CHAPTER I

INTRODUCTION

America today is faced with numerous problems. Potential reformers are offering a multitude of theories concerning every phase of our economic and social order. Since ours is a day of reform, it must of necessity be a day of experiment and, no doubt, much money and time will be wasted in trying utopian ideas. Many of these theories have been inaugurated in recent years and time alone can prove their value. However, according to one of the world's greatest economists, there is at least one institution in which investment may be safely made and dividends logically expected.

"Even today the safest and most profitable investment is in education. Whatever social or political system may be tried in the future, children will always be the greatest asset. Stocks, bonds, bank accounts, insurance policies, and real-estate holdings may easily pass out of existence. Our children, however, will always be ours."¹

The above quotation by Roger Babson is a direct challenge for America to educate her youth. The desire for youth to be educated is greater than ever before. This statement is substantiated by the fact that the steady increase in our schools has greatly exceeded the proportional increase in population. Pupils are remaining in school longer increasing our attendance in secondary school where the cost is greater. The number of pupils attending secondary schools more than doubled between the years 1920-30². In spite of ever increasing enrollment and attendance, Oklahoma spent \$6,573,158.07 less on the current expense of her public schools in 1932-33³ than she did in 1930-31.⁴

This increased attendance and decreased budget has brought about favorable school legislation. In 1935 the legislature passed House

¹ See numbers at end of chapter.

Bill 212 with an \$8,200,000 appropriation which guaranteed an eight month term of school. The bill provided for two types of aid. It provided for Primary Aid which was allocated to all districts alike on the basis of the average daily attendance of the previous year. The Primary Aid was provided for all the districts regardless of their financial ability, a sum not to exceed \$5,400,000 being set aside for this purpose. The remainder of the money appropriated was designated as Secondary Aid to be distributed to those districts in which a ten-mill levy and other revenue, including Primary Aid, would not maintain the minimum school for the minimum term. The bill provided that the transfer fees payable by the state should be paid from moneys appropriated for Secondary Aid. In the school year 1936-37 a total amount of \$8,454,000 was paid to school districts of the state.⁵

In 1937 the Sixteenth Legislature enacted House Bill 6 which appropriated \$12,800,000 for each of the fiscal years 1937-38 and 1938-39 for the purpose of aiding in the support and maintenance of the Public Schools of Oklahoma. The State Board of Education was authorized to administer and distribute the moneys appropriated under House Bill 6 to the several school districts of Oklahoma according to the provisions of the bill.

House Bill 6 authorized the State Board of Education to apportion each year, on a pro tanto basis, \$1,800,000 of the moneys appropriated by the bill to the several school districts of the State of Oklahoma. This sum was set aside for the purpose of supplying to each school district the loss sustained by it because of the exemption of homesteads from ad valorem taxation under the provision of House Bill Number 3 of the First Extraordinary Session of the Sixteenth Legislature.

House Bill 6 also provided for Primary and Secondary Aid. The State Board of Education was authorized to apportion a sum not to exceed \$5,200,000 plus any unexpended balance of Homestead Exemption fund to the school districts of the State which levied and used not less than eight mills on the lawfully assessed valuation and which voted an eight month or more term of school. The amount designated as Primary Aid was distributed on the basis of the average daily attendance for the previous year according to the schedule set forth in the law.

According to the provisions of House Bill 6, the sum of \$5,800,000 was set aside and designated as Secondary Aid. The State Board of Education was authorized to apportion Secondary Aid to each school district in the state (1) in which the people voted at least an eight-month term of school, (2) in which a ten-mill ad valorem tax levy for the general fund of the current school year was levied and used, (3) which had an average daily attendance sufficient to qualify for Primary Aid or was classified as isolated by the State Board of Education, and (4) which did not have sufficient income as defined in House Bill 6 to support the minimum program of education.

House Bill 6 provides that the State's share of the transfer fees for all districts not qualifying for Secondary Aid shall be paid from the Primary Aid Fund. It also provides that all districts qualifying for Secondary Aid, the district's share of transfer fees due to other districts shall be paid by the State from the Secondary Aid Fund.

The problems the writer has undertaken form a general survey of the financial status of the public schools of Pontotoc County, Oklahoma.

The schools of Pontotoc County are typical Oklahoma schools. The type and size of the schools included in this survey range from a one-teacher rural school, with an average attendance of eight children, to one of larger high schools of the state. For convenience the schools have been grouped into four classes. The rural school with one to four teachers constitute the Common School class. The other groups are as follows: Union Graded, Consolidated, and Independent.

The problem is limited to the financial study of the public schools of Pontotoc County, as they exist in the school year 1938-39 under the regulations of House Bill 6 with the corresponding data for the school years 1935-36 and 1936-37, which operated under House Bill 212.

