

Appendix B: Core Descriptions

Two cores, GHK 1-34 Finnell and GHK 1-27 Niece were described in terms of lithology, grain size, sorting, roundness, color, and sedimentary structures. Totally, 15 lithofacies were observed. The legend for the core description is as follows.

LEGEND					
	Muddy matrix		Convolute bedding		Conglomerate
	Pebble sized clasts		Fluidization		Sandstone
	Granule sized clasts		Bioturbation		Muddy sandstone
	Parallel stratification		Fossils		Sandy mudstone
	Cross stratification		Scoured surface		Mudstone
	Distorted bedding		Rip-up clasts
