## TMPDODUESTOW

Apparenty Stillwater is very fortunate in owning its electric utility plent. Mrough the operction of the plent suffieiont incorce has been aerived to support the atby govexnuent, and thus exempt the property omers irom texation. Sovover, certain inequities have arisen as a result of this shitt in the tex ourden. Contribution is not made on the basis of benefit recestra or abllity to pay but on the besis of the consumption of alactricity. There is no necescery relationship betweon the alectrie consumption of an individuel and the benefit received from the various dopartments of city government. Therefore, the purpose of this study is to examine the present systen of finanoing the oity goverment, and to sucgest the ehanges thet might be node, With a viev to e more equitable division of thet cost.

## GTAPTER 1

## TH ORMRATON OT IUE GTTLDARER

## MOUTGTDL LTART PLATE

History: The early history of the light plant and the munioipel practices wioh rolste to the nany econonic problens involvea ere not avelieble, and consequently the only source of infometion is the nemory of those tho were close$1 y$ related to the operetion of the plant. In 1896 Abercumbery and filler lounched the first ater systom in the city and subsequently they begen the production of electricity. In 1901 the city purchased the utility holdings of Abercumbery and Willex. In 1914, after thirteen years of Mmicipal control, we find the status of the plent recorded in "Deta on Municipal plant operation in oklanoman ${ }^{1}$ : the plant equipment consisted of two generators and to ensines with total capacity of 130 m. The plent ren on a continuous schedule, and the income for the fiscel year wes $23,224.69$. The cost statement showed $11,600.00$ expended for selary, fuel and maintencnce. The city had floated $57,000.00$ in bonas at $5 \%$ to buy equiprent for the ligint and power plant, mather than meet the bonded indebtedness out of the incone from the sale of electricity, the city levied a mill tax to cover the interest and sinking fund oosts. The dity olery had complete charge of the books and no attompt was made at fternination or prometing. The plant as it stood then had been

Hozell, Harold V. Deta on micipel plant Operation in oklenoma, p. 70
installed in 1908. The 700 1ight onsumers were sald to be vexy mueh pleased with the service rendered. The report closes with the followine gtatement:
"pho books are in bod shape."
In 1910 the plant, with 39500 oapecity, wes moved to its present location. As time hes passed the light and power plent has increased in size and lower rates beve been given to the conswhers. At one time the electric licht rete was 14f per ame and in addition to this the eity levied a 28 mill tax. In 1931 the property tax wes discorded and the burden of the general governuent was pleeed upon the sonsumers of electricity ${ }^{2}$ At the present time the equipment is relatively new with three generators ( 8,500 TV; 1,500 K5; 750 rim; making a totel oepacity of 4,750 zit producing the electricity for the conswer in stillwater. The plent, on the basis of a 24 hour average, is operating ot jess then one fourth ( $2,000 \mathrm{~mm}$ ) capacity: the peak requiming leas then one hals $(2,000 \mathrm{~m})$ eepaotty

Income: In wecordence whe the precticen of other util1 by concerns the stillwater light and power plant nainteina a alderentirl mating system. Throveh the use of this means 1t is possible to give to the consumer the benefit of the decressing oost on whioh the plent operates, and it also en-

STRE rollis 1 the county treasury ofice ${ }^{3}$ Thformation secured from the chief ensineer of the piont.
coureges the consumer to use more electricity. The aliferontiel systeri wintained is shown in schedule 1 . The rating systeri is divided into five oetogories; colloge, sill, rural on contract, outside, and the general rates for the residents and business houses of stillmeter. Onder each eategory differentials are set up on the basis of MH consumed.

The income derived from each class of consumer is shown In sahedule 2 , and the total incone for the year and also by months will be found in schedule 3.

The number of NWH sold auring the fiscel vear, to ell. classes of consumers and the average foris consumption by the general consumer in the ofty of stillweter will be found in schealule $\Delta$.

Schedule 5 shows the average wir consumption for the residential conswaex in the United stetes for $193 \varepsilon^{4}$ and what the cost mould be under stillweter rates.

These sehedules ${ }^{5} 11$ be referrea to in a later chapter when their importence will be considered in the anelysis of the entire problen.

Cost: July 1, 1938 a cost accounting systen was made operative for the stillwater light and power utility concerm. The various costs are grouped under ive headnge. since e municipally owned utility compeny $1 s$ not required to consider depreciation when thinking of cost it wes aecessexy to set up an approxi ation bhich wos based on the wagment
 5 Secords in the office or the eity clerte end tho superintendent of llght and water.
of the suparintenciont of wight and Weter. The verious eosts ${ }^{6}$ are shom on schoule 6. The $88,112.24,11 s t e d$ as the total cost, is corroct only for the purpose of enelysis, beeause it includes the $20,961.61$ of depreciation which is not considered in the cost of a munioinel plent Thererore the real cost from a point of vint of administration is $62,186.63$.

## CEAPMTR 2

The budget for this year was a guertex of a million dollers. $1227,100.00$ सes allocated to the light and weter department and the romeinder distributed among the ten othor depertments. As will be noted in the previous chopter \$62,156.63 wes expended by the light depertment. The income fron the sale of electricity ws $194,519.14 ;$ therefore, approximately $132,362.51$ was paid by the consumers of electricity into other channels of city government. The vater department contributes none or but little to the inaneins of the city government. The income fron the niscellaneous sources is negligible, and thus the real burden of the eity gevermment falls on the consumers of electricity.

