

Step3:

- 1) Get UID by matching source IP and port
- 2) construct new packet UID+length+data

Step5:

- 1) Get UID, length, data by parsing packets
- 2) Get Socket by matching UID
- 3) Create Socket with NSrcPort if Socket is NULL
- 4) Send(Socket, data, length)

Step2:

c1 to Proxy1

Step1:

c1 to s

Step4:

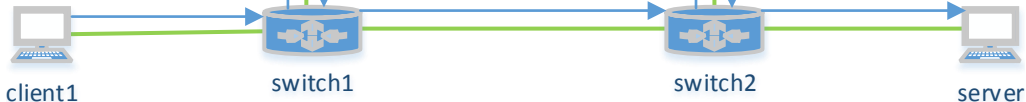

Proxy1 to Proxy2  
UID+length+data

Step6:

Proxy2 to s

Step7:

c1 to s