The findings should be of some benefit in future research and school legislation. It is only through the use of scientific information that substantial progress is made in any field of endeavor. If a similar study were made in every county in the state, definite conclusions could be drawn concerning the financial status of the public schools of Oklahoma. There are no similar surveys on record in the library of Oklahoma A. and M. College. This survey included two years under House Bill 212 and two years under House Bill 6. The nearest to this survey is Table 49 of the Seventeenth Biennial Report of the State Superintendent of Public Instruction; however, there is a similar survey being made of Delaware County.

The primary data for this survey were secured from the records of the offices of the County Clerks, County Treasurer, and County Superintendent, of Pontotoc County at Ada, Oklahoma.

The secondary data were secured from lectures on public school finance in courses at the Oklahoma A. and M. College and from reliable books and periodicals pertaining to this subject.

The data were collected and organized after the Secondary Aid allocation had been made for the school year 1938-39. Calculating and adding machines were used in all computations to reduce possible error to the minimum. Transfer of data from tabulation sheets was made and checked with utmost care. Special attention was given to the ability and effort of the various districts to support their schools.

Notes on lectures and readings in public school finance were reviewed and a bibliography was compiled as suggested in Reeder's "How To Write A Thesis."⁶

Inasmuch as the primary data were taken from the official records covering the entire county, the data are the most adequate and reliable available. It is the desire of the writer to present, as nearly as possible, a true picture of the public schools of Pontotoc County as they existed in the years studied.

Arthur B. Moehlman concerning similar surveys has said, "The probable results of such research in the long run will mean better organization, greater value to the child for the money expended, and money economies that will more than pay the expenses of such research. Social changes may be made that are now difficult to express in terms of money."⁷

CHAPTER II
EXPLANATION OF TABLES

The purpose of this chapter is to present in the forms of tables all data pertaining to each of the four different types of districts and a compilation for all of each type.

The tables contain the same type of information for each district. House Bill 6 and House Bill 212 provide for a minimum program for all schools. The items in the tables are necessary in determining the effect of the two bills. The enumeration may change from year to year. Each district is required to enumerate the children between the ages six and twenty-one each year beginning January fifteenth and finishing before February fifth.¹ The state, county, and beverage apportionments are made on this basis.² The area remains constant through the four years studied.

"No district shall be formed from other organized districts containing less than (6) square miles of area and on assessed valuation of less than \$50,000. and fewer than eight persons between the ages of six and twenty years."³

The aggregate days attended is used in computing the amount of maintenance allowed by the state for a minimum program.⁴ General maintenance is defined as all general fund expenses except transportation cost, basic salaries of teachers, principals and superintendents, and the amount allowed for this program is six and one-half cents per day per pupil in attendance during the preceding year.⁵

Valuation less homestead is the basis for computing the ad valorem levy for general fund purposes. The sinking fund levy is based on total valuation if indebtedness occurred before the passage of the Homestead Law. The loss from homestead exemption is an interesting

item and the Tax Commission has made a rather extended study of this item. The general fund appropriation includes miscellaneous revenue and amount raised from ad valorem levy. Miscellaneous revenue is made up of state apportionment, county apportionment, beverage tax, gross production, transfer fee, and one-half of Indian tuition. The general fund is indicative of the ability of the district to finance its program. Primary aid is that part of the state support made available by the Legislature for the partial support of public schools of the state. This fund amounts to \$5,200,000 plus an unexpended balance in the appropriation to replace the losses due to homestead exemption not needed for that purpose.⁶ Districts to qualify for Primary Aid must vote at least an eight months term of school, levy an eight mill ad valorem levy, and have an attendance the preceding year of fifteen. Districts not receiving aid from the state may continue to operate on their own general fund revenue. The pupil teacher ratio is set up in the bill.⁷ District Sixty-Two does not receive state funds, but operates on its own resources. Primary aid is to be used for teachers' salary only. Secondary Aid is that part of the money made available by the Legislature to guarantee the minimum program.⁸ The district to qualify for Secondary Aid must levy ten mills, vote at least an eight month term, have an attendance sufficient to qualify for Primary Aid, and not have an income sufficient to maintain the minimum program. The chargeable income of the district is the miscellaneous revenue plus a ten mill levy.⁹ One-half of the federal aid, or federal Indian tuition, is included in the general fund; the other half is called federal enrichment. The federal aid enrichment is directly under the supervision of the federal government and appropriation must be approved by the federal

educational field agent. One-half of the tuition is classed by the State Board of Education as chargeable income.⁹ Homestead replacement is determined by multiplying the loss in valuation by the previous year levy.¹⁰ This law was passed in 1937 and the legislature appropriated \$1,800,000. for replacement due to homestead exemption. The fund may be used for any purpose for which the general revenue fund is used except interest on warrants.¹¹ This is a cash account and is not included in the general fund in the tables but is a separate item and is a part of the total cost. The homestead replacement only affects the school years 1937-38 and 1938-39. Common school districts cannot legally furnish transportation. House Bills 212 and 6 make special provision for the type of transportation. In the consolidated districts it is compulsory that the pupils living more than a mile from school be furnished transportation.¹² Independent districts may furnish transportation if they meet the requirements of the consolidated districts.¹² Union graded districts may furnish transportation if the question is voted upon by the people of the district and carried.¹³