The budget will be found in Schedule 7, and in Schodule 9 the report of the auditors on April 30, 1939 regarding the Source of the General Fund for the maintenance of the city government.

## GUEPTEA 3

## 

## T1 STITLTATHR

The two previous chepters have presented deta relating to the current methods of financing the city government. It is believed that a more equitable system could be introduced by placing pert of the burden of the city government on the property owners. To support this statement it is necessery to exsmine tho racts concerning property assessments in stillWoter. Property assessments are divided into three classes; real estate, personal property, and public service. The assesment by classes is shown in schedule 9 with the totel essossment of all properties.

Real estete acording to the County Assessor is assessea at $54 \%$ of actual value. In schedule 10 the 1,637 real estate ownews are broken down into groups based on the assessed veluation of the property omned by each. Schedule 11 gives the number of owners grouped acoording to the number of lots omed in stillwater. In schedule 12 the essessed veluetion and the number of lots owned by 36 individuals is presented.

Personal property is assessed et 656 of actual value. Schedule 13 reveals the number of individuels in stillweter Who heve listed their personal property and the distribution secording to assessed valuation.

Public scrvice assessments will be found in Schedule 14. ITot refers to either improved or unimproved units.

## 

## ADD OORCLUETON

Since I951, whon the property tex was discored, the mouicipel fuxtions in stillwater heve been finenoed lerceIy by the light and power department. Mhere has been some question as to the equity of such a polioy, therefore this chepter vill bo devoted to an apreisel of the present rethod of finnneing the city government.

Pirst of ell sone criterion for the distribution of the tax burdon must be estoblished. The prineiples to bo followed are: the oitizen should contribute to the support of the city in accordence aith the bencits derived, or in eccordance with bis obility to pey ${ }^{1}$ There are eleven depertrents in the city, Each renders some service to the commnity. Who is bonerited by the expenditures of these depertments? The dieht ond Feter Depertment atfords the greetost possibility to measure the benefits derived by each individual. Benefit is messured by consumption, and sineo it is possible to determine mhet each consumes it is possible to distribute the cost of meintaining the department. Aiter anolysing the ten romining depertnents, four (comissioner of revenue and accounting depertment; health department; librery deportnent; park department) were oonsidered to render a genexal service to the entire comunty. Six (city attomey;

[^0]Sire depertment; generel governaent; meyox department; poIiee depertment street department mender a service of speeial importance to property onneps, either dinectly, an in the case of the tixe depertment, or indirectly by enhanceing the value of the property.

The second prinoiple of the critemion states thet the individual should contributo to the support of the city in accordence vith his ability to pay. The theory whith underlies the senerel property tax is composed of two propositions. The first is the prinoiple just stated, end the second is the assumption thet property in seneral is an adequate measure of ability. If it be true that the property owneps are actually benefiting by certain departmentel expenditures end thet property ownership indiootes ebility to pay, it stands to reason that the property omers should bear the burden of these depertments.

On the basis of the pest year $8952,355.00$ would be requised to finance the dity goverment. of this emome approximetely f66,779.17 should be derived from the property owners, ${ }^{4} 14,200.00$ from gerbage peroval 5 , $76,360.31$ from weter sales, $86,986.02$ from electric sales, and $86,000.00$ cmbid, p. 322

Behedule 7.
ACost of the six doperments renderine a special servico to property omners-sonedule 7

5perle 33 in appendtx
Ohhe approximate incone during the pest year, schedule 3 7 This fieure mekes up the bellonce of the totel cost.
from miscellaneous sources. With the prosent assessanents a twonty mill property tax would supply the revenue indiceted above. The existine electric metes could bo reduced sppromiaktelg $42 \%$ lallowng for the $20,961.61$ for depreciation)?

Some question has been raised regarding the assessment of property in stillwater, and it is belleved, thet with an ecuitable assessment the propery tax could be lonered sevexal mills. This oritioism is no doubt justified. Por exchple: only 649 people fin stillwater heve their personel property Listed on the tak rolis. 269 of the 649 heve their personel property listed at 100.00 or $105 s^{10}$

To sumarize there aro a few questions to be ancwered. First, Who has profited from the existins condition? Pron the facts it appers thot the lame property owner has benefited fron the present method of einancine the city government. There are approximately 550 individuals who own property assescod at $1,500.00$ or abovel shese, heve received the benerit of the oity exponditures but have not contributed proportionctely. Secondy, who hes been apfected adSehedule 8
$9_{\text {Sohedule }} 6$
10sohedule 13
11 sehedule 10
versely? those individuals who do not possess property assessod at moxe then $1,500.00$ are a mat of this group becuse the 40 reauction in electric oost will offet the burden of the property tex. Those individuals who do not own property hove been oarryins by all odas the greator pert of the burden there are approximetely 3,000 fonilies in Stinmetex fassuang the nuber of oper ting meters to be indicative of the number of families) ${ }^{16}$ There are 1,657 properity omerst 3 every property owner were m reaident end had a family there mould be 1,365 faxilies without property. These familes are boaring the burden. There are also between six and seven thousend college gtuanter tho are feeling the erveotz of the hith electric retes in no uncertain menner. 14

In vien of the necte, how een the existing conditions continue. According to the Municipal Index $15_{\text {the syster is }}$ defended when: (a) the electrio retes cherged are not higher then in similex comunities served by privete companies, (b) the electric consuners and the property owners are laxgeIy identioct, and (c) if the eloctrio onsumers do not consider themselves irposed won. Bvery one of theae areuments is dereeted by fect. In the first plece the electric mates
