became convinced that no modification of the order would be made they all moved off in good faith.

**Liquor selling**, and consequent drunkenness, is the bane of all agencies, and to suppress or guard against it is the "philosopher's stone" of the Indian problem.

Early last October I laid the matter before your office; steps were promptly taken to look into the matter and to devise ways to cope with the giant evil. This led to the appointment, at Fort Du Chesne, of W. M. Curtiss, deputy United States marshal, and J. T. McConnell as United States commissioner, thus giving us a tribunal close at hand for the apprehension and trial of offenders. Three cases are now bound over for trial at the September term of supreme court. But, owing to the almost insuperable difficulty of securing evidence, cases of punishment commensurate with the crimes are rare indeed. I still hope to make example of some of the worst offenders yet.

**School.**—By the time this reaches the printing press our school will be occupying the two large and commodious buildings which (thanks to the energetic policy of the present Commissioner) are nearing completion. Being handsomely located, in a perfect bower of green, these fine buildings will give as good school accommodations as any in the service, if not as large.

This school in the past has suffered from a variety of causes—poor accommodations, bad management, and sickness. Two superintendents and matrons having been discharged by the Indian Office for inefficiency during the last school term will explain much of the poor management. The school is literally to be “built up.” To do this is the duty now before superintendent and agent.

**Police.**—The police force consists of 8 privates, 1 sergeant, 1 captain, and are very efficient in all that pertains to their duties, are fairly proficient in drill, but should have more drill than I am personally able to give them.

**Court of Indian Offenses.**—I believe the time has come when such a court would do good service among these tribes. I have tried the method of arbitration, with Indians as umpires, and find it works well. To illustrate the law-abiding spirit of these Indians: In last December the first case of arrest of an Indian for crime by the county sheriff took place at the agency; although this was an assumption of jurisdiction hitherto denied, no resistance was offered, the man went along peaceably, stood his trial, and was cleared.

**Sanitary.**—This has been a year of much sickness from a variety of diseases; diphtheria and kindred ailments prevailed. Thirty-two deaths (5 of them school children) are reported by agency physician and 15 births.

**Conclusion.**—It is gratifying to note some improvement in the manner and morals of the tribes in the past year, and to observe the increased efforts of the Department to furnish all possible facilities for their further advancement, as the gristmill now authorized to be built and the two fine schoolhouses about completed abundantly attest.

#### OURAY SUBAGENCY AND RESERVATION.

It is situated in the valleys of the Green, White, and Du Chesne rivers, and contains 2,000,000 acres of land, laying as it does immediately east of Uintah. The two agencies were consolidated and placed under the care of one agent in the year 1886 by act of Congress. There is very little farm land on this reserve except what is located on the Du Chesne River from 4 miles from its mouth to the west line of the reserve, and these lands are so located as to require more expensive ditches than the Indians can make; neither can it be done by the available agency force.

**Buildings.**—The agency buildings stand on a barren, gravelly bench at the junction of the Du Chesne and Green rivers. The agent's house is a good building, and a small building, built for a schoolhouse but now used for office, is also fair. Aside from these all others are log and stockade structures—dirt-covered and very old, and of no money value. If the school buildings are built on the location as selected by Col. Parker, special agent, Superintendent Binford, and myself, it will necessitate the removal of the agency to that same locality. This removal I would strongly recommend.

**Schools.**—This tribe (Ourays) have never had either church, missionary, or schools on their own reservation, notwithstanding their treaty, approved June 15, 1880, expressly provides for schoolhouses, and careful estimates were made by Messrs. J. J. Russell, Otto Mears, and Thomas A. Morris, Ute commissioners, for schoolhouses and other buildings and supplies upon their location here in 1881. Neither apparent neglect nor the inherent difficulties of their naturally barren reserve has hindered these Indians from a degree of improvement, and the universal verdict of all observers is that they as a tribe are more enlightened, intelligent, and progressive than their brother Utes.

Through the enlightened and progressive policy now at the Indian Office a site has been selected for a school building, and proposals will be advertised for soon, so that this long-felt want is in a fair way to be supplied. It may be too much to expect that this tribe will sustain a large school for the first year, or perhaps two, but a beginning must be made, or a school can never be built up; and, as I remarked in a communication on this subject to the Department last April (2d), there is danger of their settling down into a “stoical and dogged” indifference that will take years to overcome, but continued and sustained efforts on the line of progress will work wonders with these people, and I am persuaded that the expenditure of so much money as is needed to build about three good canals, bringing about 15,000 acres “under water,” build two good school buildings and such buildings as would be needed to relocate the agency near these good farms, would be well and wisely invested. Anything short of this will in my opinion be to relegate these Indians to their aimless, nomadic life for indefinite years to come.