To arrive at the per capita cost it is necessary to know the total cost. This item includes all expenditures made by the district. The per capita is figured both on enumeration and on average daily attendance. House Bills 6 and 212 both figure per capita cost on average daily attendance. The idea behind using the enumeration is that the school facilities are available for all pupils enumerated whether they attend or not. The revenue raised by ad valorem tax indicates the ability and effort of the district. This item is included in the general fund appropriation and is a significant point to observe in studying the different tables. Other significant points to observe are: total

school costs; per capita costs on enumeration and average daily attendance; amount of state money received by the different types of districts; valuations of the different types; territory served by each type; effect of homestead exemption on valuation; rate of general fund tax levies; and amount allowed for maintenance under each bill.

Table Number I represents a summary of common school districts which includes tables numbered XI to LX with the exception of tables numbered XII, XIV, XXVII, XXXIII, and XXXVIII which are independent districts. A total of forty-five common school districts is included in table number I. The data assembled are items which affect or are affected by the state program of finance, and gives a financial picture of the common schools of the county.

Table Number II represents a summary of tables numbered V and VI, two union graded school districts. The form and type of information is in all the tables the same. This summary is the total of all items or headings for all union graded districts. A union graded district is classed as dependent and under the direct supervision of the county superintendent.¹⁴

Table Number III is a summary of tables numbered VII, VIII, IX, and X; representing the totals for the four consolidated districts. Consolidated districts have an additional item of transportation which is not included in the common school districts.

"This additional authority to provide transportation for pupils was never granted to common, ordinary school districts by legislative enactment of the state. In the absence of statutory authority for expenditure of school moneys for such purposes, such application of funds would be illegal."¹⁵

Transportation is included in the total cost of the school.

Tables numbered I, II, and III represent summaries of the different types of dependent districts and are listed consecutively. Table Number IV is a summary of five independent districts composed of tables VII, XIV, XXVII, XXXIII, and XXXVIII. The additional item of transportation is also found in the summary for independent districts.

The principal objective in this chapter has been to give an explanation of the tables and items of which the tables are composed. The summary and conclusion of these data are withheld for Chapter Three.

CHAPTER III

SUMMARY AND CONCLUSIONS

SUMMARY

In Chapter One, the introduction, it was suggested that many theories are being offered, surveys are being made, and the present time is a day of experiment. The problem concerning the writer, as mentioned in the introduction, was a general survey of the financial conditions of the public schools of Pontotoc County, a special study of the finance during the four years; namely: 1935-36, 1936-37, 1937-38, and 1938-39, and the ability and effort of each type of district to support its school.

The data was collected from the official records for each district in the county and tabulated in the form of tables then a summary of each type of district was made. The items selected were the ones that directly effected the finance of the districts. All the districts in the county were included in the survey, forty-five common school districts, two union graded, four consolidated, and five independent districts. A table was prepared for each district with the horizontal lines items effecting finance; and the vertical columns containing similar information for each of the four years. The totals for each type of district were placed in tables making comparison possible by years for each district and by different types.

The enumeration in the common school districts is shown to be on the decline; in 1935-36 four thousand seven hundred forty eight were enumerated this number being reduced to four thousand two hundred ninety three, or a reduction of one hundred fifty five, in 1938-39.

In 1935-36 the enumeration of the consolidated districts was one thousand fifty; but this number decreased to nine hundred four, or a loss of one hundred forty six, in 1938-39. The union graded and independent districts both show an increase in enumeration. The union graded gained from six hundred thirty-eight to one thousand five hundred thirty-four. This increase was in McLish School District Union Graded No. 2. The 1935-36 enumeration report shows four hundred two in 1938-39 one thousand three hundred twenty five. This district included the Fittstown oil field which was on the boom from 1934 to 1938. The independent districts increased from five thousand seven hundred seventeen to six thousand three hundred thirty-six. The Tables numbered XII, XIV, XXXIII, and XXXVIII indicate a decrease in each district's enumeration while Table Number XXVII shows an increase of four hundred thirty one. The increase for the independent districts was found to be in the city of Ada. The area remains constant through the four years for each type of district. The forty five common school districts have the greatest number of square miles the area being four hundred ninety-eight and eight tenths; the consolidated districts next with ninety eight and three tenths square miles; the independent districts next with eighty nine and four tenths; and the union graded districts are at the bottom of the scale having only fifty four and three tenths square miles. The common school district had nine and five tenths pupils per square mile in 1935-36 and eight and six tenths in 1938-39. The union graded districts in 1935-36 had eleven and seven tenths per square mile and in 1938-39 twenty-eight and three tenths. The consolidated districts had ten and seven tenths per square mile in 1935-36 and 1938-39 nine and two tenths. The independent districts gained from sixty-three and nine tenths in 1935-36 to seventy and nine tenths in 1938-39. The greatest per cent of gain per square mile is found in the union graded districts, one hundred

