

Chapter 1

Introduction

1.1 Standard Model

1.2 Motivations for New Physics

1.3 Gravitational Waves

1.4 Summary

Chapter 2

Phase Transitions

2.1 Formalism

2.2 Dynamics of Phase Transition

2.3 Hydrodynamics

2.4 Summary

Chapter 3

Gravitational Waves in an Expanding Universe

3.1 Theoretical Framework

3.2 Contributions

3.3 Sound Waves in the Plasma

3.4 Power Spectrum

3.5 Summary

Chapter 4

Models with Phase Transitions

4.1 xSM

4.2 SMEFT

4.3 Dark Sector

4.4 Results

4.5 Summary

Chapter 5

Collider and Gravitational Wave Complementarity

5.1 Electroweak Phase Transition and Baryogenesis

5.2 Parameter Space

5.3 Double Higgs Production

5.4 Di-boson Resonance

5.5 Summary

Chapter 6

Boson Stars

6.1 Framework

6.2 Stellar Scale

6.3 Gravitational Waves

6.4 Summary