The Indians will be opposed to any policy like the above looking to their civilization, but the time for consulting entirely their wishes in such matters has long since passed.

**Crimes.**—I know of no crimes on this reservation or quarreling worse than hot words, occasioned by drunkenness. All disputes have been settled amicably, and a uniform disposition is manifested to submit to the orders of Washington as given by and through their agent.

The Police of this agency are very efficient, obedient to orders of their chief, Mr. McAndrews; they take a just pride in their office, and are prompt and energetic in any case of threatened disturbance.

**Farming** at this agency has considerably advanced under the energetic management of McClure Wilson, who has located 15 new farms and opened 2½ miles of new ditches. The results will be seen in the statistical tables herewith (estimated).

**Herd.**—By reference to same tables it will be seen that these Indians have considerable interests in the stock line; 2,500 sheep, 6,500 horses, 375 cattle, and 1,000 goats are kept on their desert-like reserve.

**Butchering** has been done the past year in a neatly kept corral, which was an improvement over former times; but Clerk in Charge Smith has repaired and refitted the slaughterhouse, set up a new "Howe scale," and hereafter will slaughter in the house, as is being done at Uintah. The Indians are much opposed to this innovation, but will soon acquiesce.

**Agency cattle herd.**—On assuming charge of this agency I receipted to my predecessor for 1,200 head of branded cattle. I drew from herd and killed (by authority) 53 head of steers. There are now on hand: Stock steers over three years old, 275; calves branded for fiscal year 1890, 196; calves to June 30 for this season, 117; total brands on hand, 1,365. I would recommend that the office authorize the drawing yearly from this herd all the steers over 3 years old and the old cows for regular issue.

**Court of Indian offenses.**—A court of Indian offenses has never been established on this reservation, nor could I yet recommend such to be organized until a school shall be started and the contemplated changes in location are accomplished, as too much change all at once is very likely to provoke such opposition as to defeat its success.

No missionary or evangelical work has ever been done among these tribes, and I venture to express a hope that some action may be taken on that line very soon.

A few of these Indians have shown a commendable degree of industry. One has worked faithfully as apprentice to the carpenter for three years and can do very good work. One has run the ferryboat for some years, and many others are very willing to work for pay.

**Population.**—There are on this reservation, according to our census report herewith:

Males.....	515
Females.....	513
Total.....	1,028
Males above 18.....	268
Females above 14.....	353
School children between 6 and 16.....	275

Very respectfully, your obedient servant,

ROBERT WAUGH,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF AGENTS IN WASHINGTON.

### REPORT OF COLVILLE AGENCY.

COLVILLE INDIAN AGENCY, WASH.,  
August 15, 1891.

SIR: In compliance with the instructions received from the honorable commissioner of Indian Affairs, bearing date July 1, 1891, I have the honor to submit herewith my third annual report of the affairs pertaining to this agency and the Indians under my charge. I submit herewith a statistical report and a carefully prepared census of these Indians, as taken by myself and employés on June 30, 1891.

There are nine tribes of Indians residing on the Colville, Spokane, and Coeur d'Aléne reservations. There are two tribes, the Calispel and Upper Spokane, who have no reservation, but who are also under my charge. The following list gives the number by tribes:

Name of tribe.	Males above 18 years.	Females above 14 years.	Children between 6 and 16 years.	Persons not otherwise enumerated.	Total.
Coeur d'Aléne.....	140	158	60	73	431
Lower Spokane.....	134	147	74	57	412
Lake.....	117	112	74	45	348
Colville.....	109	91	62	41	303
Okonagan.....	120	152	102	63	437
Columbias.....	144	152	67	43	406
Joseph's band of Nez Percés.....	40	62	11	16	129
Nespillem.....	19	22	12	6	59
San Puell*.....	135	165	.....	.....	300
Calispel*.....	80	120	.....	.....	200
Upper Spokane*.....	75	95	.....	.....	170
Total.....	1,113	1,276	462	344	3,195

\* Estimated.

**Condition.**—The Indians living on the Coeur d'Aléne Reservation in Idaho are getting along very well indeed. Nearly all of them are farmers and but few are idlers. To see their well-tilled fields and the splendid crops growing, and later in season to see them harvesting and thrashing and hauling their grain to market by the four-horse load, one would fancy the Indians were marching along abreast of the most industrious white farmer and were fast becoming civilized. These Indians as a rule have very good habitations and good barns and sheds. They also put up an ample supply of feed for their stock during the winter. The treaty which was made with these Indians in September, 1889, by which they were to sell about 240,000 acres of their reservation, was ratified by the last session of Congress, and the Indians are now awaiting the payment of the \$500,000, the purchase price, which will make them independently rich. I feel confident they will make good use of their money and not squander it. This tribe of Indians are slowly decreasing in numbers. During the month of February, 1891, there was great mortality amongst them and about 25 died.