fifty and four-tenths per cent. The independent districts gained ten and nine-tenths per cent. The common schools lost nine per cent per square mile in the four years. The greatest percentage of loss in enumeration per square mile is fourteen per cent, found in the consolidated districts. The aggregate days attended in each column is the total for the previous year as maintenance on the minimum program is computed on this basis. There is very little fluctuation in each type for the two years under House Bill 6. There is a very noticeable increase in maintenance under House Bill 6 in each of the four types of districts. In the common school districts the greatest amount received for maintenance was in the school year 1936-37 under House Bill 212. Under House Bill 6, the year 1937-38 was the larger of the two years. Considering the greater amount under each bill the common schools received one and seventy-seven hundredth times as much under House Bill 6, for maintenance. The union graded districts received nearly two and twenty seven hundredths times as much with an increase in enumeration of fourteen per cent. The valuation less homestead in the common school districts in the year 1938-39 is greater than the total valuation in the school year 1935-36. The union graded, consolidated, and independent districts show a similar gain. This is due, however, to the influence of the oil field in the county. The greatest gain, however, is in the independent districts. The common school districts lose ten per cent in homestead exemption; the union graded two per cent; the consolidated six per cent; and the independent fourteen per cent. The average rate of general fund levy is higher for consolidated districts than any of the other types, with the independent districts a close second. The independent districts have the highest sinking fund levy and show the greatest reduction during the four years; however this would naturally be expected as the valuation

increase was the greatest. The greatest amount of primary aid for each type of district was received in the school year 1937-38. As the primary aid increased the secondary aid decreased. The homestead replacement plus the secondary aid in the years 1937-38 and 1938-39 exceeds the secondary aid of the previous two years with the exception of union graded districts where there was an unusual increase in valuation which also resulted in an increased general fund appropriation. Because transportation is required in consolidated districts the total cost of schools of this type is greater. The total cost has very little significance for comparative purposes; rather the per capita costs appears more valuable, especially since this cost is based both on enumeration and average daily attendance. The consolidated districts have the highest per capita of any type, the union graded the lowest. The independent and common school per capita on average daily attendance are very nearly the same. There is a greater difference between the per capita on average daily attendance and enumeration in common school districts than any other type. The Lawrence School District Number 52 has a per capita cost in the year 1938-39 of one hundred twenty five dollars and sixty-five cents while the lowest per capita in common school districts for the same year in Owl Creek District Number 46 is thirty seven dollars and seven cents. In the year 1937-38 the per cent of attendance based on enumeration in common school districts is fifty one per cent; in union graded districts eighty six per cent; in consolidated districts one hundred eight per cent; and in independent districts seventy three per cent.

CONCLUSIONS

1. Great inequalities exist in the area of the common schools. In many instances limited area perpetuates a one-room school.
2. Attendance is better in consolidated districts. The A. D. A. in the consolidated districts was one hundred eight per cent of the enumeration, while the common school districts show the A. D. A. as only fifty-one per cent of the enumeration.
3. Great variation exists in ability to support schools in Pontotoc County. This is particularly true in the common school districts as illustrated by Lawrence with a per capita expenditure of \$125.65 and Owl Creek with \$37.07. Byng is outstanding among consolidated districts with a per capita cost of \$107.90 for the year 1937-38; Vanoss for the same year had a per capita cost of \$69.44.
4. Maintenance allowance was greater under House Bill 6 than House Bill 212. Common school districts received 1.77 times as much in 1937-38 as in 1936-37. Union graded districts received 2.27 times as much in 1937-38 as in 1936-37.
5. More state money was received in 1937-38 than any other year studied.
6. There was a gain in valuation in spite of homestead exemption.

RECOMMENDATIONS

The writer believes that the conclusions drawn from the data in this study warrant the following recommendations:

1. Many of the smaller districts should be annexed to consolidated and independent districts.
2. Compulsory attendance laws should be more rigidly enforced, particularly in common school districts.
3. The county should be a unit for school taxation.
4. House Bill 6 is a desirable bill and should be re-enacted.
