

a.)  $1.3^\circ$

Less extensive area of strong inbound velocities.

b.)  $1.8^\circ$

RIJ and Mesovortex nearly indistinguishable from one another.

c.)  $3.1^\circ$

RIJ weaker at 1.1 km. AGL than 5 min. prior.

d.)  $6.4^\circ$

RIJ and mesovortex linkage almost non-existent, though vortex still readily identifiable.