The Lower Spokanes occupy the Spokane Reservation, which contains about 153,600 acres. The prospect for good crops this season is encouraging. The farming land on this reservation is limited, however, for the number of Indians, and it will keep them busy to raise enough for their own subsistence. Lot or Whist-le-poo-sum talks of a boarding school for his people, quite often, as one of the most important things needed on his reservation, and he says he is growing old very fast and is afraid if Washington, the great father, does not erect a boarding school for his people soon, that he will be dead, and that it has been his aim in life to see his children educated, and that if he dies before a school is given him that his life will be lost to his people and without being of any benefit to them. He says, when he visited Washington a few years ago, he was promised a boarding school and a church and that he has never seen anything done in the way of erecting the said buildings. Chief Lot takes more interest in churches and schools than almost anything else, or more pride in these institutions than any Indian I ever saw.

The Lake and Colville tribes live in the northern portion of the Colville Reservation. They have splendid crops and gardens this season. They have a larger acreage in grain this season than that of last year. These Indians are very anxious to be supplied with fruit trees, so they can in a short time raise their own fruit. They also want a sawmill, by which they can be furnished lumber. The Lake tribe live on that portion of the reservation which has been treated for, and will take their lands in severalty when the treaty is ratified by Congress.

The Lake Indians are well advanced in civilization and will be very well prepared to take their allotments. The great drawback these Indians have is their desire for whisky drinking. It is confined principally, however, to the young men, and they experience but little difficulty in getting it; the only thing required of the Indians is the money, and the trade is consummated. These Indians are very industrious and make considerable money by freighting supplies from Marcus, Wash., to the mines located in British Columbia.

The Okonagan tribe of Indians take great interest in stock raising, and they have more cattle than any other two tribes occupying the Colville Reservation. They had very good crops last year, encouraging many to enlarge their efforts and others to

follow their example. The thrashing machine was operated last season, and it has been quite a stimulus to them to raise larger crops, knowing that they would not be compelled to thrash it by hand or with a band of ponies. These Indians patronized the Tonasket boarding school, which is located on that part of the reservation which these Indians occupy, very liberally, and nearly all appear to be much interested in the school, and also to have a full understanding that it is being operated for the benefit of their children. I feel that I can see a decided improvement in the condition of these Indians since the opening of the school.

This tribe, or three-fourths of them, will according to the late treaty be left on the ceded portion of the reservation. I understand by talking with them that they are well pleased with the treaty, and nearly all of them are in favor of having their lands allotted to them. The Okonagan and Lake tribes, numbering about 700 Indians, will be on that portion of the reservation which, if the treaty is ratified, will be thrown open to white settlement.

Moses' band of Columbians are located about 75 miles from the agency, in the Nespillem Valley. These Indians, or a number of them, met with much discouragement last year on account of the ravages done by crickets, and many of them lost their entire crops. The crickets are more numerous this season than last year and have taken almost every crop in the Nespillem Valley, destroying grain, grass and everything in the vegetable line. I would not be surprised if the Government has to render some assistance to the most needy, and especially those who have lost their crops for the past two seasons. The crickets do not appear to be numerous outside of the Nespillem Valley and country adjacent thereto.

Joseph's band of Nez Percés live near neighbors to Moses and his people. Some of his people were sufferers on account of the crickets. Yellow Bull, a Nez Percé subchief, and his family moved to the Nez Percé Reservation in Idaho during the month of last May. He went there to have lands allotted to him and make that his permanent home. Yellow Bull was one of the few members of the Nez Percé tribe whom I regretted to see leave this agency. He was honest, upright, and industrious. I notified the other members of the tribe that if they desired they could return to the Nez Percé Reservation and receive their allotments. I do not know how many will take advantage of the opportunity offered, but feel that they would be benefited by the change as well as the Government.

The majority of Joseph's band would, I think, when it comes to receiving their lands in severalty, oppose the scheme, and would be entirely willing to content themselves by having the Government furnish clothing and rations for them. I think it poor policy to issue clothing and rations to these Indians much longer, and thereby encourage them in pauperism. I do not look upon them as being any better because they went on the war path a few years ago, nor even half so good as many friendly Indians who have been the friends of the whites all their lives, and have received nothing in return. After the Nez Percés have been given food, clothing, and the necessary farming implements, with the instruction of the farmer they should be taught how to farm, and then let them depend upon their own resources, as all other Indians do who reside on this reservation.
